About five days before the wedding a lump of coarse sugar is given to the barber (in his capacity of village go-between) and he brings in return a twig of the *jaṇḍ*.[1] This twig is placed in a heap of wheat weighing about 42 *sers* (84 lb.), and by it are put 21 *sers* of coarse sugar. A lamp is lit and placed on the ground; to it all the females of the family and the bridegroom do obeisance. The bridegroom cuts the twig with a knife or sword;[2] and the grain and sugar are divided, half going to the Brāhman and half to the *mīrāsī* (genealogist). The latter then brings a ram (*chatra*, whence the name of the rite itself), cuts its ear, and with his thumb imprints a mark (*ṭīkā*) of its blood on the youth's forehead, and on those of all present.[3] He gets the ram and a rupee as his vail. The youth then bathes, and boiled wheat is distributed. He is oiled, and a red tape is tied round his forehead. Thenceforward he must keep a knife or sword in his hand till the wedding day. On that day he bathes again, breaks earthen vessels, and dons new clothes. His kinsmen offer their presents, and the menials get their dues. The bride is then brought home, and the newly-wedded pair, with all the females of the family, go to the temple of Bāwā Manga, the progenitor of the tribe, offer him a double cloth and a cake (the priest's perquisite), and bow their heads in worship. This completes the wedding ceremony among the Bājwā Jāṭs, an important Jāṭ tribe akin to the Bajū Rājpūts of the Bajwāt. Bāwā Manga's shrine is at Pasrūr, a town of some antiquity, in Siālkot.

With some modifications similar rites are observed by other Jāṭ tribes of that part.

In one tribe—the Dhārīwāl—the pair circumambulate the Siddh's temple seven times. The Randhāwa tribe employs a Brāhman to fetch the twig, the ram's blood is smeared only on the foreheads of bachelors, and after the wedding, when the Siddh's temple is visited, the bride and other females take clay out of an adjacent pond. Very often the boy cuts a twig from the *jaṇḍ* tree himself, and a few tribes, *e.g.* the Ghummān, cut it from a *ber*, or plum, tree (*Zizyphus jujuba*), and that tribe offer two lumps of sugar, one to the saint Lākhdāta, the other to his priest the drummer (Bharai), who is styled Shaikh, and appear to ignore its *jaṭhera* Siddh Dulchi. The ram is frequently replaced by a he-goat and often sacrificed, its flesh being distributed in various ways. The Wirk assemble, men and women, at a *ber* tree, wash the ram, and, if it shakes its head, regard this as a token that their ancestor is pleased. The Sarāi perform the *chatra* on the first Monday of the lunar month before the wedding. This rite is, however, unknown in the south-east of the Panjāb, as it involves animal sacrifice, and in the central districts the ram is never killed, though its ear may be cut.

In the south-east, when a new village is founded, before any house is built, a mound of earth is raised near the site proposed for the village and a *jaṇḍ* planted on it. Houses may then be built, and the first man to die in the village, whatever his caste may be, is burned or buried in this mound, and on it is built a masonry shrine named after him. He is thus deified as the Bhūmia, or Earth-god. Whatever ill befall, his shrine is the first place to which the Jāṭs resort in time of trouble. But a tribe may have a tribal Siddh as well as a Bhūmia in each village. The Bhūmia too is often called Khera, and some tribes even style their *jaṭhera* Khera-Bhūmia. Possibly the custom of deifying the first man to die in a new village is akin to the custom of killing a man and building him in when a new structure is raised (cf. FOUNDATION, vol. vi. p. 10)—he then becomes its *dwārapāla*, or 'gate-keeper.' The *jaṭhera*, how-

[1] Or *jaṇḍī*. The *Prosopis spicigera* is so called in the central Panjāb, but in Jhelum the name is applied to *Zizyphus nummularia* and in the Jullundur Doab to *Acacia leucophlœa*. Offerings are made to this tree by the relatives of Hindus suffering from smallpox.

[2] This is said to be a survival of an older rite in which the Hindu Triad, the nine planets, the four Vedas, Fire, Water, and the Pole-Star were all invoked as witnesses of the marriage-rite. The bridal pair walk four times round the *hawan*, into which leaves of the *jaṇḍ* used to be thrown, and these had to be cut by the bridegroom and carried to the bride's house for that purpose, as the *mantra* in debased Sanskrit, which is still recited, shows. The leaves are no longer thrown into the *hawan*, or sacrificial fire, but the tree continues to be cut.

[3] The *ṭīkā* is also called *tilak*, though, strictly speaking, *ṭīkā* is the mark, while *tilak* appears to be the act of marking. As a *mantra* in debased Sanskrit shows, it is done in order to propitiate ancestors, and in the hope that divine recognition, help, and protection will follow from it.

ever, does not appear to be thus chosen or regarded. He is often a martyr, or *shahīd*, who fell fighting with dacoits or in an affray with a neighbouring village. But he may be, it would seem, a Jogi, a Bairāgi, a Gosain, or a Nāga, though in such a case the priest regarded as the *jaṭhera* would appear to be a dim embodiment of the god Śiva or Viṣṇu. Rarely is *satī*-worship found among the Jāṭs, for the very obvious reason that they allow widow re-marriage, but the Dhindsa affect a *satī's* shrine called the *khāngāh*, or monastery, of Sataoti.

LITERATURE.—D. C. J. Ibbetson, *Punjab Ethnography*, Calcutta, 1883, is the classical authority. See also Maclagan, *Punjab Census Report*, 1892, H. A. Rose, *Glossary of the Tribes and Castes of the Punjab and N.W. Frontier Province*, Lahore, 1911, *s.v.* 'Jāt,' and W. Crooke, *TC* iii. 25, *s.v.* 'Jāt.' For the possible connexion of the Zatt or Zutt, an Arabized form of Jāṭ, with the Gypsies see Woolner, 'The Indian Origin of the Gypsies in Europe,' in *Journ. of Punjab Hist. Soc.* ii. ii. (1914).

H. A. ROSE.

**JĀTAKA.—1. Meaning of the word.**—A *jātaka* (in Buddhist dogmatics and literature) is a story in which the Bodhisattva (*q.v.*), *i.e.* the Buddha in one of his former births, plays some part, either that of the hero or of some other character, or sometimes only that of a looker-on. Hence the word might be translated 'Bodhisattva story,' or 'story of a Bodhisattva.' But the current rendering of *jātaka* is '(Buddhist) birth story.'

'*Jātakam*, birth, nativity; a birth or existence in the Buddhist sense; a *jātaka*, or story of one of the former births of a Buddha' (R. C. Childers, *Dictionary of the Pali Language*, London, 1875, *s.v.*). This is the generally accepted explanation, the word being derived from Skr. *jāta* in the sense of 'birth.' Another explanation of the word has been proposed by H. Kern (*Der Buddhismus*, Leipzig, 1882–84, i. 328), and adopted by J. S. Speyer (*Jātakamālā*, London, 1895 [=*SBB* i.], p. xxii), who derive the word from *jāta* in the sense of 'what has become, what has happened,' and would translate it by '*Geschichtchen*, tale, story.'

*Jātaka* originally means only a single 'birth story,' but it is also used as the title of the *Collection of Jātakas*, in the *Tipiṭaka*, and in the *Jātaka Commentary* (see below).

**2. Origin and purpose of the jātakas.**—We read in the *Saddharmapuṇḍarīka*, v. (*SBE* xxi. [1884] 120), that the Buddha, knowing the differences in faculties and energy of his numerous hearers, preaches in many different ways, 'tells many tales, amusing, agreeable, both instructive and pleasant, tales by means of which all beings not only become pleased with the law in this present life, but also after death will reach happy states'; and in the same book it is stated (ii. 44 [*SBE* xxi. 44 f.]) that the Buddha teaches both by *sūtras* and stanzas and by legends and *jātakas*. It is, indeed, likely enough that Gautama Buddha himself made use of popular tales in preaching to the people. It is certain that the Buddhist monks and preachers did so. In fact, we know that the preachers of all religious sects in India always took advantage of the Hindu passion for story-hearing and story-telling, and made extensive use of stories in preaching to the people, much in the same way as Christian preachers in the Middle Ages introduced 'examples' into their sermons to attract the attention of their hearers.[1] They sometimes invented pious legends, but more frequently they took fables, fairy tales, and amusing anecdotes from the rich storehouse of popular tales or from secular literature, altering and adapting them for the purposes of religious propaganda.[2] The Bodhisattva dogma (see art. BODHISATTVA), in connexion with the doctrines of rebirth and *karma* (*q.v.*), was an excellent expedient for turning any popular or literary tale into a Buddhist legend.

[1] Cf. such works as the *Gesta Romanorum*, or A. Wesselski's *Mönchslatein*, Leipzig, 1909.

[2] In the *Jātaka Commentary* (see below) every *jātaka* is put into the mouth of the Buddha as a *dhammadesanā*, *i.e.* 'religious instruction' or 'sermon.' On the *jātakas* as homilies see also F. Max Müller, *SBB* i. [1895] p. xiii, and J. S. Speyer, *ib.* p. xxiv f.

In his numerous existences, before he came to be born as Sākyamuni who was to be the Buddha, the Bodhisattva had been born, according to his *karma*, sometimes as a god, sometimes as a king, or a merchant, or a nobleman, or an out-caste, or an elephant, or some other man or animal (see *ERE* ii. 743, note §). It was thus only necessary to identify the hero or any character of a story with the Bodhisattva, in order to turn any tale, however secular or even frivolous, into a *jātaka*.

Hence the *jātakas* regularly begin with such words as: 'Once upon a time, when Brahmadatta was reigning in Benares, the Bodhisatta (Skr. Bodhisattva) was reborn in the womb of his chief queen'; or 'Once upon a time, when Brahmadatta was reigning in Benares, the Bodhisatta was reborn into the family of a forester'; or 'Once upon a time . . . the Bodhisatta was an ox called Mahālohita (the Big Red One)'; or 'Once upon a time . . . the Bodhisatta was reborn in the womb of a crow'; or 'Once upon a time . . . the Bodhisatta was Sakka, king of the gods,' etc. In many of his existences the Bodhisatta, according to the *jātakas*, was a god, a king, a Brāhmaṇa, a minister, an ascetic, a merchant, but he also was a gardener, a musician, a physician, a barber, a robber, a gambler, an elephant, a lion, an ape, a dog, a frog, some bird, etc. (see the list in A. Grünwedel, *Mythologie des Buddhismus*, Leipzig, 1900, p. 197 f.).

**3. The jātakas in the Pāli Tipiṭaka.**—Some of the stories which were afterwards turned into *jātakas* are told in the Suttas as simple tales, without any reference to the Bodhisatta.[1] On the other hand, there are some real *jātakas* included in the Suttas—*e.g.*, the *Kūṭadantasutta* and *Mahāsudassanasutta* in the *Dīgha Nikāya* and the *Makhādevasutta* in the *Majjhima Nikāya*. That the *jātakas* form an essential part of the Buddhist canon is shown by the fact that they are included in the list of nine *aṅgas* (twelve *Dharmapravachanas* in the Sanskrit canon) into which the sacred books of the Buddhists were divided according to the subject-matter, as the 7th *aṅga* (the 9th *Dharmapravachana*).

The *Book of Jātakas*, however, is one of the fifteen collections of texts forming the *Khuddaka-nikāya* ('Collection of Smaller Texts') of the *Tipiṭaka*.[2] This *Jātaka Book* consists of *gāthās* or stanzas only, and is divided into 22 sections (*nipāta*), which are arranged according to the number of stanzas belonging to or forming a *jātaka*. The first section is supposed to contain 150 *jātakas*, each verse belonging to a separate story; the second, 100 *jātakas*, with two verses each; the third, 50 *jātakas*, with three verses each, and so on, each successive *nipāta* having a larger number of stanzas and a smaller number of *jātakas*. This *Book of Jātaka Gāthās* has not yet been published,[3] and MSS of it are rare. In many cases these *gāthās* are poetic tales, ballads, or epic poems; but very often, more especially in the first sections, they are quite unintelligible by themselves, and must be understood as belonging to some prose tale. Why these prose stories did not attain to canonical dignity we do not know. Probably they were supposed to be well known, and, therefore, left to the improvisation of the preachers. It is only in a more or less contaminated form that the prose parts of the *jātakas* have been preserved in the Commentary (see below) that was composed or compiled at some later period, after the final redaction of the canon.

J. Hertel (*ZDMG* lxiv. [1910] 58 ff., and *WZKM* xxiv. [1910] 121 ff.), pointing out that there are certain *Pañchatantra* and *Hitopadeśa* MSS containing only the verses, has advanced the hypothesis that the collection of *jātaka gāthās* in the *Tipiṭaka* is nothing but an extract from an older MS which contained both the verses and the prose parts of the *jātakas*. But the

[1] Cf. *Chullavagga*, vi. vi. 3, with the *Tittirijātaka* (no. 37); or *Mahāvagga*, x. ii. 3, with the *Dīghiti-Kosalajātaka* (no. 371).

[2] It is worth mentioning that, according to the Sinhalese chronicle *Dīpavaṁsa* (v. 37), there was a school of monks, the Mahāsaṁgītikās, who rejected some portions (we are unfortunately not told which) of the *Jātaka Book* as non-canonical. The Dharmaguptas had also a *Jātaka Book* in their canon (see M. Anesaki, 'The Four Buddhist Āgamas in Chinese,' *TASJ* xxxv. [1908] pt. iii. p. 8.

[3] It is not found in the King of Siam's edition of the *Tipiṭaka*.

relation between prose and verse in works like the *Pañchatantra* is quite different from that between the *jātaka gāthās* and the prose of the *Jātaka Commentary*. Besides, the *gāthās* differ from the prose in language also, and, above all, there are many *jātakas* that do not need any prose at all.

R. Otto Franke (*WZKM* xx. [1906] 318) says: 'Die Masse der Jātaka-Gāthās als ganzes betrachtet ist ein persönliches Erzeugnis eines einzigen Autors, d.h. dieser Autor hat sie nicht nur zusammengestellt, sondern viele selbst gedichtet und umgedichtet oder ausgeflickt und alles in allem ihrer Gesamtheit seinen persönlichen Stempel aufgedrückt. Er hat aber auf der anderen Seite vorhandene Gāthās in sein Werk mit eingebaut.' The very opposite is the case. The bulk of *jātaka gāthās* is the work of many, chiefly non-Buddhist, authors, though one editor or compiler (not 'author') may, in recasting the whole, have altered and even added verses here and there.

**4. The Jātaka Commentary.**—What has become known by the edition and translations to be mentioned below is not the canonical *Book of Jātaka Gāthās*, but a huge Prose Commentary in which the *gāthās* are embedded. This commentary, or *Jātakaṭṭhavaṇṇanā*, as it is called, is a recast of an older *Jātakaṭṭhakathā*. The latter had been translated into Sinhalese, only the verses being left in the original Pāli. Afterwards the Sinhalese version was retranslated, or rather recast,[1] into Pāli. In our *Jātakaṭṭhavaṇṇanā* every number[2] consists of the following parts: (1) the 'story of the present' (*pachchuppanna-vatthu*), in which some incident is related that prompted the Buddha to tell the *jātaka*; (2) the 'story of the past' (*atītavatthu*), which is the real *jātaka*; (3) the *gāthās*, or stanzas, forming, as a rule, part of the 'story of the past,' but sometimes also of the 'story of the present'; (4) the grammatical and lexicographical comment (*veyyākaraṇa*) on the *gāthās*; and (5) the 'joining together' (*samodhāna*) of the two stories by identifying the characters of the 'story of the past' with their rebirths at the time of the Buddha.

With the exception of the *gāthās*, which alone can claim canonical authority, the whole Commentary, including the 'stories of the present,' the 'stories of the past,' and the 'joining together,' must be regarded as the work of one author.[3] As to when this Commentary was compiled, translated, and retranslated, or recast, we have no means of deciding. There is a tradition[4] that makes the famous Buddhaghoṣa (*q.v.*) the author of the *Jātakaṭṭhavaṇṇanā*, but this is very doubtful.[5] It is just possible that the recasting of the Commentary may have taken place shortly after Buddhaghoṣa's time (5th cent.), but it may as well have been a century later. There can be no doubt, however, that, in spite of its late date, the Commentary has made use of very old materials. At any rate, it can be proved that already in the 3rd or 2nd cent. B.C. some of the *jātaka* stories were told just as we find them in our *Jātaka Commentary*. There are representations on the railings round the *stūpas* of Bhārhut and Sānchī of scenes from *jātakas*; and not only do they include scenes from the *gāthās*, but also some that are related only in the prose Commentary. And, as the titles of the *jātakas* are inscribed over some of the carvings, these famous bas-reliefs prove that these stories were in the 3rd or 2nd cent. B.C. termed '*jātakas*' and considered as sacred lore.

Up to the present 29 *jātakas* have been identified on the bas-reliefs of the *stūpa* of Bhārhut (see T. W. Rhys Davids, *Buddhist India*, London, 1903, p. 209, and E. Hultzsch, *JRAS*, 1912, p. 406). The titles of the *jātakas* are taken from the hero of the story, from some other character, from some important incident, or from the first words of the first stanza. Hence one and the same *jātaka* may be called by different titles (see D. Andersen in *Jātaka*, ed. Fausböll, vol. vii. p. xv).

**5. Place of the Jātaka Book in Indian literature.**—Though it is no longer possible to say that the *Jātaka Book* (*i.e.* the *Jātaka Commentary*) 'is the oldest, most complete, and most important Collection of Folk-lore extant' (T. W. Rhys Davids, *Buddhist Birth Stories*, p. iv), it remains true that it is a very old and highly important collection not only of folk-tales, but also of literary productions of the most varied kinds.

As regards 'the stories of the present,' they are of little value, being either very silly inventions of the commentator or borrowings from other texts, such as the *Vinayapiṭaka*, *Suttanipāta*, or *Apadāna*, or from other commentaries. But in the 'stories of the past' with the canonical *gāthās*, all kinds of literary productions are represented. As to their literary form, we may distinguish: (1) tales in prose in which only one or two or a few verses, containing the moral or the gist of the tale, are inserted (in these cases the Commentary has preserved good old prose traditions); (2) ballads in the form of (*a*) dialogues, or (*b*) a mixture of dialogue and narrative verses[1] (in these cases the prose of the Commentary is quite superfluous, often rather insipid, and sometimes even at variance with the *gāthās*); (3) long tales partly in prose, partly in verse[2] (here the prose Commentary is an expansion, often very diffuse, of the original prose text); (4) strings of moral maxims on some one topic; and (5) regular epics or epic fragments (in the last two cases the prose Commentary is superfluous).[3] The contents of the *jātakas* are: (1) fables, (2) *Märchen* (fairy tales, many of them tales of animals), (3) anecdotes and comic tales, (4) tales of adventure and romance, (5) moral tales, (6) moral maxims, and (7) legends. More than half of the *jātakas* are of non-Buddhist origin. Even the moral tales and legends belong partly to the general Hindu ascetic poetry, though most of them show a strong Buddhist tendency.

The *jātakas* vary also in length. We find short stories of hardly a page by the side of long romances or epic poems covering more than a hundred pages in our printed edition.

Many of the stories found in our *Jātaka Book* occur also in the *Pañchatantra*, *Kathāsaritsāgara*, and other Indian story books, and are important for the history of Indian fiction. Some of the tales have parallels in the *Mahābhārata* and in the *Rāmāyaṇa*, and many others in Jain literature.

A great many *jātakas* have also parallels in the literatures of the West. Thus, the fable of the peacock that lost his bride through his shameless dance (*Jātaka*, no. 32, represented on the *stūpa* of Bhārhut) was known to Herodotus (vi. 130), who tells us the story of Hippokleides. The stories of the grateful animals and the ungrateful man (*Jāt.*, no. 73, also 482 and 516), of the ungrateful wife (no. 193), and many others, are widespread in Eastern and Western literatures. A version of the Judgment of Solomon is found in the *Mahā-Ummagga-Jātaka* (no. 546), which is also important on account of its parallels to the stories of the wise Aḥiqār (*q.v.*). See also T. Zachariae, *WZKM* xxvi. [1912] 418 ff., and *Ummagga Jātaka* ('The Story of the Tunnel'), tr. from Sinhalese by T. B. Yatawara, London, 1912. Many *jātakas* are well known from their parallels in Æsop's *Fables* (*e.g.*, 'The Ass in the Lion's Skin' [see art. FABLE]), in La Fontaine's *Fables*, in the *Gesta Romanorum*, in Chaucer's *Canterbury Tales*, and elsewhere. On supposed parallels of Christian legends in the *Jātaka Book* see R. Garbe, *Contributions of Buddhism to Christianity*, Chicago, 1911, pp. 18, 30 ff., and M. Winternitz, *Geschichte der indischen Litteratur*, ii. (Leipzig, 1913) 282, 106. Though in many cases

[1] It is said in the *Nidānakathā* (*Jātaka*, ed. V. Fausböll, i. 62) that other commentaries (*aṭṭhakathās*) were used for the *Jātakaṭṭhavaṇṇanā* besides the *Jātakaṭṭhakathā*.

[2] There are 546 numbers. As, however, some of these numbers include several stories, and, on the other hand, the same *jātakas* occur in different versions under several numbers, the actual number of stories may be somewhat more or less than 546. But this is by no means the complete number of *jātakas* extant. There are some *jātakas* in other Buddhist works, both Pāli and Sanskrit, which have not been included in the Pāli collection (see L. Feer in *JA* VII. v. [1875] 417 ff., vi. 244 ff.).

[3] Only the *Veyyākaraṇa* seems to be the work of a still later commentator; see R. O. Franke in *Bezzenbergers Beitr.* xxii. [1897] 289 ff.; E. Sénart in *JA* IX. xvii. [1901] 406.

[4] *Gandhavaṁsa*, ed. J. P. Minayeff, in *JPTS*, 1886, p. 59.

[5] See T. W. Rhys Davids, *Buddhist Birth Stories*, p. lxiii ff.

[1] These narrative verses are called *Abhisambuddhagāthās*, *i.e.* stanzas told by Buddha (not as the Bodhisattva, but) after his enlightenment (see Sénart, *JA* IX. xvii. 385 ff.).

[2] This is a different type from the first, for here the verses are not inserted for any special purpose, but the tale itself is alternately related in prose and verse. See also art. FICTION, vol. vi. p. 2 f.

[3] Some kind of prose was, of course, always necessary to turn the ballad, etc., into a *jātaka*, and make it part of a homily.

it is probable that these stories migrated from India to the West, it is in other cases more probable that Western motives were brought to India.

The *Jātaka Book* is not only important for the history of Indian and, indeed, all literature, but it is also invaluable for the light which it throws on the social life and the manners and customs in ancient India.

The accounts of Indian civilization given by R. Fick, *Die sociale Gliederung im nordöstlichen Indien zu Buddha's Zeit*, Kiel, 1897, T. W. Rhys Davids, *Buddhist India*, p. 201 ff., and C. A. F. Rhys Davids, 'Notes on Early Economic Conditions in Northern India,' *JRAS*, 1901, p. 859 ff., are chiefly based on the *jātakas*. Valuable as these accounts are, they cannot be taken (as these scholars thought) as pictures of life in India at the time of Gautama Buddha, for it must be borne in mind that the prose stories in the Commentary are as late as the 5th or 6th cent. A.D., though they may contain much earlier traditions.

LITERATURE.—The standard edition of the *Jātaka Book* is that of V. Fausböll, *The Jātaka, together with its Commentary, being Tales of the Anterior Births of Gotama Buddha*, 7 vols. (vol. vii. containing the Index by Dines Andersen), London, 1877–97. Translations are: T. W. Rhys Davids, *Buddhist Birth Stories; or Jātaka Tales*, London, 1880 (contains Jātakas 1–40 only); *The Jātaka, or Stories of the Buddha's Former Births*, tr. from the Pāli by various hands, ed. E. B. Cowell, vols. i.–vii., Cambridge, 1895–1913 (the translators are R. Chalmers, W. H. D. Rouse, H. T. Francis, R. A. Neil, and Cowell himself; the last vol. contains the Index); a German tr. by Julius Dutoit, Leipzig, 1908 ff., is still in progress. Selected *jātakas* have been translated by R. Morris in *FLJ* ii. [1884] 304, 332, 370, iii. [1885] 56, 121, 242, 328, iv. [1886] 45, 168.

On the *Jātaka Book* see: Léon Feer, *JA* VII. v. [1875] 357 ff., vi. 243 ff., VII. xi. [1878] 360 ff., VIII. xx. [1892] 185 ff., IX. v. [1895] 31 ff., 189 ff., IX. ix. [1897] 288 ff.; S. d'Oldenburg, *JRAS*, 1893, p. 301 ff.; R. O. Franke, in *Bezzenbergers Beiträge*, xxii. [1897] 289 ff., and *WZKM* xx. [1906] 317 ff.; H. Lüders, *Nachrichten der königl. Gesellschaft der Wissenschaften zu Göttingen*, philol.-hist. Kl., 1897, p. 40 ff. and *ZDMG* lviii. [1904] 689 ff., lxi. [1907] 641 ff.; J. Hertel, *ZDMG* lx. [1906] 399 ff.; J. Charpentier, *ZDMG* lxii. [1908] 725 ff., lxiii. [1909] 171 ff., lxvii. [1912] 41 f., and *WZKM* xxvii. [1913] 94; A. Foucher, in *Mélanges d'indianisme offerts à M. Sylvain Lévi*, Paris, 1911, p. 231 ff.; T. W. Rhys Davids, *Buddhist India*, London, 1903, p. 189 ff., and in *Album Kern*, Leyden, 1903, p. 13 ff.; H. Oldenberg, *Literatur des alten Indien*, Stuttgart and Berlin, 1903, pp. 103–129, and *Nachrichten der königl. Gesellschaft der Wissenschaften zu Göttingen*, philol.-hist. Kl., 1911, p. 441 ff., 1912, pp. 183 ff., 214 ff.; and M. Winternitz, *Geschichte der indischen Litteratur*, ii. 89–127.

**6. The Chariyāpiṭaka.**—This is the last book in the *Khuddakanikāya* of the *Tipiṭaka*, and it is a collection of 35 *jātakas* in verse. The purpose of the work is to show in which of his former births the Bodhisattva had attained the ten *pāramitās*, or 'perfections.' The first two *pāramitās*, generosity and goodness, are illustrated by ten stories each, while fifteen stories refer to the other eight 'perfections,' viz. renunciation, wisdom, energy, patience, truthfulness, resolution, kindness to all beings, and equanimity. The stories are put into the mouth of Gautama himself. They have no literary merit whatever, all stress being laid on the moral, while the story itself is given in bare outline.

A different redaction of the *Chariyāpiṭaka* from that found in the *Tipiṭaka* is included and commented on in the first section of the *Nidānakathā*. J. Charpentier has tried (*WZKM* xxiv. [1910] 351 ff.) to reconstruct an 'Ur-Chariyāpiṭaka' on the basis of these two redactions, compared with the Sanskrit *Jātakamālā* (see below), but his arguments are not convincing.

LITERATURE.—The *Chariyāpiṭaka* has been edited by R. Morris, London, *PTS*, 1882; see also M. Winternitz, *Geschichte der indischen Litteratur*, ii. 131–134, and T. W. Rhys Davids, in *JRAS*, 1913, p. 482 f.

**7. The Nidānakathā.**—From the orthodox Buddhist point of view, all the *jātakas* may be regarded as autobiographical accounts of Gautama Buddha himself. It is, therefore, not surprising that an account of Gautama's career in his last existence, the *Nidānakathā*, *i.e.* 'the story of the beginnings,' forms the introduction to the *Jātaka Commentary*. As the Pāli canon contains only incidental references to the most important events in the career of the Buddha, and no connected biography, the *Nidānakathā* is the first *Life of the Buddha* in Pāli literature. It consists of three sections: (1) the story of 'the beginnings in the distant past' (*dūrenidāna*), narrating the life of the future Buddha as Sumedha in the time of the Buddha Dīpaṅkara down to his rebirth in the heaven of the Tusita gods, this section being a kind of commentary on the *Buddhavaṁsa* and the *Chariyāpiṭaka*; (2) the story of 'the beginnings in the less distant past' (*avidūrenidāna*), beginning with the descent of the Buddha from the Tusita heaven, and ending with his attainment of the Bodhi (perfect enlightenment or Buddhaship); (3) the story 'of the beginnings in the proximate epoch' (*santikenidāna*), relating the incidents from the Bodhi down to the story of Anāthapiṇḍika's great gift of the Jetavana (see art. BUDDHA, vol. ii. p. 883).

LITERATURE.—The text of the *Nidānakathā* will be found in Fausböll, *Jātaka*, i. 1–94, the translation in T. W. Rhys Davids, *Buddhist Birth Stories*, pp. 1–133, the first two sections also in H. C. Warren, *Buddhism in Translations*, Cambridge, Mass., 1896, pp. 5–83.

**8. Jātakas in the non-canonical Pāli literature.**—In the later books of the *Milindapañha* (which are missing in the Chinese translation, made between A.D. 317 and 420) the *jātakas* are frequently quoted. The author of bk. iv. makes no difference between the Bodhisatta of the *jātakas* and the Buddha. He, therefore, troubles himself to excuse the Bodhisatta from any transgressions that he may have committed in any of his previous births, as related in the *jātakas*; and he tries to solve all kinds of dilemmas that arise by comparing incidents in the *jātakas* with utterances of the Tathāgata in any of the canonical texts. Every word in the *jātaka gāthās*, even in mere folklore verses occurring in some fable or fairy tale, is treated as the authoritative 'word of Buddha' that as such must be true. In bk. vii. also the *jātaka gāthās* are quoted with great reverence. *Jātakas* occur also in the *Dhammapada Commentary*, a work that closely resembles the *Jātaka Commentary* and may almost be considered a supplement to it.

LITERATURE.—As to the Milindapañha see art. LITERATURE (Buddhist), and M. Winternitz, *Gesch. der ind. Litt.*, ii. 97 n., 142, 146. The author of bk. iv. differs in many points from our *Jātaka Commentary*. See T. W. Rhys Davids, *SBE* xxxv. [1890] pp. xli f., 216, 241 f., 280 f., 284 ff., 293 n., 294 ff., 303 f., xxxvi. [1894] 6, 16 ff., 146, 291, 306, 310, 341, 344, 349. A dilemma of the *Sivi Jātaka* is discussed *ib.* xxxv. 179 ff.; discussions on the *Vessantara Jātaka*, *ib.* p. 170 ff., xxxvi. 114 ff. 'Repeaters of the Jātakas' are mentioned by the side of 'Repeaters' of other canonical texts in *Milinda*, v. 22 (*SBE* xxxvi. 231).

For the *Dhammapada Commentary* see E. W. Burlingame, 'Buddhaghosa's Dhammapada Commentary,' *Proceedings of the American Academy of Arts and Sciences*, vol. xlv. no. 20 [1910] p. 469.

**9. Jātakas in Buddhist Sanskrit literature.**—(*a*) Many *jātakas* occur in the *Mahāvastu* both in prose and in verse, in 'mixed Sanskrit.' Some of them are variants of the Pāli *jātakas*, others are not found in the Pāli collection.

(*b*) Closely related to the *jātakas* are the *avadānas* (see art. APADĀNA), which belong partly to the literature of the Sarvāstivādins (see art. SECTS [Buddhist]), partly to the Mahāyāna literature. *Avadānas* are edifying 'tales of glorious deeds' of saints, illustrating the law of *karma* (*q.v.*), *i.e.* showing that 'black deeds bear black fruits and white deeds white fruits.' The difference between *avadānas* and *jātakas* consists in this, that in a *jātaka* the Bodhisattva is always either the hero or one of the characters occurring in the story, while any saint may play a part in an *avadāna*. But there are many *avadānas* in which the Bodhisattva is the hero. These are called *Bodhisattvāvadānas*, and may as well be called *jātakas*. Many *jātakas* known from the Pāli collection are also found in the *Avadāna* collections (*Avadānaśataka*, *Divyāvadāna*).

(*c*) *Bodhisattvāvadānamālā*, or 'Garland of Bodhisattva tales,' is another title of the work better known as *Jātakamālā*, a Sanskrit poem of

high poetical merit, composed by the poet Āryaśūra or Śūra. There have been several *Jātakamālās*, or 'Garlands of Jātakas,' *i.e.* poetical selections of *jātakas*, but Āryaśūra's work is best known. It is a florilegium of 34 *jātakas*, mostly known from the Pāli collection, but told in the flowery style of Sanskrit court poetry, elaborate prose alternating with verse. As in the *Chariyāpiṭaka* (see above), so also in the *Jātakamālā* the *jātakas* serve as illustrations of the *pāramitās*, especially those of generosity and kindness towards all creatures. Thus the first story (not occurring in the Pāli collection) is that of the Bodhisattva throwing himself before a starving tigress that is about to devour her offspring. Most stories occur also in the *Jātaka Book* and twelve in the *Chariyāpiṭaka*. Āryaśūra probably flourished in the 4th cent. A.D. Stanzas of the *Jātakamālā* are inscribed on frescoes found in the caves of Ajantā, and the Chinese pilgrim I-tsing mentions the *Jātakamālā* among the works that in his time were very popular in India.

(*d*) *Jātakas* and *avadānas* are also found in Aśvaghoṣa's *Sūtrālaṁkāra* (called *Alaṁkāra* in art. AŚVAGHOṢA), and in Kṣemendra's *Avadānakalpalatā*; and 50 *jātakas* are mentioned in the *Mahāyānasūtra Rāṣṭrapālapṛcchā*.

LITERATURE.—On (*a*) see S. d'Oldenburg, in *JRAS*, 1893, p. 335 ff.; A. Barth, in *Journal des Savants*, 1899, p. 625 ff.; J. Charpentier, *Paccekabuddhageschichten*, Upsala, 1908, pp. 2 ff., 12 ff., 25 ff., and *WZKM* xxvii. [1913] 94 f.; M. Winternitz, *Gesch. d. ind. Litt.*, ii. 190 ff.

(*b*) See Léon Feer in the Introd. to his tr. of the *Avadānaśataka*, *AMG* xviii., Paris, 1891, and J. S. Speyer in his ed. of the same work (*Bibliotheca Buddhica*, iii., St. Petersburg, 1902–09), vol. ii., preface, p. iv ff.; also Winternitz, *Gesch. der ind. Litt.*, ii. 215 ff.

(*c*) The *Jātakamālā* has been edited by H. Kern (Harvard Oriental Series, i., Cambridge, Mass., 1891) and translated by J. S. Speyer, *SBB* i., London, 1895. Āryaśūra has worked on the same (or a similar) collection of *gāthās* as we have in the *Tipiṭaka*; see Speyer's Synoptical Table in his tr., pp. 337–340. See also Kern, in *Festgruss an Otto von Böhtlingk*, Stuttgart, 1888, p. 50 f.; S. d'Oldenburg, in *JRAS*, 1893, p. 308 ff.; A. Barth, in *RHR* xxviii. [1893] 260; K. Watanabe, in *JPTS*, 1909, p. 263 ff.; I-tsing, *A Record of the Buddhist Religion*, tr. J. Takakusu, Oxford, 1896, p. 162 f.; H. Lüders, in *Nachrichten der königl. Gesellschaft der Wissenschaften zu Göttingen*, philol.-hist. Kl., 1902, p. 758 ff.; F. W. Thomas, in *Album Kern*, p. 405 ff.; and Winternitz, *Gesch. der ind. Litt.*, ii. 212–214. As to the Chinese tr. see A. O. Ivanovski, in *RHR* xlvii. [1903] 298 ff.

(*d*) See *Sūtrālaṁkāra*, Fr. tr. from the Chinese of Kumārajīva by E. Huber, Paris, 1908; L. Finot, 'Rāṣṭrapālapṛcchā, Sūtra du Mahāyāna,' in *Bibl. Buddhica*, ii., St. Petersburg, 1901; and Winternitz, *Gesch. der ind. Litt.*, ii. 208 ff., 229, 246.

**10. The jātakas and popular Buddhism.**—The *jātakas* are highly important for the history of Buddhism, as they give us an insight into popular Buddhism. The whole system of relating *jātakas* is based on the most popular dogma of *karma*, and the ethical ideal of this religion is not the Arhat (*q.v.*) who has attained to *nirvāṇa*,[1] but the Bodhisattva who, in all his former existences, has shown one or more of the great virtues by which he prepared himself for becoming the future Buddha. However high or low he may have been born, in every *jātaka* he is either helpful, kind, and self-sacrificing, or brave, clever, and even possessing supernatural wisdom. *Jātakas* like those of King Sivi (no. 499), who gave away his eyes as a gift, or of Prince Vessantara (no. 547), who even gave away his own children as a gift to the wicked Brāhman, are standard texts for this ideal of ethics. It may easily be understood how the theory of the *pāramitās*, which has become important in the Mahāyāna Buddhism, though not mentioned in the *Jātaka Gāthās*, but only in the *Buddhavaṁsa*, *Chariyāpiṭaka*, and the *Jātaka Commentary*, was already latent in the *jātaka* theory. It is no wonder that the *jātakas* belong as much to the Mahāyāna as to the Hīnayāna Buddhism. They are indeed the common property of all Buddhist sects in all Buddhist countries. They were the chief vehicle of Buddhist propaganda, and are the chief witnesses of popular Buddhism.

[1] This is true, though the commentator sometimes says that the Master delivered his sermon (*dhammadesanā*) in such a way as to lead up to Arhatship (*e.g.*, *Jātaka*, ed. Fausböll, i. 114, 275); but the moral taught in the *jātakas* has nothing to do with the monastic ideal.

As to the popularity of the *jātakas*, it is sufficient to quote the words of R. Spence Hardy, *Manual of Budhism*[2], London, 1880, p. 108: 'The Singhalese will listen the night through to recitations from this work, without any apparent weariness; and a great number of the Jatakas are familiar even to the women.' On their popularity in Burma see Mabel H. Bode, *Pali Literature of Burma*, London, 1909, p. 81. The *Jātaka Book* was the source from which Buddhist poets in Burma drew their inspiration for centuries (*ib.* pp. 43 f., 53).

LITERATURE.—Numerous *jātakas* (and *avadānas*) have been translated into Tibetan and Chinese. See A. Schiefner, 'Indische Erzählungen,' *Mélanges asiatiques tirés du bulletin de l'académie impériale des sciences de St. Pétersbourg*, vii. and viii., 1876 and 1877, and 'Mahākātyāyana und König Tschaṇḍa-Pradyota, ein Zyklus buddhistischer Erzählungen' (*Mémoires de l'académie imp. des sciences de St. Pétersbourg*, 1875); W. R. S. Ralston, *Tibetan Tales derived from Indian Sources*, London, 1882; W. W. Rockhill, 'Tibetan Buddhist Birth Stories, Extracts and Translations from the Kandjur,' *JAOS* xviii. [1897] 1 ff.; E. Chavannes, *Cinq cents contes et apologues, extraits du tripitaka chinois et traduits en français*, i.–iii., Paris, 1910–11.

**11. Jātakas in Buddhist art.**—The enormous popularity of the *jātakas* is also proved by the fact that representations from these stories are among the earliest productions of Indian art, and they have remained the favourite topics for sculpture and paintings through all the centuries in all Buddhist countries. In the 3rd or 2nd cent. B.C. we find them in India in Bhārhut and Sānchī (see above), in the 2nd cent. A.D. in Amarāvatī, and later on in the caves of Ajanta. The Chinese pilgrim Fa-hian, when visiting Ceylon in A.D. 412, saw at Abhayagiri 'representations of the 500 bodily forms which the Bodhisatta assumed during his successive births'; and Hiuen Tsiang mentions *stūpas* erected in honour of the Bodhisattvas whose deeds were related in *jātakas*. The famous temples of Boro-Budur in Java (9th cent. A.D.), of Pagan in Burma (13th cent. A.D.) and of Sukhodaya in Siam (14th cent. A.D.) are decorated with hundreds of bas-reliefs representing scenes from *jātakas*.

LITERATURE.—The bas-reliefs of Bhārhut have been described by A. Cunningham, *The Stūpa of Bhārhut*, London, 1879 (for the inscriptions see E. Hultzsch in *ZDMG* xl. [1886] 58 ff.; *IA* xxi. [1892] 225 ff.; and *JRAS*, 1912, p. 399 ff.). For the Sānchī reliefs see the plates in F. C. Maisey, *Sanchi and its Remains*, London, 1892. A list of all the *jātakas* represented in Bhārhut, Ajanta, and Boro-Budur is given by S. d'Oldenburg in *JRAS*, 1896, p. 623 ff., and *JAOS* xviii. [1897] 183 ff. See also A. Grünwedel, *Buddhistische Kunst in Indien*[2], Berlin, 1900, pp. 38 f., 59; A. Foucher, *L'Art gréco-bouddhique du Gandhāra*, i., Paris, 1905, p. 270 ff., and *Bulletin de l'école française d'Extrême Orient*, ix. [1909] 1 ff.; J. Griffiths, *The Paintings in the Buddhist Cave-Temples of Ajanta*, London, 1896–97; C. Leemans, *Bôrô-Boudour dans l'île de Java*, Leyden, 1874; L. Fournereau, *Le Siam ancien*, pt. 2, *AMG*, Paris, 1908. The bas-reliefs of the temple of Pagan have been described by A. Grünwedel, *Buddhistische Studien*, i. (*Veröffentlichungen aus dem königl. Museum für Völkerkunde*, v., Berlin, 1897), who also gives translations or abstracts of 55 *jātakas*.

M. WINTERNITZ.

**JAUNPUR.**—A city now the headquarters of the British District of the same name in the United Provinces of India; lat. 25° 45′ N.; long. 82° 41′ E. Muhammadans derive the name from Ulugh Khān Jūnān, afterwards Muḥammad Shāh II. ibn Tughlaq, whose name is said to have been given to the place by his cousin Fīrūz Shāh, the founder; Hindus derive it from Jamadagnipura, after the saint Jamadagni, or from Yavanapura, 'city of the Ionian Greeks or foreigners.' Before the city was founded by the Muhammadans, there was a local cult of Kerārbīr, a demon slain by the demigod Rāma. He is now represented by a shapeless stone smeared with red lead and turmeric, probably representing the blood of a sacrifice. It stands near one of the bastions of the fort; and, when this was blown up by British engineers after the Mutiny, the stone escaped uninjured, a fact which greatly increased the respect paid to it (*NINQ* ii.

[1892] 2; Cunningham, *Arch. Rep.* xi. 103 f.). The foundation of the present city was laid by Fīrūz Tughlaq on his return from an expedition into Bengal in A.D. 1360. Subsequently under Khwāja Jahān, who was viceroy of the Emperor Maḥmūd Tughlaq, in 1394 during the invasion of Tīmūr, it became independent; and for nearly a century the Sharqī, or eastern dynasty, continued powerful rivals of the Delhi kings, and formed one of the richest States in N. India. Finally they were overthrown by the Emperor Bahlūl Lodī in A.D. 1487. The religious buildings still in existence consist of mosques and tombs, the work of these Sharqī princes. They are the finest example of what has erroneously been called the 'Pathān' style, which is really Persian, but executed and modified by the native architects whom the conquerors were forced to employ. So beautiful was the city that it became known as the Shīrāz of India. The oldest of the mosques, that in the fort, dates from A.D. 1377. The three great mosques are in the city. The Aṭalā mosque, so called because it stands on the site of a temple dedicated to the Hindu goddess Aṭalā Devī, 'the permanently fixed one,' was the first erected by King Ibrāhīm Shāh (1401–40), and was finished in 1408. This is the most ornate and beautiful of the series, and Fergusson regarded the interior domes and roofs as superior to any other specimen of Muhammadan architecture of so early an age with which he was acquainted. The second, the Jāmi' Masjid, or Cathedral Mosque, of Ḥusain Shāh, is the largest in Jaunpur. It is distinguished by a majestic gate pyramid or propylon, of outline and mass almost Egyptian, supplying the place of a minaret, a feature as little known at the time in Jaunpur as it was in Delhi. It was completed in 1478. The third great city mosque, known as that of Bībī Rājī, or, as it is commonly called, Lāl Darwāzah, 'the red gate,' was founded by Bībī Rājī, queen of Maḥmūd Shāh (A.D. 1440–58).

'It is in the same style as the others, and its propylon displays not only the bold massiveness with which these mosques were erected, but shows also that strange mixture of Hindu and Mahomedan architecture which pervaded the style during the whole period of its continuance' (Fergusson, *Hist. of Ind. and East. Arch.*, p. 520).

With the fall of the local rulers the religious history of Jaunpur came to an end.

LITERATURE.—A. Führer, *The Sharqī Architecture of Jaunpur*, Calcutta, 1889, and *Monumental Antiquities and Inscriptions in the North-West Provinces*, Allahabad, 1891, p. 178 ff.; A. Cunningham, *Archæological Survey Reports*, xi. [1880] 102 ff.; J. Fergusson, *Hist. of Indian and Eastern Architecture*, London, 1876, p. 520 ff.

W. CROOKE.

**JAVA, BALI, AND SUMATRA** (Buddhism in).[1]—The Indian name of Java, known to the geographer Ptolemy (VII. ii. 29) as Iabadiu (ὃ σημαίνει κριθῆς νῆσος), is a sufficient proof that the intercourse between India and the Indian Archipelago dates from before the 2nd cent. of our era. A passage in the *Rāmāyaṇa* (IV. xl. 30), mentioning 'Yava-dvīpa, adorned by seven kingdoms, the Gold and Silver Island, rich in gold mines,'[2] apparently points to the fact that the name had a wider application, embracing both Java proper and Sumatra, as in later times with the Arabs. It is certain that Indian civilization had made progress, at least in Java, before A.D. 400, for the Chinese Buddhist Fa-Hian, who stayed for five months in the country (A.D. 412), says that 'various forms of error and Brāhmanism are there flourishing, while Buddhism in it is not worth speaking of.'[3] As to Sumatra we are wholly left in the dark, and it is not until far in the 7th cent. that the writings of another Chinese traveller, I-tsing, enable us to get insight into the condition of Buddhism at Śrībhoja, the capital of the kingdom of Bhoja, or Malayu, and situated near the present city of Palembang.[1] I-tsing went twice (A.D. 671 and 688) to Śrībhoja, and stayed there some seven years (688–695), studying and translating Sanskrit sacred texts. He tells us that the king of Bhoja—whose name he does not mention—and the rulers of the neighbouring islands were adherents of Buddhism, and that the capital was a centre of learning, where more than 1000 priests investigated and studied all the subjects that were taught in India. The great majority of the Buddhists both in Bhoja and in other islands belonged to the sect of the Mūla-sarvāstivādins, though occasionally some had adopted the tenets of the Sammitīyas, whereas two other sects had newly been introduced. All these sects belonged to the great division known under the name of Hīnayāna. There were in Malayu only a few Mahāyānists.

It is a matter of evidence that Buddhism must have been introduced into Sumatra and adjacent isles long before the time of I-tsing, and that the first propagandists belonged to one or more sects of the Northern Hīnayāna. Yet we see that in his days Mahāyānists were already making their appearance in Malayu. There is a notice in Tāranātha's *History of Buddhism* that Dharmapāla, the celebrated Mahāyānist Professor in the College of Nālandā before Hiuen Tsiang was staying there, went to Suvarṇa-dvīpa in his old age.[2]

Whatever may be the exact value of I-tsing's statement about the prevalence of the Hīnayāna in his own days, it is certain that in the 8th cent. the Mahāyāna had acquired a firm footing in Java. A Sanskrit inscription found between Kalasan and Prambanan, not far from Yogyakarta, commemorates the erection of a statue and sanctuary of the goddess Āryā Tārā (the female counterpart or *śakti* of the Bodhisattva Avalokiteśvara), together with an abode for monks versed in the rules of discipline (*Vinaya*) of the Mahāyāna. The date of the inscription is 700 Śaka (A.D. 778); the donor is a king of the Śailendra dynasty, who, as a further mark of his favour to his spiritual teacher, who had moved him to his pious work, granted to the Saṅgha the village of Kālasa.[3] It is remarkable that the inscription shows a kind of writing usual in Northern India, whereas most of the other Sanskrit inscriptions in Java are in the common Old Javanese characters which have their origin in Southern India. The inscription of 700 Śaka is, therefore, a sufficient proof that the Mahāyānists who enjoyed the king's favour came from Hindustān proper or the Western parts of Bengal. The remains of the sanctuary dedicated to Tārā have been recognized in what nowadays is known as Chaṇḍi Bening or Chaṇḍi Kalasan.[4]

All the splendid monuments of architecture and decorative art which arose in Java after the 8th cent. bear the unequivocal stamp of Mahāyānism, except, of course, those which are the works of Brāhmanists, more especially Śaivites. The Mahāyānistic character shows itself unmistakably in the images of the honoured Dhyānibuddhas or Jinas, as they are commonly called in Tibet and Java, and of the Bodhisattvas along with their *śaktis*.

[4] Explored and described by J. W. Yzerman, *Beschrijving der oudheden nabij de grens der Residenties Soerakarta en Djogdjakarta*, The Hague, 1891.

The most renowned and best explored monuments and groups of religious buildings, besides the sanctuary at Kalasan, are the so-called Chaṇḍi Sari, Chaṇḍi Sewu, and Chaṇḍi Plaosan;[1] the gorgeous sanctuary of Boro-Budur;[2] the beautiful shrine at Mendut;[3] and Chaṇḍi Jago.[4]

There were in Java down to the end of the Middle Ages two, so to speak, recognized State religions: Śaivism and Mahāyānism. At all great solemnities—the inauguration of kings, royal princes, chief commanders of the army—both religious communities were represented by their priesthood, the Śaivas and Saugatas. The relation between the two confessions was marked by a spirit of tolerance and friendliness, so much so that in course of time there sprang up a kind of mixed religion, in which the objects of worship originally belonging to either sect found their place. It is a significant fact that we find mention made of a certain sacred building at Usana, the lower part of which was devoted to the cult of Śiva, the upper part being a Buddhist shrine, the former adorned with an image of the god Śiva, the latter with a statue of the Dhyānibuddha Akṣobhya. This building had been erected by the King Kṛtanagara, who, according to the testimony of the poet Prapañcha, was a pious Buddhist when living, but after his death (Śaka 1214) was known by the posthumous name of Śiva-Buddha. In the sepulchral shrine where his remains were interred stood a Buddha image with the traits of the deceased monarch, and another statue representing Ardhanārīśvara with the traits of the same and his queen.[5] In general it may be said that the Mahāyānists of Java, far from being exclusive in their religious views, showed a tendency to syncretism. A striking illustration of it is afforded by a passage in the poem *Sutasoma* by Tantular, where it is explicitly stated that Śiva and Buddha are essentially one and the same.[6] The subject-matter of the poem is taken from the *Sutasoma Jātaka*, well known from its Sanskrit and Pāli versions, but the manner of treatment and the spirit of the whole in the Old Javanese poem are quite different. Among the works of mediæval Javanese literature which have come down to us there are comparatively few treating of subjects connected with Buddhism. Yet Buddhist authors were not lacking in activity, contributing to the store of literature by composing poems on subjects taken from Brāhmanical lore. A thoroughly Mahāyānistic production is the legend of Kuñjarakarṇa.[7] A kind of compendium of the Mahāyāna system in Old Javanese, interspersed with Sanskrit verses, is the *Kamahāyānikan*,[8] in which are treated the division of the Buddhas in past, present, and future Tathāgatas; the six Pāramitās: *dāna*, *śīla*, etc., well known from other sources; and then the four Pāramitās: *maitrī*, *karuṇā*, *muditā*, and *upekṣā*, the first being called the essence (*tattva*) of Lochanā, the second of Māmakī, the third of Pāṇḍaravāsinī (more commonly called Pāṇḍarā), the fourth of Tārā. The compendium further treats of the five attachments (*yogas*); the four *bhāvanās*; the four *āryasatyāni*;

then follows a description of the *mudrās* (attitudes of fingers) of Śākyamuni, and an enumeration of the five *skandhas*, which are brought into connexion with the five (Dhyāni) Tathāgatas. We also find an enumeration of the *śaktis* of those Tathāgatas, and, finally, precepts on the treatment of corpses.

The worship of the five Dhyānibuddhas and their female counterparts, or *śaktis*, as taught in the *Kamahāyānikan*, must have been very popular in Java, as is attested by the numerous images of those supernatural beings discovered in or near sacred buildings.

During the whole period in which Buddhism was flourishing in Java, it found favour with kings and royal families. The earliest document bearing witness to marked favour is the inscription of Kalasan mentioned above. We know also from a copper grant, dated 861 Śaka (A.D. 949–50), that the King Mpu Siṇḍok, otherwise called by his title Śrī Iśāna Vijaya Dharmottuṅga Deva, confessed Buddhism.[1] His daughter, who reigned after him under the title of Śrī Iśāna Tuṅga Vijayā, was likewise a pious votary of Buddhism.[2] The King Kṛtanagara, who reigned from 1194 to 1214 Śaka (A.D. 1272–92), is glorified by the court poet Prapañcha as being a most devout Saugata,[3] though his posthumous name of Śiva-Buddha would seem to point to his being a latitudinarian.[4] He calls himself, however, in a Sanskrit votive inscription an *upāsaka* of the Mahāyāna. The inscription, in more than one copy, has been discovered near Chaṇḍi Jago.[5] Kṛtanagara's granddaughter, Tribhuvanattuṅgadevī, who ruled as sovereign over the whole of Java during the minority of her son, the famous Hayam Wuruk, in the middle of the 14th cent. of our era, was of the same persuasion as her grandfather; likewise her consort, the Prince Kṛtavardhana of Singhasāri, her sister, and the consort of the latter.[6] The Queen Dowager of the King Kṛtarājeśa, the founder of Majapahit, is described as an energetic woman, and so earnestly devoted to the religion of Buddha that in her old age she became a nun.

Apart from all documentary evidence in writings, the remains of splendid buildings destined for the worship or use of Buddhists cannot fail to leave the impression that those architectural monuments must have been erected by the highest classes of society. The majority of the more gorgeous Chaṇḍis on Javanese soil are undoubtedly Buddhistic, whereas out of the whole mass of literature and inscriptions on stone or copper few have any connexion with Buddhism. To explain this fact it may be assumed that the great bulk of the population were Śaivites. It is quite certain that in the Middle Ages, before the irruption of Muhammadanism, Javanese society was based upon the caste system, just as in India, and that in civil and criminal law the Code of Manu was the chief authority. The present state of things in Bali, where such Javanese as remained faithful to their religion have found a refuge after the fall of Majapahit in the beginning of the 16th cent., tends to confirm the conclusion that numerically the Śaivites, or, more generally, the Brāhmanists, had the superiority. For the great majority of the Balinese confess Śaivism, with an admixture of practices surviving from an ancient animistic religion. It appears from a notice in the *Nāgarakṛtāgama*[7] that in the 14th cent. there were established two communities or sects of Buddhists

in Bali, one consisting of followers of the Vinaya, *i.e.* the regular clergy, the other of the so-called Vajradharas, evidently identical with the Vajrāchāryas in Nepāl and Tibet, and consequently Tantrists. There are sufficient proofs of Tantrism having had its votaries also in Java. Nowadays the number of Buddhists of any description in Bali is insignificant.

As to Sumatra, there is a blank in our knowledge of the conditions of Buddhism from the days of I-tsing down to the middle of the 14th cent., the time when the King Ādityavarman was ruler of Middle Sumatra. It is known from sundry inscriptions, ranging from 1265 to 1278 Śaka (A.D. 1342–56), that Ādityavarman was a staunch Mahāyānist,[1] and that he was the donor of a statue of the Bodhisattva Mañjuśrī in a temple in Java, the queen of which island was a relative of his.[2] An inscription on the back of a statue of the Jina Amoghapāśa, discovered at Padang Chaṇḍi in Sumatra, informs us that it was dedicated by order of the same king.[3] As Amoghapāśa is a Tantric form of Avalokiteśvara, the inscription is an indication of Tantrism having its votaries in Sumatra. In an inscription on the tombstone of Ādityavarman he is glorified as an *avatāra* of Lokeśvara.[4] It may be remarked that the Sanskrit of the Sumatran inscriptions, contrary to what we find in Java, is most barbarous.

In the days of Ādityavarman the northern part of Sumatra had already been Islāmized, and it is highly probable that a short time after his reign Muhammadanism triumphantly spread in Middle Sumatra. Besides the inscriptions of Ādityavarman, the statue of Amoghapāśa, an image of the Bodhisattva Lokeśvara, and some architectural remains of a doubtful character, nothing now remains of Buddhism. Traces of Indian influence however, are not wanting: the religious notions of the Bataks and their astrological superstitions are largely tinged with Brāhmanistic or at least non-Buddhistic ideas and practices.

LITERATURE.—This is fully given in the footnotes.

## JEALOUSY.—See ENVY.

## JEROME.—I. Life.

—Jerome was born at Stridon, a town on the confines of Dalmatia and Pannonia (*de Vir. Illust.* 135). According to F. Bulič,[5] the ancient Stridon, which was demolished by the Goths in A.D. 378, may now be identified with the modern Grahovo Polje. The birth of Jerome is assigned by Prosper[6] to A.D. 331, but various statements from his own pen seem rather to point to a later date—somewhere between 340 and 350.[7] He was born of Christian parents; his father was named Eusebius, and was evidently well-to-do. He received his elementary education in his own home at Stridon, and then, together with his friend Bonosus, went to Rome in order to study grammar and the rhetorical philosophy. He became a pupil of the renowned grammarian Donatus,[8] and gained a thorough knowledge of the Latin classics, especially of Cicero and Vergil.[9]

Goelzer, *Étude lexicographique et grammaticale de la latinité de S. Jérôme*, Paris, 1884.

His teacher in rhetoric was not, as was formerly supposed, the veteran rhetorician C. Marius Victorinus.[1] He did not study Greek during his early residence in Rome, but presumably learned it later in Antioch.

He was baptized in his early manhood by Bishop Liberius († 366) in Rome (*Ep.* xv. 1). Notwithstanding this, he fell for a time into serious moral errors (*Ep.* iv. 2), but thereafter manifested once more an enthusiastic piety, visiting the graves of the apostles and martyrs in the Catacombs (*Comm. in Ezech.* xii. 40). From Rome he travelled, in the company of Bonosus, to Gaul, and stayed for a while in the still semi-barbaric district of the Rhine (*Ep.* iii. 5). While in Trèves he began to busy himself with theological work, copying, on behalf of his friend Rufinus, the *Commentary on the Psalms* and the *de Synodis* of Hilary of Poitiers (*Ep.* v.). He then went to Aquileia, where he connected himself with an earnest-minded group of men, including Chromatius, subsequently bishop of Aquileia, and his friend Rufinus, a native of the town. It was in Aquileia that he took a decisive step towards carrying out a resolution that he had already formed in Trèves, viz. to devote himself to the ascetic life. All at once, from reasons that we do not know, he set out with a few friends upon a journey to the East (A.D. 373). Having reached Antioch, he lingered there for some time, and attended the prelections of the celebrated Antiochene theologian Apollinaris of Laodicea (*Ep.* lxxxiv. 3). It was during this period of indecision as to whether he should become a hermit or not that he had the experience, known as his 'anti-Ciceronian vision' (*Ep.* xxii. 30), in which Christ appeared to him, asked him regarding his religious profession, and, in answer to Jerome's claim to be a Christian, said: 'Thou speakest falsely; thou art a Ciceronian, not a Christian; for where thy treasure is, there is thy heart also.' For a considerable time afterwards Jerome renounced the study of the classics (*Comm. in Gal.* iii. præf.); but at a later date, in the monastery at Bethlehem, we find him engaged in instructing youths in Vergil and Cicero (Rufinus, *contra Hieron.* i. 28). Very soon after his vision he went to live in the wilderness of Chalcis as an eremite, and there, amid severe self-castigations, he began the study of Hebrew under a converted Jew (*Ep.* cxxv. 12), while he was also involved in the dogmatic conflicts that divided the Christians of Antioch into various parties. Being, as a native of the West, quite unable to decide between the older Nicæan and the younger Orthodox groups who were here at feud with each other, he appealed to Pope Damasus for advice as to which party he should join. Subsequently he attached himself to the anti-Meletian bishop, Paulinus of Antioch, by whom he was ordained a presbyter, though on the understanding that he might still remain a monk, *i.e.* that he should not be compelled to undertake the cure of souls (*contra Joh. Hierosolym.* 41).

Jerome then went to Constantinople, where he came into close touch with the great Cappadocian, Gregory of Nazianzen, at that time bishop of the Eastern capital. Gregory drew his attention to the theology of Origen. On the invitation of Damasus, Jerome returned in 382 to Rome, where a synod, called that year, was to meet for the purpose of settling the Antiochene schism (*Ep.* cxxvii. 7). Without any clearly defined function or any distinct charge,[2] but rather in a confidential position to which no responsibility attached, he

1 Cf. Grützmacher, i. 118.

2 It was on this ground that later tradition made Jerome a cardinal; cf. Grützmacher, i. 38 ff.

assisted the Roman bishop in the composition of official papers (*Ep.* cxxiii. 10). Moreover, during his residence at Rome (382–385) he was commissioned by Damasus to revise the Latin NT on the basis of the Greek text; and this, again, proved to be the initiative to his greatest literary achievement—his translation of the OT from the Hebrew. In Rome he gathered around him a band of women of high rank, to whom he expounded the Scriptures, and whom he inspired with enthusiasm for the ascetic ideal. The more eminent personalities in this group were Marcella and Paula, both widows, and the two daughters of the latter, Blaesilla and Eustochium. By his mordant criticisms of the Roman secular clergy he alienated the sympathies which at the outset he had won, and which, he ambitiously hoped, would secure for him at the death of Damasus (A.D. 384) the succession to the See (*Ep.* xlv. 3). In August 385 he left the ungrateful city in the company of his brother Paulinian and his friend Vincentius, in order that he might return from Babylon to Jerusalem (*Ep.* xlv. 6). Paula and her daughter Eustochium followed them shortly afterwards. In order to give no occasion for scandal, the two parties had arranged to make the journey separately, but they met again in Antioch. From this point they started on a pilgrimage through the Holy Land, visiting, first of all, Jerusalem and Bethlehem, then the South of Palestine, and, finally, the sacred sites of Galilee—Nazareth, Cana, Capernaum, and the Sea of Tiberias (*Ep.* cviii.). Somewhat later they proceeded to Egypt, and stayed a month in Alexandria, where Jerome attended the lectures of Didymus the Blind, the head of the long-renowned catechetical school (Rufinus, *contra Hieron.* ii. 12). Thence they visited also the Nitrian monastic colony—the 'city of the Lord,' as Jerome calls it—and then, in the late summer of 386, returned to Bethlehem, where they settled permanently. Here they had to be content with somewhat cramped quarters for three years—until, in fact, the monastic buildings for the lodgment of monks and nuns were quite complete. The monastic houses built at Paula's expense were four in number—one for monks, and three for nuns—while in addition to these a hospice was erected for the entertainment of pilgrims on their way to Jerusalem.

The period of Jerome's stay in the monastery at Bethlehem—the last thirty-four years of his life—was by far the most fertile in literary work. His manner of life at this time is described by Sulpicius Severus (*Dial.* i. 9) from information supplied by a monk named Postumianus, who had spent six months in Bethlehem:

'He is ever occupied with reading, with books; he takes no rest by day or night; he is always either reading or writing.'

Yet Jerome did not find in his cloister the peace he had come to seek. His passionate nature led him to take part in all the conflicts that were agitating the Church. In 392 his controversy with the Roman ascetic Jovinian brought him once more into touch with the capital. He was subsequently drawn into the Origenistic controversies—in conflict, first, with John, Bishop of Jerusalem, and then with his former friend, but now embittered enemy, Rufinus. Towards the close of his life we find him issuing biting pamphlets against the Spanish priest Vigilantius and the Pelagians. Among the events of the world-politics of the day, the sack of Rome at the hands of Alaric in 410 affected him profoundly (*Comm. in Jer.* vii. 2, *Ep.* cxxviii. 5). Paula had died in 404; in 410 Marcella also passed away (*Ep.* cxxvii.). In 416 the religious houses at Bethlehem were assailed by a band of Pelagians, and Jerome was able to save his life only by a hurried flight to a stronghold, his monastery being demolished (*Ep.* cxxxviii.). Then came the death of Eustochium, his most devoted adherent, and shortly afterwards, on the 30th of September 420, Jerome himself, now old, lonely, and weary of life, passed away at Bethlehem (Prosper, *Chronicon*, ed. Mommsen, *Chron. min.* i. 469).

**2. Writings.**—Jerome left behind him a large and varied mass of literary work, which may be classified as follows.

(1) *Letters.*—These form the most valuable source of information regarding his life.[1] They are unquestionably the most brilliant productions of his fertile brain, and furnish a richly detailed picture of contemporary life and culture. They reflect his personality in the most vivid way. They date variously from the interval between 373 (*Ep.* i.) and 420 (*Ep.* cxliv.), and their contents show a great variety, letters treating of matters of scholarship, and, in particular, of exegesis, appearing among purely personal communications. Jerome corresponded with most of the outstanding people of his time—*e.g.*, Pope Damasus (*Epp.* xv., xvi., xix., xxi., xxxvi.), Theophilus of Alexandria (*Epp.* lxiii., lxxxii., lxxxvi., lxxxviii., xcix., cxiv.), Augustine (*Epp.* cii., ciii., cv., cxii., cxv., cxxxiv., cxli.–cxliii., possibly the most interesting group of the whole series, exhibiting, as they do, the diverse characters of the two greatest Fathers of the Western Church[2]), Paulinus of Nola (*Epp.* liii., lviii.), and Pammachius, the Roman senator who became a monk (*Epp.* xlviii., xlix., lvii., lxvi.). He writes with unusual fullness when he seeks to instruct his correspondents in the rudiments of the ascetic life—*e.g.*, in *Ep.* xxii., to Eustochium, on the preservation of virgin chastity; *Ep.* xiv. to Heliodorus, on the glory of the hermit's life; *Ep.* cvii., to Laeta, on the training of her daughter; *Ep.* liv., to Furia, and cxxiii., to Ageruchia, on maintaining the condition of widowhood; *Ep.* lii., to Nepotianus, on the life of clergy and monks. Engaging portraits of his associates are given in his obituary notices of Nepotianus (*Ep.* lx.), Fabiola (lxxvii.), Paula (cviii.), and Marcella (cxxvii.).

*Ep.* xxxiii., to Paula, on the writings of Varro and Origen, which Vallarsi (see Lit.) was able to give only in a fragmentary form, was first published in full by F. G. Ritschl, *Die Schriftstellerei des M. Terentius Varro und die des Origenes, nach dem ungedruckten Kataloge des Hieronymus*, Bonn, 1847.[3] Quite recently D. de Bruyne published four unquestionably genuine letters of Jerome, from MSS in the Escurial, in the *Revue bénédictine*, xxvii. [1910] 1–11, viz. two to the presbyter Riparius (to whom were addressed nos. cix. and cxxxviii. of the traditional collection), one to Bishop Boniface, and one to a certain Donatus. These newly discovered letters date from 418 and 419, and all alike deal with the Pelagian controversy. Two letters included by Vallarsi, viz. cxlviii., 'ad Celantiam matronam,' and cxlix., 'de Sollemnitatibus Paschae,' are certainly spurious, while the present writer is of opinion that the authenticity of the two 'ad amicum aegrotum,'[4] and of that 'ad Praesidium de cereo paschali,'[5] has not been proved.

(2) *Theological polemics.*[6]—The earliest of these is the *Altercatio Luciferiani et Orthodoxi* (Vallarsi, ii. 171 ff.), which was formerly supposed[7] to have

[7] So still Tracinski, p. 88 ff.

been written in Antioch in 379, but, as the present writer thinks,[1] falls rather within the years of Jerome's stay in Rome (382–385). In this work, which is in the form of a dialogue, he assails the opinions of those who followed Lucifer of Calaris, and especially their non-recognition of heretical baptism. To 382–384 must likewise be assigned the treatise *adv. Helvidium de perpetua virginitate B. Mariæ*, in which—in opposition to Helvidius, a resident in Rome—Jerome supports the doctrine of Mary's perpetual virginity, asserting that the Lord's brethren were in fact his cousins. The *adv. Jovinianum libri II.* was composed in Bethlehem (392–393). Jovinian, the Roman ascetic, had asserted that the state of celibacy was in no way superior to that of widowhood or marriage, that the regenerate were essentially without sin, that fasting was of no peculiar merit, and that all the regenerate would attain the heavenly reward in equal degree. Jerome assailed the positions of Jovinian with great acerbity, awaking a resentment that forced him to vindicate himself in *Ep.* xlviii., the *Apologeticus ad Pammachium pro libris contra Jovinianum*, in which he somewhat modified the severity of his strictures upon marriage in the *adv. Jovinianum*. In 399, amid the controversy regarding the orthodoxy of Origen, he wrote the unfinished work *contra Johannem Hierosolymitanum* (John, bishop of Jerusalem). In 402 he composed his *Apologia adv. Rufinum* in two books, to which he added a third in the following year. These, together with the *Apology* (two books) of Rufinus against Jerome, form our most valuable authorities for the Origenistic controversy, in the course of which Jerome renounced the heresies of Origen. The short but extremely bitter pamphlet against the Spanish presbyter Vigilantius, in which Jerome defends the worship of martyrs and relics, the keeping of vigils, and the monastic life, dates from 406. Finally, in 415, he wrote the *Dialogus adv. Pelagianos* in three books—a work in masterly form, in which he seeks to controvert the views of Pelagius from the standpoint of the Catholic doctrine current in his day.

(3) *Historical works.*—The most extensive historical work from Jerome's pen is the *Chronicon omnimodæ historiæ* (*de Vir. Illust.* 135), a translation of the second part, *i.e.* the chronological tables, of the *Chronicles* of Eusebius of Cæsarea.[2] He followed the original as far as it went (A.D. 325), making additional notes, and then wrote a supplement covering the period between 325 and 378. In spite of many errors and oversights, the work is a mine of information for that period.

We have from Jerome's hand also three biographies of monks. The *Vita Pauli eremitæ* was written between 374 and 379, and its matter was in all likelihood drawn from the monastic traditions of Egypt,[3] though fancy plays a large part in its composition. The *Vita Malchi monachi captivi*, based upon information given to him by the aged Malchus himself in the wilderness of Chalcis,[4] and the *Vita Hilarionis* (the founder of monasticism in Southern Palestine)[5] date from the early years of Jerome's residence in Bethlehem (*c.* 386–391). All three are characteristic examples of the monastic literary *genre*.

The most important of Jerome's historical writings, however, is his *de Viris Illustribus*.[1] This once highly extolled work has been shown to be a gross instance of his literary methods;[2] it is virtually taken piecemeal from Eusebius, *HE*. Nevertheless, we cannot deny Jerome the distinction of having in this work made the first attempt to compose a history of Christian literature—a task in which he had many successors. The little book was translated into Greek by his friend Sophronius.[3]

(4) *Exegetical works.*—(*a*) Under this head come, first of all, three works dating from 386–391, viz. *de Situ et nominibus locorum Hebraicorum*—in reality a translation of the *Onomasticon* of Eusebius of Cæsarea,[4] and for modern scholars a valuable contribution to the topography of Palestine; *Interpretationes hebraicorum nominum*,[5] a work based, according to the preface, upon a now lost treatise of Philo, which Origen extended by adding the NT proper names; and *Quæstiones hebraicæ in libro Geneseos*,[6] an aphoristic commentary on Genesis, the value of which lies in the interpretations derived from the Jewish Haggādā and communicated to Jerome by the Rabbis—interpretations such as he uses also in his other OT commentaries.[7]

(*b*) *The OT commentaries.*—In 389–390 Jerome composed his commentary on Ecclesiastes; in 392 those on the Minor Prophets Nahum, Micah, Zephaniah, Haggai, and Habakkuk; in 395–396, on Jonah and Obadiah; and in 398 on the ten visions of Isaiah 13–23. During the period between 392 and 402 he wrote his *Commentarioli in Psalmos*.[8] In 406 came his exposition of Hosea, Joel, Amos, Zechariah, and Malachi; between 406 and 408, that of Daniel; 408–410, Isaiah; 410–415, Ezekiel; between 415 and his death in 420, Jeremiah. Jerome's work on the last-named book was interrupted by his death, no more than the first thirty-two chapters having been dealt with. These commentaries show a certain vacillation between the historical and allegorical methods, and are specially valuable because of the Jewish exegesis which they have brought down to us. In the exposition of Daniel, Jerome makes concessions to Porphyry.

(*c*) *The NT commentaries.*—In 386–387 Jerome wrote expositions of Philemon, Galatians, Ephesians, and Titus, in all of which he was specially indebted to the now lost commentaries of Origen. In 398 he composed his commentary on Matthew—valuable by reason of its extracts from the Gospel to the Hebrews. His translations of that Gospel into Greek and Latin are lost. We are unable to determine the date of his exposition of Revelation, which is in no sense an independent work, but an adaptation of the commentary of Victorinus of Pettau († 303), and in which the chiliastic interpretation of Victorinus is superseded by a spiritualistic one.[9]

(5) *Translations.*—A number of the works mentioned above are in part mere translations. But Jerome's renderings of Origen's *Homilies*—fourteen on Jeremiah, fourteen on Ezekiel, and nine on Isaiah—are translations pure and simple, and were finished between 379 and 381.[1] Between 382 and 384 he translated two *Homilies* of Origen on the Song of Songs; between 386 and 391 the *de Spiritu Sancto* of Didymus; between 388 and 391 thirty-nine *Homilies* of Origen on Luke; and in 404 the *Monastic Rules* of Pachomius, Theodore, and Orsisius, and also their *Letters* and their *Verba mystica* designed for Paula's monasteries. Of his literal translation of Origen's chief systematic work, *de Principiis*, which he executed (399) with the intention of crushing out the very incorrect version of Rufinus, only a few fragments remain in *Ep.* cxxiv., 'ad Avitum.'[2]

Jerome's most outstanding achievement in translation, however, is his version of the Bible, to which he devoted some twenty years of intense industry, and in which—in spite of many defects—he exercised an almost unique gift as a translator. In the NT his work is merely a revision of the Old Latin text. He worked at the four Gospels from 382 to 384, at the Pauline Epistles till 385, and at the remaining books till 398.[3] In the OT he began with a revision (384) of the Old Latin Psalter from the LXX version—the so-called *Psalterium Romanum*; and between 386 and 391 he made a second revision, from the Hexaplar (Theodotion's) version of the LXX—the *Psalterium Gallicanum.* He likewise revised the Latin text of other OT books from the Hexapla, but of these only his revision of Job[4] and his prefaces to the Solomonic books (Vallarsi, x. 435) and Chronicles (*ib.* 433) survive.

Jerome began his translation of the OT from Hebrew—the *veritas Hebraica*—into Latin before 392. He translated, first of all, the two books of Samuel and the two of Kings, but issued beforehand the famous *Prologus Galeatus* (Vallarsi, ix. 453 ff.), in which he accepts the Hebrew canon, enumerating twenty-two canonical books, and excluding the Apocrypha. By 393 he had completed the sixteen Prophets (including Daniel) and the Psalms,[5] Job followed in 393, Ezra and Nehemiah before 395, Chronicles in 396, the Solomonic Books in 398, the Pentateuch in 398–404, Esther in 404, and Joshua, Judges, and Ruth in 404–5. He likewise made a most perfunctory translation of the Apocryphal Books of Judith and Tobit from the Aramaic, but we are unable to fix the date of these versions. In spite of numerous errors, Jerome's translation of the Bible is a most praiseworthy achievement, inasmuch as, taken all in all, it maintains a sort of middle course between an extreme literality on one hand and an extreme freedom on the other.[6]

(6) Finally, a number of Jerome's *discourses* on texts from the Psalms, Mark, and other books of Scripture have come down to us. They were preached between 392 and 401 to the inmates of his monastery, and were afterwards committed to writing by them.[1]

3. **Significance.**—Jerome was no great creative spirit, as was Augustine, but he was certainly the most learned of the Latin Fathers. Not only was he equipped with an extensive knowledge of profane and sacred literature, but he surpassed all the Fathers in his mastery of Hebrew. His significance lies in the fact that he stands supreme among those who mediated the religious heritage of Hebrew and Greek antiquity to the Latin world. His personality was not of the most attractive kind, although the strictures passed upon him in this respect—*e.g.*, by Luther—are often unduly severe. He had the natural temperament of the scholar, but his work is frequently impaired by lack of thoroughness. He was passionate and sensuous, yet he was the champion of the most rigid asceticism. Full of petty vanity and learned rivalry, he was self-assertive and unjust towards his opponents; and, though destitute of the constructive theologian's gift, he liked to pose as a pillar of orthodoxy. By his translation of the Bible he exercised an immense influence upon the development of the Church and its theology in succeeding centuries, and in that work he produced what must be numbered among the supreme achievements of the Christian mind in any age.

LITERATURE.—Books dealing with special parts or aspects of Jerome's work have been fully referred to in the course of the article. Here we note further:—

i. COMPLETE EDD. OF HIS WORKS.—D. Erasmus, 9 vols., Basel, 1516–20; Marianus Victorius, Bishop of Rieti, 9 vols., Rome, 1565–72; J. Martianay and A. Pouget, 5 vols., Paris, 1693–1706; Dominicus Vallarsi, 11 vols., Verona, 1734–42, and 11 vols., Venice, 1766–72, the latter reprinted in Migne, *PL* xxii.–xxx.; *CSEL*, Vienna, containing so far *Ep.* i.–lxx. (vol. liv.), and *Ep.* lxxi.–cxx. (vol. lv.), ed. J. Hilberg, 1910 and 1912, and *In Hieremiam prophetam libri sex* (vol. lix.), ed. S. Reiter, 1913.

ii. BIOGRAPHIES.—S. L. de Tillemont, *Mémoires pour servir à l'hist. ecclés.*, xii., Paris, 1707; D. Vallarsi, *Vita Hieronymi*, in *Opera*, xi., Verona, 1742; J. Stilting, in *AS*, Sept. viii. [1865] 418–688; L. Engelstoft, *Hieronymus Stridonensis interpres, criticus, exegeta, historicus, doctor, monachus*, Copenhagen, 1797; F. Z. Collombet, *Hist. de S. Jérôme*, 2 vols., Paris, 1844; O. Zöckler, *Hieronymus, sein Leben und Wirken aus seinen Schriften dargestellt*, Gotha, 1865; A. Thierry, *S. Jérôme, la société chrétienne à Rome et l'émigration romaine en Terre-Sainte*, 2 vols., Paris, 1867, [2]1875; G. Grützmacher, *Hieronymus, eine biographische Studie zur alten Kirchengeschichte* 3 vols., Berlin, 1901–08.

G. GRÜTZMACHER.

# JESUITS.

**JESUITS.—1. Origin.**—The Jesuits, or members of the Society of Jesus, are technically an institute of 'Clerks Regular,' men devoted especially to the cure of souls and to the works of mercy spiritual and corporal, like the Theatines, *e.g.*, or the Barnabites (*q.v.*), both of which are slightly older in date. The Society is not a sect nor even a theological school, but simply a religious Order (that is to say, a body of men living under vows of poverty, chastity, and obedience), which, though differing in many respects from the old monastic ideal, has its recognized place in the organization of the Roman Catholic Church. In accordance with this, it is obvious that the term 'Jesuitism,' which, almost as much as the word 'Jesuitry,' originated with critics who attribute to the Order a certain distinctive spirit independent of, and more or less in conflict with, the teaching of the Church to which it belongs, would be deprecated by all who bear the name of Jesuits, in so far as it implies the existence of a doctrine, system, policy, or line of conduct peculiar to them. Let it be said at the outset that it was certainly not the object of the founder to create such a spirit. Nothing would have been more abhorrent to St. Ignatius Loyola than the erection of an *imperium*

kommentar des Bischofs Victorinus von Pettau' in *Theologisches Literaturblatt*, xvi. [1895] 193–199; cf. also Grützmacher, iii. 235–240.

[1] The authenticity of the version of the *Homilies* on Isaiah was questioned by Vallarsi, with whom O. Zöckler agrees. The present writer (i. 18) regards the translation as indubitably Jerome's.

[1] These sermons were re-discovered by G. Morin and published by him in the *Anecdota Maredsolana*, iii. 2 (1897), 3 (1900).

*in imperio* either in the domain of external discipline or in the domain of ideas. At a crisis when many were falling away, his one aim was to provide a company of devoted priests wholly subservient to the needs of the Church, ready for any form of service, and for greater expedition made immediately dependent upon the will of the sovereign pontiff. The spirit of his Society was to be exceptional only in this, that its members, as the result of a religious training unusually protracted and severe, were to be men formed upon the model of Jesus Christ Himself, full of zeal, detachment, and self-sacrifice, and of a virtue so highly tempered that they might safely be exposed to an extraordinary strain. This was the founder's conception, and it was realized by many of his followers, especially in his own lifetime and in the first century or two after his death. To admit that with the lapse of years some relaxation of these high ideals may have taken place in the Order is only to admit that the work of Ignatius was a human work and was carried out by human means.

Ignatius Loyola (*q.v.*), converted from a careless, if not a sinful, life during the long convalescence which followed a wound received in battle (1521), determined to fit himself for an apostolic vocation by the study of theology. Passing from Alcalà to Salamanca and from Salamanca to Paris, he there (1528–35) gathered a handful of companions around him, who in 1534 took vows of poverty and chastity together, and, placing themselves shortly afterwards at the disposal of the Holy See, were formally approved as a religious Order by Pope Paul III., 27 Sept. 1540. Although it may be said that Loyola felt his way only by degrees to the complete organization of the Society which he founded, one dominant idea is discernible in all his projects. From the first, as might be expected of an old soldier, his conception was a military one. The Spanish name of the Order, Compañía de Jesus, though it may be correctly translated 'Society of Jesus,' is at least patient of a military interpretation. It probably first conveyed the idea of a 'company,' *i.e.* a band commanded by a captain. The term Jesuit (Jesuita), let us note parenthetically, was not chosen by the founder. It appears first in 1544, and was then used by opponents as a nickname (see Astrain, *Hist.* i. 183), but eventually was tacitly acquiesced in even by members of the Order. The military conception is specially emphasized in the fundamental meditations of the 'Spiritual Exercises,' that manual of ascetical training devised by Loyola and communicated to his followers, to be used first of all in securing their own progress in virtue, and afterwards for the salvation of their neighbours. The characteristic meditations known as the 'Kingdom of Christ' and the 'Two Standards' are parables of human warfare. In the first Jesus Christ is set before us as a leader appealing for volunteers in a crusade against the infidel. In view of His promise that in all hardships He will share alike with His men and that they shall share with Him the fruits of victory, the conclusion is pressed home that no right-minded Christian who possesses a spark of knightly courage can remain deaf to such a call. In the 'Two Standards' the character of the spiritual campaign is more closely studied. It is pointed out that the tactics of the enemy Satan are to enchain mankind and drag them down by love of money, worldliness, and pride. From this the conclusion is drawn that the only effective combatant on the side of Christ is the man who has bound himself to a life of actual poverty and humiliation after the example of the leader Himself. It is plain that all this makes appeal to two of the strongest instincts of human nature, instincts deeply rooted in the Spaniards of Loyola's day, viz. loyalty to the feudal chieftain, and the spirit of generous fortitude.

Now, it is this military ideal which above all supplies justification for the 'blind' obedience which Ignatius desired to be the distinctive characteristic of his followers.

'More easily,' he wrote in his famous letter on obedience, 'may we suffer ourselves to be surpassed by other religious Orders in fasting, watching, and other austerities of diet and clothing which they practise according to their rule, but in true and perfect obedience and the abnegation of our will and judgment, I greatly desire, most dear brethren, that those who serve God in this Society should be conspicuous.'

Insubordination is the soldier's most unforgivable crime, discipline a virtue which, so far as great bodies of men are concerned, comes even before courage. Consequently, in the military organization of his Compañía, Ignatius insisted on obedience most of all. 'Theirs not to make reply, theirs not to reason why, theirs but to do or die,' must be the soldierly ideal as long as the world lasts. And this was especially true of such a force as the Spanish knight had conceived, a lightly equipped force ready to take the field at a moment's notice in any forlorn hope, whatever the nature of the service required of them. The blind obedience of the Jesuits has often been made a matter of reproach, but in point of fact it was never meant by the founder to be an entirely blind obedience. It was 'caeca *quaedam* obedientia' even to him, and in almost every context when speaking of obedience he limited its scope to things which were not sinful. For example, he says (*Summarium*, cap. 31) that his disciples

'must endeavour to be resigned interiorly . . . conforming their will and judgment wholly to the Superior's will and judgment in all things in which no sin is perceptible' ('in omnibus ubi peccatum non cerneretur').

The charge that St. Ignatius in the very text of his *Constitutions* (lib. vi. cap. 5) empowers a superior to bind his subjects to obedience even though compliance with the order involves the commission of a grievous sin—the famous *obligatio ad peccatum*—is based on a ridiculous misinterpretation of a formula well known to the earlier canonists (see Duhr, *Jesuiten-Fabeln*, p. 515 ff., and Monod's preface to Boehmer, *Les Jésuites*). Many writers, like L. von Ranke, John Addington Symonds, J. N. Figgis, and others, who have at first made this accusation upon inadequate evidence, have afterwards withdrawn it when they have given themselves time to consider the texts at leisure. Always regarding the priests of his Order as a *corps d'élite* likely to be called upon for special service, Loyola saw the necessity of, besides perfect obedience, equipment by an extremely severe training. Instead of a single year of noviceship, as in the older Orders, two years, abounding in tests of the most varied kind, were imposed upon every candidate before he was permitted to take vows. Even then the vows were 'simple,' not solemn. The recruit was bound to the Society, but not the Society to the recruit, and the Father General might still at any time dismiss him if he proved unsuitable. Practically speaking, a state of things soon resulted in which ordination to the priesthood could not be conferred much before the age of thirty, and the public vows, which finally marked a recruit's acceptance as a 'formed' member of the body, were even then permitted only after a sort of second noviceship, known as the 'third year of probation.' Thus, apart from a few exceptional cases, the fully fledged Jesuit was and is bound to be a man well over thirty, who for at least a dozen years has been going through a process of formation under strict control, a large part of the time having been spent in study, three years in purely spiritual discipline, and, ordinarily speaking, another long period in the teaching or moral supervision of youth. Such a system seems

well calculated in itself to produce a type of ecclesiastic fitted to cope with the difficulties and temptations of an apostolic life. It stands, at any rate, in acute contrast to the haste with which the earlier monastic and mendicant Orders often bound their members by solemn and irrevocable vows before they were well out of their teens. In its devotional aspects the training of the members of the Society is based entirely upon the book of 'Spiritual Exercises' compiled by their founder. Every year for eight days, and twice in early life for a period of a month continuously, each Jesuit, leaving all other occupations, devotes himself to 'making the Exercises,' thus to renew the memory of the principles upon which his choice of a vocation is founded. It was an extension of this practice in a modified form to select bodies of the clergy, students, sodalities, and whole parishes which first brought into vogue the system of retreats and missions which has found universal favour in the Church of Rome, and has of late years become prevalent among the more advanced type of Anglicans.

2. Organization.—As regards the organization of the Society of Jesus not much need be said. The *Constitutions*, by which the Order is still governed, were drawn up by Loyola himself, but tardily and with some reluctance. His first idea had been that too many rules would hamper that adaptability to every apostolic purpose which was what he most desired to see in the institute that he had founded. A brief outline of the conception and purpose of the new Order is incorporated in the first papal bull of approbation, *Regimini militantis ecclesiæ*, 27 Sept. 1540, but the *Constitutions* themselves were not compiled until towards the close of Ignatius's life, and were only approved by the General Congregation which met in 1558 after his death to elect his successor. Still, they were entirely the Saint's own work, as the facsimile edition of the Spanish text (Rome, 1908), corrected and annotated in his own handwriting, plainly shows. The story that Laynez, the second General, introduced important modifications is quite untrue. The military character of the Society appears in its very autocratic government. The bull of Gregory XIV., *Ecclesiae Catholicae*, approving the *Constitutions* in every detail, calls the government frankly 'monarchical and dependent on the will of a single superior.' The General is elected for life and his authority is supreme, though his power is in some measure controlled by an 'admonitor' and a small council of 'assistants' representing groups of 'provinces.' At present there are five assistancies—those of Italy, Spain, Germany, France, and the English-speaking countries. The organization of the whole Order in 'provinces,' each governed by a 'provincial,' is a matter of convenient administration, but every 'provincial' and 'rector,' the last being the title given to the superiors of the more important colleges and residences, is appointed by the General himself, not nominated by any intermediate official or elected by the votes of his subordinates. In a certain more strict sense only those who have taken their final public vows, viz. the 'professed fathers' and 'formed coadjutors,' are, properly speaking, members of the Order. The scholastics preparing for ordination, and also the novices, are indeed accounted as belonging to the body and share in its privileges, but their connexion with it is probationary and terminable. To the existence of these different categories (the technicalities of which, often borrowed from the older canonists, are not readily understood by the ordinary reader) is probably due the wide-spread fiction that there exist among the Jesuits various degrees of initiation like those of the Freemasons. This idea, as well as that of an organization of crypto-Jesuits and secret emissaries, has been largely fostered by romance writers of the type of Dumas *père* and still more seriously by the dissemination of the notorious *Monita Secreta*, a supposed Jesuit code of secret instructions, the apocryphal character of which is now universally recognized (on this see Duhr, *Jesuiten-Fabeln*, ch. 5; Brou, *Les Jésuites de la légende*, i. 275-301; and Monod's Introduction to Boehmer, *Les Jésuites*, pp. lxii-lxx). One circumstance which probably helped to render these and many similar fables more credible was the air of mystery which long enshrouded the *Constitutions*, the papal privileges, and even the 'Spiritual Exercises' of the Society. All such documents were duly submitted to and approved by the highest ecclesiastical authority (see, *e.g.*, the bulls *Quanto fructuosius* and *Ascendente Domino*, published by Gregory XIII. in 1583 and 1584). The text was also printed at an early date—that of the Exercises in 1548, the *Constitutions* in 1558-59 and repeatedly afterwards—but these copies were only for private use and were not sold to the public. Members of the Order were further distinctly forbidden to lend or show such documents to outsiders. Two reasons seem to have weighed with Ignatius in issuing this prohibition. First, the organization of the Society departed in many notable respects from the manner of life of the older religious Orders. He did not want uselessly to awaken attention, challenge criticism, and probably provoke jealousy by proclaiming these differences to all the world. They were, after all, of no concern to anybody but the members of the Order. Further, in many of these innovations, and particularly in the case of the 'Spiritual Exercises,' the written text, when taken apart from oral tradition, might easily be misinterpreted and misrepresented. The giving of the Exercises was held to be a special art. They formed, in fact, a spiritual pharmacopœia which, like the dispensing of bodily medicines, ought not to be committed to inexperienced hands. One thing at any rate is obvious. These same *Constitutions*, privileges, and secret instructions which the Society has been accused of guarding so jealously from profane eyes are now to be found in every public library.[1] On the many occasions when the Order has been expelled from the different cities and States of Europe, even apart from the general suppression of 1773, their books, MSS, and most secret papers have over and over again been seized. Many public collections contain hundreds of volumes of such impounded papers. The Jesuits must have been clever indeed, and their assailants the most bungling of police agents, if they always succeeded in destroying the evidence of the existence of an inner circle of initiates conspiring against the political and moral order of the world. The *Geschichte der Moralstreitigkeiten*, published by Döllinger and Reusch in 1888-89, is a work which is almost entirely based upon papers of the Jesuits seized at the time of the suppression of the Society; but, despite the strong anti-Jesuit feeling of the editors, those who go to this work in search of startling revelations of moral depravity will surely be much disappointed.

3. Criticisms.—Perhaps the charge which has most seriously weighed upon the Order, and which has at any rate entailed the most serious consequences in rendering them obnoxious to anti-clerical governments, is the accusation of teaching the lawfulness of tyrannicide. That Juan Mariana († 1624) and some of the earlier moralists of the Society did, though with many safeguards and

[1] *e.g.*, two copies of the first ed. of the *Constitutions*, 1558-59, are in the British Museum Library, as well as numerous other editions.

qualifications, admit the view may readily be granted, but in this they were simply echoing the doctrine of many highly respected mediæval moralists, beginning with John of Salisbury—a doctrine, moreover, cordially endorsed by not a few of the reformers, *e.g.* by John Ponet and John Knox. Attempts, of course, are repeatedly made to connect such outrages as the assassination of Henry III. and Henry IV. of France, of William the Silent, of Sir Edmund Berry Godfrey, etc., or, again, the Gunpowder Plot, with the teaching and influence of the Jesuits. The weakness of the evidence on which such charges are based cannot be adequately illustrated here, but it may be pointed out that refutations have been published on the Jesuit side in such books as the *Jesuiten-Fabeln* of Duhr and the similar French work of Brou. Nor are there wanting independent writers (see, *e.g.*, A. Marks, *Who Killed Sir Edmund Berry Godfrey?*, London, 1905) who range themselves on the Jesuit side.

The much-abused casuistry of the Jesuits stands upon precisely the same footing as their alleged advocacy of tyrannicide. To begin with, they did not create this branch of theological study. The casuists of the Society from the first based their conclusions entirely upon the similar though less methodical speculations of the mediæval doctors and canonists, such men, *e.g.*, as St. Thomas Aquinas and St. Antoninus of Florence. The same reproaches which are usually levelled against Jesuit casuistry might be directed with equal justice, or lack of justice, against the casuistry of their contemporaries who were not Jesuits, and indeed against the moral teaching of the whole Catholic Church. The Jesuits have drawn the fire of opposing critics simply because their text-books were the most widely appealed to and most commonly used. No one really conversant with the subject will maintain that the Jesuits either now form or formed in the past a school of ethics marked off from that of the Dominicans, or that of St. Sulpice, or even that of the Redemptorists, by its disedifying laxity. The famous 'Probabilism' of the Society is based upon a very simple maxim, *lex dubia non obligat*, which in ordinary life is acted upon as the dictate of simple common sense (see the book *Quos ego*, by 'Pilatus' [Viktor Naumann], a non-Catholic writer, published in 1903 in answer to the attacks of von Hoensbroech). So, again, the principle that 'the end justifies the means,' while in certain texts it may obviously bear a quite innocent meaning, has always been repudiated by the Society in its absolute and immoral signification. (This charge has also been copiously dealt with by Duhr, Brou, and many other writers.) No doubt much of the disfavour which attaches to the casuistry of the Jesuits is due to the *Lettres provinciales* of Pascal. The Jansenist champion in these brilliant satires dealt a heavier blow than he foresaw or probably intended. He himself knew enough of the Jesuits to be aware that a sort of cynical indifference to right and wrong could not be laid to their charge. He also knew that the cultured audience whom he first addressed were equally far from believing that the religious brethren of St. François Régis, and such men as Maunoir, Binet, Suffren, and before long Bourdaloue, were so many Machiavellis. But both he and his readers found it most entertaining to see them cleverly travestied in that character. The humour of the letters was at first more that of a caricature than of a satire, and it is here probably that we shall find an excuse for the truncated and unfair quotations from Jesuit moralists that the letters contain. It was only at a later stage that Pascal pledged himself to the accuracy which would be expected in serious polemics. His work, published anonymously, was primarily a *jeu d'esprit*. But, as time went on, thanks partly to the bitterness of the Jansenist controversy, and partly to the pardonable indignation and recriminations in deadly earnest of the victims themselves, the attack was understood much more seriously, and it is now quite commonly treated as if it were a protest of outraged virtue against a corruption which threatened all the moral standards. In point of fact, these technicalities and extreme positions dealt with in the folios of the casuists debating hypothetical problems from their closets have as little influence upon general conduct as such constitutional maxims as 'the King can do no wrong,' etc., have upon practical politics. If the Jesuits were the unprincipled teachers of lax morality that their opponents contend they were, the laxity might be expected to show itself first in their own lives; but even the most prejudiced admit that the standard of personal conduct in the Society has been a high one.

4. **Aims and development.**—Although the development of the Jesuit Order and the work of the Counter-Reformation went hand in hand, it would be an error to suppose that Ignatius instituted his Compañía with the definite purpose of combating Protestantism. If its best energies were expended in this service, the fact was due to influence from outside. As already indicated, Loyola's conception of a troop highly trained and lightly equipped so as to be ready for any emergency, contemplated dispassionately every form of work which was 'ad majorem Dei gloriam.' For this reason the letters A.M.D.G. may be regarded as forming in some sense the badge of the Society. But in the very earliest draft of the institute three different fields of labour were singled out as especially proper to its members. These were to teach the young, to preach to the ignorant and the heathen, and to guide Christians to perfection. The last of those ends was to be attained by hearing confessions and giving the Exercises. The second was held of such importance that the professed Fathers, the *élite* of the Society, added to the three solemn vows of poverty, chastity, and obedience a fourth vow, pledging them to start upon any mission at home or abroad when desired by the sovereign pontiff, even at the risk of life, and even if they had to beg their way to their destination. The catechetical instruction of the ignorant, or, as it was commonly called, the teaching of the 'doctrina Christiana,' was closely related to this missionary idea. The founder insisted that such employments should be recognized as not beneath the dignity, but, on the contrary, as the proper work, of even the most learned members of the Order.

In the field of missionary enterprise the achievements of the Society have been remarkable. Beginning with the wonderful career of St. Francis Xavier in India and Japan (1541–52), we might pass to the labours, partly apostolic, partly scientific, of M. Ricci, J. A. Schall von Bell, and F. Verbiest in China (1600–89), or to the heroic courage shown by the French Fathers, *e.g.* J. de Brébeuf, C. Lalemant, I. Jogues, J. Marquette, etc., between 1632 and 1685 among the American Indians. See for all this the impartial testimony of F. Parkman in his *Jesuits in North America*[20], London, 1885. Even more famous were the 'reductions' established among the Indians of Paraguay; nor does the splendid work accomplished here fail to make itself felt even in such lively pages as those of R. B. Cunninghame Graham's *A Vanished Arcadia*, London, 1901. But there is hardly any part of the earth's surface in which the Jesuit missionaries have not laboured. Five Fathers went to the Congo at the instance of the king of Portugal as

early as 1547. Five sailed for Brazil in 1549, where the labours of Father Joseph Anchieta in particular were soon to make him known as the apostle of all that vast region. In 1559 ten Jesuits started for Abyssinia, founding a mission whose wonderful story is told in a long series of volumes now being published at the expense of the Italian government, by C. Beccari. In the same year, 1559, three other priests began to labour among the Kāfirs of South Africa, and a couple of years later two others reached Memphis in Upper Egypt. In 1568 a great missionary work was inaugurated by the arrival of Portillo and eight companions in Peru. Before fifty years had expired, the Peruvian Jesuits were divided into two separate 'provinces,' while a hardly less thriving centre had been established in Mexico, whither thirteen Jesuits sailed for the first time in 1572. In 1615, St. Peter Claver began his extraordinary apostolate among the Negro slaves of Carthagena (see M. D. Petre, *Æthiopum Servus*, London, 1895). A mission was sent to the Tatars of the Black Sea region in 1603. In 1624 A. de Rhodes opened up a new field of labour in Tongking, and in the same year Antonio de Andrade reached the heart of Tibet. But the record is endless. Of course there were many reverses. A Church which before long numbered over 300,000 converts had been founded by Xavier in Japan, but between 1600 and 1640 every missionary was killed or deported, and Christianity was exterminated by fire and sword (see M. Steichen, *The Christian Daimyos*, Tokyo, 1903). In most other countries, despite contradictions, and in particular the domestic troubles originated by the controversy over the lawfulness of the 'Chinese rites,' the missions maintained a vigorous growth until the suppression of the Society in 1773.

The third special work of the Order was the education of youth; and here also, as soon as the Jesuits began to set up colleges of their own, their success was remarkable. A more or less uniform method and arrangement of studies was contemplated from the first. But the rough draft *de Studiis Societatis Jesu*, outlined by Jerome Nadal between 1548 and 1552, reached its full development only after much discussion and experiment in the *Ratio atque Institutio Studiorum S.J.* of 1599. (Important collections of documents relating to the Society's educational methods and aims may be found in the four volumes contributed by G. M. Pachtler to the *Monumenta Germaniæ Pædagogica*, Berlin, 1887 ff., and in the volume of *Monumenta Pædagogica* published by the Madrid Fathers, Madrid, 1901.) Perhaps no more convincing tribute can be found to the educational success of the Jesuits than the fact that in 1605 Bacon in England could write of them as follows:

'Education: which excellent part of ancient discipline hath been in some sort revived of late times by the colleges of the Jesuits; of whom, although in regard of their superstition I may say *Quo meliores, eo deteriores*, yet in regard of this, and some other points concerning human learning and moral matters, I may say, as Agesilaus said to his enemy Pharnabazus, *Talis quum sis, utinam noster esses*' (*Advancement of Learning*, bk. i.).

In 1584 the Collegio Romano had 2108 students. At Rouen the attendance averaged 2000. For a great part of the 17th cent. the scholars at the college of Louis le Grand, Paris, varied from 1800 to 3000. In 1615 the Society had 373 colleges and seminaries under its direction. In 1706 the number of collegiate and university establishments had risen to 769. Schwickerath computes that, when the Order, towards the close of the 17th cent., was at the height of its educational fame, the number of students attending its classes at any one time must have amounted to a total of 200,000. As regards the growth of the Jesuit body itself we may note that, while at the death of St. Ignatius in 1556 there were 12 provinces and 1000 members of the Order all told, these numbers at the death of Laynez, the second General, nine years later, had increased to 18 provinces and 3500 Jesuits. In 1615, at the death of Acquaviva, the fifth General, there were 32 provinces and 13,112 members, and in 1770 just before the suppression 42 provinces and 23,000 members. No Jesuit has ever been elected pope, and comparatively few have been created cardinals or raised to high office in the Church, but it must be remembered that all professed Fathers take a vow to accept no ecclesiastical dignity, and from this vow they can be released only by the express command of the Holy See.

The Jesuit Order, in virtue of its monarchical government, its centralization, and its special vow of obedience to the pope, has always inclined to an extreme ultramontanism. This has constantly brought it into conflict with nationalist movements, while, on the other hand, its independence of episcopal control and its claims, whether justified or not, to figure as a *corps d'élite* have often made the secular clergy somewhat lukewarm in its defence. Add to this the bitter attacks and calumnies of its avowed enemies, the free-thinkers, Evangelicals, Jansenists, etc., and we have probably sufficient explanation, even apart from the prayer of the founder that persecution should be their lot, for the numerous decrees of banishment of which they have been the object. In the latter half of the 18th cent. the spread of infidelity and corruption of morals, especially in France, together with the political intrigues of the ministers of the Bourbon princes, led to a combined attack upon the very existence of the Society. Pretexts were naturally found in the indiscretions or alleged misconduct of some individual members of the Order—the bankruptcy of Father A. Lavalette in certain commercial transactions connected with the missions being the most serious of these. As a result the Jesuits were banished and their property was confiscated in Portugal (1759), France (1765), Spain and its dependencies (1767), and, finally, Naples (1767). A few years later the pressure brought to bear upon Pope Clement XIV. was so great that he yielded to the storm, and in 1773 published a brief suppressing the Society altogether. Strangely enough, in White Russia the autocrat Empress Catherine would not allow the decree of suppression to be promulgated, and a few Jesuits still held together. After the French Revolution, Pope Pius VII. approved their corporate existence and eventually, in 1814, restored the Society by the bull *Sollicitudo omnium ecclesiarum*. Since then the Order, though with many vicissitudes, has again established itself in all European countries, in N. and S. America, and in many of the old mission fields; it has resumed the work of education; and at present it numbers in all some 17,000 members.

LITERATURE.—The literature relating to the Jesuits is vast, and for a relatively complete bibliography the reader must be referred to some such work as that of Max Heimbucher, *Die Orden und Kongregationen der kathol. Kirche*[2], Paderborn, 1908, iii. 1-258, esp. 1-12, or to the art. 'Society of Jesus' in *CE* xiv. 81. The ten volumes of C. Sommervogel and A. de Backer, *Bibliothèque de la Compagnie de Jésus*[3], Paris, 1890-1909, not only contain an enumeration of all the books and editions published by the Jesuits, but also, in vol. x., an elaborate classification of subjects—*e.g.*, on pp. 1010-1020 we have a list of apologetic works written by Jesuits in defence of the Society in reply to such assailants as Pascal and Quinet. Bibliographies compiled from a more or less antagonistic point of view may be found in *PRE*[3] viii. 742 ff., and in G. Monod and H. Boehmer, *Les Jésuites*, Paris, 1910, pp. 295-301.

The more important MS sources for the early history of the Order are all being critically edited by the Jesuits of Madrid in the series of *Monumenta Historica Societatis Jesu*. These include a very complete edition of the letters of St. Ignatius as also of documents emanating from nearly all the companions of the founder, notably St. Francis Xavier, Laynez, Blessed Peter Faber, St. Francis Borgia, etc. Another remarkable collection

is that of O. Braunsberger, *Petri Canisii epistulae et acta*, Freiburg, 1896 ff., of which six volumes have now appeared.

Many documents connected with the history of the Jesuits in France have been published by A. Carayon, *Documents inédits concernant la Compagnie de Jésus*, 23 vols., Poitiers, 1863–86, and J. M. Prat, *Recherches historiques*, 5 vols., Lyons, 1875–79. For Great Britain, Henry Foley has edited *Records of the English Province of the Society of Jesus*, 7 vols., London, 1875–83, and John Morris, *The Troubles of our Catholic Forefathers*, 3 vols., do. 1872–77, as also *The Condition of Catholics under James I.*[2], do. 1872, and other works. Much original material concerning Scottish Jesuits may be found in W. Forbes Leith, *Narratives of Scottish Catholics*, do. 1885, and *Memoirs of Scottish Catholics*, 2 vols., do. 1909. With regard to the foreign missions, collections of letters from Japan, China, North America, etc., are too numerous to mention in detail, but prominence may be given to the great American undertaking of R. G. Thwaites, *The Jesuit Relations and Allied Documents*, 73 vols., Cleveland, 1896–1901, and to the *Lettres édifiantes et curieuses*, of which the first edition, prepared by C. Le Gobien and others, appeared in 34 vols. at Paris in 1702 ff.

Of general histories of the Jesuits the best known is that of J. Crétineau-Joly, *Histoire religieuse, politique et littéraire de la Compagnie de Jésus*[3], 6 vols., Paris, 1851. It has been translated into various languages, and an abridgment has been published in English by B. N[eave], *The Jesuits, their Foundation and History*, 2 vols., London, 1879. It is admitted by all, however, that Crétineau-Joly's work is uncritical and extravagantly eulogistic. On the other hand, most of the histories written professedly from a hostile standpoint—*e.g.*, those of T. Griesinger, *The Jesuits*[2], do. 1885; G. B. Nicolini, *Hist. of Jesuits*, do. 1854; W. H. Rule, *Celebrated Jesuits*, 2 vols., do. 1853, and even that published quite recently by J. McCabe (*A Candid History of the Jesuits*, do. 1913)—are mere caricatures and quite untrustworthy. More sober accounts are given by Steitz-Zöckler in *PRE*[3] viii. 742–784, and by Monod-Boehmer, *op. cit.*; but these are, of course, only summaries. A detailed Latin chronicle, *Historiae Societatis Jesu*, of which the first volume, by N. Orlandini, was published in 1614, was carried on by F. Sacchino, J. Jouvancy, and J. C. Cordara, down to the year 1633. It occupies six folio volumes, but is never likely to be continued. In place of this a history on much more modern and scientific lines was organized by the late General of the Society, Louis Martin. According to this scheme, each 'Assistancy' is to publish its own history in its own language, and we have at present: A. Astrain, *Hist. de la Comp. de Jésus en la asistencia de España*, Madrid, 1902 ff.—so far 3 vols.; H. Fouqueray, *Hist. de la Comp. de Jésus en France*, Paris, 1909 ff.—so far 2 vols.; B. Duhr, *Gesch. der Jesuiten in den Ländern deutscher Zunge*, Freiburg, 1907 ff.—so far 2 vols.; P. Tacchi-Venturi, *Storia della Comp. di Gesù in Italia*, Rome, 1910—so far 1 vol.; T. Hughes, *History of the Society of Jesus in North America: Colonial and Federal*, London, 1908 ff.—so far 3 vols. The history of the English Assistancy, going back to the days of R. Parsons and E. Campion under Elizabeth, is being prepared by J. H. Pollen, who has already published valuable contributions in *The Month*, especially for 1902–03, and in the publications of the Catholic Record Society.

With regard to what may be called the 'Apologetic' of the Jesuits, we may number among the more serious assailants of the Order: P. von Hoensbroech, *Vierzehn Jahre Jesuit*, Leipzig, 1910 (Eng. tr. by H. Zimmern, London, 1911); J. Huber, *Der Jesuiten-Orden*, Berlin, 1873; H. Müller, *Les Origines de la Comp. de Jésus*, Paris, 1898; F. H. Reusch, *Beiträge zur Gesch. des Jesuitenordens*, Munich, 1894; J. J. I. Döllinger and F. H. Reusch, *Gesch. der Moralstreitigkeiten*, Leipzig, 1888–89; E. L. Taunton, *Hist. of the Jesuits in England, 1580–1773*, London, 1901; Walter Walsh, *The Jesuits in Great Britain*, do. 1903; E. Gothein, *Ignatius v. Loyola und die Gegenreformation*, Halle, 1895. Of works written in answer we may name among the more comprehensive: B. Duhr, *Jesuiten-Fabeln*[4], Freiburg, 1904; A. Brou, *Les Jésuites de la légende*, 2 vols., Paris, 1906; M. U. Maynard, *Les Provinciales et leur réfutation*, do. 1851–52; M. Reichmann, *Der Zweck heiligt die Mittel*, Freiburg, 1903; also the two books of 'Pilatus' (Viktor Naumann), *Quos ego*, Regensburg, 1904, and *Der Jesuitismus*, do. 1905, largely dealing with the attacks of von Hoensbroech. On the matter of education see R. Schwickerath, *Jesuit Education*, St. Louis, 1903; K. A. Schmid, *Gesch. der Erziehung*, vol. v. pt. ii., Stuttgart, 1901.

The official documents of the Society—Constitutions, Rules, Decrees of General Congregations, Spiritual Exercises, *Ratio Studiorum*, Bulls, etc.—will all be found collected in the various editions of the *Institutum Societatis Jesu*, especially in the last edition, Rome, 1869 ff. More critical editions of the Constitutions, Spiritual Exercises, *Ratio Studiorum*, etc., have been issued separately within the last few years.

HERBERT THURSTON.

## JESUS CHRIST.

[W. DOUGLAS MACKENZIE.]

I. *THE PERSONAL FOUNDERS OF RELIGION.*—**1. Introductory.**—Jesus Christ is to be described in this article as the founder of Christianity. In doing this it must be remembered that Christianity is one phase of the religious history of mankind, and its founder is not the only one who has founded a religion. Whatever classification of the religions of the world we may adopt, the Christian religion must be described as positive, personal, and universal. In the possession of all three characteristics it can be compared only with Buddhism and Islām. One historic person is recognized in each of these great religions as its 'founder.' By his own experience, teaching, and deliberate policy he has formed a group of primary disciples and has established through his influence upon them its positive history, its peculiar characteristics, and its claims to universal authority. Höffding has said (*Philos. of Rel.*, Eng. tr., 1906, p. 119), in regard to the important differences which occur in the nature alike of religious faith and of religious feeling, that they are conditioned 'by differences of value and of motives of evaluation, by differences of knowledge of reality, and by differences in the energy with which value and reality are brought together and compared.' We may put the same thing in more familiar words by saying that three elements enter into the nature of every religion. The first is the sense of some human need, or the desire for some form of good, physical, moral, or spiritual; the second is the conception of some object, divine and superhuman, who satisfies this need; the third is the attitude and conduct of man, by means of which it is believed that the desire for good is met by the God who is conceived of as its possessor and dispenser. The influence of the personal founder of a religion must be measured in relation to each of these elements of the religious consciousness, if we would rightly grasp the place which he occupies in the history of religion and the place of his religion among the other religions of the world.

**2. Brief comparison of three founded religions.**—Any description of the nature of a founded religion must involve a statement of the work of its founder with respect to these essential elements. But it will be convenient in view of the peculiar nature of such a religion to consider the material in close relation to himself.

(1) *The human need to be satisfied or form of good to be bestowed.*—This may be viewed negatively, in relation to evil, as deliverance from suffering, sin, and death; and positively, in relation to good, as the attainment of a blessed and eternal life in union with God. Buddhism is seriously defective on both sides. It conceives of evil almost wholly in terms of suffering, and of deliverance as a process of individual moral and spiritual self-culture. The end is described as Nirvāṇa, which, whether it implies conscious immortality or not, is at any rate conceived of mainly in negative terms. Buddha, weary of Hindu abstractions and subtleties, was content with agnosticism in regard to the divine. Islām is also defective through an imperfect conception of sin and an unspiritual view of the realm of bliss, while its view of God as absolute, unconditioned Will, though marking a great advance upon Buddhism, prevents a joyous faith in Him as the Saviour and Friend even of His own people. Muhammad was obviously faulty in moral character and unable to proclaim a gospel of faith. Christianity even in the NT, but with great variety of expression and personal emphasis in different phases of its history, conceives of this whole matter with singular richness and fullness. Whether we call it salvation, or eternal life, or glory, or union with God and the mystical vision, this religion presents a view of sin and holiness, of deliverance and perfection, of man's present relation to nature and the life to come, which obviously surpasses the other two, correcting, supplementing, and sublimating them from point to point. It

is important to notice, what must be more fully considered later in this article in relation to the founder of Christianity, that the moral and spiritual history of each of the three personal founders threw peculiar light upon the field of need, so that his followers discovered or interpreted their needs through that history.

(2) *The special function or 'office' of the founder.*—Here three ideas must be recognized as essential. The personality must ultimately be viewed as exemplar, or prophet, or redeemer, or as a combination of two or three of these. Yet, when the central idea of each of these functions is thoroughly conceived, it will be found to involve the others. Buddhism in its first stages knew its founder primarily as exemplar of the process of enlightenment. His teaching function arose from and was based upon his personal experience of salvation. But later Buddhism showed powerful tendencies to enlarge his authority into that of a prophet and his experience into that of a redeemer. The founder of Islâm was conceived of primarily as a prophet, inspired with definite and direct messages from God. As in Buddhism the prophetic, so here the exemplary, function of the founder was obscured. And yet, of course, the personal character and conduct of the Prophet has inevitably moulded the ethics of his religion. The 'imitation' of Muhammad is confined to the 'copying of external acts' (D. B. Macdonald, *Aspects of Islam*, New York, 1911, p. 103), but the influence of his spirit and personal life has gone deeper. Christianity views Jesus Christ as the perfect exemplar of the character of God the Father, as the full revealer of religious truth, and also as the redeemer, whose personal experience, interpreted as His 'work,' changed the moral relations of God and men.

(3) *The person of the founder.*—Though the Buddha himself, according to the tradition, assumed an agnostic position as to the Absolute Being, and was wholly concerned with a system of ethical culture for the attainment of deliverance, his followers in after generations came to think of him as an incarnation of the Supreme Spirit. So also some of the followers of Muhammad gradually worked out a doctrine of his person resembling the Arian doctrine of Christ, though this has not become a characteristic element of that faith. Christianity from the first viewed its founder as a superhuman being, as one who had become incarnate, who as thus an incarnate, divine personality exercised all the functions of exemplar, revealer, and redeemer, distinctly and with ideal completeness, and who met the fundamental needs of man for moral harmony with God, for victory over all evil, and for eternal life.

**3. The field of practical decision.**—It is obvious from this brief comparison that in certain matters a modified parallelism exists between the three great 'founded' religions. Hence their founders are often compared with one another or named together in current literature. And one result of this modern spirit is the energetic challenge as to why one should be accepted as final in preference to either of the others; *e.g.*, J. Estlin Carpenter, after comparing the 'exaltation' of Gautama with that of Jesus, addresses Christendom thus: 'In each case the belief is justified by an appeal to experience. Why is the one to be repudiated, while the other is allowed?' (in *Jesus or Christ?* London, 1909, p. 247). There can be no doubt that each of these great personalities has proved to be a most powerful dynamic in the history of man; each has contributed rich material to man's religious experience; each has exercised profound influence upon the ethical conceptions and the civilization of great masses of humanity; each personality has become more or less directly bound up with that interpretation of God and the world which on the whole is the distinguishing property of the religion and the form of civilization associated with his name. It is not the aim of this article to carry out the comparison any further. That comparison is being carried out in one way by this Encyclopædia of Religion and Ethics, and indeed by every scientific contribution to the history and science of religion. For every serious and extensive study of any religion raises the question whether a really universal and final religion is necessary or possible, and, if so, what that final religion may be. But the comparison is being carried out in another and still more potent way, to which indeed each scientific piece of work is subordinate, on every mission field where the heralds of the personal founders confront one another. There each system faces what is after all the final test of the final religion, namely, its adequacy to meet the deepest needs of the human soul.

II. *The Consciousness of Jesus Christ.*—i. The rise of the problem.—The investigation of the life of Christ in the 19th cent. and the whole trend of modern thought have combined to set in a new light the problem of His Person. One of the most vital elements in that problem is stated in the phrase 'the consciousness of Jesus.' As soon as the epoch-making *Leben Jesu* of Strauss began to be considered, this subject came to view. The change appeared at once on the orthodox side in Neander's *Leben Jesu* (Hamburg, 1837). It was also signalized in the successive editions of Ullmann's *Die Sündlosigkeit Jesu* (Eng. tr., *The Sinlessness of Jesus*). Strauss's method of attack compelled men to think more seriously even than he did himself of that which lay behind all the separate utterances of Jesus, namely that consciousness of Himself from which His whole attitude, action, purpose, and speech arose. Hence in that work of Neander we have the first earnest dealing with His consciousness and its historical development. Parallel with the development of the sense of history and contributing to the same result was the movement of thought which sprang mainly from Schleiermacher. His very definition of religion as 'the feeling of dependence' and his penetrating analysis of the religious consciousness compelled men to apply to the founder of Christianity the same tests of reality which they were learning to apply to the whole range of religious inquiry. From the days of Strauss and Neander the volume of inquiry grew steadily. The historians like Schenkel and Keim, Hase and Weiss, and a dogmatician like Gess (*Christi Person und Werk*, vol. i.) found this to be the central question—What was the form and content and history of the self-consciousness of Jesus? In English the first use of the phrase is to be found, perhaps, in John Young's *The Christ of History* (1857), in which we have a discussion of 'His own Idea of His Public Life' (bk. ii. pt. i.) and 'The Forms of His Consciousness' (bk. iii. pt. ii.). In H. P. Liddon's Bampton Lectures, *The Divinity of our Lord*, we find the Fourth Lecture entitled 'Our Lord's Divinity as witnessed by His Consciousness.' But it was only gradually that the subject won a large place in the theology of the English-speaking world, and that mainly through the writings of three men, A. B. Bruce (*The Training of the Twelve*, *The Humiliation of Christ* [Lect. vi.], *The Kingdom of God*), A. M. Fairbairn (*Studies in the Life of Christ*, *The Place of Christ in Modern Theology*), and C. Gore (Essay in *Lux Mundi*, *The Incarnation of the Son of God*, and *Dissertations*). It is important to remember that for a brief period strong objections were felt to the investigation of the consciousness of our Lord. For example, W. Sanday in his article on 'Jesus Christ' (Hastings' *DB* ii. 603) said: 'On

the Christian hypothesis, frankly held, any such grasp [*i.e.* 'of the consciousness to be investigated'] would seem to be excluded, and the attempt to reach it could hardly be made without irreverence.' The difference between that position and the bold speculations on this very topic by the same author in his *Christologies Ancient and Modern* marks the increasing range, confidence, and reverent courage with which this absolutely unique historical problem has been explored by English and American theologians during the last quarter of a century.

ii. THE NATURE OF THE PROBLEM.—There is still much uncertainty among those who discuss this subject as to the exact nature of the question before them. And the uncertainty leads to assumptions which limit the inquiry or determine its dogmatic conclusions in advance.

(1) *The Christian hypothesis.*—If Jesus is conceived of primarily and definitely as a prophet or as an abnormal religious enthusiast, or even as the sanest and deepest religious spirit in human history, the question of His consciousness will be classed wholly with the study of religious geniuses, or, at most, of inspired messengers of God. And then the phenomena of OT prophecy, of religious devotion and insight among religious leaders of various races and ages, will be relevant to the interpretation of His case. Through what stages and with what inheritance the normal human mind and will did attain such moral and spiritual pre-eminence as His will be the main matter of investigation. But on the Christian hypothesis we are here concerned with something more, something quite unique and raised beyond the level even of the highest religious experience known to history. The NT and the vast mass of Christian believers, as well as the main course of theology, present us with a new idea, namely that of a superhuman conscious will which has entered for definite moral ends into the conditions of human experience. It asserts that in Jesus Christ we have a unique type of personality. It is at once human because it is conscious will, and yet more than human because it has invaded the course of human life from a range of conscious being and life above the human. The neglect to take this matter seriously has led to such amazing confusions of thought and fact as infest, for example, so brilliant a work as that of Wernle (*Die Anfänge unserer Religion*). That author repeatedly insists that in the Messianic consciousness of Jesus we have something superhuman, and this he calls 'the mystery of the origin of Christianity.' And he then insists that this superhuman, more than prophetic, consciousness was capable of the most astounding blunders; *e.g.*, he asserts boldly that the choice by Jesus of the three titles, Messiah, Son of God, and Son of Man, 'from the first turned out to be the misfortune of the new religion' (p. 38 [2nd ed.]). A misfortune thus central to the history of the religion which He founded ought to be scarcely conceivable if we take the idea of the superhuman consciousness of Jesus seriously and thoroughly. Even Ritschl insists that 'beyond all doubt Jesus was conscious of a new and hitherto unknown relation to God, and said so to His disciples' (*Justification and Reconciliation*, Eng. tr., p. 386).

(2) *The word 'consciousness'.*—It is in the interests of sound thinking about this 'unique historic consciousness' to recall the fact that modern science and philosophy have combined to clear and also vastly to extend the use of that word 'consciousness.' We recognize now everywhere that there are various grades of consciousness. It exists in many kinds, between all of which there are definite unities as well as diversities. Thus so calm and careful a thinker as C. A. Strong (*Why the Mind has a Body*, New York, 1908) says that 'the origin of consciousness can be explained, if at all, only out of antecedent realities of the same order' (p. 268), and, again, 'consciousness has arisen out of simpler mental facts.' No one except a materialist believes that this world contains all the forms of conscious beings that exist. There may be many kinds and grades of consciousness *above*, as there are, in our own world, many *below* the human. Nor would it be quite 'modern' to hold dogmatically that the human consciousness is shut off from contact with all forms of consciousness except those that are alive at any one time upon this earth. Now the Christian hypothesis has hitherto been this, that in Jesus Christ a superhuman conscious will has taken its place in history, manifesting throughout all its ranges of expression at once its alliance with and its difference from the ordinary type of human consciousness. Upon that difference in unity the whole peculiar religious value of the history of Jesus Christ has been made to rest from the Apostolic days down to the world-wide promulgation of the Christian message in our own day.

(3) *Elements involved in the investigation.*—The investigation of the consciousness of the historic Christ must contain difficulties which are peculiar to that subject. As to its modes of action, its development, its content, its relation to the divine purpose with humanity, and its influence upon the meaning of human life and the destiny of the race, such a consciousness must present unique features to the student of history and religion. These peculiarities must have affected the course of His relations with the men about Him, their estimate of Him, their appreciation and their memory of His words and deeds. If the natural and inevitable confusion of mind is reflected in their records, if these records show that their estimate of Him varied and grew, and that their very memory of His earlier words and deeds became coloured by the fuller knowledge of later days—all this will add to the perplexity even of that historian who believes most profoundly that in Jesus Christ a more than human self manifested its conscious will, and who at the same time seeks accuracy of historical statement, and clearness in the psychological analysis of experience. And here we are facing the supreme problem. If Christ was divine and His history on earth was and is essential to the perfecting of mankind, then His consciousness in its self-manifestations was and is one of the basal facts of human existence. And consciousness has this wonderful property, that in it knowledge and being are made one. My existence is not dependent on my thought, nor my thought on my existence. The self-conscious thing exists only in being conscious and is conscious only in existing. Hence we do not merely argue from the words and acts of a human consciousness to a human being behind or above them. In those words and acts the self is revealed. The conscious will is the ultimate fact, the real and inmost nature of it.

iii. FACTORS IN THE SOLUTION OF THE PROBLEM.—*A.* THE RELIGION OF JESUS.—Any study of the consciousness of Jesus must begin with the qualities of His own religious life. And there we must take note both (1) of what He inherited and retained in mature life from His Jewish ancestry and from the religious life of His environment, and (2) of what there was of difference between His personal outlook and that of the people among whom He lived.

**1. The mixed atmosphere of His day.**—It is not too much to say that among the Jews of His day religion was everything. The circles that were influenced by their conquerors during the Greek and Roman occupations, and strove to ape Roman fashions or pursue Greek culture, were disowned by

the great mass of the people. The relation of Israel to God and the purpose of God with Israel remained as the supreme subjects of thought and discussion. In the synagogue Jesus heard the Law read and expounded from tender years. To the Temple He was taken in due course for the performance of His inherited duties there. His own reading of the Scriptures must have been deep, since His teaching is saturated by quotations and illuminated by fresh interpretations of nearly all parts of the OT, and especially of the Psalms, Isaiah, and Daniel. Important references to the Pentateuch occur, which He used and cited without question as to authorship or historicity. For Him the OT remained as the true revelation of God Himself. God is the creator and sustainer of nature and of man, the ruler of history. God is the Father of the people (Mk $7^{27}$, Mt $15^{26}$) and they are 'sons of the kingdom' (Mt $8^{12}$). He has promulgated His law of righteousness through Moses (Mk $7^{8-10}$), and has announced through the prophets the day of the Messiah when His Kingdom shall be established in the earth (Mt $5^{17}$, Lk $4^{16-22}$). These things He had been taught, and He held them true. And He takes for granted that His hearers know and believe them. But, as Baldensperger has pointed out (*Das Selbstbewusstsein Jesu*$^{2}$, p. 72 ff., 2nd ed., p. 54 ff.), there was felt at that time a deep pathetic uneasiness in regard to the Temple worship, and at the same time a strained and passionate concentration upon the application of the law to the details of daily conduct. God in His transcendent holiness seemed to have vanished from the sin-stained land. The voice of prophecy had long ceased, the Temple had been repeatedly defiled by Gentile conquerors, the holy city was under foreign rule. The sense of fellowship with Jahweh was broken. Yet His Law and promise were there in written form. In three directions relief was sought: first, by filling up the interspace between God and man with heavenly hierarchies; second, by the formation of quietist circles like the Essenes, who sought, away from the clash of the world's warfare, the lost secret of the ancient fellowship with Jahweh; and third, by the cherishing of apocalyptic dreams, in which the Day of the Lord was seen as the sheer and sudden act of God breaking in upon the course of history. Not with earthly armies but by supernatural agencies did many now look for the appearing of that hour when the ancient promises would be fulfilled, and Israel once more vindicated, justified, as the chosen and supreme people of God. In such a mixed atmosphere at once of stubborn faith and of spiritual bitterness, of national humiliation and legalistic pride, of religious fervour and moral blindness, of political defeat and apocalyptic hope, Jesus grew up. In some measure all these elements can be found in the men of His day, and in Him. But in Him appear new and distinctive characteristics.

**2. Elements in the religious consciousness of Jesus.**—Through what processes of experience and thought His youth and early manhood passed, we do not know. When He stands before us in the Gospels, He has already attained maturity. His self-consciousness is fully developed. All attempts to prove that after His baptism He obviously changed His mind, or received entirely new revelations of His office in the world, have as yet failed to win general consent. The utmost that has been done is to mark out more clearly the manner in which His central self-consciousness adapted itself to the conditions which were unfolded in the lives of those with whom He came in contact. His will was indeed conditioned by the wills of others in its progressive operation, and His method of dealing with them developed itself appropriately from stage to stage. Various fresh phases of His task no doubt did appear as these stages were passed through. But from first to last His own religious consciousness remained consistent and unchanged, and it implied from the beginning the fundamental elements of His work. Of His religious consciousness we shall here name four principal elements.

(*a*) *Secret of divine fellowship.*—He found the secret of fellowship with God in the condition of the heart. At one stroke He lays aside the burdens of the external law and their elaboration by tradition. Even the doctrine of righteousness, as an act and gift of grace at the advent of the Kingdom, is deeply modified. Righteousness before God, the 'blessedness' of the divine fellowship, rests on what a man *is* 'inwardly,' at the inmost sources of thought and volition. 'Out of the heart proceed' all evil things (Mk $7^{21ff.}$). In his 'heart' a man may commit the vilest sin, and there, before God, it is a completed deed (Mt $5^{28}$). It is the pure in 'heart' that shall receive the vision of God at that day. This does not mean that the outer life has no significance. No one can insist more relentlessly upon full and literal obedience to the known will of God (Mt $12^{50}$ and ‖, Mt $7^{15-27}$, Lk $6^{20ff.}$); there is no limit to the sacrifice which purity of heart demands (Mk $9^{43-48}$); the slightest deeds that come from the intent of faith and love have infinite meaning for God (Mt $10^{42}$ $25^{31ff.}$); and the woes implied in the parables of judgment against unfaithful lives are unmitigated. For Jesus, the supreme law is love to God and love to man (Lk $10^{25-27}$). But, as love to man is conditioned by the circumstances of men, so love to God is conditioned by its object. It manifests itself in faith, which should know no bounds, in obedience at all costs, and in prayer, which should be frank, confident, energetic, persistent, and unostentatious. These and other important features are not new when taken singly. Parallels can be found in many quarters. But in the teaching of Jesus they acquire unique significance from three facts: first, from their being unified in the thought of one mind, as they are nowhere else; second, from the exclusion of any alloy of formalism, worldliness, superstition, or mere ceremonialism; third, from the fact that they evidently express, and find their unity and power in, His own religious experience and moral character. He is not dealing with the results of abstract speculation or with the scattered 'insights' of a moral genius. He is describing what life is to Him, as He confronts man and walks with God. The Beatitudes, even though interpreted eschatologically, describe His own working ideal, His own confidence in the result, His own actual blessedness. Men feel as they read, they must have felt as they heard, these utterances that what He commanded and promised He Himself realized in His own soul.

(*b*) *Conception of God.*—This applies in the fullest manner to that which is the centre of the religious consciousness, its conception of God. And here it is not possible to exaggerate the change which Jesus wrought in human history. He assumed that God is holy and supreme. All man's awe of God, his sense of the majesty, wisdom, and purity of Jahweh of Israel is for Him indisputably justified. But Jesus with one word transmuted the whole. He taught men to think of God as the Father. Not one attribute of reverence was cancelled, but a new meaning was, as it were, shot through the whole true picture of God, and every attribute stood in a new relation to the others and all stood in a new light for man. It is true that, founding on Ex $4^{22}$, Dt $32^{6.11.18.19}$, Hos $11^{1}$ etc., the Jews spoke of God as the Father of Israel, and references to Him as Father of the individual Israelite are not unknown (see G. Dalman, *Die Worte Jesu*, Leipzig, 1898, p. 150 ff.); yet Jesus did make the name central and supreme in an entirely new way, while avoiding, except on rare occasions, other Jewish titles for God. He nowhere

speaks of God as the Father of mankind; rather do men need to become His sons (Mt $5^{45}$, Lk $6^{35}$; cf. Mt. $5^{9}$). The pronouns which He uses are 'my Father,' 'your Father,' 'thy Father,' and once 'our Father' (in the Lord's Prayer), and occasionally He speaks of 'the Father.' His use of the word and the promises bound up with it always presuppose faith and obedience in those addressed. But, for them, 'the Father' who is 'in heaven' is the God of nature (Mt $5^{45}$ $6^{26.30}$ $10^{29}$), who cares for them with individual solicitude (Mt $6^{8.11}$), who demands righteousness (Mt $5^{20}$ $6^{1.33}$), hears prayer (Mt $6^{6}$), forgives sin (Mt $6^{12}$), and at last receives them to glory (Mt $13^{43}$). There is then no lessening of awe or reverence before God in the use of this name. Rather it corresponds to that demand for 'inwardness' in the religious life of men. It is a searching, penetrating demand which He makes, that men shall treat God as their Father. Its correlative as He speaks of men is βασιλεία—the Kingship of God. The very power as well as love, the righteousness as well as mercy, of the Father combine to set up a moral standard the most searching and the most severe of which the world has heard. 'Your righteousness shall exceed'—the most exacting system of law known to history.

This teaching also came out of the inner consciousness of Jesus. As we shall see later, He knew Himself as Son of God in a unique Sonship. But its uniqueness neither removed it from analogy with that of believing men nor made the moral demand on Jesus less, but infinitely more, penetrating. His own Sonship raised questions of self-adaptation, of self-denial, demanded wisdom and grace, sympathetic insight and brooding patience, whose range and quality we can but faintly discern as we see Him training the twelve, dealing with His foes, moving to the Cross. It was out of the discipline as well as the joy, the surrender as well as the confidence, in His experience of God that His use of the word Father arose, which changed the face of God for the hearts of men.

(c) *The sinless conscience.*—We come to a point at which the religious consciousness of Jesus surpasses that of mankind always and everywhere in an incomparable manner. Whereas the whole religious history of the races assumes and proceeds from the sense of moral failure, that of Jesus was characterized by the continuous sense of moral harmony with the will of the Father. Put in the negative form, this means 'the sinlessness of Jesus.'

(α) The witness of His disciples ought not to be undervalued. Their evidence for the fact does not rest upon their inability to find and record definite moral or religious failures in His character. Their belief in the unheard of fact could arise only from two sources, viz. the impression made by His whole personal bearing, and the definite tasks which he undertook and accomplished. Hence we find that his sinlessness is not a deduction from, but a fundamental presupposition of, the essential Christian doctrines. It is as such referred to explicitly in a few passages (*e.g.*, 2 Co $5^{21}$, Ro $1^{1-4}$, He $4^{15}$ $7^{26-28}$, 1 P $2^{22}$, 1 Jn $2^{1}$ $3^{5}$). But they are not needed. The whole apostolic conception of Jesus as Risen Saviour and Lord was utterly inconsistent with any thought of His own guilt and need of pardon or redemption. The Fourth Gospel is more definite on this, as on other elements of His consciousness. But even the words 'I have glorified thee,' 'I have manifested thy name' (Jn $17^{4.6}$), do not surpass in their inner meaning the saying of Mt $11^{25ff.}$ (even when abbreviated by Harnack in his search for the original form of Q [*The Sayings of Jesus*, Eng. tr. London, 1908, Excursus 1]), nor the self-defence of Lk 15, where He openly represents Himself as acting for and revealing God in that very conduct which severe and superficial moralists condemned. That chapter practically says, 'He that hath seen me hath seen the Father.'

(β) It has been the custom to discover the quality of His moral consciousness from the way in which Jesus dealt with sin. He not only exposed and rebuked it with prophetic energy, but He even went the length of pronouncing the forgiveness of sin upon individuals (Mk $2^{5.10}$, Lk $7^{40-50}$), and that in a manner so authoritative that He was accused of blasphemy. Furthermore, He demands of all who would enter the Kingdom of God that they should pass through a great moral renewal (Mk $1^{14.15}$, Mt $18^{1ff.}$, Jn $3^{3}$). But, on the other hand, He departs from the method of all other moral leaders in that He nowhere manifests the consciousness that He Himself had passed or needed to pass through such a change of mind and heart and faith. He seems never to have repented or *become* as a little child or pleaded for pardon. As Harnack in a powerful passage has asserted: 'There lie behind the period of the public ministry of Jesus no powerful crises and tumults, no break with his past.' He carried no 'scars of a frightful struggle' (*Das Wesen des Christentums*, p. 21). These facts, if we are to estimate their meaning aright, must be kept in close relation with what was said above about His doctrine of the nature of sin and the searching quality of His doctrine of God as Father. His penetrating and sensitive view of inward sin must have made any conscious flaw in His own moral character an intolerable agony. But His recorded agonies have a very different source.

(γ) But arguments like these are subordinate to those central facts which recent discussions of the eschatological element in His teaching have emphasized with fresh power. There can be no doubt now that Jesus, in calling Himself the Son of Man or the Man (see below), asserted that He was a superhuman being, and that as such He had appeared to act as King in the Kingdom of God, as the Suffering Servant (cf. Is 53) working redemption, and that He would Himself appear as Judge of the human race. These self-assertions were the result either of moral blindness or of a sinless consciousness. They were evidences either of a self-seeking spirit which His whole teaching ruthlessly rebukes or of a self-manifestation which was compatible only with frankness, humility, and utter purity of soul. It seems impossible to picture any combination of ideas under which He should be admitted to have undertaken the tasks of a personal Revealer of the Father, of a sacrificial Redeemer of men, of the real Head (*Prinzip*) of the new moral order, and yet to have carried in His bosom the sense of personal guilt. The sense of a personally needed redemption and the claim to be an atoning Redeemer or the supreme Judge of mankind are not to be conceived of as nurtured sincerely, intelligently, and piously in the same heart. The kind of vocation on which Jesus entered at His baptism presupposes the consciousness that He had 'fulfilled all righteousness,' even including that rite prescribed by fresh prophetic authority (Mt $3^{15}$), and that the God whom He represented in His ministry was mirrored always in the placid, teeming depths of His own soul.

(δ) Objections to the doctrine of the perfect moral harmony of Jesus with the most searching will of the Father have been founded on certain incidents recorded in the Gospels:

(*a*) on His relations with human beings, alleged disobedience in boyhood (Lk $2^{41-50}$), alleged unkindness to a woman (Mk $7^{27ff.}$), alleged impatience with disciples (Mk $9^{19}$), alleged disloyalty to His mother (Mk $3^{31-35}$; cf. Jn $2^{1ff.}$), alleged lawlessness as to the destruction of swine (Mk $5^{1-20}$), alleged passionateness in the Temple (Mk $11^{15-17}$), towards scribes and Pharisees, etc. (Mt 23); (*b*) on His relations with God, alleged sense of disharmony in Gethsemane (Mk $14^{32-42}$), on the Cross (Mk $15^{34}$), and in His famous treatment of the title 'good' (Mk $10^{17ff.}$).

In all these citations, it is sufficient to say that the guilt is not proved. Without suggesting that there are two standards of righteousness, it must be insisted on that there are many varieties of duty, and that the same act can be in one man tainted and in another man absolutely pure. In all such cases, especially when dealing with a spirit at once sincere and gifted with penetrating moral insight, the appeal must be to the conscience of the man himself and to the actual circle of his relations and responsibilities. 'The real and final answer is that He stood self-vindicated; that the memory of these incidents brought Him no tremor of regret in later hours' (D. W. Forrest, *The Christ of History and of Experience*[7], Edinb., 1914, pp. 31 f., 37). As to the passage concerning the 'good' man, which has been used to the utmost by deniers of the sinlessness of Jesus, it is well to note the varied cautious forms of statement. Strauss (*New Life of Jesus*, Eng. tr., i. 283; cf. 273) says that He 'disclaimed the predicate of good'; Martineau (*Seat of Authority*[3], London, 1891, p. 651) that 'his self-judgment felt hurt by the epithet'; Wernle (*Die Anfänge*, etc., p. 113), more bluntly, that 'he did not allow himself to be called good.' The following points appear to be decisive:

(*a*) It is not well to suggest, as some have done on the conservative side, either that Jesus really claims here to be God or that 'what Jesus disclaims, rather, is *God's* perfect goodness' (H. R. Mackintosh, *The Person of Jesus Christ*, p. 37), as if the young ruler had attributed that to Him; (*b*) this inquirer, while making a most earnest and moving appeal, had used the words 'good master' in a merely conventional manner. And Jesus makes that the occasion for giving him a deeper apprehension of what 'goodness'—which is essential to eternal life—really is; (*c*) Jesus elsewhere uses the word 'good' exactly in the conventional manner which He seems here to condemn in the utterance of the young ruler (Mt $5^{45}$ $12^{35}$ [Lk $6^{45}$]; cf. Mt $20^{15}$ $25^{21}$); (*d*) Jesus goes on to teach the young man that self-satisfied legalism is not enough; it is sacrifice, humility, and complete self-devotion which alone qualify for eternal life; (*e*) His disclaimer of 'good' is not direct, but deduced from His assertion that God alone is 'good,' which really implies that goodness is from Him alone; (*f*) the saying reveals, not His sense of sin, but the measure of His personal sense of direct and complete dependence upon God for character. And that *is* goodness, as He conceives of it. If His dependence, His faith, is completely realized, His goodness must be without flaw. That He does not disclaim.

(*e*) We are left to speculation when considering how this unstained moral consciousness conditioned the growth of His Messianic consciousness. It must have influenced very early the thought of one so meditative, so clearly aware of the deeper side of God's Kingship and the deeper meanings of prophecy. Could He repeat the 51st Psalm without a sense of difference? Could He listen in the synagogue service to the 32nd Psalm, and not be aware of a felicity in His own soul quite other than that of the man 'whose transgressions are pardoned'? Could He even as a youth hear the discussions of the Messianic hope and the traditional forms of desire for a 'warrior Christ,' or the current descriptions of a Son of Man from heaven, without criticism and re-interpretation? When did He begin to think of the Suffering Servant of Isaiah in connexion with Himself? To say that as boy and youth He could not have cherished these topics without conceit is sheer nonsense. A man of honour can distinguish himself from the habitual liar without putting a speck upon his own modesty. So could Jesus feel very early that His humble and modest yet absolute dependence on God, which is the real root of meekness and lowliness of heart, was not marred, but even deepened, by seeing the difference between that and the 'little faith' of those around Him. To say that His mind faced these problems only after the Baptism is psychologically incredible. The Temptation, distinctive as it was, cannot have been unprepared for. No such complete victory as He won in the wilderness could have been sudden, and unrelated to His brooding years at Nazareth. That crisis was the natural culmination of a long history, whose deepest elements were to be found in the opening of His mind, by prayer, obedience, and faith, to the meaning of this immeasurable difference between a moral consciousness which could not doubt the inner presence of the Father, or ask from Him the forgiveness of any sin, and the religious experience of all other souls. His very great love for man was born into an active, sacrificial passion out of those crowded hours of unshadowed communion with God, before His baptism.

This, then, is the religion of Jesus. He surpasses all others in His insistence upon man's dependence on the Father for all things, temporal and spiritual, raiment for the body and goodness for the will. This penetrating insight and faith applied to Himself discovered His perfect Sonship, His qualification for being the Saviour, Lord, and Judge of the human race. It was that religious consciousness of His which, though in such unity with ours, yet created and discovered those transcendent differences which have made the Christian consciousness possible.

*B.* Jesus and the Kingdom of God.—Even though the phrase 'Kingdom of God' seldom occurs in the NT Epistles, and its use has been exaggerated in some phases of modern theology, yet no true description of the consciousness of Jesus can fail to give it a place of fundamental importance. No less constant was the word 'kingdom' than the word 'Father' upon His lips.

**1. Jahweh as King.**—The phrase was not unknown in Jewish circles. The OT is pervaded by the idea that Jahweh is to Israel what kings are to other peoples. Even when Saul was made king, there was a sense, preserved in one tradition, of a new departure in religious as well as in political consciousness through that event. The successive dynasties of Israel were raised up and cast down, the successive kings accepted or rejected by Jahweh. The prophets were His spokesmen, exercising at times more than kingly power, just because they represented and interpreted the will of Israel's true King. In Daniel (see ch. 4) the conception of this Kingship comes to fullest expression, and that in close connexion with the perception that God, who is Creator and Lord of all, must control the history of all kingdoms towards the day when He shall reign directly, alone and for ever. And the apocalyptists, to whom it seemed as if God's power were in abeyance, and the powers of evil in possession of this world, pictured the day when suddenly the might of God would reveal its shattering power, when the present evil order would collapse and 'a new heaven and a new earth' would vindicate the doubted righteousness of God. But Jesus lifted the phrase into new and rich significance.

**2. Jesus and the imminence of the Kingdom.**—(*a*) *The eschatological problem.*—With extraordinary conviction and energy, from the beginning of His public career, He affirmed the imminence of that Kingdom (Mk $1^{14f.}$). Certain of His words, uttered at great crises of His work and experience, imply, and many think that He believed, that the literal and concrete fulfilment of apocalyptic hopes and pictures would take place immediately (Mt $10^{23}$, Mk $9^{1}$ $14^{62}$). The discussion of this subject in recent days bears upon the two subjects of form and time: What did Jesus really expect the Kingdom to be? How far was His language deliberately pictorial? In what sense and measure did He expect to see it established in that generation? According to the extremists in one direction, Jesus thought of the Kingdom of God as an inward spiritual and ethical state of man's mind and heart in which, by communion with God and the development of a holy character, he shall

fulfil the divine will, and embody the divine spirit in all his social relations. This ideal is being progressively approached as the spirit and teaching of Jesus win wider and deeper influence over the life of man. According to the extreme eschatologists, Jesus held the strict apocalyptic view. He expected outward miraculous and portentous physical events as the instruments of the vindication of God. The Son of Man would appear in the clouds, the order of nature would be convulsed, the rulers of this world would be overwhelmed. (J. Weiss [*Die Predigt Jesu vom Reiche Gottes*$^2$, Göttingen, 1900, p. 123 f.] even attributes to Him a regard for the political side in the overthrow of Roman domination.) All this must happen in that generation, might happen any day or hour, though on that point He would not commit Himself to definite prophecy. This is not the place for a detailed reckoning with the merits and demerits of these hostile views. We must try in a brief statement to do justice to both elements in His sayings that we may grasp more fully His marvellous self-consciousness.

(*b*) *The phrase 'Kingdom of God'* (*ἡ βασιλεία τοῦ θεοῦ*).—This phrase does not primarily refer to the organized community over which God reigns, but to His 'Kingship' itself (Dalman, *Worte Jesu*$^1$, 75 ff.). It is the active, personal, effective reign of God over human life, displacing the present, active power of Satan, that is announced when His 'Kingship' is said to be 'at hand' or to have 'come upon' that generation (*ἤγγικεν*, Mt $10^7$; *ἔφθασεν*, Mt $12^{28}$). Jesus announces the establishment of this Kingship as an act of God. It is 'the kingdom of heaven,' probably so called by Him (for, whatever motives the other evangelists may have had for avoiding it, Matthew can hardly have used the phrase so consistently unless it had fallen from the lips of Jesus) because in heaven that Kingship is already complete, and from heaven the forces come which are to establish it on earth (Mt $6^{10}$). In acts of overwhelming power and glory it shall appear and be seen of all men, for their weal or woe (Mk $9^1$, Lk $17^{24}$, Mk $13^{24ff.}$). Here Jesus uses language which echoes that of apocalypse from Daniel to 'Enoch,' though Daniel is the only one actually quoted by Him (Mk $14^{62}$ = Dn $7^{13}$).

(*c*) *Transformation of current conceptions.*—The Jews of that day held certain eschatological ideas which Jesus did not openly attack, though the effect of His whole teaching and personal history changed them all as they passed into the Christian faith. They believed in what we may call certain 'existences': in Hades with its division into parts including Heaven and Hell, in evil spirits with Satan (apparently) in command, and in angels of various grades and functions in the service of God. They believed also in certain events: the coming of the Son of Man, the final and universal judgment and the allotment of rewards and punishments. The eschatological elements in the words of Jesus are concerned with all of these. But it is remarkable how these ideas are all rearranged and subordinated under the force of His own Person and His deeper conception of God and God's relations to the world. The difference of tone between His references to these ideas and the manner in which they are handled by others cannot be exaggerated. In the first place, His consciousness of a direct, personal, superhuman relation to all these matters changes everything. What is to be in the future is for Him very different from what it is for apocalyptic dreamers. They are dreaming of that which God may or shall do through others; He is speaking of what is being done and to be done through Himself. The 'eschatological' facts are present not merely to His pious imagination, but actually in His own effective will (cf. Lk $4^{17ff.}$ $17^{21}$, Mk $1^{21-27}$ $4^{41}$ $8^{38}$ $14^{25}$, Mt $10^{23}$ $11^{2-6}$ $12^{28-32}$ $20^{20-28}$ $25^{31}$ etc.). The act of God in the establishment of His Kingdom has for its fundamental and essential element the 'sending' of Jesus. In the second place, we must recognize the difficulty of separating between the pictorial and the literal elements in His words. The story of the Temptation and the references to the binding of the strong man (Mt $12^{29}$–Lk $11^{21. 22}$) and to the lightning from heaven (Lk $10^{18}$) cannot be taken literally, by any stretch of the historic imagination. These are proofs that, when He referred to the clouds of heaven (Mk $14^{62}$ etc.), He was again speaking pictorially and not describing what He literally expected on the physical side. That such utterances spring from an intense inward experience—which may conceivably have taken the form of a vision or physical hallucination (see J. Weiss, *Reich Gottes*$^2$, p. 92 f.)—is possible; that they are bound up inextricably both with His own religious consciousness and with the current conceptions of the universe is indubitable. But the undeniable presence of the pictorial element—so congenial to the Oriental, so confusing to the Western, mind—and the general elevation of His thought about God and the universe above all preceding conceptions make it unwise to say that the movement of His mind must be wholly confined within the 'world view' of the Jewish eschatology of His day.

(*d*) But there is also positive evidence, in spite of Schweitzer, 'that Jesus' conception of the Kingdom of God had a double character, that the eschatological and spiritual elements were eqnally represented in it and mutually conditioned one another' (A. Schweitzer, *The Quest of the Historical Jesus*, p. 234). The view that in His mind the Kingdom of God was as it were 'all or nothing,' that it could not yet be real on earth for Him or His disciples because it was not *fully* realized for all, that His Messiahship was a postponed function to be entered on only with the outward catastrophes of the 'last day' and knowing no stages of fulfilment, that this eschatological faith served for Him and His disciples as an illusion of faith to preserve confidence in His words until they should have taken permanent roots in a new soil, to spring up independently of eschatology, is a view which does violence at too many points to the method and words of Jesus. The evidence of the Synoptists proves that even for His own mind the Kingdom was not only future but present, not only imminent and rushing in but also hindered and tarrying.

(*a*) His own religious consciousness contained the sense of present fellowship with His Father. From this all His teaching flowed, and this He constantly revealed to His disciples as the supreme good. If this was not so, then the whole religious value even of His eschatological sayings disappears into mere unethical superstition. In fact it is His idea of God that must be used to discover His idea of the Kingdom of God, and not *vice versa*. His passionate call to repentance had its root not merely in a prophetic vision of doom for the impenitent, but in a vision of the present evil of sin and the present blessedness of faith and the supreme wonder of a present fellowship with the Father. His urgency about doing the will of God does not merely take the 'eschatological' form, 'as in heaven so in earth,' but a 'spiritual' form (Mk $3^{34f.}$, Mt $25^{31ff.}$). The argument against anxiety, in the Sermon on the Mount, is essentially a 'spiritual' argument, since it urges faith in the Father not as the Father at the end of time, but as the Father whose spirit and methods are seen now in nature and providence. It may be hard for certain modern types of mind to conceive of 'eschatological' ideas in unity with the 'spiritual,'

but they were both present with apparently equal force and value to the consciousness of Jesus.

(β) Further, it is clear indeed that Jesus views the establishment of the Kingdom as an act of grace, a miraculous and overwhelming revelation of God's power and glory, most certain and most real. Yet He also sees that God's act is not arbitrary, undetermined as to form and date by anything on the human side, a predestined event which is unrelated to man's conduct. On the contrary, Jesus views the coming of the Kingdom as *conditioned* by human historical events and acts.

(*a*) It is a central idea in the parables of growth that the 'consummation of the age' (cf. W. C. Allen on Mt $13^{39}$) presupposes the conditions of harvest. 'When the fruit is ripe,' the hour of the sickle has come. The meaning of the 'mustard seed' and the 'leaven' parables cannot be reasonably confined to the contrast between the small beginnings and the great result, with J. Weiss, or to 'the miraculous character of such occurrences,' with Schweitzer. When these are compared with the other parables of seed (Mt $13^{18-23.\ 24-30}$, Mk $4^{26-29}$), the two elements of time and growth must be said to have occupied the mind of the Master in uttering them, as conditions of the result. (*b*) Jesus taught that the coming of the Kingdom must be preceded and conditioned by various events. Among these must be named the conquest of the powers of evil, on which He speaks rarely and with a reserve which distinguishes Him from His contemporaries. But the Kingdom's presence in the world is proved by the fact that by Himself, who has bound the strong one, the demons are cast out (cf. O. Pfleiderer, *Philos. and Development of Rel.*, Edinburgh, 1894, ii. 83–89). The establishment of that Kingdom is conditioned by the preaching of the gospel (Mt $11^{5}$) even in His own ministry. There is no good reason why the passages which refer to the universal scope of this work after His death should be treated as unauthentic (Mt $8^{11}$, Mk $14^{8f.}$ $13^{9f.}$). If we contrast this idea of a work which must occupy much time with the words of Mt $10^{23}$, we face just that antinomy which penetrates all His teaching, and whose solution is not to be found in the annihilation of either statement, but in a conscious will for which each is essential truth because that will is directively dealing with a confused situation. (*c*) This preaching is to be accompanied by prayer, and Jesus does not look on prayer as a pious formality nor on repentance as a violent spasm, because the end is in sight (cf. J. Moffatt, *Theology of the Gospels*, London, 1912, p. 58 f.). His whole rich teaching about prayer in precept (*e.g.* Mt $9^{37f.}$, Mk $11^{24f.}$) and parable (Lk $11^{5-13}$ $18^{1-8}$) rests on the conviction that prayer, the expression of the human will, conditions the operation of the divine will. Behind prayer lies the principle of faith, which, for the first time in the history of religion, is made primary and fundamental to man's relations with God by Jesus. Can we imagine Jesus thinking of a Kingdom established by force, without faith? (*d*) Further, when He speaks of the Judgment which is to characterize that day, there is none of the uncertainty of sheer, abstract predestinarianism which later appeared in Muhammadanism. The judgment of God is a judgment and an estimate by a will which deals with facts; and the relevant facts are to be found in human character as it is revealed in conduct. (*e*) We must here note also that in His view His own death and resurrection must precede the advent of the Kingdom—a fact which must be remembered in the interpretation of Mt $10^{23}$. For, if, as we shall see later, His own death is considered by Him in the light of the Servant of Jahweh passages in Isaiah (especially Is 42 and 53), an element is introduced which must react upon the whole meaning of eschatology for His consciousness. The will that plans to redeem by vicarious suffering for humanity must view history otherwise than the apocalyptists. A moral element is introduced into history which, like a new chemical constituent, changes the whole. (*f*) In addition to the teaching which implies the immediacy of the Kingdom, there is another strain which suggests delay and urges men to be faithful in spite of it. The parable of the tares deals with the period of preparation for the Kingdom (W. C. Allen, *St. Matthew*, p. lxx); the conduct of the 'evil servant' (Mt $24^{45-51}$) was based on the fact that his lord tarried longer than was expected; in the parable of the talents (Mt $25^{14ff.}$) the point is that 'after a long time' the master returned. It is therefore not merely the uncertainty of the date of that coming of the Lord, but also the apparent continued procrastination that gives meaning and vehemence to the repeated command to 'watch' (Mk $13^{28-37}$). This appears very distinctly if we assume that Lk $18^{1-8}$ rightly follows the preceding paragraph. It is not too much to say that nowhere does the 'art' of His teaching appear more wonderful than in that fusion of the 'eschatological' and the 'progressive' which characterizes the parables of the Kingdom. (*g*) Lastly, it must be remembered that Jesus explicitly disclaimed knowledge of the time of that consummation in the well-known words: 'But of that day or that hour knoweth no one, not even the angels in heaven, neither the Son, but the Father' (Mk $13^{32}$). This is not to be reconciled with the words reported in the same paragraph, 'Verily I say unto you, This generation shall not pass away, until all these things be accomplished' (Mk $13^{30}$), by the idea that He meant by 'that day or that hour' the literal day and even time of day (cf. J. Denney, *Jesus and the Gospel*, p. 355 n.). It is coming to be widely accepted that the reports of the eschatological sayings of Jesus in the Synoptics (Mt 24, Mk 13, Lk 21) have been confused by the inability of His disciples to grasp their meaning. The fact is that the consciousness of Jesus (containing within it the will of the Messiah, which superhumanly acts on history) dealt with the ordinary eschatological conceptions from a point of view above that of mere prophecy, and that only gradually could the minds of His greatest disciples realize that all things, even eschatology, had been made new by His presence in the world. The conscious creator of history must speak, if he would say anything of the future, in a manner which reflects at once the successive unfoldings of His 'programme' to Himself, and His effort to make it real to those in whose unique experience it must first take effect (cf. 'Son of Man,' below, p. 516).

3. **Conclusion.**—For Jesus the Kingdom of God, which means His active, direct rule of human life, on earth as in heaven, is to be established by acts of God which Jesus does not describe in current apocalyptic terms, except in His reference to the coming of the Son of Man in the clouds of heaven, and in the language of the discourse reported in Mk 13 (some parts of which may not be authentic). He avoids (cf. Lk $17^{20ff.}$) all attempts to involve Him in trivial disputes about the date of those events (cf. J. Weiss, *Reich Gottes*, p. 86 f.). This Kingdom is not 'spiritual' in the sense that it has nothing to do with the physical universe, nor is it 'eschatological' in the sense that it can be established merely by means of cosmic catastrophes. For His consciousness the physical and the spiritual are elements of one system, organized by the one will of God the Father, and His language describes events and processes in both elements. Hence the Kingdom appears in works of healing and the preaching of the gospel, in cosmic transactions and in moral judgments, in the conquest of Satan and in the forgiveness of sin, in warnings of the future day and in revelation of the Father for this day's faith and obedience. That gospel of the Kingdom is the declaration not merely of its imminence, but also of its nature and conditions. And for Jesus these conditions involve knowledge both of what God will do and of what man ought to do. The religious and the ethical are for Him as completely one as the physical and the spiritual. Conduct towards man and towards God is characterized by the same fundamental principles of love and trust. And yet after all it is astounding to remember that what God will do in the establishment of that Kingdom is never set forth by Him as an objective list of future acts. The future is absorbed in the consciousness of His own functions as the Messiah. In and through Himself the supreme acts of God are being performed, in which the coming of that Kingship is to be realized.

*C.* THE FUNCTIONS OF JESUS AS MESSIAH IN RELATION TO THE KINGDOM.—1. **The tone of supreme authority.**—We have already seen that there is a remarkable difference between Jesus' conception of the Kingdom and that of all others before and after Him. Even His forecasts of its coming, when He echoes the language of prophets before Him, contain significant changes and carry in them a tone which the greatest of His followers could not repeat. For others He prescribes repentance, watching, service of an absent lord, waiting for a dateless event, but He never associates Himself with His disciples in these experiences and spiritual efforts. He never speaks or acts as if He were, or expected to be, a subject in that coming Kingdom, a recipient of its mercy and glory. His consciousness is of another kind and rises out of a relation of a superhuman order, which we must now consider. And for this not merely His words, but His whole bearing and indeed His influence upon those who lived in the presence of that unique will, must be taken into account. A writer in *Christus* (ed. J. Huby, Paris, 1912, p. 704) has well said, 'S'il est un trait caractéristique de la physionomie du Christ, c'est qu'il s'impose.' His authority, His consciousness of something more than knowing the truth, namely, of the right to

declare and even to enforce the ultimate laws of human existence, is an ineradicable element of the gospel story. It is no less evident in the Synoptics than in the Fourth Gospel. In Mark's Gospel this pervasive tone is to be found from beginning to end. He exercises power or authority (*ἐξουσία*) in His teaching ($1^{22}$), over unclean spirits ($1^{27}$), to forgive sin ($2^{10}$), even to communicate power to His disciples ($3^{15}$). All great religious leaders have won a nameless spell over their followers, and their allegiance even unto death. But the range and quality of His authority are presented in the Synoptics as having peculiar elements.

2. **Messiah-King.**—He is dealing with the final fact—the Kingship of God—through which human nature is to reach its consummation. Yet it is He who has received 'Kingship' and can speak of 'my kingdom' (Lk $22^{29f.}$; cf. Mt $13^{41}$, Mk $9^{1}$), or accept the tribute from others (Mt $20^{21}$, where for 'kingdom' Mk $10^{37}$ reads 'glory'—the substance is the same). In His mind and that of His followers the sovereignty of Jahweh over Israel was directed towards a great consummation, with which the prophets were much concerned. The end to which they looked forward is felt by Jesus to be attained in Himself (Mt $13^{16f.}$). But the end must surpass the stages which lead to it; hence He does not hesitate to set His mission above all the glories of the OT story and Himself over all predecessors. It would be enough to refer to the passages found in the document now known as Q which is embedded in the Gospels of Matthew and Luke, to show that this feature of His consciousness profoundly impressed the minds of His disciples; *e.g.*, take 'more than' Jonah, or Solomon (Mt $12^{41f.}$ ‖ Lk $11^{31f.}$). The same idea in an even more august form appears in the saying attributed to Him by Matthew ($12^{6}$), 'Something greater than the temple is here.' It is now almost universally admitted that Jesus knew Himself as the Messiah, that personal representative of Jahweh for whom Israel waited and for the signs of whose appearing they searched heaven and earth. But opinions still differ widely as to the conditions under which Jesus discovered His Messiahship, interpreted the details of its task, and made it known to His disciples. The term does not occur in the OT as a personal name, but came to be used in Jewish times of that One through whom they hoped for deliverance from the foreign yoke, and imperial supremacy for the Israel of Jahweh. That He would be an invincible king and sum up in Himself the ideal qualities of royalty (cf. 2 S $7^{12ff.}$, Ps 72, etc.), that He would be the Son of David, that He would usher in the Day of Jahweh, that He would be the Christ or Anointed One of Jahweh (Lk $2^{26}$), the Holy One of God (Mk $1^{24}$; cf. Mk $1^{34}$, Lk $4^{41}$)—all these ideas were found among the people who came in contact with Jesus. That the 'political' aspect was prominent is plain from the fact that, when He confessed Himself to be the 'Christ' at His trial, His enemies at once made that the basis of the accusation before Pilate that He claimed to be king, and that this title 'King of the Jews' was set upon His cross (see below). It is this fact that alone is sufficient to account for His avoidance of the title, His open acceptance of it from the disciples only after they had learned something of His transformation of its meaning. To have used that title promiscuously earlier would have been, in the atmosphere of His day, to misrepresent completely His interpretation of prophecy and His own consciousness of His functions. To have disowned it explicitly would have also been to misrepresent Himself and His mission. For He knew Himself to be the One in whom prophecy terminated, who had come to fulfil the best hopes of Israel, to establish over all mankind, 'beginning at Jerusalem,' the Kingship of God. It was His supremely delicate task to claim the substance and disown the popular form of Messiahship. Hence what we find Him doing is to fulfil the sublime functions of that office without formal announcement of His relation to it. The difficulty of His position is made plain by the misunderstandings of His disciples which are recorded with such astonishing faithfulness in the documents which are ultimately derived from themselves and their immediate friends and followers. So deeply were the old ideas engrained, so strange and superhuman was the new conception of the divine Kingship and its fundamental principles, that not even the Death and Resurrection of their accepted Messiah could at once reveal the new moral and spiritual universe to the minds of His disciples. It required the successive events described in the Acts and the appearing of Paul to interpret the Messiahship of Jesus to those disciples, as He fulfilled it.

3. **Elements in His will as Messiah.**—When we come to His own concrete interpretation and application of the idea of Messiah by Jesus, we find ourselves in the presence of a will greater than that which any prophet or saint of the OT had desired or foreseen. Their partial glimpses into human need and divine fullness are united and then surpassed in that which He essays to accomplish. His functions at once interpret and elevate, gather and reorganize, the scattered spiritual principles of OT religion.

(*a*) *Revealer of God.*—He acts as the Revealer of God. The OT had taught the Jews to hope for a full knowledge of Jahweh in the day of His appearing to judge the nations. But the nature and medium of that knowledge had been left vague. Jesus in the great passage, Mt $11^{25ff.}$, asserts this as His function, to reveal the Father. There is undoubtedly a mystical element involved in this work of revelation, but no less clearly is there a natural and concrete element which is the only security for its historical permanence and continuous development. Thus His very words about God throw welcome light upon His will and spirit, and He uses the definite and vivid name of Father to describe Him. Further, He does not shrink, as we have seen, from assuming that His own conduct is a revelation of the character and will of God (Lk 15). This is carried to the extreme in those passages in which, while citing OT Messianic sayings, He sets Himself in the place of Jahweh—*e.g.*, Mt $11^{4f.}$ = Is $35^{5}$ $61^{1}$, Lk $4^{17}$ = Is $61^{1f.}$; Lk $7^{27}$ = Mal $3^{1}$. This whole matter is fully expounded in the Fourth Gospel, but cf. especially the striking language to Thomas and Philip (Jn $14^{8-11}$). (*b*) *Power over demons.*—The attitude of Jesus towards the world of evil spirits must be taken just as it is set forth, if we would understand the range of His conscious will. He has met and conquered the prince of demons (Mt $4^{1-11}$ $12^{27-29}$), and hence has power over all lesser spirits of evil. He therefore accepts as true to fact the testimony of the evil spirits themselves (Mk $3^{11f.}$), as well as the recognition of this superhuman power by the people who saw His works. (*c*) *Miracles.*—The earlier rationalism strove to extrude from the story of Jesus all the miracles. They were either pure inventions or legendary growths arising from the desire to illustrate His teaching or defend His superhuman claims. The later rationalism draws a distinction between the miracles of healing for which analogies can be found elsewhere, and the 'nature miracles'—such as multiplying the loaves, raising the dead, walking on the sea, etc. The former, or some of them, are retained as well attested and historical; the latter are rejected. The dilemma is a peculiar one. For, on the one hand, the same records preserve both classes of

works with the same simplicity, directness, and relevance; on the other hand, the supposed distinction is not grounded on objective science, but has been created for the express purpose of dealing with the gospel story. Science has not yet drawn any such line as this imaginary one, and the theological writers who advocate it use only vague and unscientific language to suggest it (cf. E. A. Abbott, *The Kernel and the Husk*, London, 1886; P. Gardner, *Exploratio Evangelica*, do., 1899). In that central passage of Q (Mt 11$^{4-6}$, Lk 7$^{22}$) Jesus mentions the healing of lepers and the raising of the dead as works which He performed. His consciousness held Him in a relation to natural processes above that of other men. And this is necessary to the unity of that consciousness; it corresponds with other aspects of the range of that will. We must not confuse the issue by assuming that such a will is impossible. It is our simple scientific duty to discover whether such a consciousness moved in history, and whether its operation in the whole round of its life presents a consistent unity. For Jesus the distinction above referred to did not exist. He was conscious of power to direct the forces of nature as clearly as to reveal God, to announce the eternal conditions of blessedness, to conquer Satan, to forgive sins, to judge the race, and to rise from the dead. (*d*) *Lawgiver*.—While He has come to fulfil the Law and the prophets (Mt 5$^{17}$), He yet speaks as Himself the lawgiver of the Kingdom. The 'Sermon on the Mount' reflects this consciousness of supreme authority in the most impressive manner. For there He speaks in criticism of the noblest ethical code of antiquity, much of which He would acknowledge to have been announced by God through Moses. But, in passing behind those prescriptions to reveal the inner principles of human character, He deliberately and repeatedly uses the form 'I say unto you,' speaking as no prophet spoke, in His own name and authority. What appears formally in that place is in substance present throughout His teaching. He is everywhere laying down the laws of eternal righteousness for the citizens of the Kingdom of God. (*e*) *Administrator of law*.—He not only announces but administers those laws. It is significant that Judaism had not attained to the view that the Messiah would act as Judge (though that office is assigned to 'the Son of man' in the 'Similitudes' of Enoch), and the matter of forgiveness of sins was inevitably reserved for God Himself. Even if they could have conceived of such a judgeship, the scrutiny of conduct and the award of appropriate rewards and penalties as delegated by God to a representative, the question would still remain, 'Who can forgive sins but one, even God?' (Mk 2$^{7}$). But Jesus not only asserted that He would act as Judge of mankind; He even assumed the prerogative of forgiving sin (cf. C. W. Votaw, art. 'Sermon on the Mount' in *HDB*, vol. v. p. 29). This is Messianism of a type which men had not dared to fashion in their hearts. (*f*) *The will to die*.—Up to the time of Jesus, the Jews did not expect their Messiah to die. For them as for Peter (Mk 8$^{32f.}$), that would have been almost a contradiction in terms. It was only in the Talmudic times that the idea was tolerated, and even then the Messiah's death was looked on as a dark and mysterious fate which He shared with His people. But with Jesus a new view has taken hold of history, viz. that His death is to be used as an instrument of salvation, a weapon of the divine Kingship. Whether He contemplated His death from the beginning of His ministry is much in dispute. Certain passages would seem to show that the will to offer Himself was in His mind from the time of the baptism. The words which He heard at the baptism, 'Thou art my Son, the Beloved, in whom I am well pleased' (Mt 3$^{17}$; cf. 12$^{18-21}$), contain phrases from Ps 2$^{7}$ and Is 42$^{1}$, from which it is clear that He had in His mind the Isaianic picture of the Servant of Jahweh, and that He applied it to His own mission. The story of the Temptation shows that renunciation was from the first an essential feature of that mission. The sayings about persecution (Mt 5$^{11}$ 10$^{16. 21. 25}$) and the rejection of prophets (Mk 6$^{4}$, Lk 4$^{24}$, Mt 13$^{57}$ 23$^{37}$) indicate that He expected relentless opposition which He could not avoid and others would not abate. Hence the saying about the Bridegroom is not out of keeping with His general outlook at that early period (Mt 9$^{15}$). Moreover, when He does speak more definitely of His death, He does not treat it as a new factor or as a surprise. It is the complete fulfilment of that service to which He stands committed from the beginning (Mk 10$^{45}$). He describes it as the fundamental principle of the Kingdom that a man should lose his life. Hence it would be an exaggeration to say with Baldensperger (*Selbstbewusstsein Jesu*$^{2}$) that, after the crisis near Cæsarea Philippi, when His death becomes clear as an inevitable event, He passes through a 'Messianic re-birth.' But undoubtedly in the latter part of the ministry the will to die became more defined in relation to gathering circumstances, and hence occupied a central place in His teaching (Mk 8$^{31}$ ∥ 9$^{12}$ [Mt 17$^{12}$] 9$^{30-32}$, Mk 10$^{32-34}$ ∥ $^{38. 45}$ 12$^{1ff.}$ 14 *passim*).

From these passages we learn: (*a*) that His death was to be inflicted, and consummate His rejection by Israel; (*b*) that it was also the will of His Father (Mk 14$^{36}$); (*c*) that He looked on it in the light of Is 53, and therefore could call it a 'ransom for the many' (Mk 10$^{45}$, Is 53$^{5. 6. 12}$), and as appropriate to the Son of Man who is supreme in authority over the Kingdom; He would suffer as Messiah not merely *with*, but *for* His own; (*d*) that He deliberately and solemnly set it forth at the Last Supper as a means of redemption, as the ratifying of new relations between God and man ('blood of the Covenant'); (*e*) that He faced this death with peculiar agony of soul, but endured its approach, its accompaniments, its outer shame and inner horror, with steadfast will as the sacrifice without which He could not establish the Kingship of God over 'the many.'

(*g*) *The expectation of death*.—This is not the place to discuss either the theory of the Atonement or the detailed and successive steps through which His consciousness passed. Suffice it on the latter point to say that the phenomena of the Gospels are best explained if we keep two sets of facts before us. (i.) A great mind can hold a great purpose in view and see its general outlines without allowing itself to be prematurely concerned with all the particulars. A great mind further can foresee and yet hold off the agony of a coming sorrow. The serenity which some people see in the earlier days of His ministry is a witness not to His ignorance that only death could win that Kingship, but to the greatness and soundness, amounting in His case to majesty, of self-direction, self-estimate, and self-control. To say that He could not have preserved a calm consciousness in view of that event is to belittle Him absurdly, below the standard of many brave men and women. 'For the joy that was set before him he endured' is not a psychological blunder of the writer to the Hebrews (12$^{2}$). (ii.) Much must be allowed for His 'paideutic' method. Not only did His task unfold itself to His own mind in successive steps, from great principles and a supreme purpose which was already formed and firmly held when He entered on His Messianic functions, but He had also to communicate these principles and their practical issues in like (but not always parallel) steps to His disciples. The sudden clear teaching that He must suffer and die (Mk 8$^{31}$ and ∥) is undoubtedly made possible by their confession of His Messiahship. To announce His inevitable death before that would have hindered the growth of their insight, but after that insight had reached a certain clarity and steadfastness the shock of that other revelation must be given. And their whole bearing

justified His method. (*h*) *Resurrection.*—That Jesus spoke not only of His death, but also, though with significant reserve, of His resurrection, was at one time much questioned. But the frank acceptance of the eschatological elements of His teaching sets that dispute at an end. He who announced both His death and His coming in the clouds of heaven as 'Son of man' did foresee a resurrection of some kind. The Synoptics agree (with only a verbal variation [Mk $8^{31}$ 'after three days']) that He prophesied His resurrection as they afterwards record it, implying the idea of a physical resurrection. It may be taken as certain that Jesus carried in His consciousness something more than the human hope of a future life. It entered into His will, it modified the scope and method of His work, it qualified His whole conception both of the Kingdom as a future event and of His relation to it as its Ruler. No doubt, as Strauss saw with characteristic clearness, 'this (continuous) certainty must have been as supernatural as the event itself' (*New Life of Jesus*, Eng. tr., p. 45). But that need not trouble us nowadays. We are manifestly in the presence of a consciousness which contains elements that must be frankly conceded to be superhuman. One of these is a programme of personal influence which includes the life after death. It is not at all inappropriate to find in the Fourth Gospel this aspect of eternal life radiating from its wonderful picture of His historic consciousness. When He says to Martha, 'I am the resurrection and the life,' He utters in mystical phrase what is implied in the assertion that after death He will come in glory and receive the faithful to the rewards of the Kingdom.

4. **His demands on the disciples.**—It is a natural coefficient of all these forces in His consciousness that He as Messiah-King should make supreme demands of His subjects. (*a*) He imposes on them the law of faith, a faith in Himself which He nowhere discriminates from faith in God. It is this attitude of trust that produces His miracles of healing and His words of forgiveness. (*b*) He imposes the law of complete surrender even to death 'for my sake.' The varied Greek equivalents for ἕνεκεν ἐμοῦ may go back to one Aramaic form, but the freedom of translation and tradition is a witness to the frequency and the penetrating quality of the words of Jesus in this regard. This phrase, uttered in respect of persecution and of death, throws light upon such an incident as the command to the young ruler to sell his possessions and follow Jesus, and upon the completeness of that devotion which He demanded of the twelve. (*c*) He imposes a still more searching test—a test of character—when He speaks of those who are 'worthy' of Him. To be worthy of Him (cf. Mt $10^{34ff.}$, and Harnack's searching analysis [*Sayings of Jesus*, pp. 86–90]) is tacitly assumed to prove that a man belongs to the kingdom of righteousness. The idea must not be treated superficially, as if any distinguished leader might determine who are worthy followers. It must be connected with the other ideas in which Jesus seems to be constantly revealing Himself to His disciples as an object of religious regard. The worthiness here referred to must, therefore, be compared with the whole standard of personal worth which is presented in the Gospels. That standard has various phases and elements. It demands unlimited inward purity, unlimited outward devotion to the known will of God, love for God which absorbs the whole personality, and love for one's neighbour which is equivalent to the love of one's own life; it sets up the character of God as something known, in His righteousness and His love, and demands that men shall aim at that perfection; it lifts the whole problem from local, national, external tests to those which are universal, supreme, eternal, inevitable. It is in the heart of this system of ideas, even in the course of its unfolding, that the character, will, teaching, and very Person of Jesus emerge as an unexpected and yet essential part of it. We are not concerned with the question how the historical could thus be allied with the eternal, how one person in time could determine the moral standing of all others through their deliberate valuation of Him; that is a later question. The matter before us is one of fact. It would seem that, according to the earliest tradition, Jesus did without formality of claim, but constantly, on all sides of His self-expression, in word and act, draw to Himself the faith and obedience of His disciples and present Himself to them as the standard of moral worth—in fact, became to them the object of a religious regard. The effort to prove that this worship of Christ arose only after His death and is reflected into the story of His ministry has been prolonged, painstaking, and futile. The fact is too deeply and subtly involved in the whole presentation of His personality, even in the Synoptic Gospels, to have been added and merely reflected from later and baseless enthusiasm. The vast majority of modern scholars—even including many like Wernle and Harnack, who are reckoned to the so-called 'Liberal' position—admit that there are here in the Gospels indubitable proofs that the consciousness of Jesus contained elements not invented by the apostles, yet not native to the human mind as known everywhere else in history. These elements, as we have surveyed them thus far, appeared in the kind of things He undertook to do among men, in the manner of His self-expression. They go deep into the inmost workings of His mind, into the foundations of His character, into the substance of His purpose. Conceive them as possessed by a man—a son of the race—and they become a confusion and a folly. But the Church has conceived them as the supremely natural revealings of a superhuman conscious will, and they have been lifted into harmony and divine power (see, further, under III.).

*D.* THE SPECIAL TITLES.—1. **The Son of God.**—The NT contains material for tracing in part the remarkable development of the meaning of this great title. In view of the arbitrariness of his critical method, we shall assume that N. Schmidt (*EBi* iv. 4690 ff., and *The Prophet of Nazareth*) occupies an impossible position when he maintains 'that Jesus never called Himself "the Son of God," and never was addressed by that title' (*EBi* iv. 4701, where the last clause, strictly taken, may be true, but is irrelevant).

(*a*) *Two termini.*—The *terminus a quo* in NT usage is reflected not only in the Synoptic Gospels, but even in the Fourth, where we find in certain passages what appears to have been the current Jewish use of the phrase. Its history goes back to Ps $2^{7f.}$, where the twin ideas of Messiahship and Sonship are brought together. The well-known Hebrew way of conceiving of Israel as God's Son by making the deliverance from Egypt the birthday of the people (Ex $4^{22}$, Hos $11^{1}$ etc.) was followed up by an equally careful avoidance of the idea that any King of Israel was His offspring. The idea of Sonship expressed in Nathan's words (2 S $7^{14}$) is quite evidently religious and ethical, and that passage may have given rise to the language of Ps 2. In the Jewish period, outside the Gospels, no certain cases are found in which the Messiah is spoken of as 'Son of God.' But in the Gospels, though the evidence is confused, signs are not wanting that occasionally the phrase was employed as a honorific title for the anointed one; cf. Mk $3^{11}$ $5^{7}$ (Mt $8^{29}$), Mt $14^{33}$ (wanting in Mk), Mt $16^{16}$ (different in Mk $8^{29}$, Lk $9^{20}$), Mt $26^{63}$ (different in Mk $14^{61}$, Lk $22^{68ff.}$), Mt $27^{40}$ (different in Lk $23^{35}$, wanting in

Mk), Lk $4^{41}$. In the Fourth Gospel the words of Nathanael ($1^{49}$) and Martha ($11^{27}$) sound like faithful echoes of this early period when the Messiah was spoken of as Son of God in a manner similar to Israel, Ephraim, and David, who were uniquely loved, chosen, and endowed by God. The title as so used did not, of course, involve any reference either to the pre-existence or to the mode of birth of the Messiah. The *terminus ad quem* in the NT literature is seen in the Epistle to the Hebrews quite as clearly as in the Fourth Gospel. There the Son is conceived of as a divine being (He $1^{1ff.}$) who partook of human life by a sublime act of His own gracious will ($2^{14}$).

(*b*) *The source of the later use.*—That which came historically between these extremes and made possible the passage from the earlier vague meaning of this title to the later exalted meaning was the consciousness and self-manifestation of Jesus. As we have seen, He spoke of God as His Father with a note which differentiated His relationship from that of all other men. He avoided the almost unavoidable phrase 'Our Father' except when He taught His disciples how they should pray. According to the Synoptics, He rather took this Sonship as a fundamental fact, not to be discussed, while the Fourth Gospel represents it as an open claim which caused much controversy between Him and the Jewish theologians and nearly brought Him to death (Jn $5^{17ff.}$ $10^{29-38}$). And it is of the utmost significance that John in these two passages represents this claim to a unique and divine Sonship to have been found by His enemies simply in His peculiar emphasis upon the words 'My Father.' If this is true to fact, then certain passages in the Synoptics must have conveyed the same idea to His disciples. In the Synoptics reference must be made to Mk $12^{1-12}$ (Mt $21^{33ff.}$, Lk $20^{9ff.}$), where He by implication describes Himself as 'Son' as compared with the prophets and others, who are 'servants,' to Mt $17^{26}$ (see Dalman, *Worte Jesu*[2], p. 231), and to Mk $13^{32}$, of which H. J. Holtzmann (*Die Synoptiker*[3], Tübingen, 1901, p. 170) says that it is the only place in which 'The Son of God' appears to have a metaphysical value. In the light of such passages, the repeated emphasis upon 'Son of God' in the story of the Temptation—especially if that story came from His own lips—must not be referred to the popular, but to His own characteristic, understanding of the term.

(*c*) *A central passage.*—One of the central passages is Mt $11^{25-27}$, Lk $10^{21f.}$ (from Q), concerning which it is clear: (i.) that He reveals a consciousness beyond that of all prophets and saints in a 'sonship' which is the basis of mutual knowledge between Himself and 'the Father'; (ii.) that He recognizes that 'all things' have been 'delivered' unto Him. Wellhausen (on Mt $11^{25-30}$) points out that all doctrine and knowledge is among the Jews παράδοσις. But 'the παράδοσις of Jesus springs immediately from God, not from men.' It is very common to restrict this phrase to matters of knowledge and teaching (so Harnack, Wellhausen, Denney). And yet, if we read the passage in its Matthæan context, it would seem that 'all things' must include at least the Messianic functions to which He refers in His reply to John's messengers (Mt $11^{2ff.}$), and which ought to have brought to repentance the cities where His mighty works were done (Mt $11^{20}$). To some it still seems jejune and entirely untrue to the range of His consciousness and the type of His Messiahship to restrict the 'all things' to His 'doctrine' (see Harnack's argument in *Sayings of Jesus*, p. 297 ff.). The revelation to which He refers in the next clause, even though He does mention the σοφοί, must mean more than 'a revelation of a knowledge.' Was He not speaking with the σοφοί when they rejected His revelation of the Spirit of God by His works in Mt $12^{28ff.}$? Did He exclude that kind of revelation when He thought of the 'all things'? And further, if it is 'teaching' that constitutes the whole of His 'yoke' (Mt $11^{29}$), wherein does that differ from the 'burdens' which He deplores? If the paragraph is not to be interpreted in this setting, the best place to put it would be after the death of sacrifice had come fully into view. Then the true meaning of 'all things have been delivered unto me' would appear clearly as a reference to the functions of the Messiahship. The words can only express the consciousness that everything necessary for establishing the Kingship of God was now committed to His will, and that, as we know, included far more than teachings.

(*d*) *The origin of this Sonship.*—The idea that the term 'Son of God' was only equivalent to the term 'Messiah' having been discredited, some scholars tried to prove that Jesus first conceived of His Messiahship and from that passed on to His unique Sonship. That theory in turn seems to be doomed. It is clear that His Messiahship arose out of a religious background, but that religious background had nothing greater than the consciousness of 'the Father' in His relation to 'the Son.' But, if this filial relationship with God is the basis of His consciousness, and if it is unique, incommunicable save in a secondary though still glorious sense (Jn $1^{12}$, Ro $8^{3.14-16}$, where the use of τέκνα for υἱοί is significant), is it also true that we get from Himself no hint as to its origin? That it is more than merely religio-ethical is evident (see Dalman, *Worte Jesu*[3], p. 235). He seems to have taken for granted that men would consider it to be supra-temporal and assume that He had 'come' or 'been sent' in a higher sense than can be used of the sending or coming of a prophet. Hence it is that we find in Matthew ($5^{17}$ $10^{34.35}$ $11^{25-27}$) a series of aorists which seem clearly to refer to pre-temporal acts of God. To these W. C. Allen would add, as significant of the same idea of pre-existence, Mt $5^{17}$ $9^{13}$ $11^{10}$ $15^{24}$ (see his *St. Matthew*, pp. 46, 122, 123). But that eternal Sonship which seems to be behind so many of His references to His mission, and which was for others an inference from His self-revelation, naturally became in their minds a pre-condition when they came to tell the story of His Messiahship. Then they accounted for His unique Sonship either by the unique birth (Lk $1^{35}$) or by His pre-existence as the Logos and His manifestation in the flesh (Jn $1^{1.18}$).

2. **The Son of Man.**—(*a*) *Origin of the term.*—Controversy has long raged around this great title. Until about twenty years ago, it was generally accepted as a historical fact that Jesus used the phrase, and ingenuity was spent upon discovering what He meant by it and why He seems to have preferred it to any other. (For full accounts of the varieties of opinion see the summaries *sub voce* of S. R. Driver in *HDB*, and of N. Schmidt in *EBi.*) A sudden change was wrought when some German scholars, especially Lietzmann, Wellhausen, and Fiebig, raised the question, on purely philological grounds, whether Jesus could have used the phrase at all. Assuming that He spoke Aramaic, it was pointed out that the Aramaic equivalent of ὁ υἱὸς τοῦ ἀνθρώπου could only be Barnāsh or Barnāshā, and that this was the ordinary Aramaic word for 'a man' in the indefinite sense, and had come to be used as an indefinite personal pronoun for 'one.' The conclusion was reached by some (Wellhausen, Schmidt, etc.) that a sheer misunderstanding of certain (authentic) sayings (especially Mk $2^{10f.}$ $^{27f.}$), where Jesus spoke of 'man,' had led early Greek translators from the Aramaic to use the unnatural Greek phrase, and that by a natural process this was extended to other

authentic passages, and also to some new ones which theological conceptions of His Person led them to attribute to Jesus. The discussion of this problem must be left to the linguistic specialists. But a survey of the controversy yields the following points.

(1) Much depends on the date ascribed to the first documents in which it occurs. Now the authors of Matthew and Luke found this phrase in that document Q which gave them so many of the words of Jesus. If they independently got hold of Q in Greek, and if, as Harnack holds, it was composed before the Fall of Jerusalem, it must be dated in the lifetime of many of the first disciples of Jesus. This fact will go far to prove that 'Mark' found the phrase in his independent material, which also must have existed before A.D. 70. The double process of misunderstanding the Aramaic phrase and using it for theological ends, by which N. Schmidt accounts for its place in the Gospels, is then thrown back to the lifetime of the primary apostles. This seems incredible among people who spoke both Aramaic and Greek. (2) Those who believe that Jesus used some word to express this idea agree that He therein referred directly to Dn $7^{13}$, and did so most distinctly at His trial (Mk $14^{62}$). It seems difficult to believe that He could not have made this reference in that form, on the ground that, as Lietzmann insists, the title Son of Man 'did not, and for linguistic reasons could not, exist in Aramaic'—an extreme which Dalman refuses to accept (*Worte Jesu*[2], p. 193 f.). As a matter of fact, when the Greek Gospels were translated (in the lectionary known as the *Evangeliarium Hierosolymitanum*) into an Aramaic dialect which 'may, perhaps, bear a close resemblance to that in which Jesus spoke to His disciples' (E. Nestle, *Textual Criticism of the Greek NT*, Eng. tr., London, 1901, p. 103), two forms were used, clumsy as they were, as equivalents for the Greek for 'Son of Man' (N. Schmidt, *EBi* iv. 4714). The phrase is indeed, and admittedly, uncouth in any and every language. But its very strangeness may have lent it value for the purpose of Jesus. Those who believe with R. H. Charles that Jesus adopted the phrase from the 'Similitudes' of the Book of Enoch have less trouble, of course, with its presence in the Gospels, but throw the philological puzzle back to its origin in 'Enoch.' On the other hand, E. A. Abbott holds that Jesus derived the term from Ezekiel, where *υἱὲ ἀνθρώπου* appears scores of times in LXX as a translation of the Hebrew *ben 'ádhám*. As to the Aramaic translation of the latter, which would be given in the synagogues, he points out that the Targum of Jonathan (2nd cent.) calls Ezekiel *bar 'ádhám*, and this may have been the phrase familiar to Jesus. If this were the phrase He used, which Abbott seems to hold as possible, the reference to Dn $7^{13}$ would not be excluded. His whole manner of revealing His consciousness involved the constant use of many OT ideas and passages, hitherto unharmonised or superficially interpreted. His consciousness extracted their inner unity as the reflexion of itself, and their variety as the prophetic voices of God. (3) The avoidance of the title by the authors of the Gospels, except when they attribute its use to Jesus, arose from their recognition of its strangeness, and their reverence for His purpose in its adoption. Moreover, the titles which they use are either religious or prophetic in their meaning, but 'Son of Man' does not immediately suggest a religious idea like 'the Lord,' nor link Him directly and openly with canonical prophecy like 'the Christ,' nor immediately with the Father, like 'Son of God.' It is colourless in these respects, and even in our own day is used only when men wish to emphasise one of the aspects of His Person, namely, His humanity. But that was not what the earliest disciples needed to emphasize by means of a title; and probably it was not what Jesus intended by it. Its avoidance in the Epistles is due obviously to the fact that to Gentiles it could have had no meaning at all. This makes it all the more significant that the Gentile Synoptic (Luke), who avoids so much that is peculiarly Jewish, retains it so freely in the words of Jesus, and preserves several instances of its use which are peculiar to his Gospel (see below). (4) It is not impossible that, when Jesus used the Aramaic form, His emphasis on it carried the meaning 'the Man,' but that, for reasons partially suggested by Dalman (*op. cit.*, p. 196 f.), the only Greek form free from embarrassment was not ὁ ἄνθρωπος, but ὁ υἱὸς τοῦ ἀνθρώπου. But it is by no means conclusively proved that Jesus could not, even in Aramaic, use a phrase, however peculiar, for which those Greek words were, in the minds of men who knew and read and wrote both languages, the best equivalent. Burkitt holds that 'the Son of Man' is a literal translation of the Aramaic for 'the human being,' 'the Man,' and that, when Jesus used it, the effect would be 'the Man—you know of whom I speak,' and that at His trial the reference to Dn $7^{13}$ became quite clear (*Earliest Sources for the Life of Jesus*, p. 66).

(*b*) *Use of the term by Jesus.*—It must help us to understand His consciousness if we try to discover why and how He used this strange title.

(1) We must remember that the term 'Messiah' did not occur as a personal noun until Jewish times, and that the indiscriminate use of it by us as an equivalent for other terms may and does lead to inaccuracy. Some word must, indeed, be found to cover all the phenomena of the strange alluring hope which held the eyes of that race directed upon God and the future with passionate confidence; and 'Messiah' has become fixed for us in that usage. But we must not forget that many descriptions of their hope even in the OT contain no allusion to a personal Messiah. The word 'Messiah' in late Jewish literature—'mine (or 'the') anointed one'—is used most frequently where the mind of the seer is fixed upon the clash of nations, when he thinks of dynasty succeeding dynasty and empire overthrowing empire. Then he conceives of the Anointed One, generally as the 'Son of David,' as appearing to overcome all foes. From this it becomes plain that in the days of Jesus—whether false Messiahs had already appeared or not—the word Messiah would inevitably suggest a powerful historical king, a warrior, an army, a sudden and resistless revolution. But, if we take Enoch 37–70 to be pre-Christian, another conception of the great deliverance had arisen. Developing the central idea in Dn $7^{13}$, the eye of faith saw one appear, who comes down upon the plane of history from above, wholly 'supernatural,' for whom a new name must be found. (He is very rarely called 'the Anointed.') He, 'the Son of Man,' shall execute judgment on men and angels alike. His sphere is evidently other than that usually associated with the picture of the anointed king, of David's lineage.

The difference between the ideals led to a difference in the effect of the names principally associated with each. This comes out in a startling way in the trial scene. When Jesus is asked whether He is 'the Christ,' He not only assents, but immediately, as if still avoiding a misunderstanding, makes the statement that they will see 'the Son of Man' at the right hand of power and in the clouds of heaven. Now, it was no blasphemy, as has often been pointed out, for a man to claim to be Messiah; but the claim to be 'the Son of Man,' uttered in the presence of so many witnesses, was taken as a blasphemous claim at once. Yet, strange to say, according to the Synoptics, the Jewish judges did not lay before Pilate the religious (Son of Man) but the political (Messiah) charge, that He claimed 'to be king' (Mk $15^{2}$). Luke tells us ($22^{70}$) that it was the claim to be Son of Man that led to the further question, 'Art thou then the Son of God?'—where 'Son of God' cannot be a mere repetition of the original question, 'If thou art the Christ, tell us' (v.$^{67}$), but suggests that the term 'Son of Man' carried to their minds higher personal implications than 'Messiah.' Exactly the same succession of ideas appears in the Fourth Gospel, where Pilate is evidently first told that Jesus claimed to be king of the Jews (Jn $18^{33}$; though, strangely enough, both here and in the Synoptics the exact language of the first accusation as reported from the Jewish judges to Pilate is not preserved). When Pilate seems unimpressed by that apparently foolish idea, they then pass to a new (religious) accusation ($19^{7}$) based on their Law, viz. 'he made himself the Son of God.' Such facts would seem to prove that the term Messiah carried with it too much of a 'political' meaning, and for that reason Jesus avoided its use or acceptance, except among the inner circle of disciples (Mt $16^{16ff.}$) or at the final trial, whereas the term Son of Man was so instinct, for those who understood it at all, with what we call 'supernatural' connotation that it suggested the attitude of expectant waiting upon God's mighty act rather than the readiness of a subject people for revolution. He therefore could feel secure that those who grasped anything of its meaning, and they may have been few, would not be as the dangerous zealots, while those who did not understand it would inquire (Jn $12^{34}$).

(2) Jesus used this title from an early period in His ministry down to the very end, and in many connexions, in relation to His functions as the

founder of the Kingdom of God on earth. Some of these correspond with the functions assigned to the Son of Man in the Book of Enoch, but many are profoundly different.

(i.) Before the critical passage describing His appearance to His disciples near Cæsarea Philippi, He had already used it, according to the three Synoptic Gospels, twice (Mk $2^{10}$ $2^{28}$ and ‖); according to Q, four times in Matthew's arrangement, and twice in Luke's arrangement (Mt $8^{20}$ $11^{19}$ $12^{32.40}$ and ‖); according to Luke alone, once more ($6^{22}$, where Mt $5^{11}$ reads 'for my sake'). Of these the most significant are that the Son of Man has power on earth to forgive sins and is Lord of the Sabbath. The latter is not a strange claim, as Wellhausen and others maintain, when we remember that the Sabbath was a Jewish institution, and that the saying is parallel, therefore, to His assumption of authority over other institutions, such as 'the Law' in the Sermon on the Mount, the Temple (Mt $12^{6}$, cf. Mk $11^{15-18}$), and even the Covenant itself (Mk $14^{24}$).

(ii.) He uses the title 'Son of Man' when He begins to teach His disciples about His death (Mk $8^{31}$ $9^{12}$). And part of their distress and dismay must have been due to this most astonishing collocation of ideas. For, if He had already uttered the words of Mt $10^{23}$ $11^{19}$ $12^{8.32}$ $13^{37.41}$, He had suggested to them a personal power and authority with which death seemed utterly inconsistent. According to the Synoptics, the teaching about His death immediately followed the confession of Peter at Cæsarea. Now, it is essential to a conception of His method to see that Matthew is right in his interpretation of the meaning of our Lord's question, 'Who do men say that the Son of Man is?' ($16^{13}$; cf. Mk $8^{27}$, Lk $9^{18}$). He had already spoken of Himself as 'the Son of Man,' but that name of itself had for them no definiteness, and needed interpretation; so the problem was whether the disciples had yet 'placed' Him in their scheme of things. Hence the joy when He found that they saw in Him the Messiah. But this insight of theirs made it urgent that they should not be swept off their feet by earthly views of the Messiah. They must learn that the Son of Man is not only the Messiah of their familiar hopes, but also the 'Suffering Servant,' and must die. Hence this is the title which He uses when describing the purpose and effect of that death on the relations of man and God (Mk $10^{45}$ $14^{21f.}$). In and for His own consciousness, the union of 'the Son of Man' with the 'Suffering Servant of Jahweh' had already taken place. That which was incongruous for His disciples had long been central for Him. That which to them is a moral impossibility shines before Him even through lurid glory as the crown of the moral universe. In His blood the relations of God and man are re-constructed. He who serves the race unto death, if He be the Son of Man, *ipso facto* becomes the Lord of its destiny. But His Lordship is for His consciousness equivalent to the Kingship of God. Here then the new and transcendent fact is attained, first in His insight and will, and then in the experience of those upon whom the new relationship, the actual Kingship of the Father, takes effect. Not the fulfilment of the Law by the mass of the people, as their Rabbis taught, not even their repentance at the call of a prophet, like John the Baptist, not the abstract announcement by Jesus that God is the Father, nor even the exemplification of it in His treatment of the sinful and the suffering, opens the new era in the creative relations of God and man. The foundations of the world have been changed. That new era is produced by the will of the Son of Man to offer Himself as in some real sense a ransom, a sacrifice in death. But this death of the Son of Man is due ultimately to the will of God (see use of παραδίδωμι in Mk $9^{31}$ $10^{33}$ $14^{41}$; cf. Jn $10^{18}$ $12^{27f.}$). It is intrinsic to the very nature of that process by which God is to establish the perfect Kingship of His holy love and holy will among men. This is perhaps the most startling feature of the re-interpretation (referred to above) of the functions of the deliverer, whether called Messiah or Son of Man. Historically, it is rooted in the Ebhed-Jahweh of Isaiah; actually it was present to the consciousness and will of Jesus as a living purpose; and its effect is seen in that new form of religious consciousness whose intelligible, not to say intelligent, history began when the primary apostles discovered that the Cross was the instrument of the Christ for their reconciliation with God. Almost all the NT literature finds there the secret of the Kingdom of God. It has been established in sacrifice, in a deed whose superhuman quality is seen in its transcendent moral beauty and power (1 Co $1^{18ff.}$). St. Paul it was who saw so deeply that the death of Jesus secured that vindication of the righteousness of God which some of the greatest prophets and seers had foreseen as a necessary condition in the establishment of the Kingship of God.

(iii.) The title 'Son of Man' is used also and most frequently in the eschatological, including the apocalyptic, parts of the words of Jesus. He speaks to His disciples (according to Lk $17^{22.24.26.30}$) of 'the days of the Son of Man,' which may have reminded them of the Jewish way of speaking of 'the days of the Messiah.' (The peculiarly Jewish colouring of this phrase shows that Luke, who avoids that kind of thing when he can, found it in some document not used by Matthew and Mark.) He will appear in power and glory (Mk $8^{38}$ $13^{26}$ $14^{62}$) and will then enter upon the supreme task of judgment (Mk $8^{38}$=Mt $16^{27}$, Mt $25^{31}$). That appearing will not be confined to Judæa, but have universal effect (Lk $17^{24}$=Mt $24^{27}$). In these and similar passages Jesus uses language which, while reminding His hearers of passages in Daniel, yet presents in its total effect an entirely new view of the consummation. It is not true to His consciousness to say, as recent 'eschatologists' have been insisting, that He shared in the crude catastrophic view of the last things. His consciousness has wrought a revolution for His disciples which their minds only gradually realized; and their confusion is reflected in the reports of His last discourses, and indeed in the rest of the NT. He speaks of the Son of Man coming with power and 'with' or 'on' the clouds of heaven. What that means *for Him* must be set beside the fact that He has already come. We cannot understand Him by supposing, as Schweitzer does, that Jesus expected to become Messiah and Son of Man only after death. Such a violent conception of a consciousness that only lives on what it is going to be and is not yet, is incredible. The Son of Man had already come. The miracle that is foretold must be compared with the miracle already done. His consciousness even as He speaks—so 'naturally'!—embraces the human and the superhuman, the conscious will that 'came' and the conscious will that shall 'come' again. It is as untrue to the nature of His consciousness to confine it wholly within the limits of the imagination of His disciples, as they looked forward to His coming, as it would be to insist that His mind held the successive details of that future already in their actual form. The essential difference, and the key to our further understanding of Him, lies in that consciousness that He, as the Son of Man, pre-existent and superhuman, had come and therefore must and would come again. We have already seen that the pictorial element is undoubtedly present in His eschatological sayings, and that will

add to the conviction that we must not attribute to Him the crude 'miraculism' that His disciples saw in the form of His sayings. On the other hand, we must not take refuge, with the timidity of the modern mind before the word 'miracle,' in the notion that He possessed and claimed no superhuman power over the forces of nature. The 'purely spiritual' view of His relation to history, whatever that may mean, was His as little as it was His disciples' view. It is the higher conception of evolution (not the naturalistic, mechanical) that gives to our day better than to His own or any other generation the means of interpreting His consciousness at these points. That view is that the history of our world has been carried upward and enriched by the appearance and operation of new factors. For it is a crude evolutionism which holds that the simple produced the complex or the lower caused the higher to exist. To say that the higher was in the lower, when there is no sign of its presence, does not enlighten us. It is best to say that, when the conditions were ready, life or thought appeared, whence we know not, and became a self-multiplying power in history. The new factors are 'from above,' they have 'come,' and they have laid hold of the material prepared for them, with a strange power and for ends whose nature the former things could not suggest. The Son of Man was conscious of being such a new factor in history, and hence of a relation to nature which was both human and more than human. He came eating and drinking, He had not where to lay His head, He had to face the conditions of human history even in temptation of the devil, in hostility and betrayal by those whom He loved, in death, because He was a son of man. But, being the Son of Man, He could do these mighty works among the forces of nature and even rise from the dead. And He would come, soon or late (His words leave room for both), with power and the clouds of heaven for a universal reign over the human race in the name of God.

(3) *In the Fourth Gospel.*—The use of the title 'Son of Man' in the Fourth Gospel, where it occurs 12 times, is characteristically different from, and yet fundamentally the same as, its use in the Synoptics. (*a*) The peculiar use of the 3rd pers. in connexion with this title is emphasized by the fact that in this Gospel He uses the 1st pers. so freely—'I am' light, bread, good shepherd, etc. Only at $9^{35ff.}$ (if reading *ἀνθρώπου* for *θεοῦ*) does He seem to say, and that indirectly, 'I am the Son of Man.' (*b*) Further, we find that the title produces the same confusion in the minds of others as it does according to the Synoptics. His claim to be Messiah, and speculation whether He be the Messiah, are darkened by His deliberate association of that apocalyptic and less familiar title 'Son of Man' (if familiar at all to any but the *docti*) with death and with eating His flesh and drinking His blood ($6^{53}$). 'His disciples' are discouraged ($6^{60.66}$) just as Peter was, according to the Synoptists. The Jews and the multitude likewise are perplexed ($6^{52}$), and ask, 'Who is this Son of Man?' ($12^{34}$). (*c*) It is in answer to a perplexed mind that in two cases Jesus uses the title in an apocalyptic connexion ($3^{13}$ $6^{62}$), where 'ascending' and 'descending' express His consciousness of superhuman relations with heaven and earth (cf. $1^{51}$). (*d*) A peculiar colouring is given to the references to His death by the strange use of two words: 'lifted up' (*ὑψόω*) is here ($3^{14}$ $8^{28}$ $12^{32.34}$) used of physical events (crucifixion and ascension), whereas in the Synoptics it is always used in an ethical sense; and 'glorify' (*δοξάζω*) ($12^{23}$ $13^{31}$) is here used of His death in an ethical sense, whereas the idea is applied to the Son of Man in the Synoptists in a way which implies a glory apparent to the senses. (*e*) The essential identity of this consciousness with that described in the Synoptics is evident. The difference of colouring is not wholly explained by saying that with John 'the name . . . has reference not to the higher claims of Jesus, but to the fact of His manhood' (E. F. Scott, *The Fourth Gospel*, p. 184). Rather is it due to the constant effort in this Gospel to present the historic consciousness of Jesus as the perfect union of the supernatural with the natural. He who both wept at the grave and immediately raised the dead was not living in a double consciousness, now human and now divine; nor, for this author, was it primarily 'a human nature united with the divine' (*ib.* p. 186) for which the title was used. The emphasis in these passages is still on the divine which has become human, on the supernatural in the natural. Even in $5^{27}$, if we translate '*a* son of man' (but cf. the anarthrous title in $10^{36}$ $19^{7}$ and Mt $14^{33}$), the change from 'Son of God' in v.$^{25}$ involves a kind of 'play' upon the words 'Son of Man,' and means that He has authority *on earth* (Mk $2^{10}$) to forgive sins, as being also 'a son of man.' It is the fact of incarnation, vast in its meaning, that contains *this* power. The power alike to reveal ($3^{12f.}$), to redeem ($3^{14}$ $12^{32.34}$), to nourish with divine life ($6^{53}$), and to judge ($5^{27}$) rests upon the fact that in history, as a man, He yet stands as Son of Man. And the context of these passages shows it to be no less true that, for the Johannine interpreter of His consciousness, these functions rest upon the fact that in history, as a man, He yet stands as Son of God, the Logos who became flesh.

III. *JESUS CHRIST AS CREATOR OF THE CHURCH.*—We have in the NT the record not merely of the conscious will of the historic Jesus, but of the effect which that will produced in the experience of man, in the rise of the Christian Church. Some account of that matter is herewith given in its two principal stages.

i. THE EXPERIENCE OF THE DISCIPLES BEFORE THE CRUCIFIXION.—The attention of students of the Gospels has been fastened mainly upon two subjects, viz. the teaching of Jesus as recorded in the Gospels, and the traces of later thought in those records, such as the apologetic purpose revealed in Matthew and John, or the personal views of His Person held by each of the four evangelists. There is another somewhat neglected field of study, viz. that change which Jesus wrought in the religious life of His disciples. This is in a sense only the reverse side of the whole fact of which the obverse has been presented in the description of His conscious will. But it must also be considered if we are to realize vividly the process by which He became the founder of Christianity. The neglect of this topic is one fruitful cause of the wide-spread but superficial view that Jesus was a teacher, whose disciples *after His death* exaggerated Him into a Redeemer and a Divine Person.

1. Jesus and Israel.—The first disciples came to Jesus from those who had been arrested by the message of John the Baptist. His announcement of the approach of the Kingdom of heaven was bound up with the announcement that the King Himself would appear, through whom the Holy Spirit would enter into the life of the people (Mk $1^{2-8}$, Mt $3^{1-12}$, Lk $3^{1-20}$, Jn $1^{19-27}$). They understood, of course, that He would come to Israel and somehow assert His supreme authority over the people of God. But they did not and could not anticipate the entirely new manner in which that assertion would be made, the new type of kingship which He would establish. Even their prophets had not foreseen it (Mt $11^{1}$).

(*a*) *His appeal to the Jews.*—Jesus did make His appeal steadily and unweariedly to Israel as the people of God. He preached throughout the

synagogues of Galilee (Mk 1$^{39}$). On each visit to Jerusalem He went to the Temple and dealt directly with the responsible heads of the Jewish religious community. And not only John but the Synoptists represent Him as aware that His rejection or acceptance by them determined the question whether 'His own' had received Him or not (*e.g.*, Jn 1$^{11}$ 6$^{52. 64. 66}$ 8$^{48}$ 9$^{41}$, Mt 21$^{28-46}$ 23$^{37-39}$). When He sent out His disciples to preach in His name (alike the twelve and the seventy), He commanded them to address 'the lost sheep of the house of Israel' (Mt 10$^{6}$) or to prepare the way for His own preaching among them (Lk 10$^{1}$). The last great struggle culminating in His death arose from His unbroken will to bring Israel to repentance *and into submission to Himself.*

(*b*) *The disciples and this appeal.*—His disciples accompanied Him through the whole series of events. They heard, and helped to extend, His call to repentance; and they knew that this alone had not caused His death, for the rulers feared to kill one popularly known to be a prophet (Mt 21$^{26}$). They heard His announcement of a higher code of morals; that did not cause His death. They heard Him accused of breaking the Sabbath; that also, though more grave, did not directly enter into His final condemnation. They knew that even the desire to be a revolutionary Messiah would not have procured His formal indictment and execution; patriotism would have kept his enemies silent, if not enthusiastic. On the other hand, they had watched his passionate desire to save His people in His own way and on His own terms. They had heard his patient arguments with the scribes and Pharisees, His protests against their accusation of Him as an emissary of Satan, His warnings against their rejection of Him as leading to their own downfall, His terrific denunciations when their hatred of Him revealed them, not as ignorant or sensual, but as hypocrites. They saw His very tears over Jerusalem, when He knew her decision to be made and her doom chosen out of hatred for the real Spirit of God and for the real Kingship of God as revealed in Himself (cf. Mt 11$^{20}$ 12$^{28-30}$ 23$^{37-39}$, Mk 12$^{1-9}$, Lk 13$^{1-9}$). Burkitt explains what he calls 'the quarrel' between Jesus and the authorities by the difference between 'erudition,' on which they depended, and 'intuition,' which was the supreme quality of His Spirit (*The Gospel History and its Transmission*, p. 174). The disciples have a deeper account of the matter than that, so much deeper that the word 'quarrel' is not the adequate term for it. It was in their view a warfare between the true King of Israel and the sons of the Kingdom. The resistance to one who claims regal authority is either rebellion or patriotic rectitude. The records show that even before His death His disciples had begun to understand it as rebellion.

(*c*) *Persistence of the appeal.*—Moreover, it is not correct to say that Jesus cut Himself off from Israel. His appeals never ceased. Even in the Johannine account of His controversy this element of grace never altogether fails. His urgency, His condemnation, His denunciation, are the weapons of His mercy (*e.g.*, 6$^{35-58}$ 8$^{12-59}$ 10$^{37f.}$), and on the cross He prays for the pardon of those who have rejected His Kingship. To the very end He is seeking the lost, manifesting the Father's grace in His own attitude and action towards them.

**2. The new Israel.**—'The whole Jewish thought may be summed up in this, that as surely as there is only one God, so surely is there only one sacred community (Gemeinde)' (A. Schlatter, *NT Theologie*, Calw, 1909-10, i. 175). Nowhere is the majesty of the conscious will of Jesus more apparent than in this, that, as the people reject Him, He begins to create the new community of God. The disciples preserve this fact as fully and clearly as they do His words of an eschatological character. And their understanding of His self-estimate was rooted here, and not merely in His words of prophecy. The Gospels prove on every page that Jesus deliberately set Himself to establish the Church as the manifestation of the Kingdom of God. Whether He actually used the word 'Church' (Mt 18$^{17}$) or not is a minor matter; and it may be even irrelevant. The fact is that, as He found individuals responsive to His call, repenting of sin, as He saw repentant men (Lk 5$^{8}$) ready to rise up and follow Him at all costs, waiting upon His will as upon that of a king, He saw in them the members of the new community of God. He speaks of them as 'salt of the earth,' 'light of the world' (Mt 5$^{13f.}$), and distinguishes their kind of righteousness from that of the Pharisees (5$^{20}$). He sees publicans and harlots, who repent and follow Him (as many of them had believed John the Baptist in his day), going into the Kingdom of God (Mt 21$^{31}$). He takes the faith of the centurion in Himself as the harbinger of that multitude of Gentiles who shall come from the east and the west while the sons of the Kingdom are cast out (Mt 8$^{11f.}$). The idea that Jesus was primarily a teacher, and a personal revealer only so far as He went about doing good, just as He expected others to do, and for the rest pictured to Himself, and to others, certain transcendent acts of God lying yet for Him wholly in the future, through which the Kingdom would be established out of heaven, is one which leaves out the central fact in the Gospels. That central fact is that He created, consciously, deliberately, patiently, the new nation, the community in which God's Kingship was being realized. Harnack (*Neue Untersuchungen*, etc., p. 97) names it as one of the 'developments' in Matthew that Jesus is pictured as addressing a definite community ('eine geschlossene Gemeinde'). But, if we subtract a slight element of exaggeration in the phrase, the fact is not less true of Mark. In the latter His movements are affected by consideration of three groups—the multitude, the officials and their representatives, and the disciples. The last named, even when limited to the twelve (though not always so limited), form a definite community, which even in Mark is looked upon as the nucleus of the Kingdom of God (1$^{16. 17. 36-38}$ 2$^{18-20}$ 3$^{7. 13ff.}$ 4$^{10. 34}$ 10$^{23ff. 42-45}$ 12$^{9}$ 13$^{20-22. 27}$ [οἱ ἐκλεκτοί]).

What is the evidence in the Gospels that His disciples experienced the force of that creative will during His earthly ministry? On the outward side the answer is easy. For it is clear that Jesus, as we have seen, gathered His followers around Him, as individuals who became a more or less definite body, through their willingness to accept His teaching, obey His behests, and put their hope in His power. We do not know how large this body was. It appears indistinctly as varying in number, intelligence, and enthusiasm. That crowds followed Him so much as to endanger His work is made very clear in Mark's Gospel, where He is represented as repeatedly eluding them and their superficial and earthly desires. All the Gospels describe Him as selecting twelve men on whom He concentrated His attention (Mk 1$^{16-20}$ = Mt 4$^{18-22}$; cf. Lk 5$^{1-11}$, Mk 3$^{13-19}$ = Lk 6$^{12-19}$, Mt 10$^{2-4}$, Jn 1$^{35-51}$ 6$^{67. 70f.}$; see E. Haupt, *Zum Verständnis des Apostolats im NT*, Halle, 1896). As Mark shows Him escaping from the multitudes, Matthew most distinctly and repeatedly emphasizes the positive work of close and intimate instruction of the twelve (cf. Mt 16$^{13. 21}$ 17$^{1. 9. 19. 24. 25}$ 18$^{1. 21}$ 19$^{16. 23}$ 20$^{17}$ 24$^{1-28. 46}$ 26$^{1ff.}$).

**3. The 'liberal view.'**—It is usual and important to point out that Jesus, in giving to His disciples the secret of fellowship with God, did not teach

them any rules or provide them with institutional machinery. He has no technique of penitence, though He demands penitence. He has no external rules of worship, though He expects them to worship. He would have men pray, but teaches only one brief and general form. He insists relentlessly on doing the will of the Father, but He has no list of commandments. He makes love to God and man a universal fundamental law that must be obeyed by all men before and above all else, but where and how they shall begin He does not say. All the helps by way of rules, ceremonies, symbols, and creeds which other religious teachers and directors have used for the guidance of their followers are absent from the story of our Lord's dealings with His disciples. These facts raise in an urgent way the question, What then did Jesus do with His disciples that was sufficient to create the Church and open the Christian era? The answer to this question which the so-called 'liberal' theology has made familiar to this generation consists mainly in this, that Jesus, first by His teaching about God as Father and about the Kingdom as the re-organization of society on the basis of righteousness and love, further by His own example in which faith in the Father and love to man were so fully exemplified, awoke in His disciples' hearts a like faith in their own sonship towards God, and that 'enthusiasm of humanity' from which all effective reforms of society must spring. His primary message was about the Father and man's direct approach to Him, not about Himself as Mediator of that Father's love, not even about Himself as exemplar of the Father's spirit. It was the admiration and gratitude of the disciples that clothed Him with the categories of Messiah and Redeemer, drawn partly from Jewish and partly from Hellenistic life and thought, and in time added the remoter conceptions of pre-existence, deity, atoning sacrifice, and universal authority.

This position is capable of many modifications. There are those who reduce the personal function of Jesus to little more than that of a superlative teacher who was also a man of deep religious experience (*e.g.*, Bousset, *Jesus*; J. Weiss, *Christus*, Halle, 1909). There are those who recognize in His exemplary power a fact of transcendent value for all time, a form of religious experience which surpasses all others, and makes Him Leader and Master of all who would know the power of faith and realize in their hearts the love of God (*e.g.*, N. Schmidt, *The Prophet of Nazareth*). But there are those whom it is hard to classify, men who seem, under the spell of 'the modern mind,' to reduce His significance, and then, under a vision of His real place in the history of the Christian consciousness, to exalt Him to superhuman rank and authority. Such an one is Wernle (*Die Anfänge unserer Religion*; very clearly also in *Die Quellen des Lebens Jesu*). But we may here take as our example Harnack, in whose various writings the two points of view (or the influence of these two impulses) appear repeatedly. For example, in *The Sayings of Jesus* he says that Q gives us 'that which formed the central theme of the message of our Lord—that is, the revelation of the knowledge of God, and the moral call to repent and to believe, to renounce the world and to gain heaven—this and nothing else' (p. 251). A few pages earlier, however (while dealing with the content of Q), he says, 'It is obvious that our Lord's consciousness of Sonship must have preceded in time His consciousness of Messiahship, must indeed have formed a stepping-stone to the latter' (p. 245 n.); again in an often quoted sentence in *Das Wesen des Christentums*, 'Not the Son, but only the Father is contained in the gospel as Jesus proclaimed it' (p. 91). Yet in the next paragraphs he goes on to show from the very words of Jesus that 'He leads them to God, not only through His word, but even more through that which He is and does and finally through that which He suffers,' and concludes by asserting 'that Jesus Himself became for His disciples the power of the Gospel' (p. 92). There is evidently a situation here which needs to be cleared up. It has been urged that Harnack in that sentence means to speak strictly as a historian when he says that the gospel as Jesus preached it contained only 'the Father and not the Son,' and that he does admit the right of the disciples afterwards to introduce Jesus Himself into their form of the gospel (so Schlatter). The question is partly whether Harnack is right in excluding from consideration the great passages (cited earlier in this article) in which the conscious will of Jesus is represented as determining the destiny of men. But it is not a question to be decided merely by quoting utterances which explicitly and formally put Him into the gospel as He preached it, or by refusing to accept them as authentic. The real question is whether we have proof that Jesus became to His disciples a 'religious object' during His earthly life, and whether their experience in that matter was the effect of His conscious will as He by teaching, miracle, example, and direct moulding of their life formed them into the nucleus of that community in which He intended the Kingship of God to be realized. Have we any right to limit 'His gospel' to His recorded words of formal teaching, addressed to the multitudes, if we find that the whole effect of His 'training of the twelve' was to replace their Jewish religion with a religious attitude towards God which depended upon their attitude towards Him?

**4. The method of Jesus.**—This, which is a purely historical as well as a vital religious inquiry, we must now deal with. It will be best to do so by considering the matter in relation to the three functions of personal founders described in the opening section of this article. The appearance of repetition, when the following statements are compared with the discussion of the consciousness of Jesus, will be lessened if it be remembered, as already explained, that we are here considering the other side of the central fact (the founding of the Christian religion), viz. the religious consciousness of the disciples of Jesus. We must see the experience through which the first disciples passed as the conscious will of Jesus took effect upon their relations with God, if we would understand the method of the founder.

(1) *The sense of need.*—Each personal founder has dealt with the human sense of need. He has interpreted it, intensified it, and sought to satisfy it. He has revealed what he saw to be the true and supreme values of human experience, glorified them, and sought to make them the actual possession of his followers. What did His disciples receive from Jesus in this way?

(*a*) They came to Him from a race for which, as a whole, the religious was the supreme view of life. Moreover, they came with minds and hearts aflame from the stern, passionate, convinced, and convincing preaching of John the Baptist. His announcement of the approaching Kingdom prepared them for the King. In Jesus they found another who, like John, was absorbed wholly in the thought of that supreme crisis, and He too announced the Kingdom. But they found many great differences in His method and outlook. These differences are not exhausted by speaking of His geniality, breadth, sympathy, social interest, and so forth. For He was also stern, definite, authoritative, exacting. His disciples found themselves involved by their discipleship in

new personal relations with the living, present, and insistent will of God. Jesus did not, like the Baptist, postpone that Kingship to an outer catastrophic event. He makes them feel that they have to do with God now, as He is dealing with them now. This lies at the heart even of the Lord's Prayer, every clause of which involves the idea of God's present action in our human life, even though it may have an eschatological background. The presence of God is involved in all that He says about prayer, against anxiety, concerning the Father's love, in the call to repentance, to faith, to self-sacrifice. In spite of the eschatological element in His sayings, through which He taught them to cherish the expectation of the future acts of God, we must see in these records their memory of the awe, the humility, the confidence towards God, the sense of His actual Kingship which Jesus awoke in their souls.

(*b*) Jesus also took up the Baptist's call to repentance. But His disciples found that with Him this meant a change more profound than any prophet had ever sought to effect, for no prophet had ever learned it as they did from the Messiah Himself (cf. Mt $13^{17f.}$). This repentance was something which He wrought in them by His whole continuous treatment of them as well as by an explicit preliminary call. They learned from Him the depth and subtlety of their sin. Apart altogether from lessons about outward sin, which He rather assumed that they already knew from the Law (Mk $10^{19f.}$), they were taught to see deadliest guilt in self-righteousness and self-seeking and unbelief. On these matters they received, and have preserved in these records, the most penetrating and heart-breaking experiences. For His words created the Christian world by first making history in their own souls. The teachings gathered together in the Sermon on the Mount were addressed to them as disciples, and cannot be understood if viewed as spoken to all and sundry —a drifting, excited crowd (Mt $5^{1}$). Not only was Peter first encouraged to become a permanent follower in an hour of moral agony (Lk $5^{1-11}$), but he was repeatedly compelled to deeper knowledge of the distance of his heart from the ideal of his Master (Mt $14^{31}$ $16^{23}$ $17^{20}$ $18^{21f.}$ $19^{26-29}$ $20^{24ff.}$ $26^{31-39}$ [cf. Lk $22^{31f.}$] $26^{37.40}$). The story of continuous moral training revealed in that series of passages expressed only in part the effect which Jesus produced upon the disciples when He thus proved to them how searching is that spirit of penitence to which He summoned them. In the conversions of Levi the publican, of Zacchæus, of the woman that was a sinner, there must have been powerful emotional crises. And the disciples were witnesses of these, and learners from them. They saw and felt the extending effect of the personality of Jesus upon the moral consciousness of susceptible souls. On the positive side, we may note that He taught them to repent, and got them to repent, by demanding the attitude of a little child (Mt $18^{1ff.}$), by measuring their sin with the most terrible of all standards, the principle of absolute mercy (Mt $6^{14f.}$ $18^{15-35}$), by insisting that the essential spirit of the Kingdom in which they now began to live was that of service, unshrinking, unselfish, and complete (Mt $20^{20-28}$), which cannot be rendered except by the penitent. He confronted them with the call to love as God loves the unworthy and uncongenial (Mt $5^{43-48}$). He even taught them that this inner moral revolution must be carried in upon the deepest impulses and apparently most natural and prevalent desires of human nature (Mt $19^{10-12.24-26}$). It is impossible to measure the work of Jesus in founding the new and final religion unless we see in these mere excerpts from the wealth of material in all four Gospels, not the quiet, placid teaching of a Rabbi, but the active penetrating spirit, the conscious will, of their Lord bearing the idea of repentance persistently and insistently, deeper and deeper, into the heart, conscience, and will of the disciples. And they were thus actually taught, or the world could never have heard of them or Him. They learned from Him that the fundamental need of man is not primarily a God who can give His people the outward conditions of happiness, but this—a new moral relation with the holy will of the actual and living God. And Jesus made them feel that need while He was there in the flesh, or they could not have seen or felt His meaning and power when He came to them in the Spirit.

(2) *How the need was satisfied.*—The second matter of inquiry as to a personal founder is this —What function did He exercise in meeting the need which He revealed in so intense a light? Did He actually give them the new relation with God for which penitence is at once the preparation and the passionate outcry? It is plain from the Synoptics alone that they saw in Him a superhuman Man (see above on His consciousness). He was the Son of Man, He worked miracles of healing, He overcame the power of evil spirits, and even bound the strong man, the devil himself. He spoke on things human and divine with authority unmistakable, and announced the laws of the Kingdom of God. The religious results were not what they came to be after the Resurrection, but they were in kind the same. They found Him to be a fountain of the grace of God. No doubt the idea of saving the lost (Lk $19^{10}$ ‖ Mt $18^{11}$ [uncertain text]) may have eschatological implicates, as the word 'salvation' continues to have even in Paul's Epistles. But we cannot get rid of the fact that in the parables of the lost sheep, the lost coin, and the prodigal son Jesus described His own present conduct as He pursued and received those who became His disciples. The fact that the recorded words of explicit forgiveness were addressed to strangers (Mk $2^{5.9}$ and ‖, Lk $7^{48-50}$) must not obscure the underlying fact that all who became associated with Him entered into that state of forgiveness. It is true that He glowingly describes the willingness of the Father to receive, and the supreme joy in heaven over, the repentant. But His own disciples had that grace of heaven manifested to them in the will of Jesus towards them. He treated those as penitent who followed Him, and His followers He treated as under the Kingship of God, enjoying the love of the Father because they were under His own will and objects of His own love. This comes out more clearly if we recall, in its significance for their religious experience, the kind and extent of submission which He exacted and they yielded to Him. The very symbols and metaphors employed to describe their relations to Him and His functions towards them are significant. Thus He is the Shepherd and they His flock (Mt $10^{16}$ $25^{32}$, Lk $15^{4}$ $12^{32}$, Jn $10^{11.16}$), and therein encourages them to remember the OT conception of Jahweh as Shepherd (Ps $23^{1}$ $80^{1}$, Is $40^{11}$, Ezk $34^{17.20}$). He is the builder of the new temple, *i.e.* the community which shall take Israel's place (Mt $16^{18}$, Jn $2^{19}$), for He is 'more than the temple' (Mt $12^{6}$). He is the sower, and the souls whom He gathers to Himself are the harvest of God (Mt $13^{3.24}$; cf. $9^{37f.}$). In all these metaphors we must note the gulf between shepherd and sheep, builder and house, sower and grain, as if they must be made to feel that this difference lies between Him and them, and yet that it is His love, His wisdom, His powerful care and control, that is their supreme hope. He does for them what the moral insight of a true penitent would ask from God. Even more strikingly, He is the

Lord who appoints to every man his task, as a slave-owner deals with the slaves who are his property (Mt 19[28] 24[45-51] 25[14]), who returns to judge them, and for whose return as the consummation of human destiny the disciples of Jesus must wait in eagerness, faithfulness, and faith. These metaphors are added to the positive fundamental assertions of Messiah-King, Son of Man, final Judge, mysterious Servant of Jahweh doomed to death, whose tremendous force is felt with increasing awe as they watch Him move along His strange and unexpected path to His death. But, while the latter group of ideas are present to their minds, now as startling enigmas and anon as more startling explanations of Jesus, the former group are those which describe His actual will as it takes effect upon their present experience. Therefore, they have given up all for His sake (Mt 19[27]), are ready, as He assumed, to meet persecution and even death for His sake (Mt 5[10f.] [cf. Gess, *Christi Person und Werk*, i. 15 f.], Mt 20[22]). They learn to believe in Him as the Messiah-King (Mt 16[16f.]), and, when they reach this measure of insight, Jesus rejoices because He sees now the new community established through which the Kingdom of God is made actual on the earth. He sees in that confession of Him the work of God's grace ('my Father') in their hearts. Then it is that the deeper teaching not only about His death, but about their relation to Him, begins to find expression (Mk 8[31-38]). (Much of the material in Mt 10 probably belongs to this later period.) Now it begins to appear that their devotion to Him is a matter of which even disciples may be tempted to be ashamed (Mk 8[38], Mt 10[32f.] 11[6] 26[33], Ro 1[16]). Now there is a gospel which they may begin to preach even at the cost of life (Mk 8[35]). Now Jesus begins to speak of a cross (Mk 8[34], Mt 16[24], Lk 9[23]) which they may be called on to carry to their own execution. (It is obvious that this language cannot be reflexion from a later date, for then the minds of Christians were absorbed in another view of the cross and spoke of being 'crucified with' Christ [Gal 2[20]], and of dying with Him, not of bearing each an independent cross.) And He is said to have spoken of His drawing the world to Himself by being 'lifted up' (Jn 12[32]).

(3) *Their inchoate thought of His Person.*—We nowhere find in the Gospels an explicit statement regarding the personal religious experience of the disciples. All that fullness of the inner life which created the rest of the NT writings (and in a sense the Synoptic Gospels too) is absent from the story of their intercourse with Him in the days of His flesh. They have preserved the records of their unbelief, their quarrelling, their selfish ambition, their blindness to His meaning, their readiness to forsake or deny Him when the supreme stress came. But they do not speak of their joy or peace or hope. It is evident that those were transition days from the arid, hungering life of the Jewish world of that time to the exultant hearts that were later filled with the Spirit and presence of the Risen Christ and of God in Him. They do not make clear how they thought of the Father as Jesus taught them, nor what that dawn of forgiveness and peace was as they walked with eyes of trust and awe fastened upon this imperious yet tender Master of their souls. But certainly they had begun to feel a religious joy in His fellowship, a religious reverence for His mighty will displayed in deeds and words of superhuman power (Mt 11[25-30] 12[28] 13[16f.], Lk 10[23f.], Mk 9[6], Jn 1[14] [cf. 1 Jn 1[1f.] 15[12-16]]); and, as we have seen, we must assume that His continuous and ever deepening instruction in the nature of the penitent, consecrated, and faithful life did seize their wills and change their hearts. The story of Peter's contrition at the beginning and end of the record (Lk 5[8], Mk 14[72]) presents one side. The words of Jesus (Mt 16[17]) indicate that in His view the recognition of His Messiahship was a religious experience of the highest character, in which Peter had been brought into relation with the Father. It is quite certain that they entered into the new life of prayer, or we could never have received their record of His many teachings on that central matter. No less certain is it that, as they thus sought communion with the Father, the constant presence, the searching spirit, the authoritative commands (Mt 7[24-29]), and the whole personal atmosphere of the Messiah and Son of God conditioned in the deepest way their thought of God and their endeavours after a realized fellowship with Him. The vagueness of the matter at this point is obviously natural on the orthodox view. For, if the gospel must, in Christ's own view, contain Himself as essential to it, it was inevitable that this should not become clear to His disciples, nor the form of religious experience which He alone could make possible become realized, until His relations with them had passed through all stages and reached that climax at which alone the full situation could come into view. It is those who hold that the personal religion of Jesus Himself was meant by Him to become the religion of every man, and that He did not think of entering into their religious consciousness except as an inspiring teacher and example, who cannot explain the absence from the Gospels of any proof that the disciples felt, then and there, the presence of the Kingdom, the full force of the new life and its joy. For this His martyr death was not necessary. That event could only add a glow of pathos—but why not of despair?—to a picture of perfect relations with God which life alone could reveal and death could only blot out.

ii. The experience of the disciples after the Resurrection.—This is not the place to attempt a history of the apostolic Church. Our task is to set forth as briefly as possible some of those elements, described in the apostolic literature, which constituted the Church as a community, whose existence is founded on conscious reconciliation with God, conscious possession of His Spirit, and that through faith in Jesus as the Messiah, Son of God.

**1. The Resurrection faith.**—It is universally admitted that the inchoate community left by Jesus at His crucifixion had no basis in their brief intercourse with Jesus for continuance as a community. They were not organized for political action. Nor was their religious experience definite and strong enough to give them a distinct consciousness or place within the system of the Jewish Church. Their later conduct towards a universal gospel proves this. As an experience it was, as we have seen, real, but bound up with and dependent upon the presence of Jesus with them, and unreleased from Jewish bonds. When He lay dead, their faith was ready to die. They allowed outsiders to bury Him (Joseph of Arimathea [Mk 15[43]]; Jn 19[39] adds Nicodemus). The story of two of them, according to Lk 24[13-24], gives a vivid and realistic picture of their attitude of mind, as persons who retained a gracious memory of Jesus without hope. The grief which all the Gospels depict, the story of Thomas, the moral perplexity of Peter, the evident preparation for a permanent burial, combine to illustrate a situation which the whole history of human experience would compel us to expect as the only natural one. Moreover, there was a particular religious view of the situation which must have stained even the inevitable despair with shame and dismay. For an ancient law which was perfectly familiar to them, and which, indeed,

made all crucifixion a matter of peculiar horror to the Jewish imagination, asserted that a man who was executed, or exposed in death, on a cross was proved by that very event to have been accursed of God (Dt $21^{23}$, Ac $5^{30f.}$, Gal $3^{13}$; cf. 1 Co $1^{23}$ 'a Messiah crucified!'). These facts are named here not for an apologetic purpose, but to account for the fact that practically all scholars, from Strauss onward, have held that the Christian Church could have risen only when the disciples came to have the Resurrection faith. What produced that faith is the matter in dispute, a discussion of which would involve critical details and a philosophy of miracle too prolonged for this article. But it was this sudden conviction that God had raised Jesus from the dead that thrilled the despairing disciples with new life.

**2. The Holy Spirit.**—Another event occurred in the experience of the community which is known as the Descent of the Holy Spirit. Whether the matter is accurately described in Ac 2 or not (cf. Jn $20^{22}$), something happened early in the history of the disciples which made the language of Paul about the Spirit intelligible; and the Book of Acts is pervaded by the atmosphere and psychological effects of it. The coming of the Spirit meant that the power of God had come upon them. This power was manifested in various ways, some of them now obscure. Miracles and other forms of endowment (χαρίσματα) were the result of His presence (see H. Gunkel, *Die Wirkungen des heil. Geistes*[3], Göttingen, 1909; I. F. Wood, *The Spirit of God in Bib. Lit.*, London, 1904). It was natural, and the records show it, that at first there should be much confusion of mind among the disciples on a subject so new and startling as the conscious indwelling of God in the hearts of a human community. But it rapidly became clear that this experience meant that Jesus Christ Himself was still in living contact with them. They were—to use William James's striking word—'co-conscious' with Him in this overwhelming suffusion of their hearts with a superhuman divine power.

**3. Christ of history and of experience.**—The disciples had no intellectual difficulty about the transition from 'the Christ of history to the Christ of experience,' with which modern thought has concerned itself so deeply. On the one hand, they believed that the same Jesus whom they had known in the flesh had appeared to them after His death, and that the experience of the Spirit's power was the fulfilment of His promise (Ac $1^{8}$ $2^{33}$, Jn $14^{26}$ $16^{7}$), and therefore the proof in their own life that they were under control of the same conscious will that dominated them in His earthly days. Even Paul, when he defends his authority as an apostle, claims to have 'seen Jesus' (1 Co $9^{1}$; cf. $15^{8}$). For him this conscious will (God, the spirit of God, Christ, the spirit of Christ, Ro $8^{1-11}$) that rules him is the will of the historical personality whom they all knew as Jesus. But, on the other hand, they seem to have assumed that there was a continuity in the course and nature of their religious experience itself. It is a strange feature of the early addresses of Peter, and true to this view of the situation, that he does not represent the primary disciples, all of whom had been with Jesus (Ac $1^{13-15. 24. 26}$), as having now for the first time received the forgiveness of sins; and there is no record of their having been baptized at this time. Repentance, baptism, forgiveness, are proclaimed to others (Ac $2^{38f.}$ $3^{19. 26}$), but are presupposed as already characteristics of 'the disciples.' This can only mean that they cannot deny or ignore the past blessings which they had enjoyed in His outward presence. What was obscure has been made clear, what was inchoate is fulfilled. The Messiahship of Jesus is now openly established by transcendent acts of God on Him and in them. It has been made a difficulty that the Kingdom of God of which Jesus spoke so much seems to disappear from their vocabulary. But the fact remains and is now reflected in their use of the term 'Lord' as applied to Jesus. His Lordship over them, so real and potent and glad, is the Kingship of God! In Paul's language the term 'salvation' takes the place of 'kingdom' (Ac $28^{28}$, Ro $1^{16}$)—or 'grace' (Ro $5^{2}$), or 'life,' 'eternal life' (Ro $5^{17. 21}$). The prevailing Johannine term is 'eternal life.' They are all used now in a presential and now in an eschatological sense.

**4. The experience of union with God.**—William James said:

'We have *in the fact that the conscious person is continuous with a wider self through which saving experiences come*, a positive content of religious experience which, it seems to me, *is literally and objectively true as far as it goes*' (*The Varieties of Religious Experience*, London, 1902, p. 515).

This may be set beside the still more penetrating statement of another American thinker:

'That which can happen only with the consciousness of God is an act of God' (W. E. Hocking, *The Meaning of God in Human Experience*, London, 1912, p. 440).

These assertions may be held true of religion at every grade of its development. But they receive their full illustration, and, indeed, have been made possible, only by their complete fulfilment in the experience of the community founded by Christ. It is, of course, impossible to distinguish the higher from the lower types of religious experiences by the mere intensity of subjective emotional experience. It is the historical setting and moral qualities of that experience that make one religion greater than another, and the religion of Christ the supreme fact which it is. The immeasurable force of the apostles' witness in the history of the world arises from the following among other facts.

(*a*) *The greatness of it.*—The 'wider Self' with whom the believers were in contact was conceived in terms which had not been attained before and have not been surpassed. The living God, Creator, Sustainer, Father, is described in a series of magnificent statements of Paul (Ac $17^{23-28}$, Ro $1^{18f.}$ $11^{33-36}$, Col 1, Eph 1), and no less clearly though less elaborately by other writers (Jn $1^{1ff.}$, He $1^{1ff.}$). Throughout the apostolic literature it is assumed that He is personal, holy, and righteous, whose hatred of sin is absolute (Ro 1–$3^{20}$), and whose purpose with man is glorious. Those conceptions were not scientific or theological in form or origin. They were derived from the past life and thought of the Jewish people. They had been confirmed by the teaching of Jesus. But they were now driven deep into the human consciousness by the immeasurable power of the new range of experience. Every word and phrase by which they describe the new life is a witness to some new form of the divine action upon human nature, which transformed everything. Hence we hear of it as a new birth (Jn $3^{3}$, 1 Jn $3^{9}$), as a new creation (2 Co $5^{17}$, Gal $6^{15}$), as dying to the past life of sin, weakness, fear (Ro $6^{2ff.}$, Col $3^{1ff.}$, Gal $2^{20}$ $6^{14}$), as entering into light after darkness (1 Jn $1^{5}$ $2^{11}$, Eph $5^{8ff.}$), liberty after bondage (Gal $4^{3. 7}$ $5^{1}$), and so on. Thus the change is often described in terms which are used for the vital and fundamental conditions of human existence. Men who are convicted of sin are yet living in the conscious fellowship and peace of the living and personal God.

(*b*) *The divine power as conditioned.*—This new form of religious consciousness can be fully understood only in and through its ethical qualities. The mystical experience is there, indeed, for nowhere in religious literature is the emotional element more intense than in the NT. It is a divine power, it is divine life, it is the divine spirit, which has come upon them and swept them into

ecstasies of joy and rapture. There are signs that many of them (even Paul [2 Co $12^{1ff.}$]) were carried into abnormal psychic conditions. The scenes said to have occurred at Pentecost (Ac 2), many of the incidents connected with demons (*e.g.*, Ac $19^{12ff.}$), as well as Paul's discoursing of 'tongues' and other phenomena (1 Co $12^{14}$), prove this abundantly enough. For these things many parallels can be found elsewhere in the history of religious experience. The new thing, or the excellent thing, in the NT religion is that the experience of the universal presence and power of God (the spirit of Christ, the spirit of God, Ro $8^{1-11}$, Jn 14–16) is conditioned rationally, ethically, and historically. This was no mere inflow of inexplicable energy from an unknown source, no afflatus which breathes upon the soul from mystical 'caves of the winds.' Yet nothing is taken from its mystery, its seriousness, its intensity, its solemn awe. These qualities are simply relieved of their 'blindness,' their mere inscrutability, by the conditions under which the mystic union with God is realized. Mysticism is delivered from its sheer darkness and filled with real meaning. For the work of God in the soul is led up to by the word of the gospel which is addressed at once to the understanding, the conscience, and the heart. There is no demand for asceticism or for prolonged technical self-discipline, such as the mystery-religions, especially in the following century, demanded. It is assumed that all men must think, indeed, to become Christian; but the simplest man may think well enough to understand the personal relations into which a personal God is calling him. And then he will find, as Paul showed the untutored Galatians as well as the philosophers of the University of Athens, that the fundamental laws of righteousness and love, repentance and faith, are those under which the divine will deals with the human, and the human must deal with the divine. Hence we are not surprised to find that Paul speaks in Romans ($3^{21ff.}$) of the righteousness of God as an effective fact, a living force, in human experience; just as the same apostle no less than John (1 Jn $4^{7ff.}$) speaks of love —for God, who is working in us and begetting His children among us, has commended His love towards us and has proved that He is love.

(*c*) *The historic Christ as related to these conditions.*—The whole effect of that word of the gospel is to teach men that it is God who is now invading the individual life, that the divine is pressing in a new way and under purely moral conditions upon the human. The gospel is an appeal to men, not to scale the heights of God, but to submit to the influence of God's grace which is His very spirit and presence, an experienced force, in the inner depths of the soul. But this new religious attitude and experience, constituting the substance of the new religion, has been intelligible, and therefore is possible as a programme of spiritual history, because it is organically connected with the fact that in Christ the divine has invaded man's history, personally, definitely. Every phase of the gospel of divine grace is linked with His name. It is the deeds of God in Him, in His historic consciousness and experience, that form at once the revelation of the quality of God's will and the moral ground of His new and supreme appeal to man's reason, conscience, and heart. For the primary disciples this sense of union with God could be explained only by the continuance of the power of Jesus, now exalted as Christ, to exert His supreme influence upon human nature. And the Church has never been content with any other explanation.

(*d*) *Universalism and Parousia.*—The religion of Jesus Christ, being of this nature, was inherently a universal religion. It required a great struggle in the primitive Church before the full meaning of this fact was grasped and its consequences were accepted. Into that story we need not enter here. Nor is it necessary to do more than point out in a few words that the eschatological view, which expected the speedy manifestation (Parousia) of Christ, did not prevent the development of the universalistic view of the gospel. The former was a view of the future, the latter was made an experience in the present. The old antinomy, which was, as we have seen, in the consciousness of Jesus Himself, was now present to the faith of His Church. It is easy to exaggerate the religious and ethical effect of the eager waiting for the return of Christ, the coming of the Man from heaven. Potent as that hope was, it did not destroy the diligence of a man like Paul or hinder (rather it greatly helped) the rapid spread of the new religion. Yet we see in Paul's later epistles (when his own death drew near) how a world programme seemed to open before him, whose outlines could not be filled in within a brief space of time (Christ the Head of the Church, 1 Co 12, Eph, Col). And the Fourth Gospel, as well as 1 John, represents an effort not to forsake that hope, but to see it through the medium of an experience which means that Christ is here and His people already live in Him. Just as, in the Gospels, He is confessed as Messiah, and accepts the confession as springing from God, yet was not declared as Messiah in fullness of power; just as He spoke also of the Son of Man as there where He forgave sins and sought the lost, yet announced that the Son of Man would be seen coming on the clouds of heaven; just as in some parables He spoke as if the kingdom were there, and in others as if it were still to come; so did His apostles afterwards struggle with the same double view, now raised to a higher plane of experience. Having seen Him after death, declared as Messiah, and having received ample proof that He was now in the spirit, the true Lord, the actual energy of their lives (Gal $2^{20}$, Eph $3^{16ff.}$), they yet still waited for His appearing (Ph $3^{20}$); He was manifested and is yet to be manifested (1 Jn $1^{1ff.}$ $3^{1-6}$). Perhaps this principle is the only one on which the moral and spiritual evolution of the race could proceed.

IV. *JESUS CHRIST AND THE MORAL REGENERATION OF MAN.*—**1. The Christian Church as a moral agency.**—No one can reasonably dispute the statement that Christianity has proved itself the highest ethical force in the history of man. Other religions have exercised their own measure of noble influence, but their positive contributions have been less broad and pure and elevating, and they have adopted as inherent elements certain principles which have sadly limited their moral beneficence—*e.g.*, the pessimism of *karma* as retained by Buddhism and its insistence on unlimited asceticism as essential; also the absence of an assured faith in the mercy of God, and the fatalistic element, as well as the moral insufficiency of Muhammad's personal character, in Islām. These defects are alike fundamental and fatal to those systems. The Christian Church, as an organized historical institution, has failed to prove itself an ideally perfect moral agency. It has often been ruled by the earthly mind; it has often misinterpreted its moral task in the world; its officials have often adopted the methods of Satan for promoting the Kingdom of God. Yet it has done more than any other organization in history to hold before the conscience of mankind the ideal of human character and destiny. It has carried in its memory of Christ, in its very ritual of baptism and the Lord's Supper, in its permanent forms of worship, in its great and vital principle of an appeal through Scripture to the mind of Christ as revealed to and in the apostolic consciousness, the permanent motives and standards of self-criticism, con-

trition, and reformation. This means that Jesus Christ remains in the life of the Church not as a far-off memory growing more dim and less effective upon the conscience of the Church and mankind, as time flows, but as a living judge and unexhausted source of moral propulsion. Let us consider Him as the supreme personal force in the moral history of man.

2. **The ethical teachings of Jesus.**—The first appeal is naturally made to the teachings of Jesus, which have been explored with extraordinary minuteness to discover their personal and social application. Two things have gradually become clear which modify the nature of that appeal. (1) The first is that He abolished all dependence on outward ceremony as a means of salvation. Jesus revealed the ethical nature of man's religious relations. The same principles of faith and love unite men with one another and with God. Even worship of God is a moral act, and God's readiness to answer is compared with the attitude of good parents to their children (Mt $6^{14. 15. 26. 30. 32}$ $7^{11}$; cf. Lk $11^{1-13}$ $18^{1-8}$, Jn $4^{23f.}$). (2) The second is that Jesus did not, except for illustration, deal with the concrete details of life, and that He did not announce an organized system of laws. The only matter in which He approached the method of statutory legislation was that of marriage (Mk $10^{1-12}$, Mt $19^{3-9}$)—a fact which is of the utmost significance for the fundamental nature of that institution in His community. His teachings are occasional, fragmentary. They penetrate to the fundamental principles of conduct, rather to the inner spirit, the secret self-determinations of man. For example, take His words about love (Mt $5^{43-48}$, Mk $12^{28-31}$, Mt $22^{34-40}$), purity of motive (Mt $5^{8. 27-30}$ $25^{34-37}$, Mk $7^{20-23}$), service (Mk $10^{42-45}$, Mt $25^{31-46}$), forgiveness (Mt $6^{14f.}$ $18^{15-35}$), faithfulness (Mt $24^{45-51}$ $25^{14-30}$), sacrifice (Mk $8^{34-37}$ $9^{42-48}$ $10^{17-30}$), etc. He uses proverbs, parables, paradoxes, or mere simple illustrations, as well as direct commands, to state these principles, to make them distinct and impressive, to startle His hearers from the moral somnolence induced by their traditional habits of thought and evasions of severe moral issues, to show His principles at work in concrete social relations. In all this we note a certain finality which makes His principles inevitable for the human conscience of all ages and circumstances, a certain urgency which makes them impressive, solemn; and He binds them as ethical statements to religion as their final explanation, justification, and sanction. He takes the great principle of reward and punishment to the heart of all His teaching. But He makes it appear that these are not accidental, external, and confusing to the conscience. The reward and penalty come from God and are part of the history of the Kingdom and of the individual soul. The moral order of the universe is at once established and revealed through them.

3. **His personal character.**—In addition to the teaching of Jesus we must take account of His personal character as a moral force. It is true that the direct appeals to that character in the ordinary relations of life in apostolic literature are few (cf. Ac $10^{38}$, 2 Co $10^{1}$, 1 P $2^{21ff.}$). But on every page we see its searching and inexpressible influence. The picture of that holy and merciful life is ever before their eyes and is cherished in their hearts. In the Gospels it is preserved for us simply, directly, with such unity of spirit in its apparently divergent or even contradictory elements that it has won for itself a position of majesty, a strange and irresistible authority over the imagination, if not yet over the will, of the human race. He stands before the world as harmonizing in His own will with the perfection of self-mastery—for He was tempted to the utmost, yet sinless—such contrasts as these: (1) the consciousness of high and even superhuman station united with the will to obey unto death, unresisting and unafraid; (2) the nobility and dignity of a great mind and powerful will united with simplicity and lowliness of life; (3) severity of the utmost in His purity, frankness of the least compromising in His truth, united with tenderness, pity, and comprehending sympathy; (4) the clear, relentless perception, exposure, and hatred of man's sin united with the unfaltering resolution to be Himself the Saviour of man. Such a character was itself a revelation of the ideal humanity, and has since these Gospels were written ruled the hearts of men with royal supremacy.

4. **His character measured by His divinity.**—But there was more than His teaching and more than His character as a perfect man. It might have seemed impossible that a character formed from such a consciousness as His should be of any avail for blind, selfish, earthly-minded, impulsive men. For His superhuman consciousness and His native sinlessness would open up a gulf between His achievement of moral glory and man's continuous and dismal failure which no man could cross, the very sight of which would crush all faith and hope with the weight of personal despair. But the picture of Christ's moral quality is set before us in the light of His Incarnation and His redeeming purpose in life and in death. Passages like 2 Co $8^{9}$ and Ph $2^{5ff.}$ show that the pre-existence of Christ was not for the apostles what certain Ritschlians have too often represented it to be—an empty and unethical idea. On the contrary, it is the eternal will of the Son of God, His 'grace,' His 'mind,' that are revealed in His self-emptying and impoverishment. It is not the limited though noble sacrifice of a man that is seen in Him by the faith of the Christian Church. It can only be measured by the movement of His will from the throne to the cross. When the Word became flesh, His glory was beheld, the glory of grace and truth (Jn $1^{14}$), and, when He was seen and handled, it was the Word of life that stood revealed (1 Jn $1^{1-4}$). When the author of Hebrews refers to the Incarnation ($2^{11-18}$), we cannot miss the effect of contemplating the Son of God as He chose to partake of the flesh and blood in which all the children share, and to become in all things like unto His brethren. When in 1 Peter we read of the lamb without blemish ($1^{19}$), of His patient endurance of shame and pain ($2^{21-25}$), of the purpose of His suffering once for all ($3^{18}$), we cannot but realize that the writer is thinking not of a man, but of the divine being who entered into human life in His own full and holy will of love. When in Paul's writings we read of Him 'who loved me and gave himself up for me' (Gal $2^{20}$), of his own desire to know the fellowship of His sufferings (Ph $3^{10}$), of Christ's love which constrained him (2 Co $5^{14}$), from which no pang or shame can separate him (Ro $8^{35}$), we realize all the time that this is the love of a divine being. The whole subsequent history of the Church shows that the inner secret of that spell which the name of Jesus Christ has cast upon man's heart lies in this view of His character as that of one whose eternal holiness and love became active among men and for men. Many good men have suffered for their fellow-men. Patriotism and friendship, stern devotion to duty and a certain royal self-respect, have produced their myriad martyrs of varied degrees of worth. But they are men entangled without their will in human relations, and rising worthily to their task. Here is the picture of one whose sinless life, whose love, whose will to serve and even to die, is more than human, and who is, of His own will, set into the entanglements of man's moral situation for man's deliverance. His very difference from us gives moral sublimity to His deliberate and merciful self-union with us.

**5. The will of God revealed as the ultimate ground of moral ideals.**—The ethical value and force of the story of Christ is not yet fully stated. Another element, the greatest and most potent of all, is involved in it.

(*a*) *A permanent problem in the history of morality.*—That we may estimate aright its true significance, let us recall one of the central problems of the higher ethical systems of different ages, which have often penetrated far into the heart of virtue and have tried to picture the perfect man. Aristotle did so, and discovered that the virtuous man is alone capable of true happiness. But he was apparently baffled by the fact that he cannot be pictured as attaining the ideal in our world because the environment proves hostile. There ought to be a relation of 'perfect virtue' and 'perfect life.' But the latter fails even the best of men, either through misfortune in life or through the close of life itself in death. The Stoics faced the same situation, and their very name means for us in English what it does because they girded themselves to meet it not merely in speculation but in practical life, by the discipline not merely of the mind but of the will. They sought their sure guide to virtue and peace in an appeal to the Reason which informs the universe as a whole. Yet, just because their vision of this Reason was won only by the severe labour of elect souls, and they had no objective ground, but only an inner and therefore indemonstrable conviction, their virtue lacked joy. It could not and did not become a social good, a wide and permanent force in history. In Kant, again, the same opposition between a very high conception of the good will and of duty and the actual situation of man appears. For he too saw—and more clearly, as the heir of Christian culture—that in the end virtue must find its justification in a universe made to harmonize with it. His solution lay in what from the metaphysician's point of view must always appear as a violent use of the idea of a *Deus ex machina*. God must be conceived of as somehow and somewhere creating the perfect environment for the good will, that the need of happiness may be enjoyed. Höffding, from a narrower vision and in the language of recent thought, puts the same problem when he says, 'the conservation of value is the characteristic axiom of religion,' and adds that, therefore, 'the religious problem also is concerned with the continuity of existence, although from a special point of view' (*Philosophy of Religion*, Eng. tr., London, 1908, pp. 10, 13). The same principle or problem appears in the Hebrew Scriptures in the terms of practical religion. It created the drama of Job. It even produced the fifty-third chapter of Isaiah. The Psalms ring with its passion and wail. For Israel was confronted with the fact that the man who was righteous, who was conscious of integrity before the will of Jahweh, was yet left to the mischances of life and the doom of the grave, just like the virtuous man of Aristotle. Man needs for his clear and sure grasp of the idea of goodness, and for its social fulfilment on a large scale, the assurance not only that the universe is ultimately in accord with it, but more definitely that the Will which rules history confirms and secures it finally and for ever.

(*b*) *Its solution in God's will concerning Christ.*—According to the NT and the continuous faith of the Church since then, this supreme problem was solved in the story of Jesus Christ. For the whole 'fact of Christ' is viewed steadily as an act of God (Jn $3^{16}$, Gal $4^{4}$, He $1^{1-3}$). Outwardly this is depicted for us in the stories of His birth and His resurrection. Inwardly it is made certain (*a*) in His own consciousness of union with the will of God. That is not viewed either in the NT or in the faith of the Church, it was not viewed by Jesus Himself, as the product of a pure human will (Mk $10^{18}$, Mt $11^{27}$). It was the product in Him of the spirit of holiness, which became incarnate in Him (Ro $1^{3f.}$), of the Logos incarnate in Him (Jn $1^{14}$), of the Son of God incarnate in Him (Ro $8^{3}$) by the will of God. (*b*) In His sacrifice on the Cross. For that event is distinctly and repeatedly described as the will and deed of God. Jesus Himself so regarded it when He spoke of being 'delivered up into the hands of men' (Mk $9^{31}$), of the Son of Man having come—being sent—to give His life as a ransom (Mk $10^{45}$ $9^{37}$; cf. Ac $2^{23}$), of His blood being shed to establish the new covenant of God with man (Mk $14^{24}$), and in the Agony (Mk $14^{36}$; cf. Jn $10^{18}$). The apostolic literature is full of this fact (Ro $5^{8}$ $8^{3}$, Gal $4^{5}$, 2 Co $5^{21}$, Ph $2^{8}$, 1 Jn $4^{10}$ etc.). The supreme passage is Ro $3^{21ff.}$, where God is described as having 'set forth Jesus Christ,' *i.e.* on the Cross, as a propitiation, whereby the righteousness of God became a realized and living force in history. (*c*) In His Resurrection, which is viewed always as the seal set by God Himself, in an act of transcendent power, upon the redeeming work of Christ, and as the revelation to all men of the destiny of the sons of God (Ac $2^{24ff.}$ $3^{13ff.}$ $10^{40ff.}$, Ro $1^{4}$, 1 Co 15, Eph $1^{19-23}$, Ph $3^{10f.}$). The Risen Christ is the full revelation of the ideal man, of the predestined triumph of believing humanity (He $2^{8.10}$, 1 Co $15^{45-47}$). In the Book of Revelation the conception of the glory and power of Him who was dead and is alive for evermore fills the successive scenes with their apocalyptic splendour. All these events, in their meaning for Christian faith, have proved themselves to be charged with creative moral energy, and have entered deep into the ethical history of Christendom. In them the very character of the Creator of the universe stands revealed, and His will concerning man is seen in action. In all of them His holiness and what holiness means, His love and what love means, His mercy and its nature, His final purpose with man, are made known. The suggestions of nature, the premonitions of conscience, the yearnings of the spirit of man, have been insufficient guides. But the deeds of God in Christ have for a believing Church so revealed the righteousness and the love of God, *in action upon the believing man*, that the nature of righteousness and love stands clear, and the will of the Creator is proved to be concerned supremely with a realm of spiritual beings in whom these shall be completely realized. All the risks and sacrifices of the virtuous man, all his implicit faith in a moral universe, are confirmed by the work of God in Christ.

**6. The moral foundations of the Church.**—We have already seen that, in gathering His disciples into the nucleus of the new community of God upon earth, Jesus united them with Himself by the ethical bonds of penitence, trust, obedience, and hope. The apostolic communities grew up in various parts of the Roman Empire on the same foundation (Mt $16^{18}$, 1 Co $3^{11}$). These new social groups are filled with the consciousness of a divine indwelling (1 Co $3^{16}$, Ac $2^{16-36}$, Ro $8^{1ff.}$, Col $1^{27}$, Jn 14–16) which they describe under the three names of God, Christ, and Spirit. They live in new ethical relations with God, and accordingly all human relationships appear in a new light. A new form of moral consciousness has taken its place in human history. It was destined to pass through many outward phases, to wax and wane in alternate periods of clearness and confusion, of effective energy and feebleness. But, having the secret of renewal within its own nature and in its connexion with the history of its origin and type, which is God in Christ, it has proved itself an inexhaustible source of light and power for all periods of culture and all races of man. In proportion as the religious life

feeds itself directly upon the deeds of God in Christ, and upon Christ's character, word, and work, as the embodiment and manifestation of those deeds, it becomes aware again of its moral ideals and becomes charged afresh with faith and passion for their fulfilment. A few words only can be used here upon the social influence of the Church as a moral organism. As a social group its outward moral influence on the State and on all other social groups and institutions is based upon the principles of its own organization. Those principles are faith, love, obedience towards God, and mutual love and service towards one another. The Church as a distinct institution is created by these. The measure of the intensity with which they are practised by the Church has always been the measure of the Church's moral influence on society. Not its mere teachings, but its actual rules of combination and co-operation have proved to be the most potent revolutionary forces. The meaning of these rules, their inner logic, has not yet been all read off into the continual flux and change even of its own life. But the humanizing of man's heart, the democratizing of his governments, the socialization of his possessions and all 'values' are the laboured, slow, and never completed effort to translate the ideals or principles which give the Church its own being into the organization of the whole world. And that process is slow and laboured, because the Church, being composed of only partially enlightened human hearts, has found it so hard to understand itself, as well as because the 'kingdoms of this world' fight for the hostile principles on which they are so widely and firmly established (Mt $20^{25ff.}$, Ro $13^{1-7}$). From this aspect we can see the ethical meaning of the fight of Paul for the universality of the gospel against the Judaizers. It was a movement of the Spirit by which the will of Jesus in relation to the Kingdom, and the moral value of God's deeds in Him, were translated into human action, and into the very organization of the Church. That all races, both sexes, every grade of social life, every quality of mind, should be baptized into Christ and become one body in Him, on the same ethical terms, was necessary to make the practice of righteousness and love, as He taught them (and, in His own work, fulfilled them), possible to the whole human family. The great idea of the brotherhood of man could arise, so as to become a historic force, only in communities which had begun to practise it across all these gulfs which cut the race into unsympathetic groups. The hope of the speedy return of Christ mercifully hid from the imagination of the first Christians the length and breadth and height and depth of the task of the Church as the embodiment and promulgator of the will of God in Christ for the re-organization of society. But they did their work no less effectively. It is not the possession of any theory as to the ideal form of general society, whether politically or economically considered, that has given the Church its power. Where it has attempted to dictate such a form it has always incurred disaster. Its supreme function and power have come from the possession of those deepest principles of control by which the ambitions, passions, appetites, and convictions of men—out of these the forms of government and society grow—are themselves regulated and directed within its own life. These principles of control lie in its continuous sense of responsibility to the living Christ and its continuous dependence upon the manifestation of His will in all the transactions of his earthly life.

**7. Eschatology and morals.**—The attempt of some recent eschatologists to prove that the teaching of Jesus contains an *Interimsethik*—a view of conduct dictated by the expectation of the speedy establishment of the Kingdom of God in which the whole conditions of life would undergo a catastrophic change—deserves a few words. There is no teaching of Jesus which relieves men from the regular duties of life. No reasonable man so interprets the words about hating one's family (Lk $14^{26}$; cf. Mt $10^{37}$), or applies to all men the demand made on the rich ruler (Mk $10^{21}$), or understands that the forbidding of anxiety about clothing and food (Mt $6^{25ff.}$) is the bidding of idleness, even for a season. Jesus could not have seen less clearly than Paul did that dishonour lies in the refusal to work (2 Th $3^{6-13}$). The deep moral and religious principles underlying the commands about the laying up of treasure (Mt $6^{19f.}$), the deceitfulness of riches (Mt $13^{22}$), are frittered away by the idea that they were based upon an excited view of the imminence of the last day. The teaching about eunuchs (Mt $19^{10-12}$) is likewise misunderstood and lowered in its tone if it is taken to mean that men should not marry because the day of heaven is near when there shall be no marrying or giving in marriage. On the contrary, our Lord assumes that men will have money to use for their almsgiving (Mt $5^{42}$ $6^{1-4}$ $25^{35f.}$, Lk $16^{1-13}$), while such a passage as Lk $14^{12f.}$ (with every mark of authenticity) assumes a condition of society in which money is still possessed by those whom He would instruct. His deepest teaching about love of enemies, service as the true ground of personal distinction and the basis of divine rewards, the nature of lust, superiority to the joys of mere wealth, are not intelligible if read in relation to an unimaginable state of life following the great catastrophe, and far surpass the purview of a mere emergency legislation. They presuppose, and are relevant to, a continuation of human nature and of its social foundations, as we have them now. On the other hand, we must take account of the fact that in a certain sense all Christian ethics must be *Interimsethik*. The pilgrim spirit is the life of the Church. The final facts (*τὰ ἔσχατα*) are always present to its consciousness. Death and judgment, the transitoriness of this world and the ideal life of complete holiness and blessedness for the race in the unseen universe, the brief life of the individual and his eternal destiny—these facts make all the possessions and relations of society on their earthly side temporary, limited in their positive value, dangerous in their misuse, good only in their subjection to the ends of the soul and the meaning of the Kingdom of God. The antinomy that lay in the consciousness of Jesus, as we have seen, concerning the advent of the Kingdom and His own relations to the events in time is reflected also in His ethical teaching concerning the duties and the spirit of His true disciples; and it has passed into the consciousness of the Church, which also must live as if the Lord were at hand, and yet face the fact of His tarrying. It is hard to see how the matter of the moral evolution of the race could be dealt with otherwise. For that evolution is inconceivable on the assumption either that the earthly life is all and to be pursued for its own sole sake or that the 'day of the Lord' is so near and so destructive of the present constitution of man and nation that the earthly life has no value at all. The element in the teaching of Jesus which looks like *Interimsethik* is not contradictory of the doctrine of evolution, as Schweitzer and others suppose, but actually essential to its application in the moral history of man. For the evolution of a rational moral will in humanity is possible only when the reality and imminence of the eternal fills him with a sense of solemn urgency and makes the joys of earth seem by comparison meagre and incomplete, and when, on the other hand, the reality and definiteness of the holy will and the

loving mercy of God, apprehended now and here, make the earthly task seem noble. Christ's own character, and even His work of redemption, was evolved from the appeal to His will of these two aspects of the human situation. And His disciples were taught by word and example, and His Church by His spirit, to cherish both the urgency and the calm, the dissatisfaction and the enthusiasm, the eager waiting for a Saviour and the determined devotion to the present opportunity, out of which the loftiest morality has arisen, and through which alone the perfect civilization can be evolved.

V. *APOSTOLIC CHRISTOLOGY*.—i. THE CHRISTOLOGY OF PAUL THE APOSTLE.—1. **His religious experience.**—All attempts to explain Paul's fundamental doctrine of the Person of Christ except through his contact with the primitive Christian community, and through his faith in the risen Christ, have utterly failed. A profound experience was the beginning of his Christology. Not merely in the Acts of the Apostles but in his own letters the evidence on this matter is as direct and conclusive as possible. Many writers from Baur onwards have treated him as primarily a speculative theologian whose opinions about Jesus have the value only of deductions from Jewish Messianism and of attempts to reconcile these with Alexandrian philosophy. But all such views fail to do justice to the central things in the self-revelation of his own letters.

(*a*) *As a Jew*.—It is abundantly proved, first, that his original and deepest interest was in practical religion. He was 'exceedingly zealous' for the traditional faith of his race (Gal $1^{13f.}$). It would seem that he had given years to the earnest study of the Jewish religious system, and that he had given himself with great energy to the practical side (Ph $3^{5f.}$). The intensity of his love for his race never abated, and proves that, while it was fired by a deeply contemplative habit of mind, it was no less active and practical in the demands which it made upon his will (2 Co $11^{31f.}$, Ro $3^{1f.}$ 9–11). His ardour for the fulfilment of the Law carried him apparently to all lengths. His contemporaries saw him 'advanced' beyond them all and 'excessive' in his zeal (Gal $1^{14}$; cf. Ac $22^3$); they found him 'blameless' (Ph $3^6$ ἄμεμπτος; cf. Lightfoot, *in loc.*) in the details of legal observance. According to Ac $26^4$ he could appeal before Agrippa to the reputation which he had won as a Jew for strictness in practical religion.

(*b*) *As a foe of Christianity*.—His intensely practical nature made him the bitter and most powerful enemy of the gospel. He refers to this period with shame (1 Co $15^9$; cf. Eph $3^7$, 1 Ti $1^{13}$), in proof of his Jewish orthodoxy (Gal $1^{13}$, Ph $3^6$), and as proof also of the power of the free grace of God in Christ. The grounds of that fierce hatred of 'the Way,' and of Jesus, may be surmised to have included the usual prejudices of others, his fellow-persecutors. He led in the attack on Stephen, who was condemned for teaching the abolition of Temple-worship and the Law (Ac $6^{13}$), and for blasphemy in ascribing a divine exaltation to Jesus the Crucified as 'Son of Man' (Ac $7^{56ff.}$). It would seem that Paul must have felt a peculiar horror at the idea that the crucified and accursed Jesus should have been made the Messiah and Saviour of the world (Gal $3^{13}$); and he ever after realized that this constituted a peculiar obstacle to all Jews (1 Co $1^{23}$). It is accepted, therefore, by most scholars who are not exploiting some private method of approach that Paul before his conversion knew what the disciples believed Him to be, and that this was the origin of his hatred of them. To make them curse Jesus was for him a religious act, a service of Jahweh which he must render with his whole soul; and that implies at least a general knowledge of their claims concerning Jesus.

(*c*) *The grace of God*.—When this man became a believer in the gospel, he attributed the change not to the processes of his own mind, but to the gracious act of God (Gal $1^{15f.}$, Eph $3^7$ etc.). The revealing act was so direct, vivid, personal, objective, that he never after had a moment's doubt that he had seen Jesus even as the other apostles (1 Co $9^1$ $15^8$, Gal $1^{16}$). His heart was changed, and all his letters pulsate with the light and joy and love and power from the very spirit of God, which henceforth filled his consciousness. It is at this point that some writers, like Percy Gardner (*The Religious Experience of St. Paul*, London, 1911), pass too hastily to a supposed preparation of the Apostle's mind in his pre-Christian days for his distinctive Christology. Gardner not only attributes to him a reasoned Jewish conception of the Messiah, and knows its outlines, but credits him with a conception already illumined and expanded by Alexandrian philosophy (pp. 26, 86). Against this must be set two facts. First, the 'hints' of Paul's familiarity with Greek speculation before his conversion are obscure and precarious. The elements in his Christology which ally themselves with the Greek world are found in his later Epistles, after he had spent years in direct missionary work and controversy in Asia Minor and Achaia. Scores of modern missionaries can parallel this experience, even as late in life as he. Secondly, it is clear that the effect of his conversion was to make him receive Jesus as the primary apostles declared Him. The differences which developed later between some of that first group and himself were never concerned with the Person of Christ, but with the contrast between the act of faith on which the Church was founded and the act of circumcision on which the Jewish system was based, or with the work of divine grace in Christ as over against the principle of legalism. There is no sign that he had any controversy with the original group in the field of Christology.

2. **Three stages in his Christology.**—It was natural and inevitable that a mind so keen and powerful should seek to interpret the Person and Work of Jesus, and on this three distinct strata of thought are discernible in his letters.

(*a*) *Data from earlier believers*.—He received from the primitive Church, as confirmed in his own experience, the fact that Jesus must be called Messiah (Christ), Son of God, and Lord (Κύριος). Of course these are not mere titles of honour. They are so closely descriptive of His very being and of His functions in the salvation of men that they are used by Paul as proper names. Moreover, as proper names they are applied to that one historical Person who is known to him as Jesus, of whom Peter, standing up with the eleven, spoke in Jerusalem, and who is described in every paragraph of the Synoptic Gospels. Hence Paul is free to use these terms, whatever *status* he is thinking of. It was 'Christ' who existed eternally in the nature of God (Ph $2^6$); it was 'Christ' who was crucified (1 Co $1^{17. 24}$, Gal $2^{20}$), who died for our sins (1 Co $15^3$), who was raised from the dead (1 Co $15^{12}$), who is exalted and ever liveth (Ph $2^{11}$, Ro $8^{34}$), who is the final judge (2 Co $5^{10}$). It was the 'Son of God' who was sent forth (Gal $4^4$, Ro $8^3$), who gave Himself up (Gal $2^{20}$), whose nature as Son was definitely marked out in the Resurrection (Ro $1^4$), in whom the universe has its origin, its order, and its meaning (Col $1^{16-18}$). It was 'the Lord' whom men must see and confess in Jesus (Ro $10^9$), who was betrayed (1 Co $11^{23}$), who is received as the Spirit (2 Co $3^{17f.}$), who controls human experience (2 Co $12^{8ff.}$). To confess Him as Lord absolutely is

not, like the worship of heathen gods, to detract from, but, on the contrary, it is to manifest and magnify, the very glory of God (Ph $2^{11}$). And this Lordship extends over the created universe (Ro $14^{9}$, Ph $2^{11}$). All three original titles are brought together by Paul into one full-hearted and glorious description of this Person when he says: 'Blessed be the God and Father of our Lord Jesus Christ' (2 Co $1^{3}$, Eph $1^{3.17}$).

(*b*) *Two elements from Jewish thought.*—At least two new elements appear in the Apostle's thought which indicate that he found himself compelled to consider the relations of Christ, the Redeemer from man's racial sin and the Lord of man's destiny, to mankind and to God respectively.

(*a*) *The man from heaven.*—In two passages of great difficulty Paul draws a parallel between the relation of Adam to the race and that of Christ. In Ro $5^{12ff.}$ he discusses the fact that sin and death entered into history through Adam, whereas righteousness and life have entered and shall yet 'reign' through Christ. In 1 Co $15^{21-22.\ 45-49}$ a like comparison appears again, without direct reference to the fact of sin, in presence, however, of the facts of death and resurrection. Some theologians have made much of these passages. (The fullest discussion in English is that of David Somerville, *St. Paul's Conception of Christ*, Edinburgh, 1897.) It is asserted that Paul conceived of Christ primarily and definitely as 'the heavenly man,' 'the archetype of humanity,' and that we must connect with this, as his fundamental conception, the discussion of His redemptive work, His mystical union with humanity in the Church, and even His cosmic relations. There is some exaggeration here, though there can be no doubt that the Apostle's mind did strive to institute a certain parallelism between the 'natural' and the 'spiritual' heads of the race. For him the moral dualism in human (Christian) experience (Ro $5^{12ff.}$ $7^{7ff.}$) is fully explained only when a double 'law' operating in human life is related with two separate origins, viz. Adam and 'the one man, Jesus Christ,' and with two separate destinies, viz. death and eternal life. And Christ is called 'the last Adam' because 'at his coming' (1 Co $15^{23.\ 45.\ 47}$) the new and final order of humanity will be established, in which righteousness shall reign (Ro $5^{19}$), and whose members shall be united with Christ as the 'life-making spirit,' and bear in their own perfected nature the image of Him in His Resurrection glory. So far as Paul refers in these passages to Christ as head of a new race, his mind is moving in the eschatological field. The Man '*from* heaven' (1 Co $15^{47}$) is not the pre-incarnate Logos (the opposite view is taken by J. Weiss, *Christus*, p. 37 ff.), but Jesus Christ, in whom at His coming all shall be made alive (v.$^{22}$; cf. Ro $5^{17}$) and receive 'the victory' (v.$^{57}$). The recognition of the eschatological atmosphere in these passages undermines much of the speculation regarding the central, organizing value of 'the heavenly Man' conception, and it gives more probability to the thought that Paul is here indebted to the title 'Son of Man' or 'the Man' as Jesus used it at His trial, and has simply (some would say, more correctly) translated it into '*the man* from heaven' (cf. Jn $3^{13}$). It is less likely that reflexion upon the origin of sin (Ro 5) led to the idea of the Spiritual Man who is to found the new order at His appearing (1 Co 15) than that reflexion upon the latter idea, as given to him in the disciples' accounts of Jesus and His words, led him to carry the parallel back to the former. J. Weiss in his *Christus*, p. 42 f., traces Paul's conception to the influence of Ps 8, Dn $7^{13}$, and the 'Similitudes' of Enoch without the mediation of the words of Jesus.

(*β*) *Relation to the Spirit of God.*—In the mind of Paul the supreme term for Christ is 'Son of God,' and the greatest and most complete name which he can give to God is 'the God and Father of our Lord Jesus Christ.' But the relation of Christ to God is also stated in a very different way, through the use of the term 'Spirit.' Paul identifies this Spirit as an eternal element of the very being or life of God Himself (1 Co $2^{10ff.}$), and as the form under which God enters and operates in the heart of man. And the same Spirit is also spoken of in a distinctive way, as the Spirit of Christ. It is going too far perhaps to say with some that the Spirit is the essence or basis of His personality; even Ro $1^{4}$ (cf. 1 Co $15^{45}$) will hardly carry us so far. The famous passage in 2 Co $3^{17f.}$ does indeed seem to carry the identification through to the end —'The Lord is the Spirit,' 'even as from the Lord the Spirit.' But this must be compared with the elaborate interchange of names in Ro $8^{1-11}$, where this identification is deliberately avoided. And yet a form of unity is even there implied which is supra-temporal. The Spirit of God is the Spirit of Christ, and the experienced presence of the Spirit in the believing man is at once the presence of God and of Christ.

The two main practical aspects of this conception for Paul are these:

(*a*) The Holy Spirit reproduces in men the divine relations and qualities of Christ Himself, especially sonship, holiness, and victory over death. The love of God for His Son, which is presupposed as the fountainhead of all grace (Col $1^{13}$), is shed abroad in our hearts by the Holy Spirit (Ro $5^{5}$), and awakens in us the sense of divine sonship which He sets forth in divine majesty (Ro $8^{14-17}$). It is the spirit of life in Christ Jesus that gives men freedom (Ro $8^{2}$), and becomes the principle or source of their life (vv.$^{5.\ 9}$; cf. Eph $3^{16f.}$) and consummates His work by reproducing in them the supreme wonder of the Resurrection of Christ (Ro $8^{11.\ 17}$; cf. Ph $3^{21}$). The Holy Spirit is then for the mind of Paul that principle or energy whose power in the Christian community has opened a new order of human experience (Gal $3^{2-5}$). Its operation is viewed by the Apostle in the most concrete and vivid way as a living force manifested in many forms, in χαρίσματα of many kinds (1 Co $12^{1-11}$).

(*b*) Here the second practical aspect appears. For the Holy Spirit, when viewed, not as a formless and unknown energy, but as the Spirit of Jesus Christ, becomes available as a true test of the soundness of those varied and sometimes dangerous workings which manifested themselves so profusely in the enthusiastic life of those days, as well as in corresponding crises in other days down to our own. The true fruit of the Spirit of God (Gal $5^{22}$) is the reproduction in men of the moral qualities of Christ. All spiritual 'gifts' must be tested by the attitude of those who possess them towards Jesus (1 Co $12^{3}$) and subjection of life to His Lordship. It is the Spirit which inhered in His character, as the 'Spirit of holiness' and as the miraculous energy through which He was raised from the dead, for which His disciples must pray and hope. As He cannot be fully conceived apart from the Spirit, so the Spirit cannot be experienced by us except as the manifestation of Him in our hearts. On the other hand, we must remember, this is the 'Spirit of God' no less truly essential henceforth to our conception of the Father than to that of the Son. Inherent in the very being of God, organ of the divine intelligence and power (1 Co $2^{4.\ 10.\ 11}$, Ro $8^{11.\ 27}$), He is yet spoken of as having a distinction, or form of reality, which must not be confused with or made merely subjective to the reality of the Father and of the Son. Inherent in the life of God and of Christ, the Spirit is yet a co-ordinate name with these, and must be specially named in a full statement of the God in whom Christians believe and whom they worship (2 Co $13^{14}$).

(*γ*) *Anticipations of this doctrine.*—Once more we must be careful, while allowing for the originality and power of the Apostle's mind, to recognize that in this magnificent doctrine he bases himself upon the common experience of the Christian community. For the Holy Spirit is one of the supreme revelations of Christianity. All earlier references to that divine power, even in the OT, fall far short of the sudden, definite, dazzling conception which opens upon us in the NT, where the inbreaking of the divine life upon the human, as an abiding presence and experienced energy, is attributed by all writers to the Spirit of God. As Paul did not invent the idea of the Spirit of God, so also he was not the first to connect it with the Person of Christ. The Fourth Gospel explicitly traces the main features of the Pauline doctrine to the conscious-

ness of Jesus (Jn 1$^{32f.}$ 14–16), who promised this supreme gift to His Church (cf. 20$^{22}$).

Even in the Synoptics we find that: (*a*) the Holy Spirit is described in the accounts of the Virgin Birth as the energy which caused the new being to live in the womb of His mother (Mt 1$^{18. 20}$, Lk 1$^{35}$); (*b*) John the Baptist named the gift of the Spirit as a distinctive feature of the Messianic day (Mk 1$^{8}$, Mt 3$^{11}$, Lk 3$^{16}$; cf. Jn 1$^{33}$); (*c*) the four Gospels also name the baptism of Jesus as the hour of the coming upon Him of the Holy Spirit, for His anointing to the active work of Messiahship (Mk 1$^{10}$, Mt 3$^{16}$, Lk 3$^{22}$, Jn 1$^{32f.}$; cf. Mt 12$^{18}$, Lk 4$^{18}$); (*d*) it is asserted in these Synoptic passages that He went to the desert to face His trial in the power of the Spirit; (*e*) Jesus claims that He does His works of wonder by the Spirit of God (Mt 12$^{28. 31f.}$, Mk 3$^{28-30}$); (*f*) He asserts that His disciples will receive the Holy Spirit for their service of Him (Mk 13$^{11}$, Mt 10$^{20}$; cf. Lk 11$^{13}$).

The extraordinary fullness of reference to the presence and workings of the Spirit in the book of Acts can only be accounted for ultimately through some communal experience which was, in their minds, at once a manifestation of God's presence and power and also connected directly with Jesus and their past experience of Him. That whole situation is needed to explain the significant fact that Paul everywhere assumes that his readers must understand his references to the Spirit in relation to Christ and to the Church life. Here as throughout His central teachings, even as to what he calls 'my gospel,' he appeals steadily and even passionately, not to his speculative presuppositions as a theologian, but to the real and characteristic experience of every Christian community.

(*c*) *The influence of Greek thought.*—There is yet another range of Pauline thought concerning Christ, that, namely, which comes to expression in Colossians and Ephesians. There are evidences in nearly all his Epistles that Paul in his mission work strove to make sympathetic contact with the modes of thought peculiar to the people whom he taught (cf. Ac 17$^{16-34}$, and W. Ramsay, *Galatians*, London, 1899). Much controversy has been waged in recent years as to the extent and content of his indebtedness as a theologian to the mystery-religions, the Gnostic philosophy, and even the Stoic philosophy, which were popular at the great centres where his work lay. It has not been proved that anything essentially new was added to his Christology from any of these sources. But it has become very clear that he did set himself to make Christ intelligible to minds saturated with Gnostic interpretations of life and attractive to souls absorbed in practices of religious fervour. As it is ridiculous to argue from Ph 4$^{11f.}$ (*μεμύημαι*) that he had personally passed through a form of mystic initiation or that his frequent use of the word *μυστήριον* confirms this notion, so it is an exaggeration to say that he learned to think of 'the cosmic Christ' from the Philonic doctrine of the Logos or some Asiatic reflexion of it. That he was compelled, as a missionary is often compelled nowadays, to relate the doctrine of Christ to the intellectual concepts of his field of labour, and that this led to the use of new terminologies, is obvious. But it is significant that, while the term 'Logos' occurs in the 'Pauline' Epistles about eighty times and occasionally in meanings verging on the technical philosophical use of it, there is not one occasion when he does use it in the Philonic sense. In the critical passage of this kind (Col. 1$^{15-20}$) he undoubtedly addresses men who have cherished some phase of what is generally known as the Logos doctrine. And the result is a setting forth of the eternal being and the pre-eminence of Christ which is more elaborate philosophically than we find in any other place, except Jn 1$^{1ff.}$ and He 1$^{1-4}$. But the exposition is intended deliberately to exclude all comparison of Christ with other angelic beings, or heavenly powers (v.$^{16}$), which Gnostic philosophers described as emanations from the absolute and controllers of the world. He does not borrow their categories to add some new and unthought of quality or dignity to the glory of Christ, but to reveal to them in their own language that which He is essentially for the Christian consciousness. The result is that Christology begins to speak in the language of the Greek world that which it has already uttered in the forms of Jewish thought. Thus (*α*) it is 'the Son of his love' who is 'the image of the invisible God, the firstborn of all creation.' In Him the attributes of God are concentrated, and He has His being before 'all creation' (v.$^{15}$), 'before all things' (v.$^{17}$). (*β*) In spite of J. Weiss's argument for adoption of the idea that the clause 'in him were all things created' means that the universe had its existence 'in Him' before its actual objective creation (*Christus*, p. 46 f.), we must hold to the more common interpretation that *ἐκτίσθη*, when used of the actual elements of the universe, refers to their definite creation as such, and not to their existence 'in idea' in Him. The statement is repeated (with the perfect tense *ἔκτισται*) that all things have been created through Him (cf. 1 Co 8$^{6}$, Ro 11$^{36}$). (*γ*) The words *ἐν αὐτῷ* mean more than *δι' αὐτοῦ*, implying that He is not a mere instrument but a continuous, abiding, conditioning cause. This is made explicit in the further statement that all things 'stand together,' receive their organic unity, through their continuous dependence upon Him. (*δ*) In addition to origin and continuity, we have here applied to Christ the third great metaphysical conception of end or final cause. 'All things have been created . . . unto Him.' The idea is repeated by describing this *τέλος* in concrete terms. He is to be supreme over all things, as the head over the body, that the divine fullness (*τὸ πλήρωμα*) may dwell in Him, that all things may be gathered back from alienation to their pristine unity (*ἀρχή*) in Him.

Lest the simplicity of faith should seem to have been betrayed in this use of philosophical categories (are they not after all very human categories, the stuff of 'common sense,' and inherent in all rational life?), the Apostle keeps the reader's mind close to the fact that he is describing—the functions of an actual personal being. He probably avoided the use of the term Logos, for the reason that the conceptions named above are not found in that philosophy alone, though brought to exceptional clarity there. They are embedded even in the OT, as in Pr 8, which cannot have been absent from his mind. He may also have instinctively avoided the obvious accusation, now levelled at him by some modern scholars, that he derived his Christology primarily from the Logos speculations and clothed with them the 'pure-human' figure of Jesus, hiding His winsome Self in a cloud of abstractions. On the contrary, he takes extraordinary pains in this very passage to avoid this reproach. He is dealing from first to last with a personal being, who has appeared in history, who has shed His blood, in the body of His flesh (vv.$^{20. 22}$), been raised from the dead (v.$^{18}$), drawn the Church by His living personal force (vv.$^{17. 21}$) under His control. This is not abstract idealism of the Philonic or the Hegelian type. It is 'personal idealism' which assumes that personal, conscious will is the ultimate seat of reality, fountain of history, secret of destiny.

ii. CHRISTOLOGY IN JOHN AND THE EPISTLE TO THE HEBREWS.—It is now generally agreed that the Christology of the Johannine writings and of the Epistle to the Hebrews is in substance identical with that which we have found in the Pauline Epistles.

1. **Characteristics common to both.**—In the two great passages Jn 1$^{1ff.}$ and He 1$^{1-4}$ a terminology is employed which is drawn from an atmosphere charged with the Logos doctrine. It must, however, be carefully noted that these writers move

with individual freedom in that atmosphere. They do not directly derive their thought any more than they draw their language from Paul's writings. Rather do they reveal a common necessity felt by all prominent Christian teachers when brought face to face with the culture of the Greek world. Each writer chooses his own language to describe the fundamental facts which faith in Jesus Christ as the Son of God presents to them all (cf. the difference in language in Jn $1^{1-5}$, He $1^{3}$, Col $1^{15-19}$). Further, we must note the essential and fundamental feature common to all—that the one common term in all their descriptions is 'Son of God.' Their real unity is not to be found either in their philosophical terminology, which is very different in each case, or in a common metaphysical theory, supposed to be in the background but which we have no real means of discovering. Their unity is found in this, that they are describing the eternal and cosmic relations of a concrete personality, who is identical at once with Jesus of Nazareth and with this divine Spirit which fills the Church. But the significance of the matter is not seen until we emphasize again the one point which is most generally ignored in our day—that as a mere matter of fact these writers all feel that their whole view is based originally upon the consciousness of the historic Jesus, the Son of God.

2. **The Fourth Gospel.**—The entire meaning of the Fourth Gospel lies here. It is an effort to show the Logos, who is thoroughly conceived of in the prologue as an eternal, living, purposive, rational being, as He appeared in flesh, as He moved a man among men. It is a profound study of the consciousness of Jesus as the consciousness of the Son of God living under the conditions of human experience. Incidents and discourses are recalled, interpreted, re-stated, and recorded, as they reveal that 'glory' which shone through the veil of flesh into His disciples' hearts, full of grace and truth (Jn $1^{14}$). There can be no doubt, whether the author be John the Apostle or some other mind working upon material which must be traced back to Jerusalem and the Lord's immediate disciples, that he believes he is describing the actual consciousness of the historic Jesus. He is not inventing; nor is he using what he knows to be the inventions of a Pauline group, but what he knows or believes to be a true account of what Jesus said and did. If, as seems certain, he had at least Mark and Luke before him, then it is impossible, without impugning his honesty in the most serious manner, to doubt that he held that Jesus knew Himself to be the Son of God. This it is that accounts most reasonably for the well-known and fundamental features which distinguish his few but penetrating words about the Logos from the doctrine of Philo. He has not as an independent metaphysician discovered the defects of Philo, and then clothed the name of Jesus with the eternal attributes. Rather has he begun with a magnificent grasp of the idea of divine Sonship and read that back into the philosopher's idea of the Logos. His work is therefore as truly a criticism of the inadequacy of the Logos doctrine as Paul's exposition of the same idea of Sonship in the same philosophic atmosphere (Col 1 as above), which was intended to be at once a condemnation and transcendence of the wisdom of the Greeks.

3. **The Epistle to the Hebrews.**—The same facts appear in the Epistle to the Hebrews. It is true that in the great opening sentence the metaphysical terminology is more closely involved with the idea of the Son of God, as a definite and personal being, than appears to be the case in Jn $1^{1-5}$. In literary manner it is more akin to Paul's passage in Col $1^{15-19}$. But we must remember that John in later verses ($^{9-18}$) deliberately re-states in relation to Jesus the whole of the ideas which are set forth in vv.$^{1-8}$ in relation to the Logos. It is these later verses that are the true parallel to the passages in Colossians and Hebrews. In like manner, then, for the author of Hebrews, the Son of God is a supra-temporal personal being, who in His own nature realizes and reflects the attributes and shows the eternal powers of God. Yet not even the Fourth Gospel realizes with more clearness and vigour that it is the consciousness of the Son of God that appears in the consciousness, and receives the experience of mankind in the historical form, of Jesus. It was He who tasted death and is crowned with glory and honour ($2^{9}$), was made perfect through sufferings ($2^{10}$ $5^{9}$), He who, having partaken of flesh and blood ($2^{14}$), was tempted in His sufferings ($2^{18}$), and that most humanly ($4^{15}$), who struggled with the fact of death ($5^{7}$), and, sinless ($4^{15}$ $7^{26}$ $9^{14}$), offered Himself up to God ($7^{27}$ $9^{14. 26}$) in death. But this author more fully than any other, though not more emphatically, insists that after death, in the unseen world, the same conscious will, the same heart of love and mercy, carries on a high and momentous ministry on behalf of men, in a priesthood unchangeable ($7^{24}$ $13^{8}$; cf. chs. 8–10, *passim*).

iii. CONCLUSION.—It is in the interest not of apologetics but of actual history that we may in presence of these facts agree with J. Moffatt:

'We cannot explain primitive Christianity either as the transformation of the Jesus of history into the Christ of faith, or as the evolution of a Jesus-cult out of a current series of christological doctrines' (*Theology of the Gospels*, London, 1912, p. 174 n.).

But the same historical interest must prevent us from using, as wholly true to these facts, a certain form of expression which is quite popular in our day of psychological approach to every problem of history. For example, we may take the following from J. Weiss:

'The total impression is that early Christianity has used current, ready-made forms and conceptions in order to express in generally understood language, and yet in an absolute and supreme manner, the overwhelming impression made by the Person of Christ. Men sought out predicates wherewith to announce that the Ideal and the highest religious values are in Him' (*Christus*, p. 87).

The imperfection of such a summary appears in the succeeding paragraphs, where it appears that these ancient predicates, even that of Deity ('Gottheit'), are for us 'strange and unfamiliar' (Wernle says 'strange and bizarre'). Hence our task must be, it is urged, to go back to the Person of Jesus and win from Him for ourselves that original impression and clothe it in the predicates of our own day. This task, to which we are eloquently and earnestly summoned, must, however, take account of the nature of that original impression. The historical fact which criticism has not destroyed is this, that the 'impression' made by Jesus, which created the whole joy and energy of the Church, was not produced by the contemplation of the serene and lofty fellowship of one supreme religious genius with God. It was produced by the conscious will, the authoritative energy, the deliberate self-revelation of Jesus as Messiah, Son of God, Son of Man. He gave them the 'predicates' and the 'impression' *together*. No historian describes the historical facts accurately who ignores this, the essential element in the religion of the NT. The apostles individually and as a community viewed their experience as the reflexion of His will, and His titles as well as His commands are operations of that will. They did not labour to interpret a blind impression by predicates of their own discovery. He revealed Himself to them, and in doing that changed their conscious relations with God; and all their thought, all their predicates, started with His own words, the outflashings of His consciousness. It is for the

apologist and the denier of the deity of Christ to war over the issue as to whether the will to wear these titles was madness or miracle, delusion or divinity. But these are the pre-conditions, the facts which constitute the field of battle.

VI. *CHRISTOLOGY IN THE EARLY CHURCH.*—i. INTRODUCTORY.—**1. Logic and community life.**—The necessity for a Christology lies in the nature of all human social organizations. All groups that are formed for definite ends are compelled to work out, not only those ends, but the principles of organization and methods of pursuit. This must be done actually, whether it is done formally or informally. The history of every social group in the world, from a private club to a national government, includes the working out of the logic of its inherent principles. Moreover, the group history is always more logical than the development of the individual members of it, for in the individual the emotions play upon the course of the will, confuse the logical powers, and make the individual's life an imperfect reflexion of the inner logic of the principles which he professes to have adopted. But, for the group life, private emotions are cancelled in the clash of wills and in the course of controversy as to the meaning of the ends, the principles, and the methods which inhere in the constitution of the group. For this reason it is that the history of a group, of an institution, of a government, of a political party, of a church, is often severely logical. It is the reading off into active life of the rational implicates of those principles on which it is founded. This process of unfolding the logic of its adopted rules is aided in every institution by the challenge of the environment. For each organized group lives in a world of institutions, and its own principles come into collision or co-operation with theirs. Controversy arises, and that is, in all important and continuing cases, pushed further and further, until the full inner meaning of each interpretation is revealed. Acceptance and rejection of the institution and its ends, the loosening or confirming of conviction, the desertion of an ineffective or untrue principle, the deeper unfolding of the power of the true principles, even the gradual death of an institution, are the consequences of this criticism without and this controversy within.

**2. Christ inherent in the new community.**—The theology of the Church in its technical form and including all its departments and phases of history is the natural and inevitable result of this process. As far as Christology is concerned, it is the gradual unfolding of the central fact that Jesus Christ is from the first accepted by the Church as the incarnate Son of God, the redeemer of man by the Cross, the ruler of our experience by His Spirit. The institution that was organized on that basis must work out to the very end all the implications, the inner logic, of the conviction which gave it being and power. It would be impossible to relate here the particular stages and various adventures of the human spirit in this great undertaking. We must be content to give a mere outline of the logical process by which the Church, through all natural confusions of controversy, sought to define and defend its faith and worship of Christ. For that faith and worship of Christ created the Church. It separated, not without pain and surprise and alarm, the primary disciples from the Jewish Church. It attracted by its meaning and power individuals from all classes and races as the message of redemption through Him and of control by Him was carried from place to place. The Person of Jesus Christ as revealer of God and redeemer of man was the foundation of the new community. This principle brought it at once into conflict with the monotheism of the Jews and the polytheism of the Gentiles. Among cultured classes it was confronted by the Gnostics with their confident speculations about the deity and His invisible hierarchies of creative agencies, and by the practical Agnosticism of vast numbers for whom neither idolatry, nor Gnosticism, nor mystery-religions contained any solution of life's enigma. Collision with those forces was felt from the beginning, as the NT proves. But, as time went on, the warfare became more definite and more keen, especially as the number of Christian adherents increased and varieties of culture, of intellectual equipment, of moral and spiritual insight and intensity, took their place within the growing host of the baptized.

ii. THE FIRST STAGE IN CHRISTOLOGY.—During the sub-Apostolic period, and through that of the apologists down to nearly the close of the 2nd cent., Christological inquiry had hardly begun on the Christian basis. Such cruder phases as are known by the names of Ebionism and Docetism started from conceptions of God and the world which themselves were anti-Christian. Thus Ebionism, obscure in its history and teaching, while it affirmed Jesus as Messiah, shrank from seeing in Him the actual presence of God. Jewish prejudice against believing that God could come into such close relations with the material world as are implied in the birth and crucifixion of the Son of God held that view in abhorrence. The Spirit came upon Him at baptism and made Him the supreme teacher; the death was an inscrutable horror, but He would come again in power and glory to make all things new. Docetism, on the other hand, rose from or was adopted by various phases of Gnosticism. Even Justin Martyr bears witness that many Gnostics were in the Church and must be reckoned as Christians. But the basis of their thought lay in non-Christian speculations about the nature of God and His remoteness from all contact with the evil inherent in the material universe. The best examples of this are to be found in such a mixture of dogmatic speculation on the origins of God and the universe with reverence for Jesus, as a member of the supernatural forms of existence from which the history of our universe has arisen, as was attributed to Basilides towards the middle of the 2nd cent.; and in such a union of Christian faith with purely mythological accounts of creation and salvation as proceeded from the poetic mind of Valentinus a little later. From such sources, in the main, arose the Docetic view of the Incarnation, according to which the divine element in Christ was the only real and permanent element, and it assumed, in this way or that, the *appearance* of a man, but did not partake of actual flesh and blood. (Logically it was inevitable that the Ebionite and Docetic positions should appear as barely possible, as at least conceivable, explanations of Christ, the one denying the reality of the divine, the other denying the reality of the human nature in Him. Actually these views made in their original and cruder forms less disturbance among the general mass of Christians and in the minds of the greater Christian teachers than other interpretations of His person which appeared later.) Throughout this period of the Apostolic Fathers, and the Apologists, the apostolic positions were maintained, often in their own language of concrete and positive affirmation, often by means of carefully chosen equivalents for their words and phrases. Thus Clement of Rome speaks of 'Our Lord Jesus Christ, the sceptre of the majesty of God' (*Cor.* 16). In another passage (ch. 2, whether or not with Lightfoot and Harnack we read 'God' instead of 'Christ' as subject of the clause 'His sufferings were before your eyes'), the dependence upon Christ as at once revealer of

truth, redeemer from sin, and living Lord is vividly and passionately expressed. In the *Epistle of Barnabas* He is spoken of repeatedly as the Son of God and Lord of the World. As Maker of the Sun before which our eyes quail, how much more glorious must He be; His Incarnation was the veiling of His dazzling radiance. For Polycarp, in his Epistle, Christ's work as redeemer is the fascinating centre of thought. He is Lord and Saviour (chs. 1, 6), Son of God (ch. 12), and His name is associated with that of God as supreme object of faith (chs. 5, 12) and the fountain of mercy (ch. 1). Ignatius is more full and varied in his forms of expression. He uses the so-called Trinitarian formula but naming Christ first, 'in the Son and in the Father and in the Spirit,' or 'to Christ and to the Father and to the Spirit' (*ad. Magn.* xiii. 1). He speaks of Christ outright as 'our God' and 'my God,' asserts His pre-existence (*ib.* vii., *ad fin.*), and uses the striking mystical expression 'Who is his word (λόγος) proceeding forth from Silence' (Σιγή) (*ib.* viii.). Echoes of controversy with Docetism appear in his repeated use of the adverb ἀληθῶς (*ad Eph.* xvii. 2) when referring to the Incarnation and Death. But the double being of Christ is stated in terms which were possible only before the rise of the great discussions of His Person; *e.g.*, he says in one place:

'He is at once flesh and spirit, begotten and unbegotten, God come in the flesh, the real life, both from Mary and from God, at first passible and then impassible' (*ad Eph.* vii. 2; cf. xviii. 2, *ad Smyrn.* i. 1, iii. 1).

By these and other such writers (*e.g.*, *Epistle to Diognetus*) we are kept in the atmosphere of apostolic language. The Church is still in the glow of its first enthusiasm, eager in its missionary labours, absorbed in the joy of fellowship with God through the risen Christ, that conqueror of death and giver of the Spirit, and concerned with the continuous fight against heathen vices and the inculcation of the new law of love and kindness and meek loyalty of soul. They were building on the foundation without inquiry as to its material and mode of construction.

iii. THE SECOND STAGE IN CHRISTOLOGY.—1. **The rise of Greek Christology.**—A new race of thinkers entered into the life of the Church with Justin Martyr, the race of men who before or after their conversion were saturated with Greek culture and yet avoided the dogmatic wildness of the Gnostics, men like Origen, Clement of Alexandria, Gregory of Nyssa, and many others. But whether or not they took Justin's motto, 'Whatever is rightly said among all men belongs to us Christians,' they began the long and delicate task of determining what was 'rightly said' by tests found within the Christian system itself. Thus opened the next stage in the unfolding of the nature of Christ. Given the reality of the pre-existent Son or Logos and the reality of the man Jesus, the double being of Christ, the question arose as to what was meant by and how much was contained in those respective realities. At this point it is that a modern powerful school of thought has found the chief disaster of Christianity (see A. Ritschl, *Die Entstehung der altkathol. Kirche*[2], Bonn, 1859; A. Harnack, *Dogmengesch.*, Eng. tr., *Hist. of Dogma*, London, 1894–99; E. Hatch, *Influence of Gr. Ideas and Usages upon the Chr. Church* [*HL*, 1888], London, 1890). For such writers it appears evident that the inquiry into the divine nature of Christ and especially the use of the Logos idea, with the resulting minute discussions about the *modus* of the Incarnation, diverted faith from its true object and the Christian religion from its true and only source of inspiration. For them the gospel lies simply and directly in the experience of God's Fatherhood by the soul of Jesus and the practical teaching which flows from that (cf. W. Herrmann, *Der Verkehr des Christen mit Gott*[4], Stuttgart, 1903, Eng. tr., *Communion of the Christian with God*, London, 1906; A. Harnack, *Das Wesen des Christentums*[2], Leipzig, 1900, Eng. tr., *What is Christianity?*[2], London, 1904). The effort to treat His Person as a metaphysical and psychological problem led inevitably to the idea that salvation depends on the right solution of that problem, and so to the substitution of an orthodox creed for a historical and personal revelation of God as the true object of saving faith. A full discussion of this subject is out of place here, but, as the centre of the controversy has been the Person of the founder of Christianity, a few facts on the other side must be briefly stated. (1) From the beginning the Christian consciousness, as we have seen, has been determined in its form and content by a definite conception of Christ as superhuman Messiah and incarnate Son of God. This conception was not invented for Him, but given forth from His own consciousness and involved in His actual power and in the new consciousness of His Church in relation to God. (2) The results of thorough inquiry into the nature of His Person could have been avoided only by a universal consent not to investigate intellectually the ultimate facts of the religious life. (3) Given the right to think, the alleged disaster, attributed to gradual definition of orthodoxy, must be compared with the effects which would have been produced upon the religious consciousness *in that age* by the general acceptance of the opposite theories, if these were treated as essential to the existence of the Christian community, or if treated as of equal value to its life with any others, or even if treated as matters of indifference. History seems to prove that any intellectual definition of the Person of Christ, and of His Messianic function, if sincerely used, produces characteristic effects in the further spiritual and social life of the community which adopts it. There can be no doubt that the prevalence of the 'Liberal' picture of Jesus in our time has put its own colour upon wide circles of religious life. (4) The real and vital problem for the Church, in preserving its true relation to its divine founder, is as to the right use of its conclusions in any controversy about His Person. The ancient Church, especially under the power of the Emperor, turned its conclusions (δόγματα) into weapons of discipline wielded by a centralized authority. This the modern Church cannot do. It was at this point, and in this way, that disaster entered.

2. **The first phase: the divine nature of Christ.**—Assuming that in Christ the Son of God has appeared as a man, the problem arose as to what is meant by the Son of God or Logos. How is He related to God? This question was not forced by the metaphysical, but by a very practical, interest. For the worship of Christ was the life of the Church from the beginning, and it inevitably raised the retort from heathenism that Christians themselves had two or, counting the Spirit, three Gods. It was the effort to meet this condemnation that drove men to define how Christ, a man, could become an object of worship for avowed and sincere monotheists.

(*a*) *Monarchianism.*—The first answer came from those who are called Monarchians. They were of various kinds. Some evolved an easily refuted Unitarianism not unlike Ebionism. But those who made history took a higher road. Their chief representative was one Sabellius, who lived in the first half of the 3rd century. God in Himself was said to be without distinction (ἓν ὑποκείμενον), inscrutable, unknowable. As He acts outwards upon the universe, He assumes aspects (πρόσωπα) for which various names are needed. The three names

Father, Son, Spirit, are appropriate to describe Him as Creator of the universe, Redeemer (in Christ, from Birth to Ascension), and Life of the Church. But these names should be used only in relation to that phase of the divine action to which they exclusively refer. Much ingenuity was apparently used by Sabellius to emphasize and illustrate this inviolable unity of God. Thus He may be called *υἱοπάτωρ*, to abolish the idea that in Him any distinction exists, though we rightly name Him Father and Son, according to that aspect of His activity which we contemplate; and He is like the sun 'having three energies in one hypostasis,' as 'light-giver, heat and the very form of a circumference.' There was not much of distinctive statement in his writings, apparently, concerning the mode of the Incarnation. But the tendency of the school was inevitably towards Docetism, and Dorner says, 'No passage can be pointed out in which the Passion of Christ is made the subject of consideration' (*Person of Christ*, div. I. vol. ii. p. 167 f.). Monarchianism was not easily overcome. Through its emphasis upon the unity of God and the difficulty of defining the nature of the eternal distinctions within that unity, it tended to reappear in unexpected quarters. Various thinkers in our own day, especially those who are of the idealistic school in metaphysics, have been accused of succumbing to its subtle influence. Wherever the pantheistic view attracts, Monarchianism is at hand.

(*b*) *Arianism*.—At the opposite extreme from Monarchianism is the powerful movement known as Arianism. It represents in the 4th cent., and in many forms since, a reaction from the tendency to make Christ an abstract being, remote from human interest, and so to detract from the direct religious value of the human figure of Jesus. It involved, of course, a direct attack upon the contemporary theology. Monarchianism had endangered the reality of the revelation of God and made the very conception of Him vague and uncertain. Hence Arius insists strongly on what we moderns would call the Personality of God. He is the eternal, active, and rational Creator of all, for the Logos as *δύναμις* is immanent in Him. He became the Father in the creation of the Son, to whom He gave a share in that *δύναμις*. We cannot say that the Son was created in time, for He is the first of all creatures, and with Him time begins. But *ἦν ποτε ὅτε οὐκ ἦν*, 'there was when He was not'—in flat contradiction of Origen. Hence we must not ascribe to Him any attribute of deity itself. He is not the unbegotten as God is, nor is He a part of the unbegotten, nor did He arise from the essence of God. He is the first creature of the divine Will, only-begotten, fully divine (*πλήρης θεός*; cf. Jn 1[1]), and the medium through whom the Creator henceforth produced and ruled His universe. But the inherent and fatal Agnosticism of Arius is revealed in the repeated statement that even the Son does not directly know God. He is known under many conceptions (*ἐπίνοια*), indicating His great glory. And yet 'God is ineffable to His Son,' for it is plain that it is impossible for that which hath a beginning to conceive how the *un*begun is, or to grasp the idea. The Son became incarnate in Jesus Christ in the simple and obvious sense of entering into a human body. There was no need for another human soul in that body, save the Son of God Himself. He is worthy to be worshipped both as the medium of Creation and as the glorified Christ. On the surface this view makes a fair show. It seems to avoid some dangers of Monarchianism, with its tendency to Patripassianism on the one hand and Pantheism on the other, and yet in its deepest principle Arianism is Monarchian. Over against the dominant Origenistic theology it escapes the difficult idea of 'eternal generation' and the tendency to make the earthly life of Jesus an unreal thing for imagination and faith. But Arianism as a religion was too close to heathenism and too far from the centre of Christian faith to live. In reducing mysteries it lost the supreme realities of revelation and redemption, for its God is too remote and abstract to be known or to appear in time. And, worse still, it made a distinct approximation to idolatry in its arguments for the worship of Christ as a creature whom the divine complacency summoned to divine honours. Its solution of the problem was too easy. The Christian view of Christ had always implied a closer and more mysterious relation of God Himself to the cradle and the cross. The awe and the joy of faith in Christ arose from the presence of God in Him and in His deeds of redemption. The Arian Christ, mighty as He could be depicted, was less than the Christ who was the personal manifestation of God, and in whose death the righteousness and love of God Himself were directly realized, and made effective in the actual history of man.

(*c*) *The Nicene Christology*.—The third possibility regarding the relation of the Son of God to the Father was that which won the day at Nicæa (A.D. 325). Constantine took the portentous step of summoning the Council, and, for spiritual religion, the baneful step of using the fleshly arm to enforce its conclusions. It must be remembered that these acts of Constantine introduced a new principle into the organized life of the Church, of so potent a character that it took long centuries to unfold its inner logic. Trust in the State and trust in the ruling Spirit of Christ are principles whose reconciliation is not yet achieved either at Rome or at Berlin. More than half a century of Arian strife and shameful confusions of statecraft stretched out before the unforeseeing Church after Nicæa. But in the conclave itself there were men of profound Christian conviction and powerful intellect who saw that in this controversy the apostolic faith itself was at stake, and the defensive creed which they formulated became a living force in the Church from that day to this.

(*a*) The Nicene theology, as such, really began with Origen († A.D. 254). Against Monarchianism he affirmed the Personality of God, teaching that He is the intelligent Spirit from whom all intelligences, and, for the use of tainted souls, the material universe, have arisen. He even decides that God is above substance, a position which must be considered by those who imagine that the category of substance was supreme in ancient theology (cf. W. Temple, in *Foundations*, London, 1912, p. 211 ff.). Origen platonizes very thoroughly, but seeks to preserve this conception of the living intelligent Will of God as the supreme source of all. And he lifts his conception high above Plato and Philo by insisting always on the ethical principle that this eternal Will is a Will of love. It is love in God that is the fountainhead of the created universe of souls. Further, the Son of God, who is also conceived of as a personal being, is derived from the Father. But, afraid of heathenism on the one hand, as of Monarchianism on the other, he propounds the great doctrine—*ἀεὶ γεννᾷ ὁ πατὴρ τὸν υἱόν*. The Son is indeed subordinate to the Father, but not as a creature, for this 'begetting' is a process in the divine nature independent of time, an act of the eternal Will—*ἐκ τοῦ θελήματος τοῦ πατρός*. The distinction of Father and Son is not that of separate individuals, for they partake of one essential being. And yet the Son is not an emanation of the Gnostic type. How then does He stand related to the Father? It is here that the idea of the Logos aids the imagination (well illustrated in Athan. *Orat.* iv. 1-5). For we can apprehend the unity of Logos

with the pure, personal Spirit, of which it is the self-expression, better than the unity of a Son with a Father, while we can apprehend the distinct *hypostasis* of each more easily through the latter terms than through the more abstract. Each set of terms is used to describe now the unity and now the difference, but always the eternal reality, of God the Father and the Son (on the danger of deriving the Son from the Will, and not from the essence, of the Father, see Athan. *de Syn.* 35 f.).

(β) In this substance of it the theology of Origen became that of the Nicene Creed. When the Arians and many even of the sincerely orthodox desired to be content with the assertion that the Son is of 'like substance' (ὁμοιούσιος), the course of debate disclosed the ambiguity of a word which contented Athanasius and Arius alike as the crucial point of the whole problem. When the orthodox pressed their understanding of the word as implying an eternal and unbroken inherence of the Son in the essence (οὐσία) of the Godhead, the Arians, it is said through Eusebius of Nicomedia, reproached them with teaching the doctrine of ὁμοουσία, or identity of being, which, though held by Origen, had been hitherto associated mainly with Monarchianism and treated therefore as dangerous by both parties. That very word, however, from that hour, and inevitably, became the touchstone of the difference between the parties and was embodied in the Creed. The Son is 'from the essence' (οὐσία) of the Father, and hence 'of the same substance.' But the term was admitted even by Athanasius unwillingly and under stress of the controversy; and, indeed, it was afterwards used by him sparingly, except when it was the direct subject of exposition and defence. He defended its use in part by showing that the Arians had used many un-Biblical terms to state their own positions. The fear of Monarchianism which it had suggested to many minds was allayed by the fact that the approach to the term was not made from the speculative, but from the religious, side. The whole discussion, as conducted by Athanasius, was concerned with Jesus Christ, the historical and personal being, whose permanent reality was assumed as essential to the very life of faith. To affirm of such a being the ὁμοουσία with God could not abolish the difference between the Father and the Son, while it secured their eternal and essential unity. It is not an outside matter of creation or adoption, but (so to speak) an organic relation inside that nature. The Father is no more God without the Son than the Son is God without the Father (see Gwatkin, *Studies of Arianism*$^2$).

It is impossible to ignore the fact that both here and in later discussions of the Incarnation itself the category of substance, or rather 'essence' (οὐσία), had a powerful influence upon the course of thought. But two things must be observed in weighing the significance of that fact. In the first place, a word like 'substance' carried a varied content for the imagination and speculative thought of the ancient as well as the modern world. To pin it down to the idea of matter, or accuse them all of being ultimately materialists, is too gross a misrepresentation, though it is so common. To say even that they set it above the category of personality is not true to the facts. For, in the second place, the very discussions with which the Church was concerned drove its great minds like Origen, Athanasius, Gregory of Nyssa, and Apollinaris to be concerned with the nature of spiritual beings, and to face, not the impersonal, but the personal, as the supreme element in man and God. When Gregory of Nyssa deals with human nature he can be seen struggling to say that the essence of man, though distributed throughout his body, is not something 'spatial,' as we would so naturally put it. And, when he would state the difference between the divine and the human nature, he finds it to reside ultimately not in a difference of substance, but in this, that God is the Creator and man wholly dependent on Him (*On the Making of Man*, xvi. 12). There we are in the region of volition and ethics, and religious insight. The crass view of substance is subordinate to a higher view of spiritual nature. And we have already seen that for Origen the supreme facts in the being of God are will, intelligence, and love. The reluctance with which Athanasius and others engaged in the discussions which involved the use of οὐσία, ὑπόστασις, etc., is a witness to the fact that they were fully aware of the limitations of the human mind when applied to the mystery of God's nature. These terms were used in the Nicene Creed (in the 'Anathema') only that the dogmas of Arianism and Monarchianism might be denied, and that the substance of the Christian faith, which rests in the fact that God was in Christ and that Christ is 'eternally one with God,' 'might not perish from the earth.'

**3. Second phase: the humanity of Christ.**—The official victory of Trinitarianism, the affirmation of the proper deity of Christ, led naturally to the raising of the next problem, viz. the question of His humanity. The supreme emphasis of orthodoxy on the deity of Christ seemed to endanger the reality of His appearance in the flesh. Even in NT times this tendency was felt (cf. 1 Jn $1^{1}$ $2^{1-3}$, He $2^{9-18}$), and the reproach of Docetism has been uttered against many writers in the 2nd and 3rd centuries who were yet counted orthodox. Indeed, Harnack goes so far as to say that down to the beginning of the 4th cent. 'no single outstanding church teacher really accepted the humanity in a perfectly unqualified way' (*Hist. of Dogma*, iv. 129). Origen used his daring genius on the problem. Believing that all souls of men have pre-existence, and become incarnate because of evil taint, he held that the one unsullied soul became united with the divine Logos and then by an act of will, and love, became incarnate as the soul of Jesus. This theory did not deeply influence the history of the subject, though Arius owes something to it. It was Apollinaris who first dealt with it in a more sober and suggestive manner. That he was true to the doctrine of redemption is evident from such words as:

'He is both God and man: if Christ is only man he did not save the world, and if only God, he did not save through suffering. If Christ was only man, or if only God, he was not a mediator between man and God.'

But Apollinaris was equally clear that,

'if a perfect God were united with a perfect man, there would be two, one by nature Son of God, and the other by adoption' (Athanasius, *c. Apoll.* i. 2).

He solved the problem partly by falling back on the Aristotelian view of man's nature as tripartite and buttressing that with 1 Th $5^{23}$ ('May your spirit, soul, and body be preserved entire,' etc.). He finds the essential features of human nature in distinction from God to be body and soul, while in mind or spirit (νοῦς, ψυχὴ νοερά, πνεῦμα) man is of one type with the divine Logos. Hence in Jesus Christ the union of the two natures must be found in this, that the Logos became the νοῦς (or πνεῦμα) of the man Jesus by becoming united with the body and soul in the womb of His mother. Thus we have a mind in Jesus 'unaffected by psychical and fleshly experiences, and controlling the flesh and fleshly motives in a divine fashion, sinless, therefore, and not subject to death, but conquering death' (R. Seeberg, *Dogmengeschichte*, i. 199). Apollinaris appealed to the Scriptures, of course, as at Jn $1^{14}$, Ro $8^{3}$, to show that they do not speak of His becoming a man, but 'becoming flesh.' He weakened his position by his free admission that his theory presented a new kind of being, something neither God

nor man; and his opponents have ever since made the most of that concession. The hostile arguments were based on the idea that this affirmed a mutilated humanity, and thus left it unredeemed at its highest point. For, while Apollinaris (Greg. Nyss. *adv. Apoll.* li.) insisted that 'the death of man does not abolish death,' the opponents answered that the death of the divine Logos (if that were possible) would not redeem the νοῦς of man. What was required for redemption was a redeeming manhood in all the content of that conception, that body might redeem body, soul redeem soul, and mind redeem mind. What was not assumed was not redeemed. It was in vain that Apollinaris urged his two strongest positions, that only the divine can redeem the human, and that, since the νοῦς is the seat of personality, to conceive of Christ as possessed of all these human elements is to conceive of Him as a true human individual, and make the Incarnation inconceivable. He was not himself released from the realistic (some would say, magical) view of redemption, and could not rebut the strong argument made against him on that basis. The very conception of personality which his own speculations were helping to clarify was still so far confused with that of substance that his vision of the incarnate was held in alien bonds. That in God there is a human element; that the divine Logos and the human mind are of a type so that the former can act for or as the latter; that the seat of personality is here; that it is fatal to faith and reason alike to see in the incarnate Christ two distinct personalities with an indefinite form of unity—these are positions of great power, which account for the fact that 'Apollinarism' reappears persistently in later ages, and in our day is more wide-spread in principle than is often imagined. But he was himself hindered, by a meagre psychology and by the remainder in his mind of the tendency to define human nature in mutually exclusive 'parts,' from doing full justice to his primary assumption. Hence Apollinarism was explicitly condemned in the first canon of the Council of Constantinople (A.D. 381), at which the Nicene Creed was revised, developed, and reaffirmed. In the Decree of Chalcedon (A.D. 451) elaborate care was taken to rule it out completely. Christ is 'at once God truly and man truly of a reasonable soul and body' (ἐκ ψυχῆς λογικῆς καὶ σώματος); He is 'of the same substance (ὁμοούσιος) with us according to his manhood.' The conclusion of the Church was therefore officially announced in the doctrine that 'perfect manhood,' in the sense of all the parts of an individual man, must be ascribed to Jesus Christ.

iv. THE THIRD STAGE IN CHRISTOLOGY.—The third stage in the development of Christology was now reached. With its insistence upon the full deity of the Logos (Son of God) and the full humanity of Jesus, the Church was driven to consider more deeply the mode of the union of the divine and human in one life. The matter had not been ignored indeed. Origen, as we have seen, confronted the problem from the speculative side; Athanasius had dealt with it in close adherence to Scripture. The latter held that the Logos in assuming human nature did not merely unite Himself with an individual man, but became the true subject of the human life of Jesus. At the same time He retained His functions as Lord of the universe. He did, indeed, as man experience growth (Lk 2), and even confessed ignorance (Mk 13), but in such aspects of His incarnate life the Logos restrained His powers. This double consciousness is the very mystery of the Incarnation. For our sakes the same subject now shows His divine glory and now veils it, in the limits of a man's mind and body. But the chief difficulty with this position is the uncertainty, the apparent discontinuity, of the subject in the self-expressions of the incarnate state. The doctrine of a continuous self-limitation was not yet attained. The Cappadocian theologians likewise, with their intense hostility to Apollinarism, while holding the unity of the Person, yet insisted very strongly also that each 'nature' was perfect; the union was effected by an indescribable 'commingling.' Apollinaris had, however, raised the question to new distinctness and importance, and these uncertain views were subjected to fresh and closer scrutiny.

(*a*) *First phase: Nestorianism.*—On the one hand arose the so-called Nestorians, who were prepared for by the famous school of Antioch among whom the name of Theodore of Mopsuestia stood out as a brilliant expounder of the Scriptures. With a keen sense of the historical, he approached the problem as one who was filled with the reality and power of the life of Jesus. But he was also a vigorous defender of the Nicene Creed and as vigorous an opponent of the Apollinarian Christology, and therefore faced the problem of the *nexus* between a complete divine nature and a complete human nature. This he found in the Will of God the Word, who, Himself begotten from the Father, united the man Jesus Christ with Himself. Hence Christ is rightly called 'Son,' because beyond all men He possessed the adoption of a Son through that union (Com. on Gal 4[5]). But it was Nestorius who carried this doctrine to its full issues in the controversy which led up through the third ecumenical Council at Ephesus (A.D. 431) to the fourth Council at Chalcedon (A.D. 451). Rejecting the use of the term θεοτόκος ('Mother of God') as applied to Mary the Virgin (which was defended with great energy by Cyril of Alexandria), he also, like Theodore, set the union of the human nature of Jesus Christ with the Logos in the region of will. It was the grace of God that bound this sinless man in an ineffable oneness with Himself as Logos. The general term συνάφεια ('moral union') was used as over against the ἕνωσις φυσική ('real union') with which Cyril of Alexandria sought to express the higher view. In a series of mutual 'anathematisms' these two protagonists defined their hostile positions, which lay in a region that philosophy was only beginning to explore. Nestorius insisted that, as Jesus possessed a 'rational soul,' He was a complete human individual, while Cyril maintained the reality of the 'rational soul' but insisted that 'the Word having personally united to himself flesh animated by a rational soul,' the result was a true union in 'one Christ and one Son.' Cyril, that is to say, maintained that the Word did not unite Himself with a human individual, but united the two natures in one (εἷς). For the result, for the basis of their oneness, he could find no technical term.

Φύσις (*natura*) and ὑπόστασις (*substantia*, 'substance') were still applied as a rule to the total content of the human and divine elements in their respective and distinct reality, and Cyril's use of πρόσωπον in the so-called Creed of Union (A.D. 433) is not as yet distinct enough to define their basis of unity. But this school came near Docetism in maintaining that the Logos *appeared*, for our sakes, to be ignorant, weary, etc., but that these cannot be ascribed as real experiences to the Logos incarnate. Nevertheless, Cyril and his party, in spite of their own difficulties of construction, made it clear that the Nestorian position excluded a real Incarnation. A union which consisted only in complete sympathy, in co-operant wills, in a moral harmony, between two natures which are conceived of as distinct and complete must always appear incidental because not organic, insecure because not grounded in an objective and indissoluble fact. On the other hand, if Cyril, even in

his carefully drawn anathematisms, failed, it is because in his fear of Apollinarism (of which, however, he was accused) he shrank from taking the full consequences of making the Logos the personal basis of the Incarnate One. Striving to maintain the completeness of the humanity for soteriological reasons—and this with great earnestness and insight—he yet failed to define, so as to satisfy the Nestorians, how the human can remain human if it has for its basis, not indeed the divine 'nature,' but the divine Logos. Nestorius had a curious trick in his anathematisms of describing his opponents' language about the incarnate Christ, in His unity, as if they applied it to the one 'nature' or the other as Nestorius conceived of these; *e.g.*, in the eleventh he accuses them of maintaining 'that the flesh which is united with God the Word is by the power of its own nature life-giving'—an incredible misrepresentation, and possible only because Nestorius was so possessed of his own vision of the facts that he could not read the words of others as they meant them. He could not see their vision.

(*b*) *Second phase: Eutychianism.*—From this strong insistence by the orthodox party upon the Logos as the true basis of the one Christ logical experimentation pursued its natural course. If Nestorianism failed when starting from the integrity of the human, as though that were primary in their interest, how would it be if the start were made from the integrity of the divine in the Incarnate One? Eutyches dared this task and fell over the ever-narrowing edge of definitions into another 'heresy.' For him it was clear that the Incarnate One had but one nature, as indeed Cyril insisted. But Eutyches urged that in that case the body itself must have been changed in its very substance by union with deity. The humanity is absorbed into the divinity (cf. Origen's approach to this view, *c. Cels.* iii. 4). This was condemned, of course, as docetic in its ultimate effect, and as 'confusing' (σύγχυσις) the natures.

(*c*) *The Decree of Chalcedon.*—At Chalcedon the matter was brought to a conclusion. Subsequent councils dealing with further developments of the matter (Monophysitism and Monothelitism) could only insist on rigid maintenance of the Decree of Chalcedon. Theological speculation had passed beyond the attainments of metaphysics and psychology in that age, and could only be restrained by repeating the formulæ which marked the utmost boundary of knowledge and safe reasoning. This famous Decree, which is generally held to be the high-water mark of ancient Christology, has in recent times become the object of serious criticism. Theologians pour contempt upon it as a mere assertion of logical contradictions. Historians (Harnack especially, who does less than justice to Cyril) strive to prove that its terms were a miserable compromise which, to satisfy the ambitions of the West (led by Pope Leo, author of the famous letter to Flavian known as 'Leo's Tome,' on which the Decree was founded), obscured the real issues by asserting the 'two natures in one person,' and made impossible the true development of the Athanasian Christology, which sought to assert that the result of the Incarnation was 'the One incarnate nature of the Logos.' In spite of Harnack's vehement pages, the view will probably continue to prevail that the Decree actually saved the fundamental Athanasian position. Moreover, a protest should be entered against the frequent yet absurd suggestion that the 'two-nature hypothesis' first arose at or just before Chalcedon. The very idea of an incarnation involves that of two natures somehow made into one life. The idea dates back to the NT, to the combination of 'Son of God' and 'Son of Man,' of 'existing in the form of God' and 'found in fashion as a man.' And the entire course of Christological speculation presupposed this hypothesis from the beginning. There is, however, much difference of opinion as to the real effect of the Decree at the critical point. The following are its main points for our purpose: (1) each nature, the humanity and the Godhead of 'our Lord Jesus Christ,' is 'perfect'; (2) He is consubstantial (ὁμοούσιος) with the Father and consubstantial 'with us'; (3) the 'property' (ἰδιότης = *proprietas*) of each nature is retained and concurs in one person (πρόσωπον = *persona*) and one substance (ὑπόστασις = *substantia*); (4) the famous four adverbs (without confusion, change, division, separation) condemn Eutychianism, Apollinarism, and Nestorianism. The main difficulty about the interpretation arises from the fact that the crucial clause starts with the different natures, defining each in its distinctness and completeness, and then speaks indefinitely of 'the property of each nature' as 'being preserved and concurring in one person and substance.' This is not the way of Scripture or of the Apologists or of Greek theology as a whole, which was to view the Incarnation steadily downwards, as it were, from the side of the Glory of God as a living and personal act of condescension. Hence it has led some (Dorner especially) to maintain that, according to the Decree, the 'Person or substance' is the resultant of the union of the two natures, and *not* that the Person or substance of the Son of God, having already a divine nature as the instrument of action, assumed also a human nature as a parallel and distinct means of action. Harnack seems to agree with this:

> 'In Leo's view the "Person" is no longer entirely the one subject with two "properties," but the union of two hypostatic natures' (*Hist. of Dogma*, iv. 205 f.).

But this interpretation is not borne out by Leo's Tome itself. In the very sentence of that famous letter from which this clause in the Decree is taken, the pope says: 'Lowliness was assumed by majesty,' etc. Leo even uses the Apollinaristic phrase 'which (the flesh) he (Logos) animated with the Spirit of rational life.' And again he speaks of the unity of Person in the two natures, and of the one Person of God and man.

If that clause, which has curiously absorbed attention to its method, as over against the method of earlier clauses, is read from the point of view which tends to proceed, as it were, from differences to their unity, Dorner's interpretation may result; but, if read from another point of view which moves from unity to difference, and in the light of the earlier clauses, it must be held that the *form* of the statement (in that clause), being dictated by current controversies, does not represent truly the real inner meaning of the Decree as a whole. For after all it must be not the two concurrent natures but the Logos with whom the Incarnation begins, and who, as eternal ὑπόστασις, adds to His possession of the Godhead, or divine 'nature,' a manhood or human 'nature.' There is no use of proving, as some have done, that the technical terms (esp. φύσις and ὑπόστασις) mean elsewhere something which makes nonsense of them as used here. These ancient terms were developed in these very controversies, and their occurrence here actually marks a new stage in their history. (1) A new difference is drawn between φύσις and πρόσωπον (and ὑπόστασις). (2) The last two terms are not merely interchangeable. The one (πρόσωπον) is beginning to assume the meaning of personality, and the other (ὑπόστασις) preserves the idea of indefeasible substantiality. But the imperfections of the Decree are found in the fact that it did not end controversy. Its outward form, especially in the crucial clause beginning with and insisting on the distinct and complete natures, gave power and

victory to orthodoxy against the persistent teachers of Monophysitism and Monothelitism; but its inner and real meaning, that the Logos became the Ego of the human nature, encouraged persistent speculation as to how much is included in a conscious Ego (now=πρόσωπον), and in what sense human nature retains all its 'parts,' when it is said to be assumed by the Son of God. It is that question which has dominated modern Christology.

It is clear from this brief survey that Christological speculation in the early Church tended towards mere intellectualism, that the problems grew more and more remote from the field of experience, and that the great living figure of Jesus Christ, the Founder and Lord of Christianity, was in danger of being evaporated in technicalities and metaphysical abstractions. And, indeed, it is almost an offence to faith to follow the details of some of these controversies. All the more necessary is it, in trying to grasp the permanent significance of Jesus Christ for the Christian religion, to recall the fact that in the very midst of such controversies the Church was carrying on against tremendous difficulties its missionary, philanthropic, and sanctifying work. Many of the greatest Christological theologians were men of supreme devotion to His Person, profound believers in the redemption which He had brought, men of prayer and of saintly life. The ardour of their love for Him, and their profound grasp upon the idea that in Him the destiny of the individual and the race is determined, were the main forces which sustained their undying and even passionate engagement in these prolonged and laborious discussions of the mystery of His divine Person. Nevertheless, nothing is more remarkable than the fact that thus early, and still more in the Middle Ages, a split took place between the intellectual interest in the primary Christian facts and their spiritual, practical valuation and use by pious souls.

VII. *Christology in the modern Church.*—i. Introductory: the modern mind.—1. **The reformation of religion.**—The history of Christology in modern times is bound up exclusively with the development of Protestantism; and here mere ecclesiasticism has played but a minor part. The broken condition of the Protestant communions has prevented anything like the calling of General Councils, the action of individual denominations having authority only for themselves. Hence such terms as 'heresiarch' are applied only by a certain limited class of historians to certain thinkers of the ancient Church. It is universally thought to be inappropriate under modern circumstances to use such a term of any modern theologian. Modern Christology is more intimately connected with the modern religious and intellectual life as a whole than with that of the ancient world, for in the civilization which we call Græco-Roman it appeared as in many respects an exotic. But modern civilization is deeply moulded by Christian principles, and its defects are to be corrected only by a fuller measure of the Christian spirit. Indeed, some of the ideas which have seemed most hostile to the Faith have been nourished and ultimately sustained by her own supreme teachings. With the Reformation came a new conception of the Christian life. Martin Luther was not so much the discoverer as the chief exemplar of this phase of religious experience. His power, and indeed that of the whole movement, is due not only to the nature of his experience, but to the fact that it can prove itself identical in its fundamental elements with that of the primitive Church as revealed in the NT. Luther discovered that the grace of God is a living force which has entered history in Christ and which lays hold of the individual directly without any essential human mediation save that of the preached word, the gospel. On the human side it is penitence and faith that apprehend the grace of God and are the means through which that grace apprehends the human soul. Luther and the other great reformers maintained that they were loyal to the Councils of the early Church. The Decree of Chalcedon stood forth for them all as the supreme Christological utterance of the Church. But this loyalty to the Councils was conditioned by the idea that the Councils simply explained Scripture, and were authoritative only in so far as Scripture supported them. The reformers completely disowned the notion that the official Church had power to develop and enforce an authoritative theology. The central fact for the reformers is that the Christian faith is a living experience, made possible by the full revelation of God in the historic Christ. Apart from Him there is no saving knowledge of God. Through varying phases this characteristic evangelical view of Christianity has persisted in the reformed Churches. In periods when emphasis was placed upon doctrinal definition rather than upon personal experience, and a new intellectual formalism arose instead of the appeal to conscience, the Protestant communions have felt an arrest upon their spiritual life and their world influence. Every fresh spiritual movement—such as that known in Germany as the Pietist movement, or the Puritan movement in England, or the Moravian and Wesleyan movements both in Europe and in America—has always arisen from a fresh insight into the fundamental nature of 'reformed' and apostolic Christianity. In the 19th cent. the extraordinary expansion of Christianity through the foreign missionary movement has borne an ampler and more impressive witness to the reality and power of the Christian faith as thus re-apprehended and proclaimed. It must be observed that in Christianity thus defined and thus operative the Person of Christ always stands forth as unique, supreme, divine, redemptive, and directive. 'Ubi Christus, ibi Ecclesia.' And no less true is it that, where Christ is, the presence of the living, eternal God is immediately realized. The historic founder is believed, and His followers insist that He is irresistibly proved, to be the invisible, spiritual, divine power or will which is directing man to his true goal.

2. **Modern thought.**—(*a*) *The trend of philosophy.*—Europe experienced an amazing revival of intellectual life in the same general period in which the rejuvenescence of Christianity took place. In part this renaissance of the mind was due to fresh contact with the literature of the ancients, but it had its roots also in the long labours and deep intellectual influences of the Christian Church. For example, even in its darkest days that Church bore in upon the mind of Europe the conception that there is but one living God, who has created the entire universe for ends worthy of His own character. This great conception consecrated nature and abolished the crude ancient dualism. Modern science has arisen from, and still depends upon, certain principles which Christianity first enforced upon the human mind, especially those of the unity and order and sanctity of the natural universe. Hence the investigation of nature must now be considered as a religious act, though the officials of the Church learned this with difficulty and dismay. Modern philosophy began, it is agreed, with Descartes. From his day onwards there has been a deepening investigation of the rich and complicated process of knowledge, and into the nature of the human consciousness, which has come to be conceived of as a living organism. Mankind began by thinking of the outer physical world as

the basis of all reality. Only gradually has this conception been transcended. But now for all heirs of Christian civilization the universe of consciousness and conscious beings has come into view as the true source and seat of reality. Through this mighty process of change certain facts have emerged which must be briefly stated. And in stating them we may assume that for Christian thought the purely mechanistic view of the universe must be held as false. First we must note the emergence of personality as the ideal centre of consciousness. In personality the conscious intelligent will is recognized as the supreme fact. As yet the human mind can conceive of nothing higher which can be named as the ultimate form of reality. If it is ultimate, it must be also fontal, and every other form of the actual must proceed from and depend upon it. Next, there is the emergence of the idea of experience as the most general term which can be applied to all that which exists for personality. The material universe seems to be undergoing, not merely through philosophical reasoning, but through scientific investigation, a complete transformation, in virtue of which all its elements are seen to be symbols and instruments of a spiritual universe. Hence ancient words like 'nature,' 'substance,' 'body,' 'essence,' even 'humanity' and 'parts of humanity,' require to be thought through afresh. Much of what they meant in the Christological controversies of the early Church has simply fallen away from them for the modern mind.

(*b*) *The spirit of science.*—Further, we must note the emergence of the modern scientific spirit. It has learned through long and painful processes of discipline that truth concerning the natural universe and the history of man can be discovered only by patient and disinterested investigation of fact. A new conscience has arisen in reference to the acquirement of knowledge and the interpretation of life. For, if nature and history be together a divine process, the seeker after truth must seek it there; and to find it there he must wait upon nature and history with a spirit of utter sincerity and patience, and with the calmness of trust in his methods of investigation and their sure result. Through the labours of science and philosophy combined there has emerged the great conception of evolution. The very idea is itself undergoing a process of development. We have seen it in two generations pass from the cruder forms promulgated in the name of science by such men as Spencer and Darwin to the more spiritual conceptions which begin to guide the thought of our day. But common to them all is the idea that there is a unity in the history of nature and of men, and that this vast unified process must be read in terms of reason and of will.

(*c*) *Certain assumptions of Christian thought.*—In the main, it may be said without much risk that the following constitute some of the fundamental elements of prevalent modern thought. (α) What reason can explain is rational: what is rational must be derived from reason. (β) What exists in relation to consciousness exists for a conscious being or beings; and what exists for conscious beings, having its *raison d'être* there, must be derived from a conscious source. (γ) If there is a universe of life and of conscious beings, they may or must exist in various grades as to structure, power, and meaning. (δ) If there is a universe of rational, conscious beings, they must be capable of mutual intercourse, and such intercourse may depend upon the existence of media through which they become aware of and act upon each other. (ε) These media of intercommunication constitute the world or universe of nature, which must be also conceived of as an ultimately unified system of facts. The trend of philosophy in all its chief forms to-day is controlled by the varying influences allowed by different classes of thinkers to these and such-like fundamental conceptions. With the gradual extinction of mere materialism these have emerged as in some way the common property of the main groups of thinkers. Even natural science, through its physics, biology, and psychology, is gradually approaching a statement of its actual discoveries and provisional inferences regarding material substance, life, and mind, which is bringing it into close correspondence with these general assumptions of philosophy. Over the whole field of knowledge and its processes, of philosophy and its assumptions, one can see the irresistible pressure of the fundamental and characteristic Christian doctrines concerning God as Creator and Lord of All, concerning man as primarily a moral and spiritual being, concerning the spiritual universe as at once the source, explanation, and end of human history. For the Christian Church the conviction remains that for these ideas, however reason may strive to support and illumine and systematize them, the one indefeasible guarantee of their truth, in the field of objective reality, is to be found in the historic consciousness and the permanent spiritual presence and power of Jesus Christ.

As Troeltsch has put the matter: '. . . the image of Jesus will always remain inseparable from all efficacious Christian belief in God. A Christian mysticism . . . will always remain the central point of true and genuine Christianity as long as it exists. Without this, the personalistic belief in God would itself pine away and die' (*Report of Fifth International Congress of Free Christianity*, London, 1910, p. 238 f.).

Modern Christology, with a longer history of the Church behind it and a wider if not a deeper religious experience to correct or confirm it, is the inevitable effort of the modern Christian mind to verify afresh for itself the conception of the founder of Christianity as the personal self-revelation of God, the personal interpreter of human nature, the personal director of human destiny.

ii. FIRST PHASE: ABSOLUTE IDEALISM.—Christology received its greatest modern developments in the 19th cent., and most of these arose in the midst of the unparalleled intellectual life of the German universities. There philosophy and historical research combined to produce a complete re-casting of the Christian system of doctrine by concentrating attention upon two supreme subjects—the idea of God in relation to the universe, and the place of Christ in history. The giants of philosophy from Kant to Hegel endeavoured to do justice to both features of the Christian religion. Out of that period, whether by direct derivation or by reaction against the prevalent philosophies, arose three main views of Christianity, and hence three main forms of Christology.

1. **Hegel's Christology.**—In the first place Absolute Idealism must be reckoned with. It has made the modern mind familiar with the theory that God is an immanent principle, generating the history of the entire universe. But, as Hegel works the subject out on his vast canvas, God must not be conceived of as above or before the process. He is the Idea realizing itself in the two successive forms of nature (object) and man (subject, spirit), and coming to consciousness only in the latter. God became personal in humanity. At some point in human history the Spirit which has struggled to free itself from the bonds of nature, and to rest in a perfected self-consciousness, must come to the full realization of that climax. That full incarnation of the Idea in the form of conscious Spirit was achieved in the Person of Christ, who is the supreme appearance 'in the sensuous form appropriate to history' of the unity of man with God. But in Christ the Spirit appeared in fullness, that from Him the whole of humanity might be set free

and made conscious of itself as the dwelling-place of the divine. In spite of its vivid insight into some deeper meanings of Christianity, Hegelianism remains abstract, elusive. Its conception of God, as it has been said, appears as an ingenious apotheosis of Hegel's own dialectic. Again, in spite of its emphasis on the idea of the Trinity and many illuminating expositions of it, it gives no real grip of the facts to his Christology. For his Christ is not true to the picture in the Gospels nor to the faith of the Church. His early studies in the Life of Christ (see Günther, *Lehre von der Person Christi*, p. 97 ff.) had not brought Hegel close to the fact that Jesus knew Himself distinctively as Son of God, and that God is a Being with whom men must deal in the lofty regions of personal relationship. Sin is for him a stage in the process of man's movement towards the divine self-consciousness; and grace therefore is not the mercy that forgives, but the sense of unity with the immanent God achieved in Christ.

**2. Its influence.**—Nevertheless the marvellous energy of Hegel's expositions and the vast sweep of his system, its sublime confidence in the power of reason to unlock the ultimate secrets of being, and its complete subordination of the physical to the meanings of the spiritual universe have had a permanent and deep effect upon the whole course of modern theology. The exaggerated emphasis upon the doctrine of the divine immanence in more recent popular Christology in England and America is due to him. That theological phase sometimes called the 'New Theology' has appealed to natural science as teaching the unity of all things in its doctrine of evolution, and to idealism as teaching the indwelling of God in the entire process of time. From these two positions it has drawn its doctrine that in all men the divine is in some measure inherent, while in Christ manhood has been filled with the divine to its utmost capacity. These are, sometimes distant and unconscious, inheritances from Hegel. In Germany the Hegelian influence showed itself in many ways. It gave Baur his method of conceiving the development of Christian dogma amidst the conflicts of the early Church. For a time it seemed to give Strauss a resting-place for his faith after the destructive work done upon the story of the Gospels. It gave the clue by which men like Biedermann, for whom likewise the supernatural (in the old sense) had fallen from Christianity, sought to secure the permanent essence of that faith while its historical setting was discarded, as the husk of mere circumstance is removed from the kernel of truth. But everywhere it failed to satisfy the Christian consciousness. That consciousness cannot deduce history from ideas, but rather derives its ideas from history. It cannot persuade itself of man's power to see God through reason, and then prove that what it has seen independently was also discovered in the Christ of history. Hence, as Fairbairn (*The Place of Christ in Mod. Theol.*, London, 1893, p. 213 ff.) insisted with such force, Hegel's view of Christ endeavoured to translate into his own terminology what the Church has held; but the whole reality and value of the Church's faith consisted in the fact that the human mind had come to think and to believe in this way and thus found its unity with God. 'The remarkable thing is the relation of the faith to the Person rather than the Person to the faith' (p. 221). The reality of Christ's personal consciousness of union with God as the objective and real object and ground of faith is not present to his mind. This element in the Hegelian method, which is not peculiar to this stage in his system, has pervaded modern thought very deeply, as we shall see.

iii. SECOND PHASE: ROMANTICISM.—**1. The man who 'rejuvenated theology.'**—The second great movement was that which sprang from the remarkable personal gifts, the spiritual life, and the distinctive theological method of Schleiermacher. Many elements which seem to his critics, and even to his admirers, utterly inconsistent with one another had their unity for him through his deep mystical type of religious life, his poetic and daring imagination, and his great gift of analytic thought. This remarkable combination carried him in distaste away from the abstract and unreal dogmatism of Absolute Idealism. It carried him through the strong and powerful temptations of his period of surrender to the Romanticism dominant in Berlin society, without delivering him from the intellectual influence of that spirit. His vast reading made him sensitive to the realities of history and to the supreme significance of a fellowship like that of the Christian Church. He therefore set forth with convincing and almost revolutionary power the absoluteness of religion. It has its seat in experience, *i.e.* in the living, feeling consciousness of man. In that consciousness man finds himself dependent on the Infinite, on God, for his very being and for all the true meanings of his existence. Religion, which rises out of the fundamental fact of dependence, and also nourishes it as a feeling which has infinite worth, is for that reason independent of any philosophic system, and, on the other hand, must not be restrained as a mere department of social ethics. The poor starveling which Kant knew as religion, an *adjutorium legis*, is repulsive to the richer soul of Schleiermacher.

**2. His idea of God.**—In his conception of God, Schleiermacher, while defining Christianity as 'a teleological monotheism,' yet fails to get rid of the pantheistic trend inherent in the 'romantic' view of the universe. The sense of its unity, its vast life, its mystery, its moral beauty, made it unnatural for him to insist on the personality of God and hard to defend or define that conception. God is immediately given in the universal, persistent, and supreme feeling of our absolute dependence on the Infinite. It can be accounted for only by that which is also its very essence, viz. that it is a feeling produced by God. He and not the self is its 'Whence' ('das Woher'). Similarly the fact of sin is not to be distinguished from the consciousness of sin, and that appears in the universal experiences of failure, of incompleteness, and self-reproach. We are guilty because we feel guilty. As God is not to be proved by reasons which lie outside the God-consciousness, so sin must not be traced to any source outside the universal human feeling that 'there is something wrong.'

**3. His view of Christ.**—It will always seem an intellectual inconsistency that Schleiermacher, in spite of this view of God and man, affirmed with unconquerable conviction that in one historic consciousness, that of Jesus Christ, we find a new departure in human history. Christ was and is the redeemer of mankind. This fact is found by us in the continuous existence of the Church, as that body of human fellowship which, in spite of all imperfection, possesses the sense of the grace of God, the feeling that dependence on Him extends even to the moral issues and the destiny of man. The Church sprang from Christ and depends on Christ, and holds in its own spirit and life the future of man's religious history. And 'there is no other way of having part in the Christian fellowship than through faith in Jesus as Redeemer' ('Erlöser'). Schleiermacher, though he worked directly on the Gospels, did not go into a close examination of the consciousness of Christ in the construction of his theological system. It was enough for him that in Christ, through the faith of His original community in Him, we have an

assurance of God's perfect union with a human life. In Him that union was a new, original act of God, inscrutable but indubitable. He is the archetype of the new life of which He is the fountainhead. But He is not to be interpreted through any doctrine of pre-existence, or miraculous birth, or even of the Resurrection. These are reflexions of that divine impression of unique and perfect union with God which He made upon His disciples, and through which He welded them into a communion animated by His own life and henceforth controlled by His Spirit, which is the Spirit of God. The conclusions of the ancient Councils he lays on one side. Their whole aim was irrelevant. The idea of two natures in one Person is illogical. God has no 'nature,' and the inherence of a divine Person in human nature must inevitably annul the essential characteristics of the latter. Yet God was uniquely in Christ, constituting Him the object of universal faith and the permanent life of His Church. In sanctification others may go far towards the heights of peace and holiness, but only and always in their confessed dependence upon Him and the nourishing qualities of the Church which He created. To lose faith in Him would mean the collapse of the Church and the return of man to the unrelieved consciousness of guilt.

4. **Criticism.**—In this brief sketch of some of the main positions of Schleiermacher, certain facts are clear in reference to the subject of this article. (*a*) Schleiermacher, by his bold appeal to experience of the heart as the seat of religion, sought to destroy the sense of dependence on either metaphysical or theological dogmas as the sources and defences of faith. His passionate appeal to the human consciousness itself in its feelings of dependence, sin, and reconciliation revealed the depth, power, and reality of that consciousness in its religious, and above all in its Christian, manifestation. Yet he failed even in his acute analysis of the process of consciousness to find the personality which is conscious. His account of experience on both the objective (Godward) and the subjective (manward) side is left as a stream with no containing banks, a system of real and beautiful clouds with no sense of solidity or guarantee of continuance. (*b*) His welcome emphasis on the uniqueness of Christ and on the fact that His image and spirit are preserved for us in the abiding faith and life of the Church, gave rise to the whole movement which in Germany blossomed at last into Ritschlianism in its various phases. It is Christ-in-His-value-for-faith, in His total impression on His followers, that constitutes Christianity. Again the problem of personality is avoided. His consciousness as a reflexion in the hearts of others, not as the seat and definite manifestation of His own will and thought about Himself, is the object of faith. (*c*) By this subtle and persuasive method of winning man to a sense of the divine power of Christ, attention was diverted from all questions about His origin and His miracles. The miracles may have helped the first disciples, but they are remote from our experience. The mystery of His being is lost where the mystery of our own disappears, not to be discovered by metaphysics, in the origin of all things.

As J. Kaftan urges, 'his formula is ambiguous ('missverständlich') since it does not clearly enough assert that it is concerned with a gift from above, and not with the outworking merely of something implanted once for all in the creation (*Dogmatik*[4], Tübingen, 1901, p. 450).

The breath of Pantheism (for Schleiermacher was an intense admirer of Spinoza), with its strange obliteration of the fundamental *realia*, lies over all his thought. But many of his successors and debtors have not that reason for assuming his attitude towards the metaphysical and the miraculous.

iv. THIRD PHASE: AGNOSTIC PHILOSOPHY AND POSITIVIST THEOLOGY.—1. **Ritschl's Christology.**—(*a*) *His connexions.*—Albrecht Ritschl, though not so powerful a personality as Schleiermacher, founded a school or 'movement' in theology whose members have been identified with much of the best work done in Germany during the last thirty years. Ritschl owes what is most valuable in his thought to the earlier thinker, but he set it forth in a more definite manner, and in a generation prepared by prolonged discussion of the history of early Christianity to welcome a system which made it seem possible to worship Jesus Christ while saturated with scepticism as to the supernatural on the one hand, and despair as to the historical on the other. He justified the scepticism by accepting the Kantian theory of knowledge, as it was reinterpreted by his colleague at Göttingen, Hermann Lotze. Of that which is above the phenomena of experience we can have no real knowledge. Hence it is vain to investigate the problem of the Trinity, or to attempt a Christology in the sense of the early Church. Our experience is built up of judgments of fact and judgments of value. The former deal with the material of the senses, and form the field of natural science. The latter deal with the moral and spiritual elements of experience. All religious conceptions are in their essence value judgments. They arise out of our view of the world in relation to our human, moral, spiritual interests. The conception of God had thus taken form in the mind of man through his felt need of superhuman spiritual powers to supplement his own in his unequal struggle with the natural world. The existence of God is unquestionable, 'for the activity of God becomes to us a matter of conviction through the attitude we take up to the world as religious men' (*Rechtfertigung und Versöhnung*, Bonn, 1870–74, Eng. tr., *Justification and Reconciliation*, Edinburgh, 1900, p. 218).

(*b*) *His view of Christ.*—For the Christian Church God, thus assumed to exist, has been actually revealed in Jesus Christ. Christ founded the community in which this revelation was first realized, and through which it is perceived as the perfect form of religious conviction and life. Jesus Christ became aware of His vocation as the bearer of this revelation through His own perfect religious knowledge of the Father, which included the assurance of God's purpose to found the Kingdom of God through Him. This task He undertook with flawless devotion. He made known the Father by word and deed and by the majesty of His unshakable faith in face of sin, hostility, and death. So completely did He absorb the divine will and the end of God's governance of the world in the interest of His Kingdom, that in Him, His faith, His obedience, His love, we see the love, the grace, of God towards us. Thus Christ, in the famous phrase, has for us 'the value of God.' In the mind of God and in our faith, Christ, as the Son of God, is the founder or source of the organization of men according to God's idea of their destiny. His end with them is made known in the Person of Christ, and Christ is the type after which they are to be conformed. The doctrine of His actual Godhead is translated into this eternal purpose of God concerning man which was ever bound up with the Son 'as object of the divine Mind and Will,' and 'sharer of God's attribute as end of creation.' Concerning His actual pre-existence we can say nothing. It lies as completely beyond the range of our knowledge as His post-existence, and is unnecessary to our faith in Him. Nor can we conceive of His exaltation otherwise than as the experience of the abiding influence of His historical manifestation. Of His origin it is impossible to say anything. All we need and all we are given is the assurance that in His holy will, in His limitless love, and in His invincible faith we see the

purpose of God and His love for the community which Jesus took to His heart and in whose service He died. However, 'the right appreciation of the completeness of the revelation of God through Christ is assured by the predicate of His Godhood.'

(c) *His influence.*—This Christology has held sway over many powerful minds. Its virtues are negative and positive. On the negative side it has seemed to give the Christian faith a position where the terrors of natural science could not assail it. Miracle is not an inherent element in this view of Christ. The supernatural is limited to the sphere of moral influences and spiritual cognitions which the categories of the scientific understanding cannot penetrate. Also, as especially with Herrmann, it has seemed to make faith independent of the results of historical criticism of the Gospels. Enough is given when we have insight into the invincible assurance of Jesus Himself concerning the love of God His Father, and His complete surrender to the divine will and the divine ends. But some have gone further even than that. They are so sure that the ideas of God's Fatherhood and His gracious promise of life eternal are confirmed in the long and deep experience of the Church that, they surmise, Christianity will survive even though Jesus fade from among the facts of history. And with them the *reductio ad absurdum* of this subjective view of reality is attained. On the positive side the Ritschlian position has gained through its valuable insistence upon the 'fact of Christ' as the essential object of any living and communal faith in God. If the doctrine of knowledge, which like all Agnosticism is in essence sceptical, leaves us in the dark as to the foundations of the phenomena of all history, yet within that history and among its undeniable influences it places Christ as supreme. This very view drove Ritschl's followers into the deeper study of the consciousness of Christ, some of whose results we have already considered above.

2. Herrmann's Christology.—(a) *Contents of the Christian consciousness.*—Like all great movements, the Ritschlian has broken into several directions. One is represented more completely by W. Herrmann than by any one else. He separates even more trenchantly than Ritschl between metaphysics and religion, and holds that in religious experience we move in a sphere which no use of the logical understanding can construct into an objective universe. Nor can we reconcile the universe which science investigates, and which metaphysics tries to interpret as 'one,' with the moral and spiritual contents of the Christian consciousness. The following points may be taken as summarizing Herrmann's view of these contents. (α) We are, as human beings, conscious of our dependence on an infinite power. (β) We are as Christians conscious of moral reconciliation with God when we understand 'the personal life of Jesus.' For it is in the historical Christ Himself that we see God revealed as Father. This positive vision of God in Christ awakens in us the moral impulse to deny self, and in that we find ourselves released from the tyranny of the world. We must not so define Christ as a mediator that we may seem to get past Him to God, or find a greater good in God than in Him. That is the way to reduce Christianity to a merely relative and perhaps vanishing form of religion. 'It is true to say that we find in God Himself nothing but Christ.' On the other hand, we know nothing of God except as He becomes revealed in Christ. (γ) Hence we must not make true faith depend on a theory of His Person, or a system of doctrines about Him and His work. True faith arises only when the individual heart faces Jesus for itself and yields itself to the vision of God in Him. Hence Herrmann has the daring to say, 'We must get past the old dogma of the Deity of Christ to a higher conception of Christ' (*Der Verkehr des Christen mit Gott*[4], Eng. tr., *Communion of the Christian with God*, p. 34). The higher conception of which he speaks is not a higher metaphysical theory, but a higher *working* conception, one which consists in realizing that there is no way of knowing God apart from, or beyond, or above the historical Christ. How Christ knew God and lived in Him is His secret. All that we can know is the redemption of Christ which brings us into right relation with God. We cannot deal with God except in Jesus. (δ) Herrmann insists further that we must not seek to image for ourselves a living Christ of to-day with whom we can get into personal contact. That image will again abolish the historical Jesus and seem to make us independent of Him. The supreme secret of Christianity is this linking of the past with the present, this perennial flow of living water from the heart of the historical Jesus. When we turn our eyes away from Him to a theory of His Person, or to a picture of His present exaltation, we depart from the real faith of Christianity. It is only as we gaze upon Him in His, however far off, historical reality and see God disclosed in Him that we enter into a sense that God is here with us. Yet even in that instant recognition of His presence and power in us we dare not separate Him from the vision of Him in that historic Jesus. (ε) It is true that we must have many and great conceptions of Christ. But they do not precede faith or produce faith. They are themselves the fruits of faith ('Glaubensgedanken'). The resurrection, exaltation, and mediation of Christ are conclusions drawn from faith, and in which it delights, but they are not faith's presuppositions, and cannot create the saving attitude of trust. Herrmann discusses with unwearied care the difference, which seems to him immense, between the view that the deity of Christ must be taught in a dogmatic form in order that men may come to put their trust in Him, and so find God in Him, and the view that men must come straight to Him in history and receive from Him that overwhelming impression ('Eindruck') of the redeeming grace of God which compels them to see the very presence of God in His personality and so to confess His deity.

(b) *Estimate.*—There is no better witness to the intellectual perplexities of the Christian theologian to-day than the appearance of such a view as Herrmann's. His writings have from the first revealed a most earnest and most Christian spirit. There can be no doubt that in his own heart he has had an experience, intense and vital, which he has spent his life in making as real as possible to others. But our minds stubbornly demand that a man shall be placed in our intellectual map. And Herrmann seems to elude us. He seems a mystic, but denounces mysticism. He seems a subjective idealist, and argues for an objective ground of faith. He is not a romanticist, closely as he adheres to part of Schleiermacher's position, nor a pantheist, for he will utter no word that does not speak of God as a personal Father. His Christology, with its mingling of deep loyalty to the deity of Christ as given in experience, with a stern refusal to define His Person or even His work, except in passionate repetitions of the redeeming power of His historic personality, is possible only in an age when the war of philosophic systems has created in certain minds a deep 'philosophic doubt,' and when the triumphs of science have seemed for a while to imprison the imagination in a physical universe, closed and impervious, for our intellect, to the spiritual. The refuge of such minds throughout the 19th cent. was in the great fact of the religious consciousness of mankind. There we find a con-

tinuous and universal human experience which has its own rights and its unquestionable reality (see H. Schultz, *Christliche Apologetik*, Göttingen, 1894). There faith, the soul's organ for sight into the spiritual and moral universe, reigns beyond the assaults of science or metaphysics. And human faith, in the historic Jesus, reached such heights of power, such intensity of moral and spiritual illumination for other souls, that it has ever since produced faith in Him and in that grace of God which, concentrated with infinite force in Him, breaks out from Him as the very glory of God's own face upon all susceptible souls. This has proved itself to be a refuge and fortress for many individnal minds. But it has not been fruitful, either practically or theologically. Its psychology is faulty when it deals with the relation of dogma to individual experience, and again when it attempts to picture the Church, living and growing, conquering and thinking, over wider horizons of human experience, without making its explanation of the objects of its faith credible, verifiable, and authoritative for its own life and in its appeals to the world.

3. **Kaftan.**—The Ritschlian movement, while carried to this extreme in so noble a way by Herrmann, has in another direction tended towards a closer affiliation with historic theology. In Kaftan (*Dogmatik*[4], 1901) we find a less strict use of the epistemology espoused by Ritschl. While the latter *seemed*, at any rate, to say that the religious view of the world consisted only in value-judgments, Kaftan holds that it consists much rather in judgments of facts ('Seinsurteile') which are reached through judgments of value. It is real knowledge (*e.g.*, that God is and what God is), although it does not arise from our scientific knowledge of the order of the natural world. But Kaftan, no less than Ritschl and Herrmann, carries on the magnificent emphasis of the whole movement upon the nature and royal significance of faith. He holds that the 'two-nature theory' which underlies the whole Christology of the early Church, was due to the conception of salvation which was then held. The reformed Church, and that in the life of the whole modern world, has another view of salvation, which consists neither in the magical communication of life (as in the early Church) nor in the transactional soteriology which arose with Anselm. We have in Jesus Christ, in His coming into our world, His historical character and work, His triumph and exaltation as the Risen Lord of the Church's faith, an act of God through which His forgiveness is assured to us, and we are made partakers of His Spirit and life. The Church thinks of Him first and directly as the exalted Lord, and as such the Head of the Church. But that exalted Lord cannot be conceived except by reference to the historical Jesus. It is the spiritual content of His Person on which we depend, and that is known to us only in the story of His life in the flesh, for there the central fact is that the development of His self-consciousness as a man proceeds from His consciousness of oneness with God. That unique and supreme historical self shared in the divine attribute of omnipotence in its ethical aspect. This omnipotence is no mere logical inference from abstract speculative premisses. It appears in His actual life, His independence of the world, His complete control of all things and relations ('alle Dinge und Verhältnisse') for the fulfilment of His task. But this fact of moral omnipotence proves that the human life in which it was manifested had a unique origin, arose from a special, unparalleled, and unrepeatable act of God. Kaftan agrees with Schleiermacher that God prepared human nature for the great event of His own manifestation in and through it, but refuses to consider this event only in terms of an immanential process. There is in it a definite impartation from God. Christ therefore, while wholly and truly man, is also the manifestation under human conditions of God Himself. The Church therefore will and must always consider Jesus Christ as eternal. He is more than a divine ideal (as Harnack and others before him have maintained). But Kaftan will only say 'Yes and No' to the pre-existence hypothesis. The definition of that pre-existence through such a conception as the Logos meant and means the introduction of a speculative and really unknown factor which disturbs the concrete object of Christian faith. All that we can properly assert is that 'the coming of Jesus into the world ('das Werden Jesu in der Welt') absolutely surpasses the conditions of ordinary human development. God sent and God gave Him.'

4. **Other representatives.**—Among those who are reckoned as of the Ritschlian school, Harnack must be mentioned, not as having made any remarkable contribution to Christology, but as one whose historical investigations have done so much to refresh interest in the long history of its controversies. We have seen above (p. 521) that he seems to utter inconsistent ideas concerning the place of Christ in the gospel. Perhaps the real cause of this is that within the vigour of the scientific historian he carries the spirit of the romanticist, who makes 'feeling and inner vivacity the measure of truth' (see a keen estimate of Harnack's position by J. Baumann, *Grundfrage der Religion*, Stuttgart, 1895, pp. 23–41, which is still applicable). G. Wobbermin, while serving himself heir to the Ritschlian doctrine, modifies it even further than Kaftan. He warns us that we must not confuse metaphysical realities with the metaphysical method. That we can know metaphysical realities Kaftan admits, and Ritschl ought to have admitted, for without that the whole groundwork of religion disappears in a mere succession of feelings. But we must not set these metaphysical realities before us as discoveries of the rational understanding and objects of *a priori* speculation. Our knowledge of them is limited to and by the very means and conditions through which we become certain of their existence and of some aspect of their nature (cf. G. Wobbermin, *Theologie und Metaphysik*, Berlin, 1901, pp. 26–40, and *Der christliche Gottesglaube*, do. 1902). The school of Ritschl includes a large number of the leading theologians of the past and present generation in Germany. A full account would have to include the names of Hermann Schultz, H. H. Wendt, J. Häring, W. Bornemann, and M. Reischle. None of these has made any distinctive contribution to the problem. They differ mainly in their emphasis upon the essential relation of the historical Jesus to the gospel, upon the form of the presence of God in Him, upon the distinctness with which He is to be conceived of as the exalted Lord in living relation with the Church. They are all characterized by the effort to disown any adhesion to the doctrine of His two natures, with its Trinitarian background and its permanent puzzle regarding the presence of the divine subject in the conscious life of the man Jesus. They all insist on the faith of the first disciples ('die Gemeinde') in Jesus as the Christ, as forming the original source and type of the conception which must permanently rule the mind of the Church.

v. FOURTH PHASE: THE KENOTIC CHRISTOLOGY.—1. **Its origins.**—Parallel with the movement which arose with Schleiermacher and continued through Ritschl, there ran in the 19th cent. another known as the Kenotic Christology (from the phrase ἑαυτὸν ἐκένωσεν, Ph 2[7]). This

theory avoids the pantheistic tendencies of Absolute Idealism or of such a man as Schleiermacher. On the other hand, it rejects the philosophical Agnosticism which rules the movements derived from Kant. However closely it may approach any of these, it holds true to the idea of a Personal God, and as a rule develops a definite doctrine of the Trinity. It had various roots in the thought world of Germany, connecting it with the Lutheran doctrine of the *Communicatio idiomatum* and its emphasis on the majesty of the pre-existent Christ, and with the Reformed doctrine of the exinanition with its emphasis on the reality of the human nature and experience of the incarnate Son of God. Its formulation was hastened in the ecclesiastical sphere by the efforts to bring about the union of the Lutheran and Reformed Churches. On the side of religion it was connected with Pietism and the interest in Evangelism, which have always been most intense where the personal participation of God in human experience, for revelation and redemption, has been most vividly realized.

'It seemed as if dogma and piety, dogma and gospel, were again united more closely than ever' (Günther, *Lehre von der Person Christi*, p. 191).

Further, it was the direct fruit of the modern emphasis upon consciousness and will as the seat of reality, which has undermined the ancient conceptions of matter, substance, and nature as objective and independent realities. Accepting the 'two-nature' view of the Incarnation, on which the ancient Christology was founded, the Kenoticists have set themselves to translate its terms, and also to analyze as a living process that act by which the 'one person or substance' united with Himself the human nature and therein lived as the Gospels depict Him. Günther (*op. cit.* §§ 22–28) has traced the various stages by which the first full statement of the idea by Thomasius was prepared for.

**2. Its full statement.**—(*a*) *G. Thomasius.*—In this theologian the theory received its first complete and systematic exposition (*Christi Person und Werk*, Erlangen, 1853 ff.). According to Thomasius, the Incarnation is an act by which the Logos, Son of God, laid aside the so-called 'relative' attributes of omnipresence, omnipotence, and omniscience, whose exercise was inconsistent with the limits of human nature. The essential ethical attributes of love and holiness He retained in His assumption of that nature. Thus the Son of God is the only subject, the Ego, of this personal life of Jesus Christ, in whom we see human nature assumed by the Son of God, and the Son of God limiting Himself to human conditions through that very act. To say that such an act is impossible is to limit the power of God's will. Given the possibility of this act of infinite love, we see its fruits in the story of Jesus Christ. Thoroughly human in the forms of His consciousness, He yet manifests the essential qualities of God in His perfect love and sinless life. Though we must call Him 'the man who is God,' we must recognize the reality of His human consciousness. Hence He is the image of God, and as such the perfect ideal of human nature. Other theologians, like Luthardt and Ebrard, adopted the Kenotic theory with variations of their own.

(*b*) *Gess.*—But it was W. F. Gess (*Christi Person und Werk*, Basel, 1870) who made the most important stage in its development. The first volume of his work deals directly with the consciousness ('Selbstzeugniss') of Jesus, as it is set forth in the NT. In his constructive theory he shrinks from no implication of the idea of a 'self-emptying' of the Son of God. By a supreme act of will He deprived Himself even of His self-consciousness as Logos. He entered into that night of unconsciousness in which our life begins. Adopting the 'Creationist' hypothesis that each human soul is a fresh creation of God, Gess found in that an obvious way of accounting for the union of the Logos with the human body of Jesus. In the earthly life the Logos gradually attained knowledge of Himself through the ordinary principles of human development. But we may well suppose that in His unique case there would be operative a deep instinct (the 'instinct of kind') by which His mind would be guided, so that He would recognize through the teachings of the OT His own kinship with the Father. Gess allows us to suppose that at times there would be outflashes, 'uprushes,' of His true essence into the field of consciousness—a thought curiously suggestive of certain passages in W. Sanday's interesting speculation concerning the subconscious as the *locus* of the Incarnation. The recovery of His divine self-consciousness, which reached higher stages in His baptism and in the course of His active ministry, was conditioned ethically by His faith and His love. It was love that released the slumbering consciousness of superhuman power when distress and disease made their appeal to His sympathy. At and after the Resurrection the full divine self-consciousness was assumed. Gess weakened the force of his theory when, for the sake of completeness, he allowed himself to speculate regarding the change wrought by the Kenosis in the Trinity both during the Incarnation and as the result of carrying the human glorified body of the Risen Christ into the life of God.

Criticisms of the Kenotic theory as thus presented by its German expounder have covered three main points: (1) (speculative) it endangers the doctrine, held to be fundamental, of the unchangeableness of God (Dorner); (2) it is, says Ritschl, 'pure mythology' (*op. cit.* p. 411); it describes events and processes in the eternal life of God for which we have no ground or proof but the same imagination that produced all the ancient pictures of transactions among divine beings; (3) the 'Kenotic' Christ is neither the genuinely human being of the Gospels nor the frankly supernatural being of the ancient Christology. All that He says and does is to be accounted for within the limits of the humanity He has assumed. The flesh, in conditioning the Logos so completely, quenches any special significance which is attributed to it through the vague and occult inherence of an inoperative divine self.

(*c*) *Godet and some British Kenoticists.*—In the English-speaking world the Kenotic theory has had more vogue in the last twenty-five years than on the Continent. In Great Britain it was first made widely known by the important work of A. B. Bruce (*The Humiliation of Christ*, 1876), and more directly by translations of the works of H. Martensen (*Christliche Dogmatik*, Berlin, 1856, Eng. tr., *Christian Dogmatics*, Edinburgh, 1866) and F. Godet.

Godet's best account of his theory is not in his *Comm. on St. John* (Eng. tr., Edinburgh, 1876–77), but in his *Biblical Studies* (Oxford 1875), where he gives a characteristically brilliant exposition. His two chief presuppositions are 'the absolute freedom of God' and 'the absolute perfectibility of man' (p. 136). 'If this miracle is not possible, God is not free' (p. 139). His account of the self-discovery of Jesus has some interesting points. 'That which he felt to be behind Him, when He searched into the profound depths of His being, was not, as it is with us, the vacuum of pre-existence, but the plenitude of Divine Life' (p. 129). That this is not mere rhetoric is clear from the manner in which that 'search' is described. Jesus recognized His moral and religious differences

from other men, as He read in the OT the Messianic prophecies and faced the question of His own life-work. He could not but be forced to ask, 'Who am I?' The persistent enigmas of His consciousness are answered at His baptism, 'Thou art my Son.' Another interesting statement of the Kenotic view was given by J. B. Heard in *Old and New Theology* (London, 1884), ch. vi. 'The Person of Christ.'

But the leading champion was A. M. Fairbairn (*Place of Christ in Mod. Theol.*, London, 1893), who boldly went back to the Thomasian distinction between the external or physical attributes of God—omnipotence, omniscience, omnipresence—and the internal or ethical—truth and love. The former are 'under the command of the internal.' The Son surrendered the physical attributes which are 'the less' in order to realize in human conditions 'the more Godlike qualities.' Fairbairn made the suggestive statement that the problem of the union of God with human nature is only a part or phase of the wider question how God can be related to a universe which is not identical with Himself. C. Gore (*The Incarnation of the Son of God*, London, 1891, *Dissertations*, do. 1895) deliberately leaves some of the chief difficulties as insoluble, while accepting a modified form of the Kenotic theory. He, like Fairbairn, deals directly with the historical material. It is in the Gospel records that we find both the divine and the human in one consciousness, and that manifested consciousness is characterized by such holiness and love as can only be the working of a divine Will. He finds in Augustine a recognition of God's self-limitation in the act of creating a universe under law. The Incarnation is a further step in this process of self-humiliation, and it was prompted wholly by grace. Therein both the Father and the Son made a 'real surrender.' We do not know *a priori* what of the divine attributes could be retained in exercise or abandoned; 'but the record seems to assure us that our Lord in His mortal life was not habitually living in the exercise of omniscience.' Nor can we decide anything as to how this self-emptying affected 'the cosmic functions of the Son.' Among all the British Kenoticists (D. W. Forrest, W. L. Walker, P. T. Forsyth, etc.) the same points appear with varying emphasis and thoroughness of treatment: (α) they see in the Incarnation a deeper form of the same divine self-limitation which was evident in the creation; (β) it is an act springing from the love of God for humanity—with redemption as its end; (γ) they all exercise a certain reserve in reference both to the metaphysical (Trinitarian) and the psychological aspects of the conception.

A singularly wise review of the movement is given by H. R. Mackintosh (*The Doctrine of the Person of Jesus Christ*, Edinburgh, 1912), who is in sympathy with it. He admits that the difficulties are 'very grave,' but adds that 'they are such as no bold construction can avoid.' There are four positions which he says are 'implicit in the completely Christian view of Jesus' (p. 469 f.).

These are: (1) 'Christ is now Divine, as being the object of faith and worship.' (2) 'In some personal sense His Divinity is eternal, not the fruit of time. . . . His pre-mundane being is real, not ideal merely.' (3) 'His life on earth was unequivocally human.' (4) 'We cannot predicate of Him two consciousnesses or two wills. . . . The unity of His personal life is axiomatic.' 'It has never yet been proved . . . that there are two streams' of consciousness in the personality of Jesus.

The effect of all this is that we must throw the ethical back more vividly into the life of God than the Agnostic position makes possible. In God's holy love the pre-conditions lie for all His cosmic relations, and these find their consummation in His complete self-relation with personal human experience in a human being. Mackintosh rejects both the division of the attributes of Thomasius and the complete self-renunciation propounded by Gess. He suggests, agreeing with Forsyth, what he calls the 'transposition of attributes,' which must result from the change of the consciousness in the sphere of its action. The intelligence that in the eternal state is 'intuitive and complete' must, if it submits to the conditions of time, become 'discursive and progressive.' So omniscience becomes in the temporal state a sure exercise of 'perfect human faculty.' Mackintosh sturdily rejects the scorn of Ritschl for the Kenotic theory, and insists that, on this theory, Jesus did not become God, nor was the significance of the divine in Him quenched by assumption of the flesh. There is all through the earthly life of Jesus a 'potentiality,' which does not mean that the divine was not in action, but that it was in subdued action. In His consciousness of the Father, and 'Spiritual omniscience' in relation to Him, we have the proof of the divine self active in Him.

Mackintosh confesses warm sympathy with the very powerful setting which this point of view has received in P. T. Forsyth's work (*The Person and Place of Jesus Christ*, London, 1909). The pre-existence of Christ is a necessary postulate of Christology, because it is a necessary implication of the Church's faith in its Lord, who is not only Reconciler and Redeemer, but also Sanctifier. For sanctification is creative work and possible only to a divine being. Our faith implies the eternal reality of both Father and Son—'both being equally personal and divine.' The possibility of the Kenosis is found in the 'infinitude' which some suppose to preclude it. 'If the infinite God was so constituted that He could not live also as a finite man, then He was not infinite' (p. 315). The fact of the Incarnation sprang from the holy love which is of the very essence of God, 'the object for which all God's omnipotence exists.' The limitation of His power was 'His intensest concentration' on 'His fixed purpose with the world' (p. 316). Implicit in the *kenosis*, or self-emptying, is a *plerosis*, or self-fulfilment, of Christ. The one process is the means to the other; and the second, as the fulfilment of God's ideal of self-relation with human nature, involves His winning of the humanity He has redeemed into ideal union with Him in the Spirit.

Strenuous opposition to the Kenotic theology has come mainly from Anglican theologians. The exegetical basis has been examined by E. H. Gifford. Criticism from a stubborn though intelligent adherence to the ancient creeds is given by F. J. Hall (*The Kenotic Theory*, New York, 1898), and H. C. Powell (*The Principle of the Incarnation*, London, 1896) gives a thorough examination of the theory's psychological as well as Trinitarian implications. But his own statement of the ancient position, where the ego is treated as operating within two minds, is not argued out in the light of modern psychology.

See also art. KENOSIS.

vi. THE PRESENT SITUATION.—It is possible only to say a few things, in concluding this article, regarding the principal features of the Christological problem at the present hour. The situation is full of perplexity and difficulty for all minds which lay themselves open to the forces of their own day. And no one can write without prejudice on a question which at every point is connected with the nature of the spiritual life and with the ever passionate, ever sensitive, ever varied and complex life of the Church.

1. **The 'Life of Christ' movement.**—Albrecht Schweitzer has not exaggerated when he says, and that with emphatic reiterations, in his now famous book, *Von Reimarus zu Wrede* (Eng. tr., *The Quest of the Historical Jesus*, 1910):

'It is impossible to over-estimate the value of what German research upon the Life of Jesus has accomplished. It is a uniquely great expression of sincerity, one of the most significant events in the whole mental and spiritual life of humanity' (Eng. tr., p. 397).

(*a*) *The logic of a 'circle.'*—We have more than once referred to the logic that characterizes the course of an intelligent community life. Such a community, informal and of varying boundaries, has existed in the theologians of the German universities. They are, for good or ill, a class by themselves. Within that class more or less clearly defined circles have been formed, whose members are extremely sensitive to each other's influence, whose eyes are mainly directed upon the work of those who are like-minded with themselves. Through the means of inter-communication which they have created, they lead a life of unsurpassed intellectual intensity (see on this J. T. Merz, *History of European Thought in the 19th Century*, Edinburgh, 1896–1912, vol. i. ch. ii.), and are conscious of spending it, though separated geographically, as in each other's presence. Any principles which are adopted, as points of mutual understanding and common interest, in one of these circles (in science or history, philosophy or theology) must have their inner logic worked out to the end in the process of time.

(*b*) *Schweitzer's history of it.*—In relation to the Life of Christ, Schweitzer's book is a brilliant exposition of this process. A powerful circle has existed within the theological faculties for a hundred years, whose untiring and minute and amazingly resourceful researches into that subject have proceeded from two negative principles, viz. that the proper deity of Jesus Christ and the occurrence of miracles are impossible. With the exclusion of these two features of the NT picture of the Lord, the problem before this quasi-community of ardent intellectual life has been, on the one hand, to recover an exact picture of the actual historical Jesus, and, on the other, to measure His religious value. Schweitzer gives scant notice of the men, sometimes of equally great erudition, who have written Lives of Jesus from which the two elements named above are not violently excluded. They have not made the history of the circle which he is describing, and their names and works, for the most part, constitute a pathetic streamlet at the foot of his pages.

(*c*) *The 'liberal' Jesus.*—Through the process of exhaustive intellectual experimentation there gradually emerged before the circle of 'liberal' theologians the figure of Jesus as a prophet and reformer, who made no divine claims, whose words were confusedly preserved in tradition and recorded in successive documents out of which at last the present Gospels were fashioned. Jesus used the current Jewish religious conceptions, but shaped them to be instruments of His own clear insight into the Fatherhood of God and His strong grasp on the true moral principles which must guide men in religious and social conduct. This has come to be known as the 'liberal conception of Jesus.' It varies from one scholar to another in many features. Some would assign more of religious supremacy to Him than others. Some, like Wernle, would confess that He possessed a superhuman consciousness, but decline to define it further, and hold that its presence was not inconsistent with grave errors. But others, like N. Schmidt (*The Prophet of Nazareth*, and artt. 'Son of God' and 'Son of Man' in *EBi*), would know Him only as a prophet whose character of pure self-sacrifice and faith in God has proved to be the highest source of inspiration down to this day (cf. also G. B. Foster, *The Finality of the Christian Religion*, London, 1906, who writes as if J. Weiss, Wernle, Bousset, and others had said the last word on NT criticism, on whose scientific certainty all further thought must rest). It has become quite clear, however, that the Jesus whom the 'liberals' depict never existed. Few, says F. C. Burkitt, in his Preface to Schweitzer's *Quest*, except professed students know what a protean and kaleidoscopic figure this 'Jesus of History' is. The stubborn facts remain that Jesus knew Himself as Messiah, as unique Son of God and head of the Kingdom of God, and that the Christian Church sprang from the disciples who by His own self-manifestation in these superhuman relations passed into a new range of experience in a new consciousness of the power of God.

But another conclusion has been drawn from the fact that the 'liberal picture' of Jesus is untrue to history. With the help of the *religionsgeschichtliche Methode* men have sought to prove that Christianity arose as a syncretistic religion (Gunkel). This again has been pushed to the extreme of maintaining that Jesus never existed as a historical person, that the gospel stories arose to illustrate and justify the faith in an ideal Christ as the revelation of God (cf. Drews and W. B. Smith). (In addition to Schweitzer's exposé of the failure of the 'liberal' Lives of Jesus [*op. cit.*, ch. xiv.], see the hostile and severe but not unjust pamphlet by R. H. Grützmacher, *Ist das liberale Jesusbild modern?*, Grosslichterfelde, 1907.)

(*d*) *The eschatological Jesus.*—The reaction from the radical and destructive view has been powerfully aided by the rise of the eschatological view. It had been held inconsistent with the two primary assumptions of the learned 'circle' that the historical Jesus should have taught a strictly supernatural view of the Kingdom of God. What He held must have been the view that the Kingship of God the Father over human souls is to be conceived and realized wholly within the conditions of this life. If He spoke any words about a future life, He must have spoken as all human beings speak of that matter, in terms of faith and hope, without any peculiar authority arising from a superhuman consciousness. But the eschatologists (led by J. Weiss in the work often cited above) proved beyond a doubt that the eschatological sayings of Jesus are of assured authenticity. Moreover, they are not occasional utterances peculiar to ecstatic moments and really foreign to His main principles. Rather can it be proved that they underlie the whole course of His consciousness and penetrate His whole view of the Kingdom. Hence even His ethics flows from a mind which sees all human conditions and conduct in the light of eschatological events and superhuman forces (*Interimsethik*). When He conceives of Himself as Messiah and Son of Man, of the Kingdom of God as near at hand, He is thinking of a catastrophic, supernatural act of God, in which He will share as its supreme organ and controller, by which the natural life of man will be submerged and a new universe be established. The eschatologists to whom we refer do not even yet break away from their 'circle.' Their primary negative presuppositions hold them still eagerly experimenting with new ways of accounting for this as an illusionary element in the consciousness of Jesus, and yet as one through which a divine spirit has seized upon the course of human history and given men the assurance of God's love. The noblest proof of the reality and sincerity with which men may give themselves to this as a compelling religious force is to be found in the fact that Schweitzer (at the behest of his Master, as he believes and says) has diverted his own career from that of a distinguished and brilliant German scholar to that of a humble medical missionary in West Africa. The radical school has put forth no higher proof that the grace of God is within reach of its view of Jesus.

**2. The special influence of the sciences.**—There are signs that the two great sciences which deal with the highest forms of phenomenal history, viz. biology and psychology, will yet exert powerful influence on Christology as well as on other sides of theology.

(*a*) *Biology*.—At present biology is itself embarrassed by two phases of discussion—that concerning the nature of life (energism—vitalism) and that concerning the process of evolution (mechanical, teleological). It is only as the meaning of vitalism, and of teleological evolution, becomes clear to their advocates that ethics and theology can be enriched with new aids to the interpretation of their own fields. But some earnest efforts have already been made by British theologians to use these biological discussions in Christology (*e.g.*, D. W. Simon, *Reconciliation by Incarnation*, London, 1898; W. L. Walker, *The Spirit and the Incarnation*, Edinburgh, 1901, and other works; W. D. McLaren, *Our Growing Creed*, do. 1912; A. Morris Stewart, *The Crown of Science*, London, 1902). Such writers usually adopt some phase of Kenoticism.

(*b*) *Psychology*.—Psychology has proved more fruitful of suggestion already. That science is in the full flush of early and enthusiastic manhood, and many of its fruits are most valuable, especially in relation to religious experience. Its influence on our present subject is seen, partly in the more careful and thoughtful work of the Kenoticists, partly in the firmness with which the Ritschlians describe the conditions under which they view the consciousness of Christ (cf. T. Häring, *Der christliche Glaube*, Calw and Stuttgart, 1906, Eng. tr., *The Christian Faith*, London, 1913). But chiefly its influence is seen in the 'Voluntarism' of men like R. Seeberg (*Die Grundwahrheiten der christlichen Religion*[4], Leipzig, 1906, Eng. tr., *The Fundamental Truths of the Christian Religion*[4], London, 1908) and A. Schlatter (*Das christliche Dogma*, Calw and Stuttgart, 1911). W. Temple in *Foundations* may also be named here. The position of Seeberg (*op. cit.* p. 222 ff.) is stated as follows: 'The God-will that guides the history of mankind to salvation entered into history in Jesus, became man in Him, and worked after the method of human history in His words and deeds.' By this 'personal God-will,' Seeberg, who has disowned the conclusions of ancient theology, does not mean a mere operative force such as proceeds from God actively elsewhere, but the divine Person Himself. For 'a person is nothing else than conscious will.' Hence this divine Person worked in the human life of Jesus so that 'He could not look upon His thoughts otherwise than as God's thoughts. He could not will, without the consciousness that God willed.' 'His divine personal will or His divine personality was for His own consciousness the eternal Son of the Father in heaven.' Schlatter (*op. cit.* § 87, 'Die Ewigkeit Jesu') goes further in his estimate of the eternal nature of Jesus. The words of Jesus and the Epistles do not set His deity and humanity beside each other as two static objects ('ruhende Dinge'), but speak of a volitional bond ('Willensverband'). He approaches the biological point of view when he says further: 'In that the Word became flesh the humanity of Jesus was begotten ('erzeugt') through the Divine word and serves, therefore, as its seat and organ' (p. 362). Hence the Incarnation is not to be viewed merely as a process (as with Dorner in his famous exposition, *System of Christian Doctrine*, Edinburgh, 1882, vol. iii.) but as an act of God which underlay the whole process of growth. This appeal to the idea of will is not, however, completely worked out by any Christologist. The fact is that neither for ethics nor for Christology have the psychological data of our day been thoroughly explored. The whole meaning of the word 'consciousness' is undergoing a portentous change. The very question of the subconscious, a region shadowy and unexplored, to which Sanday (*Christologies Ancient and Modern*) has gone for help, is complicated by the almost terrifying phenomena of dissociated personalities (see Morton Prince, *The Dissociation of a Personality*, New York, 1906). There we have a demonstration of the most astounding kind as to the complex nature of the human consciousness. It has its various centres and its intricate interplay among these. Even though the actual phenomena and hidden processes come to light only in abnormal conditions, they prove that in the normal consciousness something has power over them to reduce them to unity and harmony. But all this is cited here not as giving us any sure clue, but to prove that, when henceforth we speak of the consciousness of Jesus as carrying with it the divine and the human, and as manifesting a range and richness of power above that of our ordinary human life, modern investigation of our consciousness encourages us to believe that we are not speaking in mere contradictions. The idea that consciousness means a stream or series of events is dead, and the other idea that a will can operate at only one 'centre of consciousness' must die too.

In view of these facts as to our confused situation, it may seem more than daring that any one should offer a direct and constructive statement on the Christological problem. But it would be inconclusive not to sum up various suggestions made in the course of this article in a brief and practical manner. The present writer believes that the 'double-aspect' theory—to use a psychological *terminus technicus*—of the Ritschlians is only an inadequate piece of homage to the perplexities of the hour. The Church has always held that its Christ is a divine being who entered the conditions of man's experience, and as the mediator between God and man. 'God was in Christ reconciling the world' is a word which cannot be excluded from the gospel. The realistic, as opposed to the Romanticist, Agnostic, or Monistic view, is the one with which Christianity arose, and by which alone, it would seem, it can move and win the world's conscience and heart to God.

vii. A POSITIVE STATEMENT.—**1. A double presupposition.**—We assume that we must conceive of God in terms of personality as self-conscious Will. We cannot believe in the possibility of an absolute personality unless we see that the finite personal nature of man contains elements which act only, even within our limits, in virtue of their capacity for, or tendency towards, an infinite content. Reason, feeling, and will have each their infinite or absolute side. It was the supreme gift of Kant to modern thought to make this clear through his three *Critiques*. It is in this fact that the speculative ground for an Incarnation must once for all be laid.

**2. The historic consciousness.**—(*a*) *A unique form of consciousness.*—That which we find in the Person of the historic Christ is neither a consciousness working wholly within human limits, nor a consciousness possessed of actually infinite knowledge and power (or of the sense of actual achievement and victory), nor a life in which there is a constant oscillation between the finitude of the human and the infinitude of the divine, as if they were mutually exclusive. It is a type of conscious will which is apparently consistent with itself, and able to enter into real relations with us, 'full of grace and truth,' possessed at once of human and superhuman knowledge, purity, and power. The Christian consciousness has never rested itself on His mere and complete identity with us. For mankind has had

many geniuses, many saints, many prophets, and they are all dead. It is the infinite difference of Christ from us that has made an infinite difference for us. It is what is more than human in Him, even in His sympathy, that has transformed the meaning of life from despair to a glorious hope in God. But the 'more than human' is human. And this must be possible if God and man are spiritual, conscious beings.

(*b*) *The superhuman 'aspect' or 'element.'*—That which we see is a consciousness which is fundamentally of the same type as the human, and yet working in a range more than human. Human it is in that (1) He *grew* in knowledge, knew what it is to face the coming task and wrestle with actual problems of His own life; (2) He depended on God, found Himself, as all men do, resting on the invisible Controller of all; (3) He was open to all the physical experiences of mankind. Superhuman it is in that (1) He possesses direct superhuman knowlege of God, and that not by prophetic inspiration but in virtue of a Sonship relation, whatever that may be (Mt 11[25ff.]); (2) He is conscious of the flawless will—of perfect moral harmony with God; (3) He reveals Himself as in a unique, supreme, redemptive relation with the whole race of mankind; (4) He, in claiming Messiahship and universal Lordship, was conscious of a future relationship to mankind, *i.e.* of the continuation of his control of history after His own death, and of His supremacy over nature.

(*c*) *The problem of every human birth and this problem.*—In solving the problem of this Person it is much more important than theologians realize to remember that we have not yet explained the ordinary human individual. How does the new human individual arise? By what process is, not only the physical, but the physico-spiritual, nature constituted? Is there a universe of life distinct from the physical, as O. Lodge supposes? Is there a universe and an evolution of mental facts or natures distinct again from impersonal life as well as from the physical? Is there a unity of the universe of mental or spiritual facts such that *there* the facts which become fulfilled as human personalities are already of various grades within that unity? If, out of that non-physical universe of mental living facts, one of a unique kind, but identical in type with the human, should enter into the stream of human life, evidently the history of the resulting individual must manifest at least some of the very characteristics which we have enumerated above. If, then, the question is asked how this self-conscious fact is related to that of the parents (or parent), we must answer that no discussion of that is possible till we know how the self-conscious fact in the ordinary human babe is related to the self-conscious nature of the father and mother respectively. What is it, if anything, that enters from the mental structure of the parents into that of their child? What is evident in the case of Jesus is that through the processes of human birth an individual has arisen whose self-conscious nature manifests itself as of a new type. The basis of His being as a Man must have some difference in it, to account for the difference in His active consciousness.

(*d*) *A new kind of historic self.*—The question of the ancient Church, whether this new individual has all the 'parts' of human nature, such as body or soul or spirit, is entirely irrelevant here and for us. And we shall make no headway till we see that irrelevancy. Human nature is not composed of 'parts' peculiar to itself (in that ancient sense); *e.g.*, it shares its physical history and nature with the lower animals. It shares its mental and spiritual nature, perhaps, with innumerable orders of beings, whether below or above its own peculiar structure and capacity, which are at any rate different in their present sphere and mode of action. This individual, Jesus, is not just 'humanity,' whatever that is, *plus* some element that is not human. This is not a human personality of the ordinary type with another non-human personality tied to him by some inconceivable *nexus*, any more than it is simply a man of unusual mystical piety living close to God. This is a new type of personality which has arisen within the processes of human life. It is human, yet more than human, somewhat as man is truly animal and more than animal, yet not a 'monster.' This new type of personality manifests all the fundamental traits of human nature. Dependence and growth, instinct, intuition and reasoning, moral insight and love, are all manifested in the life of Jesus. His life employs the fundamental categories of the human understanding. Yet there is a strange quality and intensity, and a range, in his use of those powers which the Christian Church, even from the first group of disciples, always recognized as more than merely human. The absence of sin alone reveals the inhabitant of another moral universe than ours. The sense of authority over all men for time and eternity puts Him in a different relation with time and eternity. And this, we may assume now, is no mere exaggeration of human ambitions or wildness of apostolic devotion. It is the very revelation of the meaning and purpose and reality of the will of God. And yet again it is just because that which is superhuman in this new and wondrous type of personality is so human that it breaks and makes again our broken hearts. It is the vision of the capacity and tendency of our human personality as fulfilled in this unique personality that at once rebukes and inspires our conscience and our will. It is not a man raised to the degree of a Christ, but another mind and will than ours, and yet ours in type, that has entered into all the fundamental conditions and processes of our human life, for love of man and with the heart of a redeemer beating in His breast. The vice of Apollinarism was not that it sought to discover a deeper and organic basis for the unity of the divine and human in Christ, but that, after asserting the essential identity in type of the divine and human, it then set them over against one another in its analysis of human nature into three 'parts' and its subtraction of one of them to make place for the Logos.

**3. Three questions.**—But we must now approach the matter from the other side and ask ourselves (*a*) What or who was this self-conscious mental being or fact? (*b*) How did He enter into this new relation with human life? (*c*) What difference did this new relation make to Him?

(*a*) In answer to the first question, we must note the following facts. (*α*) Theology does not say without careful discrimination that God became man. The Johannine thought distinguishes the Logos as an element in the being of God, and the Logos is a form of conscious will, for He is the eternal Son. 'He became flesh.' The Pauline conception likewise distinguishes the Son from the Father and speaks of God 'sending His Son,' of Christ 'emptying Himself' of the 'form of God' in which He existed.

(*β*) We must never conceive of this union of God and man in Christ either so as to make it merely mechanical or, at the other extreme, so as to reduce it to a piece of human sentimental idealism. It is God through His Son, or the Logos in the name of and for the whole nature of God, entering into the conditions of human life. Hence we must carry through the fundamental idea of Apollinaris more vigorously than he did, and so escape his fatal error. For the NT and indeed the mind of

the ordinary, healthy-minded, non-theological believer have always assumed that the mind and will of Jesus were more than human, just as they have always assumed that the mind and will of God are *mind* and *will*, and therefore of one type with mind and will in us. The self-conscious being, the pre-existent Christ, the Son of God, entered as an individual, vital, and mental organism into the process of physical, organic history in the womb of His earthly mother, and grew up among men as a new type of human personality. To nickname the resultant person a 'monster,' 'neither God nor man,' etc., would be in our day and in our richer and more complicated universe a mere outrage of careless thought. The principal point is that there must be some analogy between the manner of this supreme Incarnation and the manner of that other kind of incarnation which takes place in the case of every self-conscious personality that is born into our world. But we cannot identify or discuss that analogy until natural science and psychology have combined to tell us the manner in which the ordinary being is fashioned in one person out of spirit, or living mind, and flesh.

(*b*) In answer to the second question, we must make the following observations. (*α*) This is not a completely new problem for theology. In principle the same problem is presented by the very fact of creation, and of creation in all its grades, and of these grades in all the stages of their evolution or co-ordination in the process of time. How is God inwardly and actively related to anything that is not God? This is the battle-ground of pantheism and theism. How is His mind related to any other mind? That is the battle-ground of idealism and its doctrine of knowledge. How is His will related to the freedom of the human will? That is the battle-ground of determinism and the doctrine of moral responsibility. Now this great problem, how the divine and eternal One could clothe Himself with the forms and conditions of human experience, so far even as to 'taste death' Himself, is as a problem the climax of all the preceding problems. They, as it were, lead up to it. The question, How does the divine mind work in relation to any process in time and space? is simply the vestibule of this grander problem—how the divine mind, which must have its distinctive experience of time and space, clothed itself in the conditions of human, temporal, and spatial experience in the Person of Jesus Christ.

(*β*) The answer must be found in either of two forms of statement, if we once decline to rest either in the unreasoned but not unreasonable positivism of communal faith or in the reasoned positivism of the agnostic.

(1) The Son of God did by a supreme act of will as it were withdraw the range of action of His powers, and by the same act did enter through a human birth into the organic physical conditions and thus into the relations of a dependent being in the midst of human society.

(2) The Son of God did by an act of His divine will add to the relations or range of action of His will and mind the historic experience of a human being. While active ever in all other directions, He resolved in one direction, *i.e.* in His conscious relations with mankind, as it were, to bind the organic process of man's life in a new relation to Himself, *i.e.* to quicken into organic action, in the womb of Mary, the principle of life and consciousness which ripened into the man Jesus, so that through that definite and restricted, or rather definite and newly opened, channel of communication with the inner side of man's life he should receive into His eternal conscious self the very experience of a human being (this view is partially worked out by Frank Weston, *The One Christ*, London, 1907). The difficulty that this suggests two centres of consciousness in the life of the Son of God is not so heavy nowadays. The modern view of the complexity, the varied centres and elements, of our own human consciousness is making us less confident that two or more centres of consciousness are inconceivable. And Sanday's suggestion concerning the subconscious as the *locus* of the Incarnation, when more thoroughly worked out, may prove valuable to this theory.

(*c*) This has led up to the third question: For what did the Incarnation take place? Can we dare to say what difference this new relation of God and man made for God? It seems obvious that, if it has made an infinite difference for man, that result must rest upon a corresponding difference it has made for God (doctrine of Atonement). The essential thing regarding the general idea or form of that difference may be presented in this way. (*α*) The idea of the identity of original type between the divine and human natures must not make us imagine that the gulf between the Creator and the creation is abolished, or bridged, or even lessened. Still the separation of the creation from the Creator is infinite both in idea and fundamental fact. (*β*) Now there must be a meaning to that difference on each side of the gulf—which is peculiar to that side. It is quite evident that man can never come to experience the reality of that self-dependence which belongs and can belong alone to God. Man's effort to taste it is the root in each man's life of his most dismal and destructive sin. He cannot cross the gulf and feel and act as God. But does the same restriction apply to God? All else in His creation lies open perfectly to His mind and will. There is no secret in the nature or action of matter, in the insensate life of the plants, or in the blind impulse of the animal, which does not lie completely open to His mind. There is nothing there to experience. In these facts a finite content unfolds itself fully and in all its beauty to the divine mind which willed it all.

But in man is it so? Here all the reality of creaturehood is gathered up with the infinitude of a subjective, rational, moral, conscious experience; dependence — or creaturehood — is felt, thought, realized through all the range of human activity in a unique and supreme manner. There is something here that not even a divine observer possesses or realizes by observing. His sympathy is wondrous, but yet it is sympathy across the gulf. His deep, infinitely deep, observation of man's experience can never be a substitute or full equivalent for that experience. To see and understand dependence is not the same as to live by its virtue; to create, trace, and watch growth is not the same as to grow; to measure the sorrow of that other creaturely heart even to the last quiver of its subtlest and deepest thrill of pain is yet not to know it as the subject of it. Even to taste God's pain is different from tasting man's. Now the Incarnation means that there is this one final fact in His universe with which God would completely identify Himself, one fact not yet made His own which could become His own only in one way. Can He cross the gulf? Can He, the eternal divine Will, who has tasted what it is to be a Creator, and to rule, and inform, and bear the conscious burden of all the universe of dependent beings, can He yet put our own peculiar cup to His lips and taste even that human dependence itself—on the human side—in its very essence? The Babe at Bethlehem, the tired Physician in Galilee, the praying Servant of Jahweh, the Man on the Cross with the broken heart—what if all that means that *He* has tasted what it is to be a man? And, in love.

LITERATURE.—The immense range of literature on this subject makes any selection seem meagre and arbitrary. The following list includes some already named in the course of the article.

i. ON THE LIVES OF CHRIST.—A. Schweitzer, *Von Reimarus zu Wrede*, Tübingen, 1906, Eng. tr., *The Quest of the Historical Jesus*, London, 1910 (gives a very large list of titles); H. Weinel, *Jesus im neunzehnten Jahrhundert*, Tübingen, 1903–04; W. Sanday, *The Life of Christ in Recent Research*, Oxford, 1907; E. Digges La Touche, *The Person of Christ in Modern Thought*, London, 1912. See also artt. *s.v.* in *HDB* (W. Sanday), *SDB* (W. P. Paterson), *EBi* (A. B. Bruce), *DCG* (many artt.; valuable series in Appendix, vol. ii. p. 849), *Die Religion in Geschichte und Gegenwart* (W. Heitmüller and O. Baumgarten), and *PRE* (O. Zöckler).

ii. ON THE SOURCES.—(1) Introductions to NT.—S. Davidson[3], London, 1894; F. Godet, Eng. tr., Edinburgh, 1894–99; G.

Salmon[8], London, 1897; T. *Zahn*[3], Eng. tr., Edinburgh, 1909; B. W. Bacon, New York, 1900; A. S. Peake, London, 1909; W. C. Allen and L. W. Grensted, Edinburgh, 1913. (2) The Gospels.—B. F. Westcott, *Introduction to the Study of the Gospels*[7], Cambridge, 1888; A. Wright, *The Composition of the Four Gospels*, London, 1890; J. C. Hawkins, *Horæ Synopticæ*, Oxford, 1899; E. de W. Burton, *Some Principles of Literary Criticism and their Application to the Synoptic Problem*, Chicago, 1903; J. Wellhausen, *Einleitung in die drei ersten Evangelien*, Berlin, 1905; P. Wernle, *Die Quellen des Lebens Jesu*, Halle, 1904; A. Harnack, *Neue Untersuchungen*, etc., Leipzig, 1911; F. C. Burkitt, *The Gospel History and its Transmission*, Edinburgh, 1906, *Earliest Sources for the Life of Jesus*, Boston and New York, 1910. (3) The Fourth Gospel.—B. W. Bacon, *The Fourth Gospel in Research and Debate*, London, 1910; W. Sanday, *The Criticism of the Fourth Gospel*, Oxford, 1905; J. Drummond, *The Character and Authorship of the Fourth Gospel*, London, 1903; E. F. Scott, *The Fourth Gospel: its Purpose and Theology*, Edinburgh, 1906.

iii. The historicity of Jesus.—A. Kalthoff, *Das Christus-Problem*, Leipzig, 1902; A. Drews, *Die Christusmythe*, Jena, 1911; W. B. Smith, *Der vorchristliche Jesus*, do. 1906, *Ecce Deus*, do. 1911; S. J. Case, *The Historicity of Jesus*, Chicago, 1912; T. J. Thorburn, *Jesus the Christ: Historical or Mythical?* Edinburgh, 1912; F. C. Conybeare, *The Historical Christ*, London, 1914.

iv. The consciousness of Jesus.—Practically all recent extended studies in the Life of Christ include this topic. Among important titles are these: W. Baldensperger, *Das Selbstbewusstsein Jesu*[3], Strassburg, 1903; J. Denney, *Jesus and the Gospel*, London, 1908; W. Bousset, *Jesus*, Halle, 1904; N. Schmidt, *The Prophet of Nazareth*, New York, 1905; W. P. DuBose, *The Gospel in the Gospels*, London and New York, 1906; C. F. Nolloth, *The Person of our Lord and Recent Thought*, London, 1908; A. Harnack, *Das Wesen des Christentums*[5], Leipzig, 1900, Eng. tr., *What is Christianity?*[3], London, 1904; P. Wernle, *Die Anfänge unserer Religion*, Tübingen[2], 1904, Eng. tr., *The Beginnings of Christianity*, London, 1904; W. Wrede, *Das Messiasgeheimnis in den Evangelien*, Göttingen, 1901; H. von Soden, *Die wichtigsten Fragen im Leben Jesu*, Berlin, 1904; C. Ullmann, *Die Sündlosigkeit Jesu*[7], Gotha, 1863, Eng. tr., *The Sinlessness of Jesus*[7], Edinburgh, 1901; C. Hennemann, *Die Heiligkeit Jesu als Beweis seiner Gottheit*, Würzburg, 1898; T. Adamson, *Studies of the Mind in Christ*, Edinburgh, 1898; A. E. Garvie, *Studies in the Inner Life of Jesus*, London, 1907.

v. The doctrine of the Person of Christ.—(1) Collections of the Creeds.—A. Hahn, *Bibliothek der Symbole und Glaubensregeln der alten Kirche*[3], ed. G. L. Hahn, Breslau, 1897; P. Schaff, *Creeds of Christendom*, 3 vols., London, 1877. (2) Histories of the doctrine.—I. A. Dorner, *History of the Development of the Doctrine of the Person of Christ*, Eng. tr., 5 vols., Edinburgh, 1863; general Histories of Doctrine: A. Harnack, Eng. tr., 7 vols., London, 1894–99; G. P. Fisher, Edinburgh, 1896; R. Seeberg, 2 vols., Leipzig, 1898; F. Loofs, *Leitfaden*[3], Halle, 1893. (3) Modern Christology.—E. Günther, *Die Entwicklung der Lehre von der Person Christi im xix. Jahrhundert*, Tübingen, 1911; A. B. Bruce, *The Humiliation of Christ*[3], Edinburgh, 1881; W. Sanday, *Christologies Ancient and Modern*, Oxford, 1910; R. L. Ottley, *The Doctrine of the Incarnation*, 2 vols., London, 1896; H. R. Mackintosh, *The Doctrine of the Person of Jesus Christ*, Edinburgh, 1912. (4) Some special discussions.—H. M. Gwatkin, *Studies of Arianism*[2], Cambridge, 1900; H. Schultz, *Die Lehre von der Gottheit Christi*, Gotha, 1881; A. M. Fairbairn, *Studies in the Life of Christ*, London, 1881, *Philosophy of the Christian Religion*, do. 1902; C. A. Briggs, *The Messiah of the Gospels*, Edinburgh, 1894, *The Messiah of the Apostles*, do. 1895; *Ecce Homo*[8], London and Cambridge, 1866.

W. Douglas Mackenzie.

**JESUS CHRIST IN JUDAISM.**—The relations between Judaism and Christianity have seldom been friendly. The early Church soon discarded its Jewish element; and, in the centuries during which Christianity had the power to persecute, the Jewish people were thought of, not as the natural kindred of Jesus, but as those who had rejected and killed Him. There was seldom a good word for the Jews, except from those who were not Christians. Jews, on their side, had no reason to love the Christians, or to say any good of them. The coming of Christ into the world had perhaps brought blessing to the Gentiles; but to Israel it was the herald of suffering, more severe and more prolonged than any which had been endured in the earlier ages.

It would not be unreasonable to expect that the Jews, in their literature, should be most bitter against the founder of the Christian religion, as being the primary source of all their misery; yet that is not the case. The remarkable fact about the Jewish literature, whether of the Talmudic period, or of the Middle Ages, or of our own day, is the infrequency of any reference to Christ Himself. There is plenty of polemic against Christians mainly in regard to doctrine. The Jews were never at a loss to defend their religion, in all its length and breadth, against Christian attack; but they said very little about Jesus. The main reason was that they had very little to say. No doubt, the knowledge that anything that they might say about Him would be unfavourably judged made them reticent in times when persecution was to be feared. But, apart from that, they really knew very little about Him, and had no interest in knowing more. Only in recent times has there been, on the part of the Jewish writers, a real desire for fuller knowledge of the historical facts concerning Him, and a recognition that there was something to be learned which Israel would be the better for knowing.

The period covered by the Talmud includes the birth of Jesus and the rise of the Christian Church. In the Talmud, accordingly, and the cognate literature will be found whatever the Judaism of the first five centuries after Christ has to say about Him. Something is said; but the amount is extremely small, and the statements are seldom of any importance. There is enough to show that the person mentioned in the tradition of the schools under the names of Ben Pandîrâ, Ben Sṭadâ, and J$^{e}$shû-ha-Nôṣrî, was certainly the historical Jesus; but the tradition about Him is very scanty, and adds nothing to what is known from the Gospels.

When collected together, the references to Jesus in the Rabbinical literature may seem not inconsiderable in quantity and contents, and the reader may get the impression that they form a more important element in that literature than they do. It is, however, a complete mistake to suppose that in that literature there is an undercurrent of hostility to Christianity or to its founder. The Rabbis were thinking of their own religion, not of any other; and when, in a passing allusion, a chance remark here and there, they did refer to Jesus, it was only by way of a marginal note, so to speak, illustrating their argument; it was not for any intrinsic importance of the subject. There does not seem to have been, in the mind of any of the Talmudic Rabbis, a recognition of the greatness of Jesus. He was remembered, so far as He was remembered at all, as the man who had chiefly brought dissension to Israel, and the nearest approach to a defined opinion about Him in the Talmud is the statement (Bab. *Sanh.* 107*b*) that 'he practised magic and deceived and led astray Israel.' Round that statement there gradually gathered stray bits of gossip about Him, coarse allusions to His birth, reminiscences of His trial, and the like, having sufficient resemblance to the gospel narrative to show who is referred to, but not enough precision to be of any value as independent evidence. It is more likely that they were based on what was learned from intercourse with Christians than that the Rabbis themselves read the Gospels. But the point at present is that Jesus was of very small account in the range of ideas expressed in the Rabbinical literature of the first five centuries. He belonged to Christianity; and Judaism went its own way, caring nothing for Him or for the religion that He founded.

The Talmudic period was one of much hardship for Israel, but not specially on account of Christian oppression. Indeed, the Talmud does not seem to mention Christian oppression of the Jews. It does refer to the adoption of Christianity as the religion of the empire, but does not connect therewith any especial display of hostility towards Israel. In the Middle Ages, on the other hand, the Christians sought to oppress the Jews, and the attitude of the latter towards Christianity and its founder naturally underwent a change. They were put on their

defence when charged with holding false doctrine, and especially with speaking blasphemy against Jesus. Converted Jews were able to tell their Christian brethren of the unseemly passages in the Talmud which referred to Him, and the Christian controversialists eagerly caught up the weapon. What use they made of it may be seen in the *Pugio Fidei* of Raymundus Martinus (13th cent.; ed. Paris, 1651). The defenders of Judaism met the attack, so far as it related to Jesus, by asserting that the person referred to in the abusive passages of the Talmud was not the Jesus who founded Christianity, but another Jesus, who had lived nearly a century earlier; and a good deal of attention was given by mediæval Jewish writers to the chronological argument by which this assertion was supported.[1]

But the attack was directed not against the Talmud alone. The book just mentioned, the *Pugio Fidei*, reproduced the whole (so far as known to the writer) of an anonymous lampoon upon Jesus, bearing the title of *Tôl'dôth Y'shû'* (ed., *e.g.*, E. Bischoff, Leipzig, 1895). Traces of this book can be found as early as the 9th cent., and it was probably of German origin. It is a connected story, based on the Talmudic references to Jesus, and amplified in a manner which was, no doubt, intended to be witty, but is now very dull. The coarse allusions in the Talmud are made the most of; and the whole book is disagreeable. Editions of it are still published in our own day, but it would be unjust to say that it is representative of Jewish thought about Jesus. It represents the miserable revenge of the persecuted Jew of the baser sort for the sufferings which he endured at the hand of Christians; but it has never been acknowledged by the leaders of Judaism as anything more than an unseemly satire. Judaism has borne its martyrdom in a nobler spirit than that which produced the *Tôl'dôth*; and the attitude of mediæval Jews is defined with far greater accuracy in the polemic which disclaimed any intention of discourtesy towards Him than in the petty malice which made a burlesque of Him. In other words, the Jews of the Middle Ages would have left Him alone, if they had not been compelled to speak of Him in self-defence.

Coming to modern times, we find a change in the attitude of Jews towards Jesus, not indeed shown by all Jews, but exemplified in some of their most eminent writers. Probably it is true of the great mass of Jews, whose circumstances have kept away from them the influences of modern thought, that they have no idea about Jesus at all, except as of one who did harm to Israel long ago; but, where increasing security and liberty allowed Jewish scholarship to profit by modern methods of research, there has been a breaking away from the old position of silent hostility to, or unwilling mention of, Jesus. The first to lead the way in this new direction was I. M. Jost, who wrote with warm indignation of the way in which the saint and martyr of Nazareth was treated (*Gesch. des Judentums*, Leipzig, 1857-59, i. 398-409).

The line thus opened up by Jost was followed by Graetz, whose *History of the Jews* (*Gesch. der Juden*, ed. 1863, iii. 222-252) would be memorable for its treatment of Christianity, if for nothing else. Graetz boldly expressed his admiration for Jesus, whom he regarded as an Essene, misrepresented no less by the flattery of his followers than by the malice of his enemies. The sketch of Jesus given by Graetz is no doubt open to much criticism; but the point is that it was seriously meant as a portrait, and was an attempt to do justice to Jesus from the side of Judaism. Naturally, the Jewish historian does not see in Him what most Christians see. He describes a purely human Jesus, and does not admit into his portrait by any means all that Christians would include in the humanity of Jesus. But, with all its shortcomings, Graetz's account of Jesus is far above anything that Judaism had ever said on the subject up till then.

Neither Graetz nor Jost wavered in the slightest degree in his loyalty to Judaism, but both showed themselves able to rise high above the barriers of religious difference, and to express as well as to feel a real admiration for the founder of that religion which had wrought such evil for Israel. The example of Graetz and Jost has made it impossible for Jewish writers, even of more conservative tendencies, to revert to the former attitude towards Jesus. I. H. Weiss is one of the more conservative scholars; but in his *Dor Dor we-Dorshaw* (5 vols., Vienna, 1871-91), i. 232-234, he writes of Jesus with respect, though not with enthusiasm.

The *JE* contains a long article on Jesus, besides many incidental references to Him in other articles; and in all of these, notably in that especially concerned with Him, there is a free and candid recognition of the nobility of character of Jesus. Naturally, the writers press the likeness between His teaching and that of the Rabbis of the Talmudic period, and are somewhat unwilling to admit His originality; but they frankly own that He must have been a great man, raised up by God for the work that He did. A Jew could hardly be expected to go further than that.

The extreme limit hitherto reached in Jewish appreciation of Jesus is seen in the writings of C. G. Montefiore, notably in his *Synoptic Gospels* (London, 1909). That a Jew should write such a book at all would have been thought impossible only a few years ago, and perhaps Montefiore is the only one who could do so even now. The treatment of the subject is quite different from that which a Christian would apply; there is a frankness of criticism in regard to Jesus from which most Christians would shrink, or for which they would see no necessity. But there is also a whole-hearted admiration and even reverence for Jesus which is all the more striking because it is entirely free from theological convention. Judaism can scarcely get nearer to Jesus without ceasing to be Judaism. Be that as it may, it is from the side of Judaism that there has come this latest and fullest recognition of the greatness of Jesus, as seen by other than Christian eyes. And, in giving it, Judaism has made a noble return for what has been done to her in the name and by the professed followers of Christ.

**JESUS CHRIST IN MUHAMMADANISM.**—See QUR'ĀN.

**JESUS CHRIST IN ZOROASTRIANISM.**—Christianity attained to considerable importance in Sasanian Persia (cf. J. Labourt, *Christianisme dans l'empire perse sous la dynastie sassanide*, Paris, 1904), and, though it is true that the Christians never reached a high proportional number, their religion became of sufficient significance to warrant Zoroastrian theologians in attacking it. In their polemic the figure of the founder

[1] The theory is worked out by David Gans, *Zemaḥ Dawid*, ed. 1785, pt. ii. p. 12b; Abarbanel, *Majane Jeshua*, Ferrara, 1551, p. 67a; Salman Zebi, *Jüdischer Theriak* (cited by J. A. Eisenmenger, *Entdecktes Judentum*, abridged ed., Dresden, 1892-93, i. 231); Abraham Perissol, *Maggen Abraham*, pt. ii. ch. 59 (cited by Eisenmenger, i. 250 f.).

of Christianity was not spared, especially in *Dāṭistān-i-Dīnīk*, xxxvii. 90–92, and *Sikand-gūmānīk Vijār*, xv., both documents dating from the latter half of the 9th century. The former passage, in condemning 'the compiled sayings of the Abraham of the Christians, which are the word of him who is also called their Messiah,' criticizes the declaration that Christ has died and yet is not dead.

The important passage is the second. This begins by assailing the doctrine of the Virgin Birth, which is declared to rest merely on the assertion of a woman 'who was known for incapacity' (a term which the Skr. version takes to mean 'misconduct'). If Christ is the Son of God, He, 'through sonship to the sacred being, is not otherwise than the meaner creatures which the sacred being produced and created'; and, if He was born, He must die like all other creatures. To the author, Martān-farux, it was incredible that, if Christ was identical with God, God would descend 'into the womb of a woman who was a Jew,' and, finally, be put to an ignominious death. The Crucifixion is attacked for two reasons: if it were to demonstrate the fact of the resurrection of the dead, it might have been proved in some other way unless the divine knowledge is finite; if it were 'accepted by him, as a yoke of a new description, through his own will,' the executioners should not have been cursed by Christ (based on a distorted reminiscence of Mt $23^{29.\ 34-36}$, Lk $11^{47-50}$).

The doctrine of the Trinity is also assailed. Assuming the truth of the Christian statement:

'that the father and son and pure spirit are three names which are not separate one from the other, nor is one foremost, and this, too, that, though a son, he is not less than the father, but in every knowledge equal to the father, why now is one to call him by a different name?' (*Sik.-gūm. Vij.* xv. 46).

Again, the equality of the Persons in the Trinity is assailed, and it is alleged, on the basis of Mk $13^{4.\ 32}$, that the Son cannot be equal to the Father in knowledge. It is further argued that the Jews slew Christ at the will of the Father, whence, with an allusion to Mt $10^{29}$, ground is sought for an attack upon the tenet of the freedom of the will; and attention is called to the fact that, whereas Christ declared that He came not to destroy, but to fulfil, the law and the prophets (Mt $5^{17}$), 'all his sayings and commands were those that are dissipaters and afflictive for the rules and laws of Moses.'

Perhaps the most noteworthy philosophical argument advanced, in view of the strongly dualistic trend of later Zoroastrianism (see art. DUALISM [Iranian], vol. v. p. 111 f.), is that the author of the 'Doubt-Dispelling Explanation' assumes throughout his polemic that Christianity holds that God is the sole Creator, and, therefore, must have been the source of evil as well as of good, whereas the NT plainly shows a belief in a separate power of evil (cf. §§ 18–24, 63–70, 77–89, 97–151).

The precise source from which the polemist drew is yet to be discovered, but, as one of the proper names occurring elsewhere in the treatise betrays a Syriac origin (West, *SBE* xxiv. p. xxviii), it was probably derived from faulty reading of a Syriac version—or a translation from a Syriac text—combined with reminiscences of Christian doctrine current in Persia.

## JESUS, SOCIETY OF.—See JESUITS.

**JEWEL** (Buddhist).—The 'jewel' (Pāli *ratana*, Skr. *ratna*, also *maṇi*) plays a prominent part in the cult and terminology of Buddhism, throughout all sections of that religion. This conspicuousness of its symbolism in practical Buddhism is, we shall show, owing to the fact, not hitherto recognized, that this symbolism incorporates the deeply rooted archaic belief in the magical efficacy of the fabulous wish-granting gem as the means of procuring long life and immortality. Our inquiry into the source of this symbolism sheds much new interesting and important light upon the question of Buddhist origins.

**1. Prevalence.**—The epithet of 'jewel' is applied to Buddha not only as the first member of the 'Buddhist Triad' or 'Three Jewels' (*Tri-ratna*) in whom every professing Buddhist must take his or her 'refuge' (*śaraṇam*), but also independently. For that saint is described in the earliest Pāli canon[1] as the possessor of 'the seven jewels' (*saptaratna*), which are essentially the attributes of the highest Brāhmanical deity as 'monarch of the universe' (Chakravartin [*q.v.*]; see also below), and are, we find, traceable to remote pre-Vedic antiquity. The sacred texts expressing this 'jewel' symbolism are in universal use, throughout Buddhistdom, both 'north' and 'south,' as prayers and luck-compelling magical spells.

**2. Origin of the symbolism.**—In attempting to trace the origin of the 'jewel' symbolism of Buddhism, we find that originally the term *ratna* in the Vedic age (*c.* 1200–400 B.C.), including Buddha's day, denoted a 'treasure' rather than a 'jewel,' such as it came to mean in post-Vedic India;[2] so that it embraced living personages as well as gems (properly *maṇi*). In two early hymns of the Rigveda (V. i. 5, and VI. lxxiv. 1 f.) the deity who is henotheistically the supreme god of the universe, in the form respectively of Agni (Fire) and Soma-Rudra,[3] is the possessor of 'the seven treasures' (*saptaratna*). He is invoked in both cases with the identical words (put into the mouth of the mythical fire-priest Atri, in the first instance):

'Bestow the seven treasures on every house, be a blessing to our two-footed, and a blessing to our four-footed [creatures]!'[4]

Upon the number 'seven' in this stanza Macdonell writes[5] that 'the *sapta* has probably no specific significance here; but is simply a vague expression equivalent to "all," as so often it is in the Rigveda in connection with many other words besides *ratna*.' However this may have been at the period when these hymns were composed (*c.* 1000 B.C.), it is certain that at the time of the Vedic commentary, the *Bṛhad-Devatā* (*c.* 400 B.C.),[6] the expression had become literally restricted to the number 'seven' and formed a definite category. For that commentary explains this particular verse as referring to 'the seven treasures of all Chakravartins,' and it specifies them as 'the wheel, car (*ratha*), jewel, wife (*bhāryā* = espoused wife), territory (*bhūmi*), horse, and elephant.'[7] The evidence of this early commentator is against the view that terrestrial treasure, such as gold, silver, etc., was intended.[8] This appears to be the first detailed list of the divine treasures; and it must take precedence over the list in the Buddhist Pāli canon, which, by its mythology, indicates for its compilation a date not earlier than the 1st cent. B.C.[9] The reference in the same extract to multiple

[3] 'Rudra,' also called the great god, 'Mahādeva,' is in the Vedas a form of Agni (Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 75 f.).

[4] *Dame-dame sapta ratnā dadhānā*
*śaṁ no bhūtaṁ dvipade śaṁ chatuṣpade*

(Rigveda v. i. 5, VI. lxxiv. 2). The translation is kindly supplied by Macdonell.

[5] In a letter to the author.

[6] Macdonell, *Bṛhad-Devatā*, Cambridge, Mass., 1904, Introd. p. xxiii.

[7] *Ib.*, text, p. 59; tr. p. 198.

[8] There is a category of seven precious minerals also called *saptaratna*, though post-Vedic in date, namely gold, silver, pearl, beryl (*vaidurya*), diamond or crystal, coral, emerald (cf. R. C. Childers, *Dict. of the Pāli Lang.*[4], London, 1875, p. 402; E. J. Eitel, *Handbook of Chinese Buddhism*[2], Hongkong, 1888, p. 148).

[9] L. A. Waddell, 'Evolution of the Buddhist Cult,' *Asiatic Quarterly Review*, xxxiii. [1912] 140 ff.

Chakravartins, or 'universal monarchs,' does not necessarily imply that those personages were yet considered to be human, as they become in later Buddhist and Brāhmanical literature—for the references to human Chakravartins in the *Mahābhārata* are also probably later intrusions, as they occur in the composite episodes exhibiting the characters of the *Purāṇas* and presumably of no earlier date than the latter (*c.* 1st cent. A.D.). These multiple Chakravartins are probably the subdivided forms into which the supreme creator was considered in the later Vedic period to resolve himself, the series of active creators, *Prajāpati*, or *Puruṣa*.

**3. Assyrian (?) source of 'the seven treasures.'**—The detailed list in the *Bṛhad-Devatā* and Buddhist texts indicates the important fact, apparently not hitherto recognized, that these seven treasures were the famous divine treasures of life and immortality won by the gods of light in their great struggle against the powers of darkness and the deep, in the contest termed by the Indians 'the churning of the ocean'[1] (an appropriate metaphor for a pastoral people whose staple food was largely obtained by churning). This conflict, forming a chief episode in the *Mahābhārata* and *Rāmāyaṇa* epics, whilst incorporating a rude version of the cosmic struggle of Nature's forces in evolving the universe from chaos, marks also, in the view of the present writer, the final breaking away of the Indo-Aryans from the Assyrian gods which their Aryan ancestors had borrowed from their western neighbours when in Iran.[2] For it is the Asuras who seize the great serpent of the deep by the hood and thus stir up from the ocean the treasures of immortality. Now, the great Asura of the Rigveda is the serpent-hooded god of the sky, Varuṇa, the Ouranos of the Greeks, who is now admitted to be identical with the supreme god Ahura (*i.e.* Asura) of the Zoroastrians,[3] and further traced by the present writer to the 'Assur' of the Assyrians.[4] The epics relate that the Asuras who had gained the ambrosia and other treasures of divinity were then deprived of them by stratagem and put to flight. Thus the pre-Vedic, non-Indian, and presumably Assyrian origin of these 'Indian' and 'Buddhist' treasures is now probable.

The order in which the treasures emerged from the deep during this conflict was, according to *Mahābhārata*, i. 18 (*c.* 500–400 B.C.),[5] as follows (the corresponding number in the *Bṛhad-Devatā* is added within curved brackets and in the Buddhist list within square brackets):

1. 'The mild moon of a thousand rays' (1) [1].
2. *Śrī* (the goddess of Good Fortune) (4) [5].
3. Surā the goddess (5) [7].
4. 'The white steed fleet as thought' (6) [3].
5. 'The celestial gem *Kāustubha* which graces the breast of Nārāyaṇa' (3) [4].
6. 'The divine *Dhanvantari* (celestial physician) with the white cup of ambrosia in hand' (2) [6].
7. '*Airāvaṇa*, the great Nāga taken by the Thunderbolt-holder' (7) [2].

The next and last object to issue from the waters at this 'churning' was the world-destroying poison *Kālakūṭa*, which cannot be considered one of the 'treasures,' but rather their antitype. Here the positive identity of five out of the seven in all three lists reveals the essential unity of the tradition. Of the remaining two, namely nos. 3 and 6, '*Surā* the goddess,' and 'the divine *Dhanvantari*,' the present writer finds, for reasons which cannot be detailed here, that the former Surā is Uṣas, the Dawn, Eos of Greek mythology. Uṣas in the Rigveda 'leads [*i.e.* precedes] the white horse, the Sun' (VII. lxxvii. 3), as in the Churned treasures, where the one immediately following her is 'the white horse,' which the present writer has identified with the Sun. She is, moreover, armed with beams of light, 'wards off evil spirits' (VII. lxxv. 1), 'wakens the five tribes' (I. cxxiv. 2), 'never loses her directions' (V. lxxx. 4), and 'renders good service to the gods.' She thus represents the 'general' of the Buddhist list (no. 7), whilst no. 6, Dhanvantari, the messenger of the gods, the present writer identifies with the car-symbol.

With this Brāhmanical list may be compared the Buddhist, in the order in which the items are cited in the Pāli canon,[1] which is the usual sequence.

| | Pāli. | Skr. |
|---|---|---|
| 1. 'Wheel of a thousand rays or spokes' | *chakka-ratana* | *chakra-ratna* |
| 2. Elephant . . . | *hatthi-ratana* | *hasti-ratna* |
| 3. Horse . . . . | *assa-ratana* | *aśva-ratna* |
| 4. Gem . . . . | *maṇi-ratana* | *maṇi-ratna* |
| 5. Wife . . . . | *itthi-ratana* | *strī-ratna* |
| 6. Household chief . | *gaha-pati-ratana* | *griha-ratna* |
| 7. General . . . | *pari-nāyaka-ratana* | *pariṇāyaka* or *senāpati-ratna* |

**4. The wheel, or 'chakra,' of the Chakravartin as the moon.**—On comparing these two lists, an important fact transpires. The first item in both, it will be noticed, is the luminary disk or 'wheel.' But, whilst this disk is invariably conjectured by Western writers to be the sun in the case of the Buddhist series, we find, on the other hand, that it is most explicitly stated in the Brāhmanical series to be the moon, and this is confirmed by the version of the 'churning' in the *Viṣṇu Purāṇa*.[2] So also it seems to have been in early Buddhism; for in the *Mahāsudassana Suttanta* it is expressly stated that 'the heavenly treasure of the wheel with its nave, tire, and all its thousand spokes' appeared to that king 'on the day of *the full moon*.'[3] And we have seen that the seven treasures (of the Chakravartin) are in the Rigveda the attributes of Soma-Rudra, that is, the dual divinity of the moon with the storm-god of the sky.

The great significance of this discovery, that the 'wheel' of the seven treasures symbolizes the moon and not the sun, is that it postulates for those symbols an extremely remote and Western antiquity, long before the Indo-Iranian period. In giving this pre-eminence to the moon, they presumably belong to that early pre-historic period when the moon was regarded as the parent of the sun, as is found in the earliest Assyrian and Egyptian myths. In that pristine cosmic myth of the evolution of light from the darkness of chaos, the moon was conceived as the luminary most intimately associated with darkness, and as traversing not only the sky, but 'the waters of the deep under the earth'; and the daily changes in its form led to its being regarded as taking a more active part in the workings of Nature than the unaltering sun. Vestiges of this primitive myth survive also in the early Vedas, and account for

1 E. Senart remarked that several of the Chakravartins' treasures are 'analogous or identical' with the treasures produced at the 'churning of the ocean' (*Légende de Buddha*, Paris, 1882, p. 44 f.)—an observation overlooked by subsequent writers; but he does not suggest any causal connexion between the two series.

the great prominence given throughout the Vedas to Soma,[1] which has the dual character of 'ambrosial elixir' and the 'moon'; for in the Rigveda 'when drunk [?eaten] by Indra-Soma . . . Soma produced the sun in the waters' (Macdonell, *Ved. Myth.*, p. 109 f.), and the conception of Soma is extended in the Rigveda to that of a being of universal dominion and 'lord of the quarters' (*ib.*).

**5. Original lord of the wheel and Chakravartin: Varuṇa.**—It is to be noted that it is Varuṇa, the great Asura ('Assur'), who alone of all the early Vedic gods is expressly the 'universal monarch' (*sam-rāj*; Macdonell, p. 24); and Soma is positively identified and associated with Varuṇa in several of the aspects of the latter (Rigveda, IX. lxxvii. 5, xcv. 4; cf. lxxiii. 3, 9; Macdonell, p. 110); and Soma is the only other god who, like Varuṇa, dispels sin from the heart (Macdonell, p. 109), punishes (slays) the wicked (*ib.* 110), confers the celestial world (*ib.* 114), and is sometimes called a 'treasure' (*rayi; ib.* 110). It was, on the other hand, Varuṇa who not only placed the sun in the sky, but also placed Soma on the rock; and it is 'by Varuṇa's ordinances [that] the moon shining brightly moves at night' (*ib.* 25). This express association of the moon with Varuṇa does not necessarily imply, as Oldenberg thinks,[2] that, although Varuṇa was primarily the moon, he remained so, as this would entail the rejection of the identity of Varuṇa with Ouranos. For Varuṇa is the Vedic god of the entire sky, including the luminaries which traverse it; and, lord of light both by day and by night, his eye is the sun (Macdonell, pp. 25, 23). The inference seems rather to be that the moon is one of the chief, as it is also the earliest, of the treasures of this great Asura, the supreme god Varuṇa. This god is brought into relation with the owners of the seven treasures, namely, Soma-Rudra, who are invoked 'to free from the fetters of Varuṇa' (*ib.* 129), thus implying that they were his agents, and presuming that the seven treasures are primarily those of Varuṇa himself as the original Chakravartin of the universe. Varuṇa, indeed, in the Rigveda possesses the 'wheel' (*chakra*) of which the nave is *trita*, 'the Soma-presser,' apparently personified lightning (*ib.* 68 f.); and the present writer has shown, firstly, that in the Bhārhut sculptures of the 3rd cent. B.C. Varuṇa is figured as the 'King of the Golden Swans' (*i.e.* the winged sun conceived as a bird, as in the ancient Assyrian and Egyptian sculptures of the sun-god) and actually bears the inscribed title of Chakkavāka (*i.e.* Chakravāka, literally, 'wheel-crane,' a title of the golden goose, or 'swan,' as sun-bird);[3] and, secondly, that Buddha was deified in his chief modes as a god (Purusa in the Pāli canon and Amitābha in the Mahāyāna) upon the model of the god Varuṇa-Chakravāka,[4] the manifest prototype of the Chakravartin with whom Buddha was early identified.

**6. The 'maṇi' gem symbolism.**—Of the seven treasures other than the first, or 'wheel,' whence the Chakravartin derives his title, the most popular is the jewel proper or 'wishing-gem,' the *maṇiratna* (or *chintāmaṇi*). This popularity is doubtless owing to its being essentially of the nature of a primitive magical amulet of the animistic period. In the Atharvaveda (*c.* 600 B.C.) the *maṇi* is ordinarily an amulet against all kinds of evil, and many sorts are mentioned.[5] In its special hymn to the *maṇi* (viii. 5) the amulet hanging from the neck is called the 'lucky repelling jewel' (*ayaṁ prati-saro maṇir*). Buddha himself refers in his *Kevaddha Sutta*[1] to the use in his day of the 'jewel-charm,' called *maṇikā vijjā*,[2] which, he says, was used for 'making manifest the heart and feelings, the reasonings and thought of other beings,' enabling its possessor to say, 'So and so is in your mind; you are thinking of so and so; thus and thus are your emotions.'

Besides its use as an amulet, the *maṇi* is identified with the thunderbolt in the Atharvaveda (VIII. v. 3), which positively says that 'it was with the *maṇi* (jewel) that Indra struck Vṛtra, that he has vanquished the Asuras, conquered the sky, earth, the two worlds, and the four regions of the atmosphere.'[3] In this sense of thunderbolt it is employed also in the *Lalita Vistara* (*c.* 1st cent. B.C., pp. 457, 466), and, it seems to us, in the Pāli canon[4] descriptive of the birth of Buddha in the *hiramaṇe* underneath the white umbrella which miraculously appeared over the infant, *hira*, 'diamond,' being an ordinary title of Indra's thunderbolt.

On the other hand, the *maṇi* is interpreted by the commentator of the Atharvaveda as the 'sun-stone' (*ādityamaṇi*),[5] and the probability that it represents the sun has something in its favour. It is described in the Pāli canon[6] as 'the beryl [like?] jewel,[7] bright, with eight facets, clear, transparent . . . its radiance penetrates a day's march (*yojana*) on every side . . . *turning night into day*.' The magic jewel in *Jātaka*, 531, which was given by Indra to Buddha in his former birth, was called 'the ever-shining' (*virochana*), an ordinary epithet of the sun; and Virochana is the title of Buddha in the *Jātaka* bearing that name (no. 143), in which Buddha was habitually saluted with 'Shine forth in thy might, Lord';[8] it also occurs in the longer lotus-jewel formula: '*Oṁ! Amogha Vairochana mahāmudra Maṇi padma jvala-pravarthtaya Hūṁ.*'[9]

**7. 'Oṁ maṇi' formula.**—The hitherto unknown origin of this famous Buddhist lotus-jewel formula *Oṁ maṇi padme Hūṁ* we shall here trace back to its Brāhmanical source. The *maṇi* is specially invoked in the Atharvaveda hymn cited above, and in the Brāhmanical invocations the incantatory *Oṁ* was extensively employed already in the earliest Rigveda, even in those hymns which are not of an obviously magical character. This syllable is stated in the early *Brāhmaṇas* (*c.* 800 B.C.) to be the divine counterpart of *tathā*,[10] *i.e.* 'so be it,' implying an asseveration of certainty and thus equivalent to 'Amen'; and *Hūṁ* has a somewhat similar value —this was the early Brāhmanist explanation of these cabalistic terms, the original meaning of which, if there was any other, had already become lost in the Vedic period. It was especially addressed to Vāch (or Vāka), the goddess of speech, but also to Indra, 'the most high' (Parameṣṭhin, son of Prajāpati, the creator), to gods in general, and to magic personified (*brahman*).[11] In the later *Pūrva Brāhmaṇa* (*c.* 500–400 B.C.) it had come to express 'the function and virtue of the entire Atharvaveda,' including the potential creative power of the newly-

evolved anthropomorphic Brahmā before he created the universe.[1] From the *Oṁ* the *Praṇava-Upaniṣad* (*c.* 500 B.C.)[2] derives the entire creation.

The neuter personified magic, or *brahma*, creates the anthropomorphic masculine personal Brahmā upon a lotus-leaf; then this solitary monad Brahmā by means of penance perceives the syllable *Oṁ* of two letters. With the first letter, *O*, he perceives (*i.e.* creates) the waters; with the second, *ṁ*, the light and luminaries (sun, moon, stars); with the vowel triplicated, the triads—the earth (*bhūr*), atmosphere (*bhuvaḥ*), and heaven (*svaḥ*), also fire (with plants and trees), wind, and sun(-shine); with the consonants triplicated, water, moon, etc., and the rest of a cosmogony, also the ritual for the Brāhman priest who by the utterance of *Oṁ* before and after sacrifice remedies all defects in the latter. *Oṁ* is 'the oldest son of Brahmā . . . no holy text shall be chanted without it . . . *Oṁ* recited 1000 times grants all wishes.'[3]

Here we have revealed, in this Brāhmanized ritual prevalent in India about 500 B.C., the manifest origin of two out of the three elements of the famous lotus-jewel formula, whilst the third element, *maṇi*, is invoked as *Oṁ maṇi* still earlier with a similar connexion; also there is enforced therein the magical efficacy of repeated reiteration of the mystic syllable. The lotus element in this Brāhmanical symbolism of creation has probably a sexual significance, denoting the union of *prakṛti*, or productive female energy, with the masculine *puruṣa*; for already in the *Śatapatha Brāhmaṇa* (*c.* 800 B.C.) 'the lotus-leaf is the womb.'[4]

The Buddhist monks of the Mahāyāna school in India manifestly borrowed this Brāhmanical symbolism of Brahmā (possibly about the 2nd cent. B.C.) for their counterpart of Brahmā, namely the 'Buddha of meditation,' Amitābha, who, like Brahmā himself, was evolved, as we have seen, on the model of the ancient primordial god Varuṇa. This Amitābha-Buddha, seated, like Brahmā, impassively in abstract meditation, performed his benevolent and creative functions through the medium of his active sons, corresponding to the creator-sons (Prajāpati) of Brahmā; and the greatest of Amitābha's sons was Avalokita, to whom this lotus-jewel formula is solely addressed. On this Brāhmanical analogy, therefore, the *Oṁ* would represent Avalokita, the active proximate creator 'elder' son of Amitābha-Buddha, seated as a hermaphrodite upon the fertile lotus of his father, the remote creator latterly called Ādibuddha (*q.v.*). The *maṇi*, or jewel, as well as the lotus is an especial attribute of Avalokita, who is frequently figured in ancient Indian images as holding both the jewel[5] and the lotus, and bearing the epithet of 'holder of the jewel' (*maṇidhara*).[6] In this regard it is to be noted that the Brāhmanical homologue of Avalokita, namely Viṣṇu in his later Brāhmanized and non-Vedic form of Viṣṇu-Nārāyana, several of whose attributes were borrowed by the Buddhist monks for Avalokita, is called the 'jewel-waisted' (*ratnanābha*)[7], and in his form as creator Viṣṇu is figured with the lotus of creation springing from the jewel at his waist (or navel). Here we have all the three elements of the lotus-jewel formula united in Viṣṇu-Nārāyana as creator, that is *Oṁ*, the son of Brahmā as Viṣṇu himself, while, issuing from the jewel at his navel, the lotus gives birth to the Brāhmanical triad. The *Oṁ maṇi* formula of Avalokita, therefore, like the Viṣṇu-Nārāyana figure in Brāhmanism, presumably symbolizes the creative cosmic action by self-generative power.

In the later Tantrik period, from about the 5th cent. A.D. onwards, when Indian Buddhism, following as hitherto the fresh developments in contemporary Brāhmanism, gave greater prominence to the cult of female energies, the symbolism was given a more decided sexual meaning. This was all the easier in view of the hermaphrodite character of Avalokita's prototype, which to some extent may explain the confusion which exists in Chinese Buddhism between the male and female forms of Avalokita. The female counterpart of Avalokita, the goddess Tārā, personifying *prakṛti*,[1] was termed the 'Lotus,' and by a mysticism she was at the same time the thunderbolt (*maṇi* ?) as well. This is expressed in the *Uṣṇīṣa Sitātapatra Dhāraṇi*, where Tārā is invoked as 'with thunderbolt-navel, a beauteous damsel is she. . . . Her outward mark of the lotus is the mark of the thunderbolt!'[2] It has been suggested[3] that *maṇi-padme*, which is considered to be one word, is a feminine vocative, and that the formula refers to Tārā; this possibility is, however, ruled out by the universal restriction of the formula in Buddhist literature and practice to Avalokita exclusively.

The literal meaning of the formula thus would be: 'So be it! O lotus-jewel! Amen!' This is essentially the form of a wishing-gem spell, a luck-compelling talisman.

The earliest reference to this formula in a Buddhist text appears to be in the *Divyāvadāna*[4] (*c.* 1st cent. A.D.), where it is ascribed to Śākyamuni. The first occurrence under its usual title of the 'six-syllabled magic-spell,' or *Ṣaḍakṣara Vidyā mantra*,[5] that we can find is in the translation made from the Sanskrit into Chinese in A.D. 317-420 in seven leaves, with an exposition of the alleged circumstances under which it was recited.[6] Its universal currency throughout Tibet at the present day is well known; it is less common in China; and in Japan it is used nowadays only by the mystic section of Buddhists called Shingon.[7] *Maṇi* is a title given to the mystical hermits (*siddhi*) who have recited this *Oṁ maṇi* spell 100,000 times or more.[8]

**8. The three jewels or treasures, 'the Buddhist triad.'**—This triad, the *tri-ratna*, consists of (1) the Buddha, (2) his Word or Law (*Dharma*), and (3) his Order of monks (*Saṅgha*). As it is the stereotyped conventional formula found in the earliest Pāli canon for admission into the Order and for a layman's belief in Buddhism,[9] it was doubtless coined by Buddha himself. In arriving at this nomenclature, the title of 'treasure' (*ratna*) was obviously, in view of the above facts, borrowed by Buddha from the Brāhmanical treasures of immortality of the divine Chakravartins, a form of the supreme Vedic god Varuṇa, with whose entire septad of treasures we find Buddha already clothed in the Pāli canon. The number three was a favourite in Vedic Brāhmanism, as in the still earlier faiths. There are the threefold division of the universe, the three worlds, three classes of gods,[10]

[10] Macdonell, *Ved. Myth.* 9, 130.

the three Vedas, or revealed scriptures of Manu, and the tripartite god Trita, who is the preparer of *soma*, the draught of immortality, and the nave in the wheel of Varuṇa.[1] The latter god Varuṇa, indeed, is expressly related to several triads as well as to the 'law': 'the three heavens and the three earths are deposited within him . . . he is a great lord of the laws of nature.'[2] Here the term for 'law' is *ṛta*, or 'fixed law,' which has the same value as *dharma*, the pre-Buddhist term in Manu and elsewhere for laws and ordinances, in the same sense in which the early Buddhists used it for Buddha's word or dogma.[3] Buddha as the first member of this triad is termed the first of the treasures; but besides this he is independently referred to as a treasure-jewel (*ratnamaṇi*) or likened to one. In the *Dīgha-Nikāya* he is likened on his incarnation to this and to the beryl-jewel,[4] and also in the *Lalita Vistara*,[5] which, further, refers to that event thus: 'the beautiful treasure (*ratna*) will shortly be manifested in the three regions,'[6] and 'the jewel-victor (*jina-ratna*) from the mine of religion will be manifested in the continent of Jambu (India).'[7] Now, the latter epithet of Buddha is at the present day the ordinary formal title of him who professes to be Buddha's representative and successor, viz. the Dalai Lama of Lhasa; his designation of *Gyal-wa-rin-po-ch'e*,[8] the literal translation of *jina-ratna* into Tibetan, is thus seen to have its origin (hitherto unknown) manifestly in this appellative of Buddha in the *Lalita Vistara*.

The central member of the triad personifying the fixed ordinances and speech of Śākyamuni was probably suggested to that saint by the personified Speech of Brāhmanism, the goddess Vāch (or Vāka), who is one of the earliest of the Vedic goddesses, and was made the wife of Brahmā about the time of Buddha, when the new eponymous god Brahmā was being invested with the functions of the supreme god Prajāpati, Puruṣa-Nārāyaṇa, the transition form of Varuṇa (Chakravāka). Vāch in the Rigveda is called 'the queen of the gods,' and her original abode was the sea[9] (suggestive of relationship to Varuṇa and her original identity with Śrī, the wife in the seven treasures); and, while she has a triad nature (terrestrial, middle, and celestial), she especially occupies the middle region of the atmosphere,[10] and thus may have suggested the middle location for speech in the Buddhist triad. For the more closely we examine the mythology, idioms, and terminology of the Pāli canon, the more manifest is the indebtedness of Buddhism to its parent religion, Brāhmanism. The third member of the triad is the 'Order of Buddha's monks'—it is erroneous to translate this as the 'church' or 'congregation,' as is often done; for the laity, both men and women, are excluded from the *Saṅgha*.

**9. The treasure as a spell.**—The fact that spells have been in universal use by all sections of Buddhism from the earliest times, and even by Buddha himself, has been established by the present writer.[11] Among the southern Buddhists, of Burma, Siam, and Ceylon, one of the commonest of the protective spells, or *paritta*, is the 'Jewel (or Treasure) Sermon' (*Ratana Sutta*). This discourse, ascribed to Buddha in the Pāli canon,[1] is an invocation to demons to grant prosperity, and it is couched in the orthodox form of Buddhist spells, namely, as an 'act of asseveration' (*sachcha-kiriyā*; Skr. *satyakriyā*)[2] which is virtually an incantation.

1 Macdonell, *Ved. Myth.* 68. 2 *Ib.* 24.

3 Any statement made, or supposed to have been made, by Buddha was at once accepted as a fixed and unalterable law.

9 Macdonell, *Ved. Myth.*, p. 124.

10 *Ib.* As thunder is called 'the voice of the middle region' (*mādhyamikā vāch*), it seems to indicate a physical source for the divinity of speech.

11 Waddell, 'Dhāraṇī Cult in Buddhism,' *Ostasiat. Zeitschr.* i. [1912–13] 157–195.

The *Ratana Sutta* begins: 'O! all ye demons who are assembled, terrestrial or celestial, may you all possess happiness! Listen attentively to the things spoken! Therefore ye demons attend! Be friendly to the race of man and unremittingly protect those who by day or night propitiate you by offerings! Whatever wealth there may be in this or in other worlds, or whatever superior gem in the heavens, these cannot be compared with Buddha. This gem-like Buddha is superlatively excellent. By this truth let there be prosperity!' and so on for the other two members of the triad, treasures, etc., in fifteen stanzas, the closing sentence of each being, 'By this truth let there be prosperity!'

This is one of a large series of demonistic and theistic texts ascribed to Buddha in the orthodox Pāli canon,[3] and belongs to a phase of Buddhism which, although usually overlooked by writers on southern Buddhism, yet forms a very conspicuous and important part of southern Buddhism as a practical religion. Its contents and form indicate that it must have been originally composed expressly for use as a luck-compelling charm, based upon the supposed magical efficacy of the prehistoric wishing-gem or amulet.

The 'jewels' and 'treasures' in Indian Buddhist symbolism and cult are thus seen to be of non-Indian, pre-Vedic, and pre-Iranian archaic origin, and possibly borrowed from Assyrian and prehistoric mythology.

## JEWS IN COCHIN (MALABAR).

**1. History.**—The earliest known history of this community connects it with the now extinct city of Cranganore, the deserted site of which is situated some 20 miles north of the present port and town of Cochin. Spelt Kranganur, it is the more easily seen to be the Portuguese form of Koduṅgalūr, the name of a village which still exists close by. It is almost certainly to be identified with the ancient port of Mouziris (Μουζιρίς), known to Pliny,[4] Ptolemy, and the author of the *Periplus Maris Erythræi*, where, according to the Peutingerian Tables, the Romans, up to at least A.D. 226, kept a force of two cohorts to protect their spice-trade. Another name in frequent use for the same spot in the Middle Ages is Shinkali.[5]

The origin of the settlement is shrouded in obscurity. We may pass over possible deductions to be drawn as to a Palestino-Indian trade from well-known foreign words in the Biblical account of the merchandise of King Solomon, suggesting an Indian, to some a S. Indian or Dravidian, origin;[6] the traditions of the Cochin Jews themselves, embodied in a supposed record-book (*Dibre Hayamim*), represent their ancestors as arriving in Malabar immediately after the destruction of Jerusalem by Titus (A.D. 70).[7] Certainty cannot,

7 See Buchanan, *Christian Researches*[11], p. 222.

however, be attached to this document, which bears signs of interpolation, and of which more than one version exists, and which may even have been wholly rewritten from memory after destruction from various causes. The first really reliable and explicit record in relation to the Jews of Cochin presents itself in the form of an ancient royal charter (*śāsanam*), engraved on plates of copper, whereby a piece of territory, named Anjuvannam, is conveyed by Bhāskara Ravi Varma, the reigning monarch of Malabar, residing at his palace in Mūyirikoḍu,[1] to one Joseph Rabban, headman of the Jewish community, and to his heirs in perpetuity, with the annexation to it of various privileges of nobility and rights of revenue. The charter is attested by the signatures of six subordinate princes, whose rank Joseph Rabban may be assumed to have been called to share. Buchanan in 1806 caused a facsimile of this charter to be executed in brass, and deposited it in the Library at Cambridge. A description of it by Burnell, entitled 'The Original Settlement Deed of the Jewish Colony at Cochin,' with reproductions of the plates, may be found in *IA* iii. [1874] 333 f. Burnell shows that this document, which is inscribed in archaic Tamil, in the Vaṭṭeluttu character, must be ascribed to some time in the 8th cent., perhaps as early as A.D. 700. It reveals the Jews in an already affluent and organized condition in Malabar, bespeaking an arrival considerably anterior to its date; and it was presumably conferred by the king in return for important State services rendered by the community. After the light afforded by this charter, obscurity again descends for upwards of a thousand years upon the history of the Jews in Malabar, covering perhaps a period generally prosperous. When it lifts, it is to disclose the setting in of a time of adversity and overthrow. About 1565 the sack of Cranganore by the Muhammadan Zamorin of Calicut, who previously had invaded the place in 1524 and massacred many, accompanied by the incoming of the Portuguese, involved the ruin of the small Jewish State, and resulted in the final desertion of Cranganore as a place of abode. Reduced in numbers, and with largely shattered fortunes, the main body of the dispossessed Jews migrated to Cochin, and built their present Jews Town in its immediate vicinity. Certain of their number, however, continued to linger in the neighbourhood of the old Cranganore, at places named Chennamangalam, North Parur, and Māla, where their successors are still to be found; and some have settled at Ernākulam, the native capital of the Cochin State, situated a few miles eastwards from Cochin, across the Malabar Backwater.

**2. 'White' and 'Black' Jews.** — A singular feature of the Cochin Jewish community in the eyes of foreign observers has always been its division into 'White' and 'Black' Jews. As early as 1655, Manasseh Ben Israel,[2] addressing Cromwell, describes them as consisting one part 'of a white colour and three of a *tawny*.' Buchanan and a succession of later writers have not failed to call attention to the same distinction of colour. Some writers have even seen their way to discriminate a third, or Brown, section. It is probably correct to regard the so-called Black Jews as comprising two classes, characterized by themselves as *M'yukhásim* (those of lineage) and *enam-M'yukhásim* (non-*M'yukhásim*), the latter embracing *M'shukhárarim* (manumitted slaves). Regarded thus, the *M'yukhásim* among the Black Jews consider themselves to be the representatives of an original stock, older than the present White Jews, and look upon the *enam-M'yukhásim* as a class made up of the offspring of mixed unions with female slaves, afterwards manumitted, and increased by the descendants of purely Gentile slaves converted to Judaism. All religious disqualifications have, however, long ago been removed from all concerned by the reception of the prescribed rabbinical *T'bhilah* (lavation, or baptism); and a certificate to that effect was lately given by the Chief Rabbi Phanizal of Jerusalem (variously styled the Rabbi R'shon l'Zion, or the *ḥākhām bāshī*). The decision of the latter was based largely on a much older adjudication, of great interest, made by a Rabbi of Alexandria, known as Mahárikash,[1] who died in 1610. In the case as submitted to Mahárikash, the original stock of the Malabar Jews is represented as consisting of the descendants of Jewish merchants from Togarmah (Turkey), Aden, Sheiman (Teman, or Arabia), and Al-ajam (Persia), no mention being made of any from Spain or other European countries. These merchants are represented as having become the progenitors of a numerous offspring through female slaves, who, mingled with purely Indian converts to Judaism, had grown into a large mixed multitude, there being 800 houses of the latter to only 100 houses of the *M'yukhásim*, or those of pure stock; and great confusion had occurred, it not being known who of the mixed class had been ritually admitted within the circle of pure Israelites, and who had not. Mahárikash in his *responsum* provides for the treatment of the doubtful cases, and for the habilitation of all in the rights and privileges of Jews. Although the religious question may be said to have been thus set at rest, the controversy, as a social one, continues to exist, and at times has become a burning one, the White Jews, on social grounds, holding aloof from marriage with the Black Jews, and the two worshipping almost entirely apart. The present White Jews, although their ancestors may have been superinduced upon the earlier immigrant stock, entitling the present ones to be regarded to a certain extent as the legitimate successors of former foreign Jews of pure descent, cannot be regarded as the lineal descendants of the first settlers. Their ancestral names mark them as a group by themselves, largely consisting of Spanish or Portuguese Jews, mingled, however, with some from Persia, Egypt, and elsewhere. According to investigations set on foot by the Dutch Jews of Amsterdam in 1685,[2] the first Spanish Jews arrived in Cochin in 1511, and it is expressly stated that the Black Jews had preceded them. With this view there agrees a custom found to have prevailed in State revenue receipts and *sheetorams* (royal writs) of frequently styling the White Jews as *Pardesis* (foreigners), and their synagogue as the *Pardesis'* synagogue. The synagogue of the White Jews is in date the last of those in Cochin, and is built on a site specially carved out for it from the adjoining Palace garden, testifying to its being a belated suitor. Joseph Rabban, a recipient of the copperplate grant, is by common consent held to have come from Yemen in Arabia, and, according to this, he was not a White Jew. It would seem, then, that some modern writers who have accepted the ready-to-hand conclusion that the present White Jews of Cochin are the descen-

[1] It is from the 'Mūyiri' in this name, elsewhere shown to be identical with Cranganore, that the classical name Μουζιρίς is believed to have been formed.

[2] See *Life and Labours of Manasseh Ben Israel*, in A. Löwy's *Miscellany of Hebrew Literature*, ii., 2nd ser., London, 1877.

[1] Mahárikash is an acrostic abbreviation for Moharur Rabbi Jacob de Castro (מה'רי'קש). The decision is to be found in a Hebrew work of his entitled אהלי יאקוב (*Tents of Jacob*), published at Leghorn in 1783. Mahárikash gave decisions, or *responsa*, on questions of ritual and casuistry propounded to him. An Eng. tr. of the passage in relation to the Cochin Jews, from the pen of 'A Cochin Jew,' may be found in the *Jewish Chronicle*, Oct. 5, 1908.

[2] The report of this Commission was published at Amsterdam in 1687, under the title of *Notisias dos Judeos de Cochim*, by Pereyra de Paiva (see *JE*, artt. 'Cochin' and 'India').

dants of the original settlers, and that the Black Jews are an entirely mixed class, resulting from unions between the former and their Indian slaves, have been the victims of too sweeping generalizations. Wolff, having propounded such a view in 1839, promptly met with an indignant rejoinder from the Black Jews, repudiating the theory.[1] The fact, on the other hand, that the royal copper-plate charter is found at present in the keeping of the White, and not of the Black, Jews would seem to point to some position of consensual priority which the White Jews must have occupied in the bygone days of unbroken friendly intercourse between the two sections of the community. A White Jew, of the existing house of Halegua, held in old times a high position as Mudaliār, or hereditary headman of the community, recognized by the Raja—an honour now abolished.[2]

The present numbers of the Cochin Jewish community are small, and are slowly diminishing, as judged by the percentages of several past decades. By the census of 1911, the total number of Jews amounted to 1248. Of these, 73 are located in a patch of the Travancore State, which here curiously overlaps that of Cochin, and takes in the town of North Parur. Of the 1248 Jews mentioned, 1056 are Black Jews, and 192 White. Distributed according to residence in towns, there may be said to be 428 Jews at Jews Town, Cochin; 488 at Ernākulam; 147 at Chennamangalam; 110 at Māla; 73 at North Parur; and 2 at Trichūr. The so-called Black Jews are to be found in all the above places, the White Jews almost exclusively in Jews Town, or in the neighbouring European town of Cochin, about two miles north of it. Jews Town itself consists of a single narrow street, running N. and S. Its northernmost end is occupied by the synagogue of the White Jews, paved with handsome 'Dutch' (but in fact Chinese) tiles, and flanked by a conspicuous clock-tower, furnished with a Dutch clock. About the middle of the street is situated the Thekombagom synagogue, and near the southernmost end the Kadavambagom synagogue, both of the Black Jews. Eastwards, across the Backwater, at Ernākulam, the capital of the Cochin State, situated on ground granted them for a settlement by the Raja in 1711, the Black Jews possess two more synagogues, also known by the names of Thekombagom and Kadavambagom. These designations, meaning 'south-side' and 'river-side' respectively, bear no relation to the present locations of the synagogues in either place, but are derived from the positions originally occupied by the corresponding synagogues in Cranganore. Internally, the synagogues conform to the pattern of those in other parts of the world, except that peculiarities of native art enter into the structure of their fittings. Externally, after the manner of the country, the buildings are generally approached by a sort of prolonged porch or corridor. The Black Jews possess also a synagogue at each of the three places North Parur, Chennamangalam, and Māla. Disused sites and ruins of discarded synagogues are to be met with, as at Tirtur and Palur, and an old synagogue known as the 'Cochin Angadi' is situated near Jews Town.

[1] See the *Oriental Christian Spectator*, September, 1839. Buchanan, John Wilson, R. De Beth Hillel, and A. Asher are examples of writers who have held the view that the Black Jews are the earlier comers.

[2] While designated the 'White' and the 'Black,' it is by no means the case that the White are always fair, or that, *vice versa*, the Black are invariably dark. Especially was the present writer himself struck by the fairness of many of the Jews at North Parur, where there are only members of the Black community. Elkan Adler, a recent visitor to the Jews of Cochin, has remarked on the same fact as the result of his own observations, in artt. contributed to the *Jewish Chronicle* of May 5th and 11th, 1906.

**3. Ritual.**—In their synagogue ritual the Jews of Cochin do not differ appreciably from Jews in other parts of the world. They follow the Sephardi rite, like most of the Jews of the East. Immediately after the Dutch conquest, they established communications with the Jews at Amsterdam, and obtained from them printed copies of their Hebrew ritual. This was done to a certain extent by the White and Black Jews separately; and hereby is revealed another incidental token of the independence of the latter. A religious song-book published in Amsterdam in 1668 is described on its title-page as prepared for 'the several Holy Congregations of the Assembly of Jeshuran of Shingali,' while another, published in the same city for the White Jews within five or six years of the other book, describes itself, differently, as intended for the 'Kahal Kogin' (Congregation of Cochin). The two books, though to some extent alike, differ characteristically as to their contents.

**4. Organization and occupations.**—As to communal organization, the Black Jews formed till lately a confederation of seven synagogue communities, or *yogams*, embracing the two in Ernākulam, the two in Jews Town, and one each at North Parur, Chennamangalam, and Māla. The symmetry of this arrangement has been broken in recent years by the secession of the Kadavambagom synagogue at Jews Town to the jurisdiction of the White Jews, on account of a quarrel.

In respect of their occupations, the Cochin Jews are engaged mainly in trade and merchandise, though not to the extent prevailing in the days of their forefathers. The Black Jews deal fairly largely in rice, fish, and especially poultry, and some are handicraftsmen. Education is making way among both classes, although the recent census shows barely more than a quarter of their number to be as yet literate in the most elementary sense. A few are aspiring to clerkships in the employ of the State, and some are landholders. Hebrew is well studied by some, and the knowledge of it in the community generally is far greater than among the Bene-Israel (*q.v.*) of the Bombay Presidency, among whom some of the Black Jews are in request as synagogue-readers, but with whom they would seem to be otherwise entirely unconnected as to their antecedents and origin on Indian shores.

**JEWS IN INDIA.**—See BENE ISRAEL.

**JEWS IN ISLĀM.**—The attitude of the Muhammadans towards the Jews and the consequent position occupied by the latter in the lands of Islām must be traced ultimately to the directions regarding them promulgated by Muhammad, and especially to the ordinances of the khalīf Omar. Muhammad's attitude was at first one of sympathetic tolerance, for he hoped to range behind him, in support of the faith which he was establishing, the whole of the force of the powerful Jewish tribes of Arabia. It was not long, however, before he discovered that the absorption of Judaism into the new faith was unattainable; the Jews were thereupon denounced as enemies of the faith, and a bitter war of extermination was waged against them. The khalīf Omar, who reigned from A.D. 634 to 644, was the first to regularize and legalize the attitude of Islām towards the Jews, and, as it was under his khalīfate that Persia, Egypt, and Syria, all lands with considerable Jewish populations, first came under Arabian influence, his Ordinances had immediately a considerable influence on Jewry. By these Ordinances Jews were not allowed to build new synagogues or to restore those which were in ruins; they were to conduct their services in subdued tones, and to pay heavy and exceptional taxes; they were not to hinder their co-religionists from accepting Islām; they were debarred from holding public office or from obtaining a verdict against a Muhammadan in a court of law; they were forbidden to ride on horses or to wear signet rings—both marks of distinction; and they were compelled to wear a distinctive dress. A Muhammadan was free to enter a synagogue at any time, but no Jew was in any circumstances admitted into a mosque. Even in death Jews laboured under a disability, for they were allowed only flat tombstones as monuments. These Ordinances are still the law in all countries in which the Muhammadans hold sway, although they are not always enforced. They were not invariably acted upon even while Omar still reigned, and it is probable that, although the Ordinances all bear his name, the Code in its accepted form came into existence gradually during a period which extended beyond the date of his assassination. To Omar, however, was undoubtedly due one definite piece of persecution. Determined that Arabia should henceforth know no infidel, he ruthlessly exiled the depressed remnant of Jews who still survived in the peninsula in a state of semi-slavery.

Outside of Arabia the rule of the Muhammadans did not at first come to the Jews as a scourge. Under the later Persian kings they had suffered persecution. The advent of the conquerors was consequently welcomed, and the Jews, settled in Mesopotamia, aided materially in the conquest of that region. The Muhammadans, on their part, treated their allies with tolerance, and an era of relative happiness dawned for the Jewish communities of Babylonia. To the Jews of Syria and of Egypt also the Muhammadans came as deliverers from the yoke of oppression. In Arabia, however, the first home of Muhammadanism, the Jews have always been subject to persecution. There, if anywhere, the Ordinances of Omar have had their full effect. As late as last century, the Jews of Yemen or S. Arabia were forbidden to wear new or good clothes, to ride on an ass or a mule, or to engage in commerce. With hardly an exception they were until recent times confined to menial trades. Of late an emigration from Yemen has set in, and many of the former Jewish inhabitants are now settled in Jerusalem and in the modern Jewish settlements in Palestine, where they ply the trades which they learned in their former homes. There are at present about 25,000 Jews in Arabia.

In Persia, Jewish communities have existed since the period of the Arab conquest. The disorders which filled the centuries that immediately succeeded that event reacted unfavourably upon the fortunes of the Jewish population, whose condition from that day to this has almost always been a pitiable one. The 30,000 Jews who are to be found in Persia to-day are for the most part settled in the more important towns of Hamadān, Iṣfahān, Kirmānshāh, Shīrāz, Ṭeherān, and Mashad. They are, with few exceptions, confined to their own quarters of these towns, marked off from their neighbours by occupation, dress, and customs. As a rule they are engaged in retail trade or follow callings for which little respect is felt. Another serious disability under which they labour is the law or custom whereby a Jew converted to Islām inherits all the property of his relatives to the exclusion of the next of kin. The *Alliance Israélite Universelle*, a society founded in 1860 for the protection and improvement of the Jews in general, and now concentrating its attention on educational works in Muhammadan lands, has schools for boys and girls at Ṭeherān.

Egypt had a considerable and important Jewish population at the time of the Arab invasion, and throughout the period of Muhammadan domination, except for a few short periods, the Jews were both prosperous and contented. The khalīf al-Ḥākim (996–1020), after a period of toleration, suddenly began to enforce the Ordinances of Omar. He even exceeded their rigour. He compelled the Jews to wear bells and to carry in public the wooden image of a calf. On the pretext that they mocked him, al-Ḥākim burned the whole of the Jewish quarter. But his treatment was quite exceptional; moreover, he was not held responsible for his actions. Under other rulers individual Jews held high office in the State. Some of them —notably Maimonides, the greatest Jewish philosopher of the Middle Ages—were physicians to the khalīf. Until the middle of the 16th cent. the Jewish communities in Egypt were presided over by a *nāgīd*, whose rule was co-extensive with the Egyptian dominions. He had full civil and criminal jurisdiction over his co-religionists as well as power to punish by fine and imprisonment. The appointment of Rabbis rested with him, as well as the responsibility for seeing that the civil law was observed within the limits of his jurisdiction. The *nāgīd* was appointed by the khalīf, and his installation was attended by much ceremonial. The Jewish population of Egypt is at present estimated at 50,000.

In the other districts of N. Africa the conditions were much the same. Although there were times of persecution, for the greater part of the period of Muhammadan domination the political condition of the Jews was a tolerably easy one. The pre-Muhammadan conditions of Arabia were reproduced to some extent, and Jewish semi-independent tribes roved about the interior of N. Africa for centuries after the Diaspora, and some have persisted to the present day. In Tunis, towards the end of the 8th cent., there was a persecution by the Imām Idrīs, but his reign did not last long. The accession of the Almohad dynasty led to a longer period of tribulation. The first of the Almohads, 'Abd-ul Mu'min, was responsible for forcible conversions of Jews and Christians on a wholesale scale. This policy was pursued by his successors. At length the number of converts had become so large, and, in view of the circumstances of the conversions, their sincerity was so doubtful, that a distinctive dress was allotted to them. Under the Ḥafṣite dynasty, which commenced in

1236, the condition of the Jews improved greatly. But even in the relatively comfortable period the Jews suffered from many disabilities, notably special taxation and restriction of residence. They, however, furnished the government with a succession of high officials, in particular the receiver of taxes who was also the *qa'id* of the Jews, and as such had supreme authority over them. Even in the 19th cent. there were changes of fortune. For instance, in 1855 many of the indignities imposed upon them were abolished, but they continued to suffer some persecution until the grant of a constitution by Muhammad Bey, by which their liberties were secured. Tunis has since 1881 been a dependency of France. Its Jewish population at present numbers about 66,000. In Algeria the conditions were identical with those in Tunis until the fall of the Almohads. Subsequent to that event the vicissitudes of the Jewish population were similar to those in the neighbouring State. Under the Turks in both regions the Jews, so long as they accepted with resignation the disabilities inherent in the Turkish system of government which were imposed upon them, found their condition one of relative comfort, much envied by most of their co-religionists settled in Christian lands. They were granted self-government under a *muqaddam*; they were confined in quarters set apart for them; a distinctive dress was allotted to them; they were forbidden to ride on horses or use riding saddles; and they were subjected to special taxation. To-day, after ninety years of French rule, the Jewish population of the Province numbers 65,000.

In Morocco the rule of the Muhammadans lasted until our own day and still exists nominally. In this, the westernmost of the lands of N. Africa, the history of the Jews until the severance of the country from dependence on Baghdād in 788, is the same as in the lands farther east. Idrīs, the conqueror of that year, was successful, by means of persuasion aided by force, in inducing the Jewish tribes of the west to join his standard, and with their assistance he was able to consolidate his power. In the end, however, dissensions arose between the conqueror and the Jews, in consequence of which the latter suffered many indignities. For the following two centuries and a half their condition remained one of tolerable comfort. The advent, however, of the Almohads in 1146 brought upon them, here as elsewhere, all the rigours of persecution. The rule of the Almohads meant forced conversions to Islām and the expulsion of those who objected. Even the new Muhammadans were not allowed to live in peace. To mark them out from their neighbours they were compelled to wear a distinguishing badge. When the rule of the Almohads passed, their position improved somewhat, but always remained precarious. Mulai Arshīd and his brother Mulai Ismāīl, who reigned at the end of the 17th cent., were especially severe, and the latter plundered the Jews without mercy. During the subsequent reigns the Jews very often suffered cruel persecution; but, on the other hand, there were periods of quietude. Whenever civil war broke out, as so frequently happened, the Jews in the disturbed region were among the first to suffer, both in person and in property. The Sultan, however, even during the periods of persecution, frequently had a Jewish favourite or adviser; but the elevation to power of individual Jews had little, if any, effect on the position of the Jews as a body. These periodical massacres continued practically until the day on which the French took over the protectorate of the country. They were not always engineered by the party in power. More frequently they were part of a movement against the government. To the Jew, however, whether he was murdered or plundered by a supporter of the reigning Sultan, or of one desirous of taking his place, was not a matter of consequence. The Jewish population of Morocco to-day is estimated to number about 110,000.

The tolerant conditions under which the Jews of N. Africa were living, coupled with the harsh measures of the Visigothic kings in Spain, led the Jews of the Peninsula to welcome the Moorish invasion which culminated in a permanent settlement at the beginning of the 8th century. For a long time the position of the Jews, as subjects of the Moors in Spain, was as favourable as that in the most tolerant period in N. Africa. The first persecution of the Jews of the Peninsula by the followers of Islām occurred in 1066, when 1500 families in Granada were massacred and the remainder of the race in that city driven into exile. The accession to power of the Almoravids, a couple of decades later, led to further excesses, and the position of the Jews was rendered even worse, after the lapse of a further quarter of a century, by the rise of the Almohads, whose policy towards them has been described above.

To the Jews of the Byzantine empire the conquests by the Turks came as a relief from oppression. Under Turkish rule their position was raised so much that no precedent approaching to it could be found throughout Christendom. They were allowed to live and move in the Turkish dominions with perfect freedom. In occupation and dress they were without restrictions. They were even admitted into the army. Many rose to high positions in the State, and became the trusted advisers of successive Sultans. To the Jews of the lands of oppression Turkey became the land of promise. In the 15th cent. those of Hungary and Germany were invited to settle there, and many did so. Later, at the end of the same century, the expulsion from Spain led to a considerable further Jewish immigration into Turkey. The refugees were everywhere welcomed by the Turkish government and people. The immigrants brought many valuable industries to Turkey, with great advantage to their new country as well as to themselves. They concentrated for the most part in the larger cities. In Salonica they settled in such numbers as almost to make it a Jewish city, and even to this day the Jewish is the largest element in the population of the port.

The Sultans not only granted absolute freedom to their Jewish subjects, and utilized with advantage all their services; they also, on occasions, intervened on behalf of foreign Jews who were suffering at the hands of other governments. Notable instances of such action were the representations made at Venice on behalf of Donna Gracia Mendes which led to her release, and the protests sent to the pope against the treatment of Jewish prisoners at Ancona. The office of *ḥākhām bāshī*, or chief Rabbi, was instituted in the reign of Muhammad the Conqueror (1451–81). He was, and still is, the official representative of the Jews in civil affairs. The *ḥākhām bāshī* was a member of the State council. He had considerable powers over the Jews of the empire. He arranged their taxation, appointed Rabbis, and was, in fact, under the Sultan, the ruler of the Jews of Turkey. The first *ḥākhām bāshī*, Moses Capsali, was appointed by the Sultan. His successors were appointed subject to the Sultan's approval. The Golden Age of the Jews of Turkey lasted for about two centuries. But, as in all despotic States, the conditions under which they lived had no surety of permanence. Their rights and privileges depended on the whims of the rulers, and, when a Sultan such as Murād III. arose, they found even their lives in danger. It was by this Sultan that restrictions on the dress of the Jews were introduced. In the 18th cent., which was, moreover, one of greater misfortunes for the Jews of Turkey, further restric-

tions were introduced. During the 19th cent. their condition improved little, if at all. The misery prevalent among them was, however, due to economic and social causes rather than to political ones. The revolution of 1908 swept away all political differences between Jews and Muhammadans, and at present their relative position is one of absolute equality. In Palestine, however, foreign Jews are in theory not permitted to settle or to acquire land.

Previous to the outbreak of the Balkan war of 1911–12, the Jewish population of Turkey in Europe was estimated at 180,000, of whom 65,000 were in Constantinople. Turkey in Asia, apart from Arabia, has about 250,000 Jews.

LITERATURE.—For the general subject H. Graetz, *History of the Jews*, London, 1891–92, and artt. in *JE* which deal with the relative countries, and also those on 'Islām,' 'Mohammed,' and 'Yemen,' should be consulted. For the conditions during the last half century the successive annual reports of the *Alliance Israélite Universelle* and of the *Anglo-Jewish Association* give much information. For Arabia see R. Leszynsky, *Die Juden in Arabien zur Zeit Mohammeds*, Berlin, 1910; H. Hirschfeld, 'Essai sur l'histoire des Juifs de Médine,' in *REJ* vii. [1883] 167, and x. [1885] 10; for Persia see E. N. Adler, *Jews in many Lands*, London, 1905; for N. Africa see J. E. Budgett Meakin, 'The Jews of Morocco,' in *JQR* iv. [1892] 369; L. Addison, *The Present State of the Jews . . . in Barbary*, London, 1675; M. Wahl, *L'Algérie*², Paris, 1889; L. Reynier, *De l'Économie publique et rurale des Arabes et des Juifs*, Geneva, 1820; J. C. Frégier, *Les Juifs algériens, leur passé, leur présent, leur avenir juridique*, Paris, 1865; D. Cazès, *Essai sur l'histoire des Israélites de Tunisie*, do. 1889; for Turkey see M. Franco, *Essai sur l'histoire des Israélites de l'empire ottoman*, do. 1897; L. A. Frankl, *The Jews in the East*, London, 1859, and I. Loeb, *La Situation des Israélites en Turquie*, Paris, 1877.

A. M. HYAMSON.

**JEWS IN ZOROASTRIANISM.**—The account of the Jewish Exile and the fortunes of the Jews under the Achæmenian dynasty are too familiar to require recapitulation here; suffice it to say that the history of Mordecai and Esther proves that exile and Jewish birth were no bars to the attainment of high rank even at the king's court. Soon after the death of Alexander the Great the Jews began to proselytize, and the Babylonian Talmud itself was written in the Persian dominion, while such cities as Nehardea were centres of Jewish culture. The only convert of real note was the petty king of Adiabene, Izates (35–59; Jos. *Ant.* XX. ii. 3), whose name (=Avesta *Yazata*, 'angel'), like that of his father Monobazos (cf. Armenian *Manavaz*), is Iranian.

When the last Parthian monarch, Artabanos IV., fell in battle in A.D. 226, the Jews lamented his death and feared the accession of the founder of the Sasanian dynasty, Artašir Pāpakān, who, in fact, imposed certain minor restrictions upon them and forbade them to bury their dead. On the other hand, the heads of the Jewish schools were honoured not only at the court of this very king, but also at that of Šāpūr I. (241–272). The great friend of the Jews was Yazdagird I. (399–420), who married Šōšān-dōxt, or Gāsyān-dūxt,[1] the daughter of the Jewish exilarch (ריש גלותא),[2] probably Kahana I., and who became by her the father of the famous Bahrām Gōr (420–438). This queen established colonies of her co-religionists in Šōš (Shushan), Šōštar (Shuster), and Gai (Ispahān), while Xwārizm (Khiva) is said to have been founded either by a certain 'Narses of the Jews' (who would probably be the younger brother of Bahrām Gōr) or (according to a less likely decipherment of the Pahlavi text) by 'the exilarch of the Jews.'[3] Another Jew in high favour with Yazdagird was Huna bar Nathan, who was never exilarch, as has often been supposed, but was probably a cousin of Šōšān-dōxt[1]—a fact which may account for the special affection manifested for him by the king.

Under more orthodox Zoroastrian rulers, the Jews fared worse, and persecutions are recorded during the reigns of Bahrām Gōr's son, Yazdagird II. (438–457), Pērōz (Fīrūz) (459–484), and Qubād I. (488–531), while there is some evidence that their condition was unfavourable late in the 6th cent., since they supported the rebellion of Bahrām Cūbin against Ormazd IV. in 589 (Theophylactus, v. 7). In 343 the Jewish physicians of a Persian queen are mentioned as calumniating the Christian St. Tarbula (or Pherboutha) and her companions;[2] and, when St. Gīwargīs was martyred on 14th Jan. 615, his executioners were Jews.[3]

The literature of the Middle Persian period, which is the product of the revival of Zoroastrian orthodoxy, is distinctly hostile to Judaism. According to the *Šāyast lā-Šāyast*, vi. 7, Zandīks, Jews, and Christians are 'of a vile law,' and the *Dīnkarț* (ed. and tr. Peshotan Behramji Sanjana, Bombay, 1874 ff., pp. 24, 257, 310, 456) declares that Judaism, Christianity, and Manichæism are degraded in spirit and dangerous to Zoroastrianism, and that the evils of the worst age of the world are due to the 'sinful dispositions of all men, derived from the Yahudi religion,' whose laws and tenets are liable to ruin the earth. The Torah is 'the words of devils and unworthy of belief,' and the Hebrew Scriptures were composed by Aži Dahāka, the dragon who dwelt in Babylon (possibly an allusion to the Talmudic schools of Sura, Pumbeditha, and Nehardea in Babylonia), who deposited them in the 'fortress of Jerusalem,' and made mankind submit to Judaism on three separate occasions (perhaps referring to Abraham, Isaac, and Jacob; less probably to Abraham, Moses, and Elijah—or Enoch—as precursors of the Messiah; pp. 604 f., 372 f., 379). The same evil being was the author of ten 'universally noxious precepts':

(1) The Almighty is the injurer of the universe; (2) demons are to be worshipped as the source of all earthly prosperity; (3) injustice should be performed rather than justice; (4) unrighteousness and disgracefulness are to rule in everything; (5) greedy and selfish lives must be led; (6) children must receive no training for noble fatherhood; (7) no protection may be given to the poor; (8) goats must be killed before reaching maturity; (9) pious men must be offered to the demons; (10) men must be cruel, revengeful, and murderous.

The eighth and ninth of these 'precepts' mention the Jews, and may be based on Lv $4^{23}$ and on distorted reminiscences of condemnation of human sacrifice, as in 2 Ch $28^{3}$, Ps $106^{37f.}$, Is $57^{5}$, Jer $19^{4f.}$ $32^{35}$, Ezk $16^{20f.}$ $23^{37.39}$.

There is a possibility that the Talmud is mentioned in the *Dīnkarț*, if the reading *Gyēmarā* (גמרא) in v. i. 2 f. is correct (see E. W. West, *SBE* xlvii. [1897] 119 f. and Introd. p. xiii f.), and a knowledge of the Talmud is plainly shown in the 9th cent. *Šikand-gūmānīk-Vijār*,[4] which, in its polemic against Judaism (xiii.–xiv.; tr. West, *SBE* xxiv. [1885] 208–229), also quotes from the OT (Gn $1^{2f.}$ $2^{16f.}$ $3^{9.11\text{-}16.18f.}$ $6^{6}$, Ex $20^{5}$, Dt $29^{4}$ $32^{35}$, Ps $95^{10}$, Is $30^{27f.}$ $42^{19}$).[5]

The quotations are paraphrases rather than translations. Thus, Gn $2^{16f.}$ is rendered: 'The Lord, who is the sacred being himself, commanded Adam thus: "Eat of every tree which is

Schrift*, Strassburg, 1894, pp. 95–98; A. Kohut, *Krit. Beleuchtung der pers. Pentateuch-Uebersetz. des Jacob b. Joseph Tavus*, Leipzig, 1871, p. 6; R. Gottheil, *JE* iii. [1902] 190; W. Bacher, *ib.* vii. [1904] 317.

in this garden, except of that tree of knowledge; because when you eat thereof you die"' in one passage (xiii. 18–20), and 'The sacred being commanded Adam thus: "Thou shalt not eat of this one tree which is in paradise. . . . When you eat of this tree you die"' (xi. 352, xiii. 143; cf. the variants of Gn $3^{11}$ in xiii. 33 as compared with xiii. 139). It is suggested by West (*SBE* xxiv. 225, note 4, and p. xxviii) that the Pazand form *Āsinaa* (Skr. *Āsinaka*), 'Isaac,' in *ŚgV* xiv. 42 is a faulty transcription of the Pahlavi characters for *Aisōk*=Syr. *'Is'hoq*, and that, accordingly, the ultimate source from which the Zoroastrian polemists drew was a Syriac version of the Bible.[1] In Gn $1^2$ there is a curious variant, 'darkness was upon the face of the deep' being rendered in *ŚgV* xiii. 6 f., 'darkness and black water.' With this 'black water' we may perhaps compare the 'black water' (מיא סיאויא) which, in Mandæan cosmogony, lies at the bottom of the abyss and forms the home of all evil (A. J. H. W. Brandt, *Mandäische Religion*, Leipzig, 1889, pp. 43, 60, 63–65, 70). This is also termed מיא האחמיא, 'turbid water,' האחמיא being developed by metathesis from ܬܘܗܡܐ, probably under the influence of ܬܗܘܡܐ, תְּהוֹם, 'abyss,' in Gn $1^2$ (Brandt, p. 181; cf. T. Nöldeke, *Mandäische Grammatik*, Halle, 1875, p. 66; cf. K. Kessler, *PRE*³ xii. [1903] 166 f., 169).

The influence of the Targum of the pseudo-Jonathan (7th cent.) probably affected the rendering of Ex $20^5$ in *ŚgV* xiv. 4–7. When, in translating Gn $3^{14}$, the *ŚgV* (xiii. 43) makes God say to the serpent, 'For thee also there shall be no feet,' this may be derived either from the same Targum or from *Bereshith Rabbah*, the oldest of the Midrashim (probably *c.* 4th cent.), which contains (xix. 1, xx. 5) the following Haggādā, known already to Josephus (*Ant.* I. i. 4):

'According to the opinion of Hoshaiah the Great [3rd cent.], the serpent had two feet, and stood erect, like a reed. . . . "Upon thy belly shalt thou go." At the instant God spake thus, the ministering angels descended, and took away from the serpent his hands and his feet' (A. Wünsche, *Der Midrasch Bereschit Rabba*, Leipzig, 1881, pp. 82, 89).

Talmudic stories appear four times in the *Śikand-gūmānīk-Vijār*.

In *ŚgV* xiv. 36, God is said to prepare daily, with His own hand, 90,000 worshippers, whom He dismisses, at night, 'through a fiery river, to hell.' With this is to be compared the tradition attributed to Joshua b. Ḥananiah, that no portion of the heavenly host serves God for more than a day, and that at the end of that time they are dismissed to the stream of fire from which they were created (cf. Dn $7^{10}$, Ps $104^4$), another company of angels taking their places.[2] According to *ŚgV* xiv. 40–50, when the Lord visited Abraham to console him in old age and affliction, His host sent Isaac to fetch wine from paradise, but God would drink it only when Abraham had convinced Him of the purity of its origin. This seems to be a confusion of Gn $18^{1ff.}$ and $27^{25}$, for, according to the Targum of the pseudo-Jonathan, *ad loc.*, and Yalqut (Gen. 115), the wine which Jacob brought his father Isaac was made from grapes formed at the creation of the world, and carried from paradise to Jacob by the archangel Michael.[3] The story is told in *ŚgV* xiv. 58–70 of how a righteous man in dire poverty prayed for divine aid; but the angel who appeared told him that the sum total of joy and sorrow may not be altered. Since, however, the righteous man already had prepared for him in paradise a throne with jewelled feet, he might have the benefit of one of these on earth. After consulting with his wife, the man decided that he would not diminish celestial bliss to gain comfort in this world. This is the Jewish story of Ḥanina b. Dosa, who, under like circumstances, received a golden table-leg from paradise, but who, after his wife had had a vision in which she saw her husband feasting in heaven at a two-legged table, while all the other righteous had three-legged tables, besought that the gift might be withdrawn.[4] The last story is of less certain origin. According to *ŚgV* xiv. 75–78, God boasted of killing 'in one day an assemblage of sinners, as well as innumerable innocents. And, when the angels talked much of the unreasonable performance, He then spoke of it thus: "I am the Lord, the ruler of wills, superintending, unrivalled, and doing my own will, and no one assists or is to utter a murmur about me."' This may possibly be a distorted reminiscence of some such passage as Job $9^{22.12}$, Ezk $21^{3-5}$, or Dn $4^{35}$. C. H. Toy suggests to the writer that a closer parallel is the legend of the journey of Moses with al-Khiḍr (*Qur'ān*, xviii. 64 ff.), who staves in a boat belonging to poor fishermen, slays an apparently harmless youth, and repairs the wall of persons who had refused hospitality to Moses and his companion—the reasons being that a piratical king was about to seize the boat, the young man was an infidel who would bring grief upon his pious parents, and under the wall was a treasure belonging to two orphans, who would recover their wealth on reaching maturity. The lesson is reproof of man's unseemly inquisitiveness into the ways of God. The story in the *Qur'ān* is of Jewish origin (G. Weil, *Biblische Legenden der Muselmänner*, Frankfort, 1845, pp. 178–181), and recurs in the Haggadic account of the journey of Asmodæus to Solomon (L. Ginzberg, *JE* ii. [1902] 218; cf. also H. Oesterley, *Gesta Romanorum*, Berlin, 1872, pp. 80, 724 f., J. C. Dunlop, *Hist. of Fiction*, ed. H. Wilson, London, 1896, ii. 263–269, and art. KHIDR).

LOUIS H. GRAY.

**JHĪNWAR, DHĪMAR, DHĪNWAR** (Skr. *dhīvara*, 'fisherman').—The term applied in the Panjāb to the carrier, waterman, fisherman, and basket-maker castes of the E. districts and Kāshmīr. The caste numbered, according to the Census of 1911, 375,694, of whom 61 per cent were Hindus and the remainder Muhammadans, with a small Sikh minority. It has a low place in the Hindu caste system, and, as with the allied castes, its Hindu or Muhammadan beliefs are only a slight veneer over Animism. Its members worship chiefly the deities or spirits connected with their occupation, and the divinities of the great rivers, Ganges, Jumnā, and Indus; and they make offerings to the boats, nets, and other implements of their craft.

One remarkable rite is almost peculiar to them.

In the Panjāb on the 8th day before the Divālī, or feast of lights, which is celebrated at the new moon of Kārttik (Oct.–Nov.), the Hoī or Hūi festival is held, at which the Jhinwarnī, or female water-carrier, of the household is given the first place, and is petted by the ladies of the family, who act as her tire-women. After the house has been purified by being smeared with cow-dung, figures of a litter and its bearers are drawn on the wall in four or five colours, and to it offerings, accompanied by the usual worship (*pūjā*) with incense, lights, and flowers, are made, consisting of radishes, sweet potatoes, and other roots of the season. The legend tells that at the beginning of the Kaliyuga, or present evil age, death, murrain, and famine devastated the world. The Brāhmans prayed and practised austerities, but in vain. They were in despair, when a woman of the Jhīnwar tribe sat in their midst and encouraged them to further efforts, as the result of which the goddess Kālikā or Chāmuṇḍā appeared, carrying her head in her hands, and announced that the prevailing calamities were due to immorality and want of religious faith, and that, if the world was to be saved, she must in future be honoured with this annual feast and fast. The reward of the Jhinwar woman was to be exalted to a place of honour at the solemnity. Another story tells that Hoī was a Brāhman maid who escaped defilement at the hands of the Musalmāns by taking refuge in the hut of a Jhīnwar. When her pursuers overtook her, she disappeared into the earth, and was deified by her caste and other Hindus.

It is difficult to explain the meaning of the rite, but it probably points to a primitive cult of the earth- or mother-goddess which was specialized by the Jhīnwar caste, one of their women, as we know to be the case in other Panjāb cults of Devī, impersonating the goddess (H. A. Rose, *Punjab and N.W. Frontier Province Census Rep.*, 1901, i. 126).

**JINN.**—See DEMONS AND SPIRITS (Muhammadan).

**JĪVANMUKTA.**—The word *jīvanmukta* means 'delivered while yet on earth.' By 'deliverance' we must understand the end of existence or of transmigration, either the return to Brahman or the entry into *nirvāṇa* (Buddhism). The 'delivered on earth' is the saint who has realized all the con-

[1] Cf. the fragments of a Soghdian version of the NT, ed. F. W. K. Müller, 'Soghdische Texte, I.,' *ABAW*, 1912; it may be suggested that this Soghdian version, which is closely dependent on the Syriac, dates from the 9th or 10th cent. (L. H. Gray, *ExpT* xxv. [1913] 59–61).

[2] *Bereshith Rabbah*, lxxviii. 1 (on Gn $32^{26}$); see Wünsche, 379; also *Ekah Rabbati* on La $3^{23}$ (A. Wünsche, *Der Midrasch Echa Rabbati*, Leipzig, 1881, p. 126); cf. W. Bacher, *Agada der Tannaiten*², Strassburg, 1903, i. 172; L. Blau, *JE* i. [1901] 586.

[3] See I. Lévi, cited by J. Darmesteter, *REJ* xix. [1889] 14, note 1.

ditions of deliverance and is living his last existence. Since he has exhausted desire and illusion, which are the food of individual existence (Brahmanism), the food of existence (Buddhism), he has passed from the 'mundane' (*laukika*) plane, where thoughts and actions move, to a higher plane, 'supramundane' (*lokottara*), from which thought and action are, properly speaking, excluded. He continues to live, because the physical forces which sustain life are not yet dead, just as the potter's wheel continues to turn by the force which it has acquired; because the acts, for which this life is the payment, have not been entirely paid for. But such acts, recent or ancient, which ought to be paid for in a new rebirth, are either suppressed and 'skipped over' or 'transferred' to this life. No new act can be imputed to the *jīvanmukta*, for an act can be imputed to a person only when it is 'redolent of desire.'

The origin of this definition of sanctity is to be found, on the one hand, in the speculations concerning the ascetic, aloof from all human interest and clothed with and fed on air, in whom, as it would appear, there is no longer anything human; on the other hand, in the doctrines relating to the identity of the *ātman* and the *brahman*, and to *nirvāṇa*.

All the Indian sects have adopted the idea of the *jīvanmukta*, and they have all had to study the various complicated problems which it raises. Can the *jīvanmukta* fall from sanctity? Is he sinless? May he do whatever he pleases, since sin no longer exists for him? Is he necessarily inactive? Is he incapable of suffering? Is he exempt from mundane thoughts? We have a great deal of literature relating to these problems, especially in Buddhism (*jīvanmukta*=*arhat*). It is one of the characteristics of Hindu theologians that they have always tried, with much loyalty, sagacity, and subtlety, to 'organize' mystical ideas which cannot easily be reconciled with morality and experience.

Within the limits of this article we cannot even touch upon the problem that is here presented.

LOUIS DE LA VALLÉE POUSSIN.

**JÑĀNA-MĀRGA.**—The term *jñāna-mārga*, 'the pathway of knowledge' (to salvation, *mokṣa*, *mukti*), or *jñāna-kāṇḍa*, 'department of knowledge,' covers what are known as the 'systems of Indian philosophy.' The term is opposed to *karma-mārga* (*q.v.*), *karma-kāṇḍa*, salvation by works. The literature of the Vedic period is characterized by a joy of life which forms a striking contrast to the pessimistic attitude that dominates Indian thought throughout the later periods. The Vedas themselves are chiefly concerned with the attainment of happiness in this world and its continuance in the next by means of sacrifices and other good works (*karmāṇi*) pleasing to the gods. At an early period we find objections raised to the purely selfish character of this attitude; some of the earlier *Upaniṣads* reject works altogether as being utterly inadequate, if not useless, for the attainment of salvation, and because they aim at worldly happiness only. This opposition to Vedic ritual gradually disappears in the *Upaniṣads*, and ultimately the philosophy of the *Upaniṣads* becomes the Vedānta, and the saving knowledge that they teach is called the Vedānta (end of the Veda).

**1. Upaniṣads.**—The general attitude of the *Upaniṣads* to works is that sacrifice and good works may procure happiness to a limited extent, but are on the whole a hindrance rather than a help in the attainment of real salvation, which is to be obtained through knowledge alone. To have any merit, works must not be performed with a view to a particular reward; if performed in a proper spirit, they contribute to originate a desire for knowledge. In order that knowledge may arise, the effects of evil works must be obliterated, and this may be effected by performing acts of piety not aiming at any immediate reward; when the mind has been purified in this way, there arises a desire for knowledge, and ignorance comes to an end. Works, however, although useless by themselves, are sometimes even said to be essential:

'Only he who knows both knowledge and not-knowledge (works) can be saved, because by good works he overcomes death and by knowledge he obtains the immortal.'[1]

At a very early period we find two new ideas, which were destined to influence profoundly all future Indian thought, making their appearance with striking suddenness—the doctrines of metempsychosis (*saṁsāra*) and of the influence of actions in a previous existence (*karma*). No satisfactory explanation has yet been given of the origin of the former of these beliefs, on which the latter depends (see, further, art. METEMPSYCHOSIS [Hindu]). The second idea is based on the belief that no good or evil deed can go unrewarded or unpunished; happiness in this life is the reward of good deeds in a previous existence, while misery, often apparently unmerited, is readily explained as the result of evil deeds in a previous existence (see, further, art. KARMA). What is true of the previous existence must hold also of the one prior to that, and so on. The cycle of existence has no beginning, and similarly has no end; for in each existence there must be a certain balance of unrewarded good or unexpiated evil to carry the individual on to a new existence. Every action unfailingly brings its own reward or punishment; the cause of action is desire, and desire is due to ignorance, which mistakes the real nature of things (cf. art. DESIRE [Buddhist]); it is this ignorance that is the cause of the cycle of re-births (cf. art. MĀYĀ). The result of this doctrine is a firm conviction of the misery of mundane existence, which contrasts with the passionate love of life of the earliest period, and the belief that real happiness is to be obtained only by release from the *saṁsāra*. This release is to be obtained only by destroying the ignorance which is the root of the cycle of existence; the object of the various philosophies is to teach that knowledge which brings salvation from mundane existence to the happy few.

Vedic and allied knowledge, and indeed all existing knowledge, was early recognized as insufficient for the attainment of salvation.

Thus, for example, we find[2] Nārada lamenting that, though he has studied the Vedas, the epics, grammar, etc., and is learned in the scriptures, yet he is not learned in the *ātman*; and beseeching to be taught the *ātman* that overcomes sorrow, and to be led to the 'shore that lies beyond sorrow.' Similarly, Śvetaketu, having completed his education under his father Āruṇi, and failing to answer questions put to him, upbraids his father for declaring his education perfect.[3] Mere learning and book-knowledge then are not sufficient: 'The *ātman* is not attained by learning . . . and much knowledge of books.'[4]

True knowledge in the *Upaniṣads* is a knowledge of *brahman* or the *ātman* (*qq.v.*). This knowledge was recognized as being different in its nature from what is commonly understood by the term 'knowledge'; for it is possible to know all branches of human knowledge and yet be ignorant of the saving knowledge of the *ātman*; this state of ignorance of true knowledge is called *avidyā* ('not-knowledge'); this term gradually lost the meaning of simple ignorance, and came to be applied to that false knowledge which impedes a knowledge of *brahman*, by preventing us from seeing things as they really are, and is based on illusion (*māyā*) due to the limitations of the human intellect.

1 *Īśā Upan.* 11.
2 *Chhānd. Upan.* vii. 10.
3 *Bṛhad. Ār. Upan.* vi. 2.
4 *Kaṭh. Upan.* i. ii. 23.

Ignorance, then, is the knowledge derived from the experience of the senses, while true knowledge is of *brahman* or the *ātman*.

There are two fundamental ideas in the *Upaniṣads*—*brahman* and the *ātman*, which came to be used synonymously. *Brahman* is the first principle of the universe, the Eternal One, the all-pervading power; *ātman* is first the vital principle, the Self, then the All-soul, the One, and thus comes to be identical with *brahman*. Saving knowledge consists in the recognition of the unity of *brahman* and the *ātman* of the individual soul with the world-soul, and the object of the *Upaniṣads* is to teach a knowledge of *brahman*. The doctrine of the identity of *brahman* and the *ātman* is summed up in such phrases as *tat tvam asi* ('thou art That') and *aham brahmāsmi* ('I am *brahman*'). The veil of ignorance, through which we see a plurality of objects when in reality *brahman* alone exists, is lifted when the underlying *brahman* of the object is recognized in the *ātman* of the knower. Mundane objects are not realities, and are of no value for their own sake, but exist only through the *ātman*, which alone exists and is the entire universe. Yājñavalkya compares the phenomena of the world to the notes of a lute or conch-shell: the notes cannot be seized; only when the instrument or the player is seized can they be seized; in the same way it is only when the *ātman* is known that all else is known. He who has comprehended the *ātman* knows the whole universe.[1] When it is recognized that there is only one being, the self or *ātman*, eternal and unchanging, the illusions resulting from the limitations of the intellect disappear, and release is obtained from this world of ignorance.

2. **Vedānta.**—The Brāhmanic speculations of the *Upaniṣads* are developed in the philosophical system usually called Vedānta, properly the Uttara-mīmāṁsā, or 'Second inquiry' (concerning *brahman*; it is also called Brahma-mīmāṁsā); the founder of the system, Bādarāyaṇa, flourished about the beginning of the Christian era, and his great expositor Śaṅkara eight centuries later. The fundamental notion in the system, which is still the most influential in India, is the identity of the *ātman*, or self, with the *brahman*. *Brahman* is the One, the Unique, the Self-existent, everlasting and unchanging, and cannot therefore be subject to division into parts. The self of each individual must therefore be identical with the self of *brahman*, instead of being a part of it; the self in each individual is therefore the whole undivided *brahman*. Nothing exists but *brahman* (*advaita-vāda*, doctrine of non-duality). The apparent objections to this, which arise out of mundane experience, are due to ignorance, which prevents the self from recognizing that all else is illusion; the phenomena of the *saṁsāra* and the material universe are illusions, just as the idea of separate souls is. The Vedānta does not inquire into the origin of this ignorance, whether due to desire, etc., or not, but teaches that it may be destroyed by the saving knowledge that all that is not soul is illusion, and that the soul is *brahman*. When this truth is known, the fetters that bind the soul to the cycle of existence are broken, and release is obtained (see, further, art. VEDĀNTA). We may here mention the Viśiṣṭādvaita ('modified monism') school of the Vedānta founded by Rāmānuja, one of the most important commentators on the *Brahmasūtras*, who flourished in the 12th cent. A.D. and belonged to the Bhāgavata sect. He expounds the Vedānta system according to the tenets of this monotheistic sect in a way which differs in important points from the outline just given; according to the Viśiṣṭādvaitas, the individual souls are not identical with *brahman* or God, but are elements of him and not separate from him; the individual souls are involved in the miseries of mundane existence, not entirely by ignorance, but by unbelief. The true means of salvation is therefore found, not in some means of cognition, but in devout love of God (*bhakti*) and belief.

3. **Sāṅkhya.**—The Sāṅkhya school, which has been called the oldest real system of Indian philosophy, is as much impressed by the infinite variety of the universe as the Vedānta is with its unity. The system, the traditional founder of which was Kapila, is essentially dualistic; two principles are admitted whose interworkings produce the universe—*prakṛti* (matter) and *puruṣa* (soul or spirit); the latter is not one all-pervading spirit like the *brahman* of the Vedānta, but rather an infinite number of individual spirits each independent, and thus the variety of the universe is explained. These two are entirely distinct, and have existed side by side from all eternity. Mental processes are mechanical actions of physical organs, *i.e.* of *prakṛti*; *prakṛti*, however, would remain unconscious if it were not acted upon by *puruṣa*; *puruṣa*, or soul, has no volition of its own, but the subtle body (*sūkṣmaśarīra*), the inner organs and senses which surround it, has. Through this body the soul becomes involved in the *saṁsāra*, and thus has to suffer the miseries of mundane existence. The aim of the Sāṅkhya is to teach that *puruṣa* is absolutely distinct from *prakṛti* in the most subtle organs. A knowledge that these two are absolutely distinct, and have been so from the beginning, delivers the soul from the cycle of existence; it then realizes that the connexion between soul and matter, on which the miseries of the world depend, is only an apparent one, and, when this is realized, the sufferings of *prakṛti* are no longer the sufferings of *puruṣa*, while the sufferings of the former are no longer experienced, since they are no longer 'illuminated' by *puruṣa* (see, further, art. SĀṄKHYA).

The philosophical basis of Buddhism is considerably influenced by the Sāṅkhya (for a different view see above, p. 211b). It assumes that mundane existence is nothing but suffering, and that the cause of this suffering is the desire to enjoy the apparent delights of the world. The cause of this attachment is ignorance; this ignorance and all that follows it will be dissipated when attachment to the world is renounced.

4. **Yoga.**—The Yoga system, founded by Patañjali, who, if not identical with the celebrated grammarian of that name, likewise flourished in the 2nd cent. B.C., is closely connected with the Sāṅkhya. The philosophical basis of the Yoga is that of the Sāṅkhya with the addition of the notions of a Personal God (*īśvara*) and of the occult powers to be derived from Yoga practices. Its characteristic feature is the influence laid on asceticism and mental concentration (*yoga*=contemplation, concentration, union).

Asceticism and contemplation have always been practised in India as means of acquiring merit. Patañjali developed a formal system the methodical practice of which, in addition to giving occult powers, is regarded by him as one of the surest ways of gaining saving knowledge. The aim of Yoga was at first that of the Sāṅkhya, namely, the separation (*kaivalya*) of soul and matter; but, with the addition of the idea of a Personal God (*īśvara*) or Universal Soul, the ultimate aim comes to be union of the individual soul with God. The mind is to be deliberately and artificially withdrawn from the external world and concentrated upon itself; it is then enabled to throw off one by one the material fetters that bind it to the *saṁsāra*,

[1] *Bṛhad. Ār. Upan.* II. iv. 8

and to awaken to a knowledge of truth, and the individual soul gains freedom and absorption in the World-Soul (see, further, art. YOGA).

5. **Minor systems.**—Of the minor systems that teach the way of escape from the *saṁsāra* the most important is the Vaiśeṣika founded by Kaṇāda (the name, however, may be a nickname, 'atom-eater') at quite an early date. Deliverance, according to Kaṇāda, is to be obtained only by a knowledge of the real nature of soul and the unreality of matter, and this depends upon a knowledge of the 'six categories' (*padārtha*), under which everything that exists can be classed; these are substance, quality, action, generality, individuality, and inherence or inseparability. These are narrowly defined and subdivided; it is from the fifth that the system takes its name (*viśeṣa*=atomic individuality); all substances (defined in the first category as earth, water, light, air, ether, time, space, soul [*ātman*], mind [*manas*]) consist of invisible atoms, from the combination of which all mental and physical phenomena arise. Freedom is obtained when the Vaiśeṣika doctrines have been comprehended (see, further, art. VAIŚEṢIKA).

The Nyāya system of Gautama is usually coupled with the Vaiśeṣika, from which it is developed. It is really a system of logic and the means of knowledge. Truth is to be attained by the application of sixteen categories, or logical notions, and salvation depends on a correct knowledge of their nature. It is only when the student has thoroughly mastered the system that he is capable of ascertaining truth (see, further, art. NYĀYA).

The aim of the Pūrva-mīmāṁsā ('first inquiry'), which is usually coupled with the Vedānta, is, like that of the other systems, the attainment of liberation from the world, but, as the other name (Karma-mīmāṁsā) of the system shows, the means that it teaches is the observance of orthodox rites and ceremonies, and not saving knowledge. It is particularly concerned with the study and interpretation of the Vedas (see, further, art. MĪMĀṀSĀ).

J. ALLAN.

## JOACHIMITES

**JOACHIMITES.**—As a sect in the Christian Church the Joachimites exercised a remarkable influence in the 13th cent., and, as we shall see, some of their tenets passed over into the motive-doctrines of the Reformation. The sect derived their name from Joachim of Floris, who seems to have been born in 1145 and to have died in 1202. He was, therefore, an older contemporary of Francis of Assisi (1182–1226), with whose followers the Joachimites were in vigorous sympathy. It is difficult to disentangle the personality or the work of Joachim from the mass of tradition which has gathered about his name, and it is equally difficult to discover what Joachim himself actually taught. He was certainly a creative personality, and works have been attributed to him which are really the fruit of the school which called itself by his name. In these works, more particularly the commentaries on Isaiah and Jeremiah, the germs of thought which are due to Joachim have been expanded and developed by the school which he founded. As to the genuineness of the works attributed to Joachim, there is not a great measure of agreement among scholars, but there is no doubt that he was one of the strongest churchmen of the 12th century. His influence on contemporaries and his place in the sect which called itself by his name entitle him to a position among the leading men of the century.

1. **Life of Joachim.**—The facts of his life, so far as they can be disentangled (*AS*, May 29), may be briefly stated. He was certainly a Calabrian—first, head of a Cistercian monastery at Corazzo, and afterwards abbot of a stricter sect at Floris, with which place his name is generally associated. His work at Corazzo and Floris was fostered by contemporary popes, and he appears also to have had a remarkable influence on Richard of England and Philip of France. When his writings were submitted to the Fourth Lateran Council in 1215, the only point condemned was his doctrine of the Trinity, in which he had parted from Peter Lombard (Denzinger[11], nos. 431–433). The place which Joachim held in the regard of his time may be further gathered from the reference to him in Dante (*Paradiso*, xii. 139–141).

2. **His views.**—If we regard the genuine works of Joachim as (*a*) *Concordia Veteris et Novi Testamenti* (Venice, 1519), (*b*) *Psalterium Decem Chordarum* (do. 1527), and (*c*) *Expositio apocalypsis* (do. 1527), then the following may be described as his views and the germs which were afterwards developed by his school of thought.

(1) Like the visionaries who preceded him, such as Hildegard and Elizabeth of Schönau, he vigorously attacked the corruptions of the Church, and particularly its secularization. He held that the spirituality of the Church and the usefulness of its work in the world were being vitiated by the secularizing atmosphere in which it was enveloped. (2) He looked for deliverance from secularization in an Age of the Spirit, operating through a purified monasticism, which in turn should foster the life of contemplation. (3) Behind all his teaching lay a philosophy of religious history which had caught the Montanistic spirit. Montanus had already taught the doctrine of Three Ages or States: first, an OT revelation; secondly, a NT revelation; thirdly, the culminating age of Montanus and his prophets who should realize a Church of the Holy Spirit (see art. MONTANISM). The disciples of Montanus were, therefore, the *spirituales*, and it must not be forgotten that of these Tertullian was one. This doctrine of the Three Ages or States was developed by Joachim. The first age was that of the Father, closing with Zacharias, father of John the Baptist; the second age was that of the Son, reaching to the year 1260; after 1260 began the third age, that of the Holy Spirit. Though these ages overlapped to some extent, they were distinct in Joachim's thinking. Each age was divided artificially; each had its special characteristic and atmosphere. Joachim's teaching dealt mainly with the third of these ages. Here he showed himself a prophet and a visionary. The third age was to be the Age of the Spirit. Men were not then to be fettered by the letter. It was to be the age of the Eternal Gospel. It was not to be an age of ecclesiastical machinery. Rather was it to be an age of pure contemplation and of a perfected monasticism. Joachim's vision, in truth, was that of the imminent Age of the Holy Spirit, which, in an artificial way, he said was to open in the year 1260. Cf. art. AGES OF THE WORLD (Christian), vol. i. p. 191ᵃ.

3. **His influence.**—The views thus expressed by Joachim were eagerly caught up and developed by his followers, and the fullest expression of them is to be found in the commentaries on Isaiah and Jeremiah, which go under Joachim's name. The stricter Franciscans also found them peculiarly congenial, and the idea of a spiritual Christianity and an imminent Age of the Spirit was at once

assimilated by them. Their criticism of the secularized Roman Church had been exceptionally vigorous. To them the Church of Rome was the house of the courtesan, and the Church in its alliance with the world and in its greed of gain, shown in its many and dubious methods for securing gain, had been unfaithful to its true mission, the saving of the world for Christ. The Church ought to have trusted in the strength of God, not in the sword. In allying itself with the power of the sword, it had been unfaithful. In common with the stricter Franciscans, the Joachimites looked forward to a purified Church and a spiritual Christianity. In such a Church the monks would remain as the organ of the Spiritual Gospel. Outward authority must disappear in the Age of the Spirit. The later Joachimite teaching was peculiarly stringent in its anti-Romanism. One of the fruits of this school of thought was the famous *Liber Introductorius in Evangelium æternum*, written probably in 1254 by the Franciscan, Gerardus of Borgo San Donnino. In its teaching the *Introductorius* drew largely from the writings of Joachim, whom it regarded as an inspired prophet. The book was condemned by Alexander IV. in 1255; but the apocalyptic ideas which it boldly taught lived on among the Franciscans and the followers of Joachim. From the chronicle of Salimbene of Parma, who belonged to a generation after Joachim, we can gather how influential and central was the place of Joachim in the esteem of his immediate followers, and we can see how the Joachimites were agitated by such questions as the controversy between the papacy and the monarchy, and the approaching last time.

Though much of the teaching of Joachim and his followers was highly visionary and artificial, it is apparent that there was behind it a genuine religious experience. They made their protest against the secularization of the Church and formed their vision of the future out of the fullness of this experience. So far as their distinctive teaching was concerned, parts of it had been already before the Church's mind. The doctrine of the Three Ages had been anticipated by Montanism, while the teaching of the Eternal Gospel may be found in Origen. But the religious experience of Joachim and his followers was a real contribution to the thought of the 13th century. Nor was it teaching which passed away. In one form or another the ideals of the Joachimites passed over into the thought of the Reformation, influencing more especially such early Reformers as Wyclif and Hus.

W. BEVERIDGE.

**JOSAPHAT, BARLAAM AND.**—The history of Barlaam and Josaphat, as it has become known through numerous translations in the West, is derived from the Buddhist collection of stories known as the *Jātaka*, the 'Birth-Stories,' records of the words and acts of the Buddha in the course of his former existences upon earth.[1] Of the stories themselves the date and origin are various. None, however, has attained to so great popularity or passed through so many transformations and vicissitudes as that of Barlaam and Josaphat. All are of the nature of folk-lore, parable, or fable,

[1] On the *Jātaka* see M. Winternitz, *Gesch. der ind. Litt.*, Leipzig, 1908 ff., II. i. 89–127; *The Jātaka, or Stories of the Buddha's Former Births*, tr. from the Pāli by various hands, 6 vols., Cambridge, 1895–1907; art. JATAKA.

derived from Indian sources or collections of tales, which in the first instance were for the most part non-Buddhist, but were adapted to the purposes of Buddhist propaganda and made to serve ethical and didactic ends. Gautama himself becomes in them all the protagonist, and expounds or illustrates the moral which the story is intended to enforce. In the regions of the West, however, in which not a few of these narratives have found a home and become popular, the Buddhist element thus introduced is again excluded and is replaced by Christian terminology and teaching. Interpolation and adaptation have frequently so changed the 'atmosphere' of the story and the definite point of the moral that it is only historically and by tracing the course of development that its Indian origin can be recognized.

Of the original form of the story, as it was compiled in India or adapted from more ancient existing materials, nothing is directly known. Incidents or parables contained in it have been traced in the Buddhist *Avadāna*, the *Mahābhārata*, and elsewhere. From the Buddhist original, which, it may be assumed, was composed in Māgadhi, or in an early form of some Prākrit dialect, a Pahlavi rendering was made in or about the time of the reign of Chosroes the Great of Persia (A.D. 531–579). This version also is no longer extant. There is, however, a curious and certainly not accidental resemblance between the life and history of this king and the character of Abenner, the Indian ruler and the father of Josaphat, as presented in the Buddhist story. To this Pahlavi rendering, which would seem to have been already deprived of its distinctive Buddhist features and teaching, all the numerous versions of the West owe their origin. The earliest Greek translation is derived from a Syriac version of the Pahlavi, and is attributed to the beginning of the 6th cent., partly on the ground that in an enumeration of the great religions of the world no reference is made to Muhammadanism. The Greek text is printed among the works of John of Damascus,[1] to whom it was ascribed by a mistaken identification with a 'John, Monk of the Convent of St. Saba,' to whom the work was assigned in the colophon of early Greek MSS. There are also three early Arabic versions, the original of which bore the title of *Kitāb Balauhar wa Būdāsaf*; and a mediæval Jewish translation into Hebrew, attributed to Abraham ibn Chisdai in the 13th century.[2] From these Oriental renderings all the later versions, numbering more than sixty, are ultimately descended. The first Latin translation was made from the Greek by Anastasius, the papal librarian in the latter part of the 9th cent., and became the parent of most of the modern European versions, including the English. The Greek was again independently translated into Latin a few centuries later by J. Billius, Abbot of St. Michel in Brittany;[3] and both renderings are printed among the works of John of Damascus. The earliest English version was produced by W. Caxton in A.D. 1483.[4] There are also extant four later versions or paraphrases in English, three of which are in verse. The verse renderings have been reprinted more than once,[5] but the prose version is rare.

[4] Reprinted by J. Jacobs, London, 1896; and also as an appendix to the same author's *Barlaam and Josaphat*.

[5] *e.g.* by J. Jacobs, *op. cit.*; K. S. Macdonald, *Story of Barlaam and Josaphat*, 'The Hystorye of the Hermyte Balaam' (*sic*), from Caxton's *Golden Legend*. In an appendix Macdonald prints three variant forms of the story from as many MSS.

Essentially the legend is as follows. Variations in detail, however, are numerous in the different versions.

Antecedently to the reign of a powerful Indian ruler named Abenner, Christian teaching had found its way to the East; and many converts had been made within his dominions. The king himself, however, was strongly opposed to the foreign religion, and issued an edict against it. Among others an intimate friend and minister of the king embraced Christianity, and, renouncing the world, adopted the life of an anchorite in the desert. Having been by the direction of the king brought back to the royal court, he there delivered a brief appeal and apology, by which Abenner was further incensed against the Christians. He dismissed his former friend in anger, forbidding him ever to return to his presence.

A son is afterwards born to the king, who hitherto had been childless, of faultless form and beauty, to whom is given the name of Josaphat (in the Greek Ἰωάσαφ). At a birthday feast Chaldæan astrologers who are present prophesy of his future greatness and wisdom. In some forms of the story the horoscope of the child is represented as foretelling also that he will abandon the religion of his fathers, and will turn to the true faith. At this the father is greatly distressed, and in order to avert the fulfilment of the prophecy builds for his son a beautiful palace, where the prince is confined in the midst of all that is attractive and beautiful, that he may not come into contact with misery or death.

In the event, however, when the prince reaches man's estate, he seeks release from constraint, and with his father's reluctant consent goes forth from the palace, and gains his first experience of the external world. He encounters in succession a blind man, a leper, a man aged and infirm, and a corpse; and in answer to his troubled inquiry is told that misfortunes and miseries such as these are the common lot of men. He is deeply moved, and learns further that the secret of deliverance from these woes is known only to the holy hermits who have withdrawn from the world; and he expresses accordingly the desire to see them and to hear from their own lips the true knowledge. His wish cannot be granted, because by the decree of his father the hermits have all been expelled from the country.

Under the guise of a jewel merchant, however, an anchorite who bears a high reputation for wisdom and purity of life comes to the court, and in successive interviews with the prince convinces him of the truth, whereupon the latter expresses his determination to become the anchorite's disciple. The anchorite's name is Barlaam. To convey his teaching he employs a series of apologues or parables, which set forth the true doctrine and illustrate the vanity and fruitlessness of worldly things. In the number and arrangement of these parables the versions again present considerable variations. The king is naturally moved to grief and wrath on hearing of his son's conversion, and endeavours by threats and argument to change his purpose.

He also issues orders for the arrest of Barlaam. The hermit, however, has left the city, and the attempt fails. Arrangements are then made for the holding of a public discussion before the prince, in which a stranger, Nachor, is to play the part of advocate of the new doctrine, to present the Christian argument, and to be defeated in debate. Thus it is hoped to discredit the faith in the eyes of Josaphat, and to induce him to abandon his resolve to follow Barlaam. In a secret interview with Nachor, however, the prince threatens him with death if he does not vindicate the truth. He urges his case therefore with eloquence and success, and offers before the king a powerful and convincing apology for the faith, by which his opponents are put to silence. Nachor himself then withdraws into the wilderness. A further attempt is made to lead the prince astray by means of worldly and sensual temptations, in which the agency of Theudas, a magician, is employed. This also meets with no success; and Theudas himself is converted by means of a parable which Josaphat relates to him. Finally, the prince forsakes his home and the royal court, and, with Barlaam as his companion and friend, gives himself over to the life of an anchorite in the wilderness.

Some forms of the legend are in their details more strikingly reminiscent of the life history of Gautama Buddha than is the above, which in substance represents the Greek. Thus in an Arabic version the Bo-tree appears, with miraculous fruit. Josaphat flees on horseback from the city by night in company with his vizier, whom he sends back, together with his horse and all his possessions, when he arrives in the wilderness. After his conversion he is carried up into heaven, and on his return devotes himself with much success to preaching the doctrine. He dies, as in the Buddhist record, reclining with his head to the west, and with a final blessing on his disciple Ānanda.

The distinctively Christian features of the narrative are interpolations introduced to further a polemic interest, when the story was utilized for Christian edification and adapted to the purposes of Christian apologetic. The older Oriental versions, as the Arabic above, more evidently betray their Indian and Buddhist origin. Both Barlaam and Josaphat have a formal place on the roll of Christian saints, and special days in the calendar are set apart to their memory. In the Menology of the Greek Church, August 26 is the commemoration of St. Josaphat;[1] and, in the sister Church of Rome, Nov. 27 is dedicated to the joint service of the two saints. There are said to be relics of St. Josaphat, in the form of a bone and part of the spine, preserved in a church at Antwerp. A monastery in Thessaly bears the name of St. Barlaam; and elsewhere also churches have been consecrated in their honour.

Not the least remarkable of the many strange features of the story is that the names of the two principal characters are both ultimately derived from one and the same source, and denote the Buddha, the founder of the Buddhist faith. The characters, therefore, are really doublets of a common original. The Greek Ἰωάσαφ is a transformed and corrupted form of the title *Bodhisattva*, which through the Pahlavi found its way into Arabic as Būdāsaf, and then by a confusion of *b* and *y*, letters which differ only by the diacritical point, became Yudāsāf or Yodāsāf, and ultimately Yoasaf. Balauvar, the original form of the name which through the Syriac has become Barlaam, is the well-known title of the Buddha, *Bhagavān*, 'the Lord,' the pairs of letters *g* and *l*, *n* and *r* being similar and easily confused in the Pahlavi alphabet. Thus the great Indian religious teacher reappears in a double form in the West as a venerated Christian saint. Other names also in the story seem to be derived from the Indian legends. Thus Zardan, the nobleman entrusted with the guardianship of the young prince, has been identified with Chandaka, Gautama's charioteer and the companion of his flight from his father's palace.

The Latin version of Barlaam and Josaphat was printed as early as 1539 at Basel; but the Greek text not until three centuries later, at Paris in the year 1832. In the latter the history is described as 'a profitable story brought . . . from the further part of Ethiopia, called India, by John the Monk . . . of the Monastery of St. Saba or Sabas.' John the Monk is believed to be identical with a well-known John, a member of an early fraternity on Mt. Sinai, who lived about two centuries before John of Damascus († A.D. 756). It was not, however, until the discovery in 1889, in the monastery of St. Catherine, of the Syriac text of the *Apology of Aristides*[2] that it became evident that the defence of the faith offered by Nachor in the story was not original, but borrowed from the Christian author. According to Eusebius (*HE* iv. 3), Aristides addressed his *Apology* to the Emperor Hadrian (A.D. 117–138), but in the judgment of Rendel Harris the work belongs more probably to the early years of his successor, Antoninus Pius (138–161). It was long believed to have been lost. With the publication of the Syriac text its practical identity with the Greek which forms part of the story of Barlaam and Josaphat was at once recognized. In its Syriac form the text of the *Apology* is expanded by a number of characteristic repetitions and additions, which add considerably to its length. The Greek is believed to represent more faithfully the original. In the early Christian centuries the *Apology of Aristides* enjoyed much popularity, and was regarded as an effective and complete defence of the faith. It was adopted accordingly by the Greek translator of the

[1] *μνήμη τοῦ ὁσίου Ἰωάσαφ υἱοῦ Ἀβενὴρ τοῦ βασιλέως* (J. Jacobs, *op. cit.* p. xvi).

[2] Published with an Eng. tr. by J. Rendel Harris in *TS* i. 1, Cambridge, 1891.

Indian legend and placed in the mouth of Nachor as the convincing exposition of the Christian faith which should refute the arguments of his heathen opponents. The attribution of the text to John of Damascus rests upon a comparatively late tradition. It will be found printed in all complete editions of his works.

In all versions of the story the means by which the conversion of the prince is effected is the narration to him by Barlaam, the anchorite disguised as jewel-merchant, of a series of tales or parables conveying moral instruction and warning. The number and order of these parables vary considerably in the different versions. More than thirty altogether are contained in the several earlier translations, but of these only nine are common to all, and sixteen find a place in only one form or version of the story.[1] The Hebrew text is remarkable for the number of parables that it records which are not found elsewhere. Two of the stories possess an individual interest. That of the Sower follows so closely the lines of the narrative in the Synoptic Gospels that its source can hardly be in doubt. It is found, moreover, in the earliest versions, Arabic and Hebrew, as well as in the Greek, and therefore must have been inserted in the legend at an early date. The details are entirely Christian. Similar moral teaching derived from the processes of ploughing and sowing is contained in an early Buddhist story, which there is no reason to believe has come under Christian influence.[2] The likeness between the two is not striking. Perhaps it justifies the suggestion that the Christian form of the parable has replaced a Buddhist original of similar import.

Stories similar to that of the three caskets in Shakespeare's *Merchant of Venice* are distributed more widely. They are found in the Talmud as well as in Buddhist sources, and in mediæval Europe seem to have been well-known and popular. In the legend of Barlaam and Josaphat the king sets before his attendants four caskets, two of which are overlaid with gold and precious stones, and two covered with rough clay. The gold-encrusted caskets, however, contain only dry bones, the others are filled with pearls and jewels. The courtiers are then summoned before the king, and required to estimate the value of the several caskets. Their judgment is, of course, at fault; and the king enforces the moral that a fair outside often conceals an evil heart, while the clay-covered vessels he likens to the hermits in mean outward raiment, but within full of noble and elevating thoughts. Whether the English poet was familiar with the legend of Barlaam and Josaphat it is impossible to determine; but the ultimate source of the story which he has adopted and immortalized is Buddhist and Indian. That it was contained in the original form of the Indian legend is proved by the fact that it finds a place in the earliest versions.

LITERATURE.—J. Jacobs, *Barlaam and Josaphat, English Lives of Buddha*, London, 1896 (the most complete discussion of the legend and its historical relations, where also numerous references will be found to earlier works); Max Müller, 'Migration of Fables,' in *Selected Essays*, London, 1881, i. 533 ff.; K. S. Macdonald, *Story of Barlaam and Josaphat*, Calcutta, 1896; H. Zotenberg, *Notice sur le livre de Barlaam et Joasaph, accompagnée d'extraits du texte grec et des versions arabe et éthiopienne*, Paris, 1886; F. Heuckenkamp, *Die provenzalische Prosa-Redaktion des geistlichen Romans von Barlaam und Josaphat*, Halle, 1912; J. Rendel Harris, *Apology of Aristides*, Cambridge, 1891; S. d'Oldenburg, 'Persidskii izvodŭ povêsti o Varlaamê i Iosafê,' *Zapiski vostoč. otdêl. imp. russ. archaeolog. obščestva*, iv. [1890] 229–265. The Greek text was published separately for the first time by J. F. Boissonade in his *Anecdota Græca*, iv., Paris, 1832. It is reprinted, *e.g.*, by J. Armitage Robinson in *TS* i. 1, Cambridge, 1891. Further bibliographical material is given by K. Krumbacher, *Gesch. der byzant. Lit.*[2], Munich, 1897, pp. 886–891.

**JOSEPHUS.**—The correct form of the name of Josephus (or, according to his adopted Roman name, *Falvius Josephus*), the Jewish historian, was Ἰώσηπος, written also Ἰώσηππος or Ἰώσιππος; Latin *Josepus*, *Joseppus*, or *Josippos*. The forms Ἰώσηφος, *Josephus*, first came into use during the Middle Ages, on the analogy of the Biblical Ἰωσήφ.[1]

1. **Life.**—As Josephus left behind him an autobiography, and often speaks about himself in his other writings, we possess a relatively large amount of information regarding him. He was born in the first year of the Emperor Gaius, *i.e.* A.D. 37–38, and was a scion of one of the most eminent priestly families among the Jews. His father's name was Matthias, while his mother was of princely blood, being a descendant of the Hasmonæan leader Jonathan. Being intended for the priesthood, he was introduced to the study of Jewish law and literature at an early age; and at the age of sixteen he attended successively the schools of the three leading sects of Judaism—Pharisees, Sadducees, and Essenes—in order to acquire the intimate knowledge of each requisite for an eventual choice among them. He afterwards attached himself to a hermit, called Banûn, who dwelt in the desert, even living for a time as an ascetic. At the age of nineteen he resolved to embrace the doctrine of the Pharisees, and began to take part in the political life of Jerusalem. He first came into public notice in A.D. 63 or 64, when he was sent, probably with others, as an ambassador to Rome, to treat for the release of certain Jews whom the procurator Felix had sent in custody to the capital. His mission was attended with complete success, and he was sent home laden with gifts (*Vit.* 16 ff.).

On his return to Palestine, Josephus found everything in a state of ferment and unrest, and the revolt of the Jews broke out shortly afterwards (Aug. A.D. 66), spreading to Galilee and the surrounding district after the defeat of Cestius Gallus near Jerusalem. Leaders were now elected in Jerusalem for the various insurgent territories, and to Josephus, associated, at the outset at least, with two assessors, of whose counsels he was bound to take cognizance (*Vit.* 29, 73, 77), fell a most important post—the chief command in the two divisions of Galilee, including Gamala (*BJ* ii. 568). He subsequently maintained that, along with others who shared his views, he had tried every possible means to prevent the outbreak, but that the course of events had forced him to embrace the popular cause; he alleges, indeed, that he accepted the Galilæan command not as a step towards war, but with a view to its prevention (*Vit.* 20 f., 28 f.). As it fell to him to sustain the first assault of the legions, he fortified the most important points, such as Tiberias, Tarichea, and Jotapata, and collected an army, the nucleus of which, formed of 4500 mercenaries, was supplemented by the Galilæan levy of nominally 60,000 infantry and 350 horse (*BJ* ii. 569 ff.). His mobilization was interrupted by the attacks of the imperial forces stationed at Ptolemais and the troops of Agrippa II., as also by disputes with the cities of Tiberias and Sepphoris, the latter of which, favouring the cause of Rome, was not to be relied upon. Josephus now fell into bitter personal antagonism with John of Gischala, an implacable foe of Rome, who was urging on the insurrection, and whose machinations were so far successful that the Government sent a commission to Galilee for the purpose of superseding Josephus. The latter, however, was able to maintain his

[1] In this article the works of Josephus will be cited under the following abbreviated forms: *BJ* = *Bellum Judaicum*, *AJ* = *Antiquitates Judaicæ*, *Vit.* = *Vita*, *CA* = *Contra Apionem*; and the accompanying numbers refer to the paragraphs of the present writer's edition.

authority, and to thwart the designs of his enemy, mainly because of the loyal support accorded him by the people of Galilee.

We do not know the gravamen of the charge preferred against Josephus. In Galilee, John denounced him as a traitor to the national cause (*BJ* ii. 594), while in Jerusalem the same accuser contended that he had the ambitions of a tyrant, and that he ought to be dismissed from office before he became too powerful, as otherwise there was a danger of his coming to Jerusalem and setting up a despotic government (*BJ* ii. 626; *Vit.* 193)—an entirely different accusation, and one which practically means nothing. But, as Josephus is far from impartial in his narrative, it is highly probable that other and more serious grievances were brought against him. It would appear that he was no very enterprising or successful general, and showed dilatoriness in many things. He was specially at fault in allowing Sepphoris, one of his commanding positions, to fall into the hands of the enemy (*BJ* ii. 574, 646), and probably in other ways laid himself open to criticism. Whatever the truth may have been in these matters, it is clear that the dissensions with John of Gischala and others were anything but favourable to the preparations and defences being made by the Galilæans in view of the imminent attack of the Romans.

In the spring of A.D. 67, immediately after Sepphoris had been occupied and the surrounding country devastated by an advance guard of the Roman army under Placidus, Vespasian, the legate of Nero, pressed forwards from Ptolemais with a large force. Josephus fell back upon Tiberias, and from there sent couriers to Jerusalem, demanding either that effective reinforcements should be granted him or that peace should be concluded. He seems to have felt that his position in Tiberias was insecure, for, when he heard of Vespasian's advance against Jotapata, he marched thither, and gained admission before the investment was complete (8th June, A.D. 67). But he had little hope, as he says (*BJ* iii. 193 f.), of making a stand here, and accordingly made up his mind to escape from the besieged town together with some of his more eminent colleagues. The inhabitants, however, forced him to remain, so that he continued to direct the defence until the place succumbed to a night attack, 20th July, A.D. 67. While the Romans were putting all to the sword, Josephus, along with forty others, men and women, saved himself by hiding in a cavern difficult of access. This place of concealment having been discovered, Vespasian, acting through the tribune Nicanor, with whom Josephus was personally acquainted, offered him the privilege of asking mercy, and after some consideration, he consented.

His companions, however, would not hear of submitting to Rome, and gave Josephus the choice of committing suicide or dying at their hands; but at his suggestion they determined to kill one another in a certain order determined by lot, and the cast of fortune left as the last survivors Josephus and another, whom he had little difficulty in persuading to join him in accepting the Roman clemency. We may venture to assert that the transaction cannot have been quite as he describes it, for among those whom he claims to have outwitted were persons by no means so simple as his narrative implies (*BJ* iii. 342).

After this act of submission, Josephus was brought before Vespasian, who had him put in irons, with a view to his being sent to Nero at Rome. The prisoner now asked for a special interview with the commander, at which he announced to Vespasian that the imperial throne would shortly be his. Vespasian was at first inclined to deprecate such language, but, having learned that Josephus had previously shown himself something of a prophet, he took a different attitude. The captive still remained in bonds, indeed, but he was well treated, and at all events nothing more was said about his being sent to Rome.

Suetonius has a statement not unlike this, though differing in details, namely that Josephus firmly maintained, when put in durance, that Vespasian would soon liberate him again, but as the Emperor (Sueton. *Vespas.* 5; Dio Cass. lxvi. 1). The prediction of Josephus must, therefore, have been known to other historians of the period. In point of fact, premonitions and prophecies were at that time fully credited and seriously regarded among all classes, and it is by no means unlikely that Josephus in his precarious situation should have ventured to make such a prediction—hazardous though it was. He vaunts his prophetic gift, and seems to have believed that God had specially favoured him and revealed the future to him (*BJ* iii. 351 f., 405 f., *Vit.* 208). In any case, the special favour shown to him by Vespasian seems to prove that the Emperor felt in some sense indebted to him.

Vespasian was proclaimed Emperor in Alexandria on the 1st, then at Cæsarea on the 3rd, of July, A.D. 69, and Josephus was at once set free (*BJ* iv. 623 ff.). He accompanied the Emperor to Egypt, and in the spring of A.D. 70 joined Titus in his march towards Jerusalem. He was present during the whole siege, acting at the headquarters of Titus as interpreter and commissioner, knowing both the land and the language, and thus taking service with the Romans against his own countrymen (*CA* i. 48 f.). More than once, as he tells us, he unsuccessfully advised his people to abandon their futile resistance (*BJ* v. 114, 261, 361 ff., vi. 94 ff., 118 f., 365); on one occasion, indeed, a stone was hurled at him and he was severely injured (*BJ* v. 541), for the insurgents regarded him as a renegade and a traitor (*BJ* iii. 438). When the city fell, he was able to save a number of prisoners, including his own brother, and to rescue some sacred writings (*Vit.* 417 f.), and he then accompanied Titus to Rome and took part in the Jewish Triumph. Thereafter he permanently resided in the capital. Vespasian allowed him to occupy his own previous dwelling, and granted him a pension and the right of citizenship. He now took the name Flavius Josephus. This gracious treatment was continued by Titus, as also by Domitian and the Empress Domitia. Josephus likewise enjoyed the friendship of Agrippa II. and his household (*Vit.* 364), and it is probable that he kept in touch with eminent Jews in Alexandria and other places, as well as with the Adiabenian chiefs who lived in Rome (*BJ* vi. 356, vii. 447).

His wealth must have been considerable, for his depreciated lands near Jerusalem had been taken by Titus in exchange for better situated properties, and Vespasian supplemented his annual allowance by the gift of another estate in Judæa, which, again, was exempted from taxes by Domitian. He was several times married; his first wife had remained in Jerusalem, and was among the besieged (*BJ* v. 419). Vespasian subsequently gave him a girl-captive, who, however, deserted him in Egypt; thereupon he married a third wife at Alexandria, and by her had three children, one of whom, a son named Hyrcanus, was still living in A.D. 94. Josephus had this marriage annulled in Rome, and then took to wife one of his own race, a woman of good family belonging to Crete, who bore him two children, Justus and Simonides (*Vit.* 414 f., 426 f.). The latter, who had the surname Agrippa, is believed by K. Zangemeister to be the M. Flavius Agrippa mentioned in an inscription found in Cæsarea (*ZDPV* xiii. [1890] 25).

The outward circumstances of Josephus were thus fairly propitious. True, his good fortune was not altogether unbroken. He was hated, and more than once legally indicted, by his countrymen, notably by a certain Jonathan, who had raised some disturbance in Cyrene, and who, having been brought to Rome, denounced Josephus and other leading Jews as the instigators and abettors of the rebellion. Similar things occurred under Titus and Domitian (*BJ* vii. 448 f.; *Vit.* 423 f., 429). But Josephus was always able to clear himself, and retained the favour of the three Flavian Emperors to the last. Among his patrons was also the Emperor's freedman, Epaphroditus, to whom he dedicated his later writings.

The identity of this Epaphroditus is a disputed point. Some scholars, among whom is E. Schürer, identify him with the grammarian of the same name mentioned by Suidas (*s.v.* Ἐπαφρόδιτος)—an opinion with which the present writer cannot agree. Josephus eulogizes his friend as one who administered affairs of the utmost importance, and who had experienced numerous changes of fortune: ἅτε δὴ μεγάλοις μὲν αὐτὸς ὁμιλήσας πράγμασι καὶ τύχαις πολυτρόποις, ἐν ἅπασι δὲ θαυμαστὴν φύσεως ἐπιδειξάμενος ἰσχὺν καὶ προαίρεσιν ἀρετῆς ἀμετακίνητον (*AJ* i. 8)—statements which apply, not to the grammarian and scholar, but rather to the freedman, who had previously been

in the service of Nero, and who, under Domitian, acted as chief of the high and powerful royal office *ab epistulis*. He was dismissed in A.D. 95, and executed shortly afterwards (Sueton. *Domit.* 14; Dio Cass. lxvii. 14). The identification of Epaphroditus is a matter of importance for the chronology of the writings of Josephus (cf. *Prosopographia Imper. Rom.*, Berlin, 1897–98, ii. 36).

We cannot say when Josephus died. For us his life comes to an end with his writings, and these do not carry us beyond the reign of Domitian. We may surmise, if we care, with H. Dodwell (*Dissertationes in Irenæum*, Oxford, 1689, p. 468), that he did not survive Domitian, and that he was involved in the fall of his patron Epaphroditus, or fell a victim to the suspicion manifested by the Emperor in his last days.

2. **Works.**—We have seen that Josephus spent the later portion of his life, from A.D. 71, in Rome, and it was here that presently he entered upon his literary career. His object was to give the Greeks—a term which probably also covers the educated classes among the Romans—a more thorough knowledge of his own people, and especially of their history and their religion. He accordingly wrote in Greek, which he had doubtless learned while in his native country, and, as he tells us himself (*CA* i. 50; *AJ* xx. 263), he guarded against defects in style by consulting writers of experience. It is certain that he also had some knowledge of Latin, and in one passage he quotes Livy (*AJ* xiv. 68; cf. xix. 270).

(*a*) His first work was the ***History of the Jewish War*** (Ἱστορία τοῦ Ἰουδαϊκοῦ πολέμου, *de Bello Judaico*)—to give the title which he himself chose, though the MSS show a preference for περὶ ἁλώσεως (*de Captivitate*), which also appears quite early in Christian literature, and is, indeed, used by Origen (*Selecta in Threnos*, iv. 14 [*PG* xiii. 656]). In this work Josephus tells the story of the Jewish insurrection in which he had taken part, first on the national, then on the imperial, side. The book was written after the dedication of the temple of Pax (A.D. 75), and a little before the death of Vespasian (A.D. 79) (*BJ* vii. 158 f.; *Vit.* 361; *CA* i. 50). As Josephus says in his preface, however, he was not the first to write a history of the war.

An account of it had been given immediately after its termination in connexion with the domestic wars which followed the death of Nero; it had also been the subject of more than one monograph, and it engaged the attention of historians subsequent to Josephus. One of the earlier narratives was composed by a certain Antonius Julianus, who likewise took part in the war, and was for a time procurator of Judæa (Minuc. Felix, *Octavius*, xxxiii. 4; *BJ* vi. 238). Josephus himself had previously written an Aramaic account (now lost) of the war for the use of his own people in the East, and it was only after the completion of this that he resolved to make his candid narrative accessible also to the Romans and the Greeks (*BJ* i. 1 ff.). No part of this Aramaic record has come down to us, and we are, therefore, not in a position to fix its relation to the extant Greek narrative. The latter was probably a complete recast, constructed on a more comprehensive plan. A Syriac version of bk. vi. of the *BJ* is preserved in the Peshiṭṭâ, the Syriac OT (ed. A. M. Ceriani, Milan, 1876–80). This is not, however, as some have supposed, a survival of the original Aramaic work, but rather a translation from our present Greek text, as is clearly proved by its erroneous renderings (*Fl. Josephi Opera*, ed. Niese, vi. p. xxi).

In his preface to the *BJ*, Josephus proposes, by means of a true and straightforward chronicle, to bring his readers to a better understanding of the Jewish people and of the insurrection.

He then proceeds to give a brief abstract of the work, and opens his narrative (i. 31) with an account of the Maccabæan rising. The first third of the book is entirely devoted to the period between that event and the outbreak of the revolt against Rome (A.D. 66). Then comes the revolt itself: first, its beginnings (ii. 270); then the campaigns of Vespasian in A.D. 67–69 (iii. and iv.); the investment and capture of Jerusalem (v. and vi.); and, lastly (vii.), the final passages of the conflict, down to the taking of Masada (A.D. 72), and the Jewish disturbances in Egypt and Cyrene. His tone is naturally that of a Jewish patriot; Josephus modifies or suppresses many of the sinister things laid to their charge, such as the brigandage practised in the later Hasmonæan period, from which all the neighbouring peoples suffered so much (Strabo, pp. 761, 763; Diodorus, xl. 2; Justin, XL. ii. 4).

As regards the war itself, Josephus is chiefly concerned to show that the Jewish people, and the aristocracy in particular, were in no wise to blame for it, and that its real instigators were certain fanatical zealots, who tyrannized over the people and coerced them into mutiny. Some degree of blame, no doubt, rested upon Cestius Gallus, the commissioner for Syria, who might have stamped out the rebellion at the outset had he only adopted vigorous measures and not weakly given way (ii. 533 ff.). Nevertheless, the truly guilty parties were the zealots, who remained irreconcilable to the last, and repeatedly rejected the generous terms of peace proposed by Titus. These intransigents were no longer to be counted Jews at all: they had despised the Law and outraged all righteousness; they had desecrated the Temple, with the result that God was not on their side, but vouchsafed His presence to the Roman armies, whose vengeance He permitted to be fully wreaked upon His own people (*BJ* iii. 293, v. 444, 562, vii. 327 f.).

We must conclude, from Josephus's own account, that this presentation is one-sided and unjust, for a large proportion of the Jewish people were heart and soul in favour of rebellion; we see in his perversion of the facts, however, the real explanation of his attitude and of his defection to Rome. He admires the Romans, particularly their martial virtues, their military organization, and their learning (*BJ* ii. 577 ff., iii. 70 ff., 115 ff., v. 47 ff.). His personal situation naturally leads him to accord special praise to Vespasian and his house. He tells us (*Vit.* 361) that he submitted his narrative to Titus, and that the latter impressed his seal upon it and gave orders that it should be published and placed in the public library. It would be a mistake, however, to regard the work as being on that account an official chronicle. Josephus certainly had no Government commission for his task, but wrote entirely on his own initiative. He occasionally alters or distorts his facts to suit his royal patrons. A significant instance of this appears in his narrative regarding the destruction of the Temple.

He informs us that Titus was in no way to blame for the firing of the building, as that prince had decreed in a council of war that it should be spared; but the order was forgotten amidst the exasperation and vehemence of the soldiery, and the sanctuary was given to the flames (*BJ* vi. 236 ff.). Another report, probably traceable to Tacitus, tells a very different story, viz. that Titus gave express orders that the sanctuary should be destroyed (Sulpicius Severus, *Chron.* II. xxx. 6; Orosius, VII. ix. 6; cf. J. Bernays, *Gesammelte Abhandl.*, Berlin, 1885, ii. 159)—a statement to which unquestionably the preference must be given. Similarly, in comparison with a still extant narrative in which Tacitus (*Hist.* ii. 74 f.) tells of Vespasian's elevation to the throne, the account of the same event given by Josephus (*BJ* iv. 588 ff.) is very unsatisfactory, both from its excessive adulation of the Emperor and from its suppression of important facts.

Josephus likewise knows how to mingle self-approbation with his laudations of the Emperor and his family. In particular, he seeks to place his own martial performances in the best light.

He gives a full description of the way in which he so cleverly brought to naught the schemes of his opponents in Galilee (ii. 599 ff., 623 ff.), and of the various stratagems and means of defence which he employed against the Romans in their beleaguerment of Jotapata (iii. 171 ff.), and speaks of the high esteem and admiration which these things evoked among the Romans (*BJ* iii. 340, 348, 393).

Further, the delineation is steeped in rhetoric, in accordance with the style then in vogue in the writing of history, and decked with every ornament and artifice of eloquence. Reports in the direct oration are very copious and sometimes run to a great length: we listen to Herod (*BJ* i. 373 ff.), Annas the high priest, Jesus, Simon the Idumæan (iv. 163, 238, 271), Titus several times (*e.g.* iii. 472), Josephus himself (iii. 362, v. 362 ff., vi. 96 f.), and, finally, Eleazar, in a memorable speech in Masada (vii. 322 ff.). The longest and most finished speech of all is that of King Agrippa II., delivered in Jerusalem just before the outbreak of the revolt (ii. 345). Moreover, the historian has grafted upon his narrative tales and anecdotes of all sorts, such as the story of Judas the Essene (i. 78 f.); he also recounts various,

and occasionally amazing, exploits of war, performed by individuals, both Romans and Jews; he tells of remarkable natural phenomena, such as the river Belos (ii. 189), the Sabbatic river (the Sambation of Rabbinical Judaism; see *JE* x. [1905] 681–683) that flows only every seventh day (vii. 96), and the root Baaras (vii. 180 f.); and, finally, he specifies the various omens which heralded various events (vi. 288). Considerable space is devoted to description—*e.g.*, of the land of Judæa, the Dead Sea, the city of Jerusalem, and the Temple (*BJ* iii. 35, iv. 476 ff., v. 136 ff.). He explicitly states that he has no wish to practise the restraint which in other circumstances is appropriate to the historian (*BJ* i. 11 f., v. 19 f.), and he frequently gives eloquent expression to his feelings—his sorrow over the fall of the Holy City and the Temple, his horror at the enormities of the zealots, and his sympathy with his besieged compatriots. Rhetoric of this type, moreover, readily lends itself to exaggeration, in which Josephus is quite at home. We instance his description of the famine in the besieged city (bks. v. and vi.), which reaches its climax in the well-known story of the woman who kills and eats her own child (vi. 193 ff.). Another example is found in iii. 245, where he relates that a certain Jew had his head struck off by a projectile and carried to a distance of 1800 feet. Josephus affects large numbers, and makes no claim to accuracy in regard to them. Of the numerous instances that might be given we content ourselves with the following: he puts the number of those who perished during the siege at 1,100,000 (vi. 420; cf. v. 567), while, according to Tacitus, the entire multitude of the besieged numbered 600,000 at most (*Hist.* v. 13).

As to the sources from which Josephus drew his materials, we are left to mere conjecture, as he gives us no information on the subject. For the main portion of his work, the history of the rebellion, he could draw upon his own experience, and sometimes even upon what he had actually witnessed. He may also have been, and probably was, indebted to some of the earlier accounts noted above—an inference suggested by the occasional similarity between his work and that of Tacitus (Tacitus, *Hist.* v. 6 f. ‖ *BJ* iv. 476, ii. 189; *Hist.* v. 13 ‖ *BJ* vi. 288 ff., 312 f.). As, however, these earlier accounts have almost entirely disappeared, we can say no more on the matter. Josephus afterwards states (*CA* i. 49) that he kept a record of events during the siege of Jerusalem, but this does not seem very credible. His narrative of the war has been manifestly drawn up chiefly from the Roman point of view. Of the insurgent side he knows very little; *e.g.*, his knowledge of events in Jerusalem before the siege does not go beyond what might have been learned among the Romans themselves.

It is of interest to note that the chronological references are given, not according to the Roman, but according to a Syro-Macedonian calendar, which had been adjusted to the Julian reckoning, and exactly corresponds with the calendar of Tyre known to us from the *Hemerologia*. We might perhaps infer from this that the dates given by Josephus were obtained from a Syrian Greek soldier in the Roman camp; or it is possible that he transferred them from his original Aramaic narrative.

For the first part of the *BJ*, embracing the earlier history of the Jews, he must have been dependent upon older works; but, as, apart from the books of the Maccabees, which he appears not to have used here, a native Jewish chronicle can hardly have existed, Josephus probably excerpted from works in general history such passages as related to his own nation. In this connexion the name of Nicolaus of Damascus is the first to suggest itself—the writer whose chronicle extends till about the close of Herod's reign; but, as Josephus occasionally diverges from him, he must have drawn upon other sources as well. The history of Herod in the *BJ* gives us the impression of being a special composition, and reads almost like an encomium. It was doubtless composed by Josephus himself with a view to its insertion in his work. For the following period, till the beginning of the insurrection, he must have relied mainly upon extant Roman historical works, though he made many additions of his own, such as the description of the three Jewish sects (ii. 119 ff.).

(*b*) The second outstanding work of Josephus is the *Antiquities* (Ἀρχαιολογία Ἰουδαϊκή, *Antiquitates Judaïcæ*), which embraces in its twenty books the whole history of his people from the creation of the world to the beginning of the revolt (A.D. 66), and which was completed and published in the 13th year of Domitian, *i.e.* A.D. 93–94 (*AJ* xx. 267)—a number of years after the *BJ*. He tells us that long before, while engaged with the *BJ*, he had entertained the idea of writing such a book; but this statement is belied by the preface to the *BJ*, in which it is expressly said that a work of that kind is now a superfluity, as other writers had been in the field (*AJ* i. 6; *BJ* i. 17). The project of writing the *AJ* must, therefore, have been a later inspiration.

As in the *BJ*, so in the *AJ*, the object of Josephus is to furnish the Hellenes with an accurate delineation of Israelitic and Jewish history, in place of the misrepresentations of unfriendly or malevolent chroniclers.

It must be admitted that the knowledge possessed by educated people of the day in regard to the remoter past of the Jews was as meagre as it was inaccurate (cf. T. Reinach, *Textes d'auteurs grecs et romains relatifs au judaïsme*, Paris, 1895). The interest of the Greeks was practically confined to Moses, the Laws, and the Temple, and at best their ideas of the history of Israel in its entirety were of the vaguest. Current tales about the Jews, some of which, such as that given by Tacitus, *Hist.* v. 6, were altogether fabulous, had mostly passed through Egyptian hands. In Egypt, as is well known, there was from an early period a large Jewish population, and it was in Egypt that investigators first began to interest themselves in the past history of the Jews, although in an altogether hostile spirit. The conflict between Jews and Greeks was not confined to Egypt, but spread to the adjacent country of Cyrene. Similarly in Syria, from Maccabæan times at least, the two peoples were constantly at feud, and this mutual hostility diffused itself through almost every region where Jew and Greek dwelt together, their respective material interests often contributing largely to the strife. The Greek antagonism to the Jews found expression also in literature, leading to vehement attacks upon both their personal characteristics and their national history. In these circumstances Josephus thought it incumbent upon him to give a faithful account of his people's history, in order to disabuse the minds of men, and especially of the Greeks, for here again it is the Greeks for whom he writes (*AJ* i. 5 f., xvi. 174, xx. 262).

Josephus was not the first Jew to undertake the task of systematizing OT history. To say nothing of the Septuagint, other works of a similar kind had already appeared in the field of Alexandrian scholarship. Some of these were known to Josephus, and of their authors he names Demetrius, Eupolemus, and the elder Philo (*CA* i. 218; cf. *BJ* i. 17).

It would appear that the Alexandrian works referred to had not met with much acceptance among the Greeks, their uninviting form being in part responsible. Moreover, none of them had gone beyond the period covered by the canonical Scriptures, while Josephus carries his narrative down to his own time—to the beginning of the rebellion, in fact. His work, accordingly, was much more complete, and harmonized with the taste of his time. The result was that it drove its predecessors from the field, so that, save for a few fragments, they have utterly perished.

He acquaints us with the purpose of his book in the preface (*AJ* i. 1 ff.). In regard to the earlier period, he proposes to relate faithfully the history of the Jews as given in the Scriptures, and these he follows stage by stage from Genesis to Esther. He was admittedly the first to note the constituent elements of the Scriptures, *i.e.* the OT canon, which, according to him, embraces twenty-two books, viz. the five books of Moses, thirteen books from the following epoch terminating with the reign of Artaxerxes I., and four books of Songs and Proverbs (*CA* i. 39 f.). Naturally, he avails himself mainly of the historical books, but he supplements these from the prophets Nahum, Jonah, Isaiah, Jeremiah, Ezekiel, and Daniel. He makes explicit mention likewise of the poetical writings of David and Solomon as well as Haggai and Zechariah (*AJ* vii. 305, viii. 44, ix. 206 ff., 239, x. 32 f., 78 f., 264 ff., xi. 96). He is silent regarding Job, though it does not follow that he did not know of that work. We may assume, in fact, that his OT was, in its component parts, the same as we have it to-day.

To judge from what is said in the introduction and from other passages, he used the original Hebrew, and himself translated this into Greek, being acquainted with, and having recourse to, the Septuagint version of the Pentateuch alone; at all events he makes no mention of a Greek translation of any other portion (*AJ* i. 7 ff., x. 218; *CA* i. 55). It is an interesting but difficult problem to determine which text he used. His work is in a sense our earliest authority in this field, and is of no little value for the history of the OT text. It sometimes happens, as in *AJ* vi. 16, that he alone has preserved the genuine tradition.

It was recognized long ago, however, that Josephus in most cases follows the Septuagint rather than the Hebrew text. He

resorts not only to its phraseology, but also to its explanations and interpretations. Thus, his reckoning of the time that elapsed between the Creation and the Flood, viz. 2262 years, approximates closely to that of the Greek text, but differs widely from that of the Hebrew (*AJ* i. 82); he follows the Septuagint, not the original, in computing the period of Israel's residence in Egypt at 215 years (ii. 318), though he is not always consistent on this point (i. 185); while, again, he repeats the strange mistake of the Septuagint in 1 S (1 K) $25^{3}$, where, confusing the proper name Kâlêb with Kélĕb, 'a dog,' it makes Nabal the Calebite a Cynic (vi. 296). He relates the history of Ezra according to the recent Greek version known as 1 Esdras, and the Esther which he used contained the additions found only in the Greek. According to the investigations of Mez (*Die Bibel des Josephus*) in regard to Judges and Samuel, the text he used was that of the so-called Lucianic recension, to which he is, therefore, the earliest witness. Nevertheless, he occasionally, as in *AJ* i. 151. 234, resorts to the Hebrew, where he adopts the place-names Ur in Chaldæa and Mount Moriah; he follows the original also throughout Joshua (*AJ* v.). All this prompts the inquiry whether Josephus really knew Hebrew, as some believe, though it is also denied. The present writer is of opinion that we have not sufficient evidence finally to decide this question, though, as Josephus plumes himself on being one of the most learned men among the Jews (*AJ* xx. 263), we need hardly hesitate to credit him with some knowledge of the ancient tongue. At the same time it should be observed that he makes no distinction between Hebrew and the Aramaic vernacular of his day, and it is at least conceivable that on occasion he read the Scriptures through the medium of an Aramaic paraphrase, *i.e.* a Targum. Special mention is also due to his readings of proper names, in which he often differs widely from the Septuagint, and sometimes approximates to the Massoretic pronunciation; *e.g.*, he writes, not Νῶε or Νέεος, but Νῶχος; not Γοθολία, but Ὀθλία; not Σεδεκίας, but Σαχχίας. It is clear that Josephus represents a pronunciation which differs materially from that generally in use.

Josephus's rendering of the Scripture narrative is, on his own showing, anything but a mere paraphrase, without supplement or abridgment. He threads his recital with the additions and explanations which had been grafted by the exegetes, and especially the Hellenistic interpreters of Alexandria, upon both the historical and the legislative portions. He has thus used the Haggâdâ as well as the Halâkhâ. The latter appears mainly in his description of the Mosaic legislation (*AJ* iv. 199 ff.), while Haggâdic elements, legends, etc., occur with special frequency in bk. i., as the patriarchal tradition given there readily lent itself to such supplementary or explanatory matter.

As an instance of this we may refer to the table of nations given in Gn 10, which Josephus harmonized with the geographical ideas of his day (*AJ* i. 122 ff.). A legendary addition is found in i. 69 f., where, in conformity with Bab. traditions, he tells us that the descendants of Seth erected two memorial pillars just before the Flood, in order that the sciences and inventions of the day might remain on record for future generations. Perhaps the most remarkable insertion of all is that narrating the campaign which Moses, as an Egyptian prince, conducted against the Ethiopians, and which was brought to a close by his marriage with the daughter of the Ethiopian king (*AJ* ii. 238 ff.; for Jewish midrashim cf. *JE* ix. [1906] 48). This is really an attempt to solve the difficulty of the Cushite wife of Moses mentioned in Nu $12^{1}$.

We cannot always identify the sources from which he drew such things, but he certainly reveals a close affinity with noted Hellenists, such as Demetrius and Eupolemus. Philo the Younger, the most celebrated of all Hellenistic writers, was likewise not unknown to Josephus, who, however, does not quote from him, but merely mentions him as the spokesman of the Jewish deputation to the Emperor Gaius (*AJ* xviii. 259). He applies, in common with Philo, the allegorical method of interpretation — *e.g.*, in his description of the Tabernacle and other institutions of the Jewish cultus (*AJ* iii. 180 ff.; cf. Philo, ed. T. Mangey, London, 1742, ii. 150); according to *AJ* i. 24, Moses himself in some cases wrote allegorically. A similar correspondence appears in the narrative of Balaam, as given in *AJ* iv. 126 ff., and Philo, ii. 127 f., respectively.

In many other matters, however, Josephus and Philo differ widely: the history of Moses, for instance, is reproduced by Josephus in a form quite unlike that given by Philo. Some would trace back the Ethiopian campaign just mentioned to Artapanus; but, while that writer does tell (*ap.* Eusebius, *Præp. Evang.* ix. 27) of a war waged by Moses against the Ethiopians, he has in mind a different event altogether, so that the theory of Josephus having borrowed from him is out of the question. In brief, the enlargements and importations of Josephus cannot be definitely assigned to their respective sources. In all probability he had at command a substantial quantity of exegetic materials, including oral traditions, and chose what suited his purpose. It would appear as if in many of his sources text and tradition had already been fused together.

His chronology of the Old Testament period presents considerable difficulties. He expanded the chronological references of the Scriptures into a system. Thus *BJ* contains calculations running back from the destruction of Jerusalem by Titus to the days of Abraham (vi. 268, 435 ff.), and in the *AJ* the system is recast and carried out in its several parts (i. 82 ff., 148 f., ii. 318, vii. 65, 68, viii. 61 f., ix. 280, x. 143, 147, xi. 112, xx. 230 ff.). In this he is probably following the example of Hellenistic experts, two of whom, Demetrius and Eupolemus, had won some repute as chronologists.

The details of his system are often inconsistent with each other. Such discrepancies have been explained on the theory that Josephus, using a variety of documents, followed now one and now another, without calculating for himself. Objections have been brought against this view by Destinon, who shows that Josephus obtained some, at least, of his results by computations based upon his own narrative; but, even so, his discrepancies are not all removed. Further, while we must certainly bear in mind that the MSS themselves manifest considerable variation in regard to chronology, and that many of the apparent inconsistencies may be due to copyists' errors, and may be eliminated by conjecture, this expedient should be adopted only with the greatest care, and, when all is done, difficulties still remain. On the whole it seems impossible to deduce from Josephus a consistent system of chronology, or even to show that he had one, and in this respect his work is of a somewhat careless kind.

The personal standpoint of Josephus is fixed by his religion and his position in life; he is a Jew, a priest, and a Pharisee. History teaches, in his opinion, that prosperity attends those who fear God, while the godless and the disobedient are duly punished (*AJ* i. 14, 20, xx. 48, 89). He is convinced that the world is ordered by divine providence; in a noteworthy passage (*AJ* x. 277 f.) he denounces the Epicureans, whom he puts on a level with the Sadducees, while the Pharisees correspond to the Stoics (*Vit.* 12). His views regarding God, destiny, and the human soul are in line with Pharisaic teaching, as appears also from the *BJ* (v. 376 ff., vi. 267, 310, iii. 374, vii. 341), although he occasionally dilutes his Judaism with the conceptions of Greek philosophy, even showing some inclination towards pantheism (*AJ* vi. 230, viii. 107). Nor is this to be wondered at, for Josephus is no logical theologian or philosopher, but is concerned, above all, to make Jewish history and Jewish character intelligible to the Greeks, and at the same time to present these things in the most favourable light. He accordingly takes pains to remove or to palliate the more sinister or repulsive elements, to bring the marvellous within the bounds of credibility, and to overlay the OT history with a Hellenic gloss.

Abraham appears as a reformer of religion and science, as the founder of monotheism, and even as the pioneer of astronomy and arithmetic in Egypt (*AJ* i. 154 f., 166 f.). Josephus speaks of the Psalms of King David very much as if they were the productions of a Greek lyrical poet (vii. 305). The terebinth at Mamre he hellenizes as Ὠγυγία δρῦς, the Ogygian oak (i. 186), and, similarly, the altar which Moses set up after his victory over the Amalekites is said to have been dedicated to the God of Victory, θεὸς νικαῖος (iii. 60)—an idea of which there is no trace in Ex $17^{15}$. When Josephus ascribes to Moses two works, viz. *Politeia* and *Nomoi* (iv. 194, 196, 302), it is manifest that he has in his mind the two great works of Plato bearing these names—the law-giver being the precursor of the philosopher. It is likewise from Plato (*Legg.* iii. 676 ff.) that Josephus borrows the account of men's descent from the hills to the plains after the Flood (*AJ* i. 109); and the patriarchal history in bk. i. affords, on the whole, the most numerous and the clearest instances of his hellenizing and modernizing methods. He makes no mention of the worship of the golden calf; he transforms into statues the golden tumours offered by the Philistines to their idols (vi. 10; cf. 1 S [1 K] $6^{4}$), and the 100 *præputia* of the Philistines which David was required to bring to Saul into 600 heads (vi. 201; cf. 1 S [1 K]

18[26]), seeking in this way to modify or expunge the specifically Jewish features of the narrative. Closely connected herewith is his attempt to meet the attacks and aspersions commonly made upon the Jews, or upon Moses and his laws (i. 16, ii. 177, iii. 179, 265, vii. 116 ff.; cf. xiv. 187).

In order to invest the Mosaic legislation with a character of extraordinary humaneness and clemency, Josephus does not scruple to supplement the traditional text with enlargements of his own (iv. 207, 234); and to win the suffrages of Hellenism he intersperses the confirmatory testimonies of secular historians. Of these the most outstanding are Herodotus (*AJ* viii. 157, 253, 260), the Annals of Tyre (viii. 144 ff., 324, ix. 283 f.), Berossus (i. 93, 107, 158, x. 20, 34, 219), the Sibylline Oracles (i. 118), Alexander Polyhistor (i. 240), and Nicolaus of Damascus (i. 94, 108, 159 ff., vii. 101 ff.), all noted and distinguished names.

With the book of Esther and the period of Artaxerxes, Josephus reaches the end of the OT narrative (xi. 296), and this marks the beginning of the second section of the *AJ*. At the very outset a lacuna occurs in the tradition, which extends to the time of the Maccabæan revolt. For this interval of three centuries, embracing the reigns of Alexander, the early Ptolemys, and the Seleucidæ, Josephus had only disconnected legends of later Alexandrian origin.

There is, first of all, the visit of Alexander to Jerusalem, with all that preceded and followed it (xi. 297 ff.), for the account of which Josephus is indebted to an apocryphal work which was of later date, at all events, than the Book of Daniel (xi. 337). For the narrative of the Seventy and their translation of the Mosaic law-books (xii. 11–118) his authority was the still extant Letter of Aristeas, while the sections which follow, embracing the semi-legendary narratives of Antiochus the Great and the Jews Josephus and Hyrcanus (xii. 187 ff., 155 ff.), appear to have had a similar source.

The beginning of a new era for the Jews is really marked by the Maccabæan rising: it was then that they took their place in universal history, and came within the range of Greek writers, so that we have firm historical ground beneath our feet. The basis of the Maccabæan history as given by Josephus is 1 Mac. (*AJ* xii. 242–xiii. 212), for the existence of which work he is our earliest authority; he is of no small importance also for its textual criticism; but his use of it extends only to the death of Jonathan, the later portion (13[30ff.]) apparently being of no service to him as a source.

Various explanations of this fact may be offered. Destinon puts forward the theory that the 1 Mac. used by Josephus was different from ours, and that the final section, embracing the period of Simon, had not as yet been added. To the present writer, however, it seems more probable that Josephus discarded 1 Mac. at the point where it narrates the death of Jonathan because he now wished to work upon the basis of his own earlier account in the *BJ*; for there are facts to show that, while he did not use the concluding part of 1 Mac., he was certainly acquainted with it. Of 2 Mac. he seems to have had no knowledge; but it is, nevertheless, probable that he was indebted directly or indirectly to its source, viz. Jason of Cyrene, for some of his materials. *AJ* xii. 257 ff., *e.g.*, has no corresponding passage in 1 Mac., but it has points of contact with 2 Mac. 6[2], and, therefore, probably emanates from Jason. Another such insertion is found in xiii. 62—an account of the temple of Onias in Egypt. Further, in the narrative of 1 Mac., Josephus has made some alterations of his own: thus, to take a special instance, he asserts that Judas Maccabæus was high priest—a statement that carries other changes in its train. He has also transferred some materials from his own previous work, the *BJ*, so that, taken all in all, his divergencies from 1 Mac. are by no means inconsiderable. Finally, mention must be made of another characteristic of the *AJ*, viz. hostility to the Samaritans—a feature not found in the older writings, and first brought into relief by Josephus. This attitude is not confined to his record of the Maccabæan period, but manifests itself as far back as ix. 290 f., giving occasion for manifold enlargements of greater or less extent. The last passage of this class is xiii. 74 ff., which narrates the conflict between Jews and Samaritans in Egypt under Ptolemy Philometor. We may venture to infer from this that in the days of Josephus the antagonism between the orthodox Jews and the Samaritans was more pronounced than usual.

For the period beginning with Simon the high priest (xiii. 213), Josephus took the *BJ*, in revised and enlarged form, as his groundwork in the *AJ*. The two narratives are often quite identical, though verbal reproduction in passages of any length (with the exception of *AJ* xiv. 480 f. = *BJ* i. 352 f.) is avoided. This agreement was formerly explained on the hypothesis that both works were drawn from a common source; the present writer once shared this opinion, but now regards it as erroneous, believing that Josephus simply incorporated in his later work a revised transcript of his earlier. As a matter of fact, the *BJ* is a work of unique character, composed according to the writer's own special design, and it is scarcely conceivable that any work capable of serving as a common source was previously in existence. Corroboration of the theory that the *AJ* is an expansion of the *BJ* is provided also by the inconsistencies and dislocations found in the former, as these would naturally occur where new material was imperfectly grafted upon the pre-existing text; a palpable instance of this appears in the account of Pompey (*AJ* xiv. 37–44; cf. *BJ* i. 131).

Upon this older substructure Josephus superimposed a great deal—so much, in fact, that his additions, especially in the later books, greatly exceed the original in point of quantity. They are of many kinds; first of all may be mentioned the testimonies of various historians, such as Strabo, Timagenes, Nicolaus, Livy; and to these we may add Agatharchides and Polybius, whom he had already quoted (xii. 5 f., 135 f.). Then there are the more or less extensive enlargements upon the earlier work which appear in the last third of the *AJ*. Josephus has not divulged his authorities for these enlargements, and we must, therefore, depend upon conjectures which, in the present state of our knowledge, are most uncertain.

It is very unlikely that he directly availed himself of the Commentaries of King Herod, which he mentions once (xv. 174), and the most natural suggestion is that he relied upon the historians whom he now and again quotes—*e.g.*, Strabo and Nicolaus of Damascus. There is no doubt that the latter in particular was largely drawn upon by Josephus (as was suggested above in regard to the *BJ*), more especially, though not exclusively, for the time of Herod; for Nicolaus, as is well known, was a friend of Herod, and was likewise acquainted with Jewish history from the earliest times. As, however, he is not only quoted in the *AJ*, but also criticised and corrected (xiv. 8 f., xvi. 183 f.), Josephus must have had other sources of information as well; nor must we forget his own redaction, for he was anything but a verbal plagiarist. As regards the post-Augustan period, he must have depended upon later writers. In this section he inserts several fairly long supplements, such as the account of Agrippa I. (xviii. 127 ff., xix. 292 ff.), of the Babylonian Jews (xviii. 310 ff.), and of the Adiabenian princes who had embraced Judaism (xx. 17 ff.). He would, no doubt, derive a good deal of information from his personal intercourse with the house of Agrippa, and with his own more eminent co-religionists, including the Adiabenians. Moreover, he must have availed himself of works dealing with Roman imperial history (cf. xx. 154); and from these he sometimes takes facts and incidents having little or no connexion with the Jews—*e.g.*, the embroilments with Parthia under Tiberius (xviii. 39 ff., 96 ff.). An account of the death of the Emperor Gaius, the bitter enemy of the Jews, is given with great diffuseness (xix. 1–211), and is adapted, T. Mommsen conjectures (*Hermes*, iv. [1869] 329), from the historian Cluvius Rufus, though it may quite well have come from some other source.

Besides his classical authorities, however, Josephus also made use of native Jewish traditions. From the latter come the history of the Temple, and the annals of the successive high priests from bk. xi. onwards, while the whole work is brought to a conclusion by a second historical sketch of the high priesthood (xx. 224 ff.), quite independent of the earlier, as appears from the fact that it omits—rightly—the name of Judas Maccabæus from the list. To these native contributions belong likewise the numerous, and sometimes very extraordinary, Jewish legends, a number of which reappear in the Talmudic writings—*e.g.*, what is told of Hyrcanus I., and of his relations with the Pharisees and the Sadducees (xiii. 288 ff.), and the story of Onias the Just (xiv. 21 f.); but there are many more, and their historical value is of the slightest (cf. xiv. 106 f., xv. 319 ff., 367 ff., xvi. 1 ff.).

Special notice is due to the documents and letters here and there inserted by Josephus. Some of these are simply transferred from their sources, where they already form part of the narrative, and are still to be found in Ezra and Esther, in 1 Mac. and the Letter of Aristeas. To this class in all likelihood belong also the Edicts of Antiochus III. (xii.

138–153), the genuineness of which is not unreasonably doubted.

A different judgment must be passed upon the fairly numerous Roman edicts or decrees of the Senate: the *plebiscita* enacted in favour of the Jews by Greek communities, mainly in Asia Minor; and certain official deeds dating from the reign of Claudius (xiii. 259 ff., xiv. 144 ff., 186 ff., 304 ff., xvi. 160 ff., xix. 280 ff., 303 ff., xx. 11 ff.). These have no bearing whatever upon the narrative, or practically none; thus, to give a salient instance, there is found in xiv. 186 ff. a quite promiscuous collection of records emanating from the most various periods. But their genuineness is past dispute, and is admitted by all. Most of them, and especially those massed together at xiv. 186 ff., were presumably brought together by Nicolaus of Damascus for use in the process against the cities of Asia Minor which the Jews brought before Marcus Agrippa—King Herod being also in attendance—in 16 B.C. It was Nicolaus who conducted this case for the Jews, and he seems to have inserted his speech, together with the relevant documents, into his histories, so that Josephus had but to transfer them to his own work (xii. 125 ff., xvi. 27 ff.). The deeds of later date had, of course, a different origin. The three edicts of xix. 280 ff. go hand in hand; the first two, as appears from xix. 310, were articulated with the third.

We note, finally, that from the earliest possible point, viz. the Persian period (xi.), chronological references were inserted by Josephus at the appropriate places. For this purpose he availed himself of the chronological schemes then to hand, and took the Græco-Roman reckoning as his standard, thus bringing Jewish history within the range of universal chronology. The task was not without its difficulties, and at one point, indeed, a violation of the text was necessary; the Artaxerxes who, according to 1 Es 2, reigned between Cyrus and Darius I. had to give place to Cambyses (xi. 21 f.).

In the *AJ*, as in the *BJ*, Josephus took great pains with the form of his narration. He introduces several fairly long speeches—*e.g.*, ii. 140 ff., xv. 127 ff., xvi. 31 ff., xix. 167 ff.—and he exerts himself throughout to write with vigour and elegance. Good examples of his style will be found in iv. 11 ff., vi. 327 ff., xviii. 310 ff., xix. 1 ff. In this work, however, he puts more restraint upon himself than in the *BJ*, the diction of the *AJ* showing a change in the direction of simplicity. The contrast in style is best seen in passages which are substantially the same in both works. Thus Herod's address to his soldiers as reported in *AJ* xv. 127 ff. is quite different from what appears in *BJ* i. 373 ff. In general, Josephus endeavours in the later work to fill out his earlier delineation. An example of this is provided by the section dealing with the Jewish parties, which is inserted at the same point in both narratives (*AJ* xviii. 11 ff.; *BJ* ii. 119 ff.). Great interest attaches to his relation to Thucydides, whom he specially chose as his model for the *AJ*, more particularly in bks. xvi.–xix., where he even employs forms of the old Attic dialect, as he does nowhere else, and is manifestly at pains to emulate the great historian in his form of expression, his massive sentence-construction, and his fullness of thought. Nor can it be denied, finally, that in the *AJ* Josephus has changed his views with respect to many things and persons discussed in the *BJ*, and utters a different verdict regarding them. An instance of this is found in *AJ* xx. 198 ff. (cf. *Vit.* 193 ff.), which treats of the high priest Ananos the younger, and from which we derive an entirely different impression of the man from that gained from the story, and especially the characterization, of the corresponding passage in the *BJ* (iv. 318 ff.).

(*c*) *The Autobiography of Josephus* (βίος Ἰωσήπου) forms a sequel to the *AJ*. It is appended to the latter without break or introduction, and at the close is distinctly spoken of as belonging to the larger work (*Vit.* 430; cf. *AJ* xx. 266). It is likewise dedicated to Epaphroditus, and was composed, as is indicated in the last chapter, in the reign of Domitian, being published, of course, at the same time as the *AJ*, *i.e.* A.D. 93–94.

We emphasize this point, as other writers, including E. Schürer, are of opinion that the book was written after A.D. 100, in the reign of Trajan. It is true that, according to *Vit.* 359, Agrippa II. was dead at the time of composition, and Photius, *Bibl. Cod.* 33 (p. 6b, 31, ed. I. Bekker, Berlin, 1824–25), states that he died in the 3rd year of Trajan, *i.e.* A.D. 100. Photius, however, must have made an error here. The concluding words of the *Vita* put it absolutely beyond doubt that the work was composed while Domitian was still alive. The death of Agrippa, moreover, is actually presupposed in a passage of the *AJ* (xvii. 28), and must, accordingly, have taken place in the reign of Domitian.

In this smaller work the primary object of Josephus is to vindicate his line of action during his tenure of the chief command in Galilee, and he accordingly treats with special fullness of his relations with the cities of Tiberias and Sepphoris, as also with John of Gischala, thus providing a supplement to the *BJ*, with prelude and epilogue narrating his earlier and his later life respectively. The book was written by way of a rejoinder to the charges of his countryman, Justus of Tiberias, who likewise had played a part in the rebellion, but had latterly taken service with Agrippa II., and had, shortly before, published a history of the Jewish revolt, in which he challenged Josephus and his account of the war, arraigning him as leading instigator of the rebellion, and exhibiting his conduct, especially in his relations with the Romans and Agrippa, in a most unfavourable light. In his *Autobiography*, Josephus seeks to rebut these charges, and from his self-defence we can deduce approximately the strictures of his assailant. When he comes to discuss his relations with John of Gischala, with whom he had dealt in the *BJ*, he gives once more no very flattering picture. Josephus tries to show that it has been his own constant endeavour to maintain peace, and to protect the interests of the Romans and of Agrippa. In reading his book we must use the greatest care and vigilance—all the more so as it frequently conflicts with the *BJ*, both in substance and in the order of events, and sometimes without any assignable reason. Besides his main motive of self-justification, Josephus seems to have been influenced by a desire to compose a fresh and interesting narrative, and one that would make the most of his courage and his shrewdness.

(*d*) The last, and perhaps the most interesting, work of Josephus consists of the two books *Against Apion*.

This is the usual title of the book, but it can hardly have come from Josephus himself. It makes its first appearance in Eusebius, *HE* III. ix. 4, and is repeated by Jerome (*de Vir. Illust.* 13), thence finding its way into the editions of Josephus and into current usage. It is appropriate, however, only to the second book, as Apion is not even mentioned in the first. There are other two titles with good traditional authority in their favour, viz. (1) *Of the Antiquity of the Jews* (περὶ ἀρχαιότητος Ἰουδαίων), which, again, is pertinent only to the first book; and (2) *Against the Greeks* (πρὸς Ἕλληνας), which is somewhat too general, and can scarcely be attributed to the author. In view of these differences in the tradition, we may perhaps assume that the two books originally bore some name implying their controversial character—ἀντιρρήσεις or ἀντιρρητικοὶ λόγοι.

Like the *AJ*, the *CA* is dedicated to Epaphroditus, who died, as has already been noted, in A.D. 95, and it must, therefore, have been written some time anterior to that date, *i.e.* very shortly after the *AJ*. It is a defence of the Jews against the imputations made by Greek writers, which Josephus had, on occasion, tried to ward off in the *AJ*. But his arguments had not carried conviction; the voice of calumny was not silenced; and he felt that he must have recourse to his pen once more, in order to furnish a thoroughgoing and final refutation of the charges, which had at length, it appears, been massed together by Apion, the well-known grammarian of Alexandria. This Apion was the leader of an Alexandrian deputation to Rome in connexion with the conflicts between the Jews and his fellow-citizens which occurred in the

reign of Gaius, and he took occasion at this juncture to draw up an indictment against the hated race—a theme upon which he had previously touched in his *Ægyptiaca*.

Josephus first of all impugns the assertion that the Jews were a people of recent origin—an assertion made on the ground that none of the great Hellenic historians had mentioned them. The Hellenes, he maintained, were entirely without warrant in claiming that they alone were in possession of the most ancient historical learning, when, as a matter of fact, their records were quite modern, and their early history was unreliable. The Oriental peoples generally had memorials going back to a much more remote era, while the Jews had for ages preserved their archives with the greatest care. The silence of the classical Greek historians was due simply to the geographical position of the Jews. Josephus then sets forth the testimonies of Egyptian, Babylonian, and Phœnician historians, in order to prove that the Hebrew people had a far more ancient history than the Greeks (*CA* i. 73–160); he proceeds to show that even Greek authors of considerable antiquity were acquainted with the Jews, and had spoken of them with respect (i. 161–214); and he comes at length to the tales of Manetho, Chairemon, and others regarding the exodus from Egypt, subjecting them to careful examination, and showing them to be unworthy of credit. In bk. ii. Josephus joins issue with Apion, and refutes the strictures passed by the latter upon the person of Moses, the claim of the Jews to the free citizenship of Alexandria, and the Jewish religion (ii. 1–124). Finally, by way of rebutting the accusations made against the religious practices of the Jews, Josephus once more summarizes the salient elements of the Mosaic Law, and contrasts the God-fearing character of the Jews with the religious indifference and the immoral mythology of heathendom (ii. 145–296).

The work is composed with considerable skill. The criticism of the various stories about the exodus of the Jews from Egypt is altogether to the point, their inconsistencies and other defects being most appositely exposed. Josephus himself is of opinion that the Jews were one with the Hyksos, and uses this identification to fix the date of the exodus. His arguments are not seldom defective, as, *e.g.*, in his attempt to compute the date of Solomon's reign according to the Tyrian annals (i. 116 ff.); he suppresses or distorts many things, the clearest instances of which are connected with the Jewish right of citizenship in Alexandria. The assertion that this right was granted by Alexander the Great or Ptolemy I. is unquestionably a fabrication. Among the authors cited by him, moreover, names are found which are open to suspicion or simply forged, though he has, in this connexion, preserved most valuable passages from the ancient historical literature, and especially from the annals of Egypt, Babylonia, and Tyre. Some of these had already been given in the *AJ*. It is no easy matter to identify the sources from which he drew all this lore. He may possibly have borrowed a good deal of it from Apion himself. In Rome, which was at that time a great emporinm for Greek literature and scholarship, he would find no difficulty in securing the learned equipment requisite for his polemics.

A question may be raised as to the specific occasion of the booklet. This can scarcely have been the indictment framed by Apion, for at the time when Josephus wrote, *i.e.* A.D. 94 or 95, the pamphlet of Apion and the whole controversy which it had evoked were fifty years old. It is conjectured by A. von Gutschmid that the revolt of the Jews had been the means of producing a fresh crop of anti-Jewish writings, and that it was these that moved Josephus to take up the challenge once more. His own words seem to imply that the campaign of defamation had been quite recently renewed—just after the publication of the *AJ*, in fact (*CA* i. 2)—and this would bring us to the closing years of Domitian's reign. About this time several persons were by the Emperor's orders put to death on account of their leanings to Judaism—a procedure which tended to revive the old charge of atheism (Dio Cass. lxvii. 14). In many respects the pamphlet is a continuation and expansion of the *AJ*; it was written with the same object in view, it followed immediately upon the larger work, and its contents had for the most part been outlined in the *AJ* (cf. *AJ* i. 16–82, ii. 177, iii. 179, 265). Josephus must, therefore, have taken it in hand immediately after the latter.

(*e*) In addition to his extant works, Josephus had other literary projects in view, which in all probability, however, were never carried out.

Already in the *BJ* (v. 237, 247) he had announced a book which was to deal with Jerusalem, the Temple, the sacrifices, and the worship, but this must have remained an aspiration only, as otherwise he would assuredly have mentioned it, or quoted from it, in his subsequent writings. At a later period, again, he meditated a theological work of a similar kind, for at the end of the *AJ* (xx. 268) he announces four books upon God, His nature, and the grounds of the mandates and prohibitions of the Mosaic Laws, and, as he refers several times to this projected work (*e.g.*, *AJ* i. 25, 29, iii. 223, iv. 198, 302, *CA* i. 92), he must have drafted some definite plan for it. It was to be a kind of ætiology of the Laws, probably with explanations in the style of the rationalizing allegories of Philo. Whether the work was ever actually written we do not know; certainly not a single trace of it survives. Further, according to *AJ* xx. 267, Josephus intended to write another historical volume which should deal once more with the Jewish war, and follow the fortunes of the Jews till the date of writing. He more than once alludes to this forthcoming narrative (*e.g.*, *AJ* xvii. 28, xix. 366), but it must remain open to question whether it was ever given to the public.

Finally, in numerous passages of the *AJ* we meet with references (indicated by the phrase *καθὼς ἐν ἄλλοις δεδηλώκαμεν* or *δεδήλωται*) to an earlier work, which have caused much perplexity among expositors, and given rise to various conjectures. These references bear upon events in general history, and they punctuate the narrative from Philip and Alexander the Great (xi. 305) to the battle of Philippi (xiv. 301), appearing again in the passage dealing with the reign of Tiberius (xviii. 54). They suggest the thought that Josephus had produced still another historical composition.

A. von Gutschmid and H. Drüner suppose that this work was an unpublished first draft of the *AJ*; others, that it was a commentary on Daniel—for, according to Jerome in *Iesai.* 11 (ed. Vallarsi, iv. 461 [*PL* xxiv. 377]), Josephus had occupied himself with the interpretation of the year-weeks of Daniel. As Josephus himself makes no mention of any such work either in connexion with the prophecies of Daniel (*AJ* x. 269 ff.) or elsewhere, both conjectures are equally improbable. Further, Jerome cannot be speaking here from his own knowledge, but must have borrowed the annotation from Porphyry, and repeated it inaccurately. It is, therefore, conjectured by Destinon that Josephus, in mere carelessness, took over even the quotation-phrase from the source which he was using; but this also is an unlikely theory, and gives no satisfactory explanation of the facts. On the whole, therefore, the references form an unsolved riddle. They may mean nothing more than that Josephus had a liking for a well-sounding phrase; and it is to be borne in mind that similar untraceable references are found also in the *BJ* vii. 215, 244, and in the first half of the *AJ*—*e.g.*, vi. 322, vii. 89, x. 30. It is obvious that in this matter Josephus was not particularly scrupulous.

**3. Value and significance.**—Josephus was assuredly no historian of the first rank, no conscientious or unbiased inquirer, seeking truth alone, but a writer whose supreme object was to produce a certain impression. Like other historians, he is not unwilling to afford his readers pleasure as well as instruction (*AJ* i. 13, xviii. 128 f.), but the leading motive of all that he writes is that of the apologist. Though he did not overlook the needs of his countrymen (*AJ* iv. 197), yet it was pre-eminently the Greeks—the Romans being included under that term—that he had in view (*AJ* i. 5 ff., xvi. 174). It is his ambition to dissipate the prejudice against the Jews, to repel the imputations cast upon them, and to mitigate the antagonism between Jew and Greek. With such objects in view he endeavours to present the history of his nation in the most favourable light. His apologetic purpose reveals itself also in the selection of his documents, for he quotes with the intention of showing the favour in which the Jews had been held by the great monarchs, as well as by the Romans themselves (*AJ* xiv. 186, xvi. 174 ff.). Truth is sacrificed to tendency; for, though he asserts that he will set down nothing but the truth, and the whole truth (*AJ* x. 218, xiv. 1), he does not keep his promise. He omits and he adds; he very frequently quotes from his authorities in very casual fashion; and, accordingly, the Biblical narratives sometimes receive from his hands an entirely new complexion. He also availed himself of all the resources which the art of rhetoric then provided, in order that he might render his narrative forcible and attractive. In spite of these defects, however, we cannot afford to disparage him. When we remember the rarity of

literary culture and ability among the Jews of that day, and their meagre interest even in their own history (*AJ* xx. 264), we must allow that Josephus compares very favourably with his compatriots. He attained to a highly creditable standard of historical knowledge and literary proficiency, with the result that his writings are a perfect mine of most valuable historical material. He has produced a very remarkable body of work, often showing a high degree of skill; and these things we must still place to his credit even if we assume his partial dependence upon literary auxiliaries. His craftsmanship displays itself in all his writings, principally and most unmistakably in the *AJ*, and particularly in the second half, where he had to combine a great mass of materials from different sources. He was in no sense a mere copyist, stringing authorities together in mechanical fashion, but had the faculty of combining them into a genuine unity; for example, at the beginning of bk. xii. he welded Aristeas's account of the Seventy with what precedes, and filled up the lacunæ between the two passages. Sometimes, of course, he is less successful: his documents are often combined in quite a superficial way; one considerable section (*AJ* xiv. 213 ff.) is simply a disordered heap, quite unrelated to the tenor of the narrative. At the same time, we must concede that it would have taxed any historian to bring these documents into an articulate and organic unity, and we may congratulate ourselves that he preserved them at all. Our knowledge of the history of later Judaism is in the main derived from him. Beneath all his partisanship and his rhetorical language lies a goodly nucleus of important information. His defects are by no means peculiar to him, but are shared by many other historians, and they may at least serve to give us a better idea of the literary methods and style in vogue at that day. Even the speeches, though not authentic, but composed by Josephus himself, are not without value. They are of interest in relation to the technique of the art of rhetoric, and sometimes contain valuable material; *e.g.*, the great speech of Agrippa (*BJ* ii. 357 ff.) gives us a survey of the various Roman provinces, and of the distribution of the imperial forces, which is signally interesting and must have cost the writer considerable labour.

The work of Josephus at all events fell in with the taste of his readers, and won him approval and renown in after generations. It is recorded that he was honoured in Rome with a statue, and his writings were placed in the library of Rome (Eusebius, *HE* III. ix. 2; Jerome, *de Vir. Illust.* 13). He became the classical historian of the Jewish people, and it is safe to say that he was counted among the most celebrated authors of antiquity. This estimate was due not only to the substance, but also in great degree to the form, of his writings; for the rhetorical and highly embellished style of description, which so soon palls upon the modern reader, was regarded in ancient times as a merit, or even as an indispensable quality in historical composition. The style of Josephus, therefore, evoked both admiration and imitation; we need only refer to the numerous testimonies compiled by Hudson and Haverkamp in their respective editions. It was among his own countrymen that his works were read least of all. They looked upon him as a deserter and a traitor; and, their interest in history being of the slightest, he exercised no perceptible influence upon their literature. The affinities which exist between his works and the later Talmudic literature are usually, and perhaps rightly, explained by the theory of a common dependence upon oral tradition. All the more did he find readers among the Greeks, and perhaps also among the Romans. That Tacitus made use of his works, as many believe, remains very doubtful, and certainly cannot be proved. Nor does Suetonius, who mentions his name (*Vespas.* 5), seem to have read him. One of the first to quote him is the Neo-Platonist Porphyry. It was in Christian circles that his repute was highest. An author like Josephus, who stood upon the ground of the OT and the Law, and who had, nevertheless, wrought himself free from the narrow limits of Judaism as it then was, and who interpreted the destruction of Jerusalem and the Temple as a penalty inflicted by God, had so much in common with Christian writers that they could look upon him almost as one of themselves. We must regard the evangelist Luke as being the first to make use of his works, not a few well-attested indications of such dependence being found alike in the third Gospel and in the Acts of the Apostles.

**4. Relation to Christ.**—The problem of the attitude of Josephus to Christ and Christianity is of considerable importance. We find in *AJ* xviii. 63 f., appended to an account of the administration of Pontius Pilate, a short chapter about Christ, which has a place in all our MSS, and which was quoted by Eusebius and many others after him. What is said here about Christ, however, does not take the form of a narrative, such as we should expect from a historian, but is, in the main, a eulogy, and of a kind that only a Christian could have written. But, as Josephus, alike in feeling and in utterance, is always a Jew, and, indeed, a Jewish priest, never manifesting the slightest hint of the Christian standpoint, the general consensus of investigators has long ago decided that the passage is spurious. Some regard the whole passage as an interpolation; others, such as A. von Gutschmid and T. Reinach (*REJ* xxxv. [1897] 1–18), try to rescue a portion of it, supposing that a genuine paragraph has been supplemented and re-cast from a Christian point of view, and seeking to restore it to its original form. This view appears to the present writer untenable; the whole chapter forms so obviously an indivisible unity that, if any part of it is a fabrication, the whole of it must be so, and ought to be removed from the text altogether. If objection be alleged to this conclusion on the ground that Josephus could not have completely ignored Jesus, it may be replied that he records only such events in Jewish history as attracted the attention of foreigners by disturbances or otherwise, and led to the intervention of Rome—conditions which apply neither to the work of Jesus nor to His death, so that the silence of Josephus provides no difficulty. Further, if in reality he had written some account of Jesus, this would have been found in the *BJ*, for the Jewish history found in the *AJ*, so far as it relates to Jerusalem and Judæa, is essentially a reproduction of the earlier narrative. Since, then, he makes no mention of Christ in the *BJ*, his silence regarding Him in the *AJ* is precisely what we might expect. Finally, it should be noted that Origen (*in Matth.* x. 17; *c. Cels.* i. 47 [*PG* xiii. 877, xi. 745, 748]) is not aware of the testimony of Josephus to Christ; hence the passage in dispute was probably interpolated after his time, though before the time of Eusebius.

The motive of the interpolation is no mystery: it was desirable that there should be some mention of Jesus in the works of Josephus, some note in harmony with the Christian view, and, naturally enough, this was inserted in connexion with the governorship of Pilate. But the course of the narrative is thereby deranged, and even now we can see plainly that the passage did not originally belong to the text.

An incidental reference to Jesus is found in a later passage (*AJ* xx. 200), where the James who had been beheaded is spoken of as His brother (*τὸν ἀδελφὸν Ἰησοῦ τοῦ λεγομένου Χριστοῦ, Ἰάκωβος ὄνομα αὐτῷ*). This passage is altogether beyond sus-

picion, and we are unable to agree with the scholars who regard it likewise as an interpolation. The manner in which Jesus is here mentioned coincides exactly with what we should expect from Josephus. Thus, while Josephus had doubtless heard of Jesus, he did not deal with Him in his history, and the passage in *AJ* xviii. which we have discussed must be pronounced spurious.

The well-intentioned forgery must have helped to make Josephus still more acceptable to the Christians. They pored over his works, and from them, more particularly the two books against Apion, they borrowed a goodly portion of their equipment for their controversial writings. The earliest apologists—Theophilus, Clement of Alexandria, Origen, Tertullian, and Minucius Felix—refer to him by name and make use of him. The chronologists, in particular—Julius Africanus, Hippolytus, Eusebius, and their successors—availed themselves of his help. In another sphere Eusebius also is indebted to him, especially in the *HE* and the *Præp. Evang.*, while the later ecclesiastical writers are all acquainted with him. Throughout the entire mediæval epoch he ranks as one of the great authors, alike in East and West.

[The current view that *AJ* xviii. 63 f. is spurious has been controverted, since the death of Niese, by F. C. Burkitt (*ThT* xlvii. [1913] 135–144), A. Harnack (*Internat. Monatsschrift für Wissenschaft, Kunst und Technik*, vii. [1913] 1037–68), and W. E. Barnes (*CR* cv. [1914] 57–68). It is maintained that, in view of the mention of John the Baptist and James the Just by Josephus (*AJ* xviii. 116–119, xx. 200), we should naturally expect him to refer to Christ, who, despite what has been said above, did attract the attention of foreigners, as is conclusively shown by the famous reference in Tacitus (*Ann.* xv. 44; cf. also Sueton. *Claudius*, xxv., *Nero*, xvi.), a reference which, as Whiston had already suggested, was probably borrowed from Josephus. Burkitt finds a note of insincerity in the passage of Josephus, as well as a 'cool and patronising' tone which a Christian would not have employed, any more than he would have spoken of the Christians as a 'tribe' (φῦλον) or used ἡδονή [1] in the way in which it occurs in the passage under consideration. Neither would a Christian, Harnack urges, have been so ignorant of the life of Christ as to say that 'He drew over to Him both many of the Jews *and many of the Greeks*,' since His activity was restricted to the non-Hellenic world. The passage 'this was [the?] Christ' (ὁ Χριστὸς οὗτος ἦν), etc., is, it is suggested, an implication that, in the opinion of Josephus, the Messiah had actually appeared and been put to death, so that the Jews would no longer be a political peril to the Romans. Even the appearance of Christ to His disciples after the Resurrection may, Burkitt thinks, have been entirely credible to Josephus (cf. *AJ* vi. 327 ff., ix. 183), and the accounts of the Resurrection would, moreover, afford a welcome Jewish parallel to the stories told concerning Apollonius of Tyana (*q.v.*) and others. Harnack says that, in describing Jesus as 'the Christ,' Josephus was in no danger of being taken for a Christian (cf. *AJ* xx. 200, 'Jesus, who was called Christ,' Ἰησοῦ τοῦ λεγομένου Χριστοῦ); besides, his phraseology intentionally betrays the love of sensationalism which is frequently visible in his writings. It must also be remembered, in judging the attitude of Josephus as a whole, that, although a Jew, he was free from Zealot prejudices, and that he was further liberalized not merely by his admiration for Hellenic culture and for Roman power, but also by the influences which surrounded him. Nor must it be forgotten that he wrote under the patronage of Domitian, whose own household included the Christians Titus Flavius Clemens and his wife Domitilla. As a diplomatic historian of the Jews, writing in detail for foreigners, Josephus would have been unlikely to omit mention of an event which affected—however slightly in his day—the fortunes of his nation; it is evident, from his allusions to Christ, that he regarded Him as a sage and a noble Rabbi, and from that very fact he would not pass over in silence one of his own countrymen of whom he could say, with the patriotic pride which distinguishes him, that He was 'a teacher of men who receive true words (τἀληθῆ, not, with Whiston, 'truth') with pleasure,' so that Jews, as well as Greeks, could boast of their wise man (σοφὸς ἀνήρ); [2] thus the interests of courtier, historian, and patriot would meet in an objective and non-committal reference to Christ. From a somewhat different point of view, Barnes defends and amplifies a suggestion of Whiston, holding that the phrase 'this was [the] Christ' was added merely to identify the Jesus of whom Josephus wrote in this passage with the Jesus whom the Christians 'loved' (not, as a Christian probably would have written, 'in whom they believed'), and to differentiate Him from others of the same name, especially as He was already known to the Græco-Roman world under the name of Christ.

Barnes notes, further, that, if the passage be assumed to be a Christian interpolation, there is a strange absence of Christian terminology, as, *e.g.*, in the words ἐφάνη γὰρ αὐτοῖς τρίτην ἔχων ἡμέραν πάλιν ζῶν. The passage reads, to him, very like a non-committal report, by an orthodox Jew, of beliefs held by Christians. Respect is manifest for the character of Christ, who was 'a wise man, since it is befitting to call Him a man' (σοφὸς ἀνήρ, εἴγε ἄνδρα αὐτὸν λέγειν χρή, not, as Whiston renders, 'if it be lawful to call Him a man'). He was a 'doer of strange things' (παραδόξων ἔργων ποιητής), a tribute that was paid Him by other Jews who did not believe in Him (Lk 5[26]). The coldness of the statement that 'even until now, the tribe of the Christians named after this person (ἀπὸ τοῦδε ὠνομασμένον) has not become extinct (οὐκ ἐπέλιπε)'—without the slightest reference to the wide spread of early Christianity—reveals to Barnes 'again the observer from the outside who is speaking. He is interested in the continuance of a Jewish sect, but his position is detached.' Equally bald and cold is Josephus's bare statement, without comment on either side, that 'Pilate, on the information of the chief men amongst us, condemned Him to the cross'; while Harnack urges that the implied thesis of Josephus, that Christ suffered death because He claimed to be the Messiah—construed as a political figure, a 'King of the Jews'—as well as his manifest surprise that Christianity survived the crucifixion of its founder, is precisely what we should expect from the Hellenized Jewish historian. On the other hand, there is even a touch of irony in Josephus's allusion to the NT argument from prophecy, which narrated 'both these things and ten thousand other marvels (ἄλλα μύρια . . . θαυμάσια) concerning Him'; indeed, with the downfall of the Jewish State, Josephus might well feel sceptical regarding the truthfulness of any prophecy. Finally, even the context is against the theory of Christian interpolation, for the passage under consideration is immediately followed by an account of the scandalous connivance of the priests of Isis in the betrayal of a Roman matron; and at such a juxtaposition a Christian would have revolted.

Putting aside the possibility that Origen, who quotes Josephus on James the Just, referred to his 'testimony' to Christ in some work now lost (*e.g.*, in those sections in *Matth.* which are no longer extant in Greek), and the question whether—although he mentions the *AJ* a few times—he had actually read it, it is significant that what interests the modern reader in the passage may not have been what attracted the early student (cf. Origen, *c. Cels.* i. 47, with *AJ* xviii. 116–119, and the comments of Eusebius, *Demonst. Evang.* iii. 108, on *AJ* xviii. 63 f.); and, had Origen quoted Josephus on Christ at all, he may have done so quite as Eusebius did, as an incidental addition to the sufficient statements of the Gospels, and, 'as it were, of superfluity' (οἷον ἐκ περιουσίας).

It may also be suggested that the fact that Christ is not mentioned in the *BJ* does not necessarily cast suspicion on the passage in *AJ*, for in the interval of from 15 to 20 years between the writing of the two works the spread of Christianity—especially in Rome—would render very explicable the incorporation of some reference to a Jewish religious leader in a general and detailed treatise on 'the Antiquities of the Jews' such as had not been necessary in the more compact and less exhaustive 'Jewish War.'

The great objections to the passage have had their basis in a failure to read it with due appreciation of the circumstances of the time and the character of its author; it has been interpreted too exclusively from the point of view of modern Christianity. When closely examined, the difficulties in the way of the hypothesis of Christian forgery are far greater than those which beset the theory that the passage is genuine. After all, as Barnes pertinently says (p. 63), 'what, indeed, does it prove? It shows that a Jewish historian, who was born and bred in Palestine, who was twenty-six years old when Felix was Governor of Judæa, was acquainted with an outline of the life of our Lord, which agrees with that accepted by Christians. Such a passage has become of serious evidential value only since Strauss started the mythical theory; it is a "Testimony" to-day only because Arthur Drews and others are again writing about the *Christus-mythus*.' LOUIS H. GRAY.]

**5. Early versions and supposititious works.**—The writings of Josephus were translated into Latin at an early date.

There are two Latin versions of the *BJ*. The older of these consists of a fairly free rendering, into which portions of the *AJ* and other works have been inserted. According to the perfectly credible, and unwarrantably disputed, witness of the ancient MSS, its translator was Ambrose of Milan. It is commonly known as the work of Hegesippus or Egesippus—a name which is probably a corruption of *Josippus*. The other Latin version is a literal one, and its author is unknown; it was conjecturally, though without warrant, ascribed to

[1] The sole parallel which Harnack is able to adduce for the use of φῦλον is the description of the Christians as 'latebrosa et lucifuga natio' by a pagan speaker in Minucius Felix (viii.); and for ἡδονή, as used in a good sense by a Christian writer, he can cite only II Clem. xv.

[2] Ἀνήρ = 'man of character or prominence,' as distinguished from the ordinary man (ἄνθρωπος); cf. the antithesis between the ἀνήρ Christ and the truth-seeking ἄνθρωποι in this passage, and also the reference to τῶν πρώτων ἀνδρῶν = the chief priests, etc.

Jerome or Rufinus (Cassiodorus, *de Instit. Div. Litt.* 17 [*PL* lxx. 1133]).

About the middle of the 6th cent. the *AJ* (not including the *Vit.*, however) and the *CA* were, at the order of Cassiodorus, reproduced in a very inferior type of Latin (*ib.*). The 6th bk. of the *BJ*, which treats of the destruction of Jerusalem, had been previously translated into Syriac, and incorporated with the Syriac OT (Peshiṭṭā) as the 5th bk. of Maccabees. Subsequently there appeared a Slavic translation or paraphrase, which is extant in several recensions, and there exists also a rendering into modern Greek (in the Barberini Library [cod. Gr. n. 228, 229], Rome), besides fragments of an Armenian version (F. C. Conybeare, *JThSt* ix. [1908] 577–583). The many translations into European languages which appeared shortly after the invention of printing all go to show how assiduously Josephus was read.

In view of this almost canonical prestige enjoyed by the writings of Josephus, we need not be surprised to find that he was credited with other works, of unknown or disputed authorship, such as the following: (1) The so-called *Fourth Book of Maccabees*, an address entitled περὶ αὐτοκράτορος λογισμοῦ, *i.e.* 'the lordship of divine reason over human desire,' and illustrated by references to the seven brothers who, according to 2 Mac., suffered martyrdom under Antiochus Epiphanes. The first, so far as we know, to ascribe it to Josephus was Eusebius (*HE* III. x. 6); others, such as Jerome (*de Vir. Illust.* 18), followed suit, while many MSS name Josephus as the author. In the oldest MSS the work is anonymous, and its ascription to Josephus, as is rightly observed in the ancient scholium to the *Canon. apost.* 76 (85) (J. B. Cotelerius, *Patr. Apostol.*, Paris, 1672, i. 452), is a quite unwarranted conjecture. He had no connexion with the book; in the *AJ* he knows nothing of the seven martyred brethren; and the whole address, alike in form and contents, is alien to the manner of Josephus.

(2) The work known as *Concerning the All*, or *The Being of the All* (περὶ τοῦ παντός, or περὶ τῆς τοῦ παντὸς οὐσίας or αἰτίας), a polemical treatise against Platonism, in two books, our knowledge of which, apart from a few sentences still in existence, is derived from a note of Photius (*Bibl. Cod.* 48, p. $11^b$, 14, ed. Bekker). That Josephus was its author is a mere surmise, suggested perhaps by the fact that, like the two books against Apion, it dealt with the antiquity of the Jewish nation; it may also have borrowed from Josephus. Its ascription to Josephus was already impugned by the ancients, who attributed the work variously to the Presbyter Gaius, Justin Martyr, and Irenæus. Present-day scholarship ascribes it to Hippolytus, who was certainly credited with a work called περὶ τοῦ παντός and directed against Plato.

(3) A third work, still extant, bearing the name of Josephus, viz. Ἰωσήππου ὑπομνηστικὸν βιβλίον (see J. A. Fabricius, *Cod. pseudepigr. Vet. Test.*$^2$, Hamburg, 1722–23, ii.; *PG* cvi. 16 ff.), is a *liber memorialis* after the classical pattern; it is a concise résumé in tabular form of the most outstanding events in the OT and NT and in Church History. Among other things it contains a list of the various Christian sects and their respective doctrines, and also of the persecutions.

(4) *The Chronicle of Josephus Ben-Gorion*, composed in the Middle Ages, and preserved in various Hebrew and Arabic recensions. Its nucleus is the *BJ*, in the so-called Latin version of Hegesippus, and it is from this that its writer took the name 'Josephus, son of Gorion' (cf. Hegesipp. III. iii. 2, and see, further, M. Schloessinger, in *JE* vii. [1904] 259 f.).

**6. Manuscript transmission and editions.**—The wide circulation and popularity of the works of Josephus are indicated in the history of their transmission. The MSS were, and still are, very numerous, and the textual tradition branches out in manifold ways. Each work, again, had its own peculiar fortunes. Thus, the most comprehensive, the *AJ*, was first of all divided into four parts, then into two, and each of these, again, took its own particular path. It was only at the close of the mediæval period that the *AJ* was put together in a single volume, the *BJ* also being included; scholarly readers endeavoured to amend and elucidate the text, and not a few MSS still show traces of a thoroughgoing revision.

The works of Josephus were first printed in their Latin form: *AJ* and *BJ* by J. Schüssler (Augsburg, 1470); *CA* by P. Maufer (Verona, 1480). These impressions were subsequently often reproduced; the last serviceable complete issue of Josephus in Latin is the Basel edition of 1524. The first printed Greek text, revised by Arnold Peraxylus Arlenius, was published by Froben (Basel, 1544). This issue was several times reprinted, and formed until recently the basis of all our editions. Among the later of these special mention should be made of the meritorious but unfinished work of E. Bernard, who published the first parts of the *AJ* and the *BJ* with an exhaustive commentary (Oxford, 1687–1700); also of the edition of J. Hudson (2 vols., do. 1720), based upon Bernard's studies; and, finally, of the great edition of S. Haverkamp (2 vols., Leyden, 1726), who assimilated the labours of all his predecessors. In all these, however, little was done for the text, which remained largely as it was. It is true that E. Cardwell, in his edition of the *BJ* (2 vols., Oxford, 1837), noted the various readings of several reliable MSS, but he made no use of them in the text. Similarly the more recent editions of the text in current use, viz. those of W. Dindorf (Paris, 1845) and I. Bekker (Leipzig, 1855), provide little of any consequence, save a few conjectures, for the emendation of the very incorrect Greek tradition. An adequate groundwork for the text was supplied for the first time by the present writer's edition, now complete in seven volumes (Berlin, 1885–95); in the *BJ* (vol. vi.) he had the collaboration of J. Destinon. As supplementary to this may be regarded the writer's edition of the *Epitome* (Berlin and Marburg, 1896) and Carl Boysen's revision of the Latin version —of which only the 6th vol. has appeared (*CSEL* xxxvii. 6 [1898]). It need hardly be said that the work of textual criticism is still far from complete; it is only now, in fact, that it can really begin. S. A. Naber's revised issue of Bekker (Leipzig, 1888–96) naturally approximates more to the older text.

Additional literature is given by Fabricius and Schürer (i.$^3$ 100 ff.) in the works already cited.

BENEDICTUS NIESE.

**JUĀLĀMUKHĪ, JWĀLĀMUKHĪ** (Skr. *jvālāmukhī*, 'flame-mouthed').—An ancient place of pilgrimage, famous as the site of a shrine dedicated to the Hindu Mother-goddess under the title of Devī Bajreśvarī (Skr. *Vajreśvarī*, 'goddess of the thunderbolt'), situated lat. 31° 52′ N., long. 77° 20′ E., in the Bhavan suburb of the town Kāngrā, Nagarkoṭ, or Koṭ Kāngrā, in the Kāngrā District of the Panjāb. It was ruined in the earthquake of 1905 (*Panjāb Census Rep.*, 1912, i. 44). It is one of the centres of Hindu fire-worship. Numerous instances of this and similar cults are collected by J. G. Frazer, *Adonis, Attis, Osiris*$^3$, London, 1914, i. 188 ff. It was visited by Maḥmūd of Ghaznī and Fīrūz Tughlaq, when they attacked Nagarkoṭ or Kāngrā in A.D. 1009 and 1360. In his account of the latter campaign the historian Shams-i Sirāj Afīf, who objected to such unorthodox practices, protests against the belief that Fīrūz Tughlaq honoured the goddess:

'Some of the infidels have reported that Sulṭān Fīrūz went specially to see this idol and held a golden umbrella over its head . . . the infidels slandered the Sulṭān, who was a religious,

god-fearing man. . . . Other infidels have said that Sulṭān Muhammad Shāh bin Tughlaq Shāh held an umbrella over the same idol; but this is a lie, and good Muhammadans should pay no heed to such statements' (H. M. Elliot, *Hist. of India*, London, 1867–77, ii. 34, 445, iii. 318).

These protests by an orthodox Muhammadan betray an uneasy suspicion that the cult was recognized even by Musalmāns, many of whom were deeply influenced by Indian animistic beliefs. Abū'l Faḍl, the historiographer of the Emperor Akbar, describes the shrine under the name of Mahāmāyā, 'great illusion':

'Pilgrims from distant parts visit it and obtain their desires. Strange it is that in order that their prayers may be favourably heard, they cut out their tongues: with some it grows again on the spot, with others after one or two days. Although the medical faculty allow the possibility of growth in the tongue, yet in so short a space of time it is sufficiently amazing' (*Āīn-i-Akbarī*, tr. H. S. Jarrett, ii. [Calcutta, 1891] 312 ff.). On such mutilations of the tongue, which fanatics sometimes offer to Kālī, see *NINQ* iv. 312; *PNQ* iv. 65; N. Chevers, *Manual of Medical Jurisprudence for India*, Calcutta, 1870, p. 492 f.

Abū'l Faḍl also refers to the legend, traced by E. B. Cowell in the *Gopatha Brāhmaṇa*, which tells that the belief in the sanctity of the place arose from the quarrel between Śiva and his father-in-law Dakṣa, when the latter was refused admission to a sacrifice. The spouse of Śiva, the goddess Ūmā or Satī, offended at the insult, committed suicide, and Viṣṇu cut up her body, of which the tongue is said to have fallen at this place (H. H. Wilson, *Vishnu Purana*, London, 1864–77, iv. 261 f.; J. Dowson, *Classical Dict.*, do. 1879, p. 76 ff.). The account in the *Vāyu Purāṇa*, that 'about the mountains of Subakṣa and Śikhiśaila is a level country about a hundred *yojanas* in extent, and that there the ground emits flames,' doubtless refers to Juālāmukhī (E. T. Atkinson, *Himalayan Gaz.*, Allahabad, 1884, ii. 295). The place, again, is connected with the story of the Sikh Guru Angad, who on arriving there reprobated the idolatrous character of the rites (M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, ii. 3).

The best modern account is that of C. Hügel (*Travels in Kashmir and the Panjab*, p. 42 ff.). No idol represented the goddess; but in the centre of the forecourt of the temple there is a pit with seats at either end on which he found *faqīrs* resting. A perpetual flame rose from this pit, and from two places in the smooth rock similar flames were seen bursting out to a height of about 8 inches. The worshippers, on entering the sanctuary, delivered their gifts, usually flowers, into the hands of one of the *faqīrs*, who first held them over the flame and then cast them into the temple. Close by is a shrine of the saint Gorakhnāth.

'On descending a good many steps I saw flames issuing from two places in the perpendicular wall; and, on examining more attentively, I perceived, where the fire was burning, little cavities in the smooth stones, with just the same appearance as when a burning-glass is made to consume wood; the flame issuing, not from any aperture, but from those minute cavities, emits a scent like alcohol, burning with an aromatic and most agreeable mixture, which I could by no means identify. Under each of these flames stood a pot of water, of the same temperature as the atmosphere; the condensed residue of the gas thus deposited takes fire on the application of a light, and burns for more than a minute. Altogether this is one of the most extraordinary phenomena I ever recollect to have witnessed; and no doubt in distant ages was one of the spots most thronged by fire-worshippers. The sight of this flame rising out of the earth, perhaps long before any building was near it, would doubtless add much to the influence of this superstition on the minds of the attendant worshippers; for this seems still to be the case, although much of the marvellous is lost by confining the flames within the walls of a temple.'

The same traveller suggests that the place was an early seat of Buddhism; and J. Wilson believes that this is the explanation of the low esteem in which the Brāhman officiants are regarded (*Indian Caste*, Bombay, 1877, ii. 133). The high-priest is known as the *bhojakī pūjārī*, that is to say, 'the officiant who eats the offerings,' the term *bhojakī* being usually applied to those degraded Brāhmans whose only function is that of being fed vicariously by pilgrims in the hope that the food thus consumed may be transmitted to the deceased ancestors of the worshipper. They are said not to be genuine Brāhmans, but descendants of a servile class of agriculturists, who from their connexion with the temples have professed to be Brāhmans (see H. A. Rose, *Glossary of the Tribes and Castes of the Punjab*, Lahore, 1911, ii. 107 f.). The facts regarding fire-worship in N. India have been collected by Elliot, *Hist. of India*, v. (1873) 559 ff. The cult of Juālāmukhī Devī extends into Bengal and the Deccan, and the aboriginal Kharwārs have a shrine dedicated to the holy fire which they call by the same name (Risley, *TC*, 1891, ii. 204; Crooke, *TC*, 1896, ii. 247; *BG* xii. [1880] 63).

**JUANG, PATṬUĀ** (the latter name meaning 'leaf-wearers' [Hind. *paṭṭā*, Skr. *patra*, 'a leaf']).—A non-Aryan tribe found in the Kaṭak Tributary States of Dhenkānāl and Keonjhar, being most numerous in the latter. At the Census of 1911 they numbered 12,845, of whom the vast majority recorded their religion as animistic. They are interesting as being the last tribe in N. India which retained the archaic custom of wearing leaves as clothing. According to the tribal tradition, they were formerly fond of dress and were accustomed to lay it aside when doing foul work, and to wear suits of leaves. The goddess (Ṭhakurānī, or as some say, Sītā) reproved them for their vanity, and condemned them to wear leaves in future, threatening them that if they disobeyed they would be eaten by tigers. Similar legends are told by other leaf-wearing tribes in S. India (E. Thurston, *Castes and Tribes*, 1909, vii. 20). The classical account of the tribe is that of E. T. Dalton (*Descr. Ethnol. of Bengal*, Calcutta, 1872, p. 152 ff.), who gives the following summary of their beliefs:

'The Juāngs appear to be free from the belief in witchcraft, which is the bane of the Kols, and perniciously influences nearly all other classes in the Jungle and Tributary Mahāls. They have not, like the Kharias, the reputation of being deeply skilled in sorcery. They have in their own language no terms for "God," for "heaven," or "hell," and, so far as I can learn, no idea of a future state. They offer fowls to the sun when in distress, and to the earth to give them its fruits in due season. On these occasions an old man officiates as priest; he is called Nāgam. The even tenor of their lives is unbroken by any obligatory religious ceremonies.'

If this account, in itself improbable, be accepted, they stand in a much lower stage of religious belief than the neighbouring Dravidian tribes (see DRAVIDIANS [North India]). But Risley (*TC*, 1891, i. 353) disputes Dalton's conclusions, asserting that the tribe in Keonjhar worship a forest deity called Barām, who stands at the head of their system, and is regarded with great veneration. Next to him come Thānapatī, the patron deity of the village site, Māsimuli, Kālāpāt, Bāsulī, and Basumatī, or Mother Earth.

'Buffaloes, goats, fowls, milk, and sugar are offered to all of these, and are afterwards partaken of by the worshippers. No regular days seem to be set apart for sacrifice, but offerings are made at seedtime and harvest, and the forest gods are carefully propitiated when a plot of land is cleared from jungle and prepared for the plough. In addition to these elemental or animistic deities, the Hindu gods are beginning to be recognised, in a scanty and infrequent fashion, by the tribe. Brāhmans have as yet not been introduced, and all religious functions are discharged by the *dehari* or village priest. . . . Juāngs burn their dead, laying the corpse on the pyre with the head to the south. The ashes are left at the place of cremation or are cast into a running stream. A few days after death a meagre propitiatory ceremony is performed, at which the maternal uncle of the deceased officiates as priest. Offerings to departed ancestors are also made in October, when the autumn rice crop is harvested.'

**JUBILEE.**—See FESTIVALS AND FASTS (Hebrew).

**JUDAISM.**—I. *DEFINITION.*—Judaism[1] may be defined as the strictest form of monotheistic belief. But it is something more than a bare mental belief. It is the effect which such a belief, with all its logical consequences, exerts on life, that is to say, on thought and conduct. It is the religion which was first preached by Abraham, and symbolized by the covenant of circumcision (cf. art. CIRCUMCISION [Semitic]), and it is still practised by his descendants. It is the oldest existing religion, the parent of two mighty faiths that have spread over the major portion of the globe. They have diffused the principles of Judaism in a modified form, but the kernel of their teaching is Jewish, in spite of accretions and losses, and Judaism does not, in consequence, repudiate these religions or class them as idolatrous and false. A formal and precise definition of Judaism is a matter of some difficulty, because it raises the question, What is the absolute and irreducible minimum of conformity? (see art. CREED [Jewish]). On the other hand, it may be said, more widely, that the foundation of Judaism rests on two principles—the unity of God and the choice of Israel. Judaism denounces idolatry and polytheism. It believes in a universal God, but it is not exclusive. It believes that this world is good, and that man is capable of perfection. He possesses free will and is responsible for his actions. Judaism rejects any Mediator and any cosmic force for evil. Man is free; he is not subject to Satan; nor are the material gifts of life inherently bad; wealth may be a blessing as well as a curse. Man is made in the image of God; therefore he is noble, like the rest of the divine works. For this reason all men are equally brothers. Just as they were united in the beginning, so will they be drawn together again at the end of time. They will be brought near to the Kingdom of Heaven by the aid of Israel. This is the function of Judaism—to spread peace and goodwill throughout the world.

'Judaism by its idea of a divine kingdom of truth and righteousness to be built on earth gave to mankind a hope and to history a goal for which to live and strive through the centuries. Other nations beheld in the world's process a continual decline from a golden age of happiness to an iron age of toil, until in a great catastrophe of conflagration and ruin the end of all things, of men and gods, is to be reached: Judaism points forward to a state of human perfection and bliss to be brought about by the complete unfolding of the divine in man or the revelation of God's full glory as the goal of history. And herein lies its great distinction also from Christianity. Judaism's scope lies not in the world beyond, the world of the spirit, of which man on earth can have no conception. Both the hope of resurrection and that of immortality, in some form or other familiar and indispensable to all tribes and creeds, seem evidently to have come to the Jews from without—the one from Persia or Babylonia, the other from Greece.[2] Judaism itself rests on neither. Its sole aim and purpose is to render the world that now is a divine kingdom of truth and righteousness; and this gives it its eminently rational, ethical, and practical character' (K. Kohler, in *JE* vii. [1904] 363b).

This aim is pursued by the insistence on the belief in the Unity and on the practice of the Commandments. Judaism lays more stress on works than on faith, though the former are of no avail without the latter.

'It is not a creed or a system of beliefs upon the acceptance of which redemption or future salvation depends. It is a system of human conduct, a law of righteousness which man should follow in order to live thereby' (Kohler, 364a).

Yet Judaism does not lack a doctrine of faith; it is very doubtful whether an atheist who kept the Torah, or the Jewish ideals of righteousness, could be called a Jew (cf. art. ATHEISM [Jewish], vol. ii. p. 187 f.). There is no doubt that he would

[1] The present art. on Judaism is avowedly written from the orthodox standpoint. For the liberal attitude see art. LIBERAL JUDAISM; but it will be observed that, apart from the outstanding contention, viz. the principle of the Oral Law, the differences between the two presentations are but small and insignificant in comparison with the elements shared by both in common.

[2] This point is discussed below; it is doubtful whether orthodox Judaism can accept this entirely.

be 'saved,' in the Christian sense, because Judaism teaches that every righteous man, irrespective of his beliefs, has a share in the world to come.[1] But, just because Judaism believes that every good man is 'saved,' it follows that to be a good Jew must include something more, and must be ethically higher, than being a good man.

While Judaism, on the one hand, opens the door to proselytes, it is inevitable, from the fact of its demanding self-sacrifice, that it must long remain the religion of a minority. The function of Judaism is to keep the great ideals, unsullied and intact, before the eyes of the world. Jews must be prepared to defend their standard at the cost of their lives, as in the past, and to sacrifice, not only their lives, but their material prosperity—often a harder task. Many a potential martyr becomes indifferent, through prosperity, to the ideals for which he would offer his life in time of persecution. The world has need of a minority of idealists. For, although Judaism recognizes the truth taught by Christianity and Islâm, it believes at the same time that there are other elements contained in these faiths which are not in complete harmony with the primitive source of truth. Judaism, then, has not to compete with the more popular expositions of religion; its *raison d'être* is not to rival the successful missionary activity of its daughters, the Church and the Mosque; it claims, not to be the only form of truth, but to be the purest. While Christianity and Islâm are permeating the world with their teachings, Judaism awaits the day when it will, as originally, exert its influence over both of them, and so over all mankind. How this will take place, under what guise this universal worship of the One God will be, it does not seek to define.[2] This 'despised faith,' which holds itself to be in reality the Remnant or essence of righteousness, is safeguarded from extinction or contamination by the fence of the *miṣwôth* ('Commandments'). It has developed and grown, but ever in unbroken continuity, from the simple declaration of monotheism to a complete and comprehensive scheme of life. From Abraham to the present day the story has been written, and the pen has not yet been laid aside.

II. *GROWTH AND DEVELOPMENT.*—**1. To the end of the Restoration period.**—The Exile marked a new stage in the religion of Israel. It was the beginning of internal consolidation and external expansion. The patriarchs, the lawgiver, and the prophets represent successive degrees of progress in religious thought: monotheism, the Law, idealism. The faith of Abraham was moulded into the religion of a people, to become, ultimately, the source of ideals for a world; monotheism, purity, righteousness, and justice had developed under the impetus of lawgiver, priest, and prophet until the time of trial arrived. Exile and persecution were to test the reality of these lessons, to show that the work of the teachers was sound and the faith of the pupils unshaken. The touchstone of misfortune clearly demonstrated this; the seed had indeed been skilfully sown on fertile soil. The teachings of Isaiah had not been in vain; the exhortations of his contemporaries and predecessors succeeded in creating a compact remnant to carry on the truth and hand it over unimpaired to posterity. The Ten Tribes were lost, while the Remnant, the southern kingdom, endured.

[1] Even Elisha ben Abuya is ultimately pardoned after the death of R. Me'ir (see Bab. *Ḥagiga*, 15b).

[2] The immutability of the Ceremonial Law in the coming time was a matter on which divergence of opinion prevailed; see, *e.g.*, *Niddah*, 61b, and Midrash Tillim, Ps. 146, לעתיד לבא הוא מתיר את כל מה שאסר, line 8, outer col., f. 57b, ed. Bomberg, Venice, 1546, and, on the other hand, the 9th Creed of Maimonides (S. Singer, *Authorised Daily Prayer-Book*[9], London, 1912, p. 90) (the pagination is identical in all editions).

It is a matter of no small difficulty to attempt a sketch of the religious beliefs of the exiles. Jewish tradition (which ascribes much to a Mosaic origin [*hălākhāh lᵉ Môshĕ mis-Sînai*]) and modern critical views differ in many points. It will be more convenient, after some preliminary remarks, to trace the career of Judaism from the Restoration, from a point when most schools of thought agree as to the prevalence of the Pentateuch. For with regard to the religion of the two kingdoms little can be said with certainty, and every statement is liable to be rejected or modified according to the views held by the reader on Biblical criticism. There are certain general facts, however, that few will deny. On the one hand, no scholar on the critical side will maintain that the Pentateuchal legislation was the complete invention of the age of Ezra and his followers; a large mass of usages and beliefs must have been in existence for generations. Whether the code in which they were embodied was the Pentateuch or not is, for present purposes, a matter of indifference. It is the beliefs and usages themselves, and their effect on the people, that have to be considered, not their external form.

The foundation of all religion rests on the supreme fact of the worship of one deity, a heritage from dim antiquity; and this great idea did not stand alone. Religion must have involved something more positive than an intellectual Credo, or the tenacity of its persistence is inexplicable. The Sabbaths and festivals, sacrifice, worship, homely ritual, pious faith, and thanksgiving for the gifts of nature must have been the chief characteristics of the simple and innocent life of the God-fearing Israelite or Judæan, sanctified by the high moral lessons which his prophets taught him. How far the beliefs, ceremonies, and observances differed in the two kingdoms, what was the nature of the difference, if any, and whether the Mosaic tradition flourished more firmly in one than in the other are questions to which it is impossible to offer a definite reply. The answer must be framed according to the attitude adopted towards criticism, and will, of necessity, be controversial. But, whatever view be taken, there must have been something more powerful than unadorned dogma, some definitely practical elements, some religious functions linked to high ideals and appealing more to the heart than to the brain, affecting the life and moulding the conviction; otherwise the religion of Judah would have been no more enduring than that of the sister kingdom. Extreme criticism would relegate too much, if not everything, to a later age, while orthodox Judaism has a tendency, perhaps, to take too little account of moral and spiritual development. On the other hand, orthodox Judaism, with full Biblical authority, admits the break in continuity and accepts the disappearance of the Law until the reign of Josiah; if this disappearance is considered in its true setting and value, many difficulties can be solved. Orthodox Judaism takes its stand on the Mosaic authorship of the Pentateuch; moderate criticism (*i.e.* that which does not reject a Mosaic tradition *in toto*) lays more emphasis on the lengthy periods of conquests, settlements, and civil conflicts. As a result of political convulsions such as these, it is easy to understand how, in a non-literary age and land, amid a people recently emerged from bondage, copies of a legal code, in any case few in number, would tend to perish. This is not entirely denied by the less extreme upholders of the orthodox view; in fact, the difference between the moderate elements of the two parties is slight, being one of degree rather than of principle. Yet, whether the code existed or not, memories, more or less vivid, must have lingered, though the extent to which popular belief and practice were influenced is hard to determine. The observance of Sabbaths and New Moons (1 S $20^{18}$, 2 K $4^{23}$, Is $1^{14}$), coupled with the neglect of the Passover all the days of the Judges until the time of Hezekiah and Josiah (2 K $23^{22}$, but see Kimḥi, *in loc.*; 2 Ch $30^{21.26}$), and of the Feast of Tabernacles (cf. art. FESTIVALS AND FASTS [Jewish], vol. v. pp. 879–881) since the days of Joshua (Neh $8^{17}$), is difficult to explain. Meanwhile the discovery of the Assuan papyri introduces much useful evidence as to the state of Judaism outside Palestine. But the problems raised by the papyri are complex. The present writer has endeavoured to show[1] that the Jews of Assuan were descendants of Israelite exiles or emigrants from the northern kingdom. It is hard to resist the conclusion that they possessed some knowledge of the Pentateuchal ideas; in any case they cannot have regarded themselves as schismatics from catholic Jewry. As Samaria fell in 721 B.C., and the publication of the Law by Josiah did not take place till 618 B.C., the northern kingdom would seem not to have been entirely unaware of the code, or at least of its traditions, unless the Assuan Jews derived their knowledge after 618, when they were already in Egypt.

During the Exile and the Restoration, perhaps even earlier, Judaism spread far beyond the confines of Palestine. Of what character was this Judaism? The belief in the one and only God had long been an inalienable possession handed down from the remotest ages. The periods during which the true worship was obscured by that of other deities were mere temporary interruptions that had no lasting consequences. Baal-worship, destroyed in Israel by Jehu and in Judah by Josiah, never reappeared after the Captivity. No tendency to idolatry survived the Exile. In many cases of pre-Exilic apostasy, the prophets denounce not so much the adoration of strange gods as the introduction of heathen rites and barbarous cults into the service of the God of Israel. 'Shall I give my firstborn for my transgression?' was the temptation that assailed many an Israelite who would have scorned to be known as a worshipper of Milcom or Astarte. Not only did he refuse these deities allegiance; he denied their existence. The teaching of the prophets was directed no less strongly against henotheism. Idols had no actuality; the very term *ĕlîlîm*, usually connected with a root *'all*, 'to be feeble or insufficient,' should more probably be regarded as a contemptuous diminutive of אֵל (cf. art. IMAGES AND IDOLS [Hebrew and Canaanite], above, p. 138 ff.). Although passages are cited (Ps 82, Dt $32^{7-12}$ [reading בני האלהים for בני ישראל in v.[8]; LXX, κατὰ ἀριθμὸν ἀγγέλων θεοῦ]) to show that a belief in the God of Israel was not incompatible with a recognition of the validity of other gods for other nations, yet no authoritative argument can be found in prose; theology cannot be deduced from poetical imagery, and, even if the emendation in Dt $32^8$ is correct, the conclusion of v.[12] is an overwhelming denial of the henotheistic idea. There were, doubtless, in earlier times, cases where syncretism and henotheism sullied the purity of the true faith, but in the religious beliefs of the leaders, from the Patriarchs downwards, no adequate confirmation for such elements can be produced. Abraham, Moses, and Elijah were all equally zealous monotheists, and in none of their successors was there any retrogression from the highest and purest form of unitarian belief.

The polytheism prevalent in Babylon was vigorously attacked in the later chapters of Isaiah; more seductive to the Jews was the Persian dualism (see art. DUALISM [Iranian], vol. v. p. 111 f., also the 'Jewish' section of the same art., *ib.* 112–114), but it was none the less sternly reprobated

[1] *Jew. Lit. Annual*, London, 1906, pp. 146–148.

by the prophet. After the Return, no more is heard of temptations or lapses in this direction. The spark kindled and fostered by the prophets had spread into a mighty flame. From the day of the Return, as far as the Jews were concerned, 'the Lord was one, and His name was one.'

The belief, then, of the returned exiles in a supreme God, supreme not only for Israel but for the whole world, was unshaken and permanent. Linked to this belief was the corollary that God was good and His service obligatory on mankind, to each one of whom he was accessible as a father to his children. The insistence on the compassionate element of the divine being—that element which was later called the *middath hārahămîm*—resulted in reflexions on the nature and origin of evil, sin, and suffering. These speculations produced a repugnance to ascribe to the Deity the authorship of any actions which seemed incompatible with His attribute of a merciful Father. Hence the exiles of Babylonia were somewhat allured by the Persian dualistic theory, which seemed to offer a more satisfactory solution of the riddle of the universe. It was not a desire for idolatry, not a negation of the Unity, nor the attractions and superior status of a dominant religion that led Jews to regard the contrast of Ahura Mazda and Ahriman with approval. Their attitude arose from mistaken motives of piety, and from earnest strivings after the essential truth. Again and again Judaism has witnessed a recrudescence of the desire for a dualistic explanation of the problem of evil. Answers were not wanting from the prophets and teachers, yet new generations repeatedly felt the old difficulty in a newer and keener form. The book of Job and the Lamentations of Jeremiah declared vehemently for the Unity, and did not shrink from attributing evil to the Godhead. The unnamed prophet of the Exile states explicitly (Is $45^7$): 'I form the light, and create darkness: I make peace, and create evil: I the Lord do all these things'; and this clear definition of God's activity left no escape from attributing to His omnipotence that which man considered evil. Yet a later age again felt repelled by this outspoken avowal and sought to mitigate its seeming harshness.

To the present time, the Jewish liturgy, in the daily morning service (see Singer, p. 37), contains this passage as an introduction to the most important section, the *sh'ma'* (Dt $6^4$), but it is apparently divested of the very principle to which it owes its insertion. For the passage now runs, 'who formest light and createst darkness, who makest peace and createst *all things*.' This alteration is, of course, merely external, since 'all things' include 'evil,' yet the change is significant, and marks, no doubt, a revival of the hesitation to ascribe evil to God.

Closely allied to the problem of evil was the question of the prosperity of the wicked and the sufferings of the righteous, dealt with frequently in the later Psalms and in Job. In this, as in all the great problems, considerable fluctuation may be observed. The unity of God was a sheet anchor to which all held fast. His existence and divine providence presupposed a true solution to man's perplexities; if man could but succeed in finding the key, he would be able to unravel the mysteries. The certainty and dogmatism of later ages seem lacking during the Exile and in the two following centuries. From the Apocrypha it can clearly be seen how much the minds of men were exercised and how little they were satisfied by the answers which they possessed. The Apocrypha, taken as a whole, is at least two centuries younger than the Return, and it is only fair to assume that the earlier age evolved no solution of which the later was ignorant. While taking care, then, not to read into the former period the progress and development of the latter, we may at least infer that none of the philosophical ideas of the former escaped the notice of the later generations, and, therefore, of our own time. Our knowledge of the period immediately succeeding the Return is very scanty, but, as the centuries advance towards the period of Apocrypha, Mishna (see TALMUD), and Midrash (*q.v.*), our material becomes more abundant, and it is practically certain that no great idea, no supreme solution of any of those questions which agitate and perplex the mind of man in all ages, would have disappeared from the intellectual heritage that our ancestors bequeathed to us. From the 2nd cent. before the Christian era and onward such a supposition is almost unthinkable.

The solutions of the problems of evil and suffering ran on two lines, in a way closely allied. Man was incapable of understanding the inscrutable ways of Providence. The prosperity of the wicked was unstable or unreal even in this world; how much more in the world to come? It was only a superficial judgment that would convict the Almighty of injustice, by measuring His actions with an imperfect human norm. This line of argument, that of Job, Ps 73, etc., combines two thoughts—the insufficiency of human reason and the belief in the future world to redress the inequalities of this life. Ps 49 is difficult to interpret. On the one hand, v.[16] [v.[15] EV] seems a clear indication of a future life, yet the last verse seems a pessimistic summary of the fate of humanity, couched in terms of despondency almost recalling the language of Lucretius.

The corollary of the future world was not always employed.

It was sometimes argued (*e.g.* Ps 129) that the fall of the wicked and the triumph of the righteous would be manifest even in this world; or that, as God had saved His people in the past, so would He deliver them from present troubles; the appeal to history is common in the post-Exilic prophets. Coupled with this (*e.g.* Neh 9) is faith in God's mercy, which will save the Jews and frustrate their enemies, though the latter seem successful and the Jews doomed to failure.

The different treatment of the problem offered by Ecclesiastes will be discussed when dealing with the Apocrypha.

Closely allied to the problem of sin and suffering is the question of a future life (see, in general, art. ESCHATOLOGY, § 10, vol. v. pp. 376–381). At the early age of the Return, it is difficult to state precisely how this question was regarded. Judaism has usually refrained from defining with precision the details and circumstances of the future world, contenting itself with a belief in its reality. This belief is, however, firm and uncompromising. The difficulty felt in later times was to deduce this belief from the Pentateuch. There can be little doubt, though direct evidence as to the antiquity of the idea is not plentiful, that the post-Exilic Jews believed in a world to come; whether they believed in a resurrection of the body or of the soul is a difficult point to determine (see art. RESURRECTION [Jewish]). With the future life was bound up a belief in future reward and punishment; it is hard, in the first instance at any rate, to conceive of a future state which will not differ from the present. If this world is to be one of trial and testing, the life beyond the grave must surely bear some relation to it, depending on the success or failure achieved during the preliminary stage. The hereafter must be correlated to the present. The sin of mankind, if not expiated now, must surely be visited at a later time; and, if the sin, so also the merit.

The famous 53rd chapter of Isaiah was formerly taken as the authority for a belief in vicarious atonement. The special Christological interpretation has always been repudiated by Judaism; the general principle has scarcely, if indeed at all, been conceded (see S. R. Driver and A. D. Neubauer, *The Fifty-Third Chapter of Isaiah according to the Jewish Interpreters*, Oxford, 1877). Thus Ibn Ezra (*q.v.*; † 1167) refers the expression 'my servant' to all those God-fearing Jews who were in exile; Sa'adya (*q.v.*; 892–942) to the prophet Jeremiah. Both of these commentators reflect traditional exegesis; their views do not merely represent contemporary opinion. The suffering of the Servant was regarded by the nations as an expiation

for their sin; but this opinion, put into the mouths of the Gentile kings, was erroneous, and the outcome of their amazement at the persistence of the Servant under such unparalleled persecution. The impossibility of a vicarious atonement is clearly stated by the refusal of God to allow Moses to become a substitute for the sins of Israel. 'Whosoever hath sinned against me, him will I blot out of my book' (Ex 32[31ff.]).

Similarly, although inherited punishment might be deduced from the Decalogue, the post-Exilic Jews relied on the teachings of Jeremiah and Ezekiel, which maintain emphatically the doctrine of individual responsibility (Jer 31[29f.], Ezk 18). The problem of free will (*q.v.*) developed more fully in later ages. In Deuteronomy the free will of man is distinctly stated, and it is not felt to be an encroachment on the divine prerogative of omnipotence (Dt 11[26ff.] 30[15ff.]). Man is free, and God is all-powerful. The dilemma does not seem to have troubled the post-Exilic Jews.

One of the most important elements in Jewish theology was the idea of cause and effect. The books of Kings, which were compiled after, or at least at the end of, the Exile, show very clearly that the writers were prone to link together events between which there was not, of necessity, any connexion, to find some religious motive in all affairs, and to account for history by the aid of theology. Thus the disaster to the village children who were eaten by she-bears is narrated after the mocking of the prophet (2 K 2[23f.]). To the writer it was obvious that the former incident was directly caused by the latter: *post hoc ergo propter hoc*. The Exilic or post-Exilic Jews seem to have had no notion of secondary causes: the division of causes into material, formal, efficient, and final belongs to the later age of Aristotle. Consequently, their ideas as to divine agency were somewhat primitive, and influenced their estimates of persons and events.

Thus the compiler of the books of Chronicles, who must have lived at least in the age of Alexander, cares little for political history, which he subordinates to that of religion, and to a less extent this is true of the writer of Kings.[1] If the early theory of causation be kept in mind, many difficulties, such as Hos 1, can be satisfactorily solved. The influence of this theory on theology was great.

Both in Babylon and after the Return the Jews held tenaciously to the belief in their divine election (*q.v.*). Countless texts and teachings reminded them of the fact that God had chosen them to be His people, His witnesses, a kingdom of priests, a beacon of light and truth to the nations of the earth. However much they might have fallen short of their duty, however much they might have neglected not only to teach others, but even themselves to remain faithful to their sacred task, God had not deposed them for ever from the office to which He had appointed them and their ancestors. Although the Jews had at times misinterpreted their position to mean a freedom to sin with immunity from punishment—a view strongly opposed by the prophets (*e.g.* Am 2-3)—yet they never felt themselves to have been superseded. Their mission was not taken from them. How deeply they realized their responsibility and at what personal cost they were willing to fulfil their obligation may be seen from the great domestic sacrifice which Ezra exacted from a willing people (Ezr 9 f.).

It was no light matter to separate from beloved wives and children, yet it was obvious that, if the mission of Israel were not to end in failure, the sacrifice must be brought. The repudiation of the foreign wives has been wrongly attributed to the Jews as an act of reproach and as evidence of callousness; it was in reality an instance of their devotion and their unswerving fidelity to the idea for which they had been called to be a nation of teachers, to spread the Word of God to the uttermost ends of the earth.

At this point it becomes necessary to examine the relation in which the Jews considered themselves to be placed with regard to Gentiles. Did they regard themselves as a separate nation among other nations? This question acquires fresh importance in later and in modern[1] times, and seems to have been regarded differently at different epochs. It must be remembered that the Jews, being Semites (*q.v.*), must, in consequence, be regarded from the Semitic and not from the modern ethnological point of view. The modern idea of a unifying element is consanguinity; the Semitic bond was community of worship. From the earliest times the principle of divine selection has been religious and not racial; otherwise there is no reason why distinctions should have been made between members of the same family; *e.g.*, Abraham, not his father Terah nor his brother Haran; Isaac, not Ishmael; Jacob, not Esau. The twin brothers have the same parents and the same racial conditions, but even the primogeniture is ignored, and the spiritual heritage is given to the younger brother. A Moabite is one who worships Chemosh, an Ammonite one who worships Milcom, and an Israelite one who worships Adonai. It was not the possession of a territory, for nomads have no settled territory. It was not the ties of blood, for the descendants of Esau, though called the brothers of Israel, are yet no true sharers of Israel's Abrahamic heritage. The strife of ideals is graphically portrayed as originating in the womb (cf. Gn 25[22f.], and see Rashi's remark on the allegory). The link between Semites was solely that of a common worship. At times this might acquire a racial sense, for inter-marriage with non-Jews, involving almost necessarily an abandonment of Judaism in the home and among the offspring, was prohibited. This prohibition, however, arose from a fear that religion would be affected, not from a sense of superiority of blood. The book of Ruth is an object-lesson in the consequences of pushing this tendency too far; the proselyte can be as worthy as the native, and from the Moabite woman David himself was descended. For the same reason a distinction was observed between the seven nations of Canaan, who were irreclaimably steeped in wickedness (a fact borne out by archæology), and others, who, coming to sojourn under the wings of the Shekhinah, would develop into true sons of the Covenant.

The effect of the Exile upon the Jewish community is summarized as follows by W. O. E. Oesterley and G. H. Box (*Religion and Worship of the Synagogue*[2], London, 1911, p. 3 f.):

'To a large extent it denationalised religion by demonstrating that the religion of Israel could survive the dissolution of the State, and was, therefore, independent of a national centre. It is true that the elements of a national organization and life still existed in the Jewish communities, long after the Babylonian exile, and even later asserted themselves in new national forms. The connexion between race and religion, though modified, was not destroyed. Judaism, in fact, has never given up altogether its racial basis. In this, as in other respects, it has ever been inconsistent. When the ideal of a community, organized for purely religious purposes and recognising no distinctions of race, has attempted to translate itself into action from within organized Judaism, a reaction back to the national idea has inevitably followed. And it was after every outward sign and vestige of separate nationality had been swept away by Hadrian (A.D. 135) that national feeling and sense of racial solidarity became most intense. But all the same, it remains true that ever since, the widely sundered and (in all other respects) distinct communities of Jews which are scattered over the world find their one link of continuity and unity in a common religion.

It has been pointed out, justly,[2] that, in principle, the separation between the State and the Church had already been effected in the Book of Deuteronomy. But in practice Deuteronomic principles met at the outset with serious obstacles in the way of their realization. The last of these disappeared with the destruction of the State. . . .

The first to seize and enforce the lessons of the Exile was the

[1] Cf. W. E. Barnes, *The Two Books of the Kings*, Cambridge, 1908, p. xxix.

[1] See below, p. 607.

[2] *e.g.*, by C. H. Cornill, *Der israel. Prophetismus*[6], Strassburg, 1906, p. 83 ff.

prophet Ezekiel, "the first dogmatist of the Old Testament." He laid the theological foundations of the structure which Ezra reared.'[1]

To translate the words *'am* and *gôi* by 'nation' is to beg the question and to presuppose an idea of 'nationality' akin to that which the word now conveys. The term *'am* implied an essentially religious kinship, because in primitive times the god was of the same kin as his servants (see W. R. Smith, *Religion of the Semites*², London, 1894, p. 35 ff.). A separation of religion and nationality was impossible; the idea of religion included much that is implied by the latter. An Israelite worshipping Chemosh became a Moabite, *ipso facto*; an 'atheist Jew' was inconceivable. 'It was impossible for an individual to change his religion without changing his nationality' (*ib.* 37). In course of time the Semites developed many national characteristics and adopted national features of life and government. Intercourse with their neighbours tended more and more to bring into the minds of the Jews a craving for a separate national entity, for a king, for an army, for territorial expansion. All these desires are regarded by the religious teachers as a falling away from righteousness, as signs of rebellion against God. Israel is a theocracy, to be governed by judges and officers (Dt $16^{18}$), by councils of elders (Ex $18^{25f.}$), deriving their authority from the priests and ultimately from the Deity. If, dissatisfied with this form of government, the Israelites clamour for a king, 'like all the nations which are round about,' the desire might be granted (Dt $17^{14}$). But the king is not to collect cavalry, nor is he to set his heart on Egyptian alliances. He is to spurn all the prerogatives of nationality and monarchy, and to reign in accordance with the Word of God. Samuel (1 S 8) feels a great repugnance to the institution of a monarchy; the request for a king is a rejection of God as their sovereign (v.$^{7}$). Israel 'shall dwell alone, and shall not be reckoned among the nations' (Nu $23^{9}$). Her safety is to be in rest and tranquillity, not in diplomatic duels with Assyria and Babylon, not in political and national alliances, not in seeking for territorial expansion or military prowess. All these are the very signs of nationality that are so sternly reprobated by Isaiah and, later, by Jeremiah. Israel's destiny is comprised in the doctrine of the 'Remnant,' the small minority of true believers, who, oblivious of the narrow and confining bonds of nationality, are to spread over the earth and make it fruitful.

The ideal of Zion is to be not an impregnable fortress, but the source of the Torah, the fountain-spring of righteousness. The people who pinned their hope on the inviolability of Jerusalem were confounded, just as those who cried out, 'The Temple of God,' and trusted in it to save them, were mistaken. The idea of a temporal nationality with strong military power and a position of influence in foreign politics was never preached by Isaiah as the destiny of Judah. But the reliance on nationality and the boastful vaunt of being 'God's invincible nation' became stronger as the king, nobles, and people grew more faithless to the Word of God, more heedless of the admonitions of the prophet. They could not conceive that Assyria should be allowed to overcome Israel, God's own nation, strengthened by alliances, falsely encouraged by lying teachers, boastful of its military prowess and efficiency. But Isaiah saw more clearly: a faithless nation would inevitably be abandoned by God, for it was not for their nationality that He chose them, not because they were better or more distinguished by inherent virtue, but because of His love (Dt $7^{7}$) for them and in order that they should be His servants. Assyria was to be God's rod of punishment. The unthinkable would come about, and the false ideals of nationality were to be shattered by the hand of the heathen empire. The Lord of Hosts was to be supreme. His power was to sweep over the universe as waters cover the sea, sweeping away the puny artificial boundaries erected by man, 'removing the limits of nations and overwhelming the settlements like a mighty hero' (Is $10^{13}$). When God had finished His work on Mount Zion and purified it from false ideals, when nations would no longer learn warfare, then would nationality be finally annihilated, and Israel would be a third with Egypt and Assyria, all equally a blessing to mankind, Egypt being 'God's people,' Assyria 'His handiwork,' and Israel 'His inheritance' ($19^{25}$).

[1] Cf. the ch. referring to Ezekiel in Cornill, p. 117 ff.

This universalistic consummation was regarded by all the prophets as the purpose for which the Deity was working. This must not be taken to imply that Israel was to lose its particularization. Zion is constantly exalted to a position of spiritual leadership, and this position is contrasted with the Oriental despotic court, which the kings and nobles created. At certain times, traces of a nationalist spirit may be observed, especially in exile or in persecution. By the waters of Babylon the Jews were, so to speak, driven into nationality because they felt themselves to stand apart from the empire wherein they dwelt. But it was, in reality, the contrast between the two religions, not a sense of nationality, that sundered the Jews from their conquerors. The Northern Kingdom was essentially more nationalist in proportion as it was less religious in spirit than Judah. Destruction and expatriation fell upon both kingdoms alike; but Judah survived, Samaria perished. During the Maccabæan persecutions the contrast between Jew and Greek acquired something of a national tinge. In Babylon and after the Return, the religion alone seems to have been the essential characteristic.

The dispersal of Israel began before the Exile; it continued after the Return. Emigration, stimulated by trade and other motives, as well as exile, had removed many Jews from the land of their fathers. They were to be found in Assyria, in Egypt, in Hamath, in the coastlands of the Mediterranean, and even in remote and mysterious 'Sinim' (Is $11^{11}$ $49^{12}$). The presence of Jews in Gentile surroundings, differing from their neighbours in so many ways, must have stimulated, on both sides, introspection. The Jews were driven back on themselves, and they studied their own religion the more carefully. They would naturally look outside their own camp as well, and contrast the forms of worship and the beliefs that existed without. At a very early stage the influence of the Jewish Diaspora, as a missionary agency, began to be felt. Judaism became more and more universalistic. Cuneiform inscriptions reveal an intense Jewish life in Mesopotamia; socially and religiously the Jews played no small part in the land of their conquerors. The other world power, Egypt, was also the home of a solid Jewish community. Doubtless many other colonies existed, for silence must not be construed as an argument. Until the appearance of the Assuan papyri, we had no evidence for Jewish life in Egypt at the time of the Return; we now, by one single discovery, are able largely to re-construct the history of the Jews of Yeb (Elephantinē). The favour of the Persian governors protected them; they prospered commercially, engaging in various trades and holding property. They seem to have had a temple of their own, at least an altar with incense. They felt themselves in spiritual communion with Palestine, corresponding with political and religious officials. Their names are mostly Biblical, and they seem to have clung to their ancestral faith. It is unfortunate that most of the documents are of a business nature; more positive details as to religious life and thought would have been welcome. Doubtless the activity of the Jews prevailed in many other places, of which, at present, we have no knowledge. We can safely assume that, wherever they settled, a centre was established whence Judaism was diffused not only from Jew to Jew, but also to Gentile. Already Jeremiah, from the womb (Jer $1^{5}$), had been designated as a prophet to the Gentiles, to preach a belief in God and the tenets of righteousness to the wide world.

The Temple and its sacrifices (see SACRIFICE [Jewish]) filled as large a part of Judaism after the Return as before the first destruction. It is often urged that the prophets deprecated the sacrificial

system and were not over-zealous for the Temple itself. This view is scarcely correct. The prophets frequently decry sacrifices, when brought in a wrong spirit or regarded as licences to sin. It is extremely doubtful whether they rejected sacrifices *qua* sacrifices. Similarly Jeremiah denounces those who make the existence of the Temple and the Ark of the Lord an excuse for sin. Jeremiah $3^{16f.}$ is definitely clear: it cannot be regarded as otherwise than a denunciation of those who felt that the Temple was inviolate, and that its inviolability would safeguard them from the effect of their wrong-doing. The prophets of the Return favour the sacrifices. Malachi, speaking not merely of the present but even of the Messianic age, looks forward to a time when the *minḥāh* of Judah and Jerusalem shall again be pleasing to the Lord as in days of old ($3^4$). Haggai and Zechariah, so far from deprecating the Temple idea, reproach the people for being lukewarm in the work of rebuilding. There would have been no possibility for these admonitions had the idea of Temple and sacrifices been superseded. The rebukes are directed against those who are despondent or those who are apathetic. The first Return was followed by a certain amount of disorganization. Not until the advent of Ezra was the religious life firmly established. For this reason Malachi attacks a spirit of parsimony among the tithe-payers and those who would defraud God of the sacrifices due to His Temple. There is no indication anywhere that the Temple and the sacrifices were to be relegated to the past.

The Messianic idea seems, to some extent, dormant at the beginning of the Restoration. The term 'Messiah,' of course, occurs in early passages of Scripture, but in a purely literal sense of 'anointed,' *i.e.* king, or one appointed to fill a certain office (cf. art. MESSIAH, MESSIANISM). 'The word "Messiah" (anointed one) is never used in the Old Testament in the special sense to which it has been consecrated by Jewish and Christian usage' (J. Skinner, *Book of the Prophet Isaiah, Chapters i.-xxxix.*, Cambridge, 1896, p. lviii). During the Exile the term is even applied to Cyrus, a Gentile ruler, because he has been chosen to be a divine instrument in Israel's release. What may be termed the Messianic idea is to be found under two heads: (*a*) the redemption of Israel, from the first Exile; (*b*) eschatological prophecies of a Golden Age of universal peace and brotherhood. Under the influence of the Restoration, when the people and prophets alike were animated by optimistic hopes for the present and the more immediate future, the Messianic idea was not so strongly dominant. The settlement of the people and the restitution and spread of divine worship in its former home occupied general attention. The age of the Apocrypha saw a renewal of eschatological speculation and a development and perhaps an extension of the Messianic idea.[1]

Prayer was naturally associated with the Temple ritual, and the phrase *Mô'adhê Ēl* (Ps $74^8$) has been taken to denote assemblies for worship, synagogues. Set prayers are recorded in Chronicles and Ezra, and Jewish tradition assigns to this period the institution of the '*Amîdāh* prayer (Singer, p. 44 ff.; see, further, art. PRAYER [Jewish]).[2] So little can be said definitely with regard to ceremonial and liturgy during the period succeeding the Return that it will be more satisfactory to leave the consideration of this question to a later stage.

**2. The Maccabæan period.**—After the Return the thoughts of the restored exiles were primarily devoted to religion, to the rebuilding of the Temple, and to the exposition of the Law. Considerable time elapsed before the idea of nationality asserted itself. At the outset the Jews were governed by Persian officials, whose autocratic power was in ratio to their distance from the Court. Such a policy of decentralization was ill-adapted to consolidate a vast and unwieldy empire. In the great political convulsions occasioned by the conquests of Alexander and the strife between the Diadochoi, the evil consequences of such a system of administration became manifest. There was neither a national idea nor an imperial spirit to foster a sense of unity or attachment. Unity would, in any case, be well-nigh unattainable in such a heterogeneous collection of subjects, although patriotism might perhaps have been aroused by a strong personality at the head of the State. The local governor, not the remote and unknown 'King of kings,' represented to the country folk their actual master; with his overlord they had no concern. The feuds of cities would often result in raiding and warfare, owing to the weakness of the central government; these internal conflicts affected the provincials, not the great battles of the Empire. The Jews felt themselves at first neither citizens of the Empire nor Palestinian nationalists. The Empire was too large and Jewish Palestine was too small.

'The Jewish people had not the extension which is shown us in the days of Christ. If we had gone in the fifth century B.C. through Galilee—through all those sacred places so familiar to us, Nazareth, Cana, Bethsaida, Capernaum—we should have been among heathens. The name Galilee is the short for, Gallee of the Gentiles, that is, the *region* of the Gentiles; the name clung to those uplands between Gennesaret and the sea, even after they had become predominantly Jewish. We should have been not only among heathens, but among barbarians, a population in which the original basis of Syrian peasants, tillers of the soil, had been crossed with the wilder Arab blood which came in by infiltration from the desert. The people of the Jews we should have found only in Jerusalem and in the fields and villages around Jerusalem to a radius of some ten to fifteen miles' (E. R. Bevan, *Jerusalem under the High-Priests*, London, 1904, p. 11).

Nationality was produced, among the Jews, by purely political causes. The overthrow of Darius and his Empire at the hands of Alexander did not at first react on them. For nearly a century they were under the dominion of the Ptolemys, and the change in their position seems to have been slight. It was not until Palestine was transferred to the Seleucids that a new era really began. To the spread of Hellenism and to the fostering by the Seleucids of Hellenic institutions and customs the growth of Jewish nationality is due. Antioch was a much more zealous disseminator of Greek culture than Alexandria, but the Hellenic spirit of Antioch, more intense and aggressive, was correspondingly debased in quality. The Jews of Alexandria were not offended by Egyptian Hellenism, but the Syrian Hellenism of Antioch stirred up strife through the whole land.

The attempt of Antiochus IV. to suppress Judaism and substitute the worship of Olympian Zeus roused intense opposition. The Maccabees were supported with devotion by the *Ḥăsîdîm* (see art. HASIDÆANS, HASIDISM, vol. vi. p. 526), and their victory secured the permanence of Judaism. The beginning of the conflict was a fight for religious liberty; the end resolved itself into a struggle for nationality. When once the triumph of religion was assured, the Hasmonæan leaders, in continuing the struggle for the sake of national expansion, lost the support of the Ḥăsîdîm, who became their undisguised opponents. No circumstance is more

[1] For a detailed survey of this idea in its earlier forms see Skinner, p. lvi ff.

[2] מאן ש״ע שתקנו חכמים הראשונים (*Sifrê*, § 343, ed. M. Friedmann, Vienna, 1864, f. 142b, l. 2; ed. Bomberg, Venice, 1546, col. 288). See also *Meg.* 17*b*, where ש״ע is attributed to the Great Synagogue. The kernel is probably old, but has been redacted. Ezra instituted the public reading of the Law on certain occasions.

instructive in the annals of Maccabæan history than the secession of the 'Pious' party, as soon as the aims of the Hasmonæan princes became material. It is not difficult to discover the cause of this divergence. The gulf between Judaism and Hellenism was great, for not only religious beliefs but social practices were involved. Judaism, like Islām and other Semitic faiths, includes under 'religion' many elements which elsewhere would fall under a different classification. This point, so important to remember, will be dealt with again in considering *Hălākhā*. The Ḥăsîdîm could not tolerate many things, harmless in themselves, which would have been allowed to pass unchecked had religion not been at stake. The Greek dress and athletics would not have inspired such detestation under other conditions. In Alexandria, Jews adopted Greek speech and, most probably, Greek costume, without being considered traitors to Judaism. In Palestine, under Antiochus Epiphanes, all contact with the heathen became impossible. Things innocent by nature became actively noxious. The gap was complete, and could not be bridged. With this utter loathing for all things Greek, there came an insistence on all things Jewish; the antagonism revealed antitheses before overlooked or non-existent. There was no national feeling before; it was this bitter religious antagonism that created it, perhaps on purpose to oppose Greek nationalism. The aim of Alexander was Hellenization, and this included a strong national feeling; Antiochus and his party, unworthy heirs of a great ideal, and boastful of their national superiority, produced by their excessive fanaticism a corresponding national feeling on the Jewish side.

It was not among the pious Ḥăsîdîm that this spirit was strongest; it was chiefly evident in Judas and the leaders. The Ḥăsîdîm were concerned with one object and one object only—freedom of worship. Beyond this they cared for nothing. Judas believed that there could be no security from a repetition of the persecutions unless Judaism possessed a State as well as a religion. Hence he favoured all institutions that tended to arouse national feeling. Here he parted company with the Ḥăsîdîm, hitherto his staunchest adherents. When Demetrius sent Bacchides to instal Alcimus, an opponent of the Hasmonæans, as high priest, the Ḥăsîdîm were ready to accept him, and this was the beginning of the breach. Hereafter the fight was for national and dynastic ambition (Bevan, p. 117). In exactly the same way Jonathan and John Hyrcanus lost the support of the Pharisees, the spiritual successors of the Ḥăsîdîm, because they combined the offices of high priest and king (see Pss.-Sol. $17^{5-8}$). The Ḥăsîdîm and the Pharisees despised all worldly elements. They cared not who ruled them or to what nation they belonged if only they could have freedom to worship God. The tendency may be often paralleled in Semitic history. The Khawārij, in A.D. 657, deserted the cause of 'Alī, the fourth Khalīf, and made their battle-cry, 'No judgment save that of God!'

After the Restoration the government was, in the main, theocratic—that is to say, the priests and the exponents of the Law enjoyed considerable power; the book of Ezra mentions four branches of secular rulers ($10^{5.8}$)—princes, elders, rulers, and nobles.

The functions of these classes are not clear, nor is it possible to state with certainty that these different names imply different classes of officials. Among the aristocracy thus constituted—for, as Bevan remarks (*op. cit.*, p. 6), 'the Community at Jerusalem was no democracy'—the priests were included, the high priest gradually acquiring more and more power, until, in the time of Jonathan and John Hyrcanus, the high priest was the head of the State as well as of the religious community. He was the president of the Assembly later known as the Sanhedrin.[1] The Sanhedrin, composed of both Rabbis and nobles, possessed, up to the Roman period, the power of life and death. Even Herod, in the height of his career, was summoned to appear before them; and from this it will be seen that the authority and influence of the religious element were exceedingly strong in the Jewish State. The priests, in accordance with the provisions of the Pentateuch, were maintained by the people. They received the tithes and firstfruits as their salaries, and were regarded with reverence on account of their sacred calling. They and the Rabbis were treated with considerably more respect than the secular officials by all classes of the population.

On the first day of Tishri, 444 B.C., Ezra the scribe and Nehemiah brought out to the people the Law of Moses (Neh $8^1$), and read its contents to the assembled multitude. From now onwards, under the influence of Ezra, priest as well as scribe, the study and observance of the Law were prosecuted with ardour. From his days the scribes, or interpreters of the Law, came into existence. The canon of the whole Bible was most probably formed later (but see, further, p. 594ᵇ), in the time of 'Aḳiba († A.D. 135; on 'Aḳiba himself see art. AḲIBA BEN JOSEPH, vol. i. pp. 274–276). The Pentateuchal legislation permeated the people and moulded their lives. As the Torah spread, the influence of the scribes increased in proportion. Not only in Palestine, but wherever the Jews had settled, the zeal for the Law accompanied them. In Syria they made many proselytes (see Josephus, *BJ* VII. iii. 3). In Egypt by about 260 B.C. the Septuagint translators began their work, and the Bible was made accessible to the Gentiles in their own tongue. The various Aramaic versions, known as Targumim (see art. TARGUMS), are of later date and were made for Jewish use. The Septuagint seems to have been intended, according to the account of Aristeas, for non-Jews. The Samaritan community accepted Judaism and received the Pentateuch about 430 B.C. Their recension differs in certain respects from the Jewish or Massoretic text (see, further, art. SAMARITANS).

All these facts show how the knowledge of the Torah was becoming diffused. It is safe to assume that many of the other Scriptural books circulated freely, as well as the Law. For the intense devotion to the Law and to Judaism the scribes and priests, the successors of the prophets, are largely responsible. The strength of the religious spirit appeared in various guises, not always uniform. Sects began to arise. As the Jews were brought face to face with the fascinations of Greek culture, a Hellenizing party grew up. Originally, no doubt, this party desired to adopt all that was good in foreign culture while remaining steadfast in loyalty to their faith. In course of time, partly by compulsion and partly by choice, the Hellenizers succumbed to the allurements of their Greek friends and made jettison of their religion to save their material prosperity (1 Mac $1^{43}$). There were not wanting, doubtless, among them those who did not prove utterly faithless, but the real resistance came from the uncompromising opponents of Hellenism. From these the party of the Ḥăsîdîm developed, men zealous for religion and for religion only. These were the mainstay of the forces led by Judas; they were pioneers of martyrdom, ready to die not merely for the broad principles of their faith, but for the absolute observance of the Law. They were, at first, prepared to suffer death rather than defend themselves if attacked on the Sabbath. After their breach with Judas, the Ḥăsîdîm pass away. The term disappeared, but the spirit survived, to reappear under the guise of the Pharisees.

After the fixing of the text of the Law, the functions of the scribes centred on the exposition of the precepts and commandments and the preservation and teaching of the traditions. These traditions, called the Oral Law (*Tôrāh shebĕ'al peh*), are believed by orthodox Jews to have accompanied

[1] See *JE* vi. [1904] 293ᵃ.

the Written Law (*Tôrāh shebbikhᵉthābh*), and a tradition of Mosaic authority is called *Hălākhā lᵉ Môshĕ mis-Sînai* (see, further, art. LAW [Jewish]). The Written Law had to be supplemented in many cases by tradition, because the prescriptions were sometimes vague and presupposed existing knowledge. The rite of circumcision and the wearing of phylacteries, *e.g.*, are ordained in the Bible, but the details are not prescribed (cf. above, vol. iii. p. 440ᵃ). The object of the scribes (*q.v.*) was to teach the people how tradition required the Law to be carried out. The absence of such scribal teaching had been the cause of the neglect of the Law and of idolatry in earlier times; the work of the scribes consolidated Judaism and gave it stability and endurance through the later ages.[1] The name 'Pharisees' (*Pᵉrîshayya*, 'separatists') was adopted by or applied to those who were careful to observe the Written and the Oral Law (see, further, art. PHARISEES).

Attempts are frequently made to belittle the work of the scribes and Pharisees. The enormous moral and spiritual effect of their work is often overlooked, and attention is focused on their so-called 'hair-splittings.'

(1) This mistaken attitude is due to ignorance of the true perspective.

(*a*) Judaism includes many civil elements under the head of religion; consequently many discussions and prescriptions referring to civil matters had to be dealt with by the religious teachers. Similar legal arguments are to be found in every system of law worthy of the name. Every system must of necessity contain some elements of formal expediency, if it is based on logic, since principles cannot always be pushed to their logical conclusion. Moreover, a legal fiction was often designed to preserve the memory of a principle, while alleviating the strict requirements of a law, especially if the fulfilment had become too difficult for the community (*lᵉhāqēl*). It must be remembered that the scribe or Rabbi had a twofold, if not a manifold, personality; he was a civil judge as well as a religious teacher. It is not fair to confuse the two functions and ignore the different attitudes necessary for such a double position. It is sometimes not easy to draw a line of demarcation. Further, the duty of the scribe was to specify clearly what was required of the people, to secure homogeneity of practice. It is obvious that the vague prohibition of work on the Sabbath would lead to public scandal and Sabbath-breaking, if the interpretation of 'work' were left to individuals. It was by specification and precision that a spiritual rest was achieved. The Sabbath was not merely a day of 'Don'ts.' As a matter of fact, the circumscribing of activities in the material sphere impelled a high sense of rest and consecration. This statement is capable of simple proof. On the whole, in the course of time, the Sabbath laws have not been relaxed. The tendency has been in the opposite direction (*lᵉhaḥămîr*). Consequently the observance of the Sabbath must be more rigid to-day than in the days of the early scribes. But no orthodox Jew feels the Sabbath to be anything but a day of true delight, awaited with eagerness and welcomed as a 'bride.'[2] And this delight can be realised only from within. No non-Jew is competent to describe it, for this experience is one which he can never have enjoyed. The Sabbath is to the Jew a day of ecstasy and good cheer, not of restraint; it has a positive, not a negative, character. Only when the Sabbath spirit is lost does the day become irksome. When, for example, in order to indulge in some amusement or to perform some act which is modern, and, consequently, falls under no prohibition exactly specified by the codes, but which is, nevertheless, obviously out of keeping with the Sabbatical spirit, the prohibitions are circumvented and are observed in the letter and not in the spirit, then the restrictions are felt to be irksome. But the fault lies with the Sabbath evaders, not with the scribes. The result is that the breach of the letter soon follows that of the spirit, and the observance of the Sabbath is finally abandoned. Those who keep the Sabbath do not suffer a penitential gloom,[3] as is often falsely imagined: those who see only the restrictions, and not the underlying spirit, tend, in process of time, to lose the Sabbath altogether. It is therefore those who do not keep the Sabbath that find it a burden.

(*b*) Many arguments are theoretical, being of the nature of exercises in logic and dialectic in which every hypothetical possibility has to be considered. Reuben and Simeon often correspond to John Doe and Richard Roe.

(2) The work of the Pharisees and scribes is attacked by writers who desire to belittle Judaism, in order to exalt the daughter faith. There are some who, conceiving nothing positive about Christianity, would make the *raison d'être* of that religion the failure of Judaism. This tendency leads to perversions of fact, not always due to ignorance. Attention is deliberately focused on the 'mountains suspended by a hair,' and the Pharisaic Rabbis are represented as casuists and hypocrites, their vast spiritual activity being purposely concealed. According to the writers of this class, Judaism is effete. It is not enough to say that the Law is no longer obligatory on Christians because of the coming of Jesus. Judaism itself must be stamped as corrupt and therefore superseded.

The influence of the Pharisees was immense. They were men of extreme piety and devotion, and their aim was to sanctify every phase of daily life. The Jew was to think of God in every act, at every moment. Not only must the command itself be observed; it must be safeguarded by a 'fence' (*sᵉyāgh*). Naturally among so great a party there were those who fell short of the high ideal that was set them. Alexander Jannæus warned his wife to beware of the 'false' Pharisee. In the famous passages of the Talmud (Jer. *Ber.* ix. 5 [8], ed. princ., fol. 13*a*, outer col., ed. Jitomir, 1858–64, p. 119; M. Schwab, French tr., Paris, 1871, p. 171, or Eng. ed., 1886, p. 168; Bab. *Soṭa*, 22*b*; see also *Âbôth de R. Nathan*, pereḳ xxxvii., ed. S. Schechter, Vienna, 1887, p. 109=55*a*; see note 4 of Schechter) seven classes of Pharisees are mentioned: he who accepts the Law as a burden; he who acts from interested motives; he who counter-balances; he who is sparing ostentatiously; he who asks to be shown a good action, that he may do it; he who acts through fear; and he who is inspired by love.

The apparently sweeping condemnation of the Pharisees in the Gospels is perhaps due to the fact that the rebukes were originally directed against the hypocritical Pharisees, who had disappeared in the time when the Gospels were compiled or copied. To the Christian scribe, after the destruction of the Temple, these distinctions were unknown. Discrimination was, therefore, meaningless to him, and was consequently omitted. The result has been that the special condemnation of a small minority has been made to include a large and God-fearing class of men. The presence of upright and noble Pharisees receives recognition in the NT in the account of Nicodemus, who was also 'a ruler of the Jews' (Jn $3^{1ff.}$ $7^{50-52}$ $19^{39}$).

The greatest achievement of the Pharisees was the advance which they taught in the doctrine of the future life. On this point, as also on the question of angels, they differed from the Sadducees. The name of this party has been derived from *ṣaddîq*, 'righteous,' or, with more probability, from *Ṣādôq*, Zadok, the famous priest from whom, it is said, they claimed descent. As opposed to the Pharisees, who were largely democratic, the Sadducees were aristocratic. The Sadducees did not accept the Pharisaic *Hălākhā*. They maintained the principle of 'eye for eye' literally; the Pharisees had long commuted the penalty (see Funk, p. 47; Judah Halevi, *Kitāb al-Khazarī*, ed. Hirschfeld, pt. iii. § 46, p. 175). They interpreted 'the day after the Sabbath' (Lv $23^{11}$) literally, not, as their opponents, the 'day after the festival.' Their rejection of the doctrine of immortality was based on ethical principles. The founder, Antigonus of Socho, a disciple of Simon the Just, made his motto, 'Be not as servants that serve the master for the sake of gaining a reward, but be like servants who serve not for the sake of gaining a reward, and let the fear of Heaven be upon you' (*Âbôth*, i. 3; Singer, p. 184; R. T. Herford, in R. H. Charles, *Apoc. and Pseudepigr. of OT*, Oxford, 1913, ii. 691; see, further, art. SADDUCEES).

It must be observed that, when the Rabbis contrast two ways of serving God, 'from love' (*mē'ahăbhāh*) and 'from fear' (*miyyirāh*), and extol the former, they are practically in unconscious agreement with this saying, because 'love' here implies disinterested service, performed for its own sake. According to Antigonus, there was to be no reward in a life beyond the grave. The Sadducean doctrine of doing good for its own sake is perhaps ethically higher than that of the Pharisees, but it is the doctrine for a saint and recluse, and is impracticable as a popular creed; hence, if for no other reason, the Pharisaic party and form of belief were the more popular.

The two parties, according to Josephus, differed also on the question of free will. The Pharisees held that man's freedom of action was limited. They 'ascribe all to providence and to

[1] Of all the comprehensive verdicts on this important class, the most impartial and scientific may be found in an ordination sermon by Foakes Jackson, called 'Our Lord and the Pharisees,' published in the *Peterborough Diocesan Magazine*, Jan. 1910, with which every orthodox Jew will be in agreement. Of larger scope, and equally praiseworthy, is R. T. Herford's *Pharisaism* (London, 1912).

[2] This is well shown by Montefiore, *Judaism and St. Paul*, p. 32 f.

[3] See G. H. Box, *Spiritual Teaching of the Jewish Pr. Book* [*Judaism and Christianity: Short Studies*], London, 1906, p. 13.

God, and yet allow that to act as is right, or the contrary, is principally in the power of men; although fate does co-operate in every action. . . . But the Sadducees take away fate entirely and suppose that God is not concerned in our doing or not doing what is evil; and that to act as is good or as is evil is at men's own choice, and each man attaches himself to the one or the other at will' (Josephus, *BJ* II. viii. 14).

It would be wrong to imagine that the whole code of life, especially the laws of ritual purity, prescribed by the Pharisees was intended by them to be incumbent on all alike. The *'am hā'āreṣ* (*q.v.*), or multitude, was free from most of these provisions, which were observed only by the *ḥᵃbhērîm*, or 'associates.' This has been conclusively shown by A. Büchler (*Der galiläische 'Am-ha 'Areṣ*, Vienna, 1906). Nor was the antagonism of Pharisee and *'am hā'āreṣ* general, as is often thought. Had that been the case, the Sadducees would have been more influential and popular.

A third sect existed among the Jews, the Essenes (*q.v.*), whose name is as inexplicable as the sect itself. Josephus (*BJ* II. viii. 2 ff.) gives a long account of their manner of life and forms of belief.

They were communistic ascetics. They rejected pleasure as evil, owned property in common, and recruited their numbers more by the adoption of children and the accession of proselytes than by marriage, which, however, they did not entirely avoid. Their piety was extraordinary, and they indulged in ritual lustrations. They were noted for their fidelity; 'whatsoever they say is firmer than an oath.' They devoted themselves to researches in ancient writings and to the study of natural medicine. They believed in the corruptibility of the body and the immortality of the soul. They believed in reward and punishment as an incentive to right conduct. Many of their customs give evidence of some foreign connexion, and it has been suggested that they derived some of their ideas from Gnostic, Pythagorean, and other sources. It is clear, however, that they formed but an isolated section, and that they cannot have entered very deeply into the life of the people. Their indifference to the Temple ritual was a sufficient cause for separation, without their ascetic practices, which would not appeal to a multitude. The most important feature in connexion with the Essenes is their mysticism. For their influence on the Ḳabbālā see art. ḲABBĀLĀ.

The oldest Jewish schismatics were, of course, the Samaritans (*q.v.*). After the fall of Samaria, the king of Assyria introduced immigrants from Babylon, Cuthah, Ava, Hamath, and Sepharvaim to replace the deported Israelites (2 K 17[24ff.]).

These settlers partially adopted Judaism, serving the God of Israel, but not entirely abandoning idolatry. In 432 B.C. they were joined by Jewish exiles from Jerusalem who had quarrelled with Nehemiah (Neh 13[28]; Josephus, *Ant.* XI. vii. 2, viii. 7). The dispute turned upon the question of intermarriage. Being excluded from worship at Jerusalem, they desired a temple of their own. One of the refugees, Manasseh, a brother of Jaddua the high priest, had married a daughter of Sanballat, the governor of Samaria. For this he was disqualified from officiating at Jerusalem, and he therefore urged his father-in-law to cause an altar to be erected in Shechem. This was done, and the existence of a rival temple on Mount Gerizim further embittered the relations between the Jews and the Samaritans. During the Maccabæan wars the Samaritans sided with Antiochus (Josephus, *Ant.* XII. v. 5). Later, John Hyrcanus destroyed their temple. They possessed the Pentateuch in a somewhat different recension, which they wrote in their own characters, resembling the ancient Semitic script, but none of the Prophets, whose inspiration they did not recognize.

In addition to the books of Daniel, Chronicles (in part), and Ecclesiastes, and the works of the historian Josephus, other sources are available for information about this period. The Apocryphal writings, in most cases contemporary, furnish abundant material, especially for a study of thought and religion.

In using evidence from the Apocrypha, it must be borne in mind that we cannot be definitely certain that we have before us an illustration of general Jewish thought. One of the reasons that prevented the reception of the Apocrypha into the canon was, no doubt, its divergence, in some cases, from orthodoxy. It does not always follow that orthodoxy changed between the compilation of the various Apocryphal writings and the formation of the canon. In some cases, books, once orthodox, have become Apocryphal, at least from the Jewish point of view, by reason of Christian or sectarian interpolations. Consequently care must be exercised in accepting statements from the Apocrypha as descriptive of Judaism generally.

In the main, however, the Apocrypha furnishes a most valuable link between the OT and the NT. The beliefs of the Pharisees are very largely inspired and reflected by it. The doctrine of immortality is strongly developed in Daniel (12[2]). In Wisdom (3[1ff.]) it is associated with reward and punishment after death.

'The souls of the righteous are in the hand of God, and no torment shall touch them. In the eyes of the foolish they seemed to have died . . . but they are in peace. For even if in the sight of men they be punished, their hope is full of immortality . . . the Lord shall reign over them for evermore . . . and the faithful shall abide with him in love.' 'God created man for incorruption, and made him an image of his own everlastingness' (2[23]).

On the other hand, Ecclesiasticus has no clear belief in immortality, but, if anything, inclines to a Sadducean rejection of the idea. Ben Sirach's philosophy was that punishment overtook the sinner in this life. If the righteous died unrewarded, his recompense lay in the good name which he left behind him (see Bevan, p. 58 ff.). The canonical book of Ecclesiastes definitely breaks with the idea, if, as is held by some scholars, the last chapter, especially v.[7], be an orthodox addition to obtain the inclusion of the book in the authoritative Scriptures. The writer of 2 Maccabees, who derived his history from Jason of Cyrene, is emphatic in his belief in a future life, even in the resurrection of the body as well. That the latter idea seems also to have been held by Jesus may be deduced from Mk 9[43-48], unless the words were intended purely metaphorically. The second book of Maccabees contains many verses which might be cited to instance the author's unshaken belief in a future life.

'Thou, miscreant, dost release us out of this present life, but the King of the world shall raise up us, who have died for his laws, unto an eternal renewal of life' (7[9]). 'For these our brethren, having endured a short pain that bringeth everlasting life . . .' (v.[36]). Perhaps the most suggestive passage in the book is 12[44], 'For if he were not expecting that they that had fallen would rise again, it were superfluous and idle to pray for the dead.'

The date of 2 Maccabees has been placed within the period 60–1 B.C.; slightly earlier were the so-called Psalms of Solomon (70–40 B.C.), a collection of distinctly Pharisaic poems. In these the Sadducees are attacked and seem marked out for eternal damnation, unless, indeed, repentance is considered to commute punishment. The doctrine of immortality is very strongly taught (H. E. Ryle and M. R. James, *Psalms of the Pharisees*, Cambridge, 1891, p. li; see 3[16] 13[9] 14[7] 15[15]).

In Judith there is no reference to a future state; but this is probably accidental, and no argument can be drawn from this silence. Enough has been cited from the Apocryphal writings to prove that the doctrine of immortality was now firmly established in Judaism.

The question of reward and punishment is associated with the questions of immortality, evil, and free will. It has been doubted by some authorities (*e.g.*, Ryle and James, p. 1 (d)) whether the statement of Josephus, relative to the difference between the Sadducees and Pharisees on free will, is accurate. The ninth Psalm of Solomon upholds man's freedom and responsibility:

'Our works are subject to our own choice and power to do right or wrong in the works of our hands' (v. 7).

Several Apocryphal works deal with the problem of evil. There is not much advance in thought, but it must be remembered that, in the solution of this enigma, the progress of philosophy since Job has not been great. The chief source, in the Apocrypha, is 2 Esdras. To the writer it is inexplicable that Israel should have been punished for its sins, while the enemies of Israel have been allowed to go free. The answer is to be found in a combination of the existing solutions. The ways of God cannot be understood by man, and in time to come He will send retribution and recompense. Baruch and Enoch also deal with the problem. About this time the idea of original sin grew up; but, as

Judaism has never adopted this idea, care must be exercised in studying those early allusions, and in accepting their testimony as typical (but see the theory of S. Levy, *The Doctrine of Original Virtue*, London, 1907).

The existence of an active power or powers for evil also comes into prominence, especially, though not exclusively, in the Apocalyptic writings (cf. art. DEMONS AND SPIRITS [Jewish], vol. iv. p. 612 ff.). Not only such books as Enoch, which are full of demonology and angelology, but even Wisdom ($2^{24}$), contain such allusions: 'By the envy of the devil death entered into the world, and they that are of his portion make trial thereof.' Perhaps this recrudescence of demonology is due to the old repugnance to ascribe evil to the Deity. Thus, Jubilees, in describing the temptation of Abraham, makes the agent not the Deity, but an evil spirit, Mastêmâ ($17^{16ff.}$). The later *Chronicles of Jerahmeel* omit the incident entirely. Tobit also contains references to the devil ($6^{17}$ $8^{3}$) and to demons.

The pessimism of Ecclesiastes represents one trend of thought, probably Sadducean; Wisdom ($1^{13f.}$) another:

'God made not death; neither delighteth he when the living perish: for he created all things that they might have being: and the generative powers of the world are healthsome, and there is no poison of destruction in them: nor hath Hades royal dominion upon earth.'

The Pharisaic teaching was predominantly optimistic, and the Rabbinic writings are full of the sentiment that this world is good: the observance of the Law was a joy in itself.[1] It was good because it was the handiwork of the Creator, who saw 'that it was good.' Probably the pessimism of the Essenes, as much as anything else, contributed to their disappearance. The fatherhood of God was one of the keystones of Rabbinic teaching. 'The latter end of the righteous he calleth happy; and he vaunteth that God is his father' (Wis $2^{16}$). The immanence was always upheld, and the transcendental nature of the Deity was held to correspond with, not to contradict, His nearness to man.[2] The divine fatherhood was one of the answers to the problem of suffering and a protection against the assaults of evil.

Two books of the Apocrypha, Ecclesiasticus and Wisdom, belong to the category of didactic literature, devoted to the praise of wisdom. They are the counterpart of the OT Wisdom literature. With the Rabbis wisdom was often lauded, and its great powers are often enumerated, but it is synonymous with the Torah and connotes religion, whereas in the Apocrypha 'wisdom' implies knowledge in a wider sense. While 'the fear of the Lord is the beginning of wisdom,' general secular learning is sometimes meant. Hellenizing and perhaps Gnostic influences may be held responsible, to some extent, for the growth and spread of these ideas.

Wisdom, as in the OT, is personified. She saves Adam after the Fall, Lot from Sodom, Jacob from Esau, Joseph and Israel from Egypt; in fact, she is God's instrument (Wis $10^{1ff.}$). 'By thy wisdom thou formedst man' ($9^{2}$); Wisdom is 'the artificer of all things' ($7^{22}$). Wisdom is associated ($9^{1ff.}$) with the 'Word of God,' though the Logos theory is not developed very far.

Perhaps the personification of wisdom, which, of course, can be paralleled in Proverbs, as in $8^{22}$ $9^{1}$, may be regarded as the first stage in the growth of angelology. Except in the definitely Apocalyptic books, angels seem to have been used as poetical images, and regarded from a figurative point of view. In Jubilees, however, and in the Ascension of Isaiah, very advanced angelology—*e.g.*, division into groups and grades—occurs. Both of these books are later in date, and the references belong to Christian rather than to Jewish Apocrypha.

Perhaps the most distinctive feature in the Psalms of Solomon is the central position occupied by eschatological and Messianic ideas. In no portion of the Apocrypha is a clearer view presented or a more spiritual hero portrayed. The title *χριστὸς* is here, perhaps for the first time, used in the sense of Messiah. Pss.-Sol. $17^{23\text{-end}}$ and 18 deal particularly with the future deliverer. The time of his coming is concealed from human knowledge; it will be heralded by great disasters. These were later known as the 'birth-pangs of the Messiah' (*ḥebhlê Māshîaḥ*). The deliverer was to be descended, but not supernaturally, from the house of David, the Davidic relation being a link with the Messiah of the prophets. He will be supreme on earth, but under God; he will be king and priest; he will destroy 'proud sinners' and break up the rule of the Gentiles, *i.e.* the Romans. He will restore the kingdom and gather in the outcasts of Israel. He will rule the nations and peoples in holiness and wisdom, and he will be known for his justice. The era of universal peace and brotherhood is not so clearly indicated as by Isaiah. There are, however, distinct allusions to it: 'There shall be no unrighteousness in his days,' nor will he reign by means of war (Pss.-Sol. $17^{35f.}$); 'Blessed shall they be that shall be in those days, in that they shall see the goodness of the Lord which He shall perform for the generation that is to come' ($18^{7}$). The blessings are not to be restricted to Israel; the converted Gentiles shall share them. There is no reference to judgment, resurrection, or immortality.

Ryle and James (p. lvi) quote an earlier parallel from the Alexandrine Sibylline Oracles, in the last quarter of the 2nd cent. B.C. Here (*Orac. Sibyll.* iii. 652–656) the Messiah (called 'King') is sent by God to make war to cease from the whole world, punishing and rewarding, not in virtue of his own power, but by the authority of God.

The views as to the Messiah were various and by no means uniform. Material deliverers were expected by some, spiritual by others. In such a complex situation it is difficult to get a synoptic view. In 2 Maccabees the Messianic element is meagre; in 2 Esdras, on the other hand, the length of his dominion is specified as 400 years. Enoch associates the Messiah with the future life and reward and punishment (chs. 48–51, 90, Charles, ii. 216 ff., 259 ff.), and in the later Apocryphal books the idea is developed. Ecclesiasticus, with its disbelief in a future life ($17^{27.\,30}$), has no place for a Messianic personage. The absence of this idea is a distinctive mark of Sadducean origin.

The Sadducees were probably not lacking in devotion to the Torah; their observance was perhaps less extensive, but not less fervent. They rejected the *s'yāgh*, or fence, which the Pharisees erected. They did not insist so strongly and frequently as the Pharisees on the necessity for observing the Law, because this was taken for granted.

The Sadducees had 'their traditions as to the way the Law should be carried out in practice, but they refused to make the authority of the Scribes absolute. It is sometimes said that the Sadducees were analogous to the modern rationalists. The comparison is not a happy one . . . it would rather be to those in the eighteenth century who adhered to the church of the fashionable classes, resenting any religious claim upon them outside the routine of conventional decencies, and bitterly opposed the fantastic "enthusiasm," as they called it, of the followers of Wesley' (Bevan, p. 125).

A 'stern judgment' is threatened, 'awfully and swiftly,' upon those in 'high place' who have not kept the Law (Wis $6^{4f.}$). The aim of the book of Judith, the composition of which has been assigned either to the age of the Maccabees or to the period following Pompey's attack on Jerusalem in 63 B.C., is to extol the Law. The Sabbaths and festivals are mentioned ($8^{6}$ $10^{2}$), firstfruits and tithes ($11^{13}$), and circumcision ($14^{10}$). Tobit is similar to Judith in enjoining strict adherence to the Law; the dietary laws, firstfruits, charity,

[1] See C. G. Montefiore, *Judaism and St. Paul*, p. 28 ff.

[2] J. Abelson, *Immanence of God in Rabbinical Lit.*, Introd.

prayer, and repentance are specially emphasized. Baruch, Jubilees, and the Psalms of Solomon all 'magnify the Law and make it honourable.' In Ecclesiasticus, on the other hand, the function of the scribe is that of a philosopher rather than a religious instructor (39[1]); he is an expounder of ancient lore, of sententious doctrine, rather than of statutes and ordinances. This does not mean that the Law is lightly esteemed; it was a self-evident truth that the Commandments were to be carried out; and the maxims and wisdom of Ecclesiasticus were intended, doubtless, as a complement to the more essentially practical teaching of the other books.

The attitude towards the Law may be paralleled by that adopted towards the Temple and sacrifices. No finer tribute to the ecclesiastical system can be found than the magnificent eulogy of Simon, the son of Onias, the great high priest, the type of the *Kōhēn Ṣedeḳ*, in Sir 50. Great as was his well-deserved popularity, one feels that some, at least, of the praises are intended for the office rather than for the personality of the occupant. Significant is his[1] motto, 'Upon three things the world is based: upon the Torah, upon the Temple service, and upon the practice of charity' (*Ābôth*, i. 2; Singer, p. 184; Charles, ii. 691). His disciple, Antigonus of Socho, the founder of the Sadducees, is hardly likely to have inculcated a dislike of Temple ritual, having been the pupil of so distinguished a high priest. Ecclesiasticus, like Ecclesiastes, makes no great point of the sacrificial system; like the Law, it was taken as a matter of course (see also Jth 16[16]).

Finally, reference should be made to an appreciation of natural phenomena,[2] just as in the Psalms and in Job the poetical genius was impressed by the beauty of the world. It is re-echoed in such stirring passages as Sir 42 f.

Little has been said hitherto as to the domestic practices[3] and personal religion of the Jews. These subjects can be dealt with more conveniently in the next epoch.

**3. To the completion of the Gemārā.**—Isaiah had warned his countrymen against appeals to foreign powers for aid. The unreal glamour of such alliances scarcely concealed the silken but effective fetters of vassalage. Judah, flattered at the idea of being an equal ally of a mighty monarch, was, in point of fact, reduced to a dependent subject State. Exactly the same political error was committed by the Hasmonæans, in seeking the aid of Rome. Wherever the eagles once set foot, the country ultimately fell under Roman rule and was deprived of every vestige of independence. It may be argued that, in any case, Judæa could not have remained unnoticed, but must inevitably be drawn into contact with the great world power. This is true; but, had Judas not broken with the Ḥăsîdîm, it is possible that dissolution of the Jewish State might have been accomplished more peaceably. The pious party—whether Ḥăsîdîm or Pharisees—were supremely indifferent to the personality of their civil rulers and the political system by which they were governed. So long as freedom of worship was secured, they were ready 'to render unto Cæsar' his due. The Maccabæan princes and the Sadducees, being eager for national and political independence, could not fail to precipitate a conflict which their opponents might have avoided or at least mitigated.

The influence of Roman government on Judaism was manifest in three ways: (1) the functions of the Rabbis became more exclusively religious than civil or political; (2) the unity of the Roman Empire stimulated the growth of the Diaspora; (3) the Roman period witnessed perhaps the most fruitful epoch of internal religious expansion and constructive development in Judaism. To begin with, the civil authority of the Rabbis was diminished by curtailing the jurisdiction and sanction of the Jewish courts. The right of giving decisions in questions involving finance was abrogated in the time of R. Simon b. Sheṭaḥ, during the reign of Alexander Jannæus; the power of inflicting the death penalty was suspended forty years before the fall of the Temple (Jer. *Sanh.* 18*a*, inner col., line 24 of first pereḳ, ed. Krotoschin, 1866; Schwab's tr., Paris, 1888, p. 228; see CRIMES AND PUNISHMENTS (Jewish), vol. iv. pp. 288–290). This limitation of the powers of the Rabbis served to intensify the ill-feeling between the Jews and the Romans, but it did not cause the disappearance of the Jewish laws in those spheres where they were no longer operative. The attention of the schools was centred on the discussion of civil and social enactments and prescriptions, even though their practical application was, at the time, impossible. The debates and decisions, being incorporated in the Gemārā, have preserved faithfully a detailed record of these laws. The tendency of the Rabbis was, henceforward, to become religious teachers rather than civil officials. In the time of the Sepphoris academies, there were bitter feuds between the Jewish civil and religious officials. This, however, must not be taken to imply the rise of a new class of professional Rabbis. A new class of Jewish civil servants arose, called Parnāsîm,[1] etc., who were often in antagonism to the Rabbis. They were tax-gatherers and administrators, and are reproached for many evil practices (see A. Büchler, *Pol. and Soc. Leaders of Jew. Comm. of Sepphoris*, London, 1909). But the Rabbis remained, as before, private individuals. In general, they were accustomed to earn their living, not by teaching, but by some occupation or handicraft.

R. Gamaliel III. (first third of 1st cent. A.D.), the son of R. Judah the Prince, said: 'All study of the Torah without work must in the end be futile and become the cause of sin' (*Ābôth*, ii. 2; Singer, p. 187; Herford, in Charles, ii. 695). R. Zadok (1st cent. A.D.) used to say: 'Make not of the Torah a crown wherewith to aggrandise thyself, nor a spade wherewith to dig'; quoting Hillel's motto, 'He who makes a worldly use of the crown of the Torah shall waste away,' he deduces that 'whosoever derives a profit for himself from the words of the Torah is helping on his own destruction (*ib.* iv. 7; Singer, p. 196; Herford, p. 704).

The share of the Roman Empire in the growth of the Diaspora is almost incalculable. Jewish settlements arose in many distant lands and cities. Many causes stimulated the spirit of travel and colonization among the Jews. The peacefulness of life in a Roman province, as compared with the turbulent conditions prevailing in Palestine, must have induced many Jews to settle abroad. Commerce and deportation were other factors. Life in Palestine was considered superior to foreign residence (see Judah Halevi's *Kitāb al-Khazarī*, tr. Hirschfeld, pt. ii. §§ 22, p. 98; *Giṭṭîn*, 8*a*, etc.; *Ābôth de R. Nathan*, 2nd text, pereḳ xxxix., ed. Schechter, p. 54*a* [=107]; *Keth.* 110*b* and 111*a*; cf. *JE* ix. [1905] 503 f.), especially as many laws could be fulfilled only in the Holy Land. But the Jews outside were not forgetful of their religious duties. Of this there is abundant evidence. In earlier days, the Egyptian Jews at Syene, as may be seen from the papyri, observed the Passover, and used

[1] There is considerable doubt whether Sir 50 refers to Simon I., son of Onias I. (310–291 B.C.), or to Simon II., son of Onias II. (190–170 B.C.), or to Simon Maccabæus (143–137 B.C.), the words 'Son of Onias' being then a gloss. See Taylor, *Sayings of the Jew. Fathers*[2], Cambridge, 1897, p. 12; H. T. Andrews, *The Apocryphal Books*, London, 1908, p. 83; G. H. Box and W. O. E. Oesterley, in R. H. Charles, i. 293, 507, decide in favour of Simon II.

[2] See Montefiore, *Judaism and St. Paul*, p. 46.

[3] See also art. FESTIVALS AND FASTS (Jewish), vol. v. pp. 879 881.

[1] On the functions of these officials see *JE* ix. [1905] 541 f.

the Jewish formula of marriage, 'Thou shalt be my wife,' not the customary Egyptian declaration, 'Thou shalt be my husband.' Philo (*de Vita Moysis*, ii. 137 [Mangey]; ed. L. Cohn and P. Wendland, Berlin, 1902, iv. 204f.; tr. Cohn, Breslau, 1909, i. 302) bears testimony to the strictness with which their descendants kept the Sabbath, abstaining from all manner of work, neither kindling fires nor carrying burdens, nor in any way violating the Pharisaic *s'yāgh*. In Syria, too, Judaism flourished and spread (see Josephus, *BJ* VII. iii. 3). From the Babylonian business documents of the great commercial house of Murashu and Sons, in which documents many Jewish names occur, Samuel Daiches has shown how great was the zeal for Judaism existing among the Jews in Mesopotamia (*The Jews in Babylonia in the Time of Ezra*, London, 1910).

Judaism had also planted itself firmly and extensively within the Roman Empire. The allusions of the classical writers are instructive. Already before the time of Pompey's conquests, Jews were to be found in the Italian cities (H. Graetz, *Hist. of the Jews*, Eng. tr., London, 1891–92, ii. 67). Jewish captives, brought to Rome as slaves, were freed by their co-religionists and added strength to the Jewish community. The hostile, or at all events contemptuous, attitude of Horace, Tacitus, and Juvenal was due to the inveterate Roman pride of race rather than to knowledge; it reflects a superficial popular verdict, not a judgment of matured reflexion. But such phrases as 'in qua te quaero proseucha' (Juvenal, iii. 296) are illuminating for the history of Judaism. They show that Jews brought their worship with them in their wanderings, and that their synagogues were numerous and well known. Cæsar, like Alexander and Napoleon, favoured the Jews, who greatly mourned his death (Suetonius, *Cæsar*, 84). He supported and freed Aristobulus, and his influence was a valuable protection, for he allowed the Jews to perform their worship in Rome.[1] Augustus decreed the inviolability of synagogues, and exempted Jews from appearing in the law-courts on the Sabbath and on Friday after the ninth hour.[2] Judaism was indeed a missionary religion. The disgust at the hollowness of the old faith was causing many cultured Romans to waver in their allegiance to the gods of the Capitol, and a desire for the truth was making itself felt. The Jews were keen missionaries. They 'compassed sea and land' (Mt $23^{15}$) to make one proselyte; they strove not to win lukewarm adherents, but to implant a fervent belief in Judaism, and to make the new-comer twice as zealous as themselves (see also Clement of Alexandria, *Strom.* vii. 15 [*PG* ix. 524 f.]).

Apart from religious ties and the common bond of the Hebrew language, one of the strongest links that united Jews scattered in different lands was the tax of a third of a shekel, to be applied to the Temple. This was ordained by Nehemiah ($10^{32f.}$) as a voluntary contribution, and it was loyally collected and forwarded from all parts. One of Cicero's orations, *pro Flacco*, was delivered in defence of a certain prætor of that name, who had seized two hundred pounds of gold which the Jews of Apamea, Laodicea, Adramyttium, and Pergamos had prepared to send to Jerusalem. Cicero pretends to be in fear of the Jewish members of the audience—an argument which, if not purely rhetorical, would show to what influence Jews had attained in public life. Under Severus, Judaism became a *religio licita*. Proselytes to Judaism were numerous, in high circles as well as among the populace, both in Rome and in Asia Minor. Their position was sufficiently important to require a special treatise of the Gemārā, containing laws, etc., affecting them. This treatise is *Mass. Gērim* and belongs to the appendix of smaller *Massekhtôth*. The proselytes of the gate, *gēr hash-sha'ar* and *gēr tôshāb* (see Dt $5^{14}$ $14^{21}$; *'Ăb. Zārā*, 64*b*), who accepted part of the Torah, that is to say, the 'Seven Noachian Precepts' (for which see *ERE* iv. 245ᵃ), are distinguished from the *gērē ṣedeḳ*, or full proselytes, for whom a blessing was added to the *'Ămidāh* (see Singer, p. 48). The translations of the Bible into Greek, by Aquila, and into Aramaic (the Targum *Onkelos hag-gēr*), are ascribed to proselytes. Queen Helena of Adiabene, her son Izates, and King Monobazus adopted Judaism before the time of Claudius (Josephus, *Ant.* XX. ii.); Flavius Clemens, the cousin of Domitian, died a martyr for his adopted Judaism in A.D 95, his wife and fellow-convert, Flavia Domitilla, being exiled to Pandataria (see Dio Cassius, lxvii. 14; and art. PROSELYTES).

As a rule, Rome did not persecute for religious motives, preferring to overlook nonconformity wherever possible; but with the spread of Judaism and of Christianity the refusal to sacrifice to the Emperor or to look on him as a deity was regarded as treason, and punished with death. The private and public life of Rome was so closely associated with idolatry that intercourse between Jew and Roman was very restricted. Every civic or social act or custom was allied to idolatrous worship or the pouring of libations to heathen deities. The refusal to participate caused the Jews, and the Christians too, to be regarded as atheists[1] and as unsociable haters of mankind. The problem of regulating this intercourse was serious. On the one hand, Jews had to be kept entirely free from participation in idolatry; on the other hand, the Rabbis were anxious to enable the Jews to mix with their neighbours, as far as was consistent with a strict observance of Judaism, for social and commercial purposes, so that the lot of the orthodox Jew should not be too rigorous. Hence the treatise *'Ăbôdā Zārā* and the enactments of Tertullian (see the Introd. in W. A. L. Elmslie's ed. of *'Ăbôdā Zārā* in *TS* viii. 2 [1911]). Of the 316 differences between the schools of Hillel and Shammai, 18 are connected with intercourse with pagans and the use of pagan articles of food. The discussion of these differences, in the house of Ananias b. Hezekiah b. Garon, became very acrimonious, and, it is said, finally led to blows. It was afterwards regarded as a day of black misfortune to Israel, no less disastrous than the day on which the Golden Calf was set up (see *Mishna Shabb.*, i. 4 ff.; Bab. *Shabb.* 13*a*, 17*a*, etc.; Tos. *Shabb.* i. 16=M. S. Zuckermandel, Pasewalk, 1880–82, p. 111, l. 2). This is, doubtless, a verdict of posterity on the consequences of interdicting intercourse with heathen so strictly. The Jews adopted much from the Romans. The Haggādā for Passover, or order of domestic ceremonies, with which this festival is observed, is saturated with customs copied from Roman etiquette.

The menu 'ab ovo usque ad mala' is represented by the hard-boiled eggs, eaten just before the meal, and the *ḥărōseth* (apples soaked in wine and spices); the piece of unleavened bread, *afiqōmān* (ἀπὸ κώμης, κώμου, 'after the feast,' or perhaps ἐπὶ κῶμον, 'during the meal'), takes the place of the usual dessert of apples for a special reason on this night. The method of 'leaning' at the meal is that of the *triclinium*; the prescription of four glasses, reminiscent of the *propinatio* or fixing of the number of glasses and proportion of wine by the *arbiter* or *dictatrix bibendi* (see Hor. *Odes* III. xix.; Plautus, *Pers.* v. i. 19 ff.), is most instructive; the number of glasses usually corresponded to the number of letters in the name of the chief guest. Four would obviously represent the Tetragrammaton. This and

[1] Jos. *Ant.* XIV. vii. 4, x. 8; Dio Cassius, xli. 18.
[2] Jos. *Ant.* XVI. vi. 1–7.

[1] ἐπηνέχθη δὲ . . . ἔγκλημα ἀθεότητος, ὑφ᾽ ἧς καὶ ἄλλοι ἐς τὰ τῶν Ἰουδαίων ἤθη ἐξοκέλλοντες πολλοὶ κατεδικάσθησαν, καὶ οἱ μὲν ἀπέθανον, οἱ δὲ τῶν γοῦν οὐσιῶν ἐστερήθησαν (Dio Cassius, xvii. 4).

the 'mixing of the wine,' the 'dipping,' etc., are all instances which show how the ritual of Judaism has preserved innocent manners and customs borrowed from Roman dinner tables.

In another way, too, the Diaspora was affected by the shifting of the schools. Galilee was a barbarous district before the Rabbinical academies were transferred to Usha, Sepphoris, and Tiberias. Mesopotamia, on the other hand, was a more fruitful soil and actually 'lent' learning to Palestine, so that Hillel 'brought' Babylonian wisdom to the land of Israel.[1] As in the case of Christianity, the growth of the Diaspora was not entirely a source of strength. When Judaism spread abroad, sects arose within.

A contrast has often been drawn between the Jews of Egypt and those of Mesopotamia. On the whole, the latter country was more favourable to the growth of the spirit of Judaism. Babylon is the birthplace of the larger Talmud, undying in its influence on Judaism; Egypt is the home of the Septuagint, which was superseded by Aquila's version and became the heritage of the Greek Church, as well as of Philo Judæus (*q.v.*), whose philosophy, though important in its day, cannot for a moment be compared with the teachings of the Babylonian Rabbis in its importance for Judaism. The Jewish communities of Egypt seem to have fluctuated and disappeared periodically, at all times. Thus, when the Arab general, 'Amr ibn al-'Āṣ, conquered the country (A.D. 640–642), no mention is made of the Jews among the religions enumerated in the treaty of peace with the Mukaukis. The Jews of Egypt and of Mesopotamia were mostly orthodox; but sects, more or less heretical, manifested themselves in Palestine at an early date. Justin Martyr enumerates (*Dial. cum Tryph.* 80 [*PG* vi. 665]), besides the Sadducees and Pharisees, the Genistæ, Meristæ, Galilei, Helleniani, and Baptistæ.[2] Clement of Alexandria also mentions (*Strom.* vii. 15 [*PG* ix. 524]) the existence of Jewish sects.[3] Against the sectaries, or *Mînîm*—a term which at certain periods included Jewish Christians—a special commination, drawn up by Samuel the Younger (early part of 2nd cent.) at the request of Gamaliel, was added to the Eighteen Benedictions.[4] The Boethusians,[5] a Sadducean sect, were descended from Simon b. Boethus of Alexandria. The Cairo Genizah has recently furnished documents of an unknown group of sectaries. These have been edited by S. Schechter (*Documents of Jewish Sectaries*, i., Cambridge, 1910), who attributes them to a Zadokite sect at Damascus founded in Maccabæan times.

This hypothesis has been disputed, however, by many of the scholars who have devoted themselves to the book. See Israel Lévi (*REJ* lxi. [1911] 161–205); M. J. Lagrange (*RB*, new ser., ix. [1912] 213–240, 321–360); W. Bacher (*Zeitschr. für hebr. Bibl.*, vol. xv. [1911], no. 1, pp. 13–25); G. Margoliouth (*Athenæum*, 26 Nov. 1911, *Exp*, VIII. ii. [1911] 499–517, iii. [1912] 213–235), who believes that the Zadokites regarded John the Baptist as the Messiah and Jesus as the teacher of righteousness; R. H. Charles (ii. 785 ff.), who regards the book as the composition of a party (not a sect) originating among the Sadducees, but closely related to the Pharisees, and writing between 18 and 8 B.C.; and A. Büchler (*JQR*, new ser., iii. [1912–13] 429–485), who regards the book as coming from the period preceding the Ḳaraite schism. At all events, this sect agrees with the Zadokites of Ḳirḳisānī, mentioned in the *Kitāb al-Anwār* ('Book of Lights'), in opposing Rabbinic ordinances in several particulars, notably divorce and the regulation of the calendar.

[1] See last line of *Sukka*, 44*a*, and Rashi, *in loc.*

[2] These sects were known to Eusebius (*HE* IV. xxii. 6) from the work of an older author, Hegesippus; and Epiphanius (*Hær.* xvii. [*PG* xli. 256]) mentions as a Jewish sect the Hemerobaptistæ, who are the טובלי שחרית (Bab. *Ber.* 22*a*; Jer. *Ber.* iii. 6, c), not to be confused with the Essenes.

[3] On the various patristic references cited above see S. Krauss, 'The Jews in the Works of the Church Fathers,' *JQR* v. [1892–93] 122–157, vi. [1893–94] 82–99, 225–261.

[4] See *JE* viii. [1904] 595, xi. [1905] 281.

[5] *Inter alia*, they were strict Sabbatarians and did not believe that חבוט ערבה דוחה את השבת (*Sukka*, 43*b*).

Another Sadducean sect was that of the Dositheans (see art. 'Dositheus' in *JE* iv. [1903] 643 f.). The Ophites and Naasenes, serpent-worshippers, were Gnostic sects that scarcely come within the confines of Judaism (see Graetz, ii. 378, and cf. *ERE* vi. 238 f.). Within orthodox Judaism dissent was not wanting. In addition to the schisms caused by pseudo-Messiahs, such as Theudas and Judas (Ac 5[36f.]), in general, there was a great gap of thought between Palestine and Galilee in particular. The North was, for a long time, ignorant and superstitious, and especially in such points as demonology differences may be seen between Palestine and Galilee (see art. DEMONS AND SPIRITS [Jewish], vol. iv. p. 612 f.). Further, the ill-feeling was great between the Rabbis and the Jewish ruling classes in Sepphoris during the 2nd and 3rd centuries. It was not so strong, on the other hand, between the educated classes and those known as *'am hā-āreṣ*, as is often maintained (*e.g.* in art. 'AM HA-AREṢ, vol. i. p. 385 f.).[1]

Christianity was, of course, the most important and enduring of all the sects. A general consideration of Christianity and of its relation to Judaism must be reserved till the end of the article. For the moment it will suffice to mention the circumstances that close affinity existed between the teaching of its founder and that of the Essenes; that Christianity, like Judaism, spread rapidly in the Roman Empire, chiefly where Judaism had fructified the soil by its teachings; and that Christianity, like Judaism, soon developed sects and dissensions.

The three great prophets, Isaiah, Jeremiah, and Ezekiel, arose at national crises when their aid was most needed. All of them preached the doctrine of the survival of the Remnant, but in none of them was this Isaianic principle so strongly marked as in their great successor, R. Joḥanan ben Zakkai. This great teacher saw, like Jeremiah, that Judaism could indeed survive the loss of a temple, that it was universal, not national, and that it could flourish as well in foreign lands as at home. He saw, like Isaiah, that the great mass of the people were irreclaimable, and that the hope of Israel lay in the survival of a loyal Remnant. For this reason he managed to escape from the siege of Jerusalem, and, presenting himself to Titus, craved a boon. This was granted, and he received permission to found a school at Jamnia (Jabne, between Jaffa and Ashdod). This school proved the salvation of Judaism. After the fall of the Temple, when despair was universal, it was from this school that new hope went forth and a new epoch developed in the history of Judaism. Now indeed Judaism became essentially a religion of a book, but it was a living book, the pages of which were loyal human hearts. As the Return from Babylon resulted in the dissemination of the Written Law, so this 'Return,' or revival, resulted in the elucidation and ultimate codification of the Oral Law; it laid the foundation of the Talmud.

The name of 'scribes' (*Sôphrîm*) was given to the earlier Pharisaic Rabbis, the last of whom was Simon the Just. The Soferim formed the mysterious body known as 'the Great Synagogue' (כנסת הגדולה [*Ābôth*, i. 2]). Whether this was an actual assembly or a name given to certain Rabbis is a much disputed point.

On the one hand, S. Funk writes (*Entst. des Talmuds*, p. 88): 'Die Grosse Versammlung war zunächst eine politische Oberbehörde und als solche eine gesetzgebende Körperschaft. Da aber ein grosser Teil derselben, zunächst die Priester und Leviten,

[1] Cf. A. Büchler's pamphlet, cited above (p. 591[b]): 'The Rabbis reciprocated the feeling [of hatred], but it found expression only in burlesque exaggerations (*e.g.* those quoted in art. 'AM HA-AREṢ) addressed to scholars, which betrayed their incapacity of doing harm, and, I think, the insincerity of their hatred' (p. 58).

den hohen und höchsten Kultusbehörden vorstanden, ist es selbstverständlich, dass auch religiöse Anordnungen durch diese Versammlung getroffen wurden. Was die Soferim in den Schulen gelehrt, wurde durch diese zum Gesetze erhoben.' On the other hand, H. E. Ryle (*The Canon of the OT*, London, 1892, Excursus A, where all the evidence is given) says (p. 270): 'The evidence is quite insufficient to justify us in regarding the "Great Synagogue" as an institution which ever played a real part in the history of the Jews . . . it was, we believe, a dream of the Jewish Doctors' (see also Taylor, p. 110; and, for Herford's theory, his *Pharisaism*, p. 21).

The successors of the Soferim were called *Tannâîm* (from Aram. *tenâ* = Heb. *shânâ*, 'to repeat'). Their teaching is, in consequence, called the Mishna (on which see art. TALMUD). The Soferim formulated; the Tannaim repeated. The Tannaite period was less constructive than conservative. This teaching was naturally not uniform. It was preserved verbally, under various forms, until collected by R. Judah the Prince (150–210), who made the recension of R. Meir authoritative. Other versions were 'external' (*Boraithâ*; see annotated ed. of *The Authorised Daily Prayer-Book*, by I. Abrahams, p. xxv), or 'additions' (*Tôseftâ*). All legal matter was called *Hălâkhâ*, from הָלַךְ, 'to walk,' *i.e.* a course of conduct. Homiletical and allegorical matter was termed *Haggâdâ* (or *Aggâdâ* in Aramaic), from the hiph'îl (הִגִּיד, 'to declare, tell, relate') of נָגַד, 'to be conspicuous.' Midrash (*q.v.*), or exposition, was the Halâkhic or Haggâdic exposition of the Scriptures.

It was noted for the use of the parable, which, though found in the OT, was revived and popularized by Jesus, if the theory is correct which is advanced by H. P. Chajes, who maintains[1] that the word 'authority' (ἐξουσία), in the phrase 'he taught as one having authority' (Mt $7^{29}$), should be 'parable,' the Heb. root משל meaning both 'rule' and 'proverb.'

After the Bar Kokhba war the schools were transferred to Galilee and, ultimately, to Babylon. In these schools the Mishna was debated by later Rabbis, known as *'Âmôrâîm*, and their discussions, in Palestine and Babylon, are called the Palestinian and Babylonian Gemârâ respectively. The word *Gᵉmârâ* means 'completion.' Mishna and Gemârâ together are called Talmud. Neither the Mishna nor the Gemârâ was written down at first. They were preserved orally.

Great care must be taken in citing these works. It must be remembered that they embody information extending over centuries, and that they frequently give individual thoughts and expressions. Evidence must be carefully weighed and used with discrimination. The date, the place, and the author must be accurately noted. Evidence for Palestine is not always applicable to Galilee or Babylon. Similarly, chronological unity must be maintained. Further, the private circumstances of a speaker and the politics of his age must be remembered. Thus, a Rabbi who lived in an age of persecution will scarcely have known the meaning of tolerance. One who lived in the midst of wicked and immoral non-Jews would hardly have recommended his pupils or his flock to mix with heathen. Haphazard citations are inaccurate and misleading.

The Talmud is a *corpus juris* rather than a code. The reduction of all the legal matter to an orderly code was the work of later generations, and the arrangement of the Talmud was calculated to help the memory by the association of ideas, by the use of mnemonic aids, and by *memoria technica*. The whole life of man is regulated, and every act of daily life is considered. Not only matters essentially religious are dealt with, but also civil matters, hygiene, archæology, folklore, medicine, science, and table etiquette; indeed, the most heterogeneous subjects occur, so that of a truth the motto of the Talmud might be 'quicquid agunt homines nostri farrago libelli.' It must be remembered that the Talmud gives verbatim reports; consequently, it must be judged not as an encyclopædia or as a code of Justinian, but as a Hansard. Many cases are hypothetical or ideal; many 'hair-splitting' arguments are, in point of fact, exercises in logic and mental analysis (see above, p. 588ᵃ). Hillel, who flourished about 100 B.C., and who introduced Babylonian learning to Palestine, perfected seven measures of argument (see Tos. *Sanh.* vii. 11. = Zuckermandel, p. 427, l. 4; see also Schechter's note, no. 12, on p. 110 = *55b* of *Âbôth de R. Nathan*, Text A, perek xxxvii., ed. Schechter), later developed by R. Ishmael to thirteen (see Singer, p. 13). Hillel was the advocate of leniency (*mēqil*), his rival Shammai, of rigour (*mahmir*). Hillel's example of leniency was followed by his grandson Gamaliel I., son of Simon, who 'lightened' the Law by his decisions. This Gamaliel greatly opposed violence in repressing heresy, and it was he who advocated the release of Paul (Ac $5^{34-39}$). He is also known for legislation for the protection of women and his regulation of the calendar. For a detailed account of the Talmudic legislation see art. TALMUD.

[1] *Markus-Studien*, Berlin, 1899, p. 11.

It was probably due to the rise of Christianity that the Canon[1] of the Bible was formed. The famous passage in *Baba bathra*, 14*b*, etc. (which may be consulted in Ryle, *op. cit.*, Excursus B), embodies the traditions of the selection of the Scriptures. Owing to the diffusion of heretical books (*ḥîṣônîm*, a term which may indicate either secular books or prohibited heretical scriptures, and, probably, the Gospels), measures had to be taken to protect the people from ascribing inspiration to documents that had no claim to such authority.

'Apocryphal books are called 'Genûzim, "hidden away," books preserved as ancient but not adapted for public reading . . . (books) whose canonicity was disputed . . . different, in spite of the similarity in the derivation of the word, from Apocrypha. The name denotes doubt rather than final rejection' (Ryle, p. 187).

It is said that the fiercest fight raged about the inclusion of Canticles and Ecclesiastes, the former because the allegorical interpretation was not universally adopted, the latter because of its Sadducean tendencies. The strength of 'Aḳiba was excited in their favour, and the books received the stamp of canonicity, *i.e.* they were said 'to defile the hands.' This expression is indicative of the care for books inculcated by the Rabbis. In order to ensure safety and to preserve the scrolls from careless handling, they were declared to be 'unclean' (see the Mishna, treatise *Yâdayim*).

The Jews, at the fall of the Temple, may be divided into three groups, each of which may be typified by a representative hero. (1) There was the party of extreme nationalism, the party of the zealots, who utterly repudiated Rome. An example of this class was 'Aḳiba, who supported the revolt of Bar Kokhba against Hadrian. The greatness of 'Aḳiba's work as a Halâkhist was nearly lost through the terrible persecutions and wholesale exterminations that followed the suppression of the revolt which he had encouraged as a nationalist. 'Aḳiba stood for nationalism, but he stood for the Halâkhâ as well, and in this respect he differs from the zealots and from Bar Kokhba, whose aims were almost wholly political (see, further, art. AḲIBA BEN JOSEPH, vol. i. pp. 274–276). (2) At the other extreme stood Joḥanan ben Zakkai, who represents the old Ḥasidæan idea in its purest form. He and his followers concentrated on the Halâkhâ, and were indifferent to politics. Joḥanan, like Jeremiah, was denounced as a traitor, because, like Jeremiah, he realized the hopelessness of resistance, and saw that hope lay only in submission and in strict attention to the Law. He was subjected to persecution as Jeremiah was, and had to escape from Jerusalem in a coffin. (3) The third party may be typified by Josephus (*q.v.*), who, though equally eager for the Law and zealous for Judaism, believed in friendship with Rome. In this, but in this alone, he is reminiscent of the Hellenizers under the Maccabæans and the Sad-

[1] Quite a different view as to the origin of the Canon is taken by M. Gaster, *The Biblical Lessons*, London, 1913 (reprinted from *Jew. Rev.* iii. [1912–13] 194, 292, 427); cf. also *ERE*, vol. ii. p. 568 f.

ducees. As regards nationalism he stands at the opposite extreme to 'Aḳiba, Joḥanan being perhaps midway between the two, though nearer to Josephus. Admiration for what was laudable in Roman institutions was not confined to the Sadducees. Paul boasts with pride of his Roman citizenship, and, almost in the same breath, of being a keen Pharisee. Even if Paul be regarded as a heretic, Josephus, no less conscious of the pride of Roman citizenship, was faithful to the Law.

The fall of the Temple made the Jews wanderers, with a book for their portable fatherland and a code for their nationality. But the yearning to return to Zion showed itself to be deep and real. The liturgy contains many allusions to and prayers for a restoration, but the restoration which is described as the Return to Zion and the rebuilding of Jerusalem meant something more than a merely physical return and rebuilding. It was associated with the reign of universal peace and the coming of the Messiah. Under the overpowering influence of the catastrophe, such aspirations could not have been expressed in other phraseology. In the course of time the ideas became separated. It is significant that the rebuilding and the Return are not included in the Thirteen Creeds, based on Maimonides (see Abrahams, *Annotated Prayer-Book*, p. cii; *ERE* iv. 246ᵃ), although the coming of the Messiah is mentioned as an article of faith. Judaism has no dogmatic precision as to eschatology. The Return may be exclusively physical in form, but not necessarily so. So, too, the restoration of the sacrifices. The verse of Hosea (14²), 'Let us make up for the sacrifices with our lips' (see Ḳimḥi and also Abrahams, p. xxiv), was taken to indicate the supersession of sacrifice by prayer. The allusions to sacrifices in the liturgy are, for the most part, reminiscences, designed to preserve alive the memory of the Temple, as is the *'Ăbôdâ*, or Temple service, of the high priest, in the *Mûsāf* of the Day of Atonement. The belief in the restoration of the sacrifices is not clear, and many citations could be adduced on both sides (cf. O. J. Simon, 'Authority and Dogma in Judaism,' *JQR* v. 231–243, and the counter-statement of M. Hyamson, *ib.* 469–482).

This spiritualization has its counterpart in the homilies of the Midrash and the allegorization of Philo. It was also one of the points of difference between Sadducees and Pharisees. As an instance it may be remarked that the Sadducean sect of Boethus (*Meg. Ta'anith*, iv.) rejected the old traditional interpretation of the *lex talionis*,[1] adopted by the Pharisees, in which 'the *value* of an eye' was to be given for 'an eye.' The Sadducees claimed that the apparently literal explanation was correct and upheld severity. The Pharisees, on the other hand, pointed out that the injured party did not, in fact, receive compensation by this means. In this, as in other matters, the tendency to spiritualize and allegorize had been long existent.

For the growth of angelology, see art. Demons and Spirits (Jewish). The effect of Gnostic learning and the continued influence of Greek philosophy made themselves felt even on Rabbis. It is said (Tos. *Ḥagiga*, ii., ed. Zuckermandel, p. 234, l. 7) that four Rabbis entered Paradise, *i.e.* indulged in the study of speculative philosophy. Ben Zoma lost his reason; Ben Azzai died young; Elisha ben Abuya 'cut down the little plants' (corrupted young students) and became an apostate; 'Aḳiba alone emerged in safety. It was feared that many who were unfitted might be led to undertake metaphysical research, and the Rabbis accordingly ordained that certain portions (*i.e.* עריות, incest, etc.) of the Scriptures should not be taught publicly; that is to say, they might be imparted to two students but not to a greater number at one time; other portions, *e.g.* בראשית, 'cosmology, genesis,' should not be taught except to one student, in private. The most mystical of all chapters was not taught at all, but was reserved for individual study in mature age.

The chapter thus prescribed was Ezk 1, known as מעשה המרכבה, the 'work of the chariot,' on account of the speculations as to the nature of the Deity which would be aroused. For this reason, cosmology was not much encouraged (see 'Jewish' sections of artt. Ages of the World and Cosmogony and Cosmology). 'Ask,' it was cited, 'concerning the early days which were before thee, from (לְמִן) the day when God created man upon the earth, from one extremity (וּלְמִקְצֵה) of the heaven to the other' (Dt 4³²; note the force of the accumulated prepositions). This was explained as follows: 'Ask as to the beginning of the formation of matter (*i.e.* *Bᵉrêshîth*), but not about the period before, about the creation of matter' (for all this cf. the whole of Tos. *Ḥag.* ii., cited above).

During this period the development of the liturgy was marked. It is very probable that, in early times, the form of the prayers varied on each occasion. It was held that a fixed formula of prayer was mechanical, hence useless.

R. Simeon b. Nathaniel, a pupil of R. Joḥanan ben Zakkai, said: 'Be careful to read the Shᵉma' and to say the 'Amîdāh, and when thou prayest, regard not thy prayer as a fixed mechanical task (*qebha'*), but as an appeal for mercy and grace before the All-present' (*Âbôth*, ii. 17 = Singer, p. 189 f.; Charles, ii. 697). The word *qebha'* is also used in the sense of a fixed time for devotions (see *Mishna Berakhoth*, iv. 1), but in the passage cited it has a bad sense. The proper feeling was *kawwānāh*,[1] or an attuned spirit; without this feeling of attention, the prayer was nugatory (see the formula of self-dedication, before performing a commandment, which begins הִנְנִי מוּכָן [Singer, pp. 14, 15, 218, 232, etc.]). The early Ḥăsîdîm used to wait an hour (שָׁעָה) before prayer, in order to induce this frame of mind. 'We do not rise for prayer unless imbued with deep seriousness' (כֹּבֶד ראשׁ, lit. 'heaviness of head,' opposed to קַלּוּת ראשׁ, 'lightness of head, levity,' [*Âbôth*, iii. 17 = Singer, 193; Charles, ii. 701]). 'Even if the king greet a man, he should not reply; even if a serpent be wound round his heel, he should not pause' (*Mishna Berakhoth*, v. 1). R. Eli'ezer says, 'Whoso maketh his prayer a fixed burden (*qebha'*), his prayers are not appeals' (*ib.* iv. 4). Similar citations could be freely adduced. Prayer was to be not merely heartfelt, but also fluent (שְׁגוּרָה בְּפִיו [*ib.* iv. 3, v. 5]).

Further, it is known that originally it was prohibited to write down a formula of blessing. 'Those who write down ברכות (*v.l.* הלכות) are like those who burn the Torah' (*Shabb.* 115*b*). It is doubtful whether this does not simply mean, as Rashi suggests, that written blessings are not to be rescued from a fire on the Sabbath. In any case, however, ברכות were not generally written down. The reader knew or received instructions as to the subjects of his prayer and the order in which they were to be arranged. Frequently certain phrases were specified, but the general framework was left to the taste and inspiration of the שְׁלִיחַ צִבּוּר, or precentor. In the course of time, owing either to ignorance on the part of officials or to a desire to ensure uniformity, the prayers were written down, but the improvisation and composition of original prayers survived in the *piyyûṭ*, or poetical hymns, of later times.

The central portion of the morning and evening service was, of course, the recital of the *shᵉma'* (see Singer, p. 40; Abrahams, p. l; cf. also Taylor, Excursus iv., p. 116) with the blessings appropriate to it. This is fully discussed in the opening chapters of *Berakhoth*. The 'Amîdāh was formulated by R. Gamaliel, who 'introduced the usage of set prayers' (Graetz, ii. 366); the kernel of the prayer is much older, and very probably goes back to the early Soferim.

'It is well known that tradition has ascribed to Moses and Ezra many institutions, whose origin, dating back to ancient times, was already forgotten. To Ezra especially is attributed all that pertains to the reading of the Law and the arrangement of the Liturgy' (A. Büchler, *JQR* v. 423).

Many Psalms and Scriptural extracts were included in the services, and many touching prayers

[1] See above, p. 588.

[1] See H. G. Enelow, in *Studies in Jewish Lit. issued in Honour of K. Kohler*, pp. 82–107.

of the Tannaitic age have been preserved. The Lord's Prayer has been shown by Taylor[1] to be composed of phrases taken from contemporary Rabbinic prayers, some of which may be seen in Singer (p. 7, יְהִי רָצוֹן; Abrahams, p. xix; see also M. Gaster, *Book of Prayer . . . acc. to the Custom of the Spanish and Portuguese Jews*, i. 3).

The reading of the Law and of selected prophetical passages took place on Sabbaths, festivals, and fasts; the Law alone was read on Saturday afternoons, Monday and Thursday mornings (market days), and on other occasions, such as the New Moon. The reading from the prophets was called *Hafṭārā* (from the root *pāṭar*, 'to be free or finished'); this name, as also the alternative אַשְׁלָמְתָּא, seems to be due to the fact of its following the *Sidrā*, or Pentateuchal lesson (see Abrahams, p. clvi). When, therefore, the *Mūsāf*, or additional service, was read after an interval, and not immediately following *shaḥărîth* (morning), the conclusion of the Hafṭārā would mark almost the end of the service. The Law was read, in Babylon, in an annual cycle of consecutive sections. In Palestine, a triennial cycle existed (see A. Büchler, *JQR* v. 420 ff., but cf. M. Gaster, i. 77). It is possible that the selection of the Hafṭārā was, to a certain extent, in the hands of the reader (Lk 4[16]), but it was intended to have some point of contact with the Pentateuchal portion of the day. Both Sidrā and Hafṭārā were translated by the *m'tūrg'mān* ('interpreter'), verse by verse. In the case of the Hafṭārā, the version was more homiletical, and greater sections were rendered at a time. The Targum was greatly esteemed (see art. TARGUMS). A man was to study the Sidrā twice in Hebrew and once in the Targum. To this day the Targum is universally studied among Jews, privately, all over the world. The Yemenites also have an Arabic Targum; the Sephardim, a Spanish Targum, which is read publicly verse by verse on the ninth of Ab; the Ashkenazic Yiddish versions are not generally used in service.

The Eighteen Benedictions contain paragraphs relating to the Messiah and to the Resurrection.[2] The latter subject is introduced at the beginning, after the mention of the patriarchs; and this collocation seems, perhaps, to imply that the proof of immortality employed by Jesus ('God of Abraham . . . not the God of the dead, but of the living,' Mt 22[32], Mk 12[26f.], Lk 20[37f.]) was Rabbinic. Whatever vagueness may have existed before, there can be no doubt that this age held firmly to the belief, in broad terms, in immortality and in resurrection. The expansion or philosophical analysis belongs to the early mediæval period. The belief of the Tannaitic age in immortality and in resurrection, the result of the Pharisaic victory over the Sadducees, was unshaken. The tendency of Tannaitic religious thought, in the Haggādā especially, was optimistic, and these two ideas are the outcome of optimism. The range of Haggādā extended over every sphere of daily life and tinged everything with bright and pleasant hues. The Haggādā reflects the spirit of the Halākhā, and, consequently, the conceptions of the next world, as well as of this, were given an optimistic turn. The Messianic ideal in the Haggādā is based on the prophetical reign of peace. The troubles or 'birth pangs' that were to precede the advent of the divine Saviour were naturally identified by many of the people with the hardships and persecutions connected with the Roman occupation. Hence the thought arose that the Messiah would first of all deliver Israel from the power of the heathen, and thus the temporal Messiah, of the type of Judas and Theudas (Ac 5[36f.]) and of Bar Kokhba, gained popular support. Yet it was taught that no supernatural deliverer was to be expected, nor a successful general. 'The only difference between the present and the coming ages will be in the (absence of) Gentile domination' (see *Berakhoth* 34*b*, 12*b*, 13*a*). In the Eighteen Blessings, the paragraph dealing with the Messiah (cf. above, p. 586[a]) is placed immediately after the prayer for the rebuilding of Jerusalem. Naturally, the ideas as to the Messiah varied according to the political circumstances, especially with regard to the relation of the Messiah to the Gentiles (see J. Drummond, *The Jewish Messiah*, London, 1877, p. 331). This relation was sometimes friendly, sometimes hostile, according to the morality of the non-Jews and their treatment of the Jews in the experience of the speaker.

While the Jewish attitude to the problem of evil remained unchanged, in that evil was subordinate to the Deity and controlled and created by Him, sin, according to Jewish belief, was in man's own choice, the evil inclination (*yēṣer ha-ra'*) being parallel to the *yēṣer ṭôbh*. The doctrine of original virtue, or the hereditary grace of the patriarchs, was the Jewish counterpart to original sin (see S. Levy, *Doctrine of Original Virtue*, and 'Jewish Conceptions of Original Sin,' in *Jews' College Jubilee Volume*, London, 1906, p. 211 ff.; cf. also Porter's *Essay*, cited below, p. 607). Man was as much bound to give thanks for evil as for good (*Berakhoth*, ix. 5); and, on hearing evil tidings, God's name must be praised and a pronouncement of resignation to the divine decree must be uttered (see Singer, pp. 292 and 318 [צִדּוּק הַדִּין]; Abrahams, p. ccxxvi; cf. also the *Ḳaddish* [on which see *ERE* i. 459 f.], p. 75). It is difficult to trace the beginnings of a set creed, in the sense in which the term is used by the Christian Church.

Undoubtedly Isaiah 56 embodies three different codes of life or creeds, required of three different classes, viz. the ordinary Jew, the proselyte, and the eunuch. All three are enjoined to observe justice and righteousness and to believe in the redemption. (1) The first class, in addition, must keep the Sabbath and refrain from all wrong. (2) The eunuchs are to keep the Sabbath, observe the covenant, and do what is pleasing to God. (3) The proselytes, 'that join themselves to the Lord, to serve him, and to love the name of the Lord,' are to keep the Sabbath and the covenant. The 'Seven Commandments of the Sons of Noah' (on which see *ERE* iv. 245[a], and art. 'Laws, Noachian,' in *JE* vii. [1904] 648–650) can scarcely be regarded as a Jewish creed; they were the signs by which civilization was recognized and divided from barbarism, fundamental laws of intercourse common to civilized humanity. It has been shown that the so-called creed of Ten Articles, quoted by Aphraates, who lived about A.D. 345, is in reality an old Jewish creed converted into Christian use by the omission of one letter ([illegible] for [illegible]), which alters the future tense to the past, in the 10th art., 'and he has sent his Messiah into the world.' This theory of H. L. Pass (*JThSt* ix. [1907–08] 267–284; the creed is also conveniently given by J. Gwynn, in *Nicene and Post-Nicene Fathers*, 2nd ser., xiii. [Oxford, 1898] 345) can be supported by a comparison with the *Ḳaddish* in the Sephardic form (see M. Gaster, *Book of Prayer*, i. 14, 25, 50, 55; especially the forms used on the New Year [*ib.* ii. 27], ninth of Ab, and at funerals); in the ordinary Ashkenazic version, even in that used at funerals, the Messianic clauses וְיַצְמַח פֻּרְקָנֵהּ וִיקָרֵב מְשִׁיחֵהּ are omitted (see D. Pool, *The Old Jewish-Aramaic Prayer The Kaddish*, Leipzig, 1909). Pass also quotes the confession of faith of the Jew Ananias in the Apocryphal Acts of the Apostles (p. 272 f.), and suggests a symbolic use of Scriptural references. The number ten, used by Aphraates, suggests analogy with the Decalogue, the daily recital of which was discontinued because of the cavillings of the *Mînîm*, perhaps Christians (see Taylor, Excursus iv. 119). Undoubtedly the *sh'ma'* was the vital Jewish 'creed,' and the liturgical paragraph, אֱמֶת וְיַצִּיב, by which it is followed, seems to show that it was so intended.

**4. To Maimonides.**—In the period now under consideration, Jewish history has to deal far more with the history of the Jews than with Judaism. The Diaspora developed rapidly, and the Jews spread abroad to the remotest lands of East and West, to Malabar and to France. During this

[1] *Op. cit.* 124; see also Herford, pp. 118, 124 ff., where Weber is cited.

[2] On these see Abrahams, p. lv, and E. G. Hirsch, art. 'Shemoneh 'Esreh,' in *JE* xi. [1905] 270–282.

dispersion, in proportion as the personal history of the Jews becomes of interest, owing to their varied fortunes, the course of Judaism seems uneventful. Judaism was, in fact, recuperating after the creative energy of the preceding centuries. Evolution moves in stages, not in a path of gradual and imperceptible progress. The schools of Palestine, both in Judæa and in Galilee, had been creative; so, too, had been the Babylonian academies in their time. But the ages of the later Amoraim and Saboraim collected and formulated. The chief centres of intellectual activity in Babylon were Sura (also known as Mata Mahasya), Nehardea, Maḥuza, and Pumbeditha. Abba-Arika, known as Rabh (A.D. 175–247), was instrumental in raising the importance of the Babylonian schools.[1] He was educated at Tiberias, under Judah I., and, after his return to Babylon, he founded his school about 220 and gathered a large number of pupils. Babylonia now began to attain a higher renown than Palestine and Galilee for scholarship and Rabbinic authority. Ammi and Assi, the leaders in Judæa, acknowledged the supremacy of Rabh's successors in Babylon (*e.g.*, Bab. *Shebu'oth*, 47*a*). The growth of the schools was followed by a rise in the morality of the inhabitants of Babylon, which had hitherto been of a low standard. The fine ethical sayings of Rabh deserve special notice (see W. Bacher, *Agada der bab. Amoräer*, Strassburg, 1878, pp. 1–33). His teaching was universalistic, and inculcated love for all humanity. The influence of Rabh was especially great in restoring the old Jewish ideal of the sanctity of marriage, for decay had set in. He is said to be the author of *Mûsāf* for the New Year (see Singer, p. 245), and of אתה יוצר רזי עולם (Singer, p. 259; Abrahams, p. cci) for the Day of Atonement. He devoted much attention to the liturgy. The great opponent of Rabh was Mar Samuel (also called Ariokh [*Shabb.* 53*a*]), head of the academy of Nehardea (*c.* 165–257). The rivalry of these two teachers may, in some respects perhaps, be compared to the contests of Hillel and Shammai. Yet Rabh, though inclining to severity in his judgments, was not unlike Hillel in disposition (see Bab. *Bek.* 49*b*). Samuel inclined to the Persian sages; Rabh strenuously opposed any non-Jewish influence and teaching.

'Rab, entirely taken up with the affairs of his own nation, refused to allow the customs of the Persians to exert any influence on those of the Jews, and even forbade these latter to adopt any practice, however innocent, from the Magi: "He who learns a single thing of the Magi merits death." Samuel, on the other hand, learnt many things of the Persian sages . . . None of his decrees, however, were possessed of such important results as the one by which he declared the law of the land to be just as binding on the Jews as their own law (דינא דמלכותא דינא) . . . Jeremiah had given to the families which were exiled to Babylon, the following urgent exhortation as to their conduct in a foreign land: "Seek the peace of the city whither ye have been carried away captives." Samuel had transformed this exhortation into a religious precept: "The law of the State is a binding law." To Jeremiah and Mar-Samuel Judaism owes the possibility of existence in a foreign country' (Graetz, ii. 526, 524, 525). Another of Samuel's claims to fame is his regulation of the calendar, based on his knowledge of astronomy, which he had acquired from Magian instructors. He said of himself that he knew his way as accurately among the paths of the heavens as in the streets of Nehardea, but that he could not explain the courses of the comets (*Ber.* 58*b*). His other name, Jarḥinâāh, was derived from his facility in fixing the calendar months (*yᵉraḥ*).

Among the later principals of Pumbeditha was R. Joseph, regarded by Hai Gaon as the author of the Targum to the Prophets (cf. *JE* xii. [1906] 61ᵇ).

He is said to have translated those portions of the Prophets which had hitherto not existed in an Aramaic version. His object was probably to supersede the Peshiṭṭa, just as Aquila superseded the Septuagint. Although the Peshiṭṭa version of the canonical books was the work of Jewish translators, certain of the Prophets—*e.g.*, Isaiah—were revised by Christians and amended from the Greek text. The NT was revised by Rabbula, bishop of Edessa (411–435), and the unrevised text still exists in the Curetonian MS and the Sinai Palimpsest. The Old Syriac version goes back probably to the 2nd cent.; as regards the OT Peshiṭṭa, it was certainly used by Aphraates (A.D. 345; cf. J. Parisot, in *Patrologia Syriaca*, I. i. [Paris, 1894] p. xliii), a contemporary of R. Joseph. It is, therefore, very likely that Joseph undertook a Targum in order to provide the Jews with a version of their own.

The great achievement of the schools in Mesopotamia was the Babylonian Gemārā. When the creative power of the teachers of Halākhā began to diminish, the time arrived to 'seal up tradition.' R. Ashi, the son of Simai (352–427), a teacher of the Sura school, which he rebuilt and raised to an eminent position, was one of the greatest exponents of his time, and he was known by the honorific title of Rabbānā, 'our master.' Ashi began the collection and arrangement of the Talmud, although this must not be taken to imply the production of a written text. He devoted his labours, which extended over fifty years, to the comparison of materials and placing in order of all the decisions, corollaries, and facts of Haggādā and Halākhā which had accrued through the ages. The text was preserved orally for some considerable time to come. Ashi's work[1] was continued and completed by Rabina and Sura and Jose of Pumbeditha. In 499, when Rabina died, the Talmud of Babylon was finished. The Jerusalem Talmud had been concluded, it is generally held, about a century and a half previously. Our knowledge of Judæa is so scanty for this period that nothing can be said with certainty, but it is generally assumed that the place of compilation was Tiberias. The Talmud was in no sense a popular work. It was taught and studied in the schools by the Geonim, the successors of the Saboraim. As a code it was unwieldy and could not be easily consulted by private persons. Consequently, in course of time there grew up other arrangements which were shorter and more accessible. The Talmud has, however, always remained the ultimate source of learning. Its decisions have been modified and its contents arranged and re-arranged repeatedly; but no book, after the Bible, has exerted so much influence on Judaism. Code succeeded code, commentary followed upon commentary; finally, the Talmud became a field of learning, more or less abstract, while for practical questions reference would be made, in the first instance, to the code of the day (see, further, art. TALMUD). Between the Talmud and the *Shûlḥān 'Ărûkh* of Joseph Qaro (1564–65), which is almost universally accepted to-day as the exposition of orthodox Judaism, many other codes intervene. With these the development of Judaism is vitally concerned (see S. Daiches, 'Jewish Codes and Codifiers,' *Jew. Chron.*, Jan. 1, 1909, p. 24 f., Jan. 8, p. 28 f., Jan. 15, p. 25 f., also reprinted in pamphlet form).

The first three codes emanated from Babylon. The Gaon Jehudai b. Naḥman, at Sura, is said to have written the *Hălākhôth Pᵉsûqôth*, about 770. The *Hălākhôth Gᵉdhôlôth*, or *Rishônôth* of R. Simon Ḳayyāra, who was, according to Abraham ibn Daud, a Rabbi of Pumbeditha about 750, are thought, in reality, to be of later date, about the beginning of the 9th century. They could not have been the model for Jehudai. The Cairo Genizah has preserved part of this work, which probably existed in the form of loose letters. Gaon Aḥai wrote his *Shĕ'ēltôth*, a book of responsa, constituting a Halākhic exposition of the weekly Sidrā, or Pentateuchal lesson. As a practical hand-book, the pupils of Gaon Jehudai formulated הִלְכוֹת ראו, 'Laws of "Refer!",' in which laws and questions of the day were treated.[2]

[1] See W. Bacher, 'Abba Arika,' in *JE* i. [1901] 29 f.; and for Rabh's rival, Mar Samuel, J. Z. Lauterbach, 'Samuel Yarḥina'ah,' *ib.* xi. [1905] 29–31.

[1] See, further, W. Bacher, 'Ashi,' in *JE* ii. [1902] 187 f.

[2] See M. Schloessinger, 'Yehudai ben Naḥman,' *JE* xii. [1906] 590 f.; and 'Ḳayyara, Simeon,' *ib.* vii. [1904] 461 f.; L. Ginzberg, 'Aḥa (Aḥai) of Shabḥa,' *ib.* i. [1901] 278 f.; the differentiation of these various codes is a matter of some dispute.

The triumph of Christianity and its adoption by Constantine meant the humiliation of the Jews. Numerous repressive acts of legislation were passed against their religion, and outbursts of persecution were frequent. Jews were prohibited from entering Jerusalem, and their lives were burdened with hardships and oppressive restrictions. Prelates of the Church, such as John Chrysostom of Antioch, Ambrose of Milan, and Cyril of Alexandria, were among their bitterest persecutors, and the Emperors, when friendly, or at least not ill-disposed, to the Jews, were frequently persuaded by their priests to change their attitude. Even Jerome, who, like Ambrose, owed his knowledge of Hebrew to Jewish teachers, publicly declared his hatred of them. Yet the popes themselves and the Roman bishops were often exceptions to this rule, and they not infrequently stood forth as the champions and protectors of the Jews. The Arians, as a rule, were more tolerant than the Athanasians. The reign of Julian, who abandoned Christianity, was a brief interval of light for the Jews amid their sorrows. But on Judaism itself the domination of Christianity had little influence. In the same way, little effect was experienced from the rise of the Sasanian Dynasty (224–651), founded by Ardashīr Pāpakān, which brought into greater prominence the worship of fire. The Jews themselves suffered at first from the extreme sternness with which the profane use of fire was prevented, but by the time of the first Shāpūr (242–271) the relations between the two religions were amicably readjusted.

Mention must be made of a false Messiah (see art. MESSIAHS, PSEUDO-) who arose in Crete during the time of Ashi, *i.e.* before 427. About this time hopes of the millennium were spreading, and the long-awaited deliverer was expected. This was, to some extent, due to an ancient Sibylline oracle (see Graetz, ii. 617), which placed the advent of the Messiah in the 85th jubilee, between A.D. 440 and 470. In proportion as persecution became stronger, these hopes grew more vigorous. The *Chronicles of Jeraḥmeel*, composed, according to Gaster, during the first centuries of the common era (M. Gaster, *Chron. of Jer.*, London, 1899, p. xxxix), contain such eschatological calculations. These Messianic ideas were strongly discouraged by Ashi, and this event had no permanent influence on Judaism.

It has been mentioned that the successors to the Amoraim were called *Sabôrâîm*. The name is connected with the Aramaic and Syriac words for gospels, evangelist (*sbarthā*, *sbarānā*), etc., and probably implied a teacher or expounder. The Saboraim had little share in the redaction of the Talmud, although some small Saboraic element has been preserved; practically, it was completed by their predecessors. The age of the Saboraim is reckoned from the final redaction of the Talmud until the first of the Geonim, Mar Rab Mar, in 609. The word *Gāôn* (pl. *Gᵉônîm*) literally signifies 'pride, majesty' (Pr 16[18], in a bad sense; Am 8[7], Is 60[15], in a good sense), and is said to be derived from Ps 47[5] [EV [4]]. The chief of the Sura academy was the Gaon, the teachers of Pumbeditha being more frequently, though not exclusively, called Rabbanim. The Gaon of Sura usually took precedence. The Gaon was the academic and spiritual chief, the *Rēsh Gālūthā* ('Head of the Diaspora') being the civil head of the Jews, recognized, if not actually appointed, by the Persian court. It is thought that Gaon is an instance of mnemonics, for the numerical equivalent of its letters $(3+1+6+50=60)$ is the same as the number of treatises of the Talmud. More probably, Gaon is a translation of 'clarissimus' or 'illustris,' a title employed by the Roman Emperors in writing to provincial governors. Strictly speaking, there were thirty-seven Geonim of Sura, from Mar R. Mar to Samuel b. Ḥofni, and fifty of Pumbeditha, from Mar b. R. Ḥanan to R. Ḥai, but the term has also been used, in a wider sense, for other teachers. The age of the Gaonate was about 150 years and included several great men. It is remarkable for the growth of studies that were not strictly Talmudic: history, grammar, liturgy, and letters.

Thus, Sherira Gaon, father of Ḥai, wrote a famous epistle or responsum in 987 to the Jews of Kairowan on the growth and evolution of the Talmud and Gaonate. It is the chief source of information on the subject. Amram, in 870 and Sa'adya (892–942) drew up and arranged liturgies; Ḥai is said to be the author of the earliest known Hebrew rhyme, the hymn for the Eve of Atonement שמע קולי (see Gaster, *Book of Prayer*, iii. [1904] 12). The Geonim established a *Minhāg* (or 'Use') of prayers, which was widely adopted (see Gaster, i. p. xiii). Sa'adya compiled a dictionary (*'Igrôn*), and Ṣemaḥ (about 870) a Talmudic lexicon, or *'Arūkh*. Reference has already been made to the work of the Geonim in composing Halākhic codes. Perhaps their greatest activity was expended in responsa, *i.e.* answers to practical ritual questions, addressed to them by distant congregations.[1]

With the spread of Judaism, Jewish learning had also developed in other lands. Babylon was no longer the only source of knowledge. North Africa and Southern Europe were rising in importance. From Egypt came the famous Sa'adya (*q.v.*) to be Gaon at Sura. But the most forcible influences on Judaism were Islām and Ḳaraism, the former external, the latter internal. The Ḳaraite schism was due largely, if not entirely, to political circumstances. In 761 the Exilarch Solomon died, leaving no sons. His nephew, Anan b. David, of whom very little is known, attempted to succeed his uncle, but was opposed by the Geonim Judah and Dudai, sons of Naḥman. Dissensions arose, and Anan, at first successful by the aid of the Khalīf, was finally forced to emigrate to Palestine. At what stage his hostility to the Gaonate developed into an attack on the Rabbinic position, and to what extent this opposition had already been anticipated, is unknown. Anan and his followers soon cut themselves off completely from the Talmudists, accusing them of having changed the Law by their general teaching. In ten specific points they differed from the Rabbinite Jews, in contradistinction to whom they adopted the name of *Bᵉnē Miqrā*, or 'Sons of the Scripture.' They claimed, just as the Ḥanīf party before the foundation of Islām, to return to the primitive religion.

The ten points of difference can be seen from an examination of the *Kitāb al-Faḍā'iḥ* ('Book of Shameful Things') by Ibn Saqawaihi, one of the earliest Ḳaraite writers. His work is divided into ten sections, but begins with a general attack on the Mishna: (1) the unity of God; the Ḳaraites leaned to the doctrines of the Mu'tazilites, who opposed divine omnipotence as a creative force, in favour of almost absolute free will; (2) the use of fire on the Sabbath; the Ḳaraites permitted neither fire nor lights on Sabbath, as they interpreted Ex 35[3] literally;[2] (3) irrigation on the Sabbath; (4) the manner of fixing the New Moon; (5) the postponement of certain festivals by means of the calendar rule (לא אד״ו ראש; for which see *ERE* iii. 120[b]); (6) the leap year; (7) the forbidden fat; the Ḳaraites will not eat the fat of the tail, which was allowed by the Rabbis; (8) incest; (9) *niddā*; (10) *gerî* (impurity). For the differences between Rabbinites and Ḳaraites see *Khazari*, iii. § 35, tr. Hirschfeld, p. 165.

The Ḳaraites produced a large number of able writers[3] who contributed appreciably to Jewish literature: Ḳirḳisānī, author of the *Kitāb al-Anwār* ('Book of Lights'), Ibn al-Hiti, Yefeth ibn 'Ali, David al-Fasi, Sahl ibn Maṣliaḥ, Benjamin Nahawendi, Samuel b. Moses al-Maghribi, and others. The effect on Judaism was visible. Opposition stimulated learning and, by putting the Rabbinites on their defence, produced a positive statement of the orthodox position. The chief exponent of the Talmudic case was Sa'adya, or, more properly, Sa'īd ibn Yūsuf al-Fayyūmī

[1] See, further, art. 'Gaon,' *JE* v. [1903] 567–572.

[2] Cf. Sa'adya's commentary on this verse and his refutation of the Ḳaraites; this has been recently recovered from the Genizah and published, with translation, by H. Hirschfeld in *JQR* xviii. [1905–06] 600–618. See also 'Saadyana' by Schechter and others in *JQR* xiv. [1902].

[3] Anan's *Book of Commandments* has been edited by S. Schechter, *Documents of Jewish Sectaries*, ii.

(892–942), who met the Ḳaraite attacks first of all by translating the Bible into Arabic, and secondly by replying directly to the enemy. Sa'adya's great work was the *Kitāb al-Amānātw'al I'tiqādāt* (Heb. *'Emūnōth W'dhē'ōth*, and other titles), or 'Faith and Philosophy,' which was the first attempt to bring revealed religion into harmony with Greek philosophy.

'No Jew, said Saadiah, should discard the Bible, and form his opinions solely by his own reasoning. But he might safely endeavour to prove, independently of revelation, the truths which revelation had given. Faith, said Saadiah again, is the soul's absorption of the essence of a truth, which thus becomes part of itself, and will be the motive of conduct whenever the occasion arises. Thus Saadiah identified reason with faith. He ridiculed the fear that philosophy leads to scepticism. You might as well, he argued, identify astronomy with superstition, because some deluded people believe that an eclipse of the moon is caused by a dragon's making a meal of it' (I. Abrahams, *Short Hist. of Jew. Lit.*, London, 1906, p. 56). Many lost portions of Sa'adya's anti-Ḳaraite writings have been published by H. Hirschfeld, from the Cairo Genizah, in *JQR*. Thus of his *Kitāb al-Rudd 'alā al-Mutaḥāmil* ('Refutation of the Unfair Aggressor') two leaves exist (*JQR* xviii. 113–119). In these Sa'adya maintains the Jewish tradition of *deḥiyyāh*, or postponement of festivals. The fragment is probably a reply to Ibn Saqawaihi. There is also one leaf of a treatise on usury (*ib.* 119 f.). In *JQR* xvii. [1904–05] 712–725 Hirschfeld has published four leaves from his treatise on forbidden marriages, and two on traditional laws. Sa'adya saw that the way in which the Ḳaraites used the Kalām in their attacks could be counteracted only by adopting the Kalām itself for the defence of the orthodox position. He thus became the first of the Jewish Mutakallimin or, literally translated, *Medhabberīm*, who sought to reconcile a belief in the divine creation with the Aristotelian theory of the eternity of matter (Hirschfeld, *Khazari*, p. 4).[1]

Judaism was not modified by Ḳaraism, except in so far as the study of philology was stimulated and the impetus to philosophy created. The latter would have inevitably followed contact with Islām. The Ḳaraites were never very numerous, and now probably do not number more than 12,000. In the eyes of the Muslims there was never much question that the Rabbinites and Ḳaraites were both equally Jews. Interesting light is thrown on this point of the controversy by the decisions of the four Imāms, recorded in B.M.MS. Or. 2538, fol. 73–83, headed 'Story of the Europeans who adopted the Laws of the Ḳaraites,' published by Hirschfeld (see *Jews' Coll. Jub. Vol.*, p. 88). Yet, on account of their dietary customs and law of incest, intermarriage with Jews is very rare.

In spite of Muḥammad's treatment of the Jews of Arabia, the relations between the two faiths were intimate and not unfriendly. Islām had far more influence on Judaism than Christianity, because it was more tolerant. The theological status of Jews and Christians was recognized. They were *'Ahl al-Kitāb*, people possessing a legitimate scripture, as opposed to idolaters and to the Magi and Manichæans, whose revelation was not regarded as authentic (*man lāhu shubhatu-l-kitāb*).

It is necessary to emphasize the correct use of the phrase *'Ahl al-Kitāb*, first, because it is so frequently misinterpreted and applied to the Jews only, who are said to have been called *the* people of the book.[2] Even writers like Graetz have made this mistake (see Graetz, iii. 59; but, on the other hand, see pp. 82 and 89, where the term is correctly used). Secondly, it is a clear indication of the attitude of Islām to the sister faiths; it did not claim a monopoly of salvation. In consequence, Jews and Muslims were able to study and discuss theology and science together with far greater intimacy than was possible between Jews and Christians.

The love of learning prevalent in Muslim lands was not confined to the Muslims; it was shared by all classes of the population. Consequently, when, after and as a result of the introduction of Greek philosophy, the Arabs began to turn their attention to speculative theology, Judaism was very closely affected, and the impetus given to philosophical study created a Jewish religious philosophy.[3] Hitherto, Jewish theology had been occupied either with questions of practical Halākhā or, in refutation of Ḳaraism, with a defence of the Talmudical system of legislation. Isḥāq ibn Sulaimān, better known as Isaac Israili of Kairowan, who died about 932, was well known as a scientific philosopher and physician (see W. Engelkemper, *Religions-philosophische Lehre Saadja Gaon's*, Münster, 1903, p. 2, note 2). His title to fame rests purely on his scientific work, not on his theology. Jews took up these studies with avidity, and a series of famous writers arose who sought to harmonize Judaism with the thought of the age, and who thus developed its philosophy of religion. Baḥya b. Joseph ibn Pakudah, who lived at Saragossa at the beginning of the 11th cent., was one of the first of Jewish authors to expound a system of ethics in his Arabic *Al-Hidāya 'ila Farāid al-Qulūb* (1040) ('Guide to the Duties of the Heart'), which was translated into Hebrew by Judah ibn Tibbon under the title of *Ḥobhōth hal-l'bhābhōth*.

Baḥya attempts to show that 'Jewish faith is a great spiritual truth founded on Reason, Revelation, and Traditions, all stress being at the same time laid on the willingness and the joyful readiness of the God-loving heart to perform life's duties.' He was largely influenced by Sa'adya and by Ibn Gabirol, and leaned to Neo-Platonic philosophy. Faith must be intellectual, not blind and unreasoning. He proves the necessity and unity of a Creator by teleological arguments. The divine attributes are twofold, negative and active. The former, but not the latter, are within the power of human knowledge. God's existence is knowable from the circumstance that non-existent beings cannot create existent beings. His Unity and Eternity are also comprehensible, since the Supreme Cause must of necessity be indivisible and permanent. The other divine attributes are anthropomorphic metaphors, an indispensable medium for thought and speech, but, in reality, symbols and not realities. From these postulates Baḥya deduced his system of ethics. He maintained that immortality was to be reserved for mature speculations; hence the comparative paucity of Biblical allusions to it. Baḥya was essentially a mystic, but at the same time practical in his system of the religious life. Asceticism, as a discipline of abstinence and self-purification, is advocated, but not for general adoption.[1]

Baḥya was a Spaniard, and one of the many Jewish scholars who arose in the Iberian peninsula during the Muslim domination. The light of Jewish learning was first kindled by Moses b. Enoch († 965), from Babylon, who founded an academy at Cordova which soon eclipsed Sura. Among the great Jews of Spain were Ḥasdai ibn Shaprut, poet, physician, and politician (915–990), Menaḥem b. Saruḳ, Dunash ibn Labraṭ, Judah Ḥayyuj, Abu-l-Walīd Merwān ibn Janāḥ, who founded and developed the science of Hebrew Grammar, and Samuel the Nāgīd (993–1055), the vizier of Ḥabus, king of Granada, who wrote an introduction to the Talmud and many liturgical hymns.

The religious philosophy of Judaism owes much to Solomon b. Judah ibn Gabirol, commonly known as Avicebron (see art. Ibn Gabirol, above, p. 69). His greatness, both as poet and as philosopher, is mirrored in his *Kether Malkhūth*, or 'Royal Crown,' the text and translation of which may be seen conveniently in Gaster (iii. 47); and his *Aṣlāḥ al-Akhlāq*, or 'Improvement of the Moral Qualities' (ed. and tr. S. S. Wise, New York, 1901), is a summary of ethics for popular use.

In this the virtues and the vices are arranged, correlatively, in connexion with the senses on which they depend. He distinguishes the physical from the psychical perceptions. The senses are indications of the disposition of the soul, that is to say, the 'animal soul, not the divine soul within man.' His quotations are in most cases drawn from the Bible, not from Rabbinic writings, a fact which may account for his great influence and popularity among non-Jews. In his *Fons Vitæ*

[1] See, further, on the sect as a whole, art. Karaites.

[2] The term is used of Christians as opposed to Jews in Bukhārī, ed. Cairo, A.H. 1304, p. 11, line 10 (30th Bab of the *Kitāb el Imān*).

[3] The influence was not confined to Judaism. 'Jewish scholars held an honourable place in transmitting the Arabian commentators to the schoolmen. It was amongst them, especially in Maimonides, that Aristotelianism found refuge after the light of philosophy was extinguished in Islām; and the Jewish family of the Ben-Tibbon were mainly instrumental in making Averroes known to southern France' (W. Wallace and G. W. Thatcher, in *EBr*[11] ii. 282).

[1] See, further, I. Broydé and K. Kohler, 'Baḥya ben Joseph,' *JE* ii. [1902] 447–454.

neither Bible nor Rabbinic authorities are cited at all. This work, written in the form of a dialogue, reduced everything that exists to three categories: (1) God, the first substance; (2) the world, matter and form; and (3) the will, as intermediary. His teaching is based on Neo-Platonism, and, owing to the growth of Aristotelianism, exercised slight influence on Jewish thought. There is a difference between the pantheistic emanations of Neo-Platonism and the Jewish conception of creation. 'Moreover, the Neoplatonic doctrine that the Godhead is unknowable naturally appealed to a Jewish rationalist, who, while positing the existence of God, studiously refrained from ascribing definite qualities or positive attributes to Him. . . . Gabirol, unlike other medieval Jewish philosophers who regarded philosophy as the "handmaid of theology," pursued his philosophical studies regardless of the claims of religion' (S. S. Wise, in *JE* vi. [1904] 528b).

While Gabirol leaned towards Neo-Platonism, Judah Halevi, born in Toledo (*c.* 1085 – *c.* 1143), whose poetry, secular and sacred, furnishes some of the most inspired examples of the later Hebrew Muse, vehemently attacks the doctrine of emanation as well as the Aristotelian doctrine of the eternity of matter. As Hirschfeld says (*Khazari*, p. 6), his doctrine, like that of the Muslim al-Ghazālī, may be summed up in one sentence as a philosophic scepticism in favour of *a priori* belief. His most famous philosophical work was the *Cosri*, or *Kuzarī*, properly *Kitāb al-Khazarī*.

In this book he sets forth Jewish belief in a popular form, under the guise of a dialogue between a Rabbi and a king of the Khazars. This king, dissatisfied with his religion, consults Muslims and Christians in turn, and, finally, a Rabbi, whose faith he adopts. The short-comings of both creeds, as well as of Karaism, are discussed, and, in a more positive form, the beliefs and practices of Judaism are enumerated. The pivot of his belief in God is the fact of direct revelation and the preservation of this revelation by uninterrupted tradition (*Khazari*, i. § 25; Hirschfeld, p. 46). Aristotle failed through the fact that 'he exerted his mind because he had no tradition from any reliable source at his disposal. He meditated on the beginning and end of the world, but found as much difficulty in the theory of a beginning as in that of eternity. Finally, the abstract speculations which made for eternity prevailed, and he found no reason to inquire into the chronology or derivation of those who lived before him. Had he lived among a people with well authenticated traditions he would . . . have established the theory of creation, however difficult, instead of eternity, which . . . is more difficult to accept' (*ib.* § 65, p. 53). The testimony of Moses is to Judah Halevi an established fact, recognized by all three religions as historical, and handed down by unbroken tradition; the Bible cannot contradict truth or reason. Truth does not depend on the Bible, but is supported by it. Thus the Creation is supported by the testimony of Moses, *i.e.* it harmonizes with the Scriptural account. Even if a believing Jew were to hold the doctrine of the eternity of matter, it would not clash with his belief, according to the Bible, in the creation of this particular world (§ 67, p. 54). The soul, being part of the divine essence, must be undying, and a belief in immortality—of the soul, not of the body—is essential to religion (§ 103, p. 73). He upheld the Ptolemaic cosmology without hesitation. He opposed the determinism of the Jabariyya (those who believe that God compels man to disobey Him, since all actions come from God, not from man) without going as far as the Mu'tazilites (who believed in free will unlimited), and he attained this end by a modification of the theory of causation. He instituted intermediary causes between the Prime Cause and the ultimate end and established six axioms: (1) recognition of the Prime Cause; (2) belief in intermediary causes; (3) God gives the best possible form to every substance; (4) there is a graduation among organic beings as well as among mankind; (5) if the hearers of reproof pause to consider, they are near repentance; (6) man has power to do or avoid evil in matters under his control. It is, however, best to refer more important events in life to direct intervention of God (p. 21). The vindication (iii. §§ 25–27, p. 164) of the Massoretic text, in the cases where manuscripts differ, is interesting as being a germ of critical Biblical research, not so far developed as by Ibn Ezra. An enumeration of Karaite differences serves to prove the essential nature of the Rabbinic element in Judaism, and demonstrates the logical impossibility of interpreting the Bible and observing the Commandments without its aid. The influence of the *Kitāb al-Khazarī* was great at the time. Two Hebrew translations soon appeared and were widely circulated. To a large extent it was superseded by the *Guide* of Maimonides, chiefly owing to the fact that the latter work was Aristotelian, that is to say, it reconciled Aristotelianism and Judaism. Yet the *Khazarī* has in many ways survived the *Guide*, because it is read for its own sake, and not as an antidote. Throughout the Middle Ages it was studied; indeed many modern thinkers, such as Herder, have found in it a source of inspiration. The style is concise and clear, and the dialogue is so vigorous and real that it lacks the air of artificiality frequent in fictitious conversations. The *Khazarī* covers so much ground in relatively such small compass that it was bound to achieve popularity, merely by reason of convenience, even apart from superior intrinsic claims (see, further, art. HALEVI, vol. vi. pp. 478–480).

Mention must also be made of the Ibn Ezra family (see art. IBN EZRA, above, p. 67 f.). Moses ibn Ezra (*c.* 1070–1138), a prolific writer of *S'lîḥôth* ('penitential prayers'), was famous for his versatility. He was a philosopher and a linguist as well as a poet of very considerable gifts. His chief philosophical work, *'Ărūghath hab-Bōsem*, as it was called in the Hebrew version, only a portion of which is extant, was not, however, very popular, being eclipsed by his poems, the *Tarshîsh* and the *Dîwân*. In this book Ibn Ezra discusses the unity of God, the inapplicability of attributes and definitions of God, motion, nature, and intellect. The greatness of Moses ibn Ezra as a poet prevented posterity from according him due recognition as a philosopher. His relative, Abraham ibn Ezra (*c.* 1092–1167), was equally active in various branches of learning, notably as a Bible exegete, grammarian, and mathematician. He also entered the domain of philosophy, and compiled, in 1158, a book on the Commandments, called *Y'sôdh Môrâ*. He was to some extent a follower of the Neo-Platonist School, and Moses ibn Ezra calls him a Mutakallim.

His works were originally written in Hebrew, not in Arabic, though his contemporaries usually preferred the latter tongue. This is due in a degree to Ibn Ezra's subject-matter, which was intended more for Jews than for Muslims. His Bible Commentaries have been used by Christian students for many generations. He is noteworthy also for being, in a way, the father of Biblical criticism. Thus he hints, as plainly as he feels able to do, at the Deutero-Isaiah, and mentions as critical difficulties such verses as Gn 12[6] (see A. T. Chapman, *Introd. to Pent.*, Cambridge, 1911, p. 26). The solutions which he suggests are veiled under the phrase *ham-maskîl yâvîn*, 'the intelligent will perceive.'

From the great families of Ibn Ezra and Ḳimḥi, Jewish philosophy, grammar, and science received valuable support. Their contributions to learning were incalculable. France and Germany were the home of Talmudic and Biblical exegesis, Spain being more strongly devoted to philosophy.

The outstanding figure among Jewish mediæval scholars is Moses Maimonides, also known as Rambam (1135–1204), of whom it was said, 'From Moses unto Moses there arose not one like Moses.' His fame rests on several foundations, but for the present it must suffice to refer to the great influence which he exercised on Judaism, first as a philosopher, then as an exponent of Halākhā. His famous *Guide* was intended for

'religious persons who, adhering to the Torah, have studied philosophy and are embarrassed by the contradictions between the teachings of philosophy and the literal sense of the Torah.'

He taught the harmony of reason and revealed truths. He believed in a lost oral tradition of a philosophical nature, going back to the Prophets; and it was owing to the loss of this tradition and the lack of due understanding that the seeming opposition between religion and philosophy had arisen. Misinterpretation of anthropomorphisms had given rise to much perplexity and error. Maimonides' went further in his attitude towards anthropomorphic terms than his predecessors, who had regarded them as metaphors. He devoted much more attention to explaining them one by one, and laid far greater stress on the incorporeality of God. Further, he subjected the divine attributes to a searching analysis. He rejected the teaching of the Mutakallimīn, and based his philosophy entirely on Aristotle, for whom he had a profound admiration.

He adduces twenty-six propositions to prove the existence, unity, and incorporeality of God (*Guide*, pt. ii. ch. i., tr. M. Friedländer, London, 1910, p. 145). His proofs of the existence of God are based on the theory of motion. Motion requires an agent to produce it, the number of intermediate causes being finite. Some things receive motion and impart it; others receive but do not impart; consequently, there must be a primitive agency of motion that impels other objects, being itself unaffected. The unity of God is demonstrated in two ways: '(1) Two gods can not be assumed, for they would

necessarily have one element in common by virtue of which they would be gods, and another element by which they would be distinguished from each other; further, neither of them could have an independent existence, but both would themselves have to be created. (2) The whole existing world is "one" organic body, the parts of which are interdependent. The sublunary world is dependent upon the forces proceeding from the spheres, so that the whole universe is a macrocosm, and thus the effect must be due to one cause' (pt. ii. ch. i., tr., p. 158; cited from *JE* ix. [1905] 76).

The chief point in which Maimonides differed from Aristotle was the eternity of matter, although he maintained that the Greek philosopher was fully aware that he had not established his thesis. Maimonides believed in the *creatio ex nihilo*, and he held that this was in harmony with the teaching of Aristotle. The spheres and intelligences were not, as Aristotle taught, co-existent with the Prime Cause, but created by it. Evil does not proceed from God, because, being negative, it has no actuality. It is a negation, the absence of a capacity for good. He asserts human free will, somewhat at the expense of divine omniscience. This omniscience is incomprehensible to man, with his limited knowledge, but it is, none the less, supreme. The fact of God's foreknowing which of several possibilities will occur does not abrogate the freedom of choice. God foresees the result of a choice, having conceded full liberty of action at the outset.

Maimonides was entirely optimistic in his outlook. The ultimate aim of existence is happiness, and the object of the Commandments is to secure this end. He was the exponent of pure reason, and maintained the unassailed supremacy of the intellect. It is most typical of him that he did not believe in the *creatio ex nihilo* because of the Bible. He declared that, had his reason prompted him to adopt the Aristotelian eternity of matter, he would have had no difficulty in reconciling it with the Scriptures. Maimonides has been styled the first pragmatist. His breadth of mind and his attitude towards other faiths are remarkable. He recognized the validity, to a certain extent, of Islām and Christianity, and maintained that the adherents of these religions must not be regarded as idolaters. Salvation is not confined to Jews. 'The righteous of all nations have a share in the world to come' (*Hil. Tesh.* iii. § 11; see also references in I. Abrahams and D. Yellin, *Maimonides*, London, 1903, p. 94, etc.).

Maimonides, in his famous commentary on the *Mishna Ḥeleḳ*, regards immortality as intellectual. The wise man—*i.e.* the truly virtuous—will pursue good for its own sake. The child has to be encouraged to study by the offer of prizes. As man grows, his desires become greater, and the prizes have to be increased. So too, in mental and spiritual development, the hope of reward is the inducement to the masses to live virtuous lives. The saint requires no inducement. His reward is in the raising of his soul to the level of the divine essence. His motto must be, like that of Antigonus of Socho, to serve the Master not for the sake of a reward. In the Thirteen Articles of Faith which are formulated in the 10th pereḳ of Ḥeleḳ (which is quoted, in part, in Singer, p. 184, before ch. i.; see also *ERE* iv. 246ᵃ), Maimonides includes a belief in the Resurrection.

As a codifier, not less than as a philosopher, Maimonides exerted great influence on Judaism. Mention has already been made of the growth of codification, a necessary consequence to the nature and method of the Talmud. It was found desirable to compile more convenient hand-books or large digests, in which the laws could be more readily consulted; some of these were for the learned, others for the people. Laws had to be interpreted in accordance with the needs of the day and of local conditions, occasioned by the scattering of the Jews.

R. Isaac b. Jacob of Fez (1013-1103), called Alfāsī, a pupil of R. Nissim and of R. Ḥananeel of Ḳairowan, wrote a Compendium, which is practically the Babylonian—sometimes the Jerusalem—Talmud denuded of Haggādā and of all opinions which were not regarded as authoritative. Where the Geonim had modified the Talmud, their modification was adopted by Alfāsī. Isaac ibn Ghayyat (1030-1089) and Isaac b. Reuben (1043-1103) compiled books of laws, the former concerning festivals and fasts, the latter about oaths.[1]

All these were eclipsed, however, by the brilliance of the *Mishneh Torah*, or 'second Torah,' of Maimonides, which contains more than the Mishna, because it 'includes the fundamental doctrines of the Jewish religion . . . it represents a system of the whole of Judaism, ethical and ceremonial' (S. Daiches, 'Jewish Codes and Codifiers,' *Jew. Chron.*, Jan. 1909, pp. 1, 8, 15, 22). Maimonides did not, like the other codifiers, follow the order of the Talmud, but introduced new divisions and groupings. His style is concise and he cites no authorities—a practice for which he was blamed by his foes.

The Mishna Torah, also called *Yād hā-Ḥăzāqā* ('Strong Hand'), was written in Hebrew, because it was for general use. The *Guide*, being intended for students of Arabic philosophy, was composed in that language. Maimonides, in his letter to his pupil Aḳnin, states that he did not intend the *Hand* to supersede the Talmud as a study, but to provide a convenient work of reference, and to prevent students from going astray in practical laws.

By reason of his originality, and, especially, of his free attitude towards faith and reason, Maimonides was vehemently attacked, Abraham b. David of Posquières being a keen though sincere opponent.[2] His works were even committed to the flames, and the controversy was not softened for some considerable time; it continued long after his death. Maimonides omitted from his code anything of the nature of superstition or demonology which had crept into the Talmud. His description of the liturgy is very important for the reconstruction of the rite of Egypt and for a study of the development of the Prayer Book.

The influence of Maimonides is too great to be estimated briefly. He saved Judaism from being controlled by Aristotelianism, and, in consequence, from collapsing with the fall of that system. He vindicated the claims of reason while strengthening the right of authority. He brought harmony and unity into law and practice. Through his influence Judaism was delivered from the grasp of mysticism, which was already beginning to assert itself. He taught tolerance to those without, and breadth of mind to those within. His intellect shrank from no investigation, and yet his loyalty to Judaism was unswerving. Great men have the faculty of reacting even on their opponents, and in the case of Maimonides this was especially true. His Jewish adversaries were unconsciously affected by him. The influence of Maimonides continues to exert itself over Judaism to-day, and he is perhaps more frequently cited now than in the last few centuries. His fame must inevitably be bound up with that of Judaism for all time, and with him the mediæval period of Judaism closes.

**5. To the present day.**—Maimonides had arisen in Judaism as the exponent of pure reason and the defender of Aristotelianism. Shortly after his death, during, and, to some degree, in consequence of, the controversy which attached itself to his system, the mystic movement gained great foothold in Judaism. It is not altogether easy to trace its growth or its connexion with earlier and kindred manifestations (see artt. MYSTICISM [Jewish] and ḲABBĀLĀ). The mysticism of the Gnostics was re-echoed in the Haggādā; it slumbered while the minds of men were occupied with Ḳaraism, the Kalām, Aristotelianism, and Neo-Platonism. It must be remembered that the Jews of Germany were almost entirely limited to the Talmud in their studies. In Spain, where persecution had not restricted intellectual liberty as well as personal freedom, the Jews were allowed to devote themselves to science. Their natural inclination and

[1] On these three scholars see *JE* i. [1901] 375-377, vi. [1904] 583, 629.

[2] Cf. L. Ginzberg, *JE* i. 103-105.

aptitude for learning needed no encouragement; as soon as hindrances were removed, they applied themselves zealously to liberal culture. Many of their co-religionists in other lands, however, being prevented from enjoying these advantages, did not entirely appreciate the work of the Spanish Rabbis. They were rather repelled by the cold reason of Maimonides, and they also disagreed with his Halākhā. Hence a mystic reaction had every chance of success. Several distinguished scholars were attracted by the cult of the mysterious and lent it support. This new teaching, which was called *Ḳabbālā*, or tradition, spread from Gerona all over Spain, and also northwards. It was a revolt against logic, and sought to unite the divine element in man with the world spirit (*shekhel hap-pō'ēl*), by striving to attain perfection and self-purification. It inculcated the recognition of a harmony in all things. The microcosm is a counterpart of the macrocosm. The doctrine of the *S'fīrōth* ('spheres'), the agencies of the *En-Sōf* ('Infinite'), and the emanations and revelations of the Creator, the grades and functions of spirits and angels, and the relation between the material and the ideal were all worked out with mathematical precision (see, further, art. ḲABBĀLĀ). Metempsychosis[1] had already been taught by Isaac b. Abraham of Posquières, the Blind (fl. 1190–1210).[2] Life was surrounded with countless customs and acts having a mystical origin. In every secular deed, in every word of prayer, in every *miṣwāh*, man was to be brought to think of a new connexion with the spiritual world, and thus to induce the desired communion with it. The divine name was a mystery which overshadowed and influenced everything, and the letters of the name had a mystical power (see, further, art. TETRAGRAMMATON).

All kinds of devices were invented or employed to interpret the Scriptures in accordance with Ḳabbalistic notions. Examples of such ingenuities were *ṣērūf*, *nōṭārīḳōn*, and *gēmaṭrīā*, or permutations, the use of letters according to their numerical value and transposition. Various systems of substitution prevailed—e.g., *atbash* (. . . שב, תא), in which the first letter of the alphabet was equated to the last, the second to the last but one, and so on (see, further, art. NUMBERS [Jewish]).

The Abulafias, Isaac ibn Laṭif, Joseph Jiḳatilla, and Moses de Leon, the pioneers of Ḳabbālā,[3] were Spaniards. The most distinguished adherent was Moses b. Naḥman (Naḥmanides or Ramban), 1195–1270, who was known at an early age for his saintliness and learning.

His influence on Judaism was very great, because he was regarded rather as an orthodox Rabbi tinged with mysticism than as an absolute Ḳabbalist, for he believed in a *creatio ex nihilo*. If Maimonides be selected as the exponent of reason, Naḥmanides was the defender of authority. The former adopted a rationalistic attitude towards the Biblical miracles, ignoring those of the Talmud. To the latter the Biblical miracles were the object of veneration and implicit belief. Although his respect for authority was not limited to the Talmud, but extended to the Geonim and rendered sacred in his eyes even the utterances of his contemporaries, Naḥmanides did not hesitate to declare, at the great disputation of 1263, that a belief in Haggādā is not incumbent on the Jew. Naḥmanides' chief activity lay in the Talmud. His philosophical theories, though based on logic, in reality rest on authority. He made miracles the foundation of his system, rejecting Maimonides and Aristotle. 'For Nachmani, on the other hand, the belief in miracles was the foundation of Judaism, on which the three pillars of his structure rested: the creation from nothing, the omniscience of God, and the divine providence. . . . Maimuni assumed, with the philosophers, that the sensual instincts are a disgrace to man, since he is destined to a spiritual life. Nachmani was a strenuous opponent of this view. Since God, who is perfect, has created the earthly world, . . . nothing in it should be regarded as . . . hateful. . . . If Judaism was for Maimuni a cult of the intellect, for Nachmani it was a religion of the feelings' (Graetz, iii. 550 f.). Thus Maimonides insisted on the power of the intellect to solve the mysteries of religion, while Naḥmanides regarded the divine secrets as a sanctuary not to be profaned by any attempt at penetration. Demons and angels were rejected as heathenish by Maimonides; they are part of the system of Naḥmanides. The Ḳabbālā, laying great emphasis on miracles and authority, fitted admirably with his view of life, and the approval of so famous a Rabbi was of great value to Ḳabbalism.

The Ḳabbalistic scriptures achieved their fame very largely by the fact that they were pseudepigrapha. The most famous book was the *Zōhar* (*q.v.*), composed by Moses b. Shem Ṭob de Leon (1250–1305) after 1285. This work he attributed to Simon b. Joḥai; it was written in Aramaic, and its preservation was accounted for in a miraculous way. Its aim was to show that the Bible was never intended to be understood in a literal sense. In spite of its extravagances, the book exercised enormous influence for a long time. The *Bāhir* was composed by Azriel, one of the pupils of Isaac the Blind, and was attributed to Neḥunya b. hak-Ḳana.[1] Contemporary Rabbis, however, refused to acknowledge it, and Meir b. Simon of Narbonne (second half of 13th cent.) ordered it to be burned.

The Ḳabbalistic controversy lasted for many years. Its failure to capture Judaism completely was largely due to the firm bulwark in defence of reason erected by Maimonides; yet it saved Judaism from being reduced to a mere system of logic. It produced many saints, even though it created some fantastic enthusiasts. In the persecuted it stimulated hope and encouraged piety, and by emphasizing the inner underlying ideas it prevented observances from losing their spiritual meaning. The fault of Ḳabbālā lay in the fact that it was unfitted for the populace. In the case of a scholar or recluse, mysticism produced devotion and ecstasy; in ignorant minds it generated superstition. Gradually the Ḳabbalists drifted to Palestine. Safed became a centre where its devotees gathered, and Joseph Qaro, Isaac ben Solomon Luria, and Alḳabeṣ settled in the Holy Land. Their saintly lives are fine examples of the higher side of the movement.[2] So strong was its influence that the *Zōhar* was studied by many Christian scholars, who attempted to find in it proofs for the Trinity and Christianity. The famous Pico della Mirandola, the disciple of Elias Delmedigo, translated several Ḳabbalistic works into Latin, and introduced the Ḳabbālā to the notice of the Medicis in Tuscany. Pope Sixtus IV. (pope from 1471 to 1484) procured translations, and ordered them to be disseminated as evidences of Christianity (Graetz, iv. 314).

The influence of the Ḳabbālā on Christianity was not wide or permanent, and, similarly, Judaism was to no great extent influenced by Christianity during the Middle Ages. It was as persecutors and as slaughterers that Jews had knowledge of the Gentiles among whom they dwelt.[3] It is scarcely a source of wonder, therefore, that Judaism was so little affected by contact with Christianity. The followers of either religion knew and cared nothing for the thoughts and beliefs of the other. In the disputations between champions of the two faiths—*e.g.*, Paris (1240), Barcelona (1263), Burgos and Avila (1375), and Tortosa (1413)—the Christians desired simply to convert the Jews, and the Jews, who had no desire for controversy, were forced to argue. The attacks on the Talmud, the persecutions incidental to the Crusades, the Black Death, the charges of poisoning wells, the blood accusation, the whole-

[1] Adopted by the Muslims from Pythagoras, the conception of metempsychosis was borrowed by the Ḳaraites and denounced by Sa'adya, Abraham ibn Daud, and Ḥasdai Crescas. Rabbinic Judaism was unaffected by Ḳaraism in this respect, and the idea remained unknown till introduced by the Ḳabbalists. See art. METEMPSYCHOSIS (Jewish).

[2] Baḥya b. Asher calls him 'the father of the Ḳabbālā,' and this opinion is also that of Joseph Jiḳatilla, Recanati, and others (see *JE* vi. [1904] 620).

[3] See *JE* i. 141–144, vi. 586, v. 665 f., viii. 7.

[1] It is now believed, however, to have been the work of Isaac himself. On the book see I. Broydé in *JE* ii. [1902] 442 f.; on Azriel and Neḥunya see *ib.* ii. 378 f., ix. 212.

sale massacre of entire communities, the tortures of the Inquisition, the *auto da fé*, and the expulsions and sequestrations all combined to stigmatize Christianity in the eyes of the Jews as a religion of hate and blood. Consequently their own religion was unaffected by any attempt at contrast. Marranos and others, forced to change their creed often, seized the earliest opportunity of recanting their feigned conversion, even if their abjuration meant death.

The Renaissance and the Reformation brought some amelioration. Erasmus and Reuchlin were champions of freedom in thought, far in advance of their age. Luther, at first favourable to tolerance, ultimately changed his views. His pamphlet 'Concerning the Jews and their Lies' was full of bitterness; he detested the Jews themselves as much as he hated their religion, and his invective against both was boundless. The study of Hebrew by Christians was too strictly confined to a few learned men to influence the masses or even the ruling classes. Only in the case of Reuchlin did Hebrew learning among Christians prove of advantage to Jews, and it is not certain that even Reuchlin would have championed the cause of the Talmud had his hand not been forced by his Dominican opponents. Perhaps the most important event in which the influence of Christianity on Judaism may be observed is the expulsion from Spain, in 1492, by which the Jews were dispersed. Learning was spread abroad generally; in particular, a nucleus was formed in the East.

Towards the end of the 13th cent. a controversy arose in Judaism as to the study of science. The period when the *Zôhar* began to circulate was intellectually poor. There were no outstanding personalities who could have suppressed the extravagant fancies of Ḳabbalism and restored a due sense of proportion. Men had lost their feeling for the simple and were involved in intricacies. Biblical exegesis and preaching became tinged with obscurity, allegorization, and pseudo-philosophy. Their activity was frequently devoted not to thoughts and ideas, but to outward signs and the twisting of words. The chief of this school, Levi b. Abraham of Villefranche, near Perpignan (1240–1315), a follower of Maimonides, became the leader of the friends of science. Perpignan itself was the seat of this sort of false learning; the allegorization, *e.g.*, by Levi, of Biblical characters (thus, Abraham and Sarah were regarded by him as types of matter and intellect) provoked the antagonism of the orthodox and of those who favoured the literal exegesis. A conflict arose in 1303 which resolved itself into the question, Is the study of science opposed to Judaism, and should it be suppressed? The leader of the obscurantists was Abba Mari b. Moses of Montpellier, who, from the outset, opposed Levi of Villefranche, who stood for freedom of thought. The Rabbi of Perpignan, Don Vidal Menaḥem b. Solomon Me'īrī (1249–1306), was a very different type of scholar from his contemporaries. Of unimpeachable orthodoxy, he loved science and philosophy, and refused to be captured by Abba Mari; he became a champion of science, but declared that it ought to be studied only after the Talmud was thoroughly mastered. Abba Mari, however, managed to involve the Rabbi of Barcelona, Solomon Ben Adrat, in the quarrel, and secured his support. The lovers of science were led by Jacob b. Makhir Tibbon, a mathematician and astronomer, and the famous Tibbon family were naturally all on the liberal side, gaining many adherents to their cause by accusing their adversaries of being anti-Maimonists. While the strife was raging, there came from the Rhineland, where he had been driven by persecution, the distinguished Asher b. Jeḥiel (1250–1327),[1] a pupil of the famous Meir of Rothenburg. Asher wandered from his native country to escape the massacres of Rindfleisch, which were destroying whole communities, and, in 1305, he was made Rabbi of Toledo. He was a great Talmudist and the compiler of a famous abstract of the Talmud, but he was a bitter enemy of secular scholarship. Naturally he joined the side of Abba Mari and proposed to convoke a synod in which science was to be condemned and utterly banished from the Jewish curriculum. Finally, on 26th July 1305, a solemn ban, to remain valid for fifty years, was pronounced against all secular study and also against the works of Maimonides. Any person under the age of twenty-five reading a scientific work was to be excommunicated. The organization of the Jewish communities was such that the ban affected only the town under the jurisdiction of the particular Rabbi who issued it—in this case Barcelona. Attempts were made to have the decree recognized elsewhere, but meanwhile the other side were not idle, and issued a counter-ban from Montpellier by which excommunication was pronounced against all who should prevent their sons or other persons from studying science, in whatsoever language the text-book was written, against those who abused Maimonides, and against those who attacked religious teachers because of their scientific or philosophical thoughts. The cause of the enlightened party prospered and gained much from the famous circular letter (*'iggereth hithnaṣṣelūth*) which Jedaya Bedaresi (on whom see *JE* ii. 625–627) wrote in 1306 to Ben Adrat and his party in defence of science and Maimonides. After the French expulsions, partisans of the two parties settled in Perpignan, and the controversy continued; but the liberal views gained the day in the end, and Judaism as a whole asserted itself in favour of science.

Perpignan had been the centre of the obscurantists, but scholarship was not killed there. From this town came forth a worthy successor of Maimonides, who went even further than that scholar himself in his daring attitude towards reason and learning. This great man was Levi b. Gershon (*q.v.*), called Gersonides, Ralbag (from his initials), Leon de Bagnols (from his birthplace), or Magister Leo Hebræus (1288–1344). The ban against science had no effect on his education. Before his thirtieth year he began his famous philosophical work, *Milḥāmôth 'Ădhônāi* ('Wars of the Lord'). Of his numerous other works, his Talmudic knowledge, and his scientific and medical attainments it is impossible to write here; his influence on Judaism can be measured by his philosophic attitude in the work mentioned above.

He stood forth as a convinced Aristotelian, to a much greater degree than Maimonides, so that he sometimes does not scruple to follow Aristotle when he disagrees with Jewish doctrine, even where Maimonides threw the Greek philosopher over. He denied that the Torah required blind faith or belief in anything opposed to truth and reason. The 'Wars' deals with the six questions on which Maimonides deserted Aristotle or to which he gave no clear reply, these points being: (1) immortality; (2) prophecy; (3) divine omniscience; (4) divine providence; (5) the nature of the spheres; and (6) the eternity of matter. Ralbag defines the intellect born in man as a faculty which is operated by the universal intellect; man cannot think apart from the object of his thought. He derives immortality from the doctrine of the realists. He maintains the freedom of the human will in spite of the divine omniscience. He differs from Maimonides on the position assigned to the function of the imagination in prophecy, Maimonides holding that it should be encouraged, Ralbag that it should be subordinated to reason. Further, 'for Maimonides the special will of God is the sine qua non for prophecy; for Levi moral and intellectual perfections are quite sufficient' (I. Broydé, in *JE* viii. 30ᵃ). Ralbag demonstrated that this world had a beginning and was not the outcome of a previous world, but that it has no end. The *tōhu wā-bhōhu* (Gn 1²) existed from all time, but was formed by God at the

[1] On these scholars see *JE* viii. 22–24, 441, i. 33 f., 212 f., vi. 544, ii. 182 f.

Creation. As regards miracles he was extremely rationalistic, and he formulated three conditions by which they were to be judged: (1) miracles are transitory; their effect does not endure; (2) they are not self-contradictory; nothing can be black and white simultaneously; (3) they cannot take place in the celestial spheres. Miracles are not supernatural, but are natural results—though rare—of laws governing the universe. In Jos 10[12], the miracle was not the standing still of the sun, but the rapidity with which the Israelite victory was achieved. So also in the case of Hezekiah (2 K 20[9-11]), it was the shadow, not the sun, that went backwards.

Naturally the theories of Ralbag did not pass unchallenged. His ideas were not popular with the masses, but retained their hold over learned minds for generations. Pope Clement VI. ordered his astronomical works to be translated into Latin, and Spinoza adopted Ralbag's treatment of miracles (see Graetz, iv. 101). A contemporary of Ralbag was Moses b. Joshua of Narbonne (Vidal Narboni), who was born at Perpignan. He died after 1362. In his case, too, the ban was ineffectual, for he began the study of philosophy at the age of thirteen.

He was a follower of Maimonides and Ibn Rushd (Averroes; see art. AVERROES, AVERROISM, vol. ii. pp. 262–266). In spite of a chequered life, he was a productive author, and his works exerted considerable influence. He 'conceived Judaism as a disciplined guide which led to the attainment of the highest degree of theoretical moral truths: the Torah had a double meaning, the one simple, made easy for the thoughtless mob, and the other of a deeper metaphysical nature for the class of thinkers. This was a common opinion in those times, from which Gersonides alone demurred. Narboni also gave expression to heretical views, that is, such as were contrary to the ordinarily accepted understanding of Judaism, but not with the freedom and openness of Levi ben Gerson. He also rejected the belief in miracles, and attempted to explain them away altogether. He defended man's freedom of will by philosophical arguments' (Graetz, iv. 102).[1]

Ralbag was a staunch Aristotelian, but the Jewish philosophers were not confined to this school of thought. Ḥasdai b. Abraham Crescas (1340–1410), born in Barcelona, sought to free Judaism completely from Aristotelianism, and was thus at variance both with Ralbag and with Rambam. His second work was a *Tratado* written in Spanish in 1398, a refutation of Christianity, designed less as an apologetic for Judaism than as an attack on the apostates. His third work, *Ôr 'Ădhônāi*, is a masterpiece of reasoning and style.

Crescas declared that the teachings of Ralbag and Rambam were contrary to orthodoxy, mainly because they were based on Aristotle, but he differed from the other opponents of these teachers in that he came forward with argument, not with appeals to authority or threats of excommunication. Maimonides had accepted the twenty-six propositions of Aristotle. Crescas rejected them. He held that philosophy was inadequate to demonstrate the unity of God. Although philosophy might show that the First Cause was simple and not compound, yet there might still be deities subservient to the Supreme God. Therefore revelation and religion are necessary. God's essence was not knowledge, but love. Crescas also admitted attributes. He rejected the thirteen articles of the creed of Maimonides as being either too few or too many, and based Judaism on six essentials: God's omniscience, providence, and omnipotence; prophecy, free will; and the belief that the world was created for a purpose. Man's will is free because he feels it to be free; though in reality God's omnipotence predetermines, yet man's will is sufficiently free to admit reward and punishment. The world was created, and would pass away, while the heavens would endure. The purpose of the world was human happiness, to be brought about by love, both here and in the hereafter. Knowledge is apart from the soul.

It will thus be seen that the gulf between Crescas and his predecessors was very great. Crescas, when not actually attacked, was strangely ignored by his contemporaries. His teaching was diffused largely by the works of his pupil Joseph Albo, chiefly through the *Iqqārîm* ('Roots'), in which there is little originality, the matter being almost entirely derived from Crescas.[2]

The appearance of David Reubeni (*c.* 1490–1535) and Solomon Molko (*c.* 1500–32) kindled great hopes in the hearts of the Jews and Marranos. Their extraordinary adventures gained them many followers, and the honour with which they were received in Rome and Portugal deluded many into the belief that their Messianic claims were valid. Their failure caused bitter disappointment, though the heroic constancy of Molko at his martyrdom (1532) encouraged many who were doomed to a similar fate. Their importance to Judaism lies in the fact that the failure of one pseudo-Messiah did not prevent his successor from receiving credence.[1] Only 130 years later, Judaism was rent by the schism produced by another claimant, Shabbethai Zebi, whose followers were numbered by thousands (see below, p. 605[b]).[2] Ḳabbalism was largely responsible for these eschatological ideas. Already in 1284, Abraham Abulafia declared himself to be the Messiah, and fixed the millennium for 1290. Two of his disciples, Joseph Jiḳatilla and Samuel, from Medina Celi, alleged themselves to be prophets and harbingers of the Messiah, and Messianic hopes were largely predominant in the minds of the later Ḳabbalists at Safed.

It has already been pointed out that Christian persecution was driving the Jews into Muslim countries. Little by little, Turkey and Palestine were receiving a large Jewish population; Safed, in particular, became the home of many distinguished Rabbis. Among these Rabbis there grew up the desire to re-establish the old Rabbinic supremacy of Palestine. They desired to institute once more the *s*e*mîkhāh*, or ordination, and thus ordain a Sanhedrin which would be recognized throughout the world. In 1538, Jacob Berab[3] began to ordain in Safed; but his plans were frustrated by Levi b. Jacob Ḥabib, the chief Rabbi of Jerusalem, and his colleague, Moses de Castro. Berab failed and was forced to emigrate, but before doing so he ordained four disciples, one of whom was Joseph Qaro. Had Berab succeeded, a great step in the direction of Jewish ecclesiastical unity would have been accomplished. It is significant that he failed. Judaism has never liked centralization of authority, certainly not since the Diaspora, and it has flourished perhaps by reason of its local autonomy in religious spheres. Had a single authority been able to control Jewish thought and belief during such controversies as raged over Ḳaraism, Maimonides, the study of science, and the Arab and Greek philosophy, the result would have been the growth of sects, from which Judaism is so remarkably free. Had the central authority, during any of these conflicts, taken sides, Judaism would have been crippled. Freedom of thought, the result of local autonomy and independence, alone has preserved it from disintegration.

The convocation of synods, however, is not an unknown event in post-Talmudic Judaism, but the feature of these synods has usually been their temporary character and their convocation for a particular purpose. Thus, the *'ăsîfôth*, or assemblies, of R. Tam, in the middle of the 12th cent., met at Troyes and Rheims to determine many cases, generally those arising out of the intercourse of Jews and Christians. Perhaps the most famous synod was that summoned about 1000 by R. Gershom (960–1040), which (1) prohibited polygamy, (2) maintained the principle of mutual consent in divorce, (3) ordained leniency for forced converts, and (4) prohibited the opening of other persons' letters. Assemblies were also held at Mainz (1223 and 1381), of the Spanish Jews (1354), and at Bologna (1416), Forli (1418), Jerusalem (1552), and Lublin (1650), while Napoleon (1806) and Alexander I. (1804) summoned synods. In 1903 a synod of 50 Rabbis was held at Cracow, under the leadership of R. Elijahu Ḥazzan, chief Rabbi of Alexandria, which repudiated the blood accusation and

[2] Also the followers of David Alroy (*c.* 1160) formed a sect called the Menaḥemists (cf. M. Adler, in *JE* i. 454 f.).

[3] See L. Ginzberg, 'Berab, Jacob,' in *JE* iii. 45–47.

denounced Nihilism. In America and Germany synods have frequently been summoned in modern times, chiefly by the Reform party. The synod of Lublin, in 1650, was of a permanent character, and the famous *Wa'adh 'arba' 'ărāṣôth*, or 'Council of the Four Countries' (usually Great Poland, Little Poland, Polish Russia, and Volhynia), sat regularly during two centuries. But all these synods were, in effect, local. They did not pretend to legislate beyond their own jurisdiction, though their rulings were, in many cases, voluntarily accepted elsewhere. The theory of the Rabbis has always been mutual equality; there has been no official *primus inter pares*. At the present day in England, various Sefardic and Ashkenazic communities exist side by side, in friendship and mutual recognition; their position may be compared to adjacent dioceses of the same Church, without a primate.

Judaism maintains the individual freedom of every Rabbi, and his right to give ordination (*s'mîkhāh*) to suitable disciples. The validity of this ordination must be recognized by all Jewry, though no Rabbi may exercise his functions within the jurisdiction of another. In practice, the Ḥakham of Bevis Marks and the chief Rabbi of Duke's Place are the highest court of appeal for the Sefardim and Ashkenazim not only of the Empire, but often, it would almost be safe to add, of the world. On the Continent local Rabbinic supremacy is well-nigh universal.

The great Halākhic work of Maimonides did not check the compilation of codes. Many teachers devoted themselves to the task, either for popular use or for the elucidation of the principles of Halākhā. Elī'ezer b. Nathan of Mainz (Raban) was the author of the *'Ebhen hā'-Ēzer*. Moses of Coucy wrote the *Semag*, or *Sēfer Miṣwôth Gādhôl*, and Isaac of Corbeil composed the *Semaḳ*, or *Sēfer Miṣwôth Ḳāṭôn*, a smaller work. El'azar of Worms (1176–1238), a prolific and vigorous writer, was the author of ritual and Ḳabbalistic works. His fame rests chiefly on the *Rôḳēaḥ*, an ethical-Halākhic work in 497 paragraphs. His Ḳabbalism tinged his views very deeply, but the *Rôḳēaḥ* is a valuable contribution to Judaism. Solomon b. Adrat of Barcelona wrote a comprehensive scheme of laws, covering all the practical needs of Jewish life. In distinction to Maimonides, he gives in this work, *Tôrath hab-bayith*, the sources and proofs of his rulings. Perhaps the most famous of the post-Maimonidian codes was the *'Arba' Ṭûrîm* of Jacob b. Asher (1280–1340), a son of Asher b. Jeḥiēl.[1] Its influence on Judaism was greater than that of any other code, and it became a household word. Joseph Qaro, when he thought it necessary to compose the *Shulḥan 'Arûkh*, practically revised and brought up to date the work of Jacob b. Asher. Qaro was a mystic and devoted to Ḳabbālā. His life and those of the Safed Ḳabbalists have been well portrayed by S. Schechter in his *Studies in Judaism* (London, 1896). Their influence pervaded Jewish life and ceremonial, and many a touch of spirituality, a high association, an ethical hint, is due to their teaching. They introduced a spirit of consecration, a sanctification of religious practice, devotion, and self-sacrifice.

Excess of their teaching would have made Judaism unreal and superficial; in due proportion it gave life and light. Protected and fortified by Maimonides and the philosophers, Judaism was safe from the dangers of an exaggerated mysticism. On the other hand, the entire absence of the mystic element would have reduced it to a collection of intellectual dogmas, lacking warmth and vitality. Its stability is due to the heterogeneous nature of its component elements and to the proportion and moderation with which each one had fulfilled its appointed function.

Poland was pre-eminently the home of Talmudic study. The Polish synods had given an impetus to this learning, and the practical jurisdiction of the Rabbinical tribunals forced judges as well as litigants to master the code by which judgment would be given. Fast as the printing presses worked, the output of copies of the Talmud was speedily sold out. In forty years, three large editions were exhausted (Cracow, 1602–05, 1616–20; Lublin, 1617–39). So great was the devotion and so numerous were the Rabbis and pupils that the supremacy of Poland was everywhere recognized. The dispersion of the Polish Jews, due to the terrible atrocities in 1648 of Chmielnicki (1595–1675), had scarcely any effect on their attachment to the Talmud. They carried their love with them into exile and clung to it more firmly in distress. This enthusiasm carried with it one great disadvantage, for every other study, Jewish and secular, was abandoned, and the Polish Jews immured themselves in an intellectual ghetto, the confines of which were as narrow and crushing as those of the physical pale. There began a period of darkness and ignorance, which was ended only by the light of the Mendelssohnian movement. It is incorrect to attribute this misfortune to the nature of the Talmud. It was not concentration on the Talmud, but the exclusion of everything else, that was responsible for this retrograde tendency. The devotion of the Polish Jews to the Talmud is largely maintained to-day, but other influences are at work, and, while they no longer shut out general knowledge from their curriculum, their seal for Halākhā is not abated.

In the 17th cent. three different influences exerted themselves upon Judaism. The Talmudic influence, alluded to above, became more powerful with the diffusion of the Polish Jews over Europe. Secondly, a strong wave of Ḳabbālā infected Jewish communities in every land, East and West. This naturally was followed, in reaction, by a strong spirit of opposition. This phase of Ḳabbālā had nothing in its favour. The earlier sublimity of the mystic idea was gone; it degenerated into senseless tricks and juggling. Isaac Luria and his pupils, in spite of their piety, were the teachers of an unworthy superstition. They claimed to work miracles, and deluded the ignorant by their visions and alleged wonders. They preached metempsychosis, the union and redemption of souls, and practical magic, often by means of the ineffable name. Ḥayyim Vital Calabrese, his brother Moses, and his son Samuel lived in Palestine (Jerusalem, Safed, and Damascus being strongholds of Ḳabbalism); Israel Saruk,[1] a pupil of Luria, and Menaḥem Azaria da Fano, in Italy. The teaching of these men and their numerous followers prepared the way for the pseudo-Messiah Shabbethai Zebi.

This wonderful impostor succeeded in winning over thousands; not merely the ignorant multitude but learned and earnest Rabbis followed him. All over the world preparations were made for the Messianic Age, which he fixed for the Annus Mirabilis, 1666. London and Amsterdam vied with Smyrna in eagerness, and few kept their heads during this convulsion. So strong was his personality that, in spite of his ludicrous failure, multitudes believed in him. A rumour arose about Shabbethai similar to the Docetic theory of the Crucifixion, which maintained that a substitute had intervened and saved Jesus from the Cross. It was said that another had apostatized, and that the real Shabbethai had withdrawn for a while and would reappear in glory. The belief in him has remained to the present day, and a separate sect of Turkish Jews, called the *Dönmeh* (on whom see R. J. H. Gottheil, *JE* iv. 639), await his second coming. When the majority of his misguided admirers recovered their senses, every reminiscence of the false prophet was banned. Thus it is said that the *Ma'ărābîth* for the second day of Pentecost (אלהים דבר by Raban) is omitted from the usual Ashkenazic *Maḥzôr* because of some supposed association with Shabbethai. The Messianic spirit had in earlier times made itself felt in Holland. It was re-echoed by the English Puritans, and to no small extent facilitated the return of the Jews to England.

The excesses of Talmudism and Ḳabbalism produced an intellectual revolt, the last of the three tendencies to which allusion has been made. For the first time Judaism had to deal with calculated and philosophical scepticism. This new trend of thought was first manifested in three contemporaries, Uriel da Costa (1590–1647; see art. ACOSTA,

[1] For sketches of these writers see *JE* v. 118 f., ix. 66–70, vi. 623, v. 100 f., i. 212 f., vii. 27 f.

[1] For these see *JE* viii. 210–212, xii. 442 f., xi. 64.

vol. i. p. 74 f.), Leo of Modena (1571–1648), and Joseph Delmedigo (1591–1655).[1] There were many points of difference between the triad. Da Costa was a Marrano who, dissatisfied with Roman Catholicism, renounced it for his ancestral faith. He was, however, disappointed with Judaism. He made no secret of his views, and was twice excommunicated for heresy. After doing penance and being reconciled, he shot himself.

Da Costa maintained that the Talmud had intervened between the Bible and Judaism. He was a deist, and believed in a religion of nature to be found in every human conscience, an ethical form of creed in which Judaism as well as other faiths had a share in common, and from which all had, in various degrees, deviated. It is doubtful whether he considered himself to have abandoned Judaism. Certain it is that he was regarded by his contemporaries as an apostate; but the point at issue was precisely this, whether the Judaism of the day was the faith in its true form or whether Talmudism had been substituted for it. The Jews who had settled in Holland had suffered so severely for their religion that they would not bear any attacks on that for which they had jeopardized their lives. Persecution had made them intolerant, yet they must not be blamed too sharply, for the age was not ready for unrestrained freedom of thought. Absolute liberty would most probably have degenerated into a decay of all moral and ethical bonds.

Leo of Modena remained a Rabbi to the day of his death. His intellectual powers were of a higher order than those of Da Costa, while his frame of mind affords a curious psychological study.

Although his teaching was in favour of religion, he was himself assailed by doubt. He could attack Judaism and defend it with equal sincerity and conviction. His vacillation was due, on the one hand, to instability of character; on the other, to bitter misfortune, both in his family life and financially. In his *Bêth Yᵉhûdâh* he upholds the legal right of the Rabbis to modify Talmudic legislation, and he regards the Haggâdâ unfavourably. In his *Ḳôl Sâkhâl* (or *Bᵉḥinath haḳ-Ḳabbala*; J. A. Benjacob, *Ozar Ha-Sepharim*, *Bibliog. der hebr. Lit.*, Wilna, 1880, p. 69, no. 283) he attacked traditional Judaism;[2] in his *Sha'ăgath 'Aryēh*, he defended it. The *'Ărî Nôhēm* refutes Ḳabbâlâ and proves the late origin of the *Zôhar*. Yet he believed in astrology. His literary activity was great. On account of his official position, his influence was far greater than that of Da Costa, but he did not go to the same length, and he remained orthodox in practice. In a way, Leo was the father of the modern Reform movement, but through his inconsistency and his avoidance of conflict he achieved no practical result.

Joseph Delmedigo differed from Leo of Modena and from Da Costa in that he cannot be acquitted of insincerity. He had a wide education in liberal culture and science as well as in Jewish subjects.

He was active as a writer, and in spite of his wandering life he managed to compose a number of works. He had intimate associations with the Ḳaraites, and one of his best known books, *Êlîm* (in allusion to Ex 15[27]), is a reply to twelve questions addressed to him by Zeraḥ b. Nathan, a Ḳaraite. Delmedigo officiated for a time as Rabbi in Hamburg. He never ventured to proclaim his real views, but covered them with a veneer of orthodoxy. On this account he was highly esteemed by many, who did not see him in his true light, or who regarded merely his erudition. As a sceptic his influence on Judaism was small; he merely illustrates, as another type, the growth of the movement.

Of a different character was Baruch Spinoza (*q.v.*) (1632–1677). He could not conform, either through fear or from motives of personal advantage, to what he believed to be untrue. Delmedigo might become a Rabbi, Descartes, whose teaching Spinoza followed, might vow a pilgrimage to Loreto, but to Spinoza external adherence was impossible.

He believed that Judaism was bound up with the Jewish State and ought to have ended with the destruction of the first Temple. For this reason, he regarded opposition to the State religion as unjustifiable, and resistance to the Inquisition as futile. Owing to his excommunication and persecution, he regarded Christianity more favourably than Judaism, but he had no serious thoughts of adopting it. It is a question whether his conception of the universe as a part of God, of the Deity as a self-producing Creator of all things, and of man as entirely controlled by causes reaching far back into universal natural laws could ever have been reconciled to Judaism, for Spinoza definitely rejected a personal God, Providence, and immortality. Yet, in his day, Maimonides was equally zealous in his search for truth and did not leave the fold. The influence of Spinoza on Judaism came later; his influence extended to individual Jews rather than to corporate Jewish belief.

[1] See *JE* viii. 5–7, iv. 508 f.

[2] See 2nd treatise, ch. iv. = p. 28, ed. Isaac Reggio, Göritz, 1852, and also 3rd treatise. He urged very sweeping changes and modifications.

Far more important to Jewish development was Moses Mendelssohn (*q.v.*) (1729–86). No less brilliant than Spinoza, no less erudite, and similarly endowed with a capacity for philosophy, he was a tower of strength to Judaism. To him is due the great revival which aroused thought, stimulated culture, and once more brought Judaism into contact with external learning. Without Mendelssohn it would have sunk more deeply into the clutches of ignorance and remained an easy prey to the attacks of atheism.

Mendelssohn had to contend with opposition on account of his translation of and commentary on the Bible, but his teaching was enormously diffused and gave vast numbers of young men an insight into modern thought, without destroying their faith. Like Maimonides, he was one of those intellectual giants that give another turn to the wheel of Jewish ethics and intellect. His effect was all the more potent since it almost coincided with the break up of the ghetto. The Jews emerged into more intimate contact with their surroundings and, dazzled by the sudden light, found help in his guidance. His preference for German over jargon was in itself epoch-making. He taught fidelity to Judaism and respect for the belief of others. His friendship with Lessing helped to make the cause of Judaism known outside and may be counted as a stage in the progress of Jewish emancipation.

Mendelssohn and Naphtali Hirz Wessely were the founders of a Jewish Renaissance, and their work was continued by Naḥman Krochmal (1785–1840) and Samuel David Luzzatto (1800–65).[1] The large array of Jewish scholars of the 19th cent. all owed their inspiration ultimately—in whatever branch they were engaged—to the Mendelssohn revival.

Wessely, in his *Dibhrê Shâlôm we-Emeth* (Germ. tr. by D. Friedländer, *Worte der Wahrheit und des Friedens*, Berlin, 1798), had outlined a scheme of education in which science and Talmud should both find a place; nevertheless, he was not regarded with cordiality by many Polish Rabbis, some of whom were genuinely frightened at the combination, though not hostile to it, while others were merely obscurantist. The result of the rejuvenescence was, it is true, that a certain number became estranged, but many were fortified in their belief. At the same time a curious development had arisen in Poland, a revival of Essenism and mysticism, the followers of which called themselves by the old name Ḥăsîdîm. The founders of the new movement were Israel b. Eliezer, called Ba'al Shem-Ṭob (Beshṭ) (1698–1759), and Baer of Meseritz (1710–72).[2] The extraordinary piety of these men was re-echoed in their followers. Prayer was a vital force, and was the means of union and fusion with the Godhead. In spite of the attempts at miracles and predicting the future, and of a few unworthy practices, the sect was, and remains to the present day, a band of devotional enthusiasts, giving themselves entirely to introspection and prayer. The quaint religious exercises of the Ḥăsîdîm and their partial antagonism to the Talmud brought them into conflict with the Rabbis, and they were denounced by Elijah Wilna (1720–97),[3] while in 1781 they were declared to be heretics. Their antagonists, the *Mithnagedim* ('opponents'), rightly perceived that Judaism has no liking for extremes. The excesses of the Ḥăsîdîm were becoming intolerable; and, as their numbers grew, their eccentricities developed. It is estimated that at one time they numbered 100,000, although this is perhaps too large a figure. With the political emancipation of the Jews, a new era in Judaism began, although this emancipation is still incomplete in many lands. The effects can scarcely yet be estimated. Russia, the home of the greater number of the Jews, is still pursuing a policy of repression which affects not only the Russian Jews, but those of other

[1] On these three see *JE* xii. 506 f., vii. 576 f., viii. 224–226.

[2] For the difference between the teachings of Luria and Beshṭ, *i.e.* Ḳabbâlâ and Ḥasidism, see *JE*, *s.v.* 'Ba'al Shem-Ṭob, Israel b. Eliezer' and 'Baer (Dob) of Meseritz,' ii. 383–386, 430–433.

[3] See M. Seligsohn, 'Elijah ben Solomon,' in *JE* v. 133–135.

countries to which fugitives go. Emancipation brings many problems in its train; for, so soon as a community begins to solve some of the difficulties and readjust itself to new conditions, an influx of Russians renews the process. Education is in many respects the solution. A proper curriculum, in which religious and secular knowledge shall each have a proper place, is being gradually and variously evolved. In Russia, the Haskalah movement has usually been sterile, because the tendency of the Maskilim and their children is almost invariably towards assimilation.[1] This is in reality due to economic conditions. The oppressive restrictions imposed by the Government on schools and learning prevent the rise of a carefully planned scheme of education. Thus modern knowledge must be acquired, almost entirely, either surreptitiously or from anti-religious sources. For the Zionistic movement in modern Judaism see art. ZIONISM.

III. *JUDAISM AT THE PRESENT DAY.*—The future of orthodox Judaism and its relations with Christianity, on the one hand, and Zionism and liberal Judaism on the other, may be briefly summarized. It is unnecessary to dwell on the origin of Christianity. Graetz (ii. ch. xiv.) has traced the steps by which the breach between the two faiths was finally consummated. Judaism does not admit that Jesus was the promised Messiah. It cannot accept such distinctively Christian doctrines as the miraculous birth of Jesus, His divinity and relation to the Father, the Trinity, the Atonement, the Resurrection, the idea of mediation, the conception of sin.[2] Further, Judaism differs from Christianity with regard to the Law, neither admitting the possibility of its abrogation nor regarding it as burdensome. The Commandments are given to man 'that he may do them and live by them' (Lv $18^{5}$). Judaism has a more optimistic view of life than Christianity; it does not hold the Essene doctrine that wealth is a bad thing under all circumstances (Lk $6^{24}$ $18^{24.25}$, Ja $1^{10}$, Mt $19^{23}$) and that marriage is evil. No Rabbi may be a celibate. Marriage is the first commandment of the Bible (Gn $1^{28}$). The *Yēṣerhā-ra'* is from God (see F. C. Porter, *Yale Bicentenary Bib. and Sem. Studies*, London, 1901, p. 122); it is called טוב מאד (*Gen. Rab.* p. 71 foot, of Theodor's ed., Berlin, 1903; see his note), and God instituted it 'for his glory' (see second blessing of Jewish Marriage Service, Singer, p. 299; cf. Book of Common Prayer, The Form of Solemnization of Matrimony: 'Matrimony, which is an honourable estate instituted of God . . .'; but ct. 'It was ordained for a remedy against sin and to avoid fornication'). Judaism does not regard family ties as an impediment to man's whole-hearted service of God (ct. 1 K $19^{20}$ with Lk $14^{26}$; see also Mt $10^{37}$, and Rashi on Lv $19^{2}$), nor does it approve of asceticism.[3] The Nazirite had to bring a sin-offering (see *Bab. Taanith*, 11*a*=Goldschmidt, iii. 441, כל היושב בתענית נקרא חוטא; in Babylon only the ninth of Ab was observed). Finally, Judaism does not declare that belief in any dogma is necessary to salvation. It teaches that 'the righteous of all nations have a share in the world to come' (Maimonides, *Hilkhôth Teshûbhā*, iii. § ii.), that 'the teachings of him of Nazareth and of the man of Ishmael . . . serve to bring to perfection all mankind, so that they may serve God . . .' (Maimonides, ed. D. Yellin and I. Abrahams, London, 1903, p. 94 ff.), that 'the good actions of any man, to whichever people he may belong, will be rewarded by God. But the priority belongs to people who are near God during their

[1] See, further, artt. 'Haskalah,' 'Maskil,' in *JE* vi. 256-258, viii. 364.

[2] See 'Sin as Rebellion,' etc., in S. Schechter, *Some Aspects of Rabb. Theol.*, p. 219 ff.

life, and we estimate the rank they occupy near God after death accordingly' (*Khazari*, i. § 111=Hirschfeld, p. 78; see also *Exodus Rabba*, p. 49, and, for other references, D. Wasserzug, *The Messianic Idea*, p. 22). The function of Judaism is to fulfil the Isaianic ideal of a missionary 'Remnant.' Though it recognizes the general truths of Christianity and Islām, and the religious validity of these systems, it cannot concede that its own destiny is accomplished, as long as the differences outlined above remain in existence. While rejecting ecclesiasticism, Judaism can fully appreciate the life of the founder of Christianity; and, in estimating the practical value of that faith, it pays regard to the noble lives fostered by its ideals rather than to the persecutors that have proved false to its teaching.

Judaism is to be the religion of a Remnant; from the material sacrifices demanded of its adherents, resulting from an environment preponderatingly non-Jewish, it is inevitable that Judaism, under present conditions, must be limited to a minority. This circumstance constitutes its strength. It must never be forgotten that the minority influences the majority, not *vice versa*, for good. All great movements spring from the few; when they have permeated to the many, it is more often a sign that they have failed, and that there is need for a new growth, than that they have accomplished their purpose. Nearly every ideal degenerates with popularity. When the masses are stronger than their leaders, chaos results.

'In a great population animated by democratic notions, recognizing no external authority in matters of faith or taste, with a growing passion for equality and a greedy desire to handle the good things of this world, as recommended by the modes and methods of life of the wealthy and luxurious, it would be irrational to expect to discover any general refinement or delicacy of thought or feeling. . . . To expect too much of the human race is the ancient error of moralists and the sin of the satirist. In his lecture on "Numbers," delivered in the United States, Mr. Matthew Arnold illustrated by quotations from Plato and Isaiah the truth *that it is always the remnant that saves a nation or a race*, and the advantage of a big country and a great population is that the remnant has at least a chance of being a good large one' (Augustine Birrell, 'Modern Conditions of Literary Production,' *EBr*[10] xxx. [1902] p. ix).

The losses sustained by Judaism through perversion and by the oppression of the Jews in Russia and Rumania, together with the more subtle but no less severe persecution prevalent in some other countries, have produced Zionism, for the Zionists regard a minority as doomed to failure. Originally this movement was purely economic and philanthropic in scope; Herzl's Zionism was bound up in the Basel programme, 'to secure a *legally assured* home in Syria and Palestine' for persecuted Jews. The words 'legally assured' differentiated Zionism from the other colonizing enterprises. Since the death of Herzl, who said, 'Der Weg zum Judenlande führt durch das Judentum,' Zionism has developed into nationalism, which asserts a Jewish nationality independent of religion. The division of certain sentiments into 'national' and 'religious' is arbitrary; it is a Latin or European conception, as the language of the terms indicates.[1] The antithesis is not Semitic; for, while religion to a Semite—Jew or Muslim—includes, as has been shown (above, p. 584 ff.), much more than is now ordinarily understood by the word, a kinship on the basis of blood or language or any other but a religious tie is conceivable neither to the prophets of old nor to the Semitic ethnologist or historian of to-day. Monotheism, not some physiological inheritance, is the *raison d'être* of Judaism (see C. G. Montefiore, 'Nation or Religious Community?,' *JQR* xii. [1899-1900] 177-194; see also *ib.* xvii. [1904-05] 1-25, 397-425; *Jewish Chronicle Correspondence*, 1909, Jan. 1, 15, March 12, April 9, 16, 23, 30, May 21, June 25; on the

[1] See what has been said above on nationality, p. 584 ff.

question of a Jewish race see R. N. Salamon, in *Journal of Genetics*, i. [1910–11] 273 ff., where a complete bibliography is given).

Every recrudescence of nationalism has brought misfortune to the Jews and to Judaism. It was the cause of the catastrophe of 587 B.C., of the fall of the Maccabees, of the decay of the Sadducees, of the destruction by Titus, and of the desolation of Judæa in 136. In every case the disasters caused by the nationalists have been mitigated by their opponents. Joḥanan b. Zakkai built up what the zealots overthrew, and the breaches resulting from Bar Kokhba's declaration of nationality were healed by the Rabbis. A Jewish centre is not an essential to enable the genius of Judaism to assert itself. There was neither a physical nor a spiritual ghetto in Spain, yet the Spanish period is perhaps the brightest in the history of Judaism. Nor is the circumstance that the Jewish liturgy prays for a 'return' an argument for Zionism; the 'return' to which Judaism looks forward is always associated with religion. 'And let our eyes behold *Thy* return in mercy to Zion, and there we will worship Thee in awe as in the days of old' (Adler and Davis, *Service of Syn.* [*Tabernacles*], p. 140). The true character of Zionism, as an alternative to religion, may be seen from such pronouncements as those of J. Hochman (*Jewish Review*, iv. [1913] 217–242), who regards it as a salvation for those 'who do not share the faith of the orthodox universalist in the divine origin of the Law . . . who do not find a satisfactory sphere of activity in the life of Mitzwoth . . . to-day we have no one centre of Jewish loyalty, and the life of Mitzwoth is losing its hold.' Such Zionism would save the Jews at the cost of Judaism.

Finally, liberal Judaism has arisen as a missionary movement in order to rescue those Jews who have become indifferent to their faith. Liberal Judaism stands much nearer to orthodox Judaism than Zionism does. The differences between the two forms are internal and small in comparison with their points of contact; to the outside world both are united, although there may be a great gulf between individuals on both sides.

For membership of a liberal synagogue does not necessarily imply the repudiation of something not definitely taught from its pulpit. Liberal Judaism denies the necessity of certain practices, but it does not require their abandonment. It is thus in nature not Ḳaraitic, but it asserts the continuation of Rabbinic tradition as a living force. Refusing to regard the *Shulḥan 'Arūkh* as the sealing up of Halākhā, liberal Judaism maintains that its religious teachers and individual members to-day have the power to bind and loose as of old. In this respect it is something positive, not a mere negation of orthodoxy. The latter, on the other hand, cannot accept any development unless sanctioned by a Rabbi with *Hattārath Hōrā'ā* (*facultas docendi*), and permits a synod to decree changes only if its authority is recognized as equal to that of its predecessors. Liberal Judaism seeks to win back the lapsed, even at the cost of modifications; orthodoxy, however, maintains that the preservation of the ideal is more important than the salvation of the individual, for Judaism must be handed down unimpaired, even though by a minority. In theory the two bodies are in agreement; no one would impute to liberal Judaism a sacrificing of its ideals; it is on the definition of the essential principles that the controversy turns. Orthodox Judaism foresees a danger of liberal Judaism, by not laying sufficient stress on the Law and on ceremonial, drifting into a colourless belief of universalist monotheism.

Since 1842, when the controversy reached an acute stage in England, orthodox Judaism has changed its attitude to the Reformers. Already in 1864 the Sefardim removed the ban which had been imposed, and to-day, while acknowledging that there are differences between the two points of view, the orthodox co-operate with the liberals in harmony and tolerance. Judaism has always striven to secure union and avoid sectarianism. To the credit of Zionism it must be urged that it has brought back many outcasts to the fold; that, even if nationalism, at best, is a mere modification of Judaism, the children of the nationalists may become orthodox Jews (כל המקים נפש אחת משראל כאילו קים עולם מלא).

In the case of liberal Judaism, many Jews, previously lacking all feelings of spirituality and loyalty, have been taught to love God, to keep His commandments, to attend worship, and to observe the festivals. Their methods are not entirely those of orthodox Judaism, but of the sincerity of their purpose there can be no doubt. How much more then can there be applied to them the saying, 'Always let a man busy himself with a Miṣwā, even though it be not for the purpose of the Miṣwā, for by practice he will come to do the Miṣwā for the proper purpose' (Bab. *Pes.* 50*b*); since the purpose of liberal Judaism is to promote the sanctification of God and rouse the apathetic to a sense of duty, the choice of method, unpleasing though it be to the orthodox, must be left to the conscience and judgment of the liberals themselves. Hence Judaism, orthodox and reformed, and Zionism can look forward with confidence to a future, one and indivisible.

LITERATURE.—The following is a selection of works, chiefly those that have appeared since the bibliography of the *JE* was compiled.

i. JUDAISM.—M. Friedländer, *The Jewish Religion*, London, 1891, *Text Book of the Jewish Religion*[4], do. 1896; I. Abrahams, *Judaism*, do. 1907; E. Levine, *Judaism*, do. 1913; M. Joseph, *Judaism as Creed and Life*[2], do. 1910, *The Ideal in Judaism*, do. 1893, *The Message of Judaism*, do. 1906; N. S. Joseph, *Religion, Natural and Revealed*, do. 1906; C. G. Montefiore, *Truth in Religion*, do. 1906; S. Singer, *Sermons, Lectures, and Addresses*, 3 vols., ed. I. Abrahams, do. 1908; K. Kohler, *Grundriss einer systematischen Theologie des Judentums*, Leipzig, 1910; *Soziale Ethik im Judentum* (by various writers), Frankfort, 1913; D. Wasserzug, *The Messianic Idea and its Influence on Jewish Ethics*, London, 1913; J. Horovitz, 'Auge um Auge' in *Judaica, Festschrift zu H. Cohen's siebzigstem Geburtstag*, Berlin, 1912, pp. 609–659; M. Joseph, 'Introduction to the "Rokeach"' in *Jews' College Jubilee Volume*, London, 1906, pp. 171–190; A. S. Isaacs, *What is Judaism?*, New York, 1912; S. Schechter, *Studies in Judaism*, 2nd ser., London, 1908, *Some Aspects of Rabbinic Theology*, do. 1909, 'Saadyana' in *JQR* xiv. [1902], and *Documents of Jewish Sectaries*, ii. [Cambridge, 1910]; O. J. Simon, 'Judaism and Modern Thought' in *JQR* xi. [1899] 387–400.

ii. JEWISH PHILOSOPHY.—B. Kellermann, 'Die philosophische Begründung des Judentums' in *Cohen's Festschrift*, pp. 75–102; Rabbiner Bergman, 'Die stoische Philosophie und die jüdische Frommigkeit,' *ib.* pp. 144–166; J. H. A. Hart, *The Hope of Catholick Judaism*, Oxford, 1910; J. Horovitz, 'Die Entwicklung des alexandr. Judentums' in *Cohen's Festschrift*, pp. 535–567; H. M. Hughes, *The Ethics of Jewish Apocryphal Literature*, London, 1909; D. Neumark, *Geschichte der jüd. Philos. des Mittelalters*, Berlin, 1907; Judah Halevi, *Kitāb al-Khazari*, ed. H. Hirschfeld, London, 1905; Maimonides, *The Guide for the Perplexed*, ed. M. Friedländer, 2nd ed., do. 1904; D. Kaufmann, *Die Theologie des Bachja ibn Pakuda* (=*SWAW*, phil.-hist. Classe, lxxvii. [1874] 189); A. S. Yahuda, *Prolegomena zu einer erstmaligen Herausgabe des Kitāb al-Hidāja*, Frankfort, 1904, text, Leyden, 1912; E. Collins, *Duties of the Heart* (tr. of selected parts of above), London, 1911; F. C. Burkitt, *Schweich Lectures* (on Apocalypses), Oxford, 1914.

iii. SECTS.—A. Büchler, 'Ueber die Minim von Sepphoris und Tiberias' in *Cohen's Festschrift*, pp. 271–295; R. Leszynsky, *Pharisäer und Sadduzäer*, Berlin, 1912; R. Travers Herford, *Pharisaism*, London, 1912; C. G. Montefiore, *Judaism and St. Paul*, do. 1914, 'Sadducees and Pharisees' in *Studies in Jewish Lit. issued in Honour of K. Kohler*, Berlin, 1913, pp. 176–198; P. Goodman, *The Synagogue and the Church*, London, 1908; G. Friedländer, *Hellenism and Christianity*, do. 1912.

iv. GENERAL.—S. Singer, *Authorised Daily Prayer Book*[9], London, 1912; I. Abrahams, *Annotated Edition of the Authorised Daily Prayer Book*, do. 1914; H. M. Adler and H. Davis, *Service of the Synagogue* (*Festivals, etc.*), do. 1904; M. Gaster, *Book of Prayer and Order of Service acc. to*

*the Custom of the Spanish and Portuguese Jews*, do. 1901; W. O. E. Oesterley and G. H. Box, *Religion and Worship of the Synagogue*[2], do. 1911; S. Funk, *Entstehung des Talmuds*, Leipzig, 1910; J. Abelson, *Jewish Mysticism*, London, 1913, *The Immanence of God in Rabbinical Literature*, do. 1912; Jean de Pauly, *Sepher Ha-Zohar* (French tr.), Paris, 1906–10.

HERBERT LOEWE.

**JUDAIZING.—1. Derivation and scope of the term.**—The use of this term and its cognate forms 'Judaize,' 'Judaizer,' 'Judaist,' and, sometimes, 'Judaism' may be traced to Est $8^{17}$ 'many became Jews' (מִתְיַהֲדִים, LXX *περιετέμοντο καὶ* 'Ιουδάϊζον). A wider currency for the word arises from Gal $2^{14}$ 'I [Paul] said unto Peter before them all, If thou, being a Jew, livest after the manner of Gentiles, and not as do the Jews, why compellest thou the Gentiles to live as do the Jews (*ἰουδαΐζειν*)?'

In English usage the scope of the term varies. It may describe a tendency or type of mind, as when a 'prophetic' is contrasted with a 'Judaic' spirit. It describes habits—*e.g.*, 'Usurers . . . doe Judaize' (Bacon, *Essays*, London, 1891, 'On Usury,' p. 75); or the verb may be transitive—*e.g.*, 'Error . . . had miserably judaiz'd the Church' (Milton, 'Hirelings,' in *Prose Works*, London, 1848, iii. 15; cf. *OED*, *s.v.*).

The early Church had certain members who desired to maintain the permanent obligation of the Mosaic Law. There were two views about this obligation: the one held that only Christians who were of Jewish descent required to keep the Law; the other, that Gentile converts were equally liable. This section of the Church membership was called the Judaizers. Their origin, activity, and disappearance are here the subject of inquiry.

**2. The Judaism which Judaizers could not leave.**—Pharisaic Judaism, from which the Judaizers were but half-hearted seceders, was firmly established at the advent of the gospel. The sacrificial worship of the Temple, as prescribed by the Priests' Code in the Pentateuch, was carried on daily with glad devotion. The services were beautiful and significant; men felt that they were ordained by the express command of God. Race, religion, and patriotism were concerned in the honour and dignity of the Temple; the Roman eagle or the statue of Claudius could not be tolerated near it; Saul was ready to hale men and women from Damascus for doubting its sacred claims; in the last siege men would starve rather than stint the daily sacrifice. As Mecca has been sacred and inviolate for Islâm, so were the Temple and its cult for Judaism at home and abroad. Any change would seem unthinkable.

Throughout the Diaspora the synagogue had been for some two centuries the refuge of Jewish communities. Prayer and instruction based on the Law and the Prophets were its chief purpose. The formation of a liturgy (*Shemoneh 'Esreh*), the interpretation of Hebrew Scripture in Aramaic or in Greek, the use of the Psalms, the hearing of visitors (Lk $4^{16}$, Ac $13^{15}$), and the observance of Sabbath and Festivals made the synagogue the focus of Jewish thought and life. Gentiles were attracted and admitted, evidently in considerable numbers (Mt $23^{15}$; Horace, *Sat.* I. iv. 142 f.; Josephus, *c. Apion.* ii. 40). Contact with Gentiles made Jews more hospitable to new ideas; but contempt and ill-treatment attached them more closely to their own laws and customs.

'No Jew can go so far from his own country, nor be so affrighted at the severest despot, as not to be more affrighted at the Law than at him' (Jos. *c. Apion.* ii. 39).

The Judaism from which Christianity arose had a theism which Jews could not easily abandon; it had its code of 613 rules and regulations for a correct life; it held its members with a firm grasp through Temple and synagogue; it was displacing decadent Gentile creeds, and was not a system to be lightly forsaken.

**3. The Christianity they could not adopt.**—The teaching of Jesus offended Pharisaic Judaism by its unanswerable criticism of the traditions of the elders (the Oral Law), by its want of deference to the hierarchy, and by exalting the end of religion (love to God and man) and consequently depreciating the current estimate of Temple, sacrifice, Sabbath, dietary rules, and 'the hedge about the Law' generally. Moreover, He claimed an authority which shocked the scribes. Not by vision, or by dreams, or by prophetic inspiration, not by writing a Pseudepigraphon, but in His own name He re-stated the Mosaic Law; He spoke as the Judge of the whole religious past of the nation, and prescribed for the future a mission of world-wide benevolence. He had kindled a new spirit in a few disciples; and this religion of the spirit would seek to save that which Judaism considered to be lost. He thus claimed the Messianic rank; and the hierarchy induced Pilate to consent to the Crucifixion.

The company of disciples, animated by the spirit of the Risen Christ, 'continued stedfastly in the apostles' doctrine and fellowship, and in breaking of bread, and in prayers' (Ac $2^{42}$). They were conscious of being called to preach the gospel, and they chose Matthias in place of Judas. They showed no hatred to the 'chief priests and scribes' who had procured the death of Jesus; what had happened was part of a divine purpose foretold by the prophets. As yet the disciples were not cast out from Temple or synagogue, nor did they consider Pharisees as ineligible to the incipient Church. The believers continued to frequent the Temple (Ac $2^{46}$ $3^{1}$ $5^{12.\ 20.\ 42}$); they increased rapidly in numbers and were joined by 'a great company of the priests.' A new interpretation of Israel's history and mission was proclaimed by Stephen, which seemed to the authorities to be 'blasphemous words against Moses and against God' (Ac $6^{11}$). The stoning of Stephen and the active measures of Saul mark the end of toleration for the followers of Christ—the Galilæans, or Nazarenes, or Minîm, as the Jewish authorities began to call them.

**4. Appearance of 'Judaizers.'**—Persecuted in Jerusalem, the Church made converts among the Samaritans, who did not profess the Oral Law. The Good Samaritan of the parable was not forbidden, like the priest and the Levite under the Oral Law, to help a wounded stranger. The apostles Peter and John had no hesitation in accepting Samaritan converts (Ac $8^{17}$). Philip admits the Ethiopian, who could not have been more than a גֵּר תּוֹשָׁב (Dt $23^{1}$). Other converts are admitted, in Damascus (Ac $9^{19}$), Lydda ($9^{32}$), and Joppa ($9^{42}$); but the mission is directed to Jews only, or to proselytes attached to the synagogue ($11^{19}$), at Salamis ($13^{5}$), at Antioch in Pisidia ($13^{14}$), at Iconium ($14^{1}$), at Thessalonica ($17^{1}$), at Berea ($17^{10}$), at Ephesus ($18^{19}$ $19^{8}$; cf. $19^{9}$), and at Rome ($28^{17}$). Thus for some fifteen years after the Crucifixion the Church included only Jews or Gentiles who had become proselytes to Judaism. The admission of the Roman Cornelius was felt to be an innovation requiring the highest sanction; and St. Peter, on returning to Jerusalem, did not escape criticism, the opposition to his act marking the first appearance of the 'Judaizers.'

At Antioch Greeks were admitted to the Church by the missionaries; and the name 'Christians' was first applied to the new brotherhood. The Church at Jerusalem at once sent Barnabas to inquire into this proceeding; and, after getting Paul to assist him for a year in Antioch, Barnabas with his new companion returned to Jerusalem, bringing gifts for the relief of the brethren in Judæa during a famine. From Antioch, Paul and

Barnabas set forth on their missionary journeys. While in the Pisidian Antioch, they definitely announced their intention of appealing to the Gentiles, and on their return to Antioch they rehearsed their work and the reception of the Gentiles. Certain Judaizers from Jerusalem maintained that 'it was needful to circumcise them, and to command them to keep the Law of Moses' ($15^{5}$), and this led to the Council of the apostles in Jerusalem, which gave the most important decision on the subject of Judaizing.

**5. The Council of Jerusalem.**—The accuracy of the account in Ac 15 has been questioned; but, if we take A.D. 62 as the date of St. Luke's composition of the Acts and *c.* A.D. 50 for the Council, the time limit is against serious error. One MS (D, Codex Bezæ) omits *καὶ τοῦ ϖνικτοῦ*, and is followed by Irenæus, Cyprian, Tertullian, and Jerome. The Decree thus prohibits the use of flesh offered to idols, murder, and fornication — being 'a summary of Jewish ethical catechetics' (Harnack, *Acts of the Apostles*, p. 250). The Textus Receptus reads, 'That they abstain from pollutions of idols, and from fornication, and from things strangled, and from blood' (Ac $15^{20}$). Despite the argument of Harnack, reinforced by E. H. Eckel and S. A. Devan (*Expositor*, 8th ser., vi. [1913] 66–82), it may be held that the TR is preferable. Idolatry and fornication are specified because they were considered venial among Gentiles. Lambs or bullocks killed by a non-Jewish butcher could not be eaten by a Jew by birth; it is fairly certain that St. Paul, for all the freedom that he claimed, would never relish swine's flesh or unbled mutton. Unless this regulation were observed, there could be no common social banquets between Jewish and Gentile Christians. Higher hygienic reasons may have been instinctively present; the motive for instituting abstinence from blood in Gn $9^{4}$ was to diminish the ferocity that had filled the earth with violence. It would cause little trouble to teach the Gentile Christians the method of slaughter. 'For Moses of old time hath in every city them that preach him, being read in the synagogues every sabbath day' (Ac $15^{21}$). In every such place there was a *shoḥeṭ*, and the use of his services might help the Christians to go forth 'as lambs among wolves.' It may seem strange that the universal religion should include the menu of a Palestinian party; yet the matter of eating and drinking was regarded with concern. The Paternoster asks for 'daily bread'; Islâm commands abstinence from wine. St. Paul felt the incongruity when he wrote: 'The kingdom of God is not meat and drink; but righteousness and peace, and joy in the Holy Ghost' (Ro $14^{17}$). The Apostolic Decree assumed that Gentile Christians honoured the Sacraments, and had received the Holy Spirit and the evangelic temperament; it would be insulting to ask them to abstain from murder, as this interpretation of Codex Bezæ proposes to do. The intention of the Council was that Christendom should use *kosher* meat; but St. Paul's theoretical abolition of law, Jewish and Gentile, resulted in the survival of custom, Jewish and Gentile, in the preparation of animal food.

It is worthy of note that the Decree does not require Gentiles to abstain from eating 'of the sinew which shrank, which is upon the hollow of the thigh' (Gn $32^{33}$), although this regulation is assumed as binding in the Mishna (*Ḥullin*, 7). When strictly enforced, it meant that the hindquarters of sheep and oxen were disallowed to Jews, and had to be sold at any price to neighbours. The practice is still continued among Oriental Jews, though it entails loss for no visible gain.

'The hind quarter (like blood and fat) is avoided as food on account of the narrative in Genesis' (Rosenau, *Jewish Ceremonial Institutions and Customs*, p. 185, speaking for America).

The long-lost Jews in China had forgotten the Hebrew language and the Law, but retained this strange abstinence, and were known among the Chinese as 'the people of the sinew.' The *τὸ ϖνικτόν* could hardly refer to the sinew; it is a special class of foods referred to as with *αἷμα*, and would denote such things as chickens, geese, or game killed in the Gentile manner. The idea that bloodshed was forbidden, in the sense that a Christian could not become a soldier, is excluded by the case of Cornelius.

**6. Judaizing opposition to St. Paul.**—The Apostolic Decree thus established a rule of guidance for Jewish and Gentile Christians. Many matters required regulation. Were Jewish Christians to circumcise their boys on the eighth day? Were they to keep the Sabbath, or the first day of the week? Were Passover, Pentecost, and Tabernacles to be kept with the old associations? Was the pilgrimage to Jerusalem obligatory? Were they to intermarry with Gentiles, to maintain the dietary rules, to eat unleavened bread for a week in spring-time, to wear phylacteries, to repeat the prayers of the Jewish liturgy, and to read the Law and the Prophets with the same uncritical deference? Heathen converts such as Trophimus (Ac $21^{29}$) or Epaphras (Col $4^{12}$) would easily accept the Decree; proselytes—of the gate or of righteousness—would also welcome it; the liberal Hebrew Christians who carried the Decree might continue the old customs, while refusing to impose them upon Gentiles; but the minority of Judaizers refused all laxity, and hampered the work of St. Paul in most of his mission field.

The activity of the Judaizers is indicated in the account of the work and correspondence of St. Paul, and has to be kept distinct from the open antagonism of unconverted Hebrews. The Judaizers had sought to persuade the Galatian Church to observe days and months and times and years, and to require circumcision. They questioned Paul's authority, and may have cited the example of Peter. Paul's defence is to point to the presence and the fruits of the Spirit. If observance of Law is sufficient to give life, then the advent of Christ is a negligible accident. Peter's desire to conform to Jewish scruples is condemned as dissimulation; and Paul's acceptance of Titus, a Greek, without circumcision is mentioned as sanctioned by the Church at Jerusalem. Again, at Colossæ the Christians seemed likely to be spoiled by 'a shew of wisdom in will-worship, and humility, and severity to the body' (Col $2^{23}$). Here the legalism was tinged with theosophy, which interfered with 'meat or drink, or a feast day, or a new moon, or a Sabbath day' (Col $2^{16}$). The Epistle shows the danger of losing freedom and universalism, and insists on the need of conscious communion with a living Spirit. The Christian is under a Spirit whose voice was the true law. At Corinth the Church consisted mainly of Gentiles who had not passed through the synagogue (1 Co $12^{2}$), but included Jews (1 Co $7^{18}$); and it may be inferred from 2 Co 3 that teaching of a Judaistic type had been addressed to the Corinthians. To the Philippians, Paul has to write 'Beware of the concision. For we are the circumcision, which worship God in the Spirit' (Ph $3^{2f.}$). The Epistle to the Romans warns that Church against 'them which cause divisions and offences contrary to the doctrine which ye have learned' ($16^{17}$). These were probably Judaizers; the argument of the Epistle is St. Paul's greatest effort to answer them. All old laws and customs, Jewish and Gentile, have ceased to be important because 'the love of

God is shed abroad in our hearts by the Holy Ghost which is given unto us' (Ro 5[5]). Paul's exposition of righteousness through faith, of freedom, and of universalism has served to overshadow his important reservation for Israel according to the flesh. The Jew in Paul yielded to the Judaizer in these particulars:

'In allowing that Israel *κατὰ σάρκα*, because of the promises, held a privileged position within the Israel *κατὰ πνεῦμα*; that only Christians who were Jews by birth were the good olive tree, while the Gentile Christians were only grafts from the wild olive tree; that thus the whole Hope is the Hope of Israel; that the Gentile Christians have material obligations towards the Jewish Christians; and that the Jewish Christians should, and indeed must, still observe the Law of Moses, though it is now abolished!' (Harnack, *Date of the Acts*, p. 60, footnote).

If we except the imperative 'must' in the last sentence, this summary fairly describes the attitude of St. Paul, and this attitude explains his conduct as described by St. Luke. He has Timothy circumcised (Ac 16[3]); he has his own head shorn in Cenchreæ, for he had a vow (18[18]); at his last visit to Jerusalem he is ready to show his conformity to the Law by purifying himself with the four men who had a vow on them (21[26]). It explains his words (1 Co 9[20]), 'unto the Jews I became as a Jew, that I might gain the Jews.' The contribution from the Gentile Church to the poor at Jerusalem may have been considered as a kind of tribute. It thus appears that St. Paul as well as St. Peter found it difficult to transcend the limits of Judaism; and that the universal element in Christianity is really due to Jesus, who knew the best that was in the past, and rose above it, and appointed the whole world as the field for the good seed.

The power of the Judaizers is seen at its greatest during St. Paul's last visit to Jerusalem. They numbered many thousands of Jews, who were believers and all zealous for the Law (Ac 21[20]). They were indignant with St. Paul, maintaining that he taught all the Jews who were among the Gentiles to forsake Moses, 'saying that they ought not to circumcise their children, neither to walk after the customs' (21[21]). No doubt this was the effect though not the intention of St. Paul's teaching and example, but the antagonism of the real Jews saved the Judaizers from further trouble in prosecuting the Apostle.

**7. Later references to Judaizers.**—(*a*) *In Christian records.*—After the death of St. Paul, the Church moved away from Judaizing tenets. The Epistle to the Hebrews demonstrates the right of Christians to abandon sacrifice, and the destruction of the Temple confirmed the argument. In the Fourth Gospel, Judaism within the Church has ceased to be of any account; the antithesis is the Jews. Christians are to follow a Light, but they have a new law in Christ's commandments. The religion of the Spirit, as proclaimed by St. Paul, has permeated the evangelic tradition in the Synoptists. The convert has much to learn, and his teacher is the Church. Christ is his Lawgiver, and has entrusted a power of legislation to the Church.

The Judaizers, who kept themselves distinct from Gentile Christianity, appear later as Ebionites and Nazarenes. The Ebionites admitted only a Gospel according to St. Matthew, rejected St. Paul as an apostate, and denied the divinity of Christ. The Nazarenes acknowledged the obligation of the whole Mosaic Law for Christians of Jewish descent, but allowed Gentile Christians, as proselytes of the gate, to omit these observances. See artt. EBIONISM, ELKESAITES.

(*b*) *In Jewish records.*—Rabbinical literature has few and obscure references to the Judaizers, for Judaism was firmly resolved to ignore the Christianity which had come into being. It set itself after the Fall of Jerusalem to define the canon of Holy Scripture, rejecting the Apocrypha and apocalyptic Pseudepigrapha, which seemed to give prophetic colour to the new religion, and expurgating the Greek Bible by the versions of Aquila, Symmachus, and Theodotion. Within its own fold discipline became more stern.

'A Noahite who has become a proselyte, and been circumcised and baptized, and afterwards wishes to return from after the Lord, and to be only a sojourning proselyte as he was before, is not to be listened to—on the contrary, either let him be as Israelite in everything, or let him be put to death' (*Hilchoth Melachim*, ch. x. 8, tr. in A. MacCaul, *Old Paths*, London, 1846, vi. 58).

By the end of the first Christian century the standard Jewish prayer included a formula, 'May there be no hope for the sectaries' (מִינִים, afterwards changed to מַלְשִׁינִים, 'the slanderers'). One of the signs of Messiah's coming will be that the Kingdom (the Roman Empire) will be turned to the heresy of the Mînîm (Mish. *Soṭah*, ix. 15). The growth of Christianity in the Roman Empire and the indignation of Jews at the claim of Christians to inherit the promises of the OT are seen in Jerus. *Nedar.* 38a:

'Esau the wicked will put on his tallith and sit with the righteous in Paradise in time to come; and the Holy One will drag him and cast him forth from thence.'

By the 4th cent. Judaism regards the Mînîm with disdain rather than fear. Tosefta *Sanh.* xiii. 4. 5 imposes grave punishment on 'the Mînîm (Jewish Christians), the Mᵉshûmmâdhîm (apostates), Mᵉsôrôth (informers), and Âpîqôrsîn (free-thinkers),' and a Jewish comment on Ex 19[4] says that circumcision will not avail to save the Mînîm from Gehinnom (*Shemoth Rabba*, 36*a*). This implies that Jewish Christians in Palestine still practised circumcision in the 4th century. Talmud and Midrash confirm Jerome in considering the Nazarenes (Mînîm, Jewish Christians) an insignificant body.

'They had no share in the vitality either of Judaism or Christianity' (Herford, *Christianity in Talmud and Midrash*, p. 394).

Jerome's words in a letter to Augustine (*Ep.* lxxxix. 13 [*PL* xxii. 924]) are:

'To this day in all the synagogues of the East there is among the Jews a sect called Minæi (Minim), which is condemned by the Pharisees. They are commonly spoken of as Nazarenes, and believe in Christ the Son of God, born of the Virgin Mary, the same who, they say, suffered under Pontius Pilate and rose again. In Whom we, too, believe; but while this sect desires to be both Jews and Christians, they are neither the one nor the other.'

**8. Recrudescent forms.**—About 1725 John Glas, minister of Tealing, founded a small sect, which refrained from things strangled and from blood, and his son-in-law Sandeman gave his name to the adherents in England (see art. GLASITES). The Seventh Day Adventists and Seventh Day Baptists Judaize in their observance of Saturday.

[A Judaizing sect arose in Russia about the middle of the 15th cent., their chief centres being Novgorod and Pleskau, whence they spread to Moscow and other cities. They denied the Trinity and the Sonship and Messiahship of Christ, and rejected the invocation of the Virgin and the saints, the veneration of icons, the doctrines of original sin and redemption, the Church, and the Sacraments, while they gave greater honour to the Old than to the New Testament. 'Sabbatarians' are mentioned in the early 18th cent., and Uklein, the founder of the sect of Molokani, adopted for himself certain Jewish dietary laws, while his pupil, Sundukov, regarded Christ as infinitely inferior to Moses, observed the Jewish Sabbath, and finally submitted to the Mosaic rite. Sundukov established the modern sect of Subbotniki ('Sabbatarians'), who are scarcely distinguishable from real Jews. They are divided into a number of sub-sects, the most important being: (*a*) Gers (Heb. גֵּר), who worship in Hebrew under the leadership of regular Jewish Rabbis and are practically

Talmudic Jews; (*b*) Subbotniki proper, differing from the less numerous Gers only in the use of Russian Bibles and Prayer Books and in the abrogation of some of the Talmudic rules for the Sabbath and food; (*c*) Ḳaraimites or Ḳarimi ('Ḳaraitizers'), who, like the Ḳaraites (*q.v.*), recognize only the Pentateuch and reject the Talmud, but who do not observe all the Pentateuchal laws, *e.g.* that regarding circumcision; and (*d*) the waning Transcaucasian Naziræans, who deny the resurrection of the dead. Mention may likewise be made of the 'Jehovists,' founded by Nikolai Ilyin in 1846, in an effort to establish an OT Christianity or NT Judaism, although the rather fantastic sect was only short-lived.

Two minor American sects may also be classed as Judaizing. The first of these is the Christian Israelite, founded by John Wroe at Ashton, England, in 1822, to gather the twelve tribes of Israel, the doctrinal basis being the re-establishment of the Mosaic Law, and the condition of membership subscription to 'the four books of Moses and the four books of the Gospel.' Members do not cut their hair or beard (cf. Lv $19^{27}$), and object to all images and pictures (cf. Ex $20^4$, Dt $5^8$). Both the Jewish and the Christian Sabbaths are observed. The second of these sects is the negro Church of God and Saints of Christ, established by William Crowdy in 1896. Believing that the negroes are the descendants of the lost Ten Tribes, this sect observes the Jewish calendar and festivals, especially the Sabbath, but insists on baptism by immersion, confession of faith in Christ, the Lord's Supper, and feet-washing. D. M. KAY.

**JUDGMENT** (Logical). — **1. Introductory.** — 'The only use which the understanding can make of concepts is to form judgments by them,' while 'the understanding may be defined as the faculty of judging' (Kant, *Critique of Pure Reason*, Eng. tr., London, 1881, pt. ii. bk. i. ch. i. § 1). Concepts are the predicates of possible judgments. Inference is the derivation of new judgments out of old. Method is the disposition of concepts and judgments in a system. Thus judgment becomes a centre of reference for the defining of the other logical entities, and, if the task of definition is to be undertaken philosophically, it involves all the considerations which contribute to mark out the logical consciousness in general; the labour of precision in the use of such conceptions as idea, belief, truth, reality, fact; and studied limits between the levels of abstraction proper to psychological, metaphysical, and logical science respectively.

It would not serve the specific motives of logical doctrine if we followed exclusively either of the alternatives prescribed by Mill: 'an enquiry into the nature of propositions must have one of two objects: to analyse the state of mind called Belief, or to analyse what is believed' (*A System of Logic*[8], London, 1872, bk. i. ch. v. § 1); or, indeed, if we followed too precisely a combination of the two. He himself in his *Examination of Sir W. Hamilton's Philosophy*[5] (London, 1878) relies chiefly on the reference to belief, while in his *Logic* he insists that 'intelligent assertion refers to external facts,' and that the import of propositions consists in connexion between facts. In pursuing the latter analysis, after resolving facts, with metaphysical precision, into states of consciousness and relations between them, he allows himself in his substantive doctrine to replace these ultimate references by more popular conceptions such as 'things,' 'phenomena,' and 'attributes.' Similarly Ueberweg defines judgment as 'the consciousness of the objective validity of a subjective union of conceptions,' without definitely undertaking to resolve the contrast or mediate the correspondence between the two worlds; a mere 'reference to existence' gives the judgment 'its character as a logical function' (*System of Logic and History of Logical Doctrines*, Eng. tr., London, 1871, § 67).

A more scrupulous orientation of logical consciousness with regard to the psychological and the objective is attempted in some doctrines now current. The judgment is defined as identifying the content of ideas with reality, and the nature and possibility of such an achievement are explained by resolving reality into a system of tendencies sustained by judgment itself. Each single act of identification enters constitutively into an ever-expanding structure which in its totality is self-sufficient and all-controlling.

'Our knowledge, or our world in knowledge, exists for us as a judgment, that is, as an affirmation in which our present perception is amplified by an ideal interpretation which is identified with it. This interpretation or enlargement claims necessity or universality, and is therefore objective as our world, *i.e.* is what we are *obliged* to think, and what we are *all* obliged to think. The whole system in process of construction, viz. our present perception as extended by interpretation, is what we mean by reality, only with a reservation in favour of forms of experience which are not intellectual at all' (B. Bosanquet, *The Essentials of Logic*, London, 1895, p. 32).

If we might assume as already understood and approved a definite epistemology such as Kant's, we might escape both uncritical references to psychology and popular physics and the intricacies of a metaphysical analysis. Kant himself defines judgment as 'the conception of the unity of the consciousness of different representations, or of their relation so far as they make up one notion' (*Logic*, § 17), while in the background of this description lies his more definite epistemological characterization, 'the way to bring given cognitions to the objective unity of the apperception' (Ueberweg, *Logic*, Eng. tr., London, 1871, § 67). By the objective unity, Ueberweg explains, is meant 'the mutual connexion of cognitions according to those categories which the Ego evolves from itself by its own spontaneity'; and it carries with it throughout its applications the implied subjectivity of which he complains as peculiar to the whole Kantian philosophy.

Yet, unless we throw back upon the doctrine of the concept the burden that it carried under the older conceptualism, of taking the initiative in orientating the logical consciousness generally, we can give precision to a definition of judgment only on the basis of an epistemology. The motives of logical doctrine do not, however, imperatively call for this formal precision. It is sufficient that, by suggestions borrowed from psychology, popular physics, or discriminative reflexion on our spiritual nature as a whole, our specifically logical consciousness may be aroused apart from either introspective or external observation; and a clue to the recognition of the act of judgment may then be supplied from the detail of its conscious functions and specific ideals, over and above the ideals of the concept. In the plan of our spiritual nature there must be a faculty which commits the detailed activities of intelligence to a resultant imposed by external nature and history, while the concept provides bounds for each commitment amid the measureless possibilities. The faculty of judg-

ment, consequently, follows special constitutive ideals, which may be entitled, with some technical adaptation and departure from the common usage of the words, necessity, universality, and synthetic unity.

2. **Constitutive ideals.**—(*a*) *Necessity.*—Necessity is akin to the inevitableness of fact and the absoluteness of natural law. It is described by Sigwart thus:

'Besides the necessity of psychological causality, there is another which springs entirely from the *content* and *object* of Thought itself, which is therefore grounded, not upon the variable subjective states of the individual, but upon the nature of the object thought of, and which may so far be called objective' (*Logic*, Eng. tr., London, 1895, § i. 6).

It is an ultimate constraint upon intellectual spontaneity, and finds incidental expression in such phrases as 'I am obliged to think,' 'I cannot but believe' (Bosanquet, *Essentials*, p. 24). It is recognized in current psychology as 'objective control of ideational processes' (G. F. Stout, *Manual of Psychology*[3], London, 1913, bk. iv. ch. viii. § 1). It is described with varieties of logical suggestion, such as the 'inherence of truth or falsehood' (Aristotle), the 'truth-value of a relation between ideas' (Windelband), the 'claim to be true' (Bosanquet). It may be contrasted with the freedom of the concept, which Mill considers a 'mere creation of the mind' (*Exam. of Hamilton*[6], p. 419), and which is certainly differently related to personality.

Following a general, though ill-defined, logical tradition, we may distinguish three modes in which necessity confronts our ideas. It may be conveyed by the contents of the concepts which we employ independently of their origin. If we choose to conceive a three-sided figure, we must believe it to have three angles and these equal to two right angles. If we think of an organism in growth and decay, we must expect it to die; if we think of a perfect nature, we must, according to Descartes, predicate existence. The necessity may, however, be conveyed through the activity of other faculties than the conceptual—perception, introspection, memory, feeling, even respect for authority: 'Some swans are white'; 'Napoleon died at St. Helena'; 'I am of all men most miserable.' And a necessity, though conveyed neither through concepts alone nor through the more directly presentative faculties alone, may yet through the union and co-operation of these media commit our ideational activities to at least an anticipation of a final surrender to concepts or to perceptions: 'Rain may fall to-morrow'; 'Cancer may be incurable.' A judgment which is fringed with the consciousness of the medium of its own necessity may be entitled a 'modal' judgment: 'It must be so; it is so; it may be so.' Kant defines modality as a relation of the judgment to our complete faculty of cognition, or as the value of a judgment for our thought in general, and distinguishes it as apodeictic, assertoric, or problematic (*Critique*, pt. ii. bk. i. ch. i. § 4).

(*b*) *Universality.*—Constraint on the spontaneity of our personality is common to the world of persons; what *we* are obliged to think is what we are *all* obliged to think (Bosanquet, *Essentials*, p. 32), conditionally, of course, on our being subjected to the same medium of necessity. It has already been noted (see art. CONCEPT [Logical]) that it is because of a logical solicitude for universal validity as the hall-mark of necessity that the freedom of the concept ought, by means of conventions in the use of language, to be deliberately harmonized with the intellectual outlook of mankind in general. Through common concepts we reach common media of necessity in judgment, and can then share, and co-operate in creating, a common 'inheritance of science and civilization.'

But the harmonization of concepts is ultimately dependent on a common identification of particular things. And a logical system which, like the Aristotelian, has specially in view to promote co-operative thought, must give fundamental significance to differences in the extent to which judgments presume the common identification of things. Judgment may be defined as the identification of a denotation, along with discrimination as to connotations or conceptual intensions (cf. E. E. C. Jones, *New Law of Thought*, Cambridge, 1911, p. 1 ff.). And, for purposes of common discourse or debate, judgments must be classified according to 'quantity'—as singular or general, where one thing or a collection of things is identifiable by all thinkers; or as particular, where the identity is only so far open to all that for each person it lies within the limits of a common totality of identifiable things: 'Alexander died'; 'All men die'; 'Some men die willingly.'

(*c*) *Synthetic unity.* — All the authoritative descriptions of the act of judgment, while varying much in their suggestiveness as to the sources of constraint and the significance of universality, agree in requiring that synthesis, combination, or construction shall be shown in the product. It is owing to this uniform achievement of judgment that in psychical sequence concepts originate with it, and that in much recent logic the function assigned to judgment largely absorbs that more proper to the concept. Judgment is an enunciation after a complex manner (Aristotle), discloses a relation between two things (Avicenna), connects together or separates from each other two notions (Wolff), connects many possible cognitions into one (Kant), connects the attributes connoted by terms (Mill), connects subject and predicate in definite form (Lotze).

Obviously a function of our spiritual nature which adjusts its reactions to the complexities of the world must be connective. In each act of judgment the constraint from reality and the stress of intellectual responsibility fall where they can meet with two conditions: a definite interest has selected a delimitation within the immeasurable area of possible truth, and again a definite concept is available for reaction on it.

'Although the ultimate subject [*i.e.* reality in general] extends beyond the content of the judgment, yet in every judgment there is a starting-point or point of contact with the ultimate subject; and the starting-point or point of contact with reality is present in a rudimentary form in the simplest perceptive judgment, as it is explicitly in the later and more elaborate types' (Bosanquet, *Logic*, Oxford, 1888, bk. i. ch. i. p. 82).

Thus the synthesis special to each pulsation of the faculty links a predicate with a subject. And, although the whole construct becomes a unity and feels a necessity and universality dominant throughout, and the attendant psychical complex may present to introspection either simultaneity or a variable sequence, yet functionally judgment, following its own principle, duality, 'divides no less than it binds together ideas that are mutually associated,' in order that it may 'connect subject and predicate in definite form' (Lotze, *Microcosmus*, Eng. tr., Edinburgh, 1885, ii. 4, § 4, and *Outlines of Logic*, Boston, 1892, § 21).

Our logical consciousness must find synthesis in denial as well as in affirmation, notwithstanding such an antithesis between them as is in the description of judgment quoted above from Wolff, and notwithstanding that affirmation introduces character, while negation introduces only contrast, into the expanding system of timeless truth.

3. **Grades of synthetic relation.**—The delimitation of interest, or the point of contact with reality, may be given either in presentation, or by the conceptual faculty, or through reflexion on determinations of complete judgment itself.

(*a*) *Presentational.* — There are 'impersonal' judgments, in which the selection of subject is as indefinite as is possible in view of a proposed predicate—*e.g.*, 'It rains'; and 'demonstrative' judgments, where only the position in space or time is definite—'This is the forest primeval.' Aristotle spoke of 'terms' which can neither be predicated of a subject nor inhere in a subject, but can only *be* a subject (*Categories*, v. 10); and this implies that the synthetic relation is between thing merely presented and concept.

(*b*) *Conceptual.* — The presentational faculties may receive aid from the concept in various ways and degrees: 'The first man was a living soul,' a 'singular' judgment; 'Our fathers have told us,' an 'enumerative' judgment; 'Man is few of days,' a 'concrete general' judgment; 'Love is the fulfilling of the law,' an 'abstract' judgment. There is now a synthetic relation between two concepts, superadded to that between thing and concept.

(*c*) *Reflective.*—The starting-point of a judgment may be given directly neither by presentation nor by conception, but by the faculty of reflecting on judgments, actual or possible, whose starting-point is so given: 'If I had standing ground, I could move the world'; 'If we are sons, then heirs'; 'Either there is a resurrection or mankind is irrational.' Mill describes such a judgment as dealing with the logical inferability of propositions: 'That we are heirs is inferable from our being sons'; other writers, as the relating of 'condition' to 'consequent': 'Sonship is the condition of heirship.' They are entitled hypothetical, and the specially composite form in which 'condition' and 'consequent' are found by negating any one of the members is entitled disjunctive: 'If there is not a resurrection, mankind is irrational,' while, 'If mankind is not irrational, there is a resurrection.'

LITERATURE.—See the various systems of Logic; and especially, in addition to the authorities quoted above, the recent ones mentioned as representative under art. CONCEPT (Logical), or as important or frequently referred to on the nature of inference under art. INFERENCE. There are numerous monographs, especially on the psychological and epistemological implications of judgment, and among the more recent and relevant to logic may be mentioned A. Wolf, *Studies in Logic*, Cambridge, 1905; P. Janet and G. Séailles, *Hist. de la philosophie*, Paris, 1887, pt. i. problem 8, ch. iv.; F. Hillebrand, *Die neuen Theorien der kategor. Schlüsse*, Vienna, 1891; W. Jerusalem, *Die Urtheilsfunction*, do. 1895; A. Meinong, *Über Annahmen*², Leipzig, 1910; J. M. Baldwin, *Thought and Things*, ii., London, 1908.

J. BROUGH.

## JUGGERNAUT.—See JAGANNĀTH.

**JUMNĀ** (Skr. Yamunā personified as Yamī, twin sister of Yama, the god of death).—One of the great rivers of N. India, rising in the Himālaya near Jamnotrī (*q.v.*), and finally joining the Ganges at Prayāga, 'the place of sacrifice' *par excellence*, now known as Allāhābād (*q.v.*). In the Rigveda it occupies a position lower even than that of the Ganges, the Aryans having reached its banks only at a later period when they migrated eastward from their original settlements in the Panjāb. When it is addressed it is only in connexion with other rivers, Gaṅgā, Sarasvatī, Śutudrī, Paruṣṇī, and others, twenty-one in all (*Rigveda*, x. lxxv. 5; cf. v. lii. 17, VII. xviii. 19, and see J. Muir, *Orig. Skr. Texts*, ii.³ [1874] 346 f.; A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 86). In the later literature the geographical outlook widens, and it is called 'the great river Yamunā,' and is described as one of the three children of the Sun by Sanjñā, daughter of Viśvakarman, architect of the universe (*Vishṇu Purāṇa*, tr. H. H. Wilson, London, 1864–77, iii. 20, v. 82). Another legend describes the river as both sister and wife of Yama, god of death; and the story of their incest curiously resembles a tale which Plutarch (*de Fluv.* iv.), doubtless from Indian sources, attributes to the Ganges. Naturally, as the river flows past Mathurā, the scene of the Kṛṣṇa cultus, it has been included in this complex series of myths. Balarāma, in a state of intoxication, ordered the river to approach him, as he desired to bathe.

'The river, disregarding the words of a drunken man, came not (at his bidding). On which, Rāma, in a rage, took up his ploughshare, which he plunged into her bank, and dragged her to him, calling out: "Will you not come, you jade? Will you not come? Now go where you please (if you can)." Thus saying, he compelled the dark river to quit its ordinary course, and follow him whithersoever he wandered through the wood. Assuming a mortal figure, the Yamunā, with distracted looks, approached Balabhadra, and entreated him to pardon her, and let her go. But he replied: "I will drag you with my ploughshare, in a thousand directions, since you contemn my prowess and strength." At last, however, appeased by her reiterated prayers, he let her go, after she had watered all the country' (*Vishṇu Purāṇa*, v. 67 f.).

Wilson interprets this legend as referring to the excavation of ancient irrigation channels from the river; but F. S. Growse (*Mathura*³, Allāhābād, 1883, p. 184 f.) holds that there are no signs of ancient canals in the neighbourhood, and that the existing involution of the river sufficiently explains the myth. When the classical writers gained knowledge of the river, it was known by Ptolemy (VII. i. 29, 42) under the name Diamouna (J. W. McCrindle, *Ancient India as described by Ptolemy*, London, 1885, p. 98 ff.), by Arrian (*Indika*, viii.) as Jobares, by Pliny (*HN* vi. 19) as Jomanes.

The legend of incest connected with the Jumnā, the fact that it is supposed never to have been cleansed by the marriage ceremony, the only rite of purification in which the Hindu woman shares, and the supposed resultant indigestibility of the water are some of the causes which have contributed to render it a less sacred river than the Ganges. Its source at Jamnotrī is much less frequented by pilgrims than Gaṅgotrī (*q.v.*). Though it flows through a country sanctified in the upper part of its course by many legends of gods and heroes (E. T. Atkinson, *Himalayan Gazetteer*, Allāhābād, 1882–84 ii. ch. iii. *passim*), thence past Delhi (*q.v.*), the ancient Indraprastha, an early Indo-Aryan settlement, Mathurā, the seat of the Kṛṣṇa cultus, and Agra (*q.v.*), the Mughal capital, still, except Mathurā (*q.v.*) and in a less degree Baṭesar (*q.v.*), there is no great place of pilgrimage on its banks, and it does not acquire full sanctity until it unites with the Ganges at the holy place known as Trivenī, or 'the triple braid,' where the Ganges and Jumnā are supposed to receive by means of an underground channel the waters of the Sarasvatī. Here the stream of the Jumnā is clear and blue, in striking contrast to the mud-laden waters of the Ganges.

**JUNNAR** (said to be a corruption of *Jundnagara*, 'old city,' and wrongly identified with the *Tagara* of Greek writers and Hindu tradition, which is really *Ter* in the Nizām's Dominions [*JRAS*, 1901, p. 537 ff.]).—A town in the Poona District of the Bombay Presidency; lat. 19° 12′ N.; long. 73° 53′ E. Its importance depends on its command of the Nānā pass, which leads to the W. coast. The town is surrounded by hills containing Buddhist caves nearly equally distributed in five different localities, including fifty-seven separate excavations. These caves are devoid of figure ornament or imagery, in this respect strongly contrasting with those of later date, such as Ellora (*q.v.*) and Ajanta (*q.v.*).

'Although none of these caves can compare either in magnificence or interest with the Chaityas of Bhājā or Kārlā, or the Vihāras of Nāsik, their forms are still full of instruction to the student of cave architecture. The group comprises specimens of almost every variety of rock-cut temples, and several forms not found elsewhere, and though plainer than

most of those executed afterwards, are still not devoid of ornament. They form, in fact, an intermediate step between the puritanical plainness of the Kāthiāwār groups and those of the age which succeeded them' (Fergusson-Burgess, *Cave Temples*, p. 249).

They certainly belong to the first great division of Buddhist caves. Some of the earliest may be dated 100 or 150 B.C.; and between this and A.D. 100 or 150 the whole series may be placed. The place was successively occupied by Hindus and Muhammadans, and the latter have left one important building known as Saudāgar Gumbaz, 'The Merchant's Dome.'

LITERATURE.—J. Fergusson and J. Burgess, *The Cave Temples of India*, London, 1880, p. 248 ff.; Pandit Bhagvānlāl Indraji, in *BG* xviii. (1885) pt. iii. 168 ff. The place was visited by J. Fryer in 1675; see his *New Account of East India and Persia* (Hakluyt Society), London, 1909, i. 323 ff.

## JUSTICE.—See RIGHTEOUSNESS, LAW.

## JUSTIFICATION.

—The verb *δικαιόω*, which 'justify' represents, means 'account righteous.' It is used both in the LXX and in the NT, and is juridical in idea, though forensic associations are not necessarily present to the mind of the writer, whenever the word occurs. It implies an acquittal or declaration of righteousness, whether the facts of the case correspond with the pronouncement or not. The situation to which it refers is the result of past action, not the cause of future activities. It describes the acquirement of a status, not the production of a state. It has reference to personal relations, not to psychological conditions. The only instance in the LXX that might seem to contradict this statement, Ps 72 (AV 73)$^{13}$—*ἄρα ματαίως ἐδικαίωσα τὴν καρδίαν μου*—not improbably implies an act of self-justification before God rather than a process of self-cleansing. In every other case when the word occurs, it is proof of righteousness that is implied. In view of Ro $4^5$ the words of Ex $23^7$—*οὐ δικαιώσεις τὸν ἀσεβῆ*—should be noted (cf. Is $5^{23}$). Thus the verb becomes equivalent to 'absolve'—*e.g.*, Sir $26^{29}$ etc. In the NT the parable of the Pharisee and the Publican shows the word as involving the sense both of self-justification and of absolution (Lk $18^{14}$; cf. $10^{29}$ $16^{15}$). The Epistle of James, in the spirit of Christ's words in Mt $12^{37}$, regards Abraham's obedience and Rahab's loyalty as 'justifying' them, because their actions are stamped by the OT as winning the Divine approval ($2^{14-26}$). It shows no sign of appreciating the deeper ethical sense which attaches to the word in the parable cited above.

But it is from St. Paul's use of the verb in the Epistles to the Romans and Galatians that the term 'justification' has achieved its permanent place in Christian theology. The idea first appears in connexion with the controversy between Paul and Cephas at Antioch (Gal $2^{11-21}$), when the latter, having lived 'as do the Gentiles,' separated himself together with other Hebrew Christians, fearing 'certain *who* came from James.' St. Paul represents himself as having contended that the recognition of Jesus as Messiah meant an acknowledgment that a man is not justified by the works of the law, but 'through faith in Jesus Christ' (v.$^{16}$). The old antithesis between those who were 'Jews by nature' and 'sinners of the Gentiles' (v.$^{15}$) had become little more than a convention. Justification was applied to a human being as such (v.$^{16}$ *ἄνθρωπος*), that henceforth living whether 'as do the Jews' or 'as do the Gentiles' (v.$^{14}$) he might 'live unto God' (v.$^{19}$). This was the life 'in Christ,' which in its relation to God is spoken of as 'justification in Christ' (v.$^{17}$). On its Godward side it depended upon the death of Christ, which was 'gratuitous' (v.$^{21}$ *δωρεάν*), if righteousness were attained 'through the law,' *i.e.* by outward compliance with its ordinances, and not 'in faith of the Son of God' (v.$^{20}$). In the following chapter the idea is still further expanded. St. Paul appeals to the bestowal of 'the Spirit' ($3^2$), which was an actual experience of the Galatian converts. As a result of 'hearing the gospel' (*ib.*) an effect had actually taken place which was in itself the witness of a right relation between God and the members of the Christian community. The delivery of the message had been met by, or, rather, had produced, 'faith' in those who heard (see Ro $10^{17}$; cf. He $4^2$). They had been enabled to trust God and so become recipients of His grace. This leads the Apostle to introduce two pivot passages from the OT, one from the Law and the other from the Prophets, which express the principles that reach their consummation in Christ. 'Abraham believed God and it was reckoned unto him for righteousness' (Gn $15^6$, cited v.$^6$). 'The righteous shall live as a result of faith' (Hab $2^4$, cited v.$^{11}$). The book of Genesis presents as an initial act what Habakkuk represents as a continuing condition. The purpose of salvation begins with Abraham, though the promise reaches its fruition in Christ. His surrender to this purpose was an act of faith which the OT had rightly described as 'reckoned for righteousness' because it enabled God to establish those relations with him which, viewed from the manward side, constitute 'righteousness.' And it can be carried forward to its consummation in the full 'vision' (Hab $2^3$) or revelation only if the attitude of faith is permanently maintained.

The real scope of St. Paul's argument cannot be understood unless it is seen that he undercuts the whole controversy in which he had been involved. 'Neither circumcision availeth anything nor uncircumcision' (Gal $5^6$ $6^{15}$; cf. 1 Co $7^{19}$). The self-condemned action of Peter in separating himself from the Gentiles ($2^{11}$) and the subsequent defection of the Galatian Church under stress of the demand that they should submit to circumcision and its practical implications ($4^{10}$ $6^{12}$) had emphasized those precepts of the Mosaic system which were occupied with ceremonial rather than with conduct. It was, in fact, ceremonial observance, and not the keeping of the Moral Law, that was endangering the freedom of the gospel. This fact, though even in Galatians the conception of law is not wholly confined to these provisions, enabled St. Paul to perceive that moral actions have only the value of ritual acts if regarded simply as conformity with law. Law, therefore, is a system of regulations and has the value of discipline ($3^{24}$ *παιδαγωγός*). That particular form of it which was immediately in question, viz. the Mosaic Code, could only have been meant to prepare those whose faith had already responded to the promise for the fuller response which its fulfilment in Christ would demand. The Law was until Christ (*ib.* *εἰς Χριστόν*). Those who are living under the Law (*ἐν νόμῳ*), if they are justified at all, are justified, as Abraham was, by trusting in God. Their obedience would be a 'fruit of the Spirit' ($5^{22}$) in so far as the life unto God was granted in anticipation of the fulfilment of the promise in Christ. All this is implied, if not implicitly stated, in the argument concerning the faith of Abraham ($3^{6-29}$). In principle, God's dealings with mankind have always been the same. His purpose has always been to draw men into those relations with Himself which confer the status of sonship, the gift of the Spirit, and the possession of life, in Christ. The historical work of Jesus is only the sending forth of the Son in the fullness of the time ($4^4$), *i.e.* at the appropriate moment in the education of the human race. The gospel was preached beforehand to Abraham, who received the promise ($3^8$), as afterwards to Christian disciples, who have received 'the promise of the Spirit through faith' (v.$^{14}$). The Cross of Christ

stands in living relation to both. All alike were loved by the Son of God, who gave Himself for them ($2^{20}$). All alike must acknowledge, at least implicitly, that the life that they now live in the flesh they live through faith in Him (*ib.*).

It must be observed that St. Paul uses the phrase 'justified in Christ' ($2^{17}$). Here he combines in one sentence two lines of teaching, which many modern interpreters have found it difficult to correlate. It has been asserted that the deepest and most vital thought of the Apostle is expressed in the phrase 'in Christ,' and that the whole argument concerning justification by faith is only a controversial device to account for the apparent paradox of abandoning the Jewish system while acknowledging Jesus as the fulfiller of the Messianic expectation. The Epistle to the Galatians is too obviously a vehement attempt to express the personal experience manifested in its autobiographic passages to make such a conclusion probable, and the fuller elaboration of the soteriological doctrine in Romans, which has no immediate reference to controversy, renders it practically impossible. The personal history of St. Paul himself, if any other point of contact were wanting, would in itself be sufficient to hold together justification by faith and the life in Christ as representing two equally important aspects of the one Christian experience. But at the very outset the Apostle has himself welded them together in this conception of justification in Christ, which may in turn be interpreted by the phrase used in Ro $5^{18}$—'justification of life.' Condemnation, not a formal sentence but an attitude of God towards transgressors, rests upon all those who 'in Adam' sin (Ro $5^{16}$). So justification, *i.e.* the act of God whereby He accepts mankind for the sake of what Christ has done, of which the issue is life, rests upon all those who as a consequence live in Christ. What we have to recognize is that to the mind of the Apostle justification is a Divine act, and only figuratively a declaration. The metaphor is forensic, but the fact is such only so far as all forgiveness may be said to partake of this quality. Being the act of the living God, it is dynamic, and as such necessarily involves the infusion of the Spirit. Consequently it brings with it love, joy, peace, etc., which are the fruit of the Spirit, and the presence of which is part of the essential experience of the life in Christ. But (1) inasmuch as by baptism we 'put on Christ' (Gal $3^{27}$), it is manifest that active faith is involved in the complex result. It is, therefore, all one whether we say that we live the new life 'in Christ' or 'through faith in Christ.' St. Paul's doctrine is not one of a mystical union *ex opere operato*. It is reached through a conscious act of appropriation. And (2) the sending forth into our hearts of the Spirit of the Son ($4^6$), though it issues in the reproduction of Christ in us (v.$^{19}$), an ethical as well as spiritual transformation, is primarily the medium through which we are enabled to call upon God as Father (v.$^6$). This involves a dogmatic, which is not given in experience, but to which experience testifies, viz. that we are no longer bondservants but sons and heirs of God (*ib.*). The fundamental fact, therefore, lies in the realm of absolute, theological truth. To recognize Christ as Redeemer is to acknowledge Him as the Messiah, in whom the Kingdom is established, in which a new status is conferred on every disciple expressed under the figure of 'adoption' (v.$^5$). Compare the Epistle to the Ephesians, which takes up the language of the earlier Epistles—'by grace have ye been saved through faith' (Eph $2^8$)—and interprets it to mean the translation of sinners, through forgiveness by the blood of the Cross, into the predetermined Kingdom of Christ (Eph. *passim*). It is clear that St. Paul accepted in general outline the dogmatic belief of the primitive community concerning the Kingdom of the righteous, which had been brought in by the exaltation of Jesus, which was already present to faith in the life of the ecclesia, and whose final revelation was anticipated in the sacraments. 'We through the Spirit by faith wait for the hope of righteousness' (Gal $5^5$), being delivered by Him who gave Himself for our sins out of this present evil world ($1^4$). There is, therefore, an eschatological element in the idea of justification. It is initial to the Christian life in the sense of inaugurating those relations with God which issue in the experience of the Spirit. It is final in so far as it is only ultimately reached with that judgment which at the end will establish the Kingdom. What St. Paul criticized in the Pharisaism of his contemporaries was not the passion for ethical righteousness, which he shared, but the spiritual blindness which did not perceive the need of a new creation, of the uplifting of human life, whether Jewish or Gentile, on to a new level, the 'Jerusalem that is above' ($4^{26}$), into which men must be reborn by a Divine act. This act is forgiveness ($3^6$; cf. Ro $4^6$), to which justification is therefore equivalent.

The Epistle to the Romans presents the teaching of justification in a less controversial and more philosophic spirit. First of all, it affirms the ethical proposition that 'not the hearers of a law are just before God, but the doers of a law shall be justified' ($2^{13}$). This principle is universal in its application, and holds good of Gentiles who, not having a law divinely expressed in a revealed code, yet 'shew the work of the law written in their hearts' (v.$^{15}$), *i.e.* in so far as they are obedient to the dictates of conscience. Here it is clear that ceremonial observance passes into the background. Law means a moral ideal, as expressed, *e.g.*, in the Ten Words. But it is precisely here that the difficulty arises. The condition of the world generally makes it abundantly clear that mankind at large are under 'the wrath of God' ($1^{18-27}$) manifestly revealed in abominable lusts and passions, to which they are enslaved. The experience of those who have endeavoured 'to establish their own righteousness' ($10^3$) by attempting to make their actions correspond to a known standard of righteousness, such as the ethical code of the Hebrews, only serves to convict them of innumerable transgressions, and of falling short of the glory of God ($3^{23}$). Ideally the commandment which is holy, righteous, and good is ordained unto life, because it is a measure of just conduct, but in effect it is 'found to be unto death' ($7^{10.13}$), because, as the measure of our own shortcomings, it brings 'the knowledge of sin' ($3^{20}$). St. Paul is here universalizing his own experience, which is the ultimate basis of his argument. He has been made aware of 'a law in the members' warring against 'the law of the mind,' the standard which reason and conscience approve, and bringing him into captivity under the law, or rule of sin, which has provoked a cry for deliverance ($7^{23.24}$). As in Galatians, there is a dogmatic world-view lying behind the testimony of experience, which is the pledge of an 'eschatological' condemnation 'in the day when God shall judge the secrets of men, according to my gospel, by Jesus Christ' ($2^{16}$). This dogmatic governs the form of statement. The desire to escape the stings of conscience is the immediate, to stand as 'righteous' in the day of judgment the ultimate, yearning of the sinner. The greater includes the less.

The sad experience of the Apostle drives him to the conclusion that the law is weak ($8^3$), because it cannot effect what it demands. But against it he is able to set his experience as a Christian. 'I thank God through Jesus Christ our Lord' ($7^{25}$). So from the outset he proclaims his gospel as 'the power of God unto salvation to every one that be-

lieveth' ($1^{16}$). To accept this message, to obey this gospel, to be 'in Christ Jesus' (see above) is 'to walk after the spirit' ($8^{4}$) and to escape from sin in present experience, and so to have the assurance that there is 'no condemnation' (v.$^{1}$) here or hereafter. The 'righteousness of God,' a living, active force disclosed in Christ, is contrasted with a man's 'own righteousness,' which the revealed law shows to have no existence in fact. This Divine righteousness is 'by faith unto faith' ($1^{17}$). Faith contemplates the manifestation of that righteousness in the Person and Work of Christ ($1^{1-4.16.17}$), the trustful acceptance of which as the gift of God leads to that faith by which, abandoning self-sufficiency, we become obedient, surrender ourselves, to it. First of all there is the experience of 'newness of life' ($6^{4}$), an identification with Christ so complete that St. Paul can use the expressions 'buried with Christ in baptism,' 'crucified with Christ,' 'risen with him' ($6^{1-6}$). In proportion as this faith is active in us, we henceforth cease to serve sin (v.$^{6}$), we are liberated from 'the law of sin and death' ($8^{2}$), and no longer find sin reigning in our mortal bodies ($6^{12}$). 'The first-fruits of the Spirit' ($8^{23}$) become manifest in the mortifying of the deeds of the body. The love of Christ—the love of God in Christ—became, as the Apostle had himself proved, an influence so powerful that he could speak of Christ, or the Spirit of Christ (the two expressions are practically indistinguishable [$8^{9.10}$]), inhabiting his personality, the source of holiness and of good works. But, as in Galatians, this is clearly no *unio mystica*, transforming the character *ex opere operato*, but a conscious fellowship based upon loyalty and trust. As it is expressed in Ephesians, he had yielded himself to the Redeemer, that Christ might dwell in his heart by faith (Eph $3^{17-19}$).

But, if this were all, the Death and Resurrection of Christ would remain unexplained; the relation of these facts to the reproduction of the life of Christ in the believer would be undefined. Once again, therefore, the ethical result is taken as the pledge of that altered relationship to God which was dogmatically expressed in the theology of the primitive community as the covering effect of the work of Christ on our behalf. 'The Spirit himself beareth witness with our spirit that we are the children of God' (Ro $8^{16}$). The actual, realized effects wrought in those who were admitted to the fellowship of disciples, the fulfilling of the ordinances of the law in those who were walking not after the flesh but after the spirit, are the immediate and subjective pledge of an ultimate and objective relationship between the members of the community reconciled in Christ on the one hand and Him who is God and Father on the other. Viewed from the side of God's action, which is all along spontaneous, paramount, and free, this condition is brought about by grace or free favour. On man's side it results from faith, which is not a meritorious and independent act, but is itself a Divine gift, the reflex in human experience of free grace.

That the Pauline doctrine is forensic in form rather than in fact should be clear from the following considerations. The Apostle necessarily contrasted the freedom and joy of his experience as a Christian, and the altered relationship to God, to which it testified, with his former experience as a Pharisee. He had believed that as a circumcised Hebrew he had been admitted to a community in which the strenuous observance of the Mosaic Law both on the ceremonial and on the moral side afforded a meritorious ground for the final sentence of the Divine Lawgiver and would procure his acceptance. What he had once hoped to attain by a process of legal compliance had now been reached by the establishment of relations which were not legal at all, viz. by the free exercise of God's fatherly love towards him in Christ, which had awakened a responsive trust. This is the essential Christian experience, however it be expressed. Its note is the restoration through forgiveness of personal relations with a Father, not the satisfaction of the claim of a Lawgiver. Thus the term 'justification,' as used to express what the NT elsewhere calls 'salvation,' is forensic in what it denies rather than in what it affirms. But, inasmuch as Pharisaism arises out of that stage in the education of man in which he learns to recognize the holy love of God through the disciplinary revelation of His character in the precepts of a formal law, the conception of salvation is not adequately expressed unless it is seen in relation to what 'the law could not do in that it was weak.' Nor must we fail to perceive that faith is not an antecedent condition, but is involved in the idea of justification, so that the method cannot be separated from the fact. What the gospel means by 'thy faith hath saved thee' St. Paul expresses by saying that we are justified through faith. The correlatives which together are the keynote of justification are grace and faith, the former being the activity of God's personality towards man as realized and expressed in the historical work of Christ, the latter being the activity of man's personality towards God who thus manifests Himself as Redeemer. They are indeed two ways of expressing the same relation viewed from opposite sides. It is logic, not experience, that separates them, and that requires a third term like justification to express the resultant of both. But it is faith that is the norm of the Pauline theology. And justification must always be interpreted in the light of the experience implicit in the Apostle's obedience to the heavenly vision (Ac $26^{19}$), and summed up in the declaration: 'The life that I now live in the flesh I live in faith, faith in the Son of God, who loved me and gave himself for me' (Gal $2^{20}$).

The connexion between justification and baptism, though St. Paul does not himself explicitly adjust the terms, arises out of the fact that 'we are justified in Christ'; *i.e.* Christ is the sphere in which justification takes place. The Son of God is revealed not merely to, but in, the believer (Gal $1^{16}$), and this because he is 'created in Christ Jesus' (Eph $2^{10}$). The purpose of God was 'to sum up all things in Christ' ($1^{10}$). The mystery of the Divine will was 'the one body,' in which all believers are reconciled to the Father through the Cross ($2^{15-18}$). Thus 'we are members one of another,' which for St. Paul is the reason and motive of the ethical life ($4^{25}$ Ro $12^{5}$, 1 Co $12^{27}$). St. Paul's doctrine of the body of Christ, or the *ecclesia*, is the counterpart in his theology of the Kingdom to which in the Gospels the forgiveness of sins stands in a constant relation. Similarly, to be 'justified in Christ' is *ipso facto* to be placed in relation to the body in which is realized the fellowship of the one Spirit. And baptism is the act of initiation into the Christian fellowship (1 Co $12^{13}$), wherein justifying faith perfects itself and thus becomes the starting-point of the new life in Christ. In this rite the believer washes away his sins (Ac $22^{16}$) and puts on Christ (Gal $3^{27}$), not because he cannot achieve these results by faith, but because he can 'appropriate the forgiveness of sins by faith only when he unites in his faith at once trust in God and Christ, and the intention to connect himself with the community of believers' (Ritschl, *Rechtfertigung und Versöhnung*, iii. § 20, Eng. tr., Edinburgh, 1900, p. 111). In view of recent theories, according to which St. Paul is declared to have held that baptism confers the Spirit *ex opere operato* (see, *e.g.*, Kirsopp Lake, *The Earlier Epistles of St. Paul*,

London, 1911, pp. 233n., 383–391, and A. Schweitzer, *Geschichte der paulin. Forschung*, Tübingen, 1911, Eng. tr., *Paul and His Interpreters*, London, 1912, p. 213, etc.), it is important to bring out the essential unity between the doctrine of justification by faith and the Pauline conception of the Christian community. Baptism consummates the Divine grace and completes the act of faith. It is the guarantee of the common and corporate character of justification, not the operation of a second and different principle of salvation.

If the term 'justification' is used to express reconciliation between God and the sinner, it is clear that it implies a personal status or relationship, and not a subjective experience. But it is equally clear that for St. Paul the recognition of it implied and depended upon an experience, which ought to repeat itself in all believers. That experience was the assurance of a salvation already attained (Ro 5[1] 15[13]; cf. Eph 2[18] 3[12]), which stood in marked contrast to the fear and uncertainty which had accompanied the effort to attain it by legal righteousness, the peace and joy in the Holy Spirit which succeeded to the doubt and restlessness which had preceded the revelation of Jesus as Redeemer. This must not be confounded with an assurance which supersedes further effort. St. Paul was fully aware that he had not yet attained (1 Co 9[27], Ph 3[12]). But it was only lapse of faith that would render the final issue doubtful. It is faith in which Christians stand (Ro 11[20], 1 Co 15[1], 2 Co 1[24]). The only fear is lest they fall from a grace (Gal 5[4]) already fully theirs, not lest, continuing in faith, they should fail finally to attain it.

While the doctrine of justification is in its formal outline peculiar to St. Paul, there is no opposition in principle between it and other NT methods of expressing the meaning of salvation. The Petrine teaching, though in the later development of the First Epistle it is influenced by the Pauline theology, remains less technical and less fully formulated. The disagreement at an earlier stage between the two Apostles, so far as it was determined by intellectual causes, may be traced to this fact, and not to any fundamental contradiction, like that which determined the attitude of St. Paul's Judaistic antagonists, who failed to recognize in Jesus the Messiah a spiritual, and therefore a Divine, Redeemer. The Johannine conception of salvation, though not ignoring faith (Jn 3[18] 5[24], *εἰς κρίσιν οὐκ ἔρχεται*), is expressed in other categories, and the early rise of Gnosticism, with its imperfect attempt to explain how God became man, tended to fix the interest of religious thinkers upon the doctrine of the Person of Christ as the fundamental problem of Christian theology. Though the greatest fathers of the Church (*e.g.*, Athanasius) perceived that Christology must ultimately be determined by the satisfaction which Jesus gives to the religious need of redemption, the exigencies of repeated controversies tended to supplant the idea of faith, which sees in it an attitude of trustful self-committal to the reconciling will of God expressed in Jesus Christ, by another and a narrower conception, which represents it as assent, whether intelligent or not, to the doctrine of the Person of Christ as formulated in creeds and their corollaries. The growth of the Church system, reinforced by the natural tendency of the majority of mankind to be content with conformity to established and traditional institutions as a sufficient discharge of the Divine claims upon them, converted organized Christianity into a 'New Law.' When the hunger for salvation, which the Mosaic system had failed to allay in the case of St. Paul, began to reassert itself in the Western Church, St. Augustine partially reaffirmed the Pauline position, but without rising to its characteristic and essential principle. Interpreting justification by a false appeal to its etymology (=*justum facere*), he recovered the conception of salvation as a free gift of God (*gratia* is that which is bestowed *gratis*), but failed adequately to realize that it involved the re-establishment of personal relations with the Father through Christ. Grace was represented as a supernatural life infused into human nature through sacramental channels and gradually built up into a righteousness which was not meritorious only because it was imparted rather than achieved. Thus his teaching was a more or less materialized form of the Pauline doctrine of sanctification, *i.e.* the process by which God transforms into the image of Christ those whom He has already accepted for His children through faith in Jesus. The initial action, which alone is covered by the NT view of justification, was entirely omitted by Augustinianism, which became the accepted mould of the medieval theology, the standard expression of which is found in the *Summa* of St. Thomas Aquinas. Thus in *Summ. Theol.* ii. 1, qu. 100, he asserts that *gratia justificans* is *quiddam reale et positivum* in the soul, a supernatural quality, infused like the virtues—faith, hope, and love—of which it is the cause. In conformity with this view is his doctrine of faith. Though involving the obedience of the will, at least when formed by love (*fides formata per caritatem*), it is primarily intellectual assent and has reference to symbols or creeds rather than to the redemptive personality of God, and is a preliminary condition of justification rather than its channel. In its imperfect stage (*fides informis*) it is scarcely distinguished from the forced assent to truth which is wrung even from devils, who 'believe and tremble' (*Summ. Theol.* ii. 2, qu. 1–10). These ideas were stereotyped by the Council of Trent, after being disputed by Humanists and Reformers, in the 'Decr. de Justificatione,' which published an anathema against those who declare that men are justified either by imputation of Christ's righteousness alone, or by remission of sins alone, excluding the grace which becomes inherent in them, or who say that the grace by which we are justified is only the favour of God (*Conc. Trid.*, sess. vi., 'Decr. de Justif.' can. xi.). The point of this position is not the objection offered to the phrase 'imputation of Christ's righteousness,' which is admittedly not scriptural, but the identification of grace with an imparted gift and the consequent description of justification as a gradually realized psychological condition. This, as we have seen, is the point where St. Augustine's system parted company with Paulinism, and opened the way to the re-establishment of salvation by merit, which was characteristic of the formal teaching of the medieval Church. For a supernatural gift, if it be transmuted through use of the prescribed sacramental means into virtues inherent in human character, becomes the achievement of the possessor, precisely as the results of labour, though not obtained without the employment of material, are acquired by the worker. Thus Aquinas, in opposition to the spirit of St. Paul, allows that *fides est meritorium*. It is easy, therefore, to see how a compromise was effected with the party that had most keenly opposed the Augustinian view of grace to produce that combination of sacramental mysticism and ecclesiastical legalism which represents the view of salvation current in the Middle Ages. Emphasis was laid, on the one hand, upon the hierarchical machinery, which culminated in the system of indulgences, and, on the other, upon the mediation through sacraments of Divine influences. The personal, ethical relation to God, of which faith, as expounded in the Pauline Epistles, is the pledge, and justification, as similarly set forth, the expression, had no place in official theology.

The 16th cent. saw the rediscovery of the NT doctrine of justification. This was rendered possible in the first instance by the Revival of Learning, which threw men back upon the original Greek, promoted textual exegesis, and prepared the way for Biblical as distinguished from scholastic theology. But the renewed knowledge of Greek was not the only key to a living interpretation of the NT. The awakening of personality, the meaning of which had been only imperfectly understood whether by the classical, the patristic, or the mediæval mind, quickened those religious needs which only an experience akin to that which produced the Pauline theology could adequately satisfy. The story of Luther, laboriously climbing the Santa Scala at Rome, till the words of Habakkuk twice cited by St. Paul in his crucial arguments —'the just shall live by faith'—sent him incontinently down the steps with a revolution in his soul, is typical of the Reformation. For Luther, as for St. Paul, the vision of God in Christ brought trust in His fatherly love as manifested in the Person and Work of the Redeemer, with the consequent assurance of free forgiveness and a personal share in the purpose of salvation. This is the essential Christian experience, and though, as Hooker affirms in his sermon on 'Justification,' there have doubtless been in all ages thousands who have been the subjects of it (*Serm.* ii. § 8 f.), it is difficult to find room for it in the official theology of mediæval Catholicism. Confidence in God became the mark alike of Luther's own teaching and of Reformation theology, and confidence is nothing else but faith aware of itself. It is the subjective aspect of the restored personal relations, or reconciliation with God, by which it is inspired, and which constitute what Protestants have always meant by justification.

Neither the general outlines of the teaching of the Reformation nor the particular theories of individual writers correspond in every detail with the Pauline statement. These last do not, of course, agree one with another, either in terminology, in scope, or in adjustment to other balancing principles. Further, it must be borne in mind not only that the phraseology of St. Paul is to be interpreted in relation to the NT generally, but also that his Epistles do not present us with systematic theology. The upheaval of religious thought in the 16th cent. followed upon a long dogmatic history, in relation to which its theology was re-constructed. While, therefore, St. Paul speaks of faith being reckoned for righteousness, Protestant divines used 'the imputation of righteousness' as a technical term defined in respect to a general body of doctrine, and justification by faith becomes justification by faith only. The deviation in the latter case is due not to an exaggeration of St. Paul's teaching, but to the conditions of the later controversy. The Reformers did not deny that hope and love no less than faith were necessarily present in those who are justified. What they saw was that to connect those virtues with justification itself was to shift the meaning of the term from the Biblical to the mediæval sense. Whether 'imputation of righteousness' is to be regarded as a Biblical idea depends upon whether such a phrase as 'the righteousness which is of God' (Ph $3^9$) has a positive content, and means, *e.g.*, the merits of Christ, or whether it is simply equivalent to the status of those to whom faith is reckoned for righteousness. But what is really involved here is not so much the meaning of justification as the validity of certain theories of the Atonement. This is true also of Ritschl's contention, that the community of believers is primarily the object of justification (*op. cit.* iii. § 20, etc.). For the question really is whether the Church is part of the revelation of God in Christ or not, and justification is still equivalent to the forgiveness of sins in either case. Whether the Cross is a satisfaction for sin, whether the work of Christ possesses a substitutionary character, whether the sacramental Church is part of the Divine scheme of redemption, are questions affecting the revelation of God in Christ rather than the status of those who through faith become the objects of reconciliation. The parting of the ways in respect of justification depends on the relation which exists between forgiveness and the infusion of holiness. The latter is not denied by Protestants. But it is conceived as resulting from the communication of the Spirit, which necessarily springs from the Divine act of pardon and acceptance. Roman theology, on the other hand, regards forgiveness as consequent upon the transmission of holiness, which it calls righteousness, the normal channels of this process being the sacraments. The distinction is not merely a matter of terms, but has an important bearing upon the Christian character. The provision of aids, however powerful, for the attainment of justification must have an entirely different effect upon the daily life of the believer from the assurance of a reconciliation already fully won.

LITERATURE.—It is difficult to make a selection from the abundant literature dealing with St. Paul and Paulinism. But the student may consult art. 'Justification' in *HDB* ii. 826 (D. W. Simon), and in *DCG* i. 917 (R. S. Franks), and A. Harnack, *Dogmengeschichte*[3], Freiburg, 1894, Eng. tr. *History of Dogma*, 7 vols., London, 1894–99. To these should be added A. Ritschl, *Rechtfertigung und Versöhnung*, Bonn, 1874; Aquinas, *Summa Theologica*; H. Martensen, *Die christliche Dogmatik*, Berlin, 1856, Eng. tr. *Christian Dogmatics*, Edinburgh, 1866, §§ 228–231; J. H. Newman, *Lectures on the Doctrine of Justification*[3], London, 1874; and the Commentaries of J. B. Lightfoot on *Galatians*, and Sanday-Headlam on *Romans*.

J. G. SIMPSON.

**JUVENILE CRIMINALS.**—By 'criminals' we mean those offenders of whom the criminal law of the particular State takes cognizance by way of punishment, not those wrongdoers, against the wrongdoer's family or others, whom the State refuses to prosecute and punish. By 'juvenile,' in the expression 'juvenile criminals,' we primarily mean offenders who have reached the minimum age at which the State prosecutes for crime, but who are under the age at which full legal responsibility is held to begin. In a secondary sense, we include as juvenile criminals those young persons who, although they have not actually committed crime, are in imminent danger of becoming criminals. It is, in many cases, an accident whether a boy or a girl is in the one class or the other. State or voluntary action to prevent the manufacture of criminals may be as necessary in the one case as in the other.

This delimitation of our subject is convenient; but it does not in all cases square with the facts. There are exceptional children, under the age of possible prosecution, who might be held responsible for their wrongful acts, because they are as conscious of the nature, probable results, wrongful character, and legal consequences of these acts as those who are above that age. On the other hand, there are many adult criminals—some authorities say twenty-five, others seventy-five, per cent—whose mental and moral development is so stunted that they are not fully conscious, when they commit crime, of the conditions inferring legal responsibility.

Although the modern State will not prosecute and punish persons below the age at which it considers legal responsibility to begin, it holds itself entitled, in certain circumstances, to interfere with the liberty of these persons, and with the natural rights of their parents, and to take such steps as it thinks fit to prevent their becoming criminals.

This is the principle of 'prevention better than cure,' on which the Industrial School and, to a lesser extent, the Reformatory School of the United Kingdom, and similar institutions in other countries, are founded.

In theory, the law of all countries used to treat juveniles (above the age at which the particular State held full legal responsibility to begin) and adults as equally liable to punishment, although, in practice, the obvious distinctions between the two cases were more or less acted upon, at least by the more humane administrators of the law. Children were sentenced to be transported or hanged; but these sentences were modified in their case more frequently than in the case of adults.

In modern times, by criminologists of all countries, increasing stress has been laid on the view suggested by the words: 'Vengeance is mine; I will repay, saith the Lord' (Ro 12[19]). Torture, mutilation, branding, starvation, and transportation had each their sturdy advocates, who honestly believed that, on their abolition, discipline inside the prison and the safety of the lieges outside would become impossible. Yet these worse than useless horrors have all disappeared with the pillory and the stocks, the treadmill and the crank, never to return; and flogging and lengthened solitary confinement have been reduced to a minimum, and, with the silent system, will, for similar reasons, soon be things of the past. It has been sharply questioned whether, except as an incident of the reformation of the individual or in order to secure the safety of the community, the State, as such, has any right to punish offenders, whether by fine, imprisonment, or death. But it is generally agreed that, whether the idea of punishment pure and simple is or is not admissible in the case of adults, it has no place (except in very exceptional circumstances, as an adjunct of reformation) in dealing with juveniles. It was only in 1908, by clauses 102 and 103 of The Children Act of that year, that it was made impossible in the United Kingdom to send to penal servitude, or to hang, a boy or girl under 16. The efficacy of rewards rather than punishments, the power of sympathy rather than coercion, in the interests both of discipline and of reformation, are not yet fully recognized in prisons, in schools, or in families.

Modern methods of dealing with juvenile criminals have proceeded on similar lines in Great Britain and its Colonies, the United States, and the Continent of Europe. They have been based on two considerations: (1) the conviction that the crimes of juveniles, and the risks of their falling into crime, are in most cases the result, not of their own wilful wrongdoing or deliberate choice, but of heredity polluted by want, drink, and disease, of physical hardships (due in large measure to the periodic unemployment and the insufficient wages of parents), of defective religious and secular education, of want of parental supervision and control, and of vicious associations; and (2) the general agreement, founded on experience, that juveniles, when withdrawn from their vicious surroundings (the earlier the better), will respond to firm, kindly, intelligent reformative influences more readily and more permanently than adults.

The movement in Europe, the United States, and the British Colonies for a radical change in the treatment of potential and actual juvenile criminals was the result of a quickened sense in the State, and in the Church, of the supreme value of the rising generation as the hope of the nation, and of national as well as parental responsibility for all the children in the community, whether they are normal or defective physically, mentally, or morally. In Great Britain it was, like many other movements for the welfare of children, partly at least the consequence of the Ragged School movement, begun by John Pounds, the Portsmouth cobbler, early in the 19th cent., and subsequently extended all over Great Britain and Ireland, under the inspiration of such men and women as Shaftesbury and Mary Carpenter in England, and Thomas Guthrie and Sheriff Watson in Scotland. It was not till Ragged School methods had been proved, in Britain and elsewhere, to be successful in arresting the flow of juvenile crime that the State in Great Britain took any share in the work, which results in benefit to the whole community, and is, therefore, suitable for State recognition and support. In later years, the State's action in Great Britain has been accelerated by the success of similar preservative and regenerative institutions in the United States and in the British Colonies, and by the splendid volunteer work done by such agencies, independent of State aid, as those of the Ragged School Union and Barnardo and Müller in England, Quarrier in Scotland, and the Salvation Army in different parts of the world.

Modern legislation dealing with juvenile crime has been mainly directed (1) to exclude juveniles from prison; (2) to provide institutions for the preservation of those who are in danger of falling into crime, and for the reform of those who have been convicted of crime; and (3) to secure for any who may be in prison such treatment, in confinement and on release, as will at least make it possible for them to redeem their past, and live honest and useful lives, keeping in view the saddening statement, or, rather, understatement, made by the Departmental Committee of 1895: 'Few inmates leave prison better than when they came in.' It is not possible in a short article to exhaust the application of these views in different countries. The matter may be illustrated by stating the position in the United Kingdom, where the law relating to juvenile crime is to be found in parts iv. and v. of The Children Act, 1908 (8 Edward VII., ch. 67), entitled 'An act to consolidate and amend the law relating to the protection of children and young persons, Reformatory and Industrial Schools, and Juvenile Offenders, and otherwise to amend the law with respect to children and young persons.' The First Offenders Act, 1887, The Prevention of Cruelty to Children Act, 1904, and The Probation of Offenders Act, 1907, should be read along with The Children Act, 1908.

By section 58, magistrates may send to Industrial Schools (1) children who are found begging, (2) children found wandering, and without visible means of subsistence, (3) destitute children, and those whose parents (or surviving parent) are in prison, (4) children of criminal or drunken parents, unfit to have the care of them, (5) children living in grossly immoral surroundings, (6) children who are refractory and beyond the control of parents or guardians, or, if in a workhouse, of the managers, and (7), in exceptional circumstances, children not older than 13 charged with crime. All boys and girls sent to Reformatories (with the exception of refractory children sent from Industrial Schools) must have been convicted of crime.

The body of legislation which culminated in The Children Act, 1908, has, in conjunction with voluntary effort, resulted in the establishment, in different parts of the United Kingdom, of two institutions designed to preserve children from that prison brand which, once affixed, is rarely effaced, and to fit them, convicted or unconvicted, for a new career: (1) Certified Industrial Schools for children not older, at entry, than 14, who are in imminent danger, from their destitute and neglected condition, from their immoral surroundings, or from their refractory habits, of falling into crime, or who have been convicted of minor

offences; they may be committed for any period, but cannot remain in an Industrial School beyond 16; (2) Reformatory Schools for children over 12 years and under 16 at entry, who have committed more serious offences, or who may be beyond the Industrial School age of 14; they are committed for not less than three, and not more than five, years, but cannot remain in a Reformatory School beyond the age of 19.

(1) *Industrial Schools certified and subsidized by Government.*—The State has interfered in favour of Industrial Schools in four ways: (1) by certifying those of whose management and methods it approves as fit places for the detention of the boys and girls for whose benefit the Acts already mentioned were passed; (2) by conferring powers on magistrates to send boys and girls to these schools under detention orders for a fixed period; (3) by paying a proportion of the cost of the boys and girls so committed under magistrates' orders; and (4) by providing Government inspection of certified Industrial Schools.

Government recognition and subsidy were not obtained for Industrial Schools without opposition. It was said that these schools were merely doing the work which the parents ought to do; that to support them was to pauperize both parents and children, and to set free the children's money to feed the vicious indulgences of the parents. If there were parents, who, although able, were not willing to do their duty by their children, why did not the criminal law compel them? These arguments, although specious, were inapplicable to orphans, deserted children, and children of long sentence prisoners. Even where they had a basis in fact—*e.g.*, the common case of parents spending on drink what truly belonged to their children—it was proved that it would be of advantage to the State to save the children from joining the criminal ranks, even at the cost in some cases of pauperizing the parents and feeding their vices.

The opponents of Government interference relied on another great principle, viz. the inalienable rights of parents in their children. But, while this principle could have no application in the case of orphan children, it had only a technical application even in the case of those deserted or neglected children who, although one or both parents might be alive, were worse than orphans.

(2) *Reformatory Schools.*—As in the case of Industrial Schools, voluntary effort had proved the success of Reformatory Schools for youthful offenders before the system was adopted by Government. In the preamble of the first Reformatory Statute (passed in 1854, 7 and 8 Victoria, ch. 86) there is a recital of the establishment, by voluntary contributions, of Reformatory Schools in various parts of Great Britain.

Dealing with both Reformatory and Industrial Schools, the 1908 Act makes careful provision, in the choice of a school, for respect being paid to the religion in which the child has been brought up. It also provides for the parents of the children, wherever possible, being compelled to contribute to the cost of their maintenance and education. In the case of Industrial Schools, the children may, when the managers of the school think the case a suitable one, be boarded out instead of being kept in the school; and they may be licensed out, from both Industrial and Reformatory Schools, before the expiry of the period for which they were sent to the school. The statute does not contain any provision for emigration; but it is the practice, especially when the home is an exceptionally bad one, to send a certain number to the Colonies. There is no difficulty in finding employment for the children, the girls as domestic servants, and the boys in all kinds of skilled trades and in the army and navy. After leaving school, the children remain under the supervision of the managers—Industrial School children till 18, Reformatory School children till 19. The cost of these schools is not met entirely by the Treasury or by local authorities. Voluntary contributions cover a proportion of the cost; but, as in all cases when Government aid is available, the directors of these institutions find it increasingly difficult to maintain voluntary subscriptions. Government has wisely left the administration of the schools to voluntary committees of non-official men and women specially interested and specially skilled.

Naturally, looking to the ages and careers of the inmates, the discipline in Reformatories is more severe than in Industrial Schools, and, for the same reason, the percentage who do well after their time is up may not be so high. But, whatever differences of opinion there may be as to the best methods of dealing with juvenile crime or as to the precise percentage of satisfactory cases, it is universally admitted that the State has got many times more than full value for all the public money spent on Reformatories and Industrial Schools.

(3) *The Borstal system.*—In addition to Certified Industrial Schools and Reformatories, there are State institutions in England and Scotland on what is known as the Borstal system, for offenders, from 16 to 21, too old for Reformatories, but whose habits have not yet matured beyond redemption, although they may have been convicted several times. The success already achieved in these institutions—the first was founded in 1902—makes it certain that the test of age will be abandoned, and that, sooner or later, all prisoners will be treated as capable of reformation, save only those professional criminals who have shown by a lengthened career in crime that, for the safety of the community, they must be confined for life. See, further, art. CRIMINOLOGY.

(4) *Truant Schools.*—The position of Day Industrial Schools in Scotland, established under the Day Industrial Schools (Scotland) Act, 1893, in relation to Certified Industrial Schools appears from clause 83 of The Children Act, 1908. In the United States remarkable results have been achieved in an establishment called 'The George Junior Republic,' founded in 1895, in which the inmates are put upon their honour and trusted with administration and discipline to an extent unknown until 1913 in any institution, public or private, for similar purposes in Great Britain. An institution on similar lines, called 'The Little Commonwealth,' was started in 1913 in Dorsetshire, the success or failure of which may have important results on the whole method of dealing with juvenile criminals. Mention must also be made of the work carried on by the Ragged School Union and other associations, which prefer to work without State aid that they may be independent of State control.

The tendency is increasing to eliminate both the appearance and the reality of prison life from the institutions mentioned above. This does not proceed from any pseudo-humanitarianism, but from experience that thereby the children are better braced for the battle of life when they leave school. The Reformatory Act of 1854 enacted that every young person sent to a Reformatory must first be imprisoned for not less than 14 days, and it was not till 1899, 45 years thereafter, that this most objectionable condition was abolished. Experience proved that even this short experience was sufficient in many cases to rob the prison of its terrors, and to affix an indelible prison-brand. The discipline is firm, and temporary causes and difficulties may make it, at times, severe. Few, if any, boys or girls go voluntarily into Reformatories,

or even Industrial Schools; and few, if any, remain of their own free choice. The food, although ample, is plain. The children, consistently with the preservation of robust health, work hard, both in the school-room and at industrial work. Yet every school has abundant testimony from former pupils, many of them occupying positions of trust at home and abroad, that they owe everything to these institutions.

There is another provision in The Children Act (first put into practice in the United States in 1869) which cannot be passed over, viz. that for the establishment of Children's Courts, separate from the ordinary Police Courts, and to which none but those directly interested, including the Press, are admitted. Reference may also be made to clause 62 (2), in which it is contemplated that Industrial Schools will provide a department for children suffering from mental or physical defect. It is a sad feature of almost all effort, State and voluntary, in connexion with juvenile criminals, actual or anticipated, that the institutions for their benefit are open only to children mentally and physically normal, or nearly normal, and that no effort is made to segregate the defective, who are thus allowed, by the production of children, weak physically, morally, and mentally, to maintain the supply of the criminal class. The Mental Deficiency Act of 1913 is, however, evidence that this aspect of the question is at last to be seriously faced.

The 1908 Act recognizes by clause 60, dealing with probation of offenders (a system, like so many others, adopted from successful experience in the United States), how essential it is that the child, when he or she leaves the Industrial or Reformatory School, shall be provided with a suitable situation, and shall be supervised in his or her earlier years of freedom. In reference to juvenile criminals who have been sent to prison, we may merely mention the noble work done for them, during confinement and on release, by Prison Visitors, Discharged Prisoners Aid Societies, the Churches, and the Salvation Army, working in conjunction with the Prison Commissioners and the prison officials.

The advocates and managers of the great reformative institutions and agencies above described have always been keenly alive to the drawbacks and deficiencies of all such establishments, however well managed, compared with home life as it ought to be. While doing what we can to safeguard the tempted and to reform the fallen in our own generation, we must look forward to the day when the conditions of life of the working classes—their religious, moral, and intellectual opportunities, the regularity of their employment, their wages, their housing, their means of innocent and health-giving recreation, and their resultant law-abiding character—will be such that there will be no need for any of these institutions, and when the subject of juvenile criminals will have only an historical and antiquarian interest.

**ḲABBĀLĀ.**—I. **History.**—Ḳabbālā (קַבָּלָה, from קִבֵּל, 'he received') was a term used originally to denote the Prophets and Hagiographa as opposed to the Pentateuch, *e.g.*, T. B. *Rōsh hash-shāna*, 19*a* (see C. Taylor, *Sayings of the Jewish Fathers*², Cambridge, 1897, p. 114). The prophetical teaching was 'received' or 'traditional.' In the course of time, however, the meaning of Ḳabbālā underwent a change; it was applied to hidden and mysterious doctrines, dealing with the nature of the Deity and His relation to the world. This secret mysticism was no late growth. Difficult though it is to prove the date and origin of this system of philosophy and the influences and causes which produced it, we can be fairly certain that its roots stretch back very far, and that the mediæval and Geonic Ḳabbālā was the culmination and not the inception of Jewish esoteric mysticism.

Already in the days of the Mishna, it was felt that speculations concerning the origin of the world (see art. COSMOGONY AND COSMOLOGY [Jewish]) should be restricted to those of mature intellect, and the same tractate (*Ḥagiga*, ii. 1 and T. B. *Ḥagiga*, 13*a*; see A. W. Streane, *Chagigah*, Cambridge, 1891, p. 55) associates theosophy (מַעֲשֵׂה מֶרְכָּבָה [Ezk 1]) with cosmology (מַעֲשֵׂה בְרֵאשִׁית [Gn 1]). These two sciences are subject to the same restrictions and are regarded as interdependent. The famous admonition of Sirach, not to seek 'that which is too wonderful for thee' (Sir 3²¹ᶠ·; see Taylor, 'The Wisdom of Ben Sira,' *JQR* xv. [1902–03] 442), repeated in *Bereshith Rabba* (viii., ed. J. Theodor, Berlin, 1903, p. 58) and in *Ḥagiga*, 13*a*, shows not only that these speculations were rife in the 2nd cent. B.C., but that in pursuing them caution was deemed necessary. It is superfluous to cite further evidence, since this statement is now generally accepted.

One of the etymologies of the name Essene (Ἐσσαῖος; cf. ESSENES, vol. v. p. 400ᵇ) is 'secret' (Heb. חשאי). This is based on Josephus (*BJ* II. viii. 5), who says of the sect τοῖς ἔξωθεν ὡς μυστήριόν τι φρικτὸν ἡ τῶν ἔνδον σιωπὴ καταφαίνεται. This would seem to imply a tendency to esoteric doctrines on the part of the Essenes (see Taylor, *Sayings*, p. 79, note). The name of the Elkesaites, a Gnostic sect (A.D. 100–400), would furnish a parallel to this etymology, according to the derivation given by Epiphanius (see ELKESAITES, vol. v. p. 262), viz. חיל כסיא, 'hidden strength.'

The Apocryphal writings, especially Enoch and Jubilees, mark a considerable development in the history of Ḳabbālā. Gnosticism and dualism played a great part in influencing its growth, and contributed towards the body of ideas that found expression in the *Sēfer Yᵉṣīra* and the later *Zōhar*. Ḳabbalism denies the *creatio ex nihilo* and the possibility of knowing God. Hence it taught the doctrine of negative attributes, by which expedient the Godhead might be described. Ḳabbalism, further, represents the insistence on the divine immanence; it is a reaction against excessive emphasis on the transcendence. It has often been held that Judaism is a purely formal religion, in which the warmth of mysticism has no place. Such an opinion, in any case erroneous, is entirely untenable

if attention be paid to the history of the Ḳabbālā. For centuries it has coursed through the veins of Judaism in a fiery flood, raising man to God and bringing God to man, cheering him with hopes of a speedy Messianic advent, and comforting him in times of persecution, by the aid of an eschatology which draws the remote future, with its promise of peace, into the immediate present with its clouds and sorrows. It has filled the lives of the poor and humble with the overpowering nearness of God, and with the assurance of His interest in their daily concerns, and has made them feel at every moment that they should and could 'imitate' Him. There is no lack in the Ḳabbālā of the fantastic, the childish, or the grotesque, or sometimes even the blasphemous, but the proportion of the dross to the gold is insignificant, though not infrequently misrepresented and exaggerated. Nor is it altogether correct to regard the Ḳabbālā as the antithesis of the ceremonial Law. There have been mystics, notably among the later Russian Ḥasīdīm, who laid more stress on study of the Torah and on abstract principles than on the Talmud and Codes, but, on the other hand, many have striven to combine mysticism with the inviolate observance of the Dīn. The very author of the *Shulḥān 'Ārūkh* was a Ḳabbalist.[1] Every act and every prayer in the life of the Ḳabbalist has been surrounded with a mystic halo, given a new vigour and meaning, and preceded by a formula of self-consecration. Thus the tendency of Ḳabbalism, in general, has been largely to strengthen the ceremonial Law, not to destroy it.

From the time of Graetz it has been the fashion to decry Ḳabbālā and to regard it as a later incrustation, as something of which Judaism had reason to be ashamed. In reality this judgment goes back much further; it rests ultimately on the authority of Moses Maimonides, to whom reason was the foundation of Judaism, and the imaginative faculty abhorrent. The weight of his influence was sufficient to prejudice the majority of scholars against the Ḳabbālā. Further, the Ḳabbalists claimed extreme antiquity for their doctrines. The *Zōhar*, *e.g.*, was attributed to Simeon bar Joḥai, a Galilæan Rabbi of the 2nd cent.; it is, in point of fact, a Spanish work, more than eleven hundred years later. In consequence of the critical analysis to which modern historians have subjected the Ḳabbālā and by means of which falsities, such as the traditional date of the *Zōhar*, have been exposed, reaction has pushed too far to the other extreme. The recent tendency requires adjustment. The Ḳabbālā, though later in form than is claimed by its adherents, is far older in material than is allowed by its detractors. It is not entirely a collection of fantasy; it is poetry, spirituality, and idealism as well. Nor has the excess of imagery and anthropomorphism been suffered to spread too far. Simeon bar Joḥai, a pillar of mysticism, declared a ban on those who expounded Gn $6^{1-4}$ as a personification of the Deity which would have been unseemly (*Bereshith Rabba*, xxvi., Theodor, p. 247). Ḳabbalism is a complement to mediæval Rabbinic Judaism, not an excrescence. It has contributed to the formation of modern Judaism, for, without the influence of the Ḳabbālā, Judaism to-day might have been one-sided, lacking in warmth and imagination. Indeed, so deeply has it penetrated into the body of the faith that many ideas and prayers are now immovably rooted in the general body of orthodox doctrine and practice. This element has not only become incorporated, but it has fixed its hold on the affections of the Jew and cannot be eradicated. Consequently it is false to regard the Ḳabbālā as something apart from Judaism. Its extremists and some of its exaggerations are outside, but a large proportion is within, and the extent of its permeation must be adequately recognized.

From the earliest times mystic ideas were at work in Judaism. Externally assisted by Zoroastrianism, Gnosticism, Neo-Platonism, and other movements, these ideas grew and developed, drawing internal support as well. Hellenistic no less than Rabbinic Judaism had its share of mysticism. In Philo as well as in the Midrash it may be seen, not spasmodically or vaguely, but as a firm and well-constituted element of religion. Alexandria, the intellectual mart and meeting-ground of East and West, by bringing together all the most different and distant elements, fostered mysticism. (For the 'Hermes Books' [ספרי הירמס, not הםירוס, 'Homeros'] and the Greek Gnostic poems [שירי יוני] see K. Kohler in *JQR* v. [1893] 415 and *JE* iii. 459; the mysticism of Philo's Logos conception is treated by J. Abelson, *Jewish Mysticism*, London, 1913, ch. iii.) Philo's angelology and cosmology are, in the main, Platonic and Stoic teachings brought into line with Rabbinic modes of Biblical interpretation. Regarding matter as evil, he evolved the Logoi as divine agencies between the world and an external God (Abelson, p. 54 f.). Both in Egypt and in Babylonia the mystic movement grew on parallel lines, which, however, were by no means completely independent of each other. The gap in our knowledge of the history of the Jews of Egypt between the Alexandrian and Muslim epochs prevents any definite line of continuity from being traced. But it is certain that the Jews of Egypt, in the Arab period, preserved a strong partiality for mysticism. Sa'adya (892–942), the great philosopher and Bible translator of the Fayyūm, did not think it beneath him to compose a commentary on the *Sēfer Yeṣīra*. It was about this time that the Ḳabbālā spread to Europe. According to Eleazar of Worms, Aaron b. Samuel brought it from Babylonia to Italy. A. Neubauer, in his edition of the *Chronicle of Ahimaaz* (see *JQR* iv. [1891–92] 615 and *Mediæval Jewish Chronicles* [Anecdota Oxoniensia], Oxford, 1895), a work composed in 1054, has proved the historicity of Aaron—a fact previously contested. From this source it appears that Aaron was the son of an Ab Beth Dīn in Babylonia, and that he travelled to Italy. He lived in Benevento and Oria, and his activity in Italy lasted at least till 870. Whether he returned to Babylon is doubtful. His influence was very great. To him are ascribed, not altogether with certainty, two Ḳabbalistic works, called *Niḳḳūd* and *Pardēs*. He is said to have worked miracles by the use of the Divine Name. The doctrines which he taught found ready acceptance, and through him the seed soon bore fruit in Europe. But at this time little was written down. Mysticism was transmitted by word of mouth, so that it is not easy to say exactly what was taught and believed by those who first spread the Ḳabbālā through Italy into other countries. Angelology and permutation of the alphabet are of frequent occurrence in the Geonic writings, which are probably responsible for the French, German, and Spanish Ḳabbālā. The German Ḳabbālā, brought from Italy by the Kalonymides, centres in Judah ben Samuel (surnamed the Pious), who died in 1217, his pupil Eleazar of Worms, and Abraham Abulafia. Judah, whose ancestors were noted Ḳabbalists of Oriental origin, founded the great seminary at Regensburg. He gathered round him a band of famous disciples, and his influence was great. Miracles are attributed to him, and his teaching was largely mystic in character. His fame was not confined to Jewish circles, but he was respected and consulted by the bishop of Salzburg and other Church

[1] On the opposition to this work see *JE* iii. [1902] 586.

dignitaries. The authenticity of much of his written work is doubtful because he wrote down but little, his disciples being the repositories of his teaching. If the *Songs of Unity* and *Song of Glory* are, in fact, his composition, his mystic leanings can be clearly judged. At any rate, whether composed by Judah, by his father Samuel, or by any of his contemporaries, they reflect the current mysticism. In these mystic songs, which may be conveniently seen in any volume of the *Service of the Synagogue* (A. H. Davis and H. M. Adler, London, 1909, etc.), or, in part, in the *Authorised Daily Prayer-Book* of S. Singer (London, 1890, etc., pp. 78, 171; see annotated ed., p. xc), many Ḳabbalistic and philosophical ideas occur; they deal, in general, with the divine nature, either from the transcendental or from the immanent side.

> 'Thou encompassest all and fillest all; and since Thou art the All, Thou art in all. . . .
> Colour and shape cannot be applied to Thy Oneness, nor body to the essence of Thy Unity. . . .
> Neither is anything separate from Thee in the midst: nor is the smallest place void of Thee.
> Accident and change do not exist in Thee, nor time, nor discord, nor any imperfection'
>
> ('Hymn for the Third Day').

> 'We may not class Him with matter or substance, or ascribe to Him accident or attribute.
>
> All things that are seen or conceived or known are included in the ten categories; there are seven kinds of quantity and six kinds of motion, three modes of predication, three times, and three dimensions. Lo! in the Creator not one of them exists, for He created them all together' ('Fifth Day').

> 'I have not seen Thee, yet I tell Thy praise,
> Nor known Thee, yet I image forth Thy ways.
> For by Thy seers' and servants' mystic speech
> Thou didst Thy sov'ran splendour darkly teach.
> And from the grandeur of Thy work they drew
> The measure of Thy inner greatness, too.
> They told of Thee, but not as Thou must be,
> Since from Thy work they tried to body Thee'
>
> (*Hymn of Glory*).

In addition to other liturgical works, Judah's mysticism was expounded in a commentary to the Pentateuch and in an ethical will, but chiefly in the *Sēfer Ḥăsīdīm*, a collection of mystical and ethical sentences. Probably Judah had no more than a share in the last-named work. His fame, however, rests not on his personal writings, but on the impetus which he gave to the German Ḳabbālā. This impetus will best be measured not by his books, but by the number of pupils and associates who carried his ideas and influence far and wide. Of his disciples Eleazar [ben Judah ben Kalonymus] of Worms (1176–1238) was the most distinguished both as a Ḳabbalist and as a writer of ethics. Though his title to fame rests chiefly on the *Rôḳēaḥ*, which is devoted to ethics and Halākhā, his mystic writings were numerous and important. Eleazar was given to asceticism.

> 'In his cabalistic works he developed and gave a new impulse to the mysticism associated with the letters of the alphabet. The philosophical Cabala of the school of Isaac the Blind is replaced by arithmetical speculations. By the gemaṭria and noṭariḳon systems of interpretation found in the Talmud, Eleazar invented new combinations by which miracles could be performed. The haggadic anthropomorphism which he had combated in his earlier works ("Ha-Roḳeaḥ," "Sha'are ha-Sod weha-Yiḥud) occupied later the foremost place in his cabalistic writings' (I. Broydé, *JE* v. 101).

The Ḳabbālā of the Arabic-speaking Jews was in the meantime undergoing modification. The Arabs and Jews were growing more and more familiar with Greek philosophy, and their own was thereby affected. The influence of the 'Brothers of Purity' in Baṣra, whose writings were directed to the promotion of an ethical revival, was felt in Jewry; notably Baḥya ibn Paḳuda shows traces of their movement. In the treatise *Men and Animals* their philosophy is expounded with special reference to cosmogony, angelology, the soul, the Godhead, and the relation of man to God. It was chiefly their theory of emanation (see F. Dieterici, *Thier und Mensch vor dem König der Genien*[2], Leipzig, 1881, p. 60, line 1, etc. = *Der Streit zwischen Mensch und Thier*, Berlin, 1858, p. 97, foot, etc.; see also p. 169 for the disquisition about angels) and of the nine numbers that found favour with and adaptation by the Jewish Ḳabbalists. Already in the 13th cent. signs begin to appear of an opposition between Talmud and mysticism. Prayer and the study of the Halākhā tended to become antitheses in Germany, while the German and Spanish Ḳabbālā differed in many important points. The Spanish school tended to become more purely mystic and visionary, while Germany devoted more thought to speculative Ḳabbālā and to permutations. The details of the spread of the Ḳabbālā into Provence are obscure. Isaac the Blind cannot be the founder of the movement here, as was formerly held. In him Ḳabbālā is already so far developed as to make it certain that he must have had predecessors. The advent of philosophy to Provence produced a mystic reaction, and thus Ḳabbālā, which had hitherto remained obscure, came forward as a protest against the coldness of rationalism.

A new stage in the growth of the Ḳabbālā was marked by the appearance of the *Zôhar* (see below), which became the mystic Bible. This pseudepigraphical work probably dates from the 14th century. It paved the way for the last stage of mysticism, which has continued till the present day. This stage is associated with Isaac Luria (1533–72), known as Ari, and Ḥayyim Vital. They and their followers combined spirituality and permutations. Their piety was of an extremely high order, but coupled with it was their use of charms and amulets. In the Orient, Galicia, and Poland their influence is strong; their precepts have sometimes been misunderstood and, in ignorant hands, have degenerated into superstition. In Russia the Ḥasīdīm have incorporated the Ḳabbālā, laying special emphasis on prayer and mysticism. But the lower elements have not been wanting; hence the Ḥasidic movement has met with strenuous opposition on the part of the Rabbis.

**2. Chief theories and doctrines of Ḳabbālā.**—The complete Ḳabbalistic system consists of two main subdivisions — theoretical, *'Iyyūnīth*, and practical, *Ma'ăsīth*. It is impossible to deal exhaustively with the individual points in each branch, and it is difficult to make a rigid line of division between them. It will be convenient to consider briefly the chief ideas and principles.

(*a*) *The use of numbers and letters.*—The permutations and combinations of numbers and letters are not entirely of Pythagorean origin. Hebrew has no numerical symbols, and the use of the alphabet for numerals goes back to Maccabæan times. This practice is, no doubt, responsible for the later *gemaṭria* or *grammateia*, by which the numerical equivalents of letters and words were made a means of interpretation. An interesting example is cited in art. EXPIATION AND ATONEMENT (Jewish), vol. v. p. 662, § 3. Unlucky numbers are known in the Talmud (T. B. *Pesaḥim*, 110*a*: שׁוֹתֶה כְּפָלִים דָּמוֹ בְּרֹאשׁוֹ, 'even numbers are to be avoided in drinking'). Owing to the principle of association by ideas, things were often grouped by number. Many examples can be seen in the *Ethics of the Fathers* (*e.g.*, ch. v.; Taylor, *Sayings*, p. 78 ff.). From this passive observation of seeing a connexion between groups already existing, it was felt that a more active employment of numbers might be possible, and that he who held the secret of the mystic chain might force nature and attain fuller power. In earlier times seven, and in later times ten, was regarded as the important number. The permutation of letters and numbers is called צרוף. As perfected in the *Sēfer Yᵉṣīra*, which is arranged according to the letters of the alphabet, it is doubt-

less Pythagorean, but the Jews cannot have borrowed it altogether; the knowledge of the science was ascribed to Bezalel (T. B. *Berakhoth*, 55*a*).

(*b*) *Classes of angels and demiurges.*—The belief in the transcendence of the Deity produced a reaction in favour of mediating powers, and of this reaction Gnosticism may be regarded as the origin to no small extent. There is, of course, much angelology in the Apocrypha, and the heavenly beings are arranged in orders and ranks. While in the Prophets angels are merely figurative and poetic ideals, they are frequently found, both in the Apocrypha and in the Talmud, as intercessors and active agents. But they had no share in the work of creation. *Bereshith Rabba* (iii., Theodor, p. 24) strongly repudiates such an idea; it was certainly heretical, and probably Gnostic. The Midrash shows that the order and method of creation are expressly devised to show the falsity of the belief in a divine assistant. This mediator is usually known as Meṭaṭron (μετὰ θρόνον, or *metator*, 'guide,' or μητράτωρ, 'the measurer' of the heavens; cf. *ib.* v., Theodor, p. 37, קולו של הקב"ה נעשה כמטרון על המים; A. Kohut [*Aruch*, Vienna, 1878–92, *s.v.*] suggests that the name is to be derived from Mithra). Elisha b. Abuya, who became a heretic, believed in Meṭaṭron as one of the two creative powers (T. B. *Ḥagiga*, 15*a*, ed. Goldschmidt, Berlin, 1899, p. 834, see note; *Sanhedrin*, 38*b*). Meṭaṭron appears in a praiseworthy capacity in his relations with Moses. Thus Moses asks for Meṭaṭron's intercession with God to avert his death (Tanḥ, ואתחנן, 6, ed. S. Buber, Wilna, 1885, p. 13, § 53); Meṭaṭron shows the promised land (*Sifrê*, האזינו, *Pisḳ*, 338, ed. M. Friedmann, Vienna, 1864, p. 141), and, with other angels, buried Moses (so Targ. Onḳ. to Dt $34^{6}$). Michael and Meṭaṭron are sometimes interchanged. On the whole it seems that the belief in a Meṭaṭron became popular until checked by such direct repudiations as in *Bereshith Rabba* (for the main references to Meṭaṭron see A. Jellinek, *Beth-Hamidrash*, Leipzig, 1853–78; see also T. B. *Ḥullin*, 60*a*, and J. Abelson, *The Immanence of God*, London, 1912, p. 172).

The function of all these angelic beings was to facilitate man's access to the Deity. The multiplication of these agents led to their differentiation; some became good, others evil. Hence the connexion of the Ḳabbālā with other systems is clear.

Man being made in the image of God, it was possible to conceive of the divine nature by analogy. Hence the Deity and the demiurge or Meṭaṭron are pictured in anthropomorphisms which are sometimes highly fantastic and even indelicate. Thus the *Shî'ûr Ḳômā*, a Ḳabbalistic work of early date, attempts to give the dimensions of the Deity and to describe His members. But such hyperbole is repudiated in no uncertain language.

(*c*) *The ḳ'lîphôth, 'scales' or 'shells,'* belong to the dualistic system which assigns to the universe a 'right side' and a 'left side,' with which light or purity and darkness or impurity are associated respectively. The *ḳ'lîphôth* are also closely associated with emanations.

(*d*) *The syzygies, or pairs* (סוד הזוג), are a variation of dualism, and imply the harmony of nature. Everything possesses a mate. This idea is known in the Talmud and Midrash; it is used to demonstrate the perfection of the universe.

(*e*) *The 'chariot'* (מֶרְכָּבָה) of Ezk 1 was the vehicle on which the pious ('riders on the chariot') could ascend to God. The goal of the chariot was the 'Halls' (הֵיכָלוֹת). By mysteries, prayers, the help of angels, magic, permutation, and sometimes by asceticism, this end could be attained, and the human soul could be so uplifted as to effect union with the divine world-soul. Just as the angels ride on the chariot in the Apocalypses, so can man, if pure, find a place with them. He must overcome his temptation, which will appear as malevolent spirits, striving to dislodge him. These he can vanquish by formulas and prayers.

(*f*) *The emanations* (הַשְׁפָּעָה and אצילות [either אַצִּילוֹת, on the analogy of Jer $38^{12}$, 'arm-joints,' or, more probably, אֲצִילוּת; cf. Ex $24^{11}$, Is $41^{9}$]; see Nu $11^{17}$) are a link between the Godhead and the world. By means of them the pious can even react on the Deity. The doctrine of emanation is, of course, pantheistic. God was said to be in all, and nothing existed apart from Him. By outpourings from the Godhead all created beings were formed. They are, therefore, directly connected with it. The Arabic philosophers gave this Neo-Platonic theory to the Jews, by whom it was first accepted (*e.g.*, by Baḥya) and then rejected (by Judah Halevi and Maimonides). Already in the 4th cent. the emanation theory existed in a modified form. In Midr. *Ex. Rabb.* xv. (see A. Epstein in *REJ* xxix. [1894] 77), three primal elements, water, air, and fire, produce three others, darkness, light, and wisdom; these six combine to produce the world. Light is, however, often regarded as an emanation direct from the Deity, God's garment, on the basis of Ps $104^{2}$, being called 'Light.' When Jewish philosophers repudiated emanation, it was adopted by the Ḳabbalists. The *Massekheth Aṣîlûth*, according to general opinion, dates from the 12th cent., and it holds to the emanation doctrine. The Ḳabbalists found that emanation suited the theory of the *s'fîrôth*, and for this reason they favoured it. Emanation, being a voluntary act on the part of God, permits the possibility of His creating the world without any change in His personality resulting from the act; it surmounts the difficulty of a *creatio ex nihilo*, and also the difficulty of attributing a finite creation to an infinite Creator.

(*g*) *Limitation* (צִמְצוּם) or concentration, is the act of God's self-withdrawal in order that the universe might be created, and is explained in *Genesis Rabba* (iv., Theodor, p. 27) by an illustration of the power of concave and convex mirrors to transform the outward appearance of an unchanged object. This theory precludes the identification of the substance with the Creator, who is the 'Endless' or 'Infinite.'

(*h*) *The 'Endless,' or 'Infinite'* (אֵין סוֹף).—This negative attribute is applied by Azriel b. Menaḥem to the Deity because He is unknowable, and positive attributes are inapplicable. He is immutable, and the act of creation would imply a change. Hence the doctrine of limitation is necessary, and the first concentration leads to others, which result in the ten *s'fîrôth*.

(*i*) *The ten s'fîrôth, or spheres.*—Three etymologies are given for this term: (1) from the root *sāfar*, 'to count,' (2) from *sappîr*, 'bright,' 'brilliance,' and (3) from σφαῖρα; the last is considered to be the most probable. The doctrine of the *s'fîrôth* is a development of emanation. It reconciles a belief in the *creatio ex nihilo* with the exclusion of the Creator from thought and action in creating, which exclusion was maintained by the Neo-Platonists. The Ḳabbalists, in adopting the emanations, made the *s'fîrôth*, or qualities, stand for the Neo-Platonic grades of wisdom. The *Ên Sôf*, or infinite light or 'point' (נְקֻדָּה), produced three groups of *s'fîrôth*, intellectual, spiritual, and material, each containing three members. The *s'fîrôth* thus number ten (for pictures and charts see *JE* iii. 474 ff.).

From the *Ên Sôf* came, in the following order: (1) the Crown (כֶּתֶר), the 'principle of principles' and the first emanation after the Ên Sôf. It is the first contact of the infinite with the finite, and is known by many designations. (2) Wisdom (חָכְמָה) and (3) Intelligence (בִּינָה) are derived from the Crown. They form a syzygy, being regarded as Father (Wisdom) and Mother (Intelligence). Hence they are parallel, and their pro-

duct is Reason (דַּעַת), but this is not a separate emanation. These constitute the first group. The second consists of (4) Mercy (חֶסֶד), a father, and (5) Justice (דִּין), a mother, which produce (6) Beauty (תִּפְאֶרֶת). Mercy and Justice are both qualities of the divine nature which check one another and produce a harmonious mean. The third group consists of (7) Victory (נֵצַח), (8) Glory (הוֹד), and (9) Foundation (יְסוֹד). Victory and Glory, again, are regarded as parents that produce Foundation as their offspring. The last of the *s'fîrôth*, (10) Sovereignty (מַלְכוּת), has no clear connexion with the rest.

The *s'fîrôth* are often known by different names—*e.g.*, גְּדוּלָּה=חֶסֶד and גְּבוּרָה=דִּין, or פַּחַד. Abelson's chapter on the *s'fîrôth* (*Jewish Mysticism*, p. 136) should be carefully studied. According to some Ḳabbalists, the *s'fîrôth* bear a direct relation to the corporeal members of Âdām Ḳadmôn.

(*j*) *Âdām Ḳadmôn, or primordial man.*—This idea, originally held by the Gnostics, of an incorruptible primitive man, fashioned in the image of God, is also known to Philo and the Midrash. This being is sexless or bisexual (see *Genesis Rabba*, viii., Theodor, p. 55). St. Paul's idea of a heavenly and an earthly Adam (1 Co 15[45-50]) is, no doubt, based on the Midrash. The various portions of the body of Âdām Ḳadmôn are correlated to the *s'fîrôth* (see *JE* i. 181 and xi. 155). From the heavenly man the earthly man is sprung. The Âdām Ḳadmôn is held by some to occupy a position between the *Ên Sôf* and the *s'fîrôth*.

(*k*) *Metempsychosis* (גִּלְגּוּלִים) was rejected with uncompromising severity by Jewish philosophers, but was adopted by the Ḳabbalists. It is taught in the *Zôhar* (ii. 99*b*, tr. Jean de Pauly, Paris, 1908, iii. 400), and was regarded as an answer of the problem of the prosperity of the wicked. Luria believed that all souls were created at the same time as the different parts of Adam's body; hence the quality of the souls varies according to the particular member of Adam's body to which they are related. His successors taught that souls could wander on earth to fulfil duties neglected by a man in his lifetime or to assist others to perform their duties. The term עִבּוּר was used to express the act of junction of a soul with a living man.

(*l*) *Evil.*—According to the Ḳabbalists, evil is essentially finite, as opposed to the divine good. It is the left side in the syzygy. Evil is an appearance, not a substance, and man's sin consists of his separation from the Divine Being. This separation, or 'Fall,' gave man the potentiality of sin, which he previously lacked. By penitence and asceticism man can join the 'Riders of the Merkābhā' and attain union with perfection.

(*m*) *The idea of the microcosm*, or a comparison of man's frame and members with the parts of the universe (macrocosm) and nature, came from the Greek philosophers to the Jews through Neo-Platonism. It was much favoured by the Ḳabbalists, and is mentioned in the *Zôhar*. Of the many Ḳabbalistic devices and practices, notice must here be limited to three.

(*n*) *Amulets* (קְמֵיעוֹת, also קְמֵעוֹת or [illegible]), private charms and prophylactic devices, were much in vogue. In spite of the fact that Maimonides and other teachers emphatically opposed the use of amulets and denied their efficacy, the Ḳabbalists were not strong enough to resist the attractions of this superstition. Amulets were regarded as potent charms to ward off sickness and evil, to help women in labour, and generally to assist the wearer to attain his desire. The charms were usually written on parchment or engraved on a precious metal. The so-called shield of David, the open hand, and the circle were popular forms. The word שַׁדַּי usually figured, in addition to permutations of the Divine Name or the *s'fîrôth*. Very frequently the prayer attributed to Neḥunya hak-Ḳāna (1st cent. A.D.) was used, or its initials (for the prayer cf. Singer, p. 273, last par.). The initials of the first line (אב״ג ית״ץ) and of the second line (which form the words קְרַע שָׂטָן, 'Rend Satan') occur in most amulets. (Reference should be made to M. Gaster, *Sword of Moses*, London, 1896, where many amulets are cited and explained; a Moroccan charm against scorpions is reproduced in *JE* ix. 24; cf. also art. CHARMS AND AMULETS [Jewish].) It must be remembered that in many cases people who used amulets did so from spiritual and not material motives. The constant recitation of Scriptural verses and prayers was intended to relieve the mind and calm the soul, not directly to act on the body; hence not all amulets were put to superstitious use.

(*o*) *The casting of lots*, an old Biblical and Talmudic custom, for which many motives may be traced, was also adopted by Ḳabbalists and practised in various forms, chiefly as a means of divination. Methods similar to the *sortes vergilianæ* were in vogue.

(*p*) *Change of name* (שִׁנּוּי שֵׁם) was a Ḳabbalistic device, no doubt based on the ideas of penitence and regeneration, employed in case of serious illness as a life-saving expedient (see M. Gaster, *Book of Prayer*, i. 195). Frequently the new name chosen was Ḥayyim, 'Life,' or some variant, such as Vital.

**3. The chief Ḳabbalists and their works.**—The following lists are by no means exhaustive, but they contain the principal exponents of Ḳabbalist doctrines and the most important books on which the Ḳabbālā is based, and are intended to serve the reader as a guide for further investigation.

(*a*) *Ḳabbalists.*—(1) *Aaron b. Samuel* († after 870) is important as having carried the Ḳabbālā to Europe from Babylon. He lived in Italy. Until modern times he was regarded as a mythical personage, but his historicity has been proved by Neubauer (see above, p. 623).

(2) *Solomon ibn Gabirol* (1021–58), a Spanish philosopher, though scarcely to be included among the ranks of the Ḳabbalists, must be noted in relation to the Ḳabbālā, because he introduced Neo-Platonism among the Jews. He is, therefore, responsible for the theory of emanations. See, further, art. IBN GABIROL.

(3) *Judah b. Samuel* of Regensburg (the Pious, חָסִיד, † 1217) was the founder of a school of noted Ḳabbalists (see above, p. 623).

(4) *Eleazar b. Judah b. Ḳalonymus* of Worms (1176–1238) was a pupil of Judah the Pious. He was not only a Ḳabbalist, but a famous Talmudical scholar and a scientist. His most important work is the *Rôḳēaḥ*. In his *Sha'ărê has-Sôdh* he opposed anthropomorphism.

(5) *Moses b. Naḥman* (Naḥmanides, Ramban), the famous Spanish Rabbi (1194–1270), though hardly a Ḳabbalist, since he repudiated several fundamental doctrines (*e.g.*, he held a *creatio ex nihilo*), supported Ḳabbalistic teaching in many ways. In his Pentateuchal commentary the influence of the Ḳabbālā is marked.

(6) *Abraham b. Samuel Abulafia* (born 1240 at Saragossa, † after 1291) was one of the founders of Spanish Ḳabbālā. He was an ascetic and practised all kinds of permutations, but did not attempt to work miracles. He travelled in Palestine and made a special journey to Rome in order to convert the pope (1280). In Sicily he gave himself out to be the Messiah, but was discredited by Solomon b. Adret. He was a voluminous writer, but was responsible for much unworthy juggling and *gematria*. This influenced the later Ḳabbālā. Perhaps the most important feature of his teaching was his desire to convert Islām and Christianity to his views. In this desire to unite the three faiths he was, in a way, the forerunner of Elie

Benamozegh, Rabbi of Leghorn, whose life work was directed to the same end (see E. Benamozegh, *Israël et l'humanité*).

(7) *Joseph b. Abraham Jiḳatilla* (1248–1305), a Spanish Ḳabbalist, was, unlike his teacher Abraham Abulafia, a thaumaturgist. He tried to reconcile philosophy and Ḳabbālā. He belonged to the mystic school, but made a large use of *gemaṭria*. His works were many, chief among them being *Ginnath 'Ēgôz* and *Sha'ărē Ṣedeḳ*. His commentary on the Haggādā for Passover, מצה שמורה, was very popular.

(8) *Isaac ibn Laṭif*, a Spanish physician († 1290), attempted to combine philosophy and Ḳabbālā. Much Ḳabbalistic terminology is due to his efforts to secure precision in reasoning and the exact use of names and qualities.

(9) *Azriel b. Menaḥem* was also known as Ezra; in fact, the two names gave rise to the belief that Ezra and Azriel were brothers. Azriel, the author of several works (born in Gerona in 1160, † in 1238), was a pupil of Isaac the Blind. He taught the theory of negative attributes, emanations, and the *s'fîrôth*, on which he wrote a commentary, and denied the *creatio ex nihilo*. He was greatly influenced by Gabirol.

(10) *Isaac the Blind* of Posquières was regarded as the link between the mysticism of the Geonim and the Ḳabbalists; but, as he is said to have lived in the 13th cent., this is unlikely. Yet the Ḳabbalists held him in high esteem. Parts of the *Bāhîr* may be attributed to him.

(11) *Baḥya b. Asher* of Saragossa († 1340) must be noted as one of the first Bible exegetes to employ Ḳabbalistic methods for Bible interpretation. Himself a literalist and rationalist, he uses Ḳabbālā with care and judgment. Among his other works, his *Discourses* (*Kad haḳ-Ḳemaḥ*) is the most important.

(12) *Isaac b. Moses Arama* (1420–94) was more of a philosopher than a Ḳabbalist. He belongs to the Spanish school, but can scarcely be said to have added much to Ḳabbālā.

(13) *Menaḥem b. Benjamin Recanati* was a prominent Italian Ḳabbalist of the late 13th century. He is noteworthy for his mystic commentaries on the Bible, one of which was translated into Latin by Pico di Mirandola.

(14) *Isaac* (*b. Solomon Ashkenazi*) *Luria* (Ari) (1534–72) was the most important of the later Ḳabbalists. He lived in Palestine, and to him the whole of the modern Ḳabbālā may be traced. He was a hermit for some time, and had ecstatic visions. His chief disciples were Cordovero, el-Ḳabiz, Joseph Qaro, Ḥagiz, and Vital. The system and practices which he founded are still operative in the East. Most of his teaching was written down by his disciples, chiefly by Ḥayyim Vital. His system is far too wide to be summarized, but he is most important for (1) his teaching of metempsychosis or 'impregnation,' and (2) his introduction of the Ḳabbālā into daily life. Every Oriental Prayer Book bears traces of his ordinances and recommendations. He even promulgated a new code, *Shulḥān 'Ārūkh Shel 'Ārî*, which his followers adopted and diffused. So great was the esteem in which he was held that his followers almost 'canonized' him. His teaching called forth opposition from the anti-Ḳabbalists, but his piety and holiness were his most effectual answer to attack.

(15) *Ḥayyim Vital* (1543–1620) was a pupil of Luria, to whose position he succeeded. He was a visionary and an alchemist; he also believed himself to be the Messiah for some time. Vital is important because he edited most of Luria's works, which the latter rarely committed to writing; but he also wrote works of his own.

(16) *Israel Saruḳ*, a pupil of Luria, is noteworthy for having spread in Italy and Germany the new Ḳabbalistic teaching of Luria. He had great influence with Menaḥem Azarya of Fano, who became an adherent of Luria's school and spent large sums on buying his MSS.

(17) *Leo of Modena* (1571–1648; see art. JUDAISM, p. 606ᵃ), whose curious anomalies make him one of the most perplexing characters in Jewish history, attacked the Ḳabbālā in his *'Ārî Nôhēm*. He shows that as a system it is unscientific and that the *Zôhar* is a late work. For this he is important in the history of Ḳabbālā.

(18) *Ḥayyim Joseph David Azulai* (1724–1807), author of the *Shēm hag-G'dhôlîm*, a most prolific and versatile writer, carried the Ḳabbālā of Luria to extremes. His credulity and superstition are all the more remarkable when his scholarship is examined. His works are full of numerical permutations, etc.

(19) *Israel b. Eliezer, Ba'al Shem Ṭob* (Beshṭ) (1700–1760), was the founder of the Ḥasîdîm, a sect which marks the latest stage in the history of Ḳabbālā and which developed from the school of Luria, to which it was finally in opposition. Beshṭ, though poor, exercised unbounded influence in Poland and Galicia. Little is known of his life, and his doctrines can be studied only from his followers, for he wrote no books. Beshṭ was a pantheist and rejected emanation. Further, he preached joy and ecstasy as opposed to asceticism. He raised the position of the Ṣaddiḳ to a very high level of authority. The breach between Talmudism and Ḥasidism did not take place till after his death.

(20) *Baer* (*Dob*) of Meseritz (1710–72) was one of the earliest and most important teachers of the Ḥasidic movement. He was an ascetic and an enthusiastic adherent of the school of Luria until he became acquainted with Beshṭ, whom he succeeded as leader of the Ḥasîdîm. Baer fought their battle against the Talmudists until his death. Like his master, he left no written works.

(*b*) *Works.*—(1) The *Sēfer Y'ṣîrā* is the oldest Ḳabbalistic book. It was attributed to Abraham and also to 'Aḳiba, but belongs in all probability to the 6th century. It deals with permutations of numbers and letters, and is the first source of the emanations and *s'fîrôth*. The *Y'ṣîrā* was so widely read that Sa'adya wrote a commentary to it. It is the basis of the *Zôhar*, and hence perhaps the most important of all works for the study of the Ḳabbālā (see Abelson, *Jewish Mysticism*, p. 98, etc.).

(2) *Sēfer hab-Bāhîr*, a mystic commentary on the first chapters of Genesis, was originally attributed to Neḥunya haḳ-Ḳānā. It is now regarded as the work of Isaac the Blind, with later additions. The *Bāhîr* believes in the eternity of matter; it knows the *s'fîrôth*. It is important as a precursor and type of the *Zôhar*.

(3) The *Hēkhālôth* (or 'Halls'), Greater and Less, are Geonic mystic writings, bearing relation to the book of Enoch. They are attributed to Solomon b. Elisha. The works deal with the Merkābhā, and, finally, with the seven heavenly 'Halls.' The *Hēkhālôth* influenced the liturgy, chiefly the Ḳ'dhushshāh.

(4) The *Zôhar* is the most important of all Ḳabbalistic works. It was circulated by Moses b. Shem Ṭob de Leon and attributed by him to Simeon b. Joḥai; the forgery was discovered after his death. Many Ḳabbalists still continued to believe in its authenticity, which was finally disproved by Elijah Delmedigo and also by Leo of Modena. It is now agreed that the *Zôhar* was not composed by one person. It is written in Aramaic and contains various appendices. In form it is a mystic and allegorical commentary on the Pentateuch. No book, except the Bible and the Talmud, has

been so widely read by Jews. It is the centre of the Ḳabbālā, and innumerable works and commentaries have been written round it. Christians as well as Jews have studied it (see art. ZOHAR).

(5) *The Book of Raziel*, said to have been taught to Adam by the angel Raziel, and also to Noah, is a compilation, probably by various writers. It has affinities to the *Shī'ūr Ḳōmā* and *Sword of Moses*. According to Zunz, *Raziel* was the work of Eleazar of Worms. It describes the celestial organization, and gives directions for the preparation of amulets.

(6) *Shī'ūr Ḳōmā* deals with the dimensions and members of the Deity. It is usually included in *Raziel*. The book was known to Solomon b. Jeroḥam (b. 886). Gaster (*Monatsschrift*, xxxvii. [1893] 224 ff.) shows that it goes back as far as the last pre-Christian century.

(7) *Gilgūlīm* is the name given to lists of transmigrations of souls. Many of these works were composed by the school of Luria.

LITERATURE.—*GENERAL*.—The art. 'Cabala' in *JE* iii. 456 ff. (with the subsidiary artt.) should be carefully read, with its bibliography. See also J. Abelson, *Jewish Mysticism*, London, 1913; A. E. Waite, *The Doctrine and Literature of the Kabalah*, do. 1902, *Secret Doctrine in Israel*, do. 1913; A. Franck, *La Kabbale*², Paris, 1889; I. Abrahams, *A Short History of Jewish Literature*, London, 1906, ch. xvii.; C. D. Ginsburg, *The Kabbalah*, do. 1865; H. Sperling, 'Jewish Mysticism,' *Aspects of the Hebrew Genius*, ed. L. Simon, do. 1910, pp. 145–176; Isaac Myer, *The Qabbalah*, Philadelphia, 1888.

*SHEKHINAH*.—J. Abelson, *The Immanence of God in Rabbinical Literature*, London, 1912.

*THE YEṢIRA*.—The text, with commentary of Dunash b. Tamim, has recently been published by M. Grossberg, London, 1902; parts are translated by W. W. Westcott, do. 1893.

*THE ZOHAR*.—A French tr. by Jean de Pauly has been published by 'Eliphas Lévi' (pseudonym), *Le Livre des splendeurs*, Paris, 1894; S. L. MacGregor Mathers, *The Kabbala Unveiled*, London, 1887, contains parts of the *Zōhar* translated (both of these books must be used with caution); see also A. Jounet, *La Clef du Zohar*, Paris, 1909.

*EMANATION AND SEFIROTH*.—M. Ehrenpreis, *Die Entwicklung der Emanationslehre in der Kabbala des xiii. Jahrhunderts*, Frankfort, 1895. Many references to the *sᵉfīrōth* will be found in the Sephardic *Hosha'anōth for Hosha'ana Rabba*; this service may be conveniently seen, with tr., in M. Gaster, *Book of Prayer*, London, 1901 ff.; L. Tritel, 'Die alexandrinische Lehre von den Mittelwesen,' *Judaica* (*Cohen's Festschrift*), Berlin, 1912, pp. 177–185.

*NEO-PLATONISM*.—F. Dieterici's tr. of *Man and Beast* cited above (p. 624). In connexion with this, reference should be made to Baḥya b. Paḳuda, whose *Guide* has been edited by A. S. Yahuda, Leyden, 1912; C. Elsee, *Neoplatonism in Relation to Christianity*, Cambridge, 1908.

Schechter, *The Chassidim*, London, 1887, first essay in *Studies in Judaism*, do. 1896, pp. 1–55, the essays on 'Saints' and 'Safed' in the 2nd ser. of *Studies in Judaism*, do. 1908, pp. 148–181 and 202–285; see also his 'God and the World' (pp. 21–45) and other essays in *Some Aspects of Rabbinic Theology*, do. 1909, and 'Asceticism, the Law of the Nazirite,' in *Jew. Chron.*, 5th June 1914, p. 17.

H. LOEWE.

**KABEIROI.**—The elucidation of the Kabeiroi-mysteries is one of the most perplexing problems of old Mediterranean religion; nor can it yet be said that modern research has thrown full light upon them. The literary record is partly Greek and partly Latin; but the Latin is derived mainly from Greek sources. It does not begin before the 5th cent. B.C., by which time the mysteries had long been in vogue and had already spread from Samothrace to other centres, such as Lemnos and Thebes; it cannot therefore speak with authority concerning the earliest period. Even the 5th cent. writers are vague and confused, and the later writers contradict each other at several important points. The record is sufficient, however, to establish two facts: that the original home of the mysteries was Samothrace, and that they were the institution of a non-Hellenic people. As regards the latter point, the statement of Diodorus Siculus is of interest and importance that the aboriginal natives of Samothrace 'possessed an ancient dialect of their own, much of which is still preserved down to the present day in their religious rites.'[1] He is not likely to be speaking at random here. The word 'Kabeiroi' itself has never been satisfactorily explained on any theory of Hellenic derivation;[2] and the personal names of the Samothracian divinities that have been recorded by Mnaseas of Patrai[3]—Axieros, Axiokersos, and Axiokersa—though the forms have been semi-Hellenized, betray an alien speech.

Now nearly every writer starts with the fact, and constructs on it a theory of the origin of the cult, that the word Kabeiroi must be equated with the Semitic כבירים, meaning 'the mighty ones'; the almost exact equivalence of the two sounds could hardly have been accidental, especially in view of the term θεοὶ μεγάλοι, the constant Hellenic synonym of the Kabeiroi. It appears also that every one who accepts this origin of the word has regarded as inevitable the corollary that the Kabeiroi-mysteries were an importation from Phœnicia, the nearest or most likely centre whence Semitic influence could reach Samothrace. Hence certain scholars have been led to interpret them in the light of the knowledge that can be gathered of Phœnician and Semitic religion.[4] But upon reflexion the necessity of that corollary is by no means obvious. Phœnician traders may have found an aboriginal mystery-cult in this remote and inaccessible island; they may have attached their own descriptive title 'Kabeirim,' 'the mighty ones,' to the divinities that they found in the island, because this corresponded to some local divine appellative that the later Greeks translated by the phrase οἱ μεγάλοι θεοί; then, through the spread of Phœnician trade, the Semitic name for the island-deities acquired permanent vogue.

This hypothesis avoids the difficulties that beset the theory of the Phœnician origin of the rites, which is attested by no ancient writer of any authority, for Herodotus definitely pronounces them Pelasgic,[5] while other writers of the 5th cent. and later periods trace them to Phrygia or Crete.[6] The names attached to the Samothracian deities by Mnaseas are non-Semitic. Nor is there anything in what is revealed to us of the ritual or the divine personalities that points clearly to Phœnicia. Finally, there is no evidence yet forthcoming that the Phœnicians ever attached the appellative 'Kabeirim' to any group of their own divinities.

The legends, beginning in the 5th cent., that associate the rites with Crete and Phrygia may be of some value for religious history, but contribute nothing to the question of ultimate origin. Certain general considerations and certain coincidences seem rather to point to Thrace as their source. The Thracian coast lies nearest to Samothrace, and the aboriginal settlers in the island could most easily have come over thence. We have fair evidence that the ministers of the mysteries were called 'Saoi' or 'Saioi,' and Strabo mentions a Thracian tribe of that name, while the name Saon is applied by Lykophron to some settlement of the Korybantes located by the scholiast in Thrace.[7] Also, when we look closely at the evidence we may discern certain features in the Samothracian religion which would accord with the theory of its Thracian origin.

We must begin with certain monumental evidence which is earlier than the literary. The

explorations conducted in the island by A. Conze[1] in 1873 revealed the foundations of the original shrine that was constructed in the 6th cent. B.C.; and a central point in these was a deep sacrificial pit into which offerings were let down. The same nether chamber has been found in the Kabeirion near Thebes, which also belonged to the 6th cent. and to which more particular reference will be made below. We discern the architectural provision for a chthonian cult; and we discover something more definite and certain than all that the later literature can teach us concerning the nature of the divinities worshipped: that they were powers of the under world, having fructifying functions, no doubt, and probably associated with the ideas of birth and death and with the world of ghosts. For this reason alone the cult would be fenced with a mystery, as chthonian ritual would be too dangerous to be openly approached.[2] It is to be surmised that these Samothracian powers might originally have been spirits rather than definite and individualized *θεοί*, and that something of the vagueness and indefiniteness of the ghost-world might attach to them; this would account for the vague collective name applied to them, 'the mighty ones,' and also for the bewilderment of the later Greeks concerning the equation of them to their own clear-shaped divinities.

Other archæological evidence of importance is forthcoming from the excavations undertaken by Dörpfeld and the German School of Archæology on the site of the Kabeirion near Thebes in 1887. The architectural remains pointed to three periods of the shrine, the earliest building being assigned by Dörpfeld to the 6th or 5th cent. B.C., which would accord with a record in Pausanias[3] that the shrine was violated in the time of the Persian invasion; and some of the objects of religious art found within or near the precincts, bronze-dedications and fragments of vases, are dated to the earlier half of the 5th century.[4] We must suppose, then, a migration of the cult from Samothrace or Lemnos into Bœotia in the 6th cent. B.C. or even earlier;[5] and we cannot assign its introduction to any known fact in the history of colonization and tribal movements. What concerns us chiefly is the question how much light is thrown on the original Samothracian religion by the discoveries on the site of the Theban Kabeirion. In one point at least the ritual of the transplanted cult remained true to the tradition of its home; behind the cellar was dug a double sacrificial pit into which offerings were thrown, the chthonian ritual proper to the powers of the lower world.[6] As regards the personality and form of the divinities, we must turn to the inscriptions and the works of art. Among the latter the most important and striking is a broken vase of the 4th cent., on which appears a group with five inscribed figures;[7] on the right reclines a stately bearded person, half-clad in *ἱμάτιον* and holding out a cup, his name 'Kabiros' appearing above his head; in front of him stands a boy inscribed Παῖς, turning his back on the elder god and drawing wine from a *κρατήρ*; before him, also fronting to the left, is an ugly little dwarf figure clasping his hands below his chin, and preserved only as far as the middle of the body; he bears the singular name of Π*ρατόλαος*, as if he stood for the earliest generation of men on the earth; he is gazing in excited wonder on a group that forms the left extremity of the scene, a male and female personage—only the upper parts of the body are preserved—in loving union and converse, she designated as Κ*ρατεία*, he by the enigmatical name Μ*ίτος*. All these are ideal beings of the Kabeiros-circle, not represented, however, directly as objects of worship; on the contrary, the spirit of caricature is marked in the last three. But we might imagine that the vase-painter would keep in touch with the popular belief and the tradition of the rites. His chief figure is Kabeiros *par excellence*, whom he closely assimilates to Dionysos; this would be natural at Thebes, and all the more inevitable if there was lingering a tradition of a Thracian origin of the Samothracian mysteries. The Παῖς represents the boy-minister, the young god whom Mnaseas calls Κ*άσμιλος*, and who was an important and essential figure in the cult, though here he appears in a trivial character; for the numerous inscriptions that have been found, in which the individual worshippers commemorated their association with the shrine, contain the mention of no other divinities save those of Kabeiros and 'the Son.'[1] This evidence outweighs all other; we must assume that in the Bœotian Kabeirion these, the elder and the younger god, were the predominating personages of the religion; and, as no local reason can be discovered for this, we must suppose it to be part of the Samothracian tradition, which we shall find preserved also in the later literary records. But the vase-painter has added two other figures that have the air of divinities, 'Krateia' and 'Mitos.' Naming the goddess 'the mighty one,' he probably intended her for the female counterpart of Kabeiros, the earth-goddess who in Greek lands was individualized and idealized as Demeter-Kore; her figure has something in it of the Kore-type, and her name Krateia reminds us of Π*ασικράτεια*, 'the almighty one,' a *sobriquet* of Kore at Selinus.[2] As to 'Mitos,' the only clue to his name and significance has been found in a passage of Clement of Alexandria, who on good authority mentions *μίτος* as a hieratic word of the Orphic sacred books, meaning 'seed.'[3] We are tempted, then, to interpret this mysterious figure as the divine nourisher of all life, possibly the procreative god of the earth; but we should be embarrassed in fixing his true relation to the other elder god Kabeiros. As the vase-painter appears to have been a frivolous person with a smattering of Orphic lore, he is not a trusty exponent of genuine Samothracian religion. But his quaint little figure, 'Pratolaos,' may have been suggested by real Kabeiric legend, since, according to a passage in Hippolytus,[4] part of which may be derived from a lost ode of Pindar, it was claimed in both Samothrace and Lemnos that Kabeiros was 'the first man Adam'; it is therefore not unlikely that the mystery teaching included some dogma concerning the origin of man.

Turning now to the literary record, we find it confusing and often contradictory, as we should expect from writers trying to define and Hellenize what was indefinite and alien. For certain historic reasons, especially owing to the relations of Athens to Lemnos, the Lemnian Kabeiroi-rites appear earlier in literature than the Samothracian, having attracted the attention of Æschylus, Pherekydes, and Akousilaos. As the chief god of Lemnos was Hephaistos, we find, as we should expect, that the two last-mentioned historians make much of Hephaistos in their genealogical account of the

Kabeiroi,[1] and their authority may have influenced Herodotus's view[2] and some later genealogical fictions. Yet, outside Lemnos, the Hellenic smith-god had no affinity with this divine group, though in the later art the Kabeiroi may have borrowed their hammer from him. We cannot, therefore, deduce anything concerning their aboriginal nature from their local *rapprochement* to the Lemnian god. From the literary tangle one fact of some importance for our view of these divine personalities emerges: the more trustworthy records present the Kabeiroi not as a vague plurality like the Korybantes, but either as a trinity or as a duality. The latter view of them is in accord with the evidence of the inscriptions from the Theban Kabeirion, with the later identification of them with the Dioskouroi, and with the statement of Hippolytus[3]—mainly confirmed by Varro—concerning the two ithyphallic statues that stood in the Samothracian shrine uplifting their hands towards heaven; and the scholiast on Apollonius Rhodius, who summarizes Hellenistic learning on the subject, mentions a current view that the Kabeiroi were originally a group of two—an elder and a younger god whom the learned Hellenist might call Zeus and Dionysos.[4] We may believe that this aspect of them is original; it could not have been a later Hellenic fiction, for it clashed with the prevalent craving to identify them with the Hellenic Twin-brethren, a youthful and coeval couple. The old earth-deities of Samothrace must have been so far clothed with individual personality before entering on their Hellenic career. But those older and later authorities who attest a Samothracian trinity were probably justified; for it is most probable that the earth-power there as in all other Ægean lands had developed a female personality; and the Hellenes, who would in any case have imposed a goddess, probably found one, at least in embryo, already there in the island mystery-cult when they came to know it. We cannot lightly reject the statement of Mnaseas of Patrai (or Patara), an antiquarian of the latter part of the 3rd cent. B.C., merely because this writer appears to have been usually reckless and futile; for, maintaining that the Kabeiroi were a trinity, he actually gives us their names, as above mentioned—Axieros, Axiokersos, and Axiokersa—the last being evidently feminine, the other two being appellatives of the elder and younger god.[5] He would have had no reasonable motive for forging this statement, nor is it likely that he would have forged so well. These names ring genuine, belonging not to Hellenic speech but to some language akin to it, such as Thracian. Another Samothracian cult-name, applied like Axieros or Axiokersos to the young god of the trio, was Κάδμιλος or Κάσμιλος, meaning apparently 'the minister'; and this name alone is sufficient to explain how the story of the wandering Kadmos and Harmonia came to be engrafted on the hieratic legend of the island.

But, if the existence of the female earth-spirit, conceived as earth-mother or earth-bride, within the original Samothracian trio can be accepted as proved, she would seem to have been subordinate to the male principle of divinity. The later historians and antiquarians may have tried to assign to the Phrygian Rhea-Cybele or the Hellenic Demeter a prominent place in the mysteries;[6] but there is no sign that these alien goddesses were able to unseat the old 'mighty ones' who were predominantly male, and who were therefore capable, on this ground at least, of being fused with the Dioskouroi. This comparative subordination of the female power is of importance for our judgment concerning the ethnic origin of the religion. It makes against any theory that would regard this religion as aboriginally Ægean, or derived from pre-Aryan Phrygia or Crete.

The history of the mysteries is part of the secular history of the Mediterranean. We do not know at what early period they had spread offshoots of themselves in Lemnos, Imbros, and the Troad.[1] Towards the close of the maritime empire of Athens, it was becoming not unusual for Athenians to be initiated.[2] Macedonia, perhaps owing to its enthusiasm for Dionysiac worship, was deeply interested in them; and the establishment of Macedonian supremacy gave them a leading position in the Mediterranean. Their connexion with the Troad brought them into relation with the Korybantes and the Phrygian mother at least as early as the 5th cent. B.C.,[3] and, later, evoked the interest and devotion of Rome; the learning of Pergamon, Rome's ally and from of old a 'Kabeiric' region,[4] may have helped to propagate the fiction that the Roman Penates were deities taken originally from Samothrace to Troy by Dardanos and from Troy to Rome. With such patronage the mysteries were able to survive and even flourish throughout the latter days of paganism, and in the 4th cent. A.D. Libanios refers to them as still existing.[5] In the course of so long a period, how much they absorbed of alien elements, what transformation of ritual and what contamination of divine legend they experienced, we cannot determine with detailed precision. At the time of their chief expansion in the 4th cent. B.C., we may be sure that they borrowed much in the way of organization and even of doctrine from the greater mysteries of Eleusis; and it was probably due to Eleusinian influences that the female divinity of the Kabeiroi-group was frequently interpreted as Demeter, who was specially termed Kabeiria in Bœotia.[6]

Less natural and appropriate was the Hellenization of the two male Kabeiroi as the Dioskouroi, an interpretation which ignored the important difference of age between the elder and the younger Samothracian god, and in no way harmonized with their aboriginal chthonian character. There is no proof that it came into vogue before the 3rd cent. B.C.;[7] and it probably arose from the coincidence that the Hellenic Dioskouroi were also called Σωτῆρες in their own right, and from the fact that the ancient visitors to Samothrace, who would be often thankful enough to effect a safe landing on that harbourless island, had come to regard the Kabeiroi no longer as chthonian deities of vegetation, but pre-eminently as saviours from the perils of sea; and this was exactly the function of the Dioskouroi. The 'Samothracian saviours' was a name of divine power for the Ægean mariner;[8] but the later writers of the Roman learned world tended to identify the Kabeiroi-trinity with Jupiter, Minerva, and Mercury;[9] and, in accord with a later trend of philosophic-religious exegesis, to interpret the chief male and female deities as Cœlum and Terra, 'Heaven' and 'Earth.'[10]

8 We find a *κοινὸν Σαμοθρακιαστᾶν Σωτηριαστᾶν* in Rhodes (*Athen. Mitth.* xviii. [1893] 389).
9 Serv. ad Verg. *Æn.* iii. 264. 10 *Ib.* iii. 12.

The indefiniteness of the Kabeiroi-trinity opened the way to this confusion in the interpretation and exposed them to the caprices of the later fashion of the *θεοκρασία*.

It remains to be seen what we can gather concerning the purport and ritual of the mysteries. To consider the latter first—the inscriptions and the architectural remains in Samothrace and the vicinity of Thebes supplement the meagre literary evidence. The sacrifice must have been an essential, if not the central, part of the whole rite. And, as has been pointed out, the sacrifice was chthonian; the victim's head may have been held over the pit and its blood shed into it where the powers of the earth would receive it; or the animal may have been thrown alive into the pit; both these forms of service being Hellenic and not specially Kabeiric. As regards the animal chosen, we find on a vase-fragment from the Theban Kabeirion a bull standing near the reclining Kabeiros with worshippers approaching;[1] but this animal might have been suggested by the fusion of Kabeiros with the Theban Dionysos to whom it properly belongs. In the great mysteries of Andania consecrated to Demeter and Kore, where the Kabeiroi under the name of *μεγάλοι θεοί* had gained a footing, young sows were offered to the latter.[2] Finally, a ram-sacrifice of a peculiar and mystic type may have been part of the Samothracian tradition.[3] But we do not know that the idea of the god's incarnation in the victim, which might transform the sacrificial meal into a sacramental communion, was vividly present in the Samothracian ritual. Nor can we discover there any clear indication of that other idea, sometimes linked with the sacramental and so momentous in the mystery-cults of the Mediterranean area, of the periodic death and resurrection of the deity. Lenormant has indeed drawn this conclusion from certain late and doubtful records and still more doubtful monuments.[4] Clement of Alexandria[5] narrates the legend of the murder of one of the Korybantes by his brethren, and seems to assert that this story was transferred to the Kabeiroi, which is not improbable in view of the general confusion in later literature between Kabeiroi, Korybantes, and Kouretes (see art. KOURETES AND KORYBANTES); but Clement does not clearly state that it ever entered as a motive into the sacred drama of the *Καβειρικὴ τελετή*. The other authority is Firmicus Maternus,[6] who also narrates the murder of Korybas, and then adds: 'This is the Kabeiros to whom the men of Thessalonike used to offer prayers with blood-stained hands.' If there is anything real behind this, we may surmise that the worship of Kabeiros, which we know was prevalent in this Macedonian State, had attracted to itself the actual legend of the murdered and dismembered Dionysos, which was rife in those regions. It would be hazardous to assert that this was an original Kabeiric myth; the old Samothracian religion, being less personal and anthropomorphic than the Hellenic, may not have evolved any mythology of its own.

But the sacramental idea might have been expressed in the Samothracian ritual in other forms than communion with the blood of the divinity. In the Eleusinian mystery the administration of the *κυκεών*—the cereal drink sanctified by the goddess herself and offered by the priest to each

[3] The evidence consists of certain monuments of which the religious interpretation is doubtful (cf. G. Rodenwaldt, *Jahrb. des arch. Inst.* xxviii. [1913] 327), and a Pergamene inscription mentioning a *κριοβολία*, which may have some connexion with the initiation of the *ἔφηβοι* in the mysteries of the *μεγάλοι θεοὶ Κάβειροι* mentioned earlier in the inscription (*Athen. Mitth.* xxix. [1904] 152).

of the *μύσται*—may be called a sacrament; and the Eleusinian service must have influenced the later Samothracian at many points. An inscription in Bucharest referring to the Kabeiroi-mysteries, if we accept an attractive restoration, may indicate the mystic ritual of the administration of holy bread and drink to the *μύσται* by the priest; enough at least is preserved to reveal the importance of the sacramental cup.[1]

Such rites of power always enhance the mystic *éclat* of the priesthood; and it is not improbable that the priests themselves took the names of the 'great gods' and were called Kabeiroi; for this would explain the inconsequent opinion that prevailed in some learned circles of later antiquity that the Kabeiroi, although the name obviously designated high gods, were only *πρόπολοι*, the ministers of these, like the Korybantes or the Kouretes.[2] One of the most important functions of the priest was the scrutiny of the catechumens, so as to decide if they were ceremonially 'pure' and therefore suitable for admission. In the ancient ritual-code the gravest impurity was bloodshed; and we hear of a Kabeiric official called *Κοίης* or *Κόης*, whose function was the purification of homicides.[3] A text of Livy[4] reveals to us a temple-council or synod, in which the chief magistrate was called *βασιλεύς*, who tried cases of homicide to decide whether the pollution was too great for the temple to offer them asylum; for the rights of asylum were rigidly respected in Samothrace and might be abused. The powers of the lower world, to whom the *μύσται* were consecrated by wearing a purple band round their waists[5]—purple being a 'chthonian' colour—were specially sensitive about bloodshed.

A special form of purification, unrecorded elsewhere in the ancient Mediterranean world but in vogue in Samothrace, is the confessional; and the record that attests it contains also the first reprobation of it by the spirit of Protestantism: the haughty Lysander refused to confess to mortal man, when the priest of the Kabeiroi asked him what was the greatest sin that he had committed.[6]

As regards the actual *δρώμενα*, or sacred action whereby the initiation was consummated, we have less evidence about the Samothracian than we have concerning the Eleusinian mysteries. There was a distinction here, as at Eleusis, between the catechumens and the fully initiate, the latter being called *μύσται εὐσεβεῖς*, as possessing a peculiar piety, or, as at Eleusis, *ἐπόπται*,[7] and this term implies that the central act of the mystery was the revelation of certain sacred things or shows to their eyes. The show might have included a solemn dance; for we have a literary reference to the religious dancing of the 'pious Samothracians,'[8] and a relief found by Conze near the sanctuary showed a dance of nymphs.[9] The dancing may have been dramatic or mimetic; if so, it is useless to try to guess at its purport; we have no records that the most credulous could believe, nor can we point to any hieratic legend that is genuinely Samothracian; we know far less about Samothrace, which was perhaps never wholly Hellenized, than about Eleusis, and it is merely futile to recount the various legends, Cretan, Phrygian, Theban, that the later learning of the Hellenistic

world tried to implant on this mysterious island. Only one record deserves some passing attention. The scholiast on Euripides, quoting from Ephoros, after giving the useless story that Kadmos carried off Harmonia from Samothrace, adds words of greater importance: 'and even now in their festivals (ἐν ταῖς ἑορταῖς) in Samothrace they make search for Harmonia.'[1] We know that the quest for the vanished deity of vegetation was part of an agrarian ritual in Greece; and Ephoros might have been referring to some purely country-pageant of the island, whether Hellenic or autochthonous. But, if we regard it as more probable that his vague phrases refer to the sacred drama of the mysteries themselves—the probability being strong *a priori* that they had one—then we can draw some interesting conclusions: Harmonia was a Hellenic divine name attracted to Samothrace, because she was attached to Kadmos, and Kadmos was attracted there because Thebes had ancient communication with the island, and the native Kasmilos or Kadmilos was identified with their Kadmos. Now, if Kasmilos in the mysteries carried off the earth-goddess, if there was the semblance of an abduction followed by a sorrowful search for the lost one, the Greek μύσται, misled by the name Kadmilos, would interpret the Samothracian earth-bride as Harmonia, and the story of Kadmos carrying off his bride from Samothrace would be explained. If all this were certain, we should not feel convinced that this holy drama was autochthonous Samothracian; it is so like to what happened and was performed at Eleusis that we might naturally ascribe it to the reorganization under Eleusinian influences that the Kabeiroi-mysteries underwent at the time when they were becoming pan-Hellenic.

On the same analogies we must suppose that besides a sacred drama there was some ἱερὸς λόγος in them, some exegesis, accompanied probably with exhortation. And on *a priori* grounds we should believe that this would be connected with the doctrine of a future life and the promise of future happiness; for we could hardly understand how the Samothracian could compete so successfully throughout the later period of paganism with the other influential mystery-initiations, such as the Eleusinian, the Bacchic, the Phrygian, and the Egyptian, if it proffered to its μύσται no such message of posthumous salvation as the others proclaimed. Moreover, the Kabeiroi, like the Eleusinian deities, were powers of the shadowy world, the ghost-realm; and the Greek mind would be sure to conclude that mystic communion with them would affect the lot of the departed spirit. Hence we may explain the growth of the legend that it was Demeter herself, the goddess who held the key of the Eleusinian Paradise, who instituted the Kabeiric rites. The belief in posthumous rewards and punishments may have a moralizing effect on conduct; and it is specially attested of the Samothracian mysteries, and of these alone, that 'those who had partaken in these mysteries became more pious and more just, and in every respect better than their past selves.'[2]

A more intimate and more certain knowledge about these rites and the genuine Samothracian religion will perhaps never be attained. The evidence which has been used above is mainly indirect, incomplete, and vague. The Greeks themselves were confused in their view of these divinities, who for the meagreness of their legend and the dimness of their personality resemble more the Roman *numina*, such as the Penates, than the clear Olympian figures of Hellas.

**KABĪR, KABĪRPANTHĪS.**—1. **Life of Kabīr.**—Kabīr, an Indian teacher and religious reformer, flourished in N. India about A.D. 1440 to 1518. His origin is uncertain, and is the subject of various legends current among his followers. According to one account, his mother was a virgin widow, the daughter of a Brāhman. She accompanied her father, who was a follower of Rāmānand, the great teacher of S. India, on a visit to the spiritual guide. Rāmānand, while blessing her, offered her the usual wish that she might conceive a son, not knowing her state of widowhood. The sequel is variously reported. It was impossible to recall the blessing; but, while one version states that the mother abandoned the child to escape disgrace, another relates that Rāmānand contrived that the child should be miraculously born from his mother's hand. All stories agree that the child was brought up by a weaver named Nīrū and his wife Nīmā. The Kabīrpanthīs, or followers of Kabīr, assert that the infant was an incarnation found by Nīmā floating on a lotus in a tank near Benares. Similar legends are current regarding Kabīr's wife (Loi), son (Kamāl), and daughter (Kamāliya), all of whom are said to have had a miraculous birth. Throughout his life Kabīr preached and worked as a weaver in the neighbourhood of Benares. Owing to his teachings he was an object of dislike both to Hindus and to Muhammadans, and it is said that he was denounced to Sikandar Lodī, king of Delhi, as laying claim to divine attributes, but escaped by his ready tongue. The Brāhmans decried him as an associate with a woman of ill-fame and with Rae Dās, another religious teacher who was a Chamār, or leather-worker, despised for his low position. Kabīr died at Maghar near Gorakhpur, and a dispute at once arose as to the disposal of his remains, which were claimed by both Hindus and Muhammadans, the former desiring to cremate and the latter to bury them. While they wrangled, Kabīr himself appeared and bade them raise the cloth which covered the corpse. When this was done, it was found that the body had vanished, but a heap of flowers occupied its place. Half of these were burnt after the Hindu custom at a spot now known as Kabīr Chaura in Benares, and the rest were buried at Maghar, which became the headquarters of the Muhammadan portion of the sect. A tomb was built there which was subsequently repaired about 1567 by a Muhammadan officer of the Mughal army.

2. **Influence and doctrine.**—In the religious history of India, Kabīr occupies a place of great importance. He was almost certainly a disciple of Rāmānand, and thus belongs to the Vaiṣṇava school of thought. His teaching was the first important introduction of these tenets in N. India. But he was also conspicuous as the earliest thinker who tried to affect both Hindus and Muhammadans. And, while his followers are still numerous,[1] the effects of his teaching are rendered still more important by the fact that it was one of the main sources drawn on by Nānak Shāh, the founder of the Sikh religion. In explanation of Kabīr's constant references to Islām, J. Malcolm (*Asiat. Researches*, xi. [1810] 267) described him as a Muhammadan and a Ṣūfī—statements which were hotly contested by H. H. Wilson (*Religious Sects*

[1] At the census of 1901 the number returned was 843,171 in the Central Provinces, United Provinces, Central India, and Bombay. The number is certainly understated.

*of the Hindus*, London, 1861, p. 69, note). G. H. Westcott of Lucknow, the most recent writer on the sect, is of opinion that Kabīr was certainly a Muhammadan, and that he had at least some knowledge of Ṣūfī teaching (*Kabir and the Kabir Panth*, p. 37). Kabīr rejected entirely all the outward signs of Hinduism, as has been done in so many movements of reform. He acknowledged no caste distinctions, saw no virtue in asceticism, fasting, and almsgiving, and despised the six schools of Hindu philosophy. As an unlettered man of low origin, he probably had no deep acquaintance with the last. The Hindu theogony was ruthlessly condemned. Belief in a Supreme Being is the foundation of the teaching; but, although the name of Rām is used, it is clear throughout that the incarnation of Viṣṇu is not meant. Salvation is to be gained, not by acquisition of knowledge or by good works, but by faith (*bhakti* [cf. art. BHAKTI-MĀRGA]).

In its essence the teaching is thus another instance of the revolt of simple minds against the deadening weight of ritual, mystery, and confusing complications of thought with which Brāhmanism and Islām are overlaid. If God had desired circumcision, He would have sent men circumcised into the world. If by circumcision a man becomes a Muhammadan, what is to happen to women? Of what benefit is cleaning your mouth, counting your beads, performing ablution, and bowing in temples, when, while you mutter your prayers, or journey to Mecca and Medina, deceitfulness is in your heart? If by wearing a sacred thread a man becomes a Brāhman, what do women wear? The God of all religions is the same. To 'Alī and Rām we owe our existence, and should therefore show similar tenderness to all that live. The city of Hara (another name of Rām) is to the east, and that of 'Alī to the west; but explore your own hearts, for there are both Rām and Karīm (a name of God). The worship of many gods is wrong. *Māyā* ('delusion'; see art. MĀYĀ) created them, and, as they have sprung from sin, so are they the cause of sin in others. In the search for God a guide is necessary, who has himself learned to know God. And a teacher should not be accepted, as the Brāhman is by the Hindu, without being tested. When the master is blind, what is to become of the scholar? When the blind leads the blind, both will fall into the well. Yet the master is helpless when the scholar is unapt. It is blowing through a bamboo to teach wisdom to the dull. The scriptures are of value, but must not be rated too highly.

Most important in the positive doctrines of Kabīr is that of *Śabda*, the Word, and this teaching is one of the most striking of the many parallels between Christianity and the preaching of Kabīr. In orthodox Hindu thought knowledge can be attained by perception and inference. The Vaiṣṇava teachers added *Śabda*, which includes both divine inspiration and the word of the teacher. There are many words, and there is a great difference between them. Accept the true Word. If man wishes to know the truth, let him investigate the Word. Without finding the gateway of the Word, man will ever be astray. Without the Word the *Śāstras* are blind. There are many words, but take the pith of them. Kabīr says, 'I am a lover of the Word which has shown me the unseen (God).' It would appear probable that Kabīr did not recognize a distinct heaven and hell, but regarded these names as symbolic of happiness and misery in this world. Transmigration was certainly a feature in his doctrine. Modern Kabīrpanthīs, however, believe that the soul enters heaven or hell between successive periods of rebirth.

Kabīr's teaching was purely oral, and throughout N. India thousands of rhyming couplets are current which are ascribed to him. In addition, he and his successors are responsible for a large number of hymns, odes, and doctrinal or argumentative poems. These have been collected, and a few have been published. Wilson gives a list of 20 works included in the *Khās Grantha*, or Book *par excellence*, at Kabīr Chaura, but Westcott has obtained references to 82 in addition to eight of those mentioned by Wilson. The great majority are still in manuscript only. It is probable that the first collection of Kabīr's sayings was not compiled earlier than 50 years after his death. Of most authority is the *Bījak* (literally 'invoice- or account-book'), which has been printed with commentaries. It was compiled by Bhago Dās, one of Kabīr's immediate disciples, and contains specimens of the various classes of poems referred to above. A number of sayings attributed to Kabīr are included in the *Ādi Granth* of the Sikhs (tr. Macauliffe, *The Sikh Religion*, vi. 142–316).

3. **The Kabīrpanthīs.**—The community has not escaped sectarian division. As already mentioned, Maghar is the headquarters of the Muhammadan followers of Kabīr, who keep aloof from the Hindus. The latter recognize two main divisions. The Hindu shrine at Maghar is only a branch of the main establishment at Benares, and one version dates the appointment of the first Hindu *mahant* ('religious superior') at Maghar in 1764. But a second establishment exists in Chattīsgarh in the Central Provinces, founded by Dharm Dās, a Bania who is said to have been rebuked for idolatry by Kabīr himself. As in the case of so many reforming movements in Hinduism, there is a tendency to relapse into ritualism and exclusiveness. Though Kabīr preached against caste, the modern Kabīrpanthīs prefer that members of the unclean castes should join other sects, and should not wear the rosary of wooden beads which marks their own members. Members of the twice-born castes in addition wear the *janeo*, or sacred thread, of the Hindus. A woman may also wear the rosary, but not before marriage, and she may not become a disciple of her husband's spiritual guide, for disciples of the same teacher are regarded as brother and sister. An elaborate ceremony of initiation is performed, which includes the consumption of water used for washing the feet of the head *mahant*, representing the master, and a betel leaf. On the latter the secret name of God is inscribed with dew. It is called the *parwāna*, or passport, and is said to represent the body of Kabīr. An important feature in the ceremony is the communication of a secret *mantra*, or text. In the Dharm Dās section there are several *mantras*, and the ceremonies of initiation differ in a number of details. Every Sunday and on the last day of the lunar month a fast is observed, followed in the evening by a religious meal, at which a service is read, and an address delivered by a *mahant*, while hymns are also sung. A later ceremony follows, of even greater solemnity, and resembling the Communion service in Christianity. When *in extremis*, the dying receive the holy water and betel leaf described in connexion with initiations. Monastic life is encouraged, and women may be admitted to the order, if found qualified, after a probation of two years. They are usually widows or the wives of men who have joined the order. Branches of the community are ministered to by *mahants* who receive authority from the head *mahant*. As a rule, at present the *mahants* are not men of great learning, though some are acquainted with Tulasī Dās's *Rāmāyaṇa* and the *Bhāgavad-gītā*.

LITERATURE.—The best account of the sect is contained in G. H. Westcott, *Kabir and the Kabir Panth*, Cawnpore, 1907, which includes a bibliography. A curious comparison between the teaching of Kabir and Christianity was made by Pandit Wālji Bechar, a pastor of the Irish Presbyterian Church in the Kaira district, Gujarāt. His conclusions were published in a book called *Kabir Charitra* (Gujarāti), Surat, 1881. Reference must also be made to H. H. Wilson, *Religious Sects of the Hindus*, London, 1861, i. 68–98, and especially to M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, vi. 122–316. For a brief summary, see also R. G. Bhandarkar, *Vaiṣṇavism, Śaivism*, etc. (*GIAP* iii. 6), Strassburg, 1913, pp. 67–73.

R. BURN.

## KACHARIS.—See BODOS.

**KĀCHHĪ.** — An important agricultural tribe in N. India, an offshoot of the Kurmī. At the Census of 1911 they numbered 1,304.296, the majority of whom are found in the United Provinces of Agra and Oudh, Central India, and the Central Provinces. Their name is usually derived from Skr. *kakṣa*, 'flank,' 'enclosure,' or *karṣa*, 'furrow'; but they claim connexion with the Kachhwāhā sept of Rājputs, who assert totemic association with the tortoise (*kachchhapa*). The Kāchhī are among the best agriculturists in N. India, specially devoting themselves to the growth of the more valuable crops, such as vegetables, sugar-cane, and opium. Practically all are Hindus; and, if they can be said to belong to any sect, they prefer the Śākta, and worship the goddess Durgā Devī, more especially in her form as Sītalā, the smallpox goddess, whom they propitiate in March–April and June–July with offerings of cakes, sweetmeats, and money, which are received by the *kumhār*, or potter-priest, who attends her shrine. Except when they make pilgrimages to the shrines of the greater gods, they pay little regard to the orthodox deities of the Hindu pantheon, and devote themselves to the cult of the group of minor local gods, who are supposed to protect them from trouble and cause the increase of their crops. Such in the United Provinces are Nāgarsen, one of the deities controlling disease; Chāmar, who, if he be not propitiated with gifts of sweetmeats, incense, and red lead at the Holī and Divālī festivals, stops the milk of cows and buffaloes; Lāl Maṇi, 'red jewel,' the household god, to whom cakes and sweetmeats are dedicated and subsequently eaten by the worshipper and his family; and Bhūmiyā, god of the soil, who is patron of the village and its people, the male partner of Dhartī Mātā, Mother Earth. The malevolent deity most feared is Bisārī, 'the poisonous one' (Skr. *viṣa*, 'poison'), who brings ophthalmia on those who neglect her worship. It is believed that her priest can bring this disease on sinners by lighting a fire and throwing hot coals on her image. When a person is afflicted in this way, he lays aside seven cowrie-shells, a piece of turmeric, and some charcoal, as a mark of his vow to make a pilgrimage to the shrine of the goddess at Sankisa in the Farrukhābād District, United Provinces. The presentation of a silver coin here ensures immunity from the disease. People who are too poor to undertake this journey endeavour to appease the angry goddess by going a mile or so in the direction of her temple, and making an offering in a field which must be beyond the boundary of the village in which they live. With this cult of the minor gods is combined that of local Muhammadan saints like Madār Sāhib of Makanpur, or that at the tomb of some martyr of the faith, as Shahīd or Sayyid Mard. Among the Kāchhī of the Deccan there are indications of a form of totemism in the regard paid at marriages to the guardian (*devak*) of the union, which usually consists of an axe and leaves of four species of the sacred fig-tree and mango, which are tied to a post in the marriage halls at the houses of both bride and bridegroom.

LITERATURE.—For the United Provinces: W. Crooke, *TC*, 1896, iii. 81; for the Devak of the Deccan: *BG* xviii. (1885) pt. i. p. 283; J. M. Campbell, *Notes on the Spirit Basis of Belief and Custom*, Bombay, 1885, p. 8 ff.; J. G. Frazer, *Totemism and Exogamy*, London, 1910, ii. 276 ff.

## KACHINS.—See BURMA.

## KAFIRS.—See BANTU.

**KĀFIRISTĀN.**—Kāfiristān, or 'the land of the infidel,' almost certainly is no longer correctly described by that epithet. Since it was visited by the present writer, who left the country in 1891, the Amir of Kabul is believed effectually to have conquered every one of its numerous tribes who were continuously engaged in internecine fighting. No doubt among the old people the ancient gods are worshipped secretly still; but the former picturesque ceremonial, the dancing, the feasting, the oratorical invocation of favourite deities, must have given place now to the austere rites of the religion of Islām, the self-righteousness, and the dignified authority of its priests. Fanaticism will be prevalent among the younger men, taken away, many of them, as boys to Kabul and returned as zealots of the new faith, and also among the ordinary rank and file of the converts, for naturally it is among the most recent recruits of any religion that, on the average, the highest enthusiasm prevails. There is little probability that the Kāfirs will ever lapse back to paganism. Muhammadanism has a singular attraction for Orientals, and, once accepted by a people, it rarely seems to lose its hold upon their consciences or its insistent influence upon their outlook upon life, their manners, and their ways of thought.

This country, Kāfiristān, is pressed in between Afghanistān and Chitrāl, Badakhshan and the Kunar Valley. More exactly it is situated between latitude 34° 30′ and latitude 36°, and from about longitude 70° to longitude 71° 30′. It is one of the most difficult and intricate mountain places of the world, harsh, inhospitable, and full of peril, both from the physical dangers of crag, precipice, and howling torrent, and because of its superfluity of lurking-places for robbers and assassins, in the great sombre forests or the menacing defiles; every big rock, wall, bush, and ruin has to be watched suspiciously by the traveller and approached with wariness. The total extent of this isolated country, for long centuries an impregnable island of paganism, washed on all sides by an implacable sea of Muhammadanism, is probably not more than 5000 square miles. Nothing authoritatively definite is known about the history of the inhabitants. Obviously they are the descendants of many broken peoples. Probably the upper and better featured classes represent, in the main, certain ancient colonists of Eastern Afghanistān, tinctured very likely with Greek blood, who, refusing to accept Islām in the 10th cent., were hurtled out by the fervid missionary swordsmen from pleasant cultivated lands into the blank and hopeless mountain country, where they fell upon more or less aboriginal folk, still represented, it would seem, in at least one desolate high valley, whom they conquered and slew or enslaved.

Qualitative analysis of the Kāfir tribes, especially of those of the border valleys, is out of the question; fine-shaped heads, fair skins, wise brows, are found almost exclusively among the chief and most powerful families of sept or tribe, but often even here there are to be found also the sloping forehead, the restless eye, the coarse features, the dark colouring of the slave, or, again, the strange bird-like profile of the wild and fierce nondescript degenerate. Sometimes in the same family in the

Bashgul Valley one perceives the oddest differences between the children—a result no doubt of the indifferent selection of polygamous wives and the prevailing moral sexual laxity. The slow and heavy-featured clansmen of a remote valley, particularly difficult of access, seem curiously like one another in form and feature; that, however, may be merely the common illusion of a hurried traveller, who is apt to identify the type while ignoring its variations. Usually the chief men and the priests are Aryan-looking, sometimes remarkably so; and it may be added, with something approaching to certainty, that such a type never reveals itself among the poorer tribesmen or among the artisan, the field, or the domestic slaves. Difficult as it is to generalize concerning a congeries of peoples such as constitute the Kāfirs of to-day, especially those living near the Eastern borders of the country, it may be stated broadly that in character they all display a curious lack of simplicity. With remarkable powers of secrecy and tenacity, they can persevere remorselessly in an intrigue or a plot decided upon many years previously. Possibly their most prominent general peculiarities are an inordinate cupidity, an easily aroused fierceness of jealousy, and a capacity for bitter, suicidal, inter-tribal hatred. They are ever ready to starve themselves for the sake of hoarding. Blackmailing they look upon as a virtue: it shows ability and forcefulness. A belief in the value of vague or pointed threats is deeply engrained in their nature. A head-man, whose little son lay very ill, once declared with a menacing gesture against heaven that, if the child died, he would turn Musalmān. No one dreamt of accusing him of blasphemy; he was applauded for his wisdom and energy. Kāfirs are untruthful. A plausible lie passes as the proof of a sagacious intellectual man. Obviously they hold the belief, common to so many wild people, that the truth merely because it is the truth must be harmful to a man. They are boastful and fond of admiration, which, added to a justifiable fear of the physical power of majorities, gives a remarkable sanction to public opinion. Kāfirs have no fear of dying, although they cannot comprehend anyone committing suicide. Melancholy is unknown. They have a really wonderful sense of personal dignity; at all the religious festivals and sacrifices they strike the observer as equally cheerful and self-respecting. In his own way a Kāfir is a model of politeness. At once and gracefully he yields precedence to a superior and unaffectedly takes his own proper position. In spite of his avarice, which at times amounts almost to a disease, he is very hospitable. However grudgingly he may be so, he dare not disobey the unalterable laws on this subject. Family affection is not very strong. Some of the tribes are in the habit of selling little girls, sometimes even children nearly related to them, but as a rule it is the female offspring of their slaves that they dispose of in this way. Boys are rarely, if ever, thus treated. Nevertheless, Kāfirs are kindly in family relationship. A man is fond of his old parents; his delight in a son is remarkable. They are never rough or cruel to animals. There is no special fondness shown for dogs, which are employed mainly for hunting and as house-guards. Goats are treated as domestic pets; but no reluctance is ever shown to kill them for food. Bulls and cows, accustomed to be handled gently, do not require to be bound when sacrificed. One man takes the animal by the horns, gently depressing the head, while a second, with the stroke of an axe, divides the cervical spine. Kāfirs are wonderfully brave. In little parties of two or three they penetrate stealthily into hostile villages many miles beyond their own frontier. They stab the victims right and left as they sleep, and cut off ears as trophies and as certificates of actual deeds; then they race back to their own deep forests with a hue and cry of the whole countryside after them. They are splendidly loyal to one another, and habitually perform high acts of self-sacrifice for comrades in war. They are intensely quarrelsome among themselves. It is a sign of virility to take up a quarrel at the instant. But, if quarrelling is a manly virtue, peace-making is very sacred. Men, boys, and even dogs are separated at the first indication of a probable fight. Any one who will not help in stopping a village row at any moment is looked upon as unworthy. Nothing resembling religious intolerance exists. The men are extremely sociable, many possessing a sense of quiet humour. Their badinage with women is, of course, obscene to our way of thinking, and their jokes have much of the same nature, but they are highly amused at ironical remarks, and also at even the mildest attempt at repartee. It is as natural for a Kāfir to thieve as it is for him to watch his flocks and herds. It is, in short, the business of his life. Little children are trained and encouraged to steal. The killing of an individual, merely as a human being, is looked upon as a trivial affair except as the basis for boasting and vainglory, unless indeed the slain man happened to belong to the slayer's tribe, when grave trouble, heavy compensation, or even the driving out of the murderer into an outcasts' village of refuge would certainly follow. In the case also of the victim being a member of a neighbouring tribe, friendly at the time, serious complications and difficulties would follow. In the opinion of an average tribesman, a fine, manly character, essentially a 'good' man, must be a successful homicide. He must also be an active hill climber, one always ready to take up a quarrel, and known to be of an amorous disposition. If, besides possessing these popular qualities, he is an agile and untiring dancer at religious festivals, a sure shot with bow and arrows or with the matchlock, and a sound quoit player, he combines most of the characteristics of a really admirable person; but even with all these advantages he will possess no real influence in his tribe unless he either is wealthy himself or belongs to a family rich in flocks or herds.

The Kāfir religion is a debased form of idolatry, with a certain admixture of ancestor-worship and perhaps traces of fire-worship also. Gods and goddesses are many in number, and in different villages and among different tribes hold varying positions in local estimation. Imra, the Creator, Moni (commonly spoken of as 'the Prophet'), Gīsh (the war-god), Bagisht, Dizane, Krumai, and Nirmali are highly esteemed and popular everywhere. It is nearly certain that the same god, goddess, or inferior deity is called by a different name by different tribes, but, even allowing for this, there are many of the godlings who must be entirely disregarded except in particular villages. The difficulty in getting information from the Kāfirs about their beliefs is extreme, although they are more inclined to open their hearts on such subjects to a Christian than to a Muhammadan, for they consider that a Christian is in some sense a relation because he also is always called opprobriously a Kāfir by the Musalmān priests. A further difficulty is this—the people know seemingly little with anything like precision about their own theology. An inquirer is constantly referred from one old man to another without final benefit. When it does not bore him, cross-examination, if at all prolonged or minute, puts a Kāfir to sleep, or he jumps up and not infrequently rushes from his questioner. Prob-

ably as a result of mixing on the frontiers of their country with their Musalmān neighbours, when at peace, and hearing their religion scorned, the Kāfirs, at any rate the younger portion, are inclined to treat it cynically and with scepticism. Frequently two or three waggish youths will burlesque the ceremonies of their faith. But everywhere the war-god Gīsh is popular and respected, and in his worship at least there is remarkable sincerity, even among the light-hearted younger men. The older people, though undoubtedly devout, seem to abandon their faith without very poignant regret. In the inner valleys of Presungel the atmosphere is more distinctly religious. Devils' villages are continually met with. Old watercourses, long fallen to ruin, are universally believed to have been constructed by god or goddess. Deep imprints of divine or dæmonic hands are shown on many a rock face. There, jealously guarded, is an iron pillar thrust in the ground by Imra himself, and likewise a sacred hole to look down which is certain death. Fertile lands consecrated to the Creator lie untouched by the plough, and the most famous temple in Kāfiristān, also dedicated to Imra, is to be found in this valley.

In Kāfir theology there is both a heaven and a hell. The universe is divided into Urdesh, the upper world, the abode of the gods, Michdesh, the earth, and Yurdesh, the region under the earth; but both heaven and hell are in Yurdesh, which is reached through a great pit guarded at its mouth by Maramalik, a custodian created for that purpose by Imra. Once passed into Yurdesh, no one ever returns to the upper world. At death a man's breath, his soul—the word *shon* has the double meaning—enters and becomes at once a vague shadowy form, such as we see in dreams. The elect wander about as shades in a paradise in Yurdesh termed Bisht, while the wicked are always burning in fire. Worship consists in behaving in a dignified and cheerful manner at the sacrifices of animals, looked upon obviously as an entertainment, in dancing, in the singing of hymns, and in invocations to the gods. Fairies as well as deities have to be propitiated by offerings. The most common form of profane swearing is 'May the curse of Imra strike you!' Besides gods and goddesses and inferior godlings, one hears much of demons, the chief of whom is Yūsh. The high priest of one of the Eastern tribes gave the present writer the following information:

Imra is the Creator of all things in heaven and earth. By the breath of his mouth he endowed with life his 'prophets' Moni, Gīsh, Sataram, and the rest; but Dizane (a goddess) sprang into existence from his right breast. Bagisht alone among them all was born after the manner of men. In addition, Imra also created seven daughters whose special province it is to watch over agriculture. As the time for sowing approaches goats are sacrificed in their honour. The fairies and the demons were created by Imra, but the latter gave so much trouble to the whole world that Moni with divine permission nearly exterminated them.

Most of the religious stories, told by this high authority and others, were bald, lengthy, and inconsequential, and of interest merely as showing the mental position at which the Kāfirs had arrived—horses with swords concealed in their ears, women created out of golden goatskin churns, the removal of the sun and the moon from the sky and their concealment for a time in the interior of a mountain, and so on. There were narratives of a sacred tree whose branches were seven families of brothers, each seven in number, while the trunk was Dizane and the roots Nirmali, another goddess. And there were narratives of Bābā Ādam and his wife, who with their forty children once upon a time in Kashmir were all sleeping in pairs, and when they awoke in the morning no single couple understood the language of any other couple. Imra then ordered them to set forth and populate the whole world. With unfeigned reluctance, since everybody loves the country of Kashmir, they obeyed the divine order. Monstrous snakes, it seems, once existed: they were attacked and slain by a mighty god; the blood of one of these fabulous reptiles forms a tarn pointed out to the traveller to the present day. Imra is sacrificed to frequently, but not more so than several other gods. At the religious festivals and funeral dances he receives three rounds of stamping and shuffling by the quaintly dressed performers, but without any of the enthusiasm which is infused into the exercises in honour of Gīsh, or the comicality of step and posturing which is necessary to please the goddess Krumai. Every village has its temples. These are also to be found on the roadside far away from any dwelling-houses. Usually these temples or shrines are small, mostly about 5 ft. square, and perhaps 6 ft. high. The lower two-thirds consist of rubble masonry built between frames of axe-squared timbers. The top is almost entirely of wood with small windows in front, through which the idol or sacred stone can be seen. They are very often ornamented with poles at the corners, upon which are hung fragments of iron resembling tongueless bells, iron scull-pieces, and other trophies placed there in memory of some successful raid. Occasionally a shrine is elaborately and prettily carved. Gīsh, the war-god, is the most devoutly admired of all the pantheon. To liken a Kāfir to Gīsh is to pay him the highest possible compliment, while nothing can be in better taste than to call a woman 'Gīsh Istri,' *i.e.* 'the wife of Gīsh.' Gīsh killed fabulous numbers of enemies—Hazrat 'Alī, Haṣan and Huṣain, in short, every famous Musalmān the Kāfirs ever heard of. Some Kāfirs even say that Gīsh's earthly name was Yazīd. The most popular of the goddesses is Dizane. Any one having a son born to him in the preceding year offers a goat in sacrifice on the goddess's annual festival day. Dizane protects the growing wheat crop; Nirmali, the Kāfir Lucina, takes care of lying-in women and watches over children. The special retreats for women are under her peculiar protection. Krumai is a popular goddess; she lives high up on the great snow mountains, but is chiefly remarkable by reason of the comical dance in her honour, which invariably ends the performances at the regular ceremonies after each of the chief gods has been danced to in turn.

GEORGE SCOTT ROBERTSON.

**KAHĀR** (Skr. *skandhakāra*, 'one who carries loads on his shoulders').—A tribe of litter-bearers, cultivators, and labourers. At the Census of 1911 they numbered 1,838,698. In Bengal those who profess to be orthodox Hindus generally worship Siva and the *śakti*, or female element, the proportion of Vaiṣṇavas being very small.

'Members of the Rawáni sub-caste observe a peculiar worship in honour of Ganesa on the seventh day of the waxing moon of Kártik (October–November), when, accompanied by Brahmans, they proceed to a wood and make offerings of vegetables, fruits, and sweetmeats under an *ámlá* tree (*Phyllanthus emblica*), but never sacrifice any animal. A feast is then given to the Brahmans, after which the Kahárs dine and drink spirits to excess. The entertainment of Brahmans on this day is accounted as meritorious as the gift of five cows on any other occasion. In addition to Dák, Kartá, Bandi, Goraiya, Dharam Ráj, Sokhá, Sambhunáth, and Rám Thákur, whose worship is common throughout Behar, the caste pay special reverence to a deified Kahár called Dámubir, before whose effigy, rudely daubed in red and black paint, goats are sacrificed and betel leaves, sweetmeats, and various kinds of cakes offered at marriages, during harvest time and when illness or disaster threatens the household. As a rule these rites are performed only by the members of the family, who share the offerings among themselves. In Bhagalpur, however, the Maithil or Kanaujiá Brahmans, who

serve the caste as priests of the greater gods, are called in to sacrifice to Dāmubīr, and receive half of the offerings as their perquisite. Mondays, Wednesdays, and Fridays are the days set apart for the worship of Dāmubir' (Risley, *TC*, i. 372).

In the United Provinces they are generally orthodox Hindus, but are seldom initiated into any special sect. They offer to Bhairon, an impersonation of the male partner of the Earth-goddess, a goat, pulse cakes, and spirits; to Mahābīr or Hanumān, the monkey-god, clothes, Brāhmanical cords, and garlands of flowers; to the Pāñchoṅ Pīr (see PACHPIRIYAS) the offering is a kid and spirits. In Jhansi there is a curious combination of Hindu and Musalmān usage. When a person worships Devī, a Muhammadan and a butcher accompany him to the shrine. The Muhammadan pronounces the invocation (*kalima*), and plunges the knife into the throat of the victim, and the butcher cleans the carcass, which the worshipper and his friends cook and eat. They cultivate the water nut (*Trapa bispinosa*) and melons. When planting the former, they worship a local deity Siloman Bābā and his brother Mādho Bābā; when sowing melons, they add to these a third godling, Ghaṭauriyā Bābā. All these deities have platforms erected on the banks of rivers and tanks, and are supposed to protect crops sown near such places. When they go out fishing or start carrying a litter, they invoke Kālū Kahār, a deceased worthy of the tribe. In the Deccan they are known as Bhoī and in Madras as Besthā.

**KAILĀS, KAILĀSA** (the name is probably of Tibetan origin).—A mountain in Tibet, lying N. of the sacred lake Mānasarowar, and rising to an altitude of 21,830 ft.—less than that of Gurlā Mandhātā (25,860 ft.), the peak which flanks the lake region on the south. It is generally identified by Hindus with Mount Meru, which by others is supposed to be one of the group of mountains N. and W. of Kaśmīr. The legends connected with this world-mountain cannot be given in detail.

'On the summit of Meru,' according to Atkinson (*Himalayan Gazetteer*, ii. [1884] 291 f., quoting the Purāṇas), 'is the city of Brahmā, and, like filaments from the root of the lotus, numerous mountains project from its base. Within, Meru is adorned with the self-moving cars of the gods, like heaven; in its petals, I say, they dwell with their consorts. There resides Brahmā, god of gods, with four faces; the greatest of those who know the Vedas; the greatest of the great gods, also of the inferior ones. There is the court of Brahmā, consisting of the whole earth, of all those who grant the object of one's wishes; thousands of great gods are in this beautiful court; there also dwell the Brahmarisis.'

Kailāsa is especially the abode of Śiva and his consort. Its shape is roughly like that of a Hindu temple, with a part of the conical summit removed; this, with its resemblance to the phallic symbol (*liṅga*), possibly was the cause of its sanctity. It is a famous place of Hindu pilgrimage, the route of which is prescribed in the Hindu scriptures (Sherring, *Western Tibet*, p. 49 f.). Hitherto the difficulty of the journey has prevented the assembly of large bodies of pilgrims; but, now that under the treaty of Lhāsa western Tibet is being opened up to the people of India, it will probably be more largely frequented (*ib.* p. 144). It is equally sacred to Buddhists. Followers of both religions march solemnly round it, the length of the actual circuit being about 25 miles and the journey occupying on an average three days. At one point is the Gaurī-kuṇḍ, the lake sacred to Gaurī, 'the yellow, brilliant one,' the consort of Śiva. This remains perpetually frozen.

'As some persons measure their length on the ground for the entire distance, and others are aged and accompanied by women, and others again linger on the road, either for contemplation or to bathe in the icy waters of the Gauri-kuṇḍ (though the ordinary pilgrim merely breaks the ice and puts a little of the water on his head), it is easy to see that the time occupied by the journey varies very greatly. One and all condemn the record-breaker, who hurries round in as short a time as possible, and they apply to him the opprobrious epithet of *khi-kor*, the man who runs round like a dog' (*ib.* p. 279 f.).

LITERATURE.—The most recent account, with photographs, is that of C. A. Sherring, *Western Tibet and the British Borderland*, London, 1906. For the Hindu legends of Meru see E. T. Atkinson, *Himalayan Gazetteer*, ii. (Allahabad, 1884) 284, 289 ff., 806. The Tibetan Buddhist version is given by L. A. Waddell, *The Buddhism of Tibet*, London, 1895, p. 77 ff.

**KALĀM.**—*Kalām* (lit. 'conversation') is apparently a translation of the Greek διαλεκτική, used by Plato in a sense approaching that in which 'metaphysics' is ordinarily used, and contrasted with ἐριστική, of which the Arabic rendering is *jadal*, occasionally employed as a synonym of *kalām*. The two are sometimes coupled with *falsafah*, the Arabized form of the Greek φιλοσοφία. The *kalām* is sometimes paraphrased as 'Fundamentals of Religion' (*uṣūl al-dīn*), *i.e.* the study of the ultimate concepts which religion involves. That study, according to a manual of general information compiled in the 4th Islāmic cent. (*Mafātīḥ al-'ulūm*), deals with seven subjects: metaphysical technicalities; the founders and dogmas of Islāmic sects; Christian technicalities and sects; Jewish technicalities and sects; the opinions of the philosophic schools; paganism; and the list of metaphysical questions. It is clear from this statement that the matter included in the *kalām* is mainly theological controversy—between Muslims and members of other religious communities, philosophers and atheists, but also between Muslims of different sects.

Before the end of the Prophet's life he had discovered that religious controversies could be best settled by the sword; but during the Meccan period and the first years of the migration he had to argue with opponents, and certain fundamental questions had been posed. One of these concerned the freedom of the will, to which he could give only an evasive answer (*Qur'ān*, vi. 149). According to the tradition, he discouraged inquiries on such subjects among his followers, and the Qur'ān deprecates controversy with unbelievers. The arrangement, however, whereby he permitted the maintenance of certain non-Muslim cults rendered a certain amount of controversy unavoidable, though in the treaties with tolerated communities a clause was inserted forbidding their members to say anything against the Muslim faith. On the other hand, sectarianism in Islām was an inevitable consequence of the civil wars which broke out a quarter of a century after the Prophet's death: when persons of acknowledged sanctity took opposing sides in these campaigns and compassed each other's death, the relation between faith and works was forced to the front, and inquiry into this matter brought with it closer scrutiny of the import to be assigned to other religious notions. Thus, before the end of the 1st cent. A.H. the Muslims had split into a number of mutually hostile sects.

For the first century and a half of Islām the *kalām* actually took the form of public controversy, theories being put forward by lecturers who formed circles in the mosques, where they were compelled to answer objectors; at times the public debate may have been supplemented by controversial correspondence, of which we have what may be a genuine example in the letters of Najdah and Nāfi', leaders of Khārijite sects, preserved in the *Kāmil* of Mubarrad. The public discussion continued long after the practice of composing books had become popular; so we read of the historian Ṭabarī (towards the end of the 3rd cent.) publicly disputing with the founder of the Ẓāhirite school, and taking to the pen only because of

the personalities in which his opponent indulged. Reports of such discussions have, in one or two cases, reached us—*e.g.*, in the treatise *Mukhtalif al-ḥadīth* (Cairo, 1326) of Ibn Qutaibah († 276 A.H.). This author complains of the tenacity with which disputants adhered to their opinions, even when they had been decidedly nonplussed, excusing themselves on the ground that, if they allowed themselves to be convinced, they would have to be changing their views many times a day. As early as 125 A.H. we hear of a heresiarch being summoned to defend his theses in the presence of the Umayyad Khalīf Hishām; he was nonplussed by the theologian employed to oppose him, and barbarously executed by the Khalīf's order.

According to some authorities, the standard author on *kalām*, who had provided the material for all later writers, was Abu'l-Hudhail al-'Allāf of Baṣra († 226 A.H.; see Yāqūt, *Dictionary of Learned Men*, London, 1913, vi. 74). His chief work was called 'The Five Fundamentals,' and dealt with justice, monotheism, the promise, the threat, and the intermediate state; the first refers to the freedom of the will, without which the punishment of unbelievers, etc., would be unjust; the second, to the creation of the Qur'ān and of the divine attributes, since, if these were uncreate, there would be more than one God; the third and fourth, to the doctrine that the ultimate fate earned by man cannot be altered; the fifth, to a theory that the Muslim criminal was something between a believer and an unbeliever. These doctrines certainly embraced most of the matter in controversy between Muslims, since, if a man earned his fate, there would be no intercession, and the Judgment Day, etc., would become superfluous. Though those who accepted these views or modifications of them (the Mu'tazilites) were only spasmodically in the ascendant, they had the reputation of being the ablest controversialists. Abu'l-Ḥasan al-Ash'arī († *c.* 324 A.H.), who is supposed to have won the case for orthodoxy, commenced as a Mu'tazilite, but (according to his biographer) was miraculously converted, and told to use the controversial ability which he had acquired to refute the doctrines of the Mu'tazilites, whom the orthodox had been allowing to gain the victory through unwillingness to debate or even 'share a carpet' with them (see art. AL-ASH'ARĪ, vol. ii. p. 111 f.).

The list of subjects treated by Abu'l-Hudhail keeps clear of politics, and indeed the name *Mu'tazil* means 'neutral,' possibly with this reference; but most of the Islāmic sects were political, whence the discussion of the lawful sovereignty could not easily be avoided; hence the question, 'Who is the best of mankind after Muḥammad?' usually figures in the lists of *kalām* questions. Moreover, fresh theories on this subject were constantly being formulated, and in consequence new chapters of *kalām* introduced. Although it was rarely safe under Islāmic rule for any member of the dominant community to question such fundamental notions as the two which form the Islāmic creed and the infallibility of the Qur'ān, there were sects which, unless misrepresented by our informants, went a long way in this direction. It was, therefore, desirable that there should be some recognized method of meeting those who suggested doubts on these subjects. Further, though paganism had been extinguished in Arabia, the spread of Muslim conquest brought the followers of the Prophet into fresh contact with it, and in India it was even found necessary to grant it the toleration which the code elsewhere excluded. Conditions both internal and external thus combined to keep religious controversy alive, and encouraged speculation on those very subjects from which the Prophet and his chief companions are likely to have kept clear.

Of controversies with Jews, Christians, and Magians we have echoes rather than reports in the *Zoology* of Jāḥiẓ († 255 A.H.) and other works. For the reason mentioned above such controversy was not unaccompanied with danger, and the 'unorthodox' appear to have been no more open-minded in these debates than the orthodox.

A story is told of Abu'l-Hudhail which illustrates this. He heard that a Jew of Baṣra had defeated the Muslim controversialists by getting them, on the authority of the Qur'ān, to admit the mission of Moses, and then by virtue of this admission refuting the pretensions of Muḥammad. Abu'l-Hudhail evaded this argument by accepting the mission of Moses only so far as he confirmed the claims of Muḥammad. The Jew (according to the story) endeavoured to provoke Abu'l-Hudhail into a personal assault, in order to win the sympathy of the audience; we may well believe that he was actually assaulted by the audience and compelled to leave Baṣra (Abū'l-Faraj Ibn al-Jauzi († 597 A.H.), *Kitāb al-Adhkiyā*, Cairo, 1306, p. 98).

Nevertheless, the possibility of such controversy caused many Muslim theologians to study, at any rate to a slight extent, the theology of the other communities, whence in the lists of works by leading Mutakallimūn ('Dialecticians') we find 'Refutations' of Christians, Jews, and pagans, or accounts of these systems. Thus among the works of Abū Zaid of Balkh († 322 A.H.) there was a treatise on 'Religious Codes,' and a 'Refutation of the Worshippers of Idols.' Jāḥiẓ of Baṣra, sometimes called the Chief of the Dialecticians, composed a 'Book of Idols' and a 'Refutation of the Christians.' Much of his *Zoology* is occupied with refutation of the Magians.

The same lists ordinarily contain works dealing with the tenets of various Islāmic sects; among the works of Jāḥiẓ we find a 'Refutation of the Anthropomorphists,' accounts of the dogmas of the various branches of the Zaidīs, 'Refutation of the 'Othmānīs,' and a treatise on the difference between the Zaidīs and the Rāfiḍah; some of these treatises seem to have been objective in character. The familiar treatise by Shahrastānī († 548 A.H.) on 'Sects and Religious Opinions' gives an almost entirely objective account of the opinions ascribed to the chief sects and philosophers known to the author, whose statements have to be received with great caution. The treatise on the same subject by Ibn Ḥazm, about a century earlier, is, on the other hand, vehemently controversial.

In the manual of the 4th cent. to which reference has been made there is a list of *kalām* questions, which the author declares exhaustive, so far as the main subjects are concerned; other questions are merely subsidiary or derivative. It runs as follows:

(1) Proof that bodies had a beginning, and refutation of the atheists, who maintain the eternity of the world. (2) Proof that the world has a creator, viz. Almighty God, and refutation of those who deny the divine attributes; and that He is eternal, knowing, able, living, and that He is one; refutation of the Magians and Zindiks, who maintain two powers, and of the Christians, who maintain a Trinity, and of others who assert a plurality of creators; proof that He does not resemble things, with refutation of the Jews and other anthropomorphists; proof that He is not a body, as some of the Muslim anthropomorphists assert; proof that He is essentially knowing, able, living. (3) Question whether God will or will not be seen. (4) Question whether His will is eternal or produced. (5) Question whether His word is create or uncreate. (6) Question whether the actions of men are created, *i.e.* produced by God or by themselves. (7) Question whether capability is prior to action or simultaneous with it. (8) Question whether God wills immorality or not. (9) Question whether the unrepentant criminal is to remain in hell for ever, or whether he may be pitied and pardoned and taken to paradise. (10) Proof of the reality of prophecy, against the Brāhmans and others who deny it. (11) Proof of the mission of Muḥammad. (12) Theory of the sovereignty, and to whom it properly belongs.

In the unpublished treatise of Shahrastānī called *Nihāyat al-Iqdām fī 'ilm al-Kalām* a list is given of twenty subjects which form the material of the *kalām*:

(1) Proof that the world had a beginning. (2) Proof that all things that exist had a beginning. (3) The unity of God. (4)

Refutation of anthropomorphism. (5) Refutation of those who deny the divine attributes. (6) On states (*i.e.* conditions of things). (7) Question whether the non-existent is or is not 'a thing'; on matter, and refutation of those who assert the existence of matter without form. (8) Proof that the propositions connected with the divine attributes can be known. (9) Proof of the same with regard to the eternal attributes. (10) On the eternal knowledge in particular. (11) On the divine will. (12) Proof that the Creator speaks with an eternal speech. (13) Proof that the speech of the Creator is one. (14) Reality of human speech and psychic utterance. (15) Proof that the Creator is 'hearing seeing.' (16) Proof of the intellectual admissibility and the scriptural attestation of the visibility of the Creator. (17) Meaning of the terms 'commendable' and 'culpable'; proof that the reason makes nothing incumbent on the Creator or on man before the revelation of a code. (18) Proof that the acts of the Creator are without purpose or cause; refutation of the doctrine of utility (as applied to those acts); meaning of various terms, such as 'divine guidance,' 'favour,' etc. (19) Proof of the reality of the prophetic office, of the genuineness of miracles, and the infallibility of prophets. (20) Proof of the mission of Muhammad.

It will be found that these two lists cover nearly, though not quite, the same ground. Some of the questions were suggested by the civil wars (as we have seen) and their bearing on the interpretation of the Qur'ān. Others may have arisen in the course of studying the Qur'ān and endeavouring to reconcile its various utterances. It is noticeable that the chief sects of Islām arose before the end of the 1st cent. and so before the philosophy of Aristotle can have had much direct influence on Islāmic speculation; since, however, much of the thought of the philosopher had long before become the common property of the educated world, his indirect influence may have been considerable. Indeed, where in the Qur'ān itself (vii. 10 f., xv. 26–33, xxxviii. 71–77) Iblīs (Satan) declines to bow down to Adam because Adam had been created of clay, whereas he (Iblīs) had been created of fire, the underlying proposition that fire is more honourable than earth is drawn from the Aristotelian hierarchy of the elements, though by no means directly from the *de Cœlo*. There is, however, no doubt that, when under the early Abbāsids the works of the philosopher began to be translated into Arabic, they found many earnest readers; and Ibn Qutaibah charges one sectarian, Muhammad b. al-Jahm al-Barmakī, with making Aristotle's *de Generatione et Corruptione* serve as his Qur'ān. Jāḥiẓ, a contemporary of this personage, refers to the 'author of the Logic' as a well-known writer, and speaks of persons who rely on the *Meteorology*, though he warns them against mistranslations and corruption of the text. The probability is that the decidedly Aristotelian clothing of some of the questions (*e.g.* (7) in Shahrastānī's list) is due to their having been suggested to the Muslim thinkers by the study of the philosopher's works; and, as those works became better known, the scope of the *kalām* had a tendency to enlarge, while ever increasing subtlety was displayed by the disputants. In some treatises most of the subjects dealt with in the Aristotelian *Physics* and *Metaphysics* are treated as *kalām* (*e.g.*, the theories of time, space, and motion), and some even define the word *kalām*, in the style of the *Metaphysics*, as 'the science of Being *qua* Being.'

The extent to which the Muslim *kalām* was influenced by Christian theological speculation cannot be easily determined. One question which at one time provided the shibboleth for the chief sects, whether the Qur'ān was or was not created, appears most easily explicable as an echo of the Christian controversy about the Spirit 'neither made nor created nor begotten, but proceeding'; and, since the teachers of Greek philosophy were chiefly Christians, it is probable that Islām owes Christianity both the general idea of basing itself on the philosophy of Aristotle and some of the applications of that philosophy. It is, however, clear from the epitomes which have come down to us of the Islāmic heresies that original speculation was carried on with considerable hardihood. Very few dialecticians ventured to abandon the Qur'ān altogether; but almost any doctrine could be read into it.

The attitude adopted towards these studies by Islāmic rulers varied very greatly. The early Abbāsids, especially Hārūn al-Rashīd and Ma'mūn, encouraged them both by organizing translations of philosophical works into Arabic and by inviting to their court persons who had acquired fame as theologians. But in 279 A.H., after the Islāmic world had been rent by the controversy between the orthodox and the Mu'tazilites, the Khalif Mu'tamid forbade the sale in Baghdad of works dealing with *kalām*, eristic, or philosophy. Since it was impossible to refute a heresy without stating it in some form and repeating the arguments whereby it was defended, probably this was the surest mode of preventing the spread of heresy; and this motive was dominant when Maḥmūd of Ghaznah († 421 A.H.) ordered all works dealing with *kalām* in the library at Rai to be burned. An author of the same period complains that his library (containing works on *kalām*) had been burned by a prince who was not ashamed to keep the works of Aristotle in his own (Yāqūt, ii. 296, 315). The historians notice other holocausts of this sort; in 555 a philosophical library was burned in Baghdad by public order; it contained among other works the *Rasā'il Ikhwān al-Ṣafā* and the *Shifā* of Avicenna, both of them authorities on metaphysical theology. On the other hand, some eminent rulers held 'eristic assemblies' (*majālis jadal*), wherein theological questions were freely discussed.

LITERATURE.—The wilful destruction to which allusion has been made accounts for the disappearance of much of this literature, which at one time existed in vast masses. Thus Abu'l-Husain Rāwandī († 245 A.H.) composed 114 works, and other Mutakallimūn were little less voluminous. Probably the earliest work extant directly bearing on the subject is the *Ibānah* of Abu'l-Ḥasan al-Ash'ari (Hyderabad, 1321), which is mainly refutation of the Mu'tazilites. Though the views of this author ultimately won the day, they experienced some setbacks, and for a time in the 5th cent. of Islām his name was publicly cursed from the pulpits. Some contributions to metaphysical theology continued to be made even by persons who in the main accepted his opinions; the names of Abū Ḥāmid Asfarā'inī († 406 A.H.) and 'Abd al-Malik al-Juwainī († 478 A.H.), called 'the Imam of the two sanctuaries,' often meet us in works on this subject, which it became the fashion for Muslim jurists to epitomize. Al-Ghazālī († 505 A.H.) prefixes to his *Arba'ūn* (Cairo, 1328) a very brief epitome of the subject, which he had treated in a book of 115 pages called *al-Iqtiṣād fi'l-I'tiqād* (printed in Cairo *c.* A.D. 1910); this is about the length also of the *Baḥr al-Kalām* ('Sea of Kalām,' Cairo, 1329) by Abu'l-Mu'īn al-Nasafī († 508 A.H.). A far better summary is the treatise of Shahrastānī mentioned above. Another unpublished work, the *Arba'ūn* of Fakhr al-dīn al-Rāzī († 606), is also highly instructive; this author has a great name as a Muslim theologian (see I. Goldziher, 'Die Theologie des Fakhr al-dīn al-Rāzī' in *Der Islām*, iii. [1912] 212–247). Great popularity was acquired by the *Ṭawāli' al-Anwār* of Baiḍāwī († 690), famous as a commentator on the Qur'ān; and still more by the *Mawāqif* of 'Aḍud al-dīn al-Ījī († 756), which may be regarded as the standard treatise. The *Muqaddamāt* of Sanūsī († 895 A.H.), translated into French by J. D. Luciani (Algiers, 1908), forms a good introduction to the subject. A more modern work, the *'Alam Shāmikh* of Ṣāliḥ b. Mahdī al-Muqbalī († 1108), is noticeable as attacking all the Mutakallimūn of former times with impartiality; the positive parts of the work (published Cairo, 1328) seem far less felicitous than the negative. The fullest account of the *kalām* in a modern language is to be found in M. Horten, *Spekulative und positive Theologie des Islam nach Rāzī (1209 †) und ihre Kritik durch Tūsī (1273 †)*, Leipzig, 1912.

D. S. MARGOLIOUTH.

**KALEVALA.**—The *Kalevala*, the national epic of Finland, is unique in literature. It is a poem in fifty runes or cantos, averaging nearly 500 lines each, compiled from popular songs by an industrious patriot. He pieced his acquisitions together to the best of his judgment, without any essential alterations or padding, and with such success that Max Müller and many others have placed the *Kalevala* among the half-dozen great world-epics.

There is practically no suggestion that the poem

is the work of one author. Its component parts were produced by various singers at different periods; but sporadic traces of apparent Christian influence help us to limit its youth if not its age. These bards were all inspired with a passionate love for their nation and with sympathy for the popular traditions, and they reflected the character and natural bent of the people as peaceable yet patriotic, practical yet superstitious, simple-minded yet romantic.

[I. **Original materials.**—The materials of the *Kalevala* consist not only of epic, but also of lyric and magic folk-poems. The fusion of the various types and themes—a process which, in many cases, had already been effected among the people themselves—was possible because the whole mass was of a single metrical form, the octosyllabic trochaic.

i. *THE EPIC POEMS.*—These were composed partly among the Finns and partly among the Esthonians, although it was among the Karelians of Ingria (in the Government of St. Petersburg) in East Finland, and in districts lying beyond the borders of Finland (the Governments of Olonetz and Archangel) that the epics were moulded and linked together in such a way that they could be combined into an epic whole. These epic poems may be classified as (*a*) songs of heroes, (*b*) legends, (*c*) ballads of chivalry, (*d*) imaginative songs, and (*e*) songs of everyday life.

(*a*) *Songs of heroes.*—These date from a period anterior to the official adoption of Christianity in the latter half of the 12th century. The names of the various heroes have in certain cases been connected with those of Scandinavian heroes, as, *e.g.*, Kaleva (cf. Caelic weold Finnum in Wídsíð) with Kylfing Skilfing; Vetra (Vetrikka, from which comes *veitikka*, 'rogue,' in the *Kalevala*) or Utra (from which perhaps Untamo) with Vederas, Vedergéatas in *Beowulf*; Osmus or Osmo with Osmund, Ásmundr; Rego or Riiko with *ríkr*; Hermandroinen with Hermanarik. Vuojolainen means 'the Gothlander.' The name Ahti or Ahvo, which, as denoting the 'water-dweller,' has been derived from *ahva*, 'water,' is likewise a human name, to which are attached epithets signifying dignity and strength. Even Väinämöinen, 'dweller in the narrow sea,' is to be interpreted, not as a divine name (as the present writer assumed in art. FINNS [Ancient], vol. vi. p. 24[b]), but as a hero-name. The name of the smith, Ilmarinen, as connected with the sky-god Ilmarinen, was formed from that of a smith called Ismaro (from Osmaro). To this group of songs belong also those of Joukamoinen 'the mighty' (?), Lemminkäinen 'the beloved' (?), and Kaukamoinen.

These heroes are represented as beautiful and strong, with long curling hair. They wear mantles of red or blue material, and always have a sword by their side. They travel on horseback or by boat. They are rich in lands and gold, and possess slaves. They drink home-brewed intoxicating ale, and seduce maidens, yet they are less eager for gold, ale, or women than for feats of warlike prowess.[1]

The heroes, however, are also capable workers in field and meadow, and they are skilled blacksmiths. Moreover, they are poets, singers, and musicians. As experts in magic and healing they know how to fashion the magic runes. They are designated kings, holy ones, and gods. In popular usage some of their names still survive as designations of individuals belonging to a former race of heroes, and also as names of stars (cf. K. Krohn, 'Kaleva und seine Sippe' in *Journal Soc. Finno-ougr.* xxx. [1914] 35).

(*b*) *Legendary poems.*—These consist mainly of stories about Christ, and from them the Russo-Karelian popular poets in the Government of Archangel had compiled a legendary epic, 'The Cycle of the Creator' (J. and K. Krohn, *Kanteletaren tutkimuksia* ['Investigations of Kanteletar'], Helsingfors, 1900–01, iii.). An important element in the Sampo myth of the *Kalevala* is the beautiful legend narrating the deliverance of the sun, which was brought by the Saviour from Pohjola, 'realm of the North' (*i.e.* hell), and set in a tree of gold—first of all among the lower branches, whence he shone only upon the rich and the wise, and then among the higher branches, from which he gave light to all without distinction. The song of Lemminkäinen's death is the same version of Christ's death which is reproduced in the Icelandic myth of Balder (*Finn.-ugr. Forsch.* v. [1905] 83–138). Part of the account of Väinämöinen's voyage belonged originally to a legend telling of the storm on the Lake of Gennesaret—a legend which also underlies the story of Thor and the Midgard serpent (*ib.* vii. [1907] 167–180). The dreadful rush of blood from the wound in Väinämöinen's knee is taken from the narrative of the blood which flowed from Christ upon the Cross, and Väinämöinen's journey to Tuonela is simply a transcript of Christ's descent to Hades. The story of Henry of England, the apostle of Finland, is, however, of purely Finnish origin.

(*c*) *Ballads of chivalry.*—These date from mediæval times, and are mainly of Scandinavian origin. To this class belongs the song of Kullervo's (originally Turo's) sister in the *Kalevala* (Grundtvig, no. 338, Hr. Truelses Dötre; Child, no. 14, Babylon). The song of Iivana Kojosenpoika was composed in Ingria on the model of a Russian *bylin* by Ivan Godinovič; and to it corresponds the story of the second wooing of Ilmarinen in the *Kalevala*. 'Elina's Death,' the greatest Finnish ballad of real dramatic power, is, however, a genuinely Finnish folk-poem.

(*d*) *Imaginative poems.*—This class consists of poems ostensibly but not really mythical, such as those telling of the process of creation from birds' eggs, of the giant oak, of the huge ox, and of the courtship of the heavenly bodies. The genuinely mythical song of Sämpsä Pellervoinen (cf. art. FINNS [Ancient], vol. vi. p. 25[a]) is a ritual poem.

(*e*) *Narrative poems of everyday life.*—These are chiefly about wives and maidens.

ii. *LYRIC POEMS.*—This class is now represented in West Finland only by lullabies, nursery rhymes, and pastoral songs. These songs, as yet only slightly investigated, arose mainly in Esthonia, thence finding their way through Ingria to Finnish and Russian Karelia, though it is probable enough that some of them took shape among the Eastern Finns themselves. The most important sub-group is that of the marriage-songs.

iii. *MAGIC POEMS.*—These were versified in West Finland from the Christian spells of the Scandinavians, and in East Finland were further elaborated and embellished with additions from the epic poems. The Christian appellations of the characters involved are in some cases retained; in others they are superseded by heathen designations, and in still larger numbers are transformed into names apparently heathen. The later Finnish mythology is dealt with in *Suomensuvun uskonnot*, i. *Suomalaisten runojen uskonto* ('The Religions of the Finnish Race,' i. 'The Religion of the

[1] Cf. the words of Lemminkäinen in *Kalevala*, xii. 74–106:

'But for home-brewed ale I care not,
Rather would I drink stream-water
From the end of tarry rudder.
Nought I care for home-stored treasures;
One mark won by far is better.'

Cf. also (xxx. 1–106) the fine lament of his ship of war, and his comrade's eager readiness to follow him, though that comrade had but recently married a young wife.

Finnish Poems'), the first part of which has just appeared (Borgo, 1914). Of these originally Christian names occurring in the *Kalevala*, a few may be mentioned as examples:

Mielikki, the goddess of the forest, is formed from *mielusisa*, 'pleasant,' an epithet of St. Anne (Annikki); her other name, Mimerkki, is a corruption of Immerkki, Himmerki (Swed. *Himmelrike*, 'kingdom of heaven'); Kuippana (also Kuihtana, Kuitua, and Huitua), the name of the forest-god, is a folk-etymological derivative from Hubertus, the tutelary saint of the hunter. Ilmatar, 'the air maiden,' Luonnotar, 'the nature maiden,' and Suvetar or Etelätär, 'the daughter of the South,' are all epithets of the Virgin Mary, as is also Kivutar, 'maiden of sorrows,' on the Kipumäki, 'the mount of sorrows' (*i.e.* Golgotha).

K. KROHN.]

**2. Name and subject.**—The word *Kalevala* (*Kälěvällä*) is derived from Kaleva, the progenitor of the Finnish heroes, and means 'the land of the heroes.' Kaleva himself does not appear in the epic; but Kalevatar, his daughter, and Kalevaläinen, his descendant, are mentioned. In the poem there are five main characters: Väinämöinen, the patriotic minstrel; Ilmarinen, the magic smith; Lemminkäinen, the reckless adventurer; Kullervo, a morose and violent slave; and Louhi, the mistress of Pohjola, a crafty witch.

Pohjola, the North country, is in the poem understood to be Lapland, or a dismal land to the north thereof; and Kalevala, of course, is Finland. Throughout the epic there is a continual conflict between the Finns and the Lapps, representing the constant opposition between light and darkness, good and evil. The hero is always able to overcome an evil power if he can chant the origin of it, implying probably that we could exterminate evil if we only knew how or whence it came. The conflict is carried on by means of magic arts, which generally presuppose toil of some kind, thus suggesting that the best magic consists in industry, skill, and perseverance. It is interesting to note how frequently humble instruments are enlisted for the attainment of great ends, and how high a moral tone pervades the epic from beginning to end.

**3. Origin.**—The *Kalevala* is unique in being the only example of a national epic compiled from songs actually existing among the people, independent of a larger national poem. The compiler, Elias Lönnrot, visited the most remote districts of his beloved land, industriously and carefully reaping and gleaning from aged singers and reciters such songs or fragments as they knew. His harvest was rich, and it has a literary charm absolutely unknown in compilations, and only to be found in a work proceeding from one, and that a more than usually gifted, author.

Finnish literature proper is not ancient in the sense of having come down in parchment or print from former centuries. It is traditional, and was handed on from sire to son until about a century ago. Nearly all the traditional poetry is anonymous and composed in unrhymed lines of eight syllables, in the versification with which Longfellow has made us familiar in *Hiawatha*, the idea of which was derived from the *Kalevala*. At first the versification of the translation seems cramped, but the reader is quickly undeceived; for the vigour and grace of the poetry compel his admiration. One of the distinctive features of this versification is parallelism, such as we find in some of the OT Psalms, the second line repeating the sense of the first, either in different words or giving a new shade of meaning. Many of the songs are rich in imagery and choice of language through this poetic form. The other features of this poetry are more common in other literatures; alliteration and assonance, for example, are freely employed.

Lönnrot has issued two collections in addition to the *Kalevala*. These are *Loitsurunoja*, 'The Magic Songs of the Finnish People' (Helsingfors, 1880), consisting of some 900 incantations, invocations, and other religious formulas, which help us to understand the superstitions and magic of the Finns; and *Kanteletar*, 'The Daughter of the Harp' (1st ed., Helsingfors, 1840 [with variants], 3rd ed., 1887), consisting of lyrics and ballad poetry which reveal the customs, habits, and life of the people in all their phases.

As these traditional songs were collated, the students of literature noticed the frequency with which certain names and characters appeared; and it gradually dawned on them that these fragmentary incidents might belong to some complete tale. Efforts were, therefore, made to gather in from every quarter every song or verse in the Finnish tongue, and eventually, in 1835, Lönnrot published a collection of the episodes and verses that seemed to belong to an original epic, and to this compilation he gave the name *Kalevala*. He divided the work into 32 cantos or runes, the whole amounting to some 12,000 lines. But he was not satisfied; and he continued to gather material until, in 1849, he issued the *Kalevala* as we now have it, in 50 cantos, containing, in all, 22,793 lines. Lönnrot alone is responsible for the selection and arrangement of the material. As the original fragments and songs, culled from many sources, have been carefully preserved, often in many variants, it is known that the compiler made only such trivial additions and alterations as were absolutely necessary to weld the fragments into a connected whole. Universal praise has been accorded to him for his self-restraint, his literary skill, and his loyalty to the unknown poets whose songs had survived until he rescued them from possible oblivion.

**4. Scheme of the epic.**—The great defect of the *Kalevala* as a work of art is its lack of unity and continuity. Much might be left out, and additional verses or even runes might be inserted, without attracting the attention or decreasing or increasing the interest. For this reason it is difficult to indicate in few words what the subject of the *Kalevala* really is. In the poem there are at least four main cycles of songs; and, in addition, seven separate romances are woven into the epic. The four cycles are: (*a*) the Sampo Songs, in which, *inter alia*, we find the Finnish conception of the Creation; (*b*) the Väinämöinen songs, *i.e.* songs relating to the national hero, apart from the Sampo cycle; (*c*) the Lemminkäinen songs; and (*d*) the Kullervo cycle. Probably it would be right to say that the Sampo is the key to the *Kalevala*. For the story of the Sampo and its possession by the Finnish people—the origin, the hiding, the quest, the rape, and the loss of the Sampo—is the central fact that makes the poem an epic; and Lönnrot himself says that, without the Sampo, the *Kalevala* would fall into a number of independent cycles having very little connexion with each other.

**5. The Sampo cycle.**—

Ilmatar, the daughter of the Air, tired of lofty solitude, descended to the surface of the waters, and was embraced by the boisterous waves. She was tossed about for 700 years before she shaped the earth and could bring forth her son Väinämöinen. In due time this son cleared the land and sowed barley and other plants. He wooed a Lapland girl, Aino, but she would not marry him, and was drowned in escaping from his ardour. His mother advised him to seek a bride in Pohjola, the North country; and, as he was riding over the water on his magic steed, Aino's brother shot at him and killed the horse. Väinämöinen, however, was conveyed by an eagle to the castle of Pohjola, whose mistress, Louhi, offered to give him her beautiful daughter if he would forge for her the Sampo, a magic mill, which could produce, on demand, either grain or salt or gold, the symbols of prosperity. Väinämöinen himself could not make the mill, but he sent his younger brother Ilmarinen, by whose magic the task was accomplished and the Sampo given to Louhi. Väinämöinen, Ilmarinen, and Lemminkäinen in turn made love to Louhi's daughter, but she chose the handsome

smith, Ilmarinen, who made the Sampo. So long as the magic mill remained in Pohjola, the country prospered exceedingly. Kullervo, having been ill-treated by Louhi's daughter, Ilmarinen's wife, killed her. Thereafter the three wooers set out on an expedition to Pohjola to recover the Sampo which Louhi had hidden under a mountain and protected most cunningly. Eventually they overcame every difficulty, seized the Sampo, and escaped with it. But Louhi followed them, and in the struggle for supremacy the Sampo fell into the sea and was broken into fragments, some of which were cast upon the shore. Väinämöinen regained enough to ensure the prosperity of Kalevala; but Louhi secured only a fragment, so small that it was of no benefit to her or Pohjola.

This is the natural close to the epic; but the last canto of 620 lines has an interest of its own.

**6. The Finnish Virgin Mary myth.**—The fiftieth and final canto of the *Kalevala* gives us the story of Marjatta.

She was a damsel who was rarely beautiful,
'And was always pure and holy,
And was ever very modest.'

One day on the mountains she swallowed a cranberry and so conceived. She was discarded by her kindred and compelled to take refuge in the stable of Hiisi, the Evil One; and there, warmed by the vapours of the fire-breathing steed, she found comfort;

'And a little boy was born her,
And a sinless child was given,
On the hay in horses' stable,
On the hay in horses' manger.'

The child was spirited away whilst Marjatta slept. In her distress she sought him far and wide. The stars and the moon refused to reveal the hiding-place; but the sun directed the mother to the spot where he was concealed. The child grew in beauty, increasing in strength and in wisdom and in favour with men, so that 'All Suomi [Finland] saw and wondered.' Marjatta sent for a priest to baptize him; but he desired proof that the boy was no son of some black wizard. Väinämöinen, being appealed to, inquired into the matter, and suggested that, as the boy had sprung from a berry, he ought to be exposed on the mountains. But the fortnight-old child spoke up for himself and reproved Väinämöinen for his unrighteous judgment. The priest immediately took the side of the boy, crossed him, and

'Quick baptized the child with water,
As the king of all Karelia
And the lord of all the mighty.'

Greatly offended,

'Then the aged Väinämöinen
Went upon his journey singing,
. . . . .
Sailed away to loftier regions,
To the land beneath the heavens,'

leaving behind his harp and his songs as a parting gift to his people.

**7. Other cycles and separate romances.**—In the course of the epic there are many songs and episodes in which Väinämöinen, the Finnish national hero, appears, and in which national customs and habits are delineated with minuteness and vigour.

The Lemminkäinen songs set forth the misadventures of this reckless adventurer. Time after time he escapes disaster or death by his own magic skill or that of his mother, to whom he is devotedly attached.

The Kullervo cycle has hardly any connexion with the main subject of the *Kalevala*; and these songs, with one peculiarly sad episode, are introduced because Kullervo killed Ilmarinen's wife.

The separate romances include the strange and moving tale of Aino, the fishing for the Maiden of Vellamo, the wooing of the Virgin of the Air, the Golden Maiden, the Son of Kojonen's wooing, the deliverance of the sun and moon, and the story of Marjatta, already described.

LITERATURE.—A full bibliography up to the year 1910 is given in the last Finnish ed. of the *Kalevala*, published at Helsingfors in that year. Unfortunately most of the best books on the *Kalevala* are to be had only in Finnish, a language which is but little known by scholars of other lands; but translations of some of these are promised in more common tongues. The most important of these works are: E. Aspelin, *Kalevalan tutkimuksia* ('Researches on the Kalevala'), i. (Helsingfors, 1882); J. Krohn, *Suomalaisen kirjallisuuden historia* ('History of Finnish Literature'), i. 'Kalevala,' Helsingfors, 1883–85 (Swedish tr., 1891); A. Ahlqvist, *Kalevalan karjalaisuus* ('Karelian Origin of the Kalevala'), do. 1887; K. Krohn, *Kalevalan runojen historia* ('History of the Kalevala Songs'), do. 1903–10; F. Ohrt, *Kalevala som Folkedigtning och Nationalepos*, Copenhagen, 1907 (contains a trustworthy summary of the most recent Finnish research). Translations of the *Kalevala* have appeared in Swedish by M. A. Castren, Helsingfors, 1844, and K. Collan, do. 1864–68, in French by L. Le Duc, Paris, 1845 and 1868, in German by A. Schiefner, Helsingfors, 1852, and H. Paul, do. 1885–86, in Hungarian by F. Barna, Pesth, 1871, and B. Vikár, do. 1909, in Russian by L. P. Bjelskij, St. Petersburg, 1889, in Italian by T. Cocchi, Città di Castella, 1909, P. E. Pavolini, Milan, 1910, and F. di Silvestre-Falconieri, do. 1910, in Esthonian by M. I. Eisen, Dorpat, 1891 and 1898, in Bohemian by J. Holeček, Prague, 1894–95, and in English by J. M. Crawford, New York, 1888, and W. F. Kirby, London, 1907. C. J. Billson, *The Popular Poetry of the Finns*, London, 1900, is a brief and excellent introduction to the epic. The best known (but already out of date) work on the subject is Domenico Comparetti, *Der Kalewala*, Halle, 1892, Eng. tr. by I. M. Anderton, *The Traditional Poetry of the Finns*, London, 1898 (with introduction by A. Lang).

J. BEVERIDGE.

**KĀLĪGHĀṬ.**—Kālīghāṭ (*Kālī*, a form of Durgā [*q.v.*], and *ghāṭ*, Skr. *ghaṭṭa*, Beng. Hind. *ghāṭ*, 'a flight of steps for bathing and other purposes on a river bank'), where the most sacred temple of the Indian goddess Kālī is situated, is now a southern suburb of Calcutta. Tolly's Nullah, earlier Gaṅgāsāgar Nullah, the tidal water-course from the Hūgli upon which the temple stands, represents the ancient course of the sacred river Ganges. It is still termed the Ganges, and revered as such by the pilgrims and worshippers at Kālīghāṭ. The modern name Tolly's Nullah merely commemorates a Colonel Tolly who, in 1775, was at the expense of deepening the *nullah*, or water-course. The old course of the Ganges was disappearing, but now lives again as a cross-country canal. The name Kālīghāṭ itself signifies the *ghāṭ*, or steps, of Kālī by which the worshippers from the temple descended to the stream for their ablutions.

The original temple of Kālī stood within what is now the city of Calcutta, not in the suburb of Kālīghāṭ, three miles farther south. The mythological legend of its sanctity is now, however, quite rooted in the popular mind in connexion with the latter, not the former, place.

Dakṣa, father of Satī (a title of Durgā or Kālī, wife of the god Mahādeva or Śiva), omits to invite Mahādeva to a great sacrificial gathering at his house, to which all the other gods are invited. Satī asks an explanation of the indignity, and her father adds insult to injury by calling her husband Mahādeva names. Unable to bear the humiliation, Satī causes her soul to leave her body. Then Mahādeva, furious at the news of Satī's death, sweeps down upon the scene, picks up Satī's dead body from the ground, and dances madly about with it, threatening destruction to the whole world. Through Brahmā the Creator, the gods succeed in inducing Viṣṇu, the Preserver, to save creation from the wrath of the terrible destroyer Mahādeva, mad with grief and drunk with loss. Viṣṇu flings his discus at the body of Satī in Mahādeva's hands and breaks the body into fifty-one pieces, which fall to earth in various places. Every spot where a fragment falls becomes from that moment a holy spot full of the divine spirit of Satī. Calcutta is one of the fifty-one spots so consecrated, for the little toe of the right foot of Satī fell upon its site (*Census of India*, 1901, VII. i. [Calcutta] 5).

Such is the mythological explanation of the sanctity and repute of the place known at first as Kālīkṣetra, or the place of Kālī, and subsequently as Calcutta. Kālīkṣetra is mentioned in the Pīṭhamālā of the Nigamakalpa, which may take us as far back as the 12th century.

Other forms of the legend are given by C. R. Wilson (*Early Annals of the English in Bengal*, i. 129, note) and by W. W. Hunter (*Statistical Account of Bengal*, vol. i.). Wilson also gives a different derivation for Calcutta, and Hunter would derive the name from Kālīghāṭ itself.

When and how the Kālī temple in Calcutta was superseded by that at Kālīghāṭ is not known, but by the year A.D. 1495 a Kālīghāṭ was in existence separate from Calcutta, and as a place of worship, which apparently Calcutta had ceased to be (see Bipro-dās, a Bengali poet, quoted by Wilson, *op. cit.*; see also W. Ward, *Hindoos*[3], Madras, 1815, ii. 125 ff.).

According to tradition, it was during an earthquake in the 15th cent. that the Calcutta temple disappeared. Kālī's shrine was thereupon raised

at the Kālīghāṭ in the neighbourhood of her husband's shrine in the adjoining suburb of Bhawānipur. To Kālīghāṭ also, as has been said, the mythological account of the sanctity of the Calcutta shrine has now been transferred, with further local particulars added. In these additions we seem to see a ray of light cast upon the beginnings of the southern shrine.

In the neighbourhood where the temple now stands, so the Kālīghāṭ legend runs, somewhere about the 15th cent. lived an ascetic, by name Jaṅgal Gir ['tenant of the jungle'?]. To him one night Kālī herself revealed that one of the portions of her body had descended to earth there. Next day Jaṅgal Gir dug down at the spot, found 'the petrified toes,' and set them up for worship in a small wooden house (Wilson, i. 130).

Jaṅgal Gir, a jungle devotee, the traditional founder of Kālīghāṭ about the 15th cent., was himself probably, as a historical fact, the first attraction to draw worshippers thither. The reverence for holy men is an attractive feature of Hinduism.

Two centuries later than Bipro-dās, in 1676, when Streynsham Master visited the Hūgli on behalf of the East India Co., he referred in his description of the river to the shrine at Kālīghāṭ, and made no reference whatever to Calcutta, whose secular era had not yet dawned (Wilson, i. 54). Finally, by the middle of the 18th cent. the repute of Kālīghāṭ is apparent. Leading past the town of Calcutta, upon the east, lay a great pilgrim thoroughfare to Kālīghāṭ, known as 'the Broad Road,' now Bentinck St. and Chowringhi Road. The *Gaṅgā Bhakti Taraṅgiṇī* of about A.D. 1740 speaks of Kālīghāṭ as a wonderful place, where the worship 'is celebrated with much pomp and sacrifice' (*Census of India*, 1901, VII. i. 8 and 11, note). The author of the *Census Report* of 1901 gives good grounds for believing that the shrine and the Tāntric rites associated with Kālī-worship began to rise into prominence at the end of the 16th cent., when the well-known Hindu general Mān-singh ruled Bengal for the Muhammadan Emperor.

The buildings within the temple enclosure are not in themselves in any way distinctive or of architectural note. The features of Kālīghāṭ are the packed crowds of worshippers and the great slaughter of young goats on the days of the annual celebrations of the Durgā Pūjā and the Kālī Pūjā (*pūjā* = 'worship'). Between seven and eight hundred goats are said to be sacrificed during the three days of the Durgā Pūjā. The decapitation taking place within the temple enclosure, it becomes at such times a veritable shambles, muddy with trodden earth and blood. From the place of decapitation the heads are carried to be piled up before the idol, and become thereafter temple perquisites, the worshipper carrying away the body with him to furnish the family feast.

'In this [sacrificing] there is no idea of effacing guilt or making a vicarious offering for sin' (M. Monier-Williams, *Brāhmanism and Hindūism*[4], London, 1891, p. 25).

The great mass of the crowd, too poor to offer a goat, press eagerly into the passage before the eastern door of the shrine to enjoy the opportunity of saluting the goddess as they pass and of casting their copper coin at her feet.

Kālīghāṭ is of special interest to the student of religions as the chief scene of bloody sacrifices within India, probably in the whole world. Such sacrifices are associated with the worship of certain goddesses—Kālī, the *mātas*, or Mothers, of Western, and the *ammans*, or Mothers, of Southern India, and others. At Kālīghāṭ, probably upon an aboriginal basis, they illustrate the later Śākta and Tāntric aspects of Hinduism.

The Durgā Pūjā, supposed to be a festival of the autumnal equinox, falls within the sixth Bengali month, Āśvin, beginning on the first day of the second quarter of the moon (the eighth day of the new moon between 15th Sept. and 15th Oct.). Of the three days, the second is the chief day at Kālīghāṭ. The date of the Kālī Pūjā (*kāla* = black) is fixed by the darkest night, the night of no moon, of the seventh Bengali month, Kārtik (the night of no moon between 15th Oct. and 15th Nov.).

## KALMUKS.—See MONGOLS.

**KALWĀR** (Skr. *kalyapāla*, 'a distiller,' *kalya*, 'spirituous liquor').—The tribe of distillers, liquor-sellers, and traders, the great majority claiming to be Hindus by religion, found in all parts of India, but most numerous in Bihar and Orissa and the United Provinces of Agra and Oudh. At the Census of 1911 they numbered 954,241. Like most of the trading classes of India, the Kalwārs, though probably including some non-Aryan elements, wish to rise in the social scale, and pose as orthodox Hindus, favouring in Bengal the Vaiṣṇava cultus, which is usually adopted by the mercantile castes. But in Bengal they are still on their promotion, and, though they employ Brāhmans for their religious and social rites, these are deemed to be of inferior rank in the priestly order. In the same province with the cultus of the orthodox gods they combine the worship of various minor deities. Thus one sub-caste offers rice and milk to Sokhā on Mondays during the light half of Śrāvan (July–August); goats and sweetmeats to Kālī and Bandē on Wednesdays and Thursdays; sucking pigs and spirits to Goraiyā on Tuesdays. Another sub-caste during the same period presents cakes and sweetmeats to the Pāñchoṅ Pīr (see PACHPIRIYA); and another offers similar gifts to Barham Deo in August–September and January–February. All these offerings are eaten by members of the worshipper's family, except the sucking pigs, which, being lawful food only to the menial castes, are buried after dedication. In the United Provinces the Kalwārs seem to occupy a somewhat higher position than in Bengal, the Brāhmans who serve them being received on an equality by their brethren. Here they combine the cult of the Mother-goddess Durgā in the form of Kālikā with that of lower deities like the Pāñchoṅ Pīr, Phūlmatī, and the hero of cholera, Hardaur Lālā. Madain, the god of spirituous liquor, though worshipped by the Kalwārs when distillation is going on, is more generally reverenced by the lower castes, like the Chamārs or curriers, who are addicted to drinking. These people regard an oath by Madain as more likely, if violated, to attract retribution than that by any other god in the pantheon. The Kalwārs specially venerate the *amlā* tree (*Phyllanthus emblica*) by feeding Brāhmans and performing a fire sacrifice (*homa*) at its foot. They also revere the *nīm* tree (*Melia azidirachta*) and the *pīpal* (*Ficus religiosa*), the former being regarded as the abode of the goddess Devī, to which women bow as they pass; the latter as the home of Vasudeva (Kṛṣṇa) and other gods. They fast on Sundays in honour of Sūraj Nārāyaṅ, the sun-god, and pour spirits on the ground in honour of Sāirī or Sāyarī, who seems to be a form of the earth-goddess. Each house has a family shrine at which the household deities are worshipped. This rite is specially performed at childbirth, and the deity thus revered is usually Ghāzī Miyāṅ, one of the Pāñchoṅ Pīr, whose symbol, an iron spear, is kept near his shrine. In the Central Provinces the Kalārs, who are iden-

tical with the Kalwārs, worship the deified bridegroom, Dulhā Deo, who is said to have perished in a tragical way during his wedding rites (Crooke, *PR*², 1896, i. 119 ff.), and a goddess called Rātmā, who is represented by a flat plate of gold or silver. Some, however, have advanced so far in the direction of monotheism that they worship Bhagvān, 'the glorious, prosperous one,' who is recognized as the Supreme Being. They also practise the cult of deceased ancestors by worshipping at the Holī, or spring festival, Bahādur Kalariyā and his son Susan Chābārī, who were said to be successful distillers, and the ruins of their factories are still pointed out. The assertion that the Halbās of Central India worship a pantheon of glorified distillers lacks confirmation.

**KANAKAMUNI.**—Kanakamuni (Pāli Koṇāgamana), according to the tradition, was the second of the four Buddhas of the present age, his predecessor being Krakuchchhanda (Pāli Kakusandha), and his successors Kāśyapa (Pāli Kassapa) and Śākyamuni himself. Of these the first three are said to have been born in the neighbourhood of Kapilavastu (*q.v.*), the birthplace of Gautama, in the Nepalese *tarāi*. In the Bhadrakalpa, the time of Kanakamuni, men lived to the age of 40,000 years. Interest attaches to him, more than to the other predecessors of Gautama Buddha, on account of the discovery in the year 1899, in the course of a tour of archæological exploration undertaken on the border country of India and Nepāl, of the pillar erected by the Emperor Aśoka in honour of Kanakamuni and in commemoration of his visit to the place where the sage was believed to have been born.

The Chinese pilgrims Fā-Hian and Hiuen Tsiang both in turn visited the birthplace of Kanakamuni, and have recorded in a few words their journey thither and the condition of the buildings and site. Fā-Hian states that the town where Kanakamuni was born was less than a *yojana* north of the birthplace of his predecessor Krakuchchhanda, the latter place being twelve *yojanas* south-east of Śrāvastī. There was a *stūpa*, but no mention is made of the pillar.[1] The narrative of Hiuen Tsiang is as follows:

'To the north-east of the town of Krakuchchhanda Buddha, going about 30 *li*, we come to an old capital (*or*, great city) in which there is a *stūpa*. This is to commemorate the spot where . . . Kanakamuni Buddha was born.

To the north-east of the city, not far, is a *stūpa*; it was here, having arrived at complete enlightenment, he met his father.

Farther north there is a *stūpa* containing the relics of his bequeathed body; in front of it is a stone pillar with a lion on the top, and about 20 feet high; on this is inscribed a record of the events connected with his *Nirvāṇa*; this was built by Aśoka-raja.'[2]

The 'old town' where Krakuchchhanda was born is stated to have been about fifty *li* south of Kapilavastu. In his time human life was prolonged to 60,000 years.

Of the *stūpa* of Kanakamuni, with relics seen by the Chinese monks, no trace apparently exists. The broken parts of the pillar were found lying on the western bank of a large tank, the Nigliva Sāgar, south of and about a mile from the village of Niglīva, not far from the spot where the pillar erected by Aśoka in commemoration of his visit to Gautama's birthplace was discovered. The tank is now almost dry. The pillar is broken, but the total length of the two fragments still in existence is stated to be about 25 feet. The capital also has disappeared, and with it the lion surmounting the pillar, to which Hiuen Tsiang refers. There is, moreover, no trace of the inscription of which the pilgrim speaks, but four short lines of Tibetan script record a date and the so-called Buddhist creed *Om maṇi padme hūm*. The more ancient inscription of Aśoka is imperfect; the pillar itself also has been removed from its original position, and now lies at the top and bottom of the high embankment of the tank.

The inscription is in four lines on the lower broken part of the pillar, which together cover 15 or 16 inches in the height of the stone. The rendering is as follows:

'His Majesty King Piyadasi [*i.e.* Aśoka] in the fifteenth year of his reign enlarged for the second time the *stūpa* of Buddha Konākamana, and (in the twenty-first year) of his reign, having come in person, he did reverence, and set up (a stone pillar).'[1]

The approximate position of the pillar is lat. 27° 40′ N., long. 82° 10′ E.[2]

Of the numerous Buddhas whose names are recorded in the Buddhist books as predecessors of Gautama it would seem therefore historically probable that a real basis of fact underlies the name and personality of Kanakamuni; and also of his successor Kāśyapa. Nothing more, however, is known of him.

**KANAUJ** (Skr. *kanyā-kubja*, 'the crooked maiden,' in allusion to a legend of the hundred daughters of Kuśanābha, king of the city, who were rendered deformed by the ascetic Vāyu because they refused to comply with his licentious desires [*Rāmāyaṇa*, i. 32]).—A famous ancient city in the Farrukhābād District of the United Provinces of Agra and Oudh; lat. 27° 3′ N.; long. 79° 56′ E. It has been identified with the Kanogiza of Ptolemy, but this is disputed (J. W. McCrindle, *Ancient India as described by Ptolemy*, Calcutta, 1885, pp. 134, 227 f.; V. A. Smith, *JRAS*, 1908, p. 766). It was an important seat of Buddhism, as appears from the account by the Buddhist pilgrim Hiuen Tsiang (S. Beal, *Buddhist Records*, London, 1906, i. 206 ff.); but later, under the Gupta dynasty, it became a centre of Brāhmanical Hinduism. Its last king, Jai Chand, was defeated by Muhammad Ghorī, A.D. 1194 (Smith, *loc. cit.* 765 ff., *Early Hist. of India*³, Oxford, 1914, p. 385 ff.). As the capital of the great monarch Harṣa (A.D. 606–645), and a centre of the two chief religions of N. India, it must have contained numerous religious buildings; but of these nothing now remains above the surface. Out of the materials of some of them the fine Jāmi' Masjid, or cathedral mosque, was built in A.D. 1406 by Ibrāhīm Shāh of Jaunpur; but the site is still called Sītā-kī Rasoī, 'the kitchen of Sītā,' the heroine of the *Rāmāyaṇa* epic. There are many tombs of Muhammadan saints, the most important being those of Makhdūm Jahāniya, Makhdūm Akhai Jamshīd, and Bālā Pīr and his son Shaikh Mahdī, famous religious teachers who flourished in the reigns of Shāh Jahān and Aurangzīb. Other names for the city were Kuśasthala, Kauśa, Gādhipura, and Mahodaya (C. Lassen, *Ind. Alterthumskunde*, i.² [Leipzig, 1867] 157 f.).

1. **Name.**—In Tamil literature the most usual form of the name is Kachchi, with or without a suffix signifying 'place,' and this is probably the original name. Regarding its derivation nothing is known. The name Kāñchī is probably a Sanskritized form of the Tamil name, the form Kañchī, which is also found, being perhaps a connecting link between the two. The attempt to connect it with *kāñch* ('to shine') is fanciful. To Kāñchī the suffix *puram* ('place') came to be added. Among Europeans this was corrupted into Conjeveram or Conjeeveram. The older forms, however, are still used by the people and by Indian historical writers.

2. **Significance.**—Kāñchī is included by Saivas and Vaiṣṇavas alike among the seven cities in all India which are regarded as most sacred. How it first came to be so regarded we cannot tell, but that its fame as a sacred city goes back to ancient times is certain. The oldest buildings date from the 7th cent. of our era, but the place was famous at least eight hundred years earlier. As a home of learning its name has been known for nearly two thousand years. The city is of special interest to the student of architecture. In the oldest temples we can study to great advantage the transition from Buddhist to Hindu architecture, and mark the beginning of the Dravidian style (see ARCHITECTURE AND ART [Hindu]), while in some of the temples we can trace the slow evolution of that style through the centuries, until it culminates in the huge structures that astonish the visitor. To the student of religion, too, the city gives a unique opportunity. Almost every religious movement that has affected the South for two thousand years and more has been connected in some way with Kāñchī and has left visible traces of its influence. One has the feeling that, if its story could be fully unravelled, much would be added to our knowledge of the history of South Indian religion. The epigraphical records are unusually numerous, and much valuable work has been done, especially during the last thirty years. But much remains to be done, and many problems remain unsolved. All that is possible in the following sketch is to give the outline of the story, so far as it has been made out with tolerable certainty, with the proviso that further research may lead to some modification in detail.

3. **History.**—(1) *Early period (to 4th cent. A.D.).*—The earliest mention of Kāñchī occurs in Patañjali's Commentary on the Grammar of Pāṇini; and Patañjali lived not later than the 2nd cent. B.C. The fact that the name occurs in the Sanskrit form leads to the inference that the place had already been colonized by the Aryans. The Chinese traveller Hiuen Tsiang, who visited the place *c.* A.D. 640, states that 'Tathâgata [Buddha] in olden days, when living in the world, frequented this country much; he preached the law here and converted men' (*Buddhist Records of the Western World*, tr. S. Beal, ii. 229). It is possible that an Aryan migration took place as early as Buddha's day, but that Buddha himself came so far south is extremely improbable. When, however, Hiuen Tsiang goes on to say, 'And therefore Aśôka-râja built *stûpas* over all the sacred spots where these traces exist,' we may accept the substance of the statement as probable, for the *Mahāvaṁsa*—a Buddhist chronicle composed in Ceylon about the 3rd cent. A.D. (T. W. Rhys Davids, *Buddhist India*, p. 276 ff.)—mentions places not far from Kāñchī as among those to which Aśoka sent missionaries. The fact that no trace remains of Buddhist buildings of any kind is not a fatal objection to this view, since such buildings, when Buddhism disappeared, would form valuable quarries for Hindus or Jains, and the buildings which existed in Hiuen Tsiang's day have also disappeared. Regarding the date of the appearance of Jainism in the South nothing is known; but that it had obtained a footing before the end of this period may be taken for granted, since Hiuen Tsiang's testimony shows its prevalence in the succeeding period. If we could be sure that the Tamil epic, the *Maṇimēkhalai*, belonged to the 2nd cent. A.D. (see DRAVIDIANS [South India]), we would have in it an interesting glimpse of Kāñchī during this period, and testimony to the fact that in those early days the votaries of the Brâhmanical religion (doubtless considerably modified by contact with the Animism of the Dravidians) dwelt in a condition of mutual toleration, if not of actual harmony, with Buddhists and Jains; but regarding the date of this work there is considerable doubt, some recent writers putting it as late as the 8th century.

(2) *Pallava period (4th to 9th cent.).*—During the greater part of the early period Kāñchī belonged to the Chola empire. Before the end of the period a new power had arisen before which the Chola dominion waned. The Pallavas, of whose origin nothing can be affirmed with certainty, had established themselves in the Āndhra country to the north of Kāñchī about the 2nd cent. A.D., and by the middle of the 4th, if not earlier, they had made Kāñchī their capital. From the 5th cent. to the 8th they were the dominant power in the South, though at times, more especially towards the end of this period, they had to defend themselves against the Chālukyas and Rāṣṭrakūṭas on the North-West, and the reviving Chola power on the South. To this period belongs the visit of Hiuen Tsiang already mentioned. He describes the city, which he calls Kin-chi-pu-lo, as about 30 *li* (5 miles) round.

'The climate is hot, the character of the people courageous. They are deeply attached to the principles of honesty and truth, and highly esteem learning; in respect of their language and written characters, they differ but little from those of Mid-India. There are some hundred of *saṅghârâmas* and 10,000 priests. They all study the teaching of the Sthavira (*Chang-tso-pu*) school belonging to the Great Vehicle. There are some eighty Dêva temples, and many heretics called Nirgranthas' (*loc. cit.*).

Thus at the time of his visit (A.D. 640) Kāñchī was still a stronghold of the Buddhists. Hiuen Tsiang mentions Dharmapāla, a renowned Buddhist teacher who is said to have flourished shortly before the time of his visit (H. Kern, *Manual of Indian Buddhism*, Strassburg, 1896, pp. 9, 130), as a native of Kāñchī. The Jains (Nirgranthas) apparently lived side by side with the Buddhists. Under the head of 'Dêva temples' he doubtless included the Saiva and Vaiṣṇava temples, and probably the temples of the *ammans*, or Mothers, whom the Dravidians worshipped before the advent of the Aryans. Thus several different forms of Hinduism were already strong; but just about this time began a remarkable revival of Hinduism, before which first Buddhism and then Jainism began to wane. Epigraphical evidence shows that the central shrine of the Kailāsanātha temple was erected by the Pallava king Rājasiṁha (otherwise known as Narasiṁhavarman II.) about A.D. 670, and the Vaikuṇṭa Perumāl temple a few years later by his son Parameśvaravarman II. (Venkayya, *The Pallavas*, p. 17 f.). Several other temples are so similar in style that they may be placed about the same period, and the resemblance to the rock temples of Māmallapuram (the Seven Pagodas) is very striking. Apart from simple excavations, these temples are the oldest in South India which are known to us. Fergusson has shown that they are copied from Buddhist models, being imitations either of the *chaitya*, or hall for common worship, or of the *vihāra*, or monastery. The *vimāna*, or central tower, of the Kailāsanātha temple, for instance, is in the shape of a *vihāra*, and consists of several storeys built up of imitation *chaityas*.

The *gopuram*, or gate-tower (later), is in the form of a *chaitya*, and from such simple beginnings the evolution of the great *gopurams*, which are such a notable feature of the Dravidian style, may be traced (Fergusson, *Hist. of Ind. and East. Arch.*[2] i. 170–175, 302–362).

But the zeal of the Pallava kings, which showed itself in the building of these temples, was not the only factor in the triumph of Hinduism over its rivals. In Saivism and Vaiṣṇavism alike, during the Pallava period, remarkable groups of poets arose, whose songs in praise of the gods did much to win the people over from Buddhism and Jainism. Appar and Tirujñānasambandhar in the 7th cent., and Sundaramūrti in the 8th or 9th, were the authors of the hymns in praise of Śiva known as the *Dēvāram*. The songs of the twelve Ālvārs, or Vaiṣṇava saints, who are placed in the 6th and three following centuries, are gathered up in the *Nālāyiraprabandham*. How many of these poets actually lived in Kāñchī we cannot say with certainty. Poygai Alvār is said to have been born there (time uncertain), and definite traditions connect Tirujñānasambandhar and Tirumaṅgai Ālvār (9th cent.), among others, with the place. Be this as it may, the shrines of Kāñchī were well known to many of these singers, five Śaiva shrines being mentioned in the *Dēvāram*, and fourteen Vaiṣṇava shrines in the *Nālāyiraprabandham*. These all remain to the present day, though only in cases where the literary evidence is confirmed by the archæological can we be sure that the actual buildings which now exist can be traced so far back (K. V. Subrahmanya Aiyar, in *Madras Chr. Coll. Mag.*, new ser., xiii. [1913] 244–247). Before the end of the Pallava period still another force was at work. The great Śaṅkara is said to have visited Kāñchī; and, if the usually accepted dates of his life are correct, the visit must have taken place early in the 9th century (*ib.*). Thus alongside of the Śaiva Siddhānta of the *Dēvāram* poets, and the Vaiṣṇavism of the Ālvārs, the *Advaita* (*q.v.*) system came to be taught.

An image of Śaṅkara stands in the temple of Kāmākṣī (a name for the wife of Śiva), and it is said that the goddess cannot stir beyond the temple precincts without getting permission from Śaṅkara. This prohibition is said to originate from Śaṅkara's victory over the goddess, the local tradition being that in Śaṅkara's day Kāmākṣī was a ferocious goddess who could be satisfied only with human blood, and that Śaṅkara brought such pressure to bear on her as to lead her to abandon her evil ways. The legend is only one out of the innumerable stories which cluster round the temples of Kāñchī, and may be of no more historical value than any other. Yet it may be an attempt to depict the victory—only partial—of the philosophic ideas of Śaṅkara over the worship already mentioned, in which evil goddesses are propitiated by bloody offerings, and may even demand human sacrifices. It is interesting to note that to this day the *archakas* (priests) of Kāmākṣī's temple are Nambūdri Brāhmans, who claim to be the descendants of those whom Śaṅkara brought with him from Malabar.

According to local tradition, Śaṅkara conducted a vigorous controversy with the Jains. The fact that nothing is said of the Buddhists in this connexion may be an indication that, so far as Kāñchī was concerned, their day was past. In the 8th and 9th centuries Jainism still flourished, and two of its protagonists, Samantabhadra and Akalaṅka, are associated with Kāñchī. On the whole, however, Hinduism was gaining ground. Of definite persecution of Buddhists and Jains there is little decisive proof, but the combination of royal favour with the efforts of poets and sages led to the disappearance of the followers of these religions, mainly by their gradual absorption into the Hindu community.

(3) *Chola period (9th to 14th cent.).*—During this period Kāñchī passed many times from hand to hand, but throughout the greater part of it the Cholas were in undisturbed possession, and for a time made it one of their capitals. In many inscriptions found in Kāñchī and the neighbourhood their victories are celebrated, and much interesting light is thrown on their administration (Krishnaswami Aiyangar, *Ancient India*, ch. vi.). In the Chola period Kāñchī became more distinctively than before a Hindu city. The Jains, indeed, retained a considerable measure of influence under the early Chola rulers. There is a strong local tradition that some temples which are now Hindu were once Jain, but the only Jain temple now remaining is just outside the modern city, in the village of Tirupparuttikunram. It is assigned by Fergusson to the 11th cent. (*op. cit.* p. 362), and contains a number of inscriptions of this and the following period (Sewell, *Lists of Antiquities*, i. 176–187). The legend in the Madura *Sthala Purāṇa* (*Gazetteer of the Madura District*, i. [1906] 254 f.) of the magical efforts made by the Jains of Kāñchī to convert the Śaivas of Madura may be regarded as testimony to the influence which the former were believed to be capable of exerting. But the movements in favour of Hinduism which were in progress in the previous period continued in this. The Chola kings went on with the work of temple-building, as many inscriptions testify (Sewell, *loc. cit.*). New temples were erected and old temples added to, and to old and new alike grants of land were made. Śaiva and Vaiṣṇava temples shared in this royal favour; but by the 11th cent. Vaiṣṇavism was gaining ground, mainly through the influence of Rāmānujāchārya.

This remarkable teacher was born in Śriperumbūdūr, about 20 miles E. of Kāñchī. Though belonging to a Vaiṣṇava family, he was placed under an Advaita teacher in a village near Kāñchī, but soon rejected the teaching of his master, and became the pupil of a Vaiṣṇava teacher in Kāñchī who is usually known as Kāñchīpūrṇa. Attaching himself to the service of the god Varadarāja (Viṣṇu), he remained in Kāñchī till he was over thirty years of age, when he was called to Śrīraṅgam to succeed Yāmunāchārya as head of the Vaiṣṇava community. He became the developer and exponent of the Viśiṣṭādvaita philosophy, in association with the Vaiṣṇava religion, Viṣṇu being regarded as the Supreme Being. Throughout his long life he was a controversialist, and we read of controversies with Buddhists, Jains, Advaitīs, Śaivas, and Śāktas. On Kāñchī he left an impression which remains to this day. The Śrīvaiṣṇavas, as his followers are called, have for about seven centuries been divided into rival sects—the Teṅkalais, or southern sect, and the Vaḍakalais, or northern sect. The founder of the latter was Vedāntadeśika, who was born at Kāñchī about the middle of the 13th cent., and taught there for several years before being called to Śrīraṅgam (Rajagopalachariar, *Vaishnavite Reformers of India*, pp. 97–125). The Chola period, as we see from this outline, was a period of controversy and sometimes of persecution, Rāmānuja himself in his later years being persecuted by the Chola king Kulottuṅga I. (Govindāchārya, *Life of Rāmānujāchārya*).

(4) *Vijayanagar period (14th to 17th cent.).*—After a time of confusion Kāñchī became a part of the great Vijayanagar empire. Though no longer the capital of a kingdom, it was still regarded as the capital of the province of Tondaimaṇḍalam, and was the seat of a viceroy. Its sacredness was recognized by the Vijayanagar kings. Some of them frequently visited it, and at least one of them had his coronation ceremony performed there. It was in this period that the great temples attained their present huge dimensions, older buildings being added to and adorned, and in some cases surrounded by great courtyards with high walls and lofty *gopurams*. The work of many of the kings can be definitely traced through the inscriptions on the temples, from which we learn that the temples were enriched with many royal gifts. Although the Vijayanagar empire received a severe shock in A.D. 1565, it lingered on as a small kingdom till 1646, when its temporary capital, Chandragiri, was captured by the king of Golkonda. With this Kāñchī passed from Hindu to Muhammadan rule (Sewell, *loc. cit.*; Subrahmanya Aiyar, *Madras Chr. Coll. Mag.*, new ser., xiii. [1914]; for the Vijayanagar rule in general see Sewell, *A Forgotten Empire*).

(5) *Modern period (middle of 17th cent. to the*

*present day*).—During the first century of this period Muhammadan rulers were in occupation of the place. This was not indeed their first appearance, for in A.D. 1310 Kāñchī was captured and plundered by Malik Kāfūr, a general of 'Alā-ud-dīn of Delhi. A similar disaster befel it in 1481, when it was sacked by Muḥammad Shāh of Bījāpur.

According to Firishtah, this conqueror was incited to the attack by what he had heard of the wealth of one of the temples, 'the walls and roof of which were plated with gold, ornamented with precious stones' (Sewell, *A Forgotten Empire*, p. 101). Another writer says that the victors 'levelled the city and its temples with the ground, and overthrew all symbols of infidelity, and such a quantity of jewels, valuable pearls, slaves and lovely maidens and all kinds of rarities fell into their hands that they were beyond computation' (quoted by Subrahmanya Aiyar, *loc. cit.*).

This statement must be regarded as an exaggeration. That great booty was carried off is probable, but, though some temples may have been plundered, others escaped with little damage, and survive to this day. Local tradition says that some of the 'symbols of infidelity' were saved by being buried. Such occupation was only temporary, but from 1646 to 1751, when it was captured by the French, Kāñchī was almost continuously under Muhammadan rule, first as part of the kingdom of Golkonda, then conquered by generals of Aurangzīb, and finally included in the dominions of the Nawāb of the Carnatic. During the Carnatic and Mysore wars it changed hands many times, the great temples being used as fortresses. Much damage was done, especially by Haidar 'Alī, who occupied the place in 1768 and again in 1780. In his time the terror of the Hindus was so great that many of the idols were removed to Tanjore and other places, and not till 1799 was confidence sufficiently restored to allow of their return. Meanwhile the district had been granted by the Nawāb to the East India Company in 1759, and, apart from Haidar's occupation, it has remained British territory since that date. During the Muhammadan occupation there was much friction between Muhammadans and Hindus. A number of mosques were erected, and one of the largest was originally a Hindu *maṇḍapam* ('pillared hall'), the pillars of which remain, though any Hindu figures that may have been carved on them have been removed. This mosque bears the date A.H. 1106 (=A.D. 1700), and is said to have been the work of Razafar 'Alī Khān, who came to take vengeance on the Hindus for an outrage to the person of a Muhammadan who had dared to wash his hands in a sacred tank. The same general is credited with the completion of the largest of the mosques, which commemorates a Muhammadan sage, Shāh 'Amīd 'Auliah, regarding whom and his contests with the representatives of Kāmākṣī and other deities many wonderful stories are related (for this period see Crole, *Manual of the Chingleput District*, pp. 141-200).

4. **Present condition.**—Kāñchī now measures nearly 4 miles from N.W. to S.E., with a maximum breadth of about a mile and a half. According to the census of 1911, the population was 53,864. Of these 1746 were returned as Muhammadans, and 139 as Christians. Only a few families of Jains are left, and the only Jain temple is that already referred to as standing outside the city. A small Sikh monastery where the Granth is worshipped forms a rallying place for Sikh pilgrims from the North, who, though not allowed by their creed to worship idols, have a remarkable fondness for visiting Hindu shrines. But, while other religions have retained, or are gaining, a foothold, the city remains essentially Hindu. The visitor is astonished at the number and size of the temples. He finds, too, that almost everything that comes under the title 'Hinduism' is represented in the place. The old Dravidian worship has survived the impact of all the other forces that have been at work, and the *ammans* are still worshipped, sometimes by themselves, sometimes in connexion with the Hindu pantheon. For instance, an obscure goddess called 'Elāgōli amman' is regarded as the mother of Pārvatī, and the latter repairs to her abode every year when her marriage is to be celebrated. In one of the smaller temples, where, among others, the five Pāṇḍavas are worshipped, the principal deity, Reṇukā, the mother of Paraśurāma, is identified with Māri, the Dravidian goddess of smallpox. The majority of the gods, however, are either the great gods of the pantheon under special aspects or deified men.

The principal divisions of the city are known as Śiva Kāñchī and Viṣṇu Kāñchī, but the nomenclature is not strictly accurate, for a number of ancient and important Vaiṣṇava shrines are in Śiva Kāñchī. The greater temples of this section, however, are connected with the worship of Śiva. In the largest of all, Śiva is worshipped as Ekāmranātha. Begun in the Pallava times, celebrated in the *Dēvāram*, and associated with Śaṅkara, this temple has been added to by succeeding dynasties till it now stands as one of the largest in India. Its great tower is 188 ft. in height, and the area enclosed within its outer wall is about 25 acres. Near the central shrine is a mango tree, under which Pārvatī is said to have done penance for putting her hands over Śiva's eyes. The principal object of worship is the *pṛthvī* ('earth') *liṅga*. Among the other objects now worshipped are the sixty-three Śaiva saints. During the last twenty years over £100,000 has been spent on the renovation of the temple by a few wealthy members of Nāṭṭukoṭṭai Cheṭṭi caste. Second in size among the Śaiva temples comes that of Kāmākṣī, already mentioned more than once. Śiva Kāñchī contains seven tanks of special sanctity, each being specially sacred on one day of the week. The largest is the Sarvatīrtham, in which all the Indian rivers are believed to have gathered to witness the penance of Pārvatī. The temples which are shown by architectural evidence to belong to the Pallava period are all in Śiva Kāñchī, and all except one are Śaiva temples.

In Viṣṇu Kāñchī the greatest temple is that of Viṣṇu under the name of Varadarāja (*i.e.*, the kingly giver of boons). It contains many inscriptions of the Chola and Vijayanagar periods (Sewell, *Antiquities*, where it is called the Arulāla Perumāl temple). Although it cannot be distinctly traced further back, it was already famous when Rāmānuja attached himself to it early in the 11th century. It measures about 1200 ft. in length and 800 in breadth, being unsurpassed in size in the whole city except by the Ekāmranātha temple. Its hall of 100 pillars is an excellent specimen of the carving of the Vijayanagar period. Although the temple is said to have been plundered by Haidar, it still has great wealth. It is said that a Brāhman devotee vowed that he would not eat on any day till he had collected Rs.10, and that he collected in all Rs.24,000, with which valuable ornaments were purchased. Rāmānuja and other great Āchāryas (or Vaiṣṇava teachers), and several of the Āḻvārs, are worshipped within the precincts. The comprehensive nature of Hinduism is illustrated by the fact that at one end of the temple the lofty philosophy of Rāmānuja is taught in a Sanskrit college, while near the other offerings are presented to a living cobra. The great festival of this temple is by far the most important of all that are connected with the city. It takes place in the month of Vaikāśi (May–June), and lasts nominally for ten days; but, as the car festival counts as one day, and seldom occupies less than three, the

festival usually continues at least twelve days. Except on the seventh day, when the idol is drawn in a huge car which takes about a thousand people to pull, the image, adorned with the temple jewels, is carried out morning and evening on different vehicles. The procession, after passing along the narrow main street of Viṣṇu Kāñchī, enters the broad street of Śiva Kāñchī (said to date from Chola times); and, after going round that portion of the city, it returns, the total distance traversed being about six miles. According to the local legends, Viṣṇu and Śiva are brothers-in-law, and the Vaiṣṇava deity on the sixth day of the festival rests for a time in a *maṇḍapam* in front of Śiva's great temple. A strange relic of the Muhammadan domination is found in the fact that, when the daily procession reaches a *maṇḍapam* near the tomb of Shāh 'Amīd 'Auliah, a representative of that sage receives tribute in the shape of two small cakes of different kinds, one in the morning, and the other in the evening. On the third day of the festival, when the image is carried on the *garuḍa*, or mythical kite, which is Viṣṇu's special vehicle, it has to submit to the doubtful compliment of receiving a garland from the representatives of a small shrine belonging to the Pariahs. During these days large crowds, including many of the rich and educated, assemble from far and near, and men of wealth vie with one another in meeting the expense of the fireworks and other means of popular enjoyment. At all times, and especially during the festival, the authorities have to be on their guard to prevent rioting between the two sects of the Vaiṣṇavas, the Teṅkalais and the Vaḍakalais. The old feuds between Hindus and Muhammadans are at an end, and Śaivism and Vaiṣṇavism no longer manifest the rivalry of an earlier day. The controversy is now between these two sects into which Rāmānuja's followers are divided, and, while the great majority of the sectarians know little or nothing of the points of difference,[1] feeling always runs high, and law-suits dealing with the position of the two sects in connexion with the temple worship go up from court to court, occasionally even reaching the Privy Council. While the festival of Varadarāja far surpasses all others, there are probably not many days in the year when some temple or other is not *en fête*; and quite apart from special festivals a stream of pilgrims from the most distant parts of India pours unceasingly through the place. For their entertainment many *choultries* ('rest-houses') have been built and endowed.

As a seat of learning, Kāñchī retains something of its ancient glory. In addition to the Viśiṣṭādvaita College, there are several Sanskrit schools, and some of the *gurus* who instruct pupils privately have a wide reputation. The Tamil scriptures are also extensively studied. Education on modern lines is now becoming popular, and is represented chiefly by two large high schools; the older of these dates from 1839, and is carried on by the United Free Church of Scotland, while the other is supported by an endowment left by a wealthy native of the place.

The present writer is much indebted to Mr. T. A. Gopinatha Rao, Superintendent of Archæology to the Maharaja of Travancore, for valuable information and guidance.

J. H. MACLEAN.

[1] The distinction is mainly connected with ritual, the Vaḍakalais using extracts from the Veda (Skr.), while the Teṅkalais use the *Nālāyiraprabandham* (Tamil). Doctrinally, it is analogous to that between Arminianism and Calvinism. The Vaḍakalais hold the 'monkey' doctrine, that the soul must cling to God as a monkey cub to its mother; the Teṅkalais maintain the 'cat' doctrine, that God takes hold of the soul as a cat does of her kitten. Further, the Vaḍakalais observe caste-restrictions far more closely than the Teṅkalais (see Monier-Williams, *Brāhmanism and Hindūism*⁴, London, 1891, pp. 124–127.

**KĀÑCHULIYĀS.**—A class of Indian Śāktas (*q.v.*). The name is derived from the Skr. *kañchulī*, 'a bodice.' They are found in Southern India (*Madras Manual of Administration*, i., Madras, 1886), where they are called Kāñjuliyās (from *kañjuli*, the Tamil corruption of *kañchulī*), and have also been noted in Bombay. They are adherents of the most extreme left-handed Śākta doctrines, their chief ceremony culminating in the promiscuous intercourse of the sexes. This ceremony is called *ghaṭa-kañchulī*, or 'jar and bodice.' The number of male and female celebrants must be equal. A jar is placed in the centre of the place of worship, into which each woman throws her bodice, leaving the upper part of her body exposed. An orgy of eating and drinking is followed by each man taking at random a bodice from the jar and pairing with its owner, however near in kin to him she may be, for the rest of the night.

LITERATURE.—For a general account of these orgies see J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, ed. H. K. Beauchamp, Oxford, 1906, p. 286 ff., and H. H. Wilson, *Religious Sects of the Hindus*, London, 1861, i. 257 ff. W. Ward's *View of the History, Literature, and Religion of the Hindoos*⁴, do. 1817, i. 247 ff., may also be consulted. For the ghaṭa-kañchulī worship see Wilson, *op. cit.*, p. 263, and (for Bombay) K. Raghunāthjī, in *IA* x. [1881] 73, 287. Cf. also the Ucchhiṣṭa-Gāṇapatyas, in art. GĀṆAPATYAS.

G. A. GRIERSON.

**KANDH, KHOND** (the derivation of the name is uncertain; G. Oppert, *Original Inhabitants of Bharatavarṣa*, 1893, p. 144, connects their title Koī, Kuī, with *ko*, *ku*, 'a mountain'; Risley, *TC* i. 398, connects it with *khāṇḍā*, 'a sword,' said to be the distinguishing mark of the tribe).—A tribe found in Bengal and Madras, the bulk of those formerly residing in the Central Provinces having passed into Bengal on the transfer to that province of the States of Kālāhandī and Patnā and the Sambalpur District. According to the Census of 1911, they number 673,346, of whom 355,137 are found in Madras, 302,883 in Bihar and Orissa, and the remainder in Bengal, the Central Provinces and Berar, and Assam. The tribe has for a long time attracted the attention of anthropologists owing to their custom of human sacrifice, known as *Meriah*. But, owing to their isolation, the information regarding them is still incomplete.

'Much has been written about them; but from reports received it seems clear that observers have in some cases been too ready to attribute to the whole of the tribe customs which are in reality only locally observed. A people which is split up, as they are, by hill and jungle into communities which cannot easily communicate with one another naturally develop a considerable diversity in their ways' (*Madras Census Report*, 1901, i. 161).

1. **The tribe in Bengal.**—The earliest and most generally accepted account of their beliefs is that of S. C. Macpherson (*Memorials of Service in India*, ch. vi. p. 84 ff.).

He represented them as believing in 'One Supreme Being, self-existing, the source of good, and Creator of the universe, of the inferior gods, and of man. This divinity is called, in some districts, Boora Pennu, or the God of Light; in others, Bella Pennu, or the Sun God; and the sun and the place from which it rises beyond the sea are the chief seats of his presence. Boora Pennu, in the beginning, created for himself a consort, who became Tari Pennu, or the Earth goddess, and the source of evil.' Finding her wanting in wifely complaisance, he determined to create from the earth a new being, man, who should render to him the most assiduous and devoted service, and to form from it also every variety of animal and vegetable life necessary to man's existence. 'The creation was perfectly free from moral and physical evil. Men enjoyed free intercourse with the Creator. They lived without labour upon the spontaneous abundance of the earth; they enjoyed everything in common, and lived in perfect harmony and peace. They went unclothed. They had power to move not only on the earth, but through the air and the sea. The lower animals were all perfectly innocuous' (p. 84 ff.). This paradise was destroyed by the intrigues of Tari Pennu, who 'instilled into the heart of man every variety of moral evil . . . and at the same time introduced every species of physical evil into the material creation. . . . Boora Pennu, by the application of antidotes, arrested and held in abeyance the elements of physical evil; but he left man perfectly free to receive or reject moral evil.' Those who remained sinless he raised to the rank of immortal gods. 'Upon the corrupted mass of mankind Boora Pennu inflicted high moral penalties by the withdrawal of the antidotes which had arrested them. He entirely withdrew his face and his immediate guardianship from mankind. He made all who had fallen subject to death; and he further ordained that, in future, every one who should commit sin should suffer death as its consequence. Universal discord and war prevailed, so that all social and even family ties were broken up.' Some, he goes on to say, believe that Boora 'proved triumphant in the contest, and, as an abiding sign of the discomfiture of Tari, imposed the cares of childbirth upon her sex.' Others, however, hold 'that she remained unconquered, and still maintains the struggle with various success' (p. 86 f.). 'Boora Pennu, say his sect, resolved that, for his own honour, his work should not be lost, but that man should be enabled to attain to a state of moderate enjoyment upon earth, and to rise after death, through the practice of virtue, to a state of beatitude and partial restoration to communion with his Maker' (p. 88). Six deities 'were created to meet the primary wants of man on earth after the introduction of evil, namely: 1. Pidzu Pennu, the god of rain. 2. Boorbi Pennu, the goddess of new vegetation and firstfruits. 3. Pitterri Pennu, the god of increase, and of gain in every shape. 4. Klambo Pennu, the god of the chase. 5. Loha Pennu, the god of war (literally the iron god). 6. Sundi Pennu, the god of boundaries. To which is to be added, as an inferior god of the first class, 7. Dinga Pennu, the judge of the dead' (p. 89 f.). 'Next in rank to this class of inferior gods is the class of deified sinless men of the first age. . . . The third class of inferior deities are sprung from the gods of the first two classes. . . . The following are the chief of this class of gods: 1. Nadzu Pennu, the village god; 2. Soro Pennu, the hill god; 3. Jori Pennu, the god of streams; 4. Idzu Pennu, the family or house god; 5. Moonda Pennu, the tank god; 6. Sooga Pennu, the god of fountains; 7. Gossa Pennu, the forest god; 8. Kootti Pennu, the god of ravines; 9. Bhora Pennu, the god of new fruits produced on tree or shrubs' (p. 90 f.). 'Men are endowed with four souls. First, there is a soul which is capable of beatification and restoration to communion with Boora. Secondly, there is a soul which is attached to some tribe upon earth and reborn for ever in that tribe, so that upon the birth of every child the priest declares, after inquiry, which of the members of the tribe has returned. Thirdly, there is a soul which endures the sufferings inflicted as the punishment of sin, and performs the transmigrations imposed on that account. This soul, moreover, has the power of temporarily quitting the body at the will of a god, leaving it weakened, languid, sleepy, and out of order. Thus, when a man becomes a priest, this soul always leaves his body for a time to hold an interview with, and receive instructions from, the god who has appointed him his minister; and when, by the aid of a god, a man becomes a tiger, . . . this, I believe, is the soul which animates the bestial form. Fourthly, there is a soul which dies on the dissolution of the body' (p. 91 f.). Dinga Pennu, judge of the dead, administers justice to departed souls. 'The chief sins are: 1. To refuse hospitality, or to abandon a guest; 2. to break an oath or promise, or to deny a gift; 3. to speak falsely, except to save a guest; 4. to break a solemn pledge of friendship; 5. to break an old law or custom; 6. to commit incest; 7. to contract debts, the payment of which is ruinous to a man's tribe, which is responsible for the engagements of all its members; 8. to skulk in time of war; 9. to betray a public secret' (p. 92 ff.).

This elaborate system of mythology and ethics naturally gave rise to criticism. J. Campbell (*Thirteen Years' Service among the Wild Tribes of Khondistan*) disputed the statements made by Macpherson.

He calls the Kandhs 'a degenerate race, with all the ignorance and superstition of savages' (p. 15); 'just what I expected barbarians to be—sunk in the depths of ignorance, superstition, and sensuality' (p. 108). He protests against Lord Elphinstone's assertion that 'in their religion we find traces of the primitive elemental worship of the Vedas before it was overlaid by the superstructure which now almost conceals it from our eyes, as well as from those of the generality of Hindoos themselves' (p. 39). He expresses wonder that such a pantheon as Macpherson described could be asserted to exist among such an ignorant people, 'and in the course of my long inquiries and researches, I found nothing in the hill districts resembling the array of deities referred to in this report' (p. 163). 'Sacred images of the most barbarous type are to be found in most villages, and of these the priests, as ignorant as the rest of the people, can give no intelligible account. Indeed, save at the time of sacrifice, when wrath is to be averted, and their malignant deity propitiated by the offering of human blood, the Khonds are a most irreligious people' (p. 163 f.). They have no idols more artistic than 'a log of wood, sometimes rudely fashioned after the manner of some animal's head, and only used on the occasion of the immolation of a human victim'; and he denies the existence of a priesthood corresponding to 'the elaborate system of idolatry provided for this semi-barbarous people' (p. 165). Campbell, it is true, was, for official reasons, hostile to Macpherson. But there seems little reason to distrust his general conclusion that Macpherson, who knew little of the tribal dialects, was misled by his interpreters and native subordinates. The whole story illustrates the danger of such methods of inquiry. At the same time, Būṛhā Deo, the consort of the earth-goddess, is a deity worshipped by the Gonḍs and kindred tribes. In fact, Dalton, though his acquaintance with the Kandhs was limited, is inclined to believe that, while Macpherson's system of mythology and ethics is 'more profound than one would expect to find amongst so ignorant a people,' and that it is 'a melange of Genesis, the several Hindu systems, and primitive paganism. . . . it is quite possible that such a system may have been gradually built up for them by Bráhmans, Gosáins, and other Hindus, who not only lived amongst them, but joined in their sacrifices, supplemented by notions gleaned from Missionary teaching or books' (*Descriptive Ethnology of Bengal*, Calcutta, 1872, p. 296). Risley (*TC*, Calcutta, 1891, i. 403) regards Macpherson's account as 'quite out of keeping with their primitive social organization, and one is inclined to suspect that the persons from whom he derived his information must have described to him rather their ideal view of what the religion of the tribe ought to be than what it actually was. . . . The Kandhs of the Kandhmals recognise three principal gods—Dharma Pennu, Sáru Pennu, and Táru Pennu. The functions of Dharma Pennu appear to be of a somewhat more general character than those assigned to the other two. No regular times or seasons are fixed for his worship, and he is appealed to only in cases of illness or at the birth of a first child. His worship is performed by a *guru* who may be of any caste, but is usually either a Kandh or a Pán. The *gurus* usually have the power of throwing themselves or feigning to throw themselves into a state of hypnotic trance, and are supposed to be able to cure diseases by touching people, tying them up with bits of thread, and similar mummery. Sáru Pennu is the god of the hills, a divinity apparently of much the same type as the Marang Buru of the Santáls and Mundas. He is a jealous god, and does not like people to trespass on his domain, and the chief object of the worship which is performed in his honour in April and May is to induce him to protect from the attacks of wild animals people whose business takes them among the forest-clad hills of the Kandhmals, and also to secure a full yield of the jungle products which the Kandhs, like most similar tribes, use so largely for food. The priests of Sáru Pennu are called *dehuri*, and the appropriate offerings are a goat and a fowl with rice and strong drink. The offerings are partaken of by the worshippers. Táru Pennu, the earth god, takes the place among these Kandhs of Tári Pennu, the earth *goddess*, familiar to students of the voluminous official literature which treats of the suppression of human sacrifice among the Kandhs. He is believed to be very vindictive, and to wreak his anger upon those who neglect his worship, afflicting them with various diseases, destroying their crops, and causing them to be devoured by tigers and leopards. In order to avoid these evils the Kandhs offer buffaloes and goats to the god at irregular intervals, apparently whenever they think that he stands in need of being appeased. His priests are called *jhankar*, and the person who actually sacrifices the animals is known as *jani*. The functions of the *dehuri*, the *jhankar*, and the *jani* are hereditary.'

**2. Human sacrifice.**—The chief interest in the religion of the Kandhs rests in their system of human sacrifice, which has now, under the pressure of the British Government, been discontinued. A full account of these rites, based on the authorities already quoted — Macpherson, Campbell, Dalton, Risley—is given by J. G. Frazer in his *GB*[3], pt. v. vol. i. (London, 1912) p. 245 ff. As Frazer's account is generally accessible, only a bare summary is required. The *Meriahs* (Oriya *mĕrīā*, from Kandh *meroi*, *mervi*, or *mrivi*, 'a human victim'; see *Man*, xi. [1911] 38) were sacrificed to Tārī Pennu, the earth-goddess, in order to ensure good crops and immunity from disease and accidents. It was necessary that they should be bought for a price, and they were procured

through the agency of the menial Pān tribe from the plains of Bengal. The victim was well treated before the sacrifice, which was preceded by several days of revelry and debauchery. He was anointed with oil, butter, and turmeric. There was a struggle to secure relics of his person while he was tied to the sacrificial post. This post was often in the form of a peacock or elephant. The only surviving example is preserved in the Madras Museum (E. Thurston, *Castes and Tribes*, iii. 371, with photograph, p. 377). Before sacrifice the victim was sometimes led in procession, and he was finally killed by being either strangled or squeezed to death. The flesh was divided among the participants in the rite, who buried it in their fields. Frazer disputes the theory suggested in the contemporary accounts of the rite, that the victims were offered to propitiate the earth-goddess. The custom, he thinks, cannot be explained merely as a propitiatory sacrifice. Part of the flesh was certainly offered to the goddess; but the rest was buried in the fields, or the ashes were scattered over them; some was laid in the form of paste in the granaries, or mixed with the new corn.

'These latter customs imply that to the body of the Meriah there was ascribed a direct or intrinsic power of making the crops to grow, quite independent of the indirect efficacy which it might have as an offering to secure the good-will of the deity. In other words, the flesh and ashes of the victim were believed to be endowed with a magical or physical power of fertilising the land. The same intrinsic power was ascribed to the blood and tears of the Meriah, his blood causing the redness of the turmeric and his tears producing rain; for it can hardly be doubted that, originally at least, the tears were supposed to bring down the rain, not merely to prognosticate it. Similarly the custom of pouring water on the buried flesh of the Meriah was no doubt a rain-charm. Again, magical power as an attribute of the Meriah appears in the sovereign virtue believed to reside in anything that came from his person, as his hair or spittle. The ascription of such power to the Meriah indicates that he was much more than a mere man sacrificed to propitiate a deity. Once more, the extreme reverence paid him points to the same conclusion. . . . In short, the Meriah seems to have been regarded as divine. As such, he may originally have represented the Earth Goddess or, perhaps, a deity of vegetation; though in later times he came to be regarded rather as a victim offered to a deity than as himself an incarnate god' (*GB*[3], pt. v. vol. i. p. 250).

The Kandh prayers are discussed by Tylor (*PC*[3], London, 1873, ii. 268 f.) and by Farnell (*The Evolution of Rel.*, do. 1905, p. 183).

3. **Beliefs in the Central Provinces.**—The following account refers to the tribe before its transfer to Bengal. The belief in a future state is indicated by the death customs. A rupee or copper coin is tied in the shroud, so that the deceased may not go penniless to the other world. Sometimes his clothes and bows and arrows are buried with him. On the tenth day the soul is brought back to his family. Outside the village, where two roads meet, rice is offered to a cock, and if it eats it is a sign that the soul has come. The soul is then asked to ride on a bow-stick covered with cloth, and this is brought to the house and placed in a corner with those of other relatives. The souls are fed annually with rice at the harvest and *Dasahrā* festivals. In Sambalpur a ball of powdered rice is placed under a tree with a lighted lamp near it, and the first insect that settles on the ball is supposed to be the soul, and it is brought home and revered. The souls of infants who die before the umbilical cord has dropped off are not brought back, because they are considered scarcely to have come into existence. One cause of female infanticide among the tribe was the belief that the souls of girl children would not be born again. The souls of women who die during pregnancy, or after a miscarriage, or during the monthly period of impurity, are not brought back, no doubt because they are held to be malignant spirits (*Ethnographical Survey Central Provinces*, pt. vii. [1911] p. 55).

The *Semī-jātrā*, or bean festival, is held in November when that crop is ripe; some offerings are made to the earth-god to obviate the risk of consuming the firstfruits. A similar festival in March, called the *Mahūl-jātrā*, solemnizes the ripening of the *mahuā* (*Bassia latifolia*), as the *Dasahrā* in September marks the rice harvest, when new rice is offered to the earth-god. Before these festivals it is dangerous to eat these kinds of food (*ib.* 58 f.).

The pantheon includes eighty-four gods, of whom Dharnī Deotā, the earth-godling, is chief. He is supposed to have replaced the female deity, Tāri Pennu or Berā Pennu. Such change of sex is not unusual; in Chhattīsgaṛh the earth-deity is either a male, Ṭhākur Deo, or a female, Ṭhakurānī Māī. The earth-god is usually accompanied by Bhātbarsī Deotā, godling of hunting. Dharnī Deotā is represented by a triangular wooden peg driven into the ground, and Bhātbarsī has a place at his feet in the shape of a piece of conglomerate stone with circular granules. Once in four or five years a buffalo is offered to the earth-godling in lieu of the human sacrifice which is now prohibited, as in Madras a monkey is sometimes substituted for the *Meriah* (E. Thurston, *Omens and Superstitions of S. India*, London, 1912, p. 207). The animal is predestined for sacrifice from its birth, and is allowed to wander loose and graze on the crops at will. The stone representing Bhātbarsī is examined periodically, and when the granules on it appear to have increased it is decided that the time has come for sacrifice. In Kālāhaṇḍī a lamb is sacrificed every year, and strips of the flesh are distributed to all the villagers, who bury them in their fields as a divine means of fertilization, as the flesh of the human victim was formerly buried. The Kandh worships his bow and arrows before he goes out hunting. He believes that every hill and valley has its own deity, who must be propitiated with the promise of a sacrifice before his territory is entered; if this is not done, he will hide the animals within it from the hunter, or will help them to escape when wounded. These deities are closely related to each other, and it is important when arranging an expedition to know the connexion between them. This information can be obtained from any one on whom the divine afflatus periodically descends (*ib.* 59 f.).

4. **Beliefs in Madras.**—Various accounts of the beliefs of the tribe in Madras are on record. At Chollapadam in the Vizagapatam District, worship is offered to Kondā Deotā, the nameless mountain spirits, who dwell in a hill cave; to Jākarā, the tribal deity, of whom a Kandh is priest; to Polamma, a village deity imported from the Telugu country, whose priest is a Jātapū, or civilized Kandh; and to Kāṣīviśveṣvara, 'lord of the universe,' Śiva at Kāṣī or Benares, at whose shrine a Jaṅgam Liṅgayat (*q.v.*) officiates, the chief festival being held at the Śivarātri, or 'night of Śiva' (W. Francis, *Vizagapatam Gaz.*, 1907, i. 75). In the Ganjam District the soul is believed to survive the death of the body, and on the day after death a little cooked rice is laid on the spot where the cremation took place, and the priest delivers an incantation asking the spirit to eat the food, to enjoy itself, and not to change into an evil spirit, or a tiger, and worry the relatives. Purification follows a death; and, when a man is killed by a tiger, a pig is sacrificed and the body of the animal is passed between the feet of the villagers; it is a bad omen for any one if it happens to touch his legs (Thurston, *Castes and Tribes*, iii. 395). Another sacrifice intended to save the cattle from injury consists in burying the head of a chicken near the post of the cowshed, and in front of it a rotten egg. When the cattle come home in the evening, the women, who have

fasted all day, are obliged to eat; drinking and dancing follow for two days, during which time the manure is not removed from the shed. On the third day a lump of manure is brought out by each owner and thrown in a heap, over which the priest pours spirituous liquor and rice (*ib.* iii. 406 f.). Oaths are taken before a basket containing a blood-sucker (lizard), a bit of tiger's skin, a peacock's feather, earth from an ant-hill, rice mixed with fowl's blood, and a lighted lamp. Witchcraft is common, and various forms of ordeal are used, such as holding the hand of the suspected person in boiling water; if the hand is scalded, the accused is condemned and has to pay a fine to the tribe (*ib.* iii. 408 f.). From a still more recent account it appears that the Hindu belief in *karma* and reincarnation is not found, except in a vague way, among those who have come in contact with the people of the plains. They certainly believe in the survival of the spirit after death, and in its possible temporary transference during life, it being commonly supposed that the spirit of a man killed by a tiger guides the animal in its search for other victims. But it is very difficult to distinguish their beliefs from those of the Hinduized peasantry in their neighbourhood. Their gods are Bura Penu, who with his wife Piteri (probably the S. Indian Pidari) is worshipped as Creator of mankind, who controls a host of minor gods; Dondo Penu, god of hunting, who lives in sacred trees which no one dares to cut; Loha Penu, god of iron, who directs the arrows of his votaries against the enemy and averts their counter-shafts; Odu Penu, god of the outside, who is the village guardian, in which duty he is assisted by Dandere Penu, the door-keeper, who watches the back of the village, Darni Penu, who watches the inside from beneath a heap of stones, beside which a rotten egg is buried, Teki Penu, god of vessels, who guards the house goods, and Goheli Penu, god of the stable, who protects the animals from tigers. Besides these are Murdo and Rugo, deities of smallpox and cholera; another god whose activity is chiefly shown by his demanding tobacco; a god of precipices and a hot spring at which worship is offered. If there is no actual ancestor-worship, tales are told of hero and giant forefathers (*Madras Census Report*, 1911, i. 62 ff.).

5. Totemism.—Among the branch of the tribe in Madras there are three totemistic septs named after a peacock's egg, a small bird, and a dung-worm, which are nominally exogamous, though the strictness of this prohibition has now become weakened. How far each sept reveres its totem is a matter of uncertainty (*Madras Census Report*, 1911, i. 65). Among the northern branch of the tribe more precise information has been collected by J. E. Friend-Pereira (*JASB* lxxiii. pt. iii. [1905] p. 40 ff.), fully analyzed by J. G. Frazer, *Totemism and Exogamy*, London, 1910, ii. 305 ff.

LITERATURE.—For the Bengal branch of the tribe: S. C. Macpherson, *Memorials of Service in India*, London, 1865; J. Campbell, *Thirteen Years' Service among the Wild Tribes of Khondistan*, do. 1864; E. T. Dalton, *Descrip. Ethnol. of Bengal*, Calcutta, 1872; H. H. Risley, *TC*, Calcutta, 1891; W. W. Hunter, *Orissa*, London, 1872. For the Madras branch: E. Thurston, *Castes and Tribes* (with a detailed bibliography), Madras, 1909, *Ethnographic Notes in S. India*, do. 1906; *Census Reports Madras*, 1901, 1911; *District Manuals* (*Ganjam*, by T. J. Maltby and G. D. Leman, 1882; *Vizagapatam*, by D. F. Carmichael, Madras, 1869, W. Francis, 1907); G. Oppert, *Original Inhabitants of Bharatavarṣa*, Westminster, 1893.

**KANDY.**—Kandy is a small modern town in Ceylon, beautifully situated on the border of a lake in a plain about 1718 ft. above sea level, and about 75 miles nearly N.W. of Colombo. The mountains, 2000 to 4000 ft. higher, rise around it; and in the Sinhalese time the town was difficult to approach, being surrounded by thick jungle. It was the residence of the kings of Ceylon from 1592 to 1798. During this period the kingdom of Ceylon had reached the lowest depth of disorder and decay. Half its territory was lost; and the half still remaining was harassed by frequent civil wars between rival claimants to the throne; and, when one or other of these claimants succeeded in gaining the upper hand over his rivals, there were recurring struggles against outside enemies—Tamils, Portuguese, Dutch, and, finally, English. These rival claimants to the throne were not Sinhalese but South Indians by blood, and by religion, though nominally Buddhist, were at heart Hindus. They built four *devālas*, Hindu temples, in the town.

Knox unfortunately gives no description of Kandy. But we have a good one by John Pybus, who was there in 1762. It is preserved in *Account of Mr. Pybus's Mission to the King of Kandy*, reprinted from the Madras Government records by the Government printer in Ceylon in 1862. We read there (p. 35) that the town then consisted of two main streets (the one running north and south being about a mile long) and several cross streets. Only a few of the houses were tiled. The streets were not lit; but about 8 o'clock a bell was rung along them, and after that no one was allowed abroad unless he carried a large light in his hand. The Palace was a rambling pile to the south of these streets with a large garden in front of it. This is confirmed by J. Forbes,[1] but in his time the lake which Pybus does not mention had been constructed 'by the late king' Rāja Siñha in 1807. J. E. Tennent, writing about 30 years later,[2] describes the modern European town, and the wonderful road to it up the Kadugannāwa Pass. It is now a prosperous little place of about 25,000 inhabitants, with a busy railway station, and many villas on the slopes of the surrounding hills.

The English name, Kandy, is a corruption of the old name, not of the town, but of the county or province in which it was situated. This was Kanda-uda ('Up in the Hills'). The Sinhalese name of the town was Senkada-gala-nuwara.

Besides the four Hindu temples there are two small *vihāras*, or residences for members of the Buddhist Order, named respectively Asgiriya and Malwatte Vihāra. No one, according to a regulation issued, in defiance of the old *Vinaya* (the Rules of the Order), by the Sinhalese court, can be received into the Order except at a chapter held at one or other of these *vihāras*.[3] There is also the well-known Daladā Maligāwa, a pretty little building containing the supposed tooth of the Buddha—really not a human tooth at all, but possibly the tooth of some pre-historic animal. The history of this supposed relic is long and complicated, and has been the subject of various writings. In the 13th cent. Dhamma-kitti wrote a Pāli poem about it based on an older Sinhalese work in prose.[4] According to the tradition preserved in this poem, the tooth was brought to Ceylon in the 4th cent. of our era, and had remained there up to the time when the poem, the *Dāṭhā Vaṁsa*, was written. According to Portuguese accounts quoted by Tennent (*loc. cit.*), the Portuguese captured the tooth, ground it to powder, and threw the powder into the harbour at Goa. The Sinhalese say that the tooth thus destroyed was a Hindu relic seized by the Portuguese in the Tamil country at Jaffna, and that the Buddhist relic now in Kandy is identical with the one whose history was written by Dhamma-kitti.

**KAṆHERĪ** (Skr. *Kṛṣṇagiri*, 'hill of Kṛṣṇa').—One of the most important of the Buddhist cave temples in the island of Salsette, about 16 miles N. of Bombay; lat. 19° 13′ N.; long. 72° 59′ E.

The site, lonely, picturesque, and close to the great trading marts of the W. coast, combines the three leading characteristics of the chief groups of W. India temples. 'But Kanheri is the only rock-cut monastery in W. India that has the feeling of having been, and of being ready again to be, a pleasant and popular dwelling-place. The rows of cells, water-cisterns, dining-halls, lecture-halls, and temples joined by worn flights of rock-cut steps, and the crowded burial gallery show what a huge brotherhood must have once lived in Kanheri' (*BG* xiv. [1882] 123). The caves were excavated at various periods, the great Chaitya cave bearing an inscription of Yajña Śrī Gautamīputra Siriyana Śātakarṇi, a king of the Āndhra dynasty (A.D. 173–202) (V. A. Smith, *Early Hist.*[3], Oxford, 1914, p. 211). Not far off is the Darbār Cave, which 'is not a *vihāra* in the ordinary sense of the term, though it has some cells, but a *Dharmaśāla* or place of assembly, and is the only cave now known that enables us to realize the arrangements of the great hall erected by Ajāta Śatru in front of the Sattapanni cave at Rājāgriha, to accommodate the first convocation held immediately after the death of Buddha' (Fergusson-Burgess, *The Cave Temples of India*, London, 1880, p. 353).

**KANIṢKA.**—Kaniṣka was an Indo-Scythian king of N. India and Afghānistān, who plays the part of a second Aśoka in the traditions of the Buddhist schools of N. India, Tibet, China, and Mongolia, especially as the convener of a council held in Kashmīr, or, according to certain authorities, at Jālandhar (see COUNCILS [Buddhist]). His name is sometimes spelt *Kāṇiṣka* in inscriptions. It appears on coins in Greek script as *Kanērki*, or in the genitive *Kanērkou*, which some scholars read as *Kaneshki* and *Kaneshkou* respectively. Kashmīr tradition gives the variant *Kaniṣṭha*, which becomes *Kanit'a* in Chinese.

He was a member of the Kushān (Kuṣana, Guṣana, or, according to von Holstein, Kuṣa) section of the great Yuechi nation of Central Asian nomads, and is mentioned in numerous Indian inscriptions bearing dates ranging from 3 to 41. Prolonged controversy has ranged round the interpretation of these dates, and general agreement has not yet been attained. In the opinion of the present writer, it is certain that Kaniṣka was the immediate successor of Kadphises II. (Wima, etc., of coins and inscriptions, Yen-kao-ching, etc., of Chinese), and almost certain that his accession (or possibly coronation) coincides with A.D. 78, the epoch of the Śaka era. That era appears to have been established by Kaniṣka.

Kaniṣka, who is often described as king of Gandhāra, had his capital at Puruṣapura (Peshāwar), and was a powerful monarch, whose influence, as Hiuen Tsiang (Yuan Chwang) testifies, extended to distant regions, even into the basin of the Tārīm beyond the Pāmīrs. He held all the countries now included in the kingdom of Afghānistān, at least as far as the Oxus, and was the lord paramount of the whole of N.W. India. His arms are said to have penetrated to Pāṭaliputra, and his dominions included Sind. His viceroys, called 'satraps' after the Persian fashion, ruled W. India from Nāsik and Ujjain. He warred against the Parthians, and in his later years seems to have conquered from China the regions now known as Chinese Turkestan. It is said that he was murdered by discontented officers while he was engaged in a trans-Himālayan campaign. Vāsiṣka and Huviṣka (Huṣka), probably his sons, appear to have ruled the Indian provinces on his behalf, while he was absent on his distant wars. Vāsiṣka apparently predeceased him. Huviṣka certainly succeeded him in the rule of the entire empire, probably about A.D. 123. The father of Kaniṣka was Vajheṣka (? Vajheṣpa), presumably a near relation of Kadphises II.

During the long reign of Kaniṣka his Indian subjects divided their allegiance among the three great indigenous religions—Buddhism in its various forms, Brāhmanical Hinduism, and Jainism. Kadphises II. had favoured the Śaiva form of Hinduism, but there is no evidence that Kaniṣka took any interest in the doctrines of the Brāhmans. The occurrence of numerous Persian deities on his coinage suggests that in early life he may have been a Zoroastrian, and that many of his subjects must have been adherents of the creed of Zoroaster. Late in his life the king became an active patron of Buddhism. He placed the image of Buddha on his coins, summoned a council of Buddhist theologians to prepare commentaries on the scriptures, and erected magnificent sacred buildings, notably the lofty *stūpa* of Peshāwar, the foundations of which have recently been excavated. The explorers found a relic casket engraved with the names of Kaniṣka and his Greek superintending engineer, Agesilaus, and adorned with images of the king. An inscribed portrait statue of him, unfortunately headless, has been discovered near Mathurā.

Tradition associates Kaniṣka with Aśvaghoṣa (*q.v.*), who was a pupil of Pārśva, by whom the council was summoned, according to some authorities. The president is said to have been Vasumitra, Aśvaghoṣa being content with the vice-presidency. The date of the council may be stated as ± A.D. 100, but, of course, it depends on the view taken of the chronology of the reign.

The powerful patronage of Kaniṣka undoubtedly promoted the cause of Buddhism in both India and Chinese Turkestan.

LITERATURE.—V. A. Smith, *The Early History of India*[3], Oxford, 1914, which gives abundant references.

V. A. SMITH.

**KANJAR.** — One of the nomadic, gypsy-like tribes of N. India. At the Census of 1911 they numbered 23,983.

They are found in the United Provinces of Agra and Oudh and the Panjāb, with smaller groups in other parts of N. India. They wander about in gangs, supporting themselves by the usual gypsy industries, but more especially by theft and highway robbery. According to J. C. Nesfield (*Calcutta Review*, lxxvii. [1883] 368 ff.), they possess no idols, temples, or priesthood. They are in constant dread of evil spirits, the souls of the malignant dead. To these they attribute all deaths, except those obviously due to old age. Hence they bury the dead in deep graves to prevent the ghost from 'walking'; and they believe that such spirits are under the control of an exorcist (*nyotiyā*), who by means of shamanistic rites is supposed to be able to transport a goblin into the body of some living person, and make that person his mouthpiece for declaring its will. Their principal deity is a man-god, Mānā, believed to be one of the ancient worthies of the tribe. He is worshipped chiefly in the rainy season, when the tribe is less migratory

than at other times. No altar is erected, no image is worshipped; but his votaries collect under a tree, where they sacrifice a pig, goat, sheep, or fowl, and make an offering of roasted flesh and spirituous liquor. Formerly, it is said, they used to sacrifice a child, having first made it insensible by draughts of fermented palm-juice. At the feast which follows most of the worshippers get drunk, and occasionally one of them declares himself to be possessed by the tribal god, and delivers oracles. Meanwhile the others dance round the tree and sing songs commemorating the wisdom and valour of Mānā. Marī, the goddess of death or epidemics, known also as the 'Queen goddess' (Mahārāṇī Devī), is supreme, and seems to be worshipped as the animating and sustaining force of nature. Parbhā or Prabhā, goddess of light, controls health, and more particularly the welfare of cattle. With her is worshipped Bhuiyān or Bhavānī, the earth-goddess. In other parts of the United Provinces they are specially devoted to the worship of deceased ancestors, who are regarded as more kindly than among other inferior castes, and are satisfied if at marriages and other festive occasions platters of food are laid on their graves. The chief deified worthies are Dhāmin Devā, or Mānā, and Pahlwān, or the wrestler. To their graves they make pilgrimages, sacrifice a pig, and pour spirits on the ground. The offering of meat is eaten in secrecy and silence by the males of the tribe, no woman being allowed to be present or to share in the meal. When they have become more Hinduized they worship Vindhyavāsinī Devī, the guardian goddess of the Vindhyan hills, and the Pāñchoṅ Pīr (see PACHPIRIYA) with the sacrifice of a cock. They also revere many of the local gods of the villages through which they wander, and one clan is specially devoted to the cult of Nānak, the *guru* of the Sikhs, to whom they make a special prayer: 'Praise be to thee, who hast preserved us in safety for a year! We hope for the same favour in the future!' They are much devoted to demonology, and a special medicine-man, known as 'the wise one' (*syānā*), is appointed to propitiate those spirits which are believed to be responsible for the evils which beset the tribe. When a person is attacked by some disease which indicates spirit possession, the *syānā* makes an offering of treacle, butter, cloves, incense, and red lead to the tribal Devī, by throwing these things into the fire. The Devī enters the *syānā*, who names the evil spirit which is afflicting the patient. He then places a cup of spirits on the sick man's head, and waves it round him. This causes the spirit to enter the cup, which the *syānā* drinks, thus taking upon himself the dangerous influence which has caused the disease. In more serious cases an offering is placed on the spot where four roads meet (cf. Westermarck, *MI* ii. 256, n. 2). The friends of the sick man sing and beat a brass tray over his head to scare the evil spirit, which is believed to enter the offering and thence be transferred to any passer-by who may accidentally touch it (cf. *PR*[2] i. 164 ff.). The *churel*, or ghost of a woman dying in a state of impurity, is much dreaded. The ghosts of young children take the form of *masān*, the evil spirit which haunts graveyards. Any one dying by snakebite or in some other abnormal way becomes an *ātū*, *i.e.* one for whom there is none to make the water oblation which causes the repose of the soul. The tribal beliefs are thus a combination of the primitive Animism with a veneer of Hindu belief and usage. There are some indications of totemism, but this is closely connected with tree-worship, the tamarind being regarded as the special abode of spirits, and a kind of reed grass and the leaves of the mango being fixed upon the marriage shed.

**KANPHATA.**—See YOGIS.

**KANT.—1. Life and principal works.**—Immanuel Kant was born on 22nd April 1724 at Königsberg, in the province of Eastern Prussia. His father was a harness-maker in poor circumstances. Kant believed that his grandfather was a Scottish immigrant, and that the original form of the name had been Cant, the initial having been changed to avoid the pronunciation Tsant; but there seems to be no documentary proof of this. He entered the University of Königsberg in 1740, registering himself as a student of theology; but the subjects of the preparatory ('philosophical') course, especially natural science and philosophy proper, soon claimed his interest. After completing his course he acted as a private tutor in several families in the neighbourhood. In 1755 he took his degree with an essay *de Igne*, and habilitated as privatdozent with a dissertation entitled *Principiorum primorum cognitionis metaphysicæ nova dilucidatio* (Königsberg, 1755). He remained in the position of a *magister legens* for fifteen years; but in 1764 he had declined the offer of a chair in Poetic Art in Berlin, and in 1766 was made sub-librarian in his own University at a salary of about £10. Then in 1770 he was promoted to a full professorship in philosophy. Apart from these changes, his life was quite uneventful; with study, teaching, and writing books, one year was like another. He never travelled beyond the borders of his native province; he never married; and he reduced the details of life to a clock-work regularity. Towards the close of his working days he was officially reprimanded for the breadth of his theological views, but he made his peace with the government. In personal character he was simple and reserved, generous and pious, and the reputation that ultimately came to him left him quite unspoiled. He ceased lecturing in 1796, and his increasing weakness of body and mind ended with his death on 12th Feb. 1804.

The development of Kant's thought is a very complex subject. Taken broadly, it consisted of two great periods, the pre-critical and the critical, with an interval between them of about ten years, when he was feeling his way to the position that was to prove so epoch-making. In the pre-critical period itself we can trace shorter stages. His dozent's thesis and his earlier works are mainly in the Leibnizo-Wolffian manner. He afterwards came under the influence of English empiricism, and this influence appears in *Der einzig mögliche Beweisgrund zu einer Demonstration des Daseins Gottes* (Königsberg, 1762), *Untersuchung über die Deutlichkeit der Grundsätze der natürlichen Theologie und Moral* (1762, pub. Berlin, 1764), and *Versuch den Begriff der negativen Grössen in die Weltweisheit einzuführen* (Königsberg, 1763), to which may be added *Träume eines Geistersehers, erläutert durch Träume der Metaphysik* (do. 1766). In his inaugural lecture as professor, *De mundi sensibilis atque intelligibilis forma et principiis* (do. 1770), he is feeling his way towards a unifying point of view between, or rather above, dogmatism and scepticism; but, as already indicated, his thought had to ferment for another decade till he reached at length the 'critical' solution, and gave the first instalment of its exposition in the *Kritik der reinen Vernunft* (Riga, 1781; 2nd ed., with important changes, do. 1787; the two edd. combined, with notes, by E. Adickes, Berlin, 1889, also in tr. of Max Müller, 1881). The great works of the critical period are named below; to them

may be added *Prolegomena zu einer jeden künftigen Metaphysik die als Wissenschaft wird auftreten können* (Riga, 1783), *Grundlegung zur Metaphysik der Sitten* (do. 1785), and *Metaphysik der Sitten* (Königsberg, 1796-97), dealing with law and the virtues. His interest in the problems and principles of natural science can be traced all through his life, as, *e.g.*, in his early work, *Allgemeine Naturgeschichte und Theorie des Himmels* (Königsberg, 1755), and *Metaphysische Anfangsgründe der Naturwissenschaft* (Riga, 1786).

**2. The place of Kant in the history of philosophy.**—(*a*) *His direct relation to Leibniz.*—Kantianism is the characteristically German philosophy, just as the philosophy of France is to this day more or less determined by Cartesianism, and English philosophy is essentially characterized by the thought of Bacon, Locke, Berkeley, and Hume. The Germans lagged behind the other European peoples in taking a place in the movement of modern philosophy, but at length they secured in Leibniz (*q.v.*) a thinker who combined the new conceptions of modern philosophy in one grand system, from which, again, in virtue of a profound transformation, sprang the philosophy of Kant. The Kantian teaching is certainly a radical metamorphosis of the Leibnizian system as far as regards the method by which *a priori* knowledge is discovered, established, and de-limited, and yet it is at the same time an essentially unchanged continuation of Leibniz's views regarding the nature and meaning of reality. Even as regards method, indeed, Kant's advance upon his predecessor must not be exaggerated. The system of Leibniz belongs to the rationalistic, Platonizing type of speculative philosophy, or, in other words, it is an *a priori* doctrine of ideas, and this holds good also of the system of Kant. The only real difference is that in the latter the *a priori* forms of knowledge are deduced, and applied, and have their limits assigned, in a different way. In order to understand the system of Kant we must, therefore, first of all make a rapid survey of that of Leibniz.

(*b*) *The system of Leibniz.*—Leibniz, like the other pioneers of modern philosophy, started from the empirico-inductive and mathematico-mechanical science of nature, and, in point of fact, from physics, the only natural science that had at that time attained any adequate development. Having adopted the doctrine that nature is built up of infinitesimal elementary bodies, he followed up the idea of force, as that which must be assumed for the inter-action and orderly inter-relations of these. This force he regarded as something immaterial, and this immaterial constituent, again, he described as a thinking, perceptive, or quasi-conscious power, thus applying to it the only term that was then available to connote a non-material reality. In this way he made the transition from a materialistic and mechanical to a spiritualistic and dynamic mode of thought. If the element of force be taken as in reality a thinking substance, however, its activities in relation to the other elements of force, as also the latter themselves, will appear as ideas or percepts of the element of force. Such an element thus becomes the monad, which perceives itself and its orderly relations to the other monads. Now it would be irrational to speak of this monad and its congeries of perceptions as the sole existing object. There must be a plurality of monads, existing *realiter* side by side. This hypothesis, however, is possible only on the ground of two presuppositions, viz. (1) that the co-existing monads have each the same ordered and logically articulated content of perceptions—a condition which is explained by the pre-established harmony of the monads with one another, and (2) that each single monad virtually holds within itself the whole universe, though it may bring only a part of it to clear consciousness—a position elucidated by Leibniz's theory of the unconscious, or of the conscious in an infinitely small degree. We are thus brought to a thoroughly spiritualistic system, in which, by an *a priori* necessity of reason, the individual monads severally perceive themselves and the universe contained in them as organic wholes, and, notwithstanding their absolute isolation, are in harmony with one another in virtue of the aggregate perceived and articulated by them. The various monads are endowed in very different degrees with the consciousness of the self-perceptive power, but are nevertheless connected and unified through the identity of the content variously known to each. Thus knowledge—in cases where the monads really have knowledge—may be interpreted as a process of discerning the content of consciousness according to the *a priori* laws immanent therein. From the condition of the non-conscious, or the pre-conscious, Leibniz disengages the rationally necessary laws and concepts in order that he may by means of them construct the system of the world as a complete whole. The ultimate pre-condition of all, indeed, is a self-identical, perfectly and logically conceived cosmic content, *i.e.* God, and the self-transformation of the divine universal substance into the infinite multiplicity of different monads, each of which contains in its own individual way the divine world-substance, and, in the measure of its individual capacity of becoming conscious, brings that content to a logically ordered comprehension. Philosophy is thus simply the measure of completeness and clearness to which the human monad can attain in its perception of the world.

(*c*) *Kant's reconsideration of Leibniz under the stimulus of Hume.*—Kant adhered to the views of Leibniz for about twenty years of his mature life, making modifications of them only in detail, more especially on the physical, mathematical, and astronomical sides. To the starting-point of the monadology in general, however—its analysis of consciousness and of the content of consciousness—as well as to its idea of the *a priori* validity of the rational laws that regulate that content, Kant remained permanently faithful, and we shall never understand his position unless we make full allowance for this survival in time of the Leibnizian point of view and tendency. He was at no time the pure phenomenalist, who acknowledges only subjective phenomena within what might be called the closed space of consciousness. Rather, he always dealt with the thinking subject as a central force working towards the logical unification of the manifold, and rejected the idealism or phenomenalism of Berkeley—what German philosophers now call 'psychological idealism.' Moreover, he never denied the apriority of the logical laws, or their being evolved from their pre-conscious self-activity. He was never a sceptic or an agnostic, never a pragmatist or a relativist. The point which marks his departure from the philosophy of Leibniz and from which he proceeded to construct his own system was one quite apart from such considerations. It was simply this: he could not permanently remain blind to the fact that, while a theory like that of Leibniz might logically articulate the reality immanent in consciousness, it was essentially incapable of passing beyond that sphere or of predicating anything whatever regarding the real which transcends consciousness. Leibniz's conception of God, his doctrine of the pre-established harmony, and of the individuation of the deity into countless monads varying in their capacity of thought, at length seemed to Kant, as already to other disciples of Leibniz, to be mere philosophical myths—figments of the imagination.

From this standpoint Kant began to suspect all forms of metaphysical theory, as they did not permit of strict demonstration and showed no unanimity in their conclusions. Although he continued to attach the utmost significance to the practical or moral convictions of the mind, he now came to doubt the possibility of developing and establishing them as realities of a transcendent metaphysics.

If, however, the Leibnizian mode of reaching the reality beyond consciousness from the content of consciousness itself and from the reflexion guided by *a priori* laws was thus invalid, philosophy was thrown back upon what is immanent in consciousness. But, if this were so, of what avail were the *a priori* laws which enable us to articulate in thought our conscious experience? They never carry us into the sphere beyond consciousness; can we, therefore, cognize anything at all by means of them? Are they not, with their *a priori* necessity, restricted exclusively to formal logic and the mere explication of concepts? Is not their necessary truth thus of a purely analytic kind, *i.e.* do they not merely analyze a given thought into the consequences already contained and implied in it? Is it not possible, therefore, that, in particular, mathematics itself, the chief instrument of natural science, may be no more than an analytic elucidation of thoughts already virtually contained in definite numerical and spatial magnitudes? It was at this stage that Kant became acquainted with the views of Hume—views which had been developed upon an entirely different foundation. Hume, working from the standpoint of pure phenomenalism, had divided knowledge into two departments: first, an *a priori* formal logic (including mathematics) entirely without content and purely self-interpretative; and, secondly, a real knowledge, empirical and substantial, but having no logical necessity or *a priori* character. For Hume, knowledge of reality was constituted only by the principle of custom—by our becoming accustomed to certain associations of perceptions—and by the practical verification of such customary associations, and thus our reference of perceptions and their relations to a reality lying beyond consciousness has no real ground to rest upon, but is at most the object of an absolutely indispensable belief. Hume's reasonings affected Kant in the most profound way, as they appeared to undermine the whole structure of *a priori* rationalism, and, in fact, to bring all philosophy of the Platonic type to an end. All that remained of rationalism seemed to be 'analytic judgments *a priori*,' *i.e.* the analysis of the logical content of certain propositions in formal logic and mathematics—a purely logical play of reason, but not a real knowledge of things by means of reason. Hume had apparently rendered it impossible, not only to pass beyond experience, but even to articulate experience itself by logically necessary principles; he seemed to have shown the futility of all *a priori* synthesis of the real, and, therefore, also of rational science of nature and rational ethics. Thus, if Kant found in Leibniz his positive foundation, he was on the negative side decisively influenced by Hume, both as a stimulus to his thought and as an antagonist to be overcome.

(*d*) *Kant's discovery of the critical solution.*—The arguments of Hume, as has been said, wrought upon Kant with profound effect, not, however, in the sense of drawing him into the sphere of the Scottish thinker's ideas, but rather in the sense of forcing him to provide fresh foundations for, and set new limits to, the essentially Platonic doctrine which he had inherited from Leibniz. Hume's influence, in short, was not such as to convert Kant to phenomenalism. The idea of an experience limited to consciousness he had taken over from Leibniz, and all thoughts of transcending that experience by metaphysical constructions based upon it he had at length abandoned in view of the contradictions in which alone such attempts result. Hume certainly confirmed him in this position, but it was not Hume who brought him to it. The influence of Hume lay rather in clarifying his mind with reference to the problem of elucidating and systematizing the contents of consciousness with a view to attaining a logically demonstrable and, therefore, necessary knowledge of the real. Kant formulates this problem very simply in the question whether we have only analytic judgments *a priori*, or also synthetic judgments *a priori*, as instruments for reducing the contents of consciousness, or of experience, to form and order. Or, to give the question a more direct expression: Is there a logically necessary connexion in the real—an inherently necessary conception of nature which imposes a logical order upon the concrete? The 'real' that Kant seeks is attained not by reaching out towards a realm transcending consciousness, but by a synthetic articulation of an actually given content of consciousness or experience. He entirely ignores the question how this experience comes to be; it is simply given, and that is sufficient for us. As a matter of fact, he finds the real in the results of the logical elaboration of experience. By means of that process he distinguishes logically classified and abstractly necessary relations of phenomena from the chaotic state of the manifold prior to such elaboration, as also from relations wrongly imposed upon the facts; and for him the former is the real. In short, the real arises out of the valid and correct elaboration and elucidation of conscious experience, as contrasted with invalid, erroneous, or confused determinations of it and an uncritical linking together of phenomena. The problem before him was the possibility of a natural science which is at once empirical and rational, enabling the mind to unify the empirical data of consciousness by rational and *a priori* principles, and thus to transform the naive and confused representation of things into a representation that is scientifically clear and valid. Kant's aim was to establish a rationalism of pure experience, upon which might be constructed a conception of nature at once scientifically valid and embracing all experience.

This is the fundamental position from which we must interpret Kant's thought—his presupposition of the ego as the focus to which all thinking is related, of the content of experience as given to the mind in order that it may be brought to a fully realized clearness and completeness, of the *a priori* logical activity of the mind as moulding and combining the matter given to all according to the laws which cohere in the logical subject itself, and which come into consciousness and unfold themselves in the actual operation of thought. With these, again, is connected his refusal to recognize a supposed metaphysic which would urge *a priori* thought beyond its task of moulding and arranging the data of experience, since the *a priori* forms have to do with such data alone, and, if employed apart from and beyond them, remain altogether empty—a use of them which results in a futile metaphysical hypostasis, such as was fabricated by Plato and, in a more cautious and covert way, by Leibniz. Kant's presuppositions and his surrender of a transcendent metaphysic determined for him the only possible aim of knowledge or philosophy, viz. the safeguarding of the *a priori* and ideal character of our knowledge of nature by confining it to experience within consciousness.

This line of thought, which in the first resort related only to the conception of nature, Kant subsequently extended to ethics, the philosophy of

religion, teleology, and æsthetics, his method of dealing with all of these being essentially determined by his principles of intellectual cognition. As treated by him, these other spheres of rational activity were all designed to supply, not metaphysical knowledge of realities lying beyond consciousness, but the proofs of a valid mode of reflexion which issues from the nature of consciousness itself, and as such is to be applied to the criticism of experience. None of them passes beyond valid and necessary modes of thought and interpretation. The proof of their subjective necessity supplies the measure of all the objective knowledge which they can attain. A philosophy of this kind is in reality reason's knowledge of itself, and is indirectly a knowledge of facts only in so far as it reveals the necessary activities of reason, and arranges and interprets the data of consciousness by means of them. It sets out as a theory of the presuppositions, possibilities, and limits of science, and then proceeds by analogy to comprehend the other great activities of the mind, which likewise present merely the knowledge and interpretation of experience by means of reason.

(*e*) *The meaning of the various designations of Kant's philosophy*.—From this point of view, again, we are able to see the purport of the various designations applied to the philosophy of Kant by himself or by others. It is Idealism—in a double sense, indeed, as it regards the mind not only as that which possesses experience, but also as the active subject of the necessary forms of thought through which alone experience gains order and meaning; in other words, it is a system which arranges and interprets experience within the limits of consciousness by means of ideas, and is thus directly opposed to materialism and sceptical relativism of every type. It is also criticism, since, in fixing by a critical investigation of principles the limits of the realm of formal ideas, it prevents these from transcending experience, and disengages the separate activities of that realm from its naive and prescientific state of nebulosity. The system is transcendentalism, because it recognizes the *a priori* validity of the ideas and asserts that they contain an element superior to experience, while, however, it uses the ideas, not as a means of reaching beyond experience, but simply as a means of moulding, classifying, and interpreting it. The word 'transcendental' is here meant to imply that the ideas have no validity with reference to what lies beyond consciousness, and are accordingly not 'transcendent.' They are, in fact, immanent in experience, but are nevertheless truly *a priori*, are not derived from experience, and are only to that extent above or beyond experience. Such is the implication of Kant's original and noteworthy use of the term 'transcendental'—in contrast to 'transcendent'—as meaning 'making experience possible by means of ideas.' Kantianism has also been called a formal intra-experiential rationalism. Some, again, describe it simply as an epistemology—a designation which, however, must be received with circumspection, and which has given rise to much misconception. Since the days of the Sophists and Plato nearly all systems of philosophy have had an epistemology; this, however, was merely the pre-condition of, or the preparation for, the system proper, which might vindicate or deny the metaphysical knowledge of things. In Kantianism, however, the epistemology is actually the system itself, since for it valid truth or reality lies in the necessary character which it proves to be inherent in the activities of thought. The subjective necessity of the functions of arrangement and interpretation yields the only objective knowledge attainable by man—a knowledge which, in virtue of its being grounded in that necessity, is indeed genuinely objective. For similar reasons Kant's teaching has been known since Fichte's day as a *Wissenschaftslehre*, *i.e.* a gnoseology or doctrine of science, since its aim is to determine the possibilities and limitations of science—the knowledge of the real. So understood, it would be the theory of cognition upon which is based the systematic development of knowledge in the special sciences. But, in view of Kant's extension of the *a priori* from the field of science proper to ethics, teleology, and æsthetics, the designation is undoubtedly too narrow. In point of fact, Kantianism is a theory of reason in all the aspects of its *a priori* functions; it is a Platonism without Plato's metaphysics.

3. **The structure of the system.**—Except in its most general features, the actual structure of Kant's philosophy could not be inferred from the foregoing account of it as a whole. It is the fruit of earnest and persevering reflexion, and its most important sections are those devoted to the solution of intricate special problems. These cannot be dealt with here. Of peculiar importance are the movements by which Kant proceeds from his original interest in the scientific conception of nature to the consideration of ethics, religion, and æsthetics. He grapples with these various subjects one after another, and deals with them according to the procedure applied in his primary field of interest, viz. the conception of nature. But, as might be expected, the changes of the subject-matter involved also certain amplifications and modifications of the method itself.

(*a*) *The theoretic philosophy*.—The first product of his mature and critical period was *Kritik der reinen Vernunft* ('Critique of Pure Reason')—the work in which he determines the significance of *a priori* ideas for the formation of a conception of nature embracing the totality of things. At the very outset (and this is of decisive importance for all his subsequent work) he shows that even experience of the most elementary kind—sense-impressions as apprehended and ordered in time and space—contains an *a priori* element, *i.e.* an element which does not emanate from experience, but rather creates it and makes it possible. Time and space are transcendental conditions of experience, already involved, no doubt, even in our naive and preconscious state, but recognizable by consciousness as such conditions in the self-analysis of reason. This signifies, as against Hume's doctrine of the purely analytic character of mathematics, the synthetic nature of the spatial and numerical judgments of mathematics. It also signifies, of course, that space and time exist only in their application to possible sensuous experience, and that they have no function whatever outside such experience—a view in conformity with which the possibility of a supra-experiential metaphysics is at the very outset greatly attenuated, since a space-less and time-less reality is for us absolutely unimaginable and inconceivable. To his doctrine of time and space Kant gives the name 'transcendental æsthetic,' the word 'æsthetic' meaning here, of course, not a critique of art, but the science of the laws of sense-perception. From this significant opening Kant then proceeds to his second great theme, the 'transcendental analytic,' the theory of the categories. Here he shows that, just as sensibility involves *a priori* forms of perception, so the so-called empirical investigation of nature contains *a priori* principles of combination and relation, and, above all, the conceptions of substantiality and causality. These principles, already naively and unsystematically used in the most ordinary thinking, are simply disengaged in a pure form by the all-embracing mathematico-mechanical science of nature, and so developed into the conception of

the rational articulation of nature as a whole. To the conception of nature, according to Kant, belong also psychical phenomena, the relations of which to physical facts and to one another must likewise be dealt with by the principles of this conception of nature. The consequence of such a view is, of course, determinism. Then, as with psychical phenomena, so with the process of history, this too being incorporated in the conception of nature, though it must be admitted that Kant did not here give any further consideration either to psychology or to history. Another and very important consequence of his argument is that the categories have validity only when applied to experience within consciousness, and that they fall into sheer vacuity whenever we attempt to carry them beyond that field. Their function is confined to the relation of form and matter, and, where there are no data of experience for them to encompass, they become void. This brings us to the most significant result of all—positively, to a conception of nature as partly conditioned by *a priori* forms of reason, and, therefore, also to the comprehension of the entire manifold of experience under rational laws; and, negatively, to the rejection of every attempt to apply these forms and categories to anything that may lie beyond, anterior to, or behind experience—in other words, to the impossibility of all rational metaphysics.

Nevertheless, the need for such a metaphysic constantly re-asserts itself, and with this Kant deals in the third great division of his *Critique*, viz. the 'transcendental dialectic.' Here he shows that, while the need of a rational metaphysic is perfectly warranted, and belongs, in fact, to the *a priori* function of reason, yet it cannot be satisfied by means of a rational investigation, as the conceptions employed for the purpose by ordinary metaphysics are simply the categories of substantiality and causality used without application to experience, and so working in a mere void. That need, for which the theoretical reason can accordingly make no provision, can be satisfied only by the convictions of the moral will. Only in the sphere which we are compelled to think of as lying behind the moral will do we find that which the need for metaphysics has a right to demand. The theoretical reason can lend support to these moral convictions only indirectly—only in so far as its intra-experiential rationalism posits the unknown behind all experience and behind the thinking subject, and because, by restricting the conception of nature to experience, it nullifies every attempt to find matter for the conception of nature in the transcendent sphere. Kant could accordingly say that he had abolished (metaphysical) knowledge in order that he might make room for (moral) faith.

(*b*) *The ethical and religious philosophy.*—This subject—the moral judgment and the metaphysic of faith based upon it—is dealt with in Kant's second great work, *Kritik der praktischen Vernunft* ('Critique of Practical Reason'). In this he extends his peculiar and original method of deducing the *a priori* in experience to ethical judgments. These are, in the first instance, elicited psychologically, and, in view of their peculiar nature, characterized as imperatives, *i.e.* judgments regarding what ought to be—imperatives, in fact, of absolute authority, the nature of which appears in the fact that reason affirms them unconditionally, and regards them as universally binding, and that they appeal to the dignity of man which is to be attained in obedience to their 'ought.' They thus present themselves, like the *a priori* forms and categories of the theoretical reason, as purely formal judgments. Their function, however, is not to apprehend the matter of experience, but to determine the motives of the will. They must all be brought under the Categorical Imperative, *i.e.* the moral judgment which is distinguished from all others by its being formally unconditional. Man's recognition of an unconditional 'ought' constitutes his true dignity and his true personality, and forms also the link that binds human beings together as persons. It is true that, so far, we have here only a moulding of the countless empirical motives of the will by a judgment that issues *a priori* from the soul—a judgment which bids us act unconditionally upon the personal conviction of conscience. We are not yet, it would seem, within the domain of metaphysics at all. But, as a matter of fact, we are; for the Categorical Imperative, unlike the logical category, does not govern its matter wholly by its own might, but is conditioned by the resolve of a will which thereby rejects other possible alternatives. Here, indeed, we come into touch with the fact of freedom—the power of submitting or surrendering ourselves to a law felt to be of unconditional authority. The realm of theoretical reason contains nothing analogous to this. In the fact of freedom, therefore, Kant sees the gleam and manifestation of an altogether different realm—the supersensuous, metaphysical, intelligible world which is not subject to the conception of nature, but is of a character all its own and beyond the grasp of all theoretical reason.

It cannot certainly be asserted that Kant succeeded in reconciling the anti-rational metaphysical freedom here discovered with his conception of nature and the deterministic psychology which it involves. All the more important to him, therefore, was the manifestation, thus authenticated, of a realm distinct from nature, a world which vindicates its existence to man as a moral agent, and which Kant usually calls the intelligible world. Having thus posited a metaphysic based upon practical, ethical grounds, he proceeds to set forth its further implications. From it issues the idea of an intelligible realm of spirits, with the Moral Law as its focus, which may also be represented as Deity. The question as to the relation of this intelligible realm of the good to the physical and natural world carries him to the postulates of a divine universal order that keeps both realms in harmony, and of an immortality in which the antinomies of earthly experience may be reconciled. These two postulates, again, lead us once more to the idea of God. Such is the way in which the metaphysic of the religious postulates involved in his ethics and actually deduced from the fact of freedom is developed by Kant as his philosophy of religion, and this he sets forth more distinctly in his *Religion innerhalb der Grenzen der blossen Vernunft* ('Religion within the Limits of mere Reason'). The religious implications of these postulates he regards as constituting the kernel of Christianity in the only form in which it can now be maintained.

(*c*) *The æsthetic and teleological philosophy.*—There remains still another function of pure reason, viz. that which finds expression in the teleological conception of reality as subservient to the ends of spirit. As reality, in relation to the beholder, is felt to have meaning and purpose also in art and in æsthetic satisfaction, Kant deals with both the teleological and the æsthetic judgment in his third great work, *Kritik der Urtheilskraft* ('Critique of the Faculty of Judgment'). In this work, following the method of his earlier *Critiques*, he shows that in our teleological conceptions likewise there is an *a priori* mode of judgment that emanates from the very nature of reason. The design, or purposive character (*Zweckmässigkeit*), of the world cannot be metaphysically demon-

strated, but it asserts itself in an *a priori* type of judgment or interpretation as an irresistible conviction. We cannot fail to see how far apart this *a priori* lies from that of theoretical science, as also from that of the ethico-religious sphere. It implies no theoretical and logical certainty, no ethically imperative obligation, but a process of interpretation that plays freely upon things, making as if these subserved a kingdom of spiritual ends. The teleological interpretation is thus closely related to the artistic. In the latter, however, 'end' has a peculiar meaning: the æsthetic end of the beautiful is a disinterested end; it is that inner harmony of the contemplated object in which the necessity of nature and the freedom of the spirit seem to coincide, and in this apparent coincidence lies the end that gives us pleasure. The beautiful is, in fact, the harmony of the real, which is otherwise always in discord with itself, and it exists only in the contemplating and formative subject; but, as in contemplating it we simultaneously feel an *a priori* necessity, it is of more than merely individual or transitory validity. The beautiful is thus the symbol of the inner unity of the real—a unity which cannot be demonstrated by theoretic metaphysics. As such a symbol it has an essential function in the domain of reason, since it guarantees from the side of the subject that conception of reality which could otherwise be fabricated only by a teleological metaphysic, though, of course, never really attained by it.

(*d*) *Defects of the system.*—With the *Critique of Judgment* Kant completed his discussion of the series of great philosophic problems which lay within his view. As was indicated above, his survey lacks a systematic psychology, while at the same time a psychological basis is presupposed in the tripartite division of his critical work as well as in his exposition of the functions of reason to which he devotes his several *Critiques*; and this ambiguous attitude towards psychology has been much criticized. The system likewise lacks a properly developed logic—a want which is all the more felt because Kant carefully distinguishes his own transcendental logic from the formal logic of the Aristotelian type. He used the latter as the starting-point and guiding thread of his philosophy; the former, as a theory of an intra-experiential rationalism, constitutes the actual content of his system. He nowhere definitely explains the relation between the two, and yet that relation is felt to be of the utmost importance whenever we ask upon what theory of knowledge his distinctively epistemological system is constructed. Nor did Kant give any special consideration to history; all that he provides in this field is a few short studies in which certain principles for an estimate of history are deduced from his ethical philosophy of religion.

4. **The further development of the Kantian philosophy.**—For a time the system of Kant in its original form seemed to German thinkers the only possible philosophy—philosophy, indeed, in its absolute and final expression. After the lapse of a decade or two, however, this attitude was abandoned, and the system has since been amended, supplemented, or transformed from many points of view. It has nevertheless maintained its position as the nucleus of German philosophy, and even to the present day all the great systems either emanate directly from it or define their position by critical reference to it. The later modifications arose partly from the system itself, in which lay the seeds of various germinative ideas and various possibilities of development, partly also from the influence of certain general movements of contemporary thought which assimilated it or mingled with it. We may distinguish three main lines of development.

(*a*) *The metaphysical development.*—In its view of consciousness and the *a priori*, the Kantian theory undoubtedly contains metaphysical elements which it took over from Leibniz, but did not recognize or define as metaphysical. If, however, we follow up Kant's idea of consciousness—if we ask, as Leibniz had asked, why individual minds agree with one another, how consciousness is related to the data of experience, and what is the source of the *a priori* in consciousness—we are brought once more to metaphysical problems akin to those of Leibniz, and, in particular, to the idea of the absolute consciousness, or God, and the task is then to find a way back to the individual reason. A metaphysic of this kind—partly influenced, no doubt, by the ethical and literary tendencies of the time—was evolved from Kantianism by Fichte, Schelling, Hegel, and Schopenhauer; and, just as such metaphysic sprang directly from Kant himself, so it is still drawn by many thinkers of to-day from the neo-Kantianism of recent times.

(*b*) *The psychological development.*—It was possible to proceed in a directly opposite way, and to emphasize and further develop the anti-metaphysical aspects of Kantianism. Those who took this course proposed to regard the *a priori* as assigning the final limits to specifically human knowledge, and to dissolve in it all relations to a 'consciousness in general.' Instead of a conception of things still inherently metaphysical, there thus emerges an anthropological conception which sees in the *a priori* our only organ of experience, and in its limits our essential limitation. Such is the teaching of J. F. Fries (1773-1843), who regarded himself, in contradistinction to the metaphysicians, as the true continuator of Kant. Once the *a priori* had come to be interpreted in a manner essentially anthropological, however, it was impossible to evade endeavours to derive and explain it; and, if such procedure could not look for support to metaphysics, the *a priori* necessarily became the object of psychology, its apparently absolute objectivity being explained by social psychology and the emotion of reverence. Thus transcendentalism was resolved into relativism, psychology, and even pragmatism. An instance of the first is the philosophy of Simmel; of the second, that of Vaihinger.

(*c*) *The epistemological development.*—Finally, it may be regarded as Kant's great design to keep clear of both metaphysics and psychology, and to safeguard those presuppositions of all logic and all science which form the groundwork of correct thinking. Philosophy in that case is exclusively a doctrine of the *a priori* conditions of science, and of its vindication as an entirely independent and inwardly necessary activity in which the autonomous and ideal nature of the spirit finds expression. This view of the *a priori* is one that adheres rigidly to the *Critique of Pure Reason*, and altogether disregards the *a priori* of the other *Critiques*, which certainly cannot be brought under the conception of purely scientific theory. Philosophy is thus transformed into epistemology and logic. This is the theory held by Cohen, Natorp, Liebmann, Riehl, Windelband, Rickert, and Husserl—thinkers who, no doubt, differ from one another in much, but are all at one in resolving criticism into logic and the theory of knowledge. Philosophy, they hold, does not cognize realities, but takes account only of the laws of reason, through which alone the real is brought within the sphere of the scientific consciousness. The methods of philosophy produce and guarantee real objects by subjecting them to thought. The critical and logical analysis of consciousness must be much more rigidly separated from the psychological and genetic analysis than was done by Kant himself. The proper

subject-matter of philosophy is logic; metaphysic is abolished, or ranked with practical convictions; psychology is a science of consciousness lying side by side with, but quite independent of, philosophy in the proper sense. We need not wonder that a theory of this kind should be met with ever renewed criticism at the hands of both metaphysicians and psychologists.

LITERATURE.—Kant's works are collected in the ed. of G. Hartenstein, Leipzig, 1867-69. A new complete ed. is being issued by the Berlin Academy of Sciences. From the enormous mass of literature relating to Kant we may select the following works: K. Fischer, *Immanuel Kant und seine Lehre*[5], Heidelberg, 1909 (=*Geschichte der neuern Philosophie*, iv. and v.); Alois Riehl, *Der philosophische Kritizismus*[2], Leipzig, 1908; H. Cohen, *Kants Theorie der Erfahrung*[2], Berlin, 1885; J. Volkelt, *Immanuel Kant's Erkenntnisstheorie nach ihren Grundprincipien analysirt*, Leipzig, 1879; G. Simmel, *Kant*, do. 1904; F. Paulsen, *Immanuel Kant: Leben und Lehre*, Stuttgart, 1898, Eng. tr., London, 1902; H. Vaihinger, *Die Philosophie des Als Ob*[2], Berlin, 1913; O. Liebmann, *Kant und die Epigonen*, Stuttgart, 1865, *Zur Analysis der Wirklichkeit*[4], Strassburg, 1911; H. Rickert, *Die Grenzen der naturwissenschaftlichen Begriffsbildung*[2], Tübingen, 1913; W. Windelband, *Präludien*, do. 1911; Paul Natorp, *Platos Ideenlehre*, Leipzig, 1903; E. Troeltsch, *Das Historische in Kants Religionsphilosophie*, Berlin, 1904; E. Caird, *The Critical Philosophy of Kant*, 2 vols., Glasgow, 1889.

Translations: *Critique of Pure Reason*, by J. M. D. Meiklejohn, London, 1897, F. Max Müller, London, 1881; *The Metaphysic of Ethics*, by J. W. Semple[3], Edinburgh, 1871; *Critique of Practical Reason, and other Works on the Theory of Ethics*[3], by T. K. Abbot, London, 1879. A copious bibliography is given in *DPhP* iii. [1905] 286-320. E. TROELTSCH.

**KAPĀLA-KRIYĀ.**—*Kapāla-kriyā* (Skr. 'skull-rite') is the Indian ceremony of breaking the skull of the corpse, performed at the cremation or at the burial of a member of an ascetic Order.

'We are told in the Garuḍa-purāṇa that when a man [who, from his evil deeds during life or from some defect in the proper ceremonies at his decease, becomes subject to Yama's penalties] dies his spirit takes a downward course through the intestines and emerges in the same manner as the excreta; whereas . . . the spirit of a good man finds its way through the tenth aperture of the body, which is a suture at the top of the skull, called the Brahma-randhram, "Brahma's crevice"' (M. Monier-Williams, *Brāhmanism and Hindūism*[4], London, 1891, p. 291).

This orifice is also known as the *suṣumṇanāḍi*, 'blessed channel.' It is further believed that Sannyāsī or Yogī ascetics, whose spirits pass through the crown of the head, go straight to heaven. Such a man, it is said, by the force of his austerities, has the power of concentrating his soul in the crown of his head and of dying at will, when the soul leaves the body through the *brahmarandhram* (*BG* xv. i. [1883] 150 n.).[1] The corpse of such a teacher is placed in the grave in a sitting posture, and his successor in office, to effect the release of the spirit, strikes a coco-nut or a conch-shell on the skull, and in the opening thus formed lays the sacred ammonite, the *śālagrāma*. The Chuvashes of E. Russia similarly believe that the soul leaves the body through the back of the head (J. G. Frazer, *JAI* xv. [1886] 83 n.). It is remarkable that in the Neolithic Age and among some modern savages it was the custom, in cases of epilepsy or similar maladies believed to be the work of evil spirits, to trepan the skull of the patient so as to give exit to the evil spirit (A. W. Buckland, *JAI* xi. [1882] 7 ff.; W. Johnson, *Byways in British Archæology*, Cambridge, 1912, p. 321). Among the Buddhists of Sikhim,

'after advising the spirit to quit its body and its old associations and attachment to property, the Lāma seizes with the forefinger and thumb a few hairs of the crown of deceased's head, and plucking it forcibly is supposed to give vent to the spirit through the roots of these hairs; and it is generally believed that if the *hphobo* [Lāma] is, as he should be, a Lāma of exceptional virtue, an actual perforation of the skull occurs at this instant through which passes the liberated spirit' (L. A. Waddell, in *Gazetteer of Sikhim*, Calcutta, 1895, p. 379; cf. his *Buddhism of Tibet*, London, 1895, p. 489).

[1] On the importance which is attached to the openings of the body in magico-religion see W. R. Halliday, *Greek Divination*, London, 1913, p. 175.

Hence arises the belief that the cutting of a lock of hair from the top of the head facilitates the departure of the soul (Frazer, *loc. cit.*). In India the rite of smashing the skull is generally performed when the corpse is half burnt, the chief mourner using a piece of sacred wood or a bamboo for the purpose.

**KAPILA.**—The name of the founder of the Sāṅkhya system (see SĀṄKHYA). Since all Indian tradition is unanimous in recognizing under this name the author of the Sāṅkhya school, we are unquestionably bound to see in Kapila a historical person, who, as is proved by the dependence of Buddhism on his teaching, must have lived before the middle of the 6th cent. B.C. All the accounts, however, which have been preserved in the literature of the Brāhmans relating to the life of Kapila are so full of legends and contradictions that we are unable to attribute to them any historical value. The information given by the Buddhist authorities with regard to him deserves more serious consideration, since they connect Kapila with the name of the city of Kapilavastu, the birthplace of the Buddha, and ascribe to him, therefore, a sphere of activity the geographical site of which agrees well with the internal relations which subsist between Buddhism and the Sāṅkhya philosophy.

No work by Kapila has been preserved. For that the *Sāṅkhya-sūtras* are an entirely modern work, and have no claim to bear his famous name, has long been an established conclusion. We have no real ground for supposing that any compositions at all are due to his authorship.

LITERATURE.—R. Garbe, *Die Sāṃkhya-Philosophie*, Leipzig, 1894, p. 25 f.; F. Max Müller, *Six Systems of Indian Philosophy*, London, 1899, p. 287 ff. R. GARBE.

**KAPILAVASTU.**—Kapilavastu (-vatthu, -nagara, -pura), interpreted either as 'tawny town' or as 'the town of Kapila' (a mythical sage), according as the first element of the word is taken to be an adjective or a proper name, is the name of the town famous in legend as the ancestral home of Gautama Śākyamuni, the Buddha, commonly called Buddha. The four great holy places of Buddhism from very early times were Kapilavastu, Gayā, Benares, and Kuśinagara, associated respectively with the birth, enlightenment, ministry, and death of the Master (see art. BUDDHA). The myths descriptive of the foundation of Kapilavastu, which assume diverse forms, all equally unhistorical, are summarized as follows by Watters ('Kapilavastu in the Buddhist Books,' *JRAS*, 1898, p. 535):

'This city, according to the mythical accounts of the Buddha's royal ancestors, had been founded by the sons of an Ikṣvāku king of the Solar race. The king who reigned at Potalaka, according to some, or at Sāket, according to others, yielding to the entreaties of his wife or concubine, drove his four sons into exile. These princes, accompanied by their sisters and a large retinue, went northwards, and after a long journey halted at a pleasant suitable site near the hermitage of a rishi [sage] named Kapila. The rishi welcomed the exiles, and with solemn rite gave over to them a piece of ground on which to settle and build their city. When the city was laid out and occupied, the settlers called it in gratitude Kapilavastu or Kapilanagara, from the name of their kind patron. This happened in a period of remote antiquity. The city of Kapilavastu thus founded was, according to the generally received accounts, situated near, or at the southern slopes of the Himavat [Himālaya] mountains and in the kingdom of Kosala. . . . It must be noticed, however, that in some of the Chinese texts the site of Kapilavastu is placed in a district to the north of the Himavat, the royal exiles being represented as having crossed this range and settled on the south side of a mountain beyond. . . . But the majority of the texts is in favour of the supposition that the city was situated on or near the southern slope of the Himālaya. This position, which is indicated by the earliest Indian texts,

must be accepted as the correct one, because the town, notwithstanding the mythical tales of its origin, had a real existence to the south of the mountains. Its site continued to be visited by a series of Chinese pilgrims for several centuries after A.D. 400, and even now, in spite of obscurities in detail, can be identified to a certain extent with ruins situated in the plain not many miles distant from the outermost Himâlayan range.

The *Lalitavistara* and other works which profess to tell the story of Buddha's infancy and early life are full of glowing descriptions of the material glories of Kapilavastu, and of the magnificence of the royal court supposed to have been held there by Râjâ Suddhodana, father of Gautama Buddha. But these tales are purely works of imagination without any basis of solid fact. The real life-story of Buddha is almost completely lost, and the romance which does duty in the books for his biography will not bear criticism. There is no sound reason for believing that either he or his father ever enjoyed the position of regal magnificence ascribed to them by the pious imagination of later ages. Even some of the Buddhist treatises, as Watters points out, describe Kapilavastu as 'a small unimportant town without any attractions,' too small for the accommodation of the growing families of the legendary Ikṣvâku princes. The real Kapilavastu, although raised to a certain degree of ecclesiastical grandeur by the erection of monasteries and other religious buildings after the time of Aśoka, never can have been a large and wealthy city.

Tradition placed the actual scene of the nativity, not at Kapilavastu itself, but at a grove or garden called Lumbinî, some miles to the eastward. There the holy infant was fabled to have sprung from his mother's right side as she stood under a tree, to have been caught in the arms of the gods, and forthwith to have taken seven steps, and proclaimed himself Lord of the World. The legend of these and other supposed incidents of the nativity was well established by the beginning of the Christian era, and supplied subjects for long mythological narratives and numerous works of art. Writers and sculptors found equally welcome material in the many miracles with which the imagination of the faithful adorned the early life of the founder of their religion. All these marvels were closely associated with Kapilavastu. A specially favourite topic was the story of the departure of the young prince from the gate of his father's palace, as he started on his journey into the wilderness in order to assume the mendicant's robe and to live the hard life of a begging friar. Certain bas-reliefs described by A. Foucher (*L'Art gréco-bouddhique du Gandhâra*, Paris, 1905, p. 360) exhibit the figure of a personification of Kapilavastu in the conventional garb and pose of a Greek city-goddess lamenting the loss of her youthful lord. After he had obtained full enlightenment under the Bodhi-tree at Gayâ (*q.v.*), Gautama was believed to have paid two visits to his Śâkya relatives at Kapilavastu. The wondrous words and deeds attributed to him on those occasions will be found detailed in all the works dealing with the legendary history of Buddhism. His final visit to his ancestral town is associated with the legend of its destruction by King Viḍûḍabha (*alias* Virûḍhaka, etc.). Like the connected fairy tales, this story is told in more ways than one, but all the narratives agree that Viḍûḍabha either expelled or massacred almost all the inhabitants. Gautama sighed over the desolation of the place, which he had tried in vain to prevent, and departed, vowing that he would never return. From that time Kapilavastu passed almost out of existence, and it is certain that the first authentic record of the site at the beginning of the 5th cent. A.D. represents the town and its neighbourhood as a wilderness nearly uninhabited. A curious group of seventeen small *stûpas* discovered at Sâgarwâ, two miles north of Tilaura Kōṭ, in Jan. 1898, by A. Führer, and destroyed by his excavations, may possibly mark the traditional scene of the massacre of the Śâkyas by Viḍûḍabha. At the level of the foundations of each of these structures the lowest layer consisted of nine, seven, or five bricks, the central brick of each being carved with the design of a full-blown lotus, under which the relic-caskets were placed embedded in the soil. The other bricks of the layer had figures of maces, tridents, axes, and other ancient weapons stamped upon them, which indicate that the monuments were erected in memory of a band of warriors regarded as sacred persons. If the massacre of the Śâkyas by Viḍûḍabha really occurred, it must be dated about 500 B.C., or a little earlier, the date of the death of Buddha being taken as *c.* 487 B.C.

In those legendary days the territory of Kapilavastu seems to have been a dependency of the kingdom of Kosala, which was equivalent approximately to the modern province of Oudh. The books enumerate a considerable number of towns and villages as situated within the borders of the Kapilavastu country, but none of them can be identified, and at the date of our first authentic and detailed account of the region all those towns and villages had decayed. There is little reason to expect that the sites of most of the various settlements mentioned in the Buddhist treatises will ever be determined. A city designated variously by the names of Koli, Devadaha, and Vyâghrapura, which lay to the east, some miles beyond the Lumbinî garden, was intimately associated with Kapilavastu by tradition, and there are some grounds for thinking that its position may be ascertained by local investigation. The introduction to the *Kuṇâla Jâtaka* (no. 536 in tr. by H. T. Francis and E. B. Cowell, vol. v., Cambridge, 1905) narrates a curious story about a threatened fight between the inhabitants of Devadaha and those of Kapilavastu concerning disputed claims to water for irrigation.

About 249 B.C. the emperor Aśoka (*q.v.*), under the guidance of his preceptor, Upagupta, performed a pilgrimage in state to the spots sanctified by the sojourn of Buddha. The first place visited is said to have been the Lumbinî garden, the scene of the nativity. The fact that Aśoka actually came to that spot is placed beyond doubt by the inscribed pillar at Rummin-dēī, which was erected by the emperor in the twenty-first year after his coronation, to commemorate his visit. Thence Aśoka proceeded to Kapilavastu, and the inclusion in his tour of that locality, only a few miles distant from the Lumbinî garden, is attested by another inscribed pillar now lying by the side of the Nigâlî tank, but not exactly in its original position. The inscription, however, does not mention the name of Kapilavastu. The literary tradition (*Aśokâvadâna*), which professes to give the details of the imperial pilgrimage, locates at Kapilavastu a number of legends, which probably were not invented until after Aśoka's time.

The earliest definite description of the town of Kapilavastu and the surrounding country is that given by the first of the Chinese pilgrims, Fa-hian (Fa-hsien), who was shown round the reputed holy places at the beginning of the 5th cent. A.D., about six hundred and fifty years subsequent to the pilgrimage of Aśoka. In or about A.D. 636, Hiuen Tsiang (Yuan Chwang), the most learned and eminent of the Chinese pilgrims, followed his predecessor's example, and, under the guidance of local monks, minutely examined and carefully recorded the positions of the numerous localities at or near Kapilavastu associated by tradition with the legend of Buddha. All modern attempts

to identify existing ruins with Kapilavastu necessarily have for their basis the descriptions recorded by the two pilgrims named, which are the only extant ancient detailed accounts of the town. The topographical and archæological problems suggested by the pilgrims' narratives are far too complicated for discussion here, but a brief notice of the travellers' observations is indispensable.

The visit of Fa-hian to Kapilavastu may be dated with approximate accuracy in A.D. 403. He found there 'neither king nor people.' The site of the city was marked only by desolate ruined mounds, and was uninhabited save for a few monks and a score or two of the common people. The surrounding country was equally deserted, the inhabitants being few and far between, and the roads infested with wild elephants and lions. The monks who clung to the dreary ruins and acted as guides to pilgrims were not embarrassed by philosophic doubts, and had no hesitation in pointing out the exact spots where Gautama sat under a tree, met his father, and so forth. Fa-hian, too, was easy of belief, and found no difficulty in accepting as gospel truth all that was told him by his guides. Hiuen Tsiang, notwithstanding his erudition, was equally credulous, and was shown even more 'sights' than his predecessor. The country continued to be in much the same state as in Fa-hian's time, the city of Kapilavastu being so utterly ruined that its limits could not be ascertained. But the solid brick foundations of the central 'palace city' were still visible, and were estimated to measure nearly three miles in circuit. This walled town is not mentioned by Fa-hian, who places Kapilavastu about nine miles to the westward of the Lumbini garden. Hiuen Tsiang locates his Kapilavastu some fifteen or sixteen miles from the same point. Now the site of the Lumbini garden is determined beyond the possibility of doubt, as already observed, by the Aśoka inscription, which, it may be added, is supported by other cogent proofs. The discrepancies between the two pilgrims in the matter of the distance from the fixed point, and in sundry other particulars, show that different places must have been pointed out to them as being Kapilavastu.

Local investigation, in which the present writer took a share, makes it clear that the 'palace city' of Hiuen Tsiang is represented by the ruined walled town now known as Tilaura Kōṭ, while the Kapilavastu of Fa-hian must be identified with the group of ruins near the village of Piprāwā, about ten miles S.S.E. from Tilaura Kōṭ. This conclusion, although in reality inevitable from the premisses, has been criticized as being incredible, but a little consideration diminishes the apparent improbability. The town, according to tradition, had been utterly destroyed more than 900 years before the visit of the earlier pilgrim, and more than 1100 years before that of his successor, and both the pilgrims found the region in a state of utter desolation. It is obvious that, if there is any truth in the tale of the destruction of the place by Viḍūḍabha, genuine knowledge in detail of the particular holy spots so glibly pointed out by the local guides could not possibly have survived, and that their identifications must have been fanciful. As Watters observes (*JRAS*, 1898, p. 543), they failed to show the Śākyas' assembly-hall and other objects frequently mentioned in the books, the reason apparently being that the guides either did not know where to place them or had never read the books in which they are described. The same inference may be drawn from their silence respecting the now famous Piprāwā *stūpa*, the most interesting building in the whole region, which is not mentioned by either pilgrim. Evidently it had been completely forgotten. The whole of the 'identifications' recorded in detail by the pilgrims have a fictitious and unverifiable aspect. The walled town of Tilaura Kōṭ was much better suited than the Piprāwā ruins to fit in with the legend of the regal splendour of Kapilavastu, and it does not seem incredible that the site associated with the legend should have been moved in the course of more than two centuries. Whatever may be the correct explanation of the ascertained facts, the present writer adheres to the opinion published by him in 1901, that the Piprāwā group of ruins represents the Kapilavastu of Fa-hian, while Tilaura Kōṭ and the neighbouring remains represent the Kapilavastu of Hiuen Tsiang. The known position of the Lumbini garden and the local conditions limit the possible alternatives to these only.

The Piprāwā *stūpa*, alluded to above, when opened by W. C. Peppé in Jan. 1898, proved to have been built for the purpose of preserving a great sandstone coffer, in which were placed five vessels, one being of rock-crystal and four of steatite. Sundry minute fragments of bone distributed among the vessels were accompanied by more than a thousand gold stars and minute jewels, mostly of exquisite workmanship. The bits of bone evidently were the relics in honour of which the jewels were deposited and the *stūpa* erected. An inscription scratched round the lid of one of the vases in very ancient Brāhmi script, probably earlier than that of the Aśoka period, is interpreted by Barth, Bühler, Rhys Davids, and Pischel as meaning that bodily relics of the Blessed Buddha were deposited by his brethren the Śākyas with their sisters, sons, and wives. Fleet disputed the accuracy of this rendering, proposing to read the inscription as recording the deposit of relics of Buddha's relatives and not those of Buddha himself. The knowledge of the most ancient Prākrit is not yet sufficiently advanced to warrant a final solution of the linguistic problem presented by the inscription, but it may be said that Fleet's view is open to grave objections, and that the current interpretation probably will prove to be substantially correct. If this should be the case, the opinion of Rhys Davids that the Piprāwā *stūpa* is that erected by the Śākyas over their share of the relics from Buddha's funeral pyre may be defended with good reason, and the present writer's theory that Piprāwā represents the Kapilavastu of Fa-hian will receive strong support. The numerous archæological problems suggested by the imperfectly known remains in the Nepālese *tarāi* and adjacent districts of British India—Bahraich, Bastī, Gorakhpur, and Champāran—are so closely interwoven with the history of Buddhism that the solution of them would be a matter of world-wide interest. But they cannot be solved without patient and scientific exploration, conducted for an adequate time by competent persons, equipped with sufficient funds and appliances, and heartily supported by the governments of both India and Nepāl. Unfortunately there is little reason to suppose that these conditions will be soon satisfied; and in all probability the mystery of Kapilavastu will continue for many years to be the sport of unverified conjecture.

The following indications will enable the reader to trace on any large-scale map of India the approximate positions of the places named in this article. The Lumbinī garden is represented by the mound now known as Rummin-dēi, *i.e.* 'goddess of Rummin.' In the ancient Māgadhī dialect, in which the inscription on the pillar was written, initial *R* is replaced by *L*, so that *Lumbinī* or *Lumminī* is identical with *Rummin*. The mound is situated in the Nepālese *tarāi*, about six miles north-east of Dulhā in the British District of Bastī, and is in Tappa Rummin-dēi, about two miles north of Bhagwānpur, the head-quarters of the Nepālese *tahsil*, or subdivision, and one mile north of the village called Paḍariā or Pariā. The Tilār river, the 'river of oil' of Hiuen Tsiang (*tel*='oil'), flows a short distance to the east of the mound. The nearest railway station is Uskā, on a branch of the B. and N. W. Railway. The position of the mound approximately is 27° 29′ N., and 83° 20′ E., about 50 miles in a direction slightly west of north from Gorakhpur (26° 45′ N., 83° 22′ E.). The village and Buddhist ruins of Piprāwā stand on the Birdpur estate of W. C. Peppé, near boundary pillar no. 44, and just inside the border of the Bastī District. The direct distance from Rummin-dēi, in a direction south of west, is barely 9 miles. Tilaura Kōṭ, in Nepālese territory, is about 10 miles N.N.W. of Piprāwā, and 14 or 15 miles from Rummin-dēi in a north-westerly direction as measured on the map. The ruins to the S.S.W. and east of Tilaura Kōṭ extend for two or three miles. The outermost range of hills is about 12 or 15 miles to the north of the Kōṭ.

VINCENT A. SMITH.

**ḲARAITES.**—The Ḳaraites are a Jewish sect which took its rise in Babylon during the latter half of the 8th cent. A.D. Their Hebrew name is *Ḳarāim* (קראים), 'adherents,' or *Bᵉnē miḳrā* (בני מקרא), meaning 'sons of the writing,' the watchword of the sect being 'Back to Scripture from Tradition,' *i.e.* from 'Talmud.' The watchword, however, came to be a purely theoretical one, as the Ḳaraites developed a tradition of their own, the only difference being that it was called, not 'tradition,' but 'the yoke of inheritance' (סבל הירושה), and that they held as binding the doctrines and usages which, while not taught in the Bible, were recognized as obligatory by all (the קבוץ, or עדה, corresponding to the Muslim *ijmā'*, *i.e.* 'consensus'), and of which a large number had come down from those who returned from the Exile, *i.e.* from 'the good figs,' as they are designated, with an allusion to Jer $24^{5}$.

The designation 'Ḳaraites,' however, was not applied to the sect until the 9th cent. A.D. Originally they were known as 'Ananites, from the name of their founder, 'Anān b. David, of Baghdād. Our sources of information regarding 'Anān and the motives that prompted him to initiate the new movement are meagre and shrouded in obscurity; moreover, they are not altogether reliable, as, in the first place, the oldest of them are not of earlier date than the first half of the 10th cent.; and, secondly, they all show considerable bias, as emanating either from his adherents or from his opponents, the Rabbinists. They agree only in two points, viz. that 'Anān was descended from the exilarchs, *i.e.* that he was of the lineage of David, and that he was deeply versed in Rabbinic and Talmudic lore. The Ḳaraites will not admit, however, that they are a sect of late origin, or that they separated from the integral organism of Judaism. On the contrary, according to the earliest extant Ḳaraite account, viz. that of Abū Yūsuf Ya'ḳūb al-Ḳirḳisānī (or Ḳarḳasānī), as given in his *Kitāb al-'Anwār w'al-Marāḳib*,[1] written in A.D. 937, the first Jewish schism took place in the reign of Jeroboam; thereafter arose the first sect—the Samaritans—and then, at the foundation of the Second Temple, the Rabbinists, whose leader was Simeon the Just, and who simply continued the evil work of Jeroboam. These, in turn, were opposed by the party of the Sadducees, which arose under the leadership of Zadok and Boēthos. Zadok discovered a portion of the truth, but the finding of the whole truth was the achievement of the exilarch 'Anān, who lived in the reign of the Khalīf al-Manṣūr (754–775). The Rabbinists tried to compass the death of 'Anān, but God saved him from their hands. This reading of history appears in all the Ḳaraite chroniclers, and at length, in the later of them—Mordecai b. Nisan, Solomon b. Aaron Troki, Simḥah Isaac Luzki, and Abraham Firkovitch—it assumes the most fantastic forms.[2] But it is quite unhistorical, and, besides, it fails to explain the origin of the Ḳaraite teaching. The reports of the Arabic writers all show the influence of the Ḳaraite sources.[3] According to the Rabbinical records,

[1] ed. A. Harkavy, *Zap. Vost. Otdel. Imp. Russ. Archeolog. Obščestva*, viii. [1894] 247 ff.

[2] Cf. Poznanski, *REJ* xliv. 161 ff.

[3] The Arabic authors who give more or less inaccurate information about 'Anān and the Ḳaraites are: Muṭahhar b. Ṭāhir al-Maḳdisī (pseudo-Balḫī), ed. C. Huart, Paris, 1899–1907, iv. 34; al-Bīrūnī, ed. E. Sachau, London, 1879, p. 58 f.; al-Shahrastānī, ed. Cureton, London, 1842–46, i. 167; and Maḳrīzī, in S. de Sacy, *Chrestomathie arabe*[2], Paris, 1826, i. 91. That they are all dependent upon Ḳaraite writings is shown by the fact that they all speak of 'Anān as an exilarch (راس الجالوت).

again, the earliest of which is that of Sa'adya Gāôn (892–942), the motive of 'Anān's revolt was injured pride. In the election of the exilarch by the Geônīm, who did not believe in his orthodoxy, he was set aside, and his younger brother, Ḥananiah, a man of inferior learning but more staunch in the faith, chosen instead. 'Anān refused to accept this decision, proclaimed himself exilarch, and was in consequence thrown into prison. Here he made the acquaintance of a comrade in persecution—none other than the celebrated Abū Ḥanīfa, the alleged founder of the Ḥanifite School,[1] who is said to have advised him to appeal to the Khalīf as the champion of another religion. In this way 'Anān was induced to take the path that led to schism.

That personal motives played a part in the action of 'Anān may well be the case, but in the light of religious history it is quite impossible to suppose that personal motives alone could have created a movement which maintained a vigorous life for centuries. The truth is that in the 7th and 8th centuries the foundations of Judaism in the East were most insecure. The rise of Islām and the religious conflicts within its pale, the influx of general knowledge, and other factors of the kind acted with revolutionary effect upon the Jewish mind, and gave rise to various sects, as, *e.g.*, that led by Abū 'Īsā al-Iṣfahānī (end of the 7th cent.), who was partly a pseudo-Messiah and partly a sectary, and who acknowledged the prophetic character of both Jesus and Muḥammad; that of his pupil Yudghān, and others. It is possible, moreover, that Sadduceeism had not wholly died out, and in some form or another made itself felt as an underlying force in religious life. But the Sadducees and the Ḳaraites were at one, above all, in their adherence to the written Word and their rejection of oral tradition; and then, secondly, in their acceptance of certain tenets which have been handed down as expressly Sadducean, as, *e.g.*, the literal application of the *ius talionis* (Ex $21^{24}$), the interpretation of ממחרת השבת (Lv $23^{15}$) as meaning the Sabbath, so that the Feast of Weeks should always fall on the first day of the week, etc. The first to draw attention to this relationship was A. Geiger,[2] according to whom there was, in addition to the common Halākhā that was ultimately deposited in the Talmud, an older Halākhā, which is dimly traceable in the earlier Talmudic writings, and was common to the Samaritans, the Sadducees, and, subsequently, the Ḳaraites. Other indications of the relationship are found in the statements of Ḳirḳisānī already referred to, in the writings of the many Rabbinists (Sa'adya, Abraham b. Da'ūd, Judah Halevi, Abraham ibn Ezra, Maimonides, etc.) who simply identify the Ḳaraites and the Sadducees, and, finally, in the fact that not only Sa'adya, but also Ḳaraite writers of the 10th cent., had 'Sadducean writings' in their hands.[3] It was with these various elements, to which others were subsequently added, that 'Anān instituted his movement.

'Anān is said to have expressed his distinctive tenet in the bipartite formula quoted in connexion with his name by Japheth b. 'Ālī (end of 10th cent.): 'Search thoroughly in the Scripture, and do not rely upon my opinion.'[4] The primary article of

his confession is accordingly the searching of the Scripture, and it signifies that Scripture is of itself sufficient, and requires no supplement of tradition. By Scripture is meant here, not merely the legislative portion of the Pentateuch, but the whole Bible; even the narrative parts must be drawn upon for the deduction of legal ordinances. In point of fact, however, 'Anān adopted all the methods of the Talmudists, who were likewise at pains to base their oral teachings, *i.e.* tradition, upon the written Word, and he made extensive use of the thirteen canons of Rabbi Ishmael. He availed himself, above all, of the canon of analogy (היקש, Arab. *ḳiyās*), perhaps under the influence of Abū Ḥanifa, but his great aim was to read the laws always in the sense carrying the heaviest obligation. This rigour he applied very specially to the laws of the Sabbath and of marriage. With reference to the former, he extended the idea of forbidden work to such processes as, being begun on a Friday, would automatically continue on the Sabbath; thus it was unlawful to light on a Friday a candle that would keep burning till next day—Ex $35^{3}$ being interpreted in that sense—whence he enjoined his adherents to sit in darkness on Friday evenings; and similarly, reading Ex $16^{29}$ literally and as binding for all time, he forbade them to leave their homes on the Sabbath, except to attend the worship of God. The marriage law he made more rigorous in two ways: interpreting Gn $2^{24}$ literally, he maintained that husband and wife were really one flesh, so that, *e.g.*, the wife's brother was to be regarded not as the husband's brother-in-law, but as his brother; while, again, applying the method of analogy here too, he extended the forbidden degrees to all collateral lines, whether ascending or descending.[1] This so-called *rikkūb* ordinance (רכוב) put great obstacles in the way of intermarriage among the Ḳaraites. Of 'Anān's other innovations special mention may be made of his reconstruction of the calendar: he bade his followers determine the months according to the earlier method, *i.e.* observation of the new moon, and fix the intercalary month in view of the condition of the crops (cf. art. CALENDAR [Jewish], vol. iii. p. 118 f.). In this matter, too, he brought his adherents to a state of mischievous confusion, as in different localities they celebrated the festivals on different days,[2] and evil results followed also from his discarding the prayers hitherto in use, and substituting for them the recitation of psalms and verses from Scripture. Other regulations introduced by him relate to details of the laws about food and ceremonial purity, of feasts and fasts, of circumcision, and many other things. His injunctions, moreover, are pervaded by a strain of gloom. He forbade the Jews of the Diaspora to eat flesh, as, according to his interpretation of Dt $12^{20}$, the use of such food was dependent upon the existence of a sanctuary and a sacrificial ritual. It should also be noted that, notwithstanding his adherence to the literal meaning of Scripture, he interpreted many of the Biblical laws in an allegorical sense.[3]

'Anān set forth his views in an Aramaic writing entitled *Sēfer ha-Miṣwōth* ('Book of Commandments'), of which, however, only fragments[4] survive. He also wrote a kind of compendium of

[1] Cf. Poznanski, *Kaufmann-Gedenkbuch*, Breslau, 1900, p. 173.

[2] According to the narrative of Sa'adya already cited, 'Anān specially urged upon the Khalif that his rejection of the fixed calendar was the distinctive mark of a new religion. Generally, the calendar plays a great part in the history of Jewish sectarianism.

[4] ed. Poznanski, in *REJ* lxv. [1902] 54 ff.; Harkavy, *Studien und Mitteilungen aus der St. Petersb. Bibliothek*, viii., St. Petersburg, 1903, and Schechter, *op. cit.* ii.

that work, which is referred to by its Arabic title of *Fadhālika* (פדלכה), and survives only in a few quotations.[1] There is no dogmatic theology in either of these works, but, according to Ḳirḳisānī, their author believed in metempsychosis, and composed a work treating of it;[2] and he is further said to have held, on the authority of Lv $17^{11}$, that the essential nature of the soul consists in blood.[3] Moreover, his 'Book of Commandments' is free from all controversy with the Rabbinists, nor does it contain a single opprobrious reference to them. According to Moses Taḳū,[4] a writer of the 13th cent., 'Anān expressed a wish to have all the Jewish (*i.e.* Rabbinical) scholars inside him, and then to have a sword thrust through him, so that he and they might die together. But the witticism comes from a period later than 'Anān's.

The second clause of 'Anān's formula—'Do not rely on my opinion'—operated with disastrous effect among his early followers, who took each his own way, so that Ḳirḳisānī (ed. Harkavy, p. $285_{22}$) complains that it was hard to find two Ḳaraites who agreed in all things. There also arose in consequence various parties and groups, which, however, were all at one in rejecting tradition. The 'Anānites, the adherents of 'Anān in the narrower sense, formed a distinct sect, which survived as such till the 10th cent.; his followers in general, however, called themselves Ḳaraites.

The history of their outward and inward development may be divided into five periods: (1) the earliest (9th cent.), (2) the Arabic (10th and 11th centuries), (3) the Byzantio-Turkish (12th–16th cent.), (4) the Taurido-Lithuanian (17th and 18th centuries), and (5) the modern (19th cent. and after). To recount this varied development is, however, no easy task, the reasons being, first, that only a fraction of the Ḳaraite literature is accessible in printed form, secondly, that the Ḳaraites are deficient in the historical sense, and have left behind them scarcely any historical works at all, and, thirdly, that they mix and confound periods and persons, partly because of their defective sense of history, and partly for the express purpose of glorifying their sect, the result being that the student of their literature often feels as if he were groping about in a dark wood.[5]

**1. The early period (9th century).**—The movement initiated by 'Anān found the environment responsive, especially in Persia, where, owing to the variety of religions (Parsiism, Judaism, Christianity, Islām) strongly represented in the country, syncretistic and sectarian tendencies were widely prevalent; and, indeed, the majority of the Muslim sects and heresies, as also the earliest Jewish sects ('Isāwites, Yudghānites), originated there. In Babylonia, his native region, however, his teaching seems to have evoked less response, and this explains why the official representatives of the Jews resident there, the Geônîm, take no notice of Ḳaraism, and why, *e.g.*, the Gāôn Naṭronai b. Hillai (A.D. 853, *i.e.* almost a century after 'Anān) knows of the 'Book of Commandments' only by hearsay.[6] According to the later Ḳaraite writers, 'Anān migrated from Babylonia to Palestine, and founded the still surviving Ḳaraite synagogue in Jerusalem. These statements, however, have no historical foundation;[7] in point of fact, his descendants, who were nearly all honoured with the

title of 'exilarch' or 'prince,' are found in Egypt. Of these descendants his immediate successors are said to have been his son Saul and his grandson Josiah, of whom we know hardly more than their names.[1] Josiah is said to have been the teacher of Benjamin b. Moses Nahawandī (*i.e.* of Nahawand in Persia), who flourished *c.* 830, and with whom began a new era in the history of the sect; in fact, the Arabs speak of the Ḳaraites as 'the companions of 'Anān and Benjamin' (اصحاب عانان وبنيامين),[2] and one Arabic writer makes Benjamin the head of a distinct sect, the Benyaminya.[3] Benjamin is the first of extant authors to speak of the Ḳaraites as *Bᵉnê miḳrā* (see p. 662ᵃ); and, while 'Anān wrote in Aramaic, he used Hebrew. While he followed the Rabbinists in regard to many precepts of the Law, his method, especially with reference to the deduction of the Law from the Scripture, was more consistent and systematic than theirs. He laid greater stress than 'Anān upon the necessity of independent investigation of Scripture.[4] He applied himself also to dogmatics, and affirmed, *inter alia*, that the personage who created the world, sent the prophets, performed all the miracles, revealed the law, etc., was not God Himself, but an angel whom He had created—a view which he based upon various passages of Scripture, especially Ex $3^{2-6}$, where the angel who appeared to Moses says: 'I am the God of thy father, the God of Abraham, the God of Isaac, and the God of Jacob.' In reality, however, we have here the Logos-doctrine of Philo, whose writings, translated into some Oriental language, circulated in the East, and may quite well have been known to Benjamin.[5] Another of the latter's doctrines, founded upon Ezk $32^{27}$, was that divine penalties fall upon the bones of men.[6] He read an allegorical sense into many passages of Scripture.[7] He enjoined that the months of Nisan and Tishri alone should be determined by observation of the moon; the others, as was the practice among the Rabbinists for all months, by computation. He frequently differed from 'Anān in his applications of the Law. Of his writings only the 'Book of Laws' (*Sēfer Dīnīm*, published under the title משאת בנימן, Eupatoria, 1836) has been preserved. He also wrote a 'Book of Commandments' (*Sēfer ha-Miṣwôth*) and Biblical commentaries, of which, however, nothing is known beyond a few quotations by other writers.[8]

Daniel b. Moses al-Ḳūmisi, or al-Dāmaghānī, is spoken of as a pupil of Benjamin. As his surname indicates, he was a native of Dāmaghān, in the province of Ḳūmis (Ṭābaristān); he flourished towards the end of the 9th century. A point of special interest is his attitude to 'Anān, whom at first he designated 'the head of the wise' (ראש המשכילים), and afterwards 'the head of the fools' (ראש הכסילים).[9] In contrast to Benjamin, he was hostile to secular knowledge, and rejected reason as a means of deciding questions of religious law; and his opposition to his teacher is seen also in his denial of the existence of angels. The 'angels' mentioned in the Bible, as appears from Ps $78^{49}$ $104^{4}$, were nothing but natural forces. He was also entirely opposed to the allegorical interpretation of the Commandments, since 'God did not ordain his commandments in allegorical form.'[1] In his interpretations of the religious law he tends to favour the more severe alternative. Daniel likewise composed a 'Book of Commandments,' preserved only in a few quotations,[2] and Biblical commentaries, of which only two small fragments (on Leviticus) survive;[3] he is also referred to as the author of a work on the law of inheritance.[4]

**2. The Arabic period (10th and 11th centuries).**—This period is so named because most of the Ḳaraite works dating from the centuries indicated were written in Arabic. It is the most brilliant age of Ḳaraite literature—an age in which the sect produced theologians, grammarians, lexicographers, exegetes, teachers of the Law, controversialists, etc., some of them writers of great and lasting importance. This illustrious advance was due in part to the influence of the Rabbinists and of their now active bent towards secular science and their desire to provide a scientific foundation for Judaism; while, in turn, the Ḳaraites influenced the Rabbinists, and, in particular, constrained them to engage more profoundly in the investigation of the Hebrew language and the rational exegesis of Scripture. Modern Jewish historians (Pinsker, Graetz, Fürst), indeed, would characterize all the earlier Jewish grammarians, Massoretes, and Biblical theologians as Ḳaraites; but, while this view has been completely refuted by criticism,[5] there can be no doubt that the Ḳaraites, whose very *raison d'être* was their literal view of the Bible, devoted themselves in a special degree to the branches of knowledge in question, and often gave the initiative to the Rabbinists. Another effective factor in the movement was polemics. The passive attitude of the Geônîm had to give way before the impetus and the recruiting power of Ḳaraism; and now there arose the Gāôn Sa'adya, who as a youth of twenty-three had attacked 'Anān in a polemical work in the Arabic language (*Kitāb al-ridd 'alā 'Anān*), and who made it one of the great tasks of his life to fight against Ḳaraism. His challenge brought the Ḳaraites into the field, and the contention inspired them with new life. While the struggle was of a purely literary character, it was sometimes conducted in no very becoming way on either side, and not infrequently with a biased deviation from truth.[6] The Ḳaraites were not slow to retaliate upon their assailants, and directed their pointed but not always well-aimed shafts mainly against the anthropomorphic Haggādā of the Talmud, as also against the mystical writings of a like kind that emanated in part from the schools of the Geônîm.

The literary activity of the Ḳaraites during the period under notice asserted itself in nearly all the more important Muslim lands, *i.e.*, besides Babylonia and Persia—the cradle and the nursery of Ḳaraism—in Egypt, N. Africa, and especially Palestine. In the last-named country an eager intellectual interest also prevailed among the Rabbinists during the 10th and 11th centuries; here arose, as a counterpart to the official school of Geônîm in Babylon, a distinctively Palestinian Gāônate, and here the Ḳaraites likewise conducted a zealous propaganda about the same time.

The most eminent representative of Ḳaraism in

this period was undoubtedly the already mentioned Abū Yūsuf Yaʻķūb al-Ķirķisānī, or al-Ķarķasānī (*i.e.* of Circesium on the Euphrates, or of Ķarķasān, near Baghdād). As appears from his writings, he travelled widely, visited Persia and India, observed the customs of the heathen living there, was in personal touch with the representatives of various Jewish sects, and argued with Muslim theologians on various questions relating to their religion, of which he had a thorough knowledge. So far as we can estimate from his writings, he was a widely cultured and thoughtful man, 'who adhered loyally to his ancestral faith, but neither assumed an uncritical position towards the weaknesses of his own religious community, nor set himself against the adherents of other religions' (T. Friedländer, *ZA* xxvi. [1912] 94). In 937 he composed the first Ķaraite book of laws in the Arabic language; it is entitled *Kitāb al-'Anwār w'al-Marāķib* ('Book of Luminaries and Outlook Towers'), and is divided into thirteen sections. It differs from all works of its class in the fact that its first four sections are devoted to items of historical information and questions of dogmatic theology. The most important section is the first, which contains a survey of all the Jewish sects down to the writer's own day.[1] Ķirķisānī gathered his information partly from his own observation and his conversations with others, partly from the writings of his predecessors, and, above all, from those of David b. Merwān al-Muķammaṣ, and from the *Kitāb al-Maķālāt* of Abū 'Īsā al-Warrāķ. The book is invaluable as a storehouse of information provided by no other source, as, *e.g.*, regarding the Sadducees, who, it states, forbade divorce, and reckoned by solar months of thirty days;[2] regarding the sect of the Maghāriya, *i.e.* 'cave-dwellers,' who are perhaps identical with the Essenes;[3] regarding the remnants of the 'Īsāwites, Oķbarites, and 'Anānites still surviving in his day, etc. It is interesting to find that he includes the Christians among the Jewish sects. In the opinion of many Ķaraites, Jesus was a righteous and devout man, but Pauline Christianity was sheer heresy and a denial of God.[4] The subjects of the second section are the necessity of investigation and speculation with reference to the injunctions of the Torah, and the vindication of the proof *ex ratione et analogia*. In the third section Ķirķisānī refutes the views of the sectaries, and in the fourth indicates the paths that lead to the knowledge of the Law. He was likewise the first to direct a searching criticism upon the anthropomorphism of the Haggādā, and to formulate a canon to determine when the requirements of the Law were to be interpreted according to the inner, *i.e.* the figurative, sense. His position in these matters was influenced by his contemporary Sa'adya, whose opinions he also cites and refutes in other writings.[5] In his views of the religious Law his attitude is one of independence.

MSS of the *Kitāb al-Anwār* are found in St. Petersburg and the British Museum. In addition to the first section, various chapters from the other sections have been edited by H. Hirschfeld (*Arabic Chrestomathy in Hebrew Characters*, London, 1892, pp. 116–121), and more fully by Poznanski (in various publications). Friedländer (*op. cit.*) edits the chapter against Islām (iii. 18), which reveals an intimate knowledge of its subject. Ķirķisānī regarded the *Kitāb al-Anwār*, his greatest work, as only an introduction to his commentary on the Pentateuch (*Kitāb al-Riyāḍ w'al-Ḥadā'iķ*, 'The Book of Flower-beds and Gardens'), portions of which survive in MS. He refers also to the following writings as from his pen: a commentary on Job and Ķoheleth, and treatises on the unity of God, on translations of the Bible, and against the prophetic character of Muḥammad.

[3] Poznanski, *REJ* l. 14 ff.

[4] The Ķaraites were inclined to coquet with Christianity and Islām, although they sometimes assailed them vehemently, and, *e.g.*, like other Jewish writers, they stigmatize Muḥammad as a פסול (*pasūl*, a sarcastic play upon the word *rasūl*). The Muslim powers are said to have been at first favourably disposed towards the Ķaraites (cf. *REJ* xliv. 165).

[5] Cf. Poznanski, *The Karaite Literary Opponents of Saadiah Gaon*, p. 8 ff., *Studies in Jewish Literature*, p. 249.

A number of other eminent Ķaraite men of learning may be named here. David b. Boaz, a descendant of 'Anān in the fifth generation (*i.e.* *c.* 910, though Ibn al-Hītī brings his date down to *c.* 993; cf. Poznanski, *The Karaite Literary Opponents of Saadiah Gaon*, p. 18), is always designated 'prince,' and enjoyed a position of great authority. His principal works were Biblical commentaries in Arabic, still partly extant in MS; and a treatise on the fundamental doctrines of religion (*Kitāb al-Uṣūl*) is also ascribed to him. His place of residence is unknown. The letter said to have been written by him from Jerusalem in 1009 is a forgery.[1] David b. Abraham al-Fāsī (*i.e.* of Fez, in Morocco), belonging to the latter half of the 10th cent., wrote in Arabic a magnificently planned Hebrew lexicon, entitled *Kitāb Jāmi' al-Alfāẓ*,[2] which contains numerous contributions to Biblical exegesis and the comparative philology of the Semitic languages. Attempts to assign the work to the 12th cent. have proved futile. Sahl b. Faḍl (Heb. Jāshār b. Ḥesed) of Tustar, in Khūzistān, Persia, lived in the first half of the 11th cent., and among other works wrote a critical adaptation of Aristotle's *Physics*.[3] Nissi b. Noah was long regarded as a pupil of 'Anān, but, according to recent research, he lived in the 11th cent., and resided in Persia. He composed what might be called a commentary on the Decalogue, in which he made use of Hebrew philosophical terms. The most prolific Ķaraite exegete of the period was Japheth b. 'Alī of Baṣra (end of 10th cent.), who translated the whole OT into Arabic, and also wrote a very full commentary to it in that language.[4] He was well-affected towards secular knowledge,[5] and composed, among other things, a polemical work against Sa'adya and his pupil, Jacob b. Samuel. Levi, a son of the foregoing, wrote in Arabic a 'Book of Commandments' (1007), which survives only in a Hebrew translation, and also Biblical commentaries. In the field of sacred jurisprudence he was one of those who prefer the less exacting interpretation; thus, *e.g.*, he inveighed against 'Anān's requirement that no light should be allowed to burn on the eve of the Sabbath. 'Reason ordains that in honour of the Sabbath there should be light in the house, for thus it is said (in Is $24^{15}$): "with lights glorify the Eternal" (Bashyazi, *Adderet Ēliyāhū*, Eupatoria, 1835, fol. $31^b$). Thus sound common sense came at length to triumph over a rigid adherence to the letter.

About this period, however, Ķaraite learning had, as was said above, a special centre in Jerusalem, where the Ķaraites seem for a time to have been a stronger party than the Rabbinists. Jerusalem was perhaps the home (*c.* A.D. 940–960) of Solomon b. Jeroham, the most zealous and fiercest anti-Rabbinic controversialist among the Ķaraites. He was opposed to philosophy and secular knowledge; he declaimed against the learning of foreign languages—though he himself sometimes used Arabic—and the reading of secular literature; he was even a foe to Euclid and the Hebrew grammar. He wrote in

Hebrew a bitter and vulgar rhymed epistle against oral doctrine in general, and Sa'adya in particular; to this a pupil of Sa'adya—perhaps Jacob b. Samuel—composed a rejoinder in Arabic (cf. Poznanski, *Zeitschr. für hebr. Bibliog.* x. [1906] 47). Solomon was also a writer of Biblical commentaries in Arabic, of which only a specimen portion of his Lamentations has been printed.[1] Sahl b. Maṣliaḥ (end of the 10th cent.) was a man of kindred mould with Solomon, but superior to him in many respects. He too wrote Biblical commentaries in Arabic,[2] and likewise composed a violent epistle against Jacob b. Samuel; but his horizon was wider than Solomon's, and he was a wonderful master of diction. In his epistle we find interesting data regarding the Ḳaraites of Jerusalem, their ascetic manner of life, and their successful propaganda among the Rabbinists. These data he repeats in his Hebrew introduction to a 'Book of Commandments' which he wrote in Arabic;[3] in that work he urges his co-religionists to settle in the Holy City. He was likewise the first Ḳaraite to propound canons for the determination of religious law. They are four in number: (1) reason or speculation (חכמת הדעת), (2) the actual words of Scripture (משמה), (3) analogy (היקש = Arab. قياس [see above]), and (4) the *consensus* of the community (עדה [see above]; cited by Hadassi, *Eshkôl ha-Kôfer*, § 168 ב). Joseph b. Noah (*c.* 1002) seems to have played a great rôle among the Karaite scholars of Jerusalem. According to Ibn al-Hītī,[4] his seminary was always attended by seventy learned men—doubtless an ideal figure, assimilated to the membership of the ancient Sanhedrim. Of Sahl's four canons Joseph rejected the third, analogy, and he had a controversy with Sahl regarding the question of fixing leap-year by the coming of spring (Abīb). He wrote a commentary to the Pentateuch, which his pupil Abū'l Faraj Hārūn b. al-Faraj recast in an abbreviated form;[5] and also a work on grammar, which is quoted by the same pupil. This Abū'l Faraj was himself a distinguished grammarian, lexicographer, and Biblical exegete, and is referred to by Rabbinist writers as 'the grammarian of Jerusalem.'[6] He was the author of a grammatical treatise, *Kitāb al-Mushtamil* (completed in August 1026), in eight books, of which the 7th and 8th are of special interest, the former being of the nature of a lexicon, giving the various meanings of each triliteral root, and the fresh significations it acquires by the transposition of its radicals,[7] while the latter deals with Biblical Aramaic and its affinity to Hebrew.[8] He also wrote, in Arabic, *Kitāb al-Kāfī*, a grammatical work, *Sharḥ al-Alfāẓ*, a book giving definitions of Biblical words, and a commentary to the Pentateuch.

A still more important scholar of the period was Joseph b. Abraham al-Baṣīr (Heb. *ha-Rôeh*, euphemism for 'the Blind'), another pupil of Joseph b. Noah, and at once the first and the most renowned philosophical theologian among the Ḳaraites. Even at an early date he was confounded with Ḳirḳisānī, or else regarded as anterior to him; but it is now certain that he flourished in the first half of the 11th cent., and died probably *c.* 1040.[9] As a philosopher, al-Baṣīr was dominated by the influence of the Mu'tazilite *kalām*, as was indeed the case with almost all the Ḳaraite philosophers;[1] hence the Ḳaraites as a sect are usually referred to by Arabic writers as *ahl al-'adl w'at-tawḥīd* (اهل العدل والتوحيد), *i.e.* 'the people of the righteousness [or equity] and the unity [of God].' Thus he too enunciates five principles of the confession of the divine unity: (1) the necessary assumption of atoms and accidents, (2) the necessary assumption of a creator, (3) the necessary assumption of divine attributes, (4) the necessary rejection of attributes falsely ascribed to God, and (5) the assumption of His unity notwithstanding the plurality of His attributes — the attributes being elements of His nature, and not entities that exist outside of Him. Al-Baṣīr was a believer in free will (*ḳadr*), and an opponent of 'Anān's doctrine of metempsychosis—though he upholds it as true in the case of the 'Abdiya—repudiating an idea current in many Mu'tazilite groups, viz. that God's dealings with the children and animals to which He allots suffering are justified by that doctrine. He was likewise opposed to the theory of Benjamin al-Nahawandī (see above). He expounded his philosophical views in two Arabic treatises. His chief work is the *Kitāb al-Muḥtawī*,[2] 'the one surviving pattern of a work on the Mu'tazilite *kalām* that might quite as well have been composed by a Muslim'[3]—just as in the introduction he maintains that revelation by the prophets must necessarily be supplemented by speculative knowledge. For centuries the treatise was known only in the Hebrew translation by Tobiah b. Moses (below, 667ᵇ), bearing the title *Sēfer ha-Ne'īmôth* (ספר הנעימות), and it is only recently that certain chapters, both of the original and of the translation, have seen the light in the form of graduation theses.[4] A compendium of the *al-Muḥtawī* is found in the *Kitāb al-Tamyīz*, or *al-Manṣūrī*,[5] translated into Hebrew by Tobiah b. Moses as *Maḥkīmath Pethī* (מחכימת פתי).[6] An analysis of both works has been published by P. F. Frankl.[7] The *al-Muḥtawī* exercised a vast influence upon the scholars of the age, and even the last Ḳaraite philosophical theologian, the Aaron b. Elijah to be dealt with below (1364), owes everything to it. Al-Baṣīr was likewise the author of other philosophical treatises,[8] for the most part now lost. He occupied an influential position as a teacher of the Law. He was the first to protest against the rigorous Ḳaraite regulations concerning marriage, the so-called *rikkūb* theory (above, p. 663ᵃ). In A.H. 428 (A.D. 1036–37) he wrote in Arabic a 'Book of Commandments', entitled *Kitāb al-Istibṣār*, sections of which, treating of legacies and ceremonial purity, are found in MS in the British Museum. It was no doubt from this work that his successors drew their numerous references to his views of religious law.

Joshua b. Judah (Arab. Abū'l Faraj Furḳān ibn Asad) was a pupil of al-Baṣīr, and, like his teacher, a philosopher and a teacher of the Law, while he was also an exegete. He executed an Arabic translation of the Pentateuch, and composed two commentaries on it, one of which (1050) was an exhaustive work, the other (begun 1054) an epitome.[9] His work as an exegete was greatly esteemed by Abraham ibn Ezra. As a philo-

sophical theologian, he wrote philosophical homilies on Genesis and numerous dogmatic treatises, which survive, however, only in Hebrew translations. His philosophical position is exactly that of his master, and, like the latter, he was an adherent of the Mu'tazilite *kalām*. The only extant memorial of his activity as a teacher of the Law is a treatise on incest in a Hebrew translation, *Sēfer ha-'Ărāyōth* (ed. I. Markon, St. Petersburg, 1908), in which he delivered a more decisive blow to the *rikkūb* theory than even his teacher had done, with the result that it was completely discredited. The outstanding achievement of Joshua, however, consists in his having trained a group of pupils who carried the Ḳaraite teaching to European countries.

Joshua was the last representative of Ḳaraite learning in Palestine, and after his day, *i.e.* from the last third of the 11th cent., the intellectual activity of Ḳaraism disappears from the Holy Land, while the period of spontaneous and creative vigour comes likewise to an end. This collapse was probably due to political occurrences, viz. the capture of Jerusalem by the Seljuks in A.D. 1071, and by the Crusaders in A.D. 1099.[1] It is recorded that a large number of the Ḳaraites—or all of them—were, together with the Rabbinists, driven into a synagogue by the army of the Crusaders, and there burned to death.[2] In 1642 the Ḳaraite traveller, Samuel b. David, found in Jerusalem only twenty-seven Ḳaraites, occupying fifteen houses,[3] while it is said that in 1749 there was not a single adherent of the sect in the Holy City.[4] In 1912 the Ḳaraites in Jerusalem numbered eighteen persons (five males and thirteen females), belonging to five families and living in three houses (in one of which was the synagogue).[5] The centre of Ḳaraite life was now transferred to Eastern Europe, and this brings us to the beginning of a new period.

3. The Byzantio-Turkish period (12th-16th cent.).—This may be divided into three shorter stages, viz. (*a*) a time during which the Ḳaraites, by translating the works of the Arabic period into Hebrew and gathering up the results of the past, simply maintained and consolidated what had already been attained (close of the 11th cent. and the 12th cent.); (*b*) a time of advance and quasi-renaissance (13th-15th cent.); and (*c*) a time of complete decadence (16th cent.).

The outstanding feature of the first of these three sub-periods was its activity in the work of translation. Young men came in large numbers from Byzantium to study under Joshua at Jerusalem, and there learned Arabic. They then returned home, mainly to Constantinople, where in a relatively short time they translated all the more important Ḳaraite works that had been written in Arabic—a feat which Frankl[6] characterizes as 'an achievement so great in respect of mere mass that we cannot wonder if its quality should be poor.' Its defects of quality were due to the translators' inadequate grasp of the Arabic language. The translators were mostly of Byzantine origin, and were familiar with Byzantine culture; and in their translations, besides Arabic words which were taken over unchanged, we find large numbers of Greek words, and these, again, as we might expect, were subjected to great corruption by the copyists. The influence of the translations was nevertheless very great, as they alone, and not the originals, were studied. The greatest and most eminent of the translators was Tobiah b. Moses, who is sometimes indeed called Ha-Ma'atīḳ ('the translator'). Being in a manner a pioneer, he had to construct a terminology, and this is harsh and often ill-devised. His principal translations are those of the writings of al-Baṣīr and his teacher Joshua, and, while he sometimes added to the matter of these works, he also now and then condensed it. Of Tobiah's own works the best known is his very full commentary on the Pentateuch, entitled *Ōṣār Neḥmād*, which, however, is for the most part a compilation from David b. Boaz and Japheth b. 'Alī.[1] He also enjoyed a considerable reputation as a teacher of the Law, and reference is often made to his dictum that every tradition accepted by the Ḳaraites is suggested in Holy Scripture, and that it was mere lack of understanding to assert that there were Ḳaraite traditions which had not the support of Scripture.[2] Another greatly valued translator was Jacob b. Simeon; the names of the rest are unknown. Other noteworthy Ḳaraite scholars of Byzantium in this epoch are Aaron b. Judah Ḳusdimi (*i.e.* of Constantinople), who devoted himself specially to the study of the marriage law, and Jacob b. Reuben, author of a commentary on the Bible entitled *Sēfer ha-'Ōsher*, and drawn mainly from his predecessors, especially from Japheth b. 'Alī.

This sub-period closes with the publication of one of the most notable productions of Ḳaraite literature, the *Eshkōl ha-Kōfer*, written by Judah b. Elijah Hadassi in 1148.[3] Jost[4] compares it to a sea into which flow all the streams of Ḳaraite learning. Even on its formal side the work is remarkable. It consists of 379 sections, written in a rhymed prose, and all its strophes, which, with few exceptions, are acrostically arranged under the Hebrew alphabet in the direct and inverse order (*i.e.* "אבגד and "תשרק), end in ק. This—to say nothing of the affected language and the cumbrous diction—gives the work a character of tedious monotony. Moreover, Hadassi tabulates all the injunctions of the Law and his other data under the Ten Commandments of the Decalogue; and here, too, he has to resort to all manner of artifice. He claims to be no more than a compiler, and frequently emphasizes the fact (see especially the end of the twenty-third repetition of the alphabet), and, in point of fact, the *Eshkōl ha-Kōfer* takes the form of an encyclopædia in which are accumulated the results of all previous Ḳaraite learning. In his attitude towards the Rabbinists he is most spiteful and savage, and may in this respect be matched with Solomon b. Jeroham and Sahl b. Maṣliaḥ. He fastens, above all, upon the first, second, and ninth Commandments of the Decalogue, and he reproaches the Talmudists for having in their grossly sensuous Haggādā obscured the unity of God, conjoined Him with other beings, and made false representations of the Biblical personages.[5] He was also well versed in secular science, philosophy, and dogmatic theology. His views are dominated by Mu'tazilite influence;[6]

[1] These two events also caused irreparable damage to the Palestinian Gāônate already referred to. The Seljuk conquest forced it to abandon Jerusalem. It settled in Trabulus, and, when that city was itself taken by the Crusaders on the 12th of July 1109 (cf. R. Röhricht, *Geschichte des Königreichs Jerusalem*, Innsbruck, 1898, p. 81), the Gāônate no longer existed in the Holy Land (cf. *REJ* xlviii. 170).

[5] Cf. esp. alphabets 106–124 and 358 *f.* Hadassi, nevertheless, does not scruple to make copious use of Rabbinical writers, nor does he always acknowledge his sources. This is particularly true of his work in the field of Hebrew philology. Thus he plagiarizes from the *Mōznayim* of his younger contemporary, Abraham ibn Ezra, in a manner that amounts to sheer fraud (cf. Bacher, in *MGWJ* xl. 78, 126).

[6] Cf. M. Schreiner, *Der Kalām in der jüdischen Literatur*, Berlin, 1895, p. 33.

but his information in the sphere of secular science is drawn in part from Byzantine sources, as appears from the numerous Greek glosses to his work, which, however, are sometimes omitted and sometimes distorted in the published edition.[1] Hadassi was likewise the first Ḳaraite writer who formulated articles of faith. These are ten in number—to correspond, no doubt, with the Ten Commandments—and are as follows: (1) creation from nothing; (2) the creator is God; (3) God is one, formless, and different from all other beings; (4) God sent Moses and the Prophets; (5) through Moses, God revealed the Torah, which in its wording is of itself sufficient, and does not require to be supplemented by oral teaching (the specifically Ḳaraite article); (6) the Torah must be learned by every Israelite in the original Hebrew; (7) God appointed a sanctuary; (8) the resurrection of the dead; (9) reward and punishment in the future life; and (10) the redemption of Israel by a Messiah of the posterity of David. These articles were set forth in a work which, as a later writer, Aaron b. Elijah,[2] proudly affirms, was composed twenty-nine years before the *Sĕfer ha-Madda'* of Maimonides.

About this time, as we read, there were Ḳaraites also in the extreme west of Europe, in Spain. A certain al-Taras had migrated from Castile to Jerusalem, where he embraced Ḳaraism and became a pupil of Joshua b. Judah, and then returned to his native place as a propagandist of his new faith. After his death his work was taken up by his wife, designated Mu'allima ('the teacher') by their adherents, who seem to have been fairly numerous. By the intervention of Rabbinist dignitaries at the Castilian court, however, the Ḳaraites in Spain were subjected to persecution, and it is stated that from 1178 they were completely lost sight of. There is evidence to show, nevertheless, that there were Ḳaraites in Castile as late as the 13th century.[3] In other West European countries the sect was known only by repute,[4] although an occasional Rabbinist scholar, as, *e.g.*, Meshullam b. Kalonymus,[5] thought it necessary to deal critically with its teachings.

In the East, and especially in Egypt, the Ḳaraites at this time occupied a position of great respect, and perhaps used it domineeringly. In Egypt they numbered amongst them many physicians of eminence, as, *e.g.*, Abū'l Bayyān al-Mudawwar and Sadīd al-Dīn Abū'l Faḍl Dā'ūd b. Sulaimān (perhaps a son of the foregoing).[6] It was in Egypt also that their 'princes,' the descendants of 'Anān, resided, and about the period under notice their prince was Solomon b. David (Arab. al-Ra'īs Abū'l Faḍl), the author of several works. Here, too, lived the earliest and the only outstanding Ḳaraite poet, Moses b. Abraham Dar'ī, whom their uncritical historians assigned to the 11th cent. and regarded as the model of all the greater Hebrew poets, Gabirol, the two Ibn Ezras, and Judah Halevi, while, as a matter of fact, the relation was exactly the reverse.[7]

[7] On Moses cf., most recently, Posnanski, in *Yevreyskaya Enzyklopedya*, *s.v.* (vii. 18 f.), and the literature cited there. It is possible that Elijah b. Abraham's valuable little work on the separation of the Ḳaraites from the Rabbinists (חלוק הקראים והרבנים, ed. in Pinsker, *Liḳḳuṭe Ḳadmoniot*, pp. 99–106, on which cf. Posnanski, *The Karaite Literary Opponents of Saadiah Gaon*, p. 78) was also written about this time. Samuel ibn 'Abbās, who became a Muslim convert in 1163, says that most of the Oriental Ḳaraites of his day had embraced Islām, and that all of them were prepared to do so (cf. *MGWJ* xlii. 260); but it is a question whether we can believe him.

As time went on, the Ḳaraites came to be more and more affected by the influence of Rabbinism and the Rabbinical literature, and their power gradually waned. The Rabbinical intellectual giants of Spain carried Judaism to heights which the Ḳaraites were quite unable to scale. In Egypt their prestige was shattered by the advent of Maimonides. The latter certainly dealt most gently with them, but he saw to it that Ḳaraite usages and Ḳaraite interpretations of the Law which had crept into Rabbinistic communities were rooted out.[1] From the end of the 12th cent. the vitality of Ḳaraism was all but completely spent. Attempts were made to revive it; strong personalities arose within its pale; there were conciliatory approaches to the Rabbinists; but the sect was no longer truly alive. Its unyielding insistence upon adherence to the past shut it off from the vitalizing springs of progress and doomed it to a fatal atrophy, and from this point onwards its fortunes require but brief narration.

At the beginning of the second portion of the Byzantio-Turkish period, *i.e.* in the opening years of the 13th cent., we hear with growing frequency of Ḳaraites living in the land of Kedar (*i.e.* of the Tatars)—the Crimea. Why they came there, and whence they came, are questions not easily answered. At a later day an attempt was made to show that they had migrated thither, as one might say, in pre-historic times; but this is a mere falsification of history (see below, § 5). It is possible that the Chazars who had been converted to Judaism had intermingled with the Ḳaraites, and that this might explain the presence in the Crimea of a body of people exhibiting a somewhat impure Jewish type of religion. Our earliest information regarding this body is provided by the traveller Pethaḥya of Regensburg (end of 12th cent.). He states that there were heretics in the land of Kedar who did not follow tradition—of which, indeed, they had never heard—who were accustomed to sit in the dark on Friday evenings, whose prayers consisted only of psalms, etc. Further, Sulchat in the Crimea was the native place of the Aaron b. Joseph or Aaron the First (*c.* 1260–1320) who removed to Constantinople—one of the most sympathetic minds that the Ḳaraites ever produced. He was a doctor by profession, but he wrote (in 1294) a commentary on the Bible entitled *Sĕfer Mibḥār*,[2] a very remarkable piece of work. His fair-mindedness towards Rabbinist adversaries, with whom he often agrees, is particularly worthy of note. 'Truth and error,' he says, 'are not what they are in virtue of the person who utters them, but are so entirely on their own account.' At a later date he was actually regarded as a pupil of Naḥmanides. His views in theology and the philosophy of religion, like those of his predecessors generally, are based upon the Mu'tazilite *kalām*, but he also shows leanings to Aristotelianism.[3] He rendered his party a more effective service, however, in the sphere of religious worship, as the order of prayer universally adopted among the Ḳaraites from his day was due to him, and he also enriched the ritual of the synagogue with about eighty sacred poems;[4] he was, in fact, the most prolific and distinguished of Ḳaraite

[1] Cf. Bacher, *Die Bibelexegese Moses Maimûnis*, Strassburg, 1897, p. 174; Neumann, in the Hungarian *Bloch-Jubelschrift*, Budapest, 1905, pp. 164–170; Friedländer, in *MGWJ* liii. 469 ff.
[2] The greater part of it was printed at Eupatoria in 1835.
[3] Schreiner, *op. cit.* p. 57.
[4] In addition to the writings mentioned, he composed a small grammatical treatise entitled *K'lîl Yôfî*, which, however, he left unfinished; it was completed in the 16th cent. by Isaac Tishbi (Constantinople, 1581; Eupatoria, 1847). It was in the time of Aaron that Shemariah Iḳriṭi of Negropont (fl. *c.* 1290–1320) made his attempt to adjust the differences between the Ḳaraites and the Rabbinists (cf. Graetz, *Gesch. der Juden*, vii.[3] 300 f.).

liturgical poets. It may be remarked here that the Ḳaraites adopted many of their synagogue songs from the Rabbinists, and that in other parts of their liturgy as well they could not evade the influence of the latter. Moreover, in different countries they instituted different ritual forms.[1]

A still more versatile, more fertile, and more learned writer was Aaron b. Elijah or Aaron the Second (born Nicomedia, *c.* 1300; †Constantinople, 1369), who was at once a philosophical theologian, a teacher of the Law, and an exegete, and is designated by his co-religionists 'the Ḳaraite Maimonides.' He expounded his philosophical and theological views in his *'Eṣ ha-Ḥayîm*,[2] in which he is chiefly concerned to guard the Mu'tazilite *kalâm* against the Aristotelian teachings which had found their way into Judaism largely through the writings of Maimonides. A more significant work is his exposition of the religious law, the *Gan Êden*,[3] in which he lays down the principle that belief in the unity and the other attributes of God, as also in His government of the world, is the final aim of the Law. In his commentary to the Pentateuch, *Keter Tôrâh*,[4] the influence of Ibn Ezra is clearly traceable.

In the early years of the Turkish domination the Ḳaraites were frequently persecuted by the government; but, as an offset, their relations with the Rabbinists became quite friendly. Mutual forbearance and tolerance helped to bring about this result. Elijah Mizraḥi of Constantinople (*c.* 1455–1525), one of the greatest Rabbinical scholars in Turkey—in opposition to Moses Ḳapsali, the chief Rabbi of Turkey—allowed the Ḳaraites to be instructed even in oral tradition. Many Ḳaraites sat as scholars at the feet of Enoch Ṣaporta and his pupil Mordecai Komtino, a man of universal culture (middle of the 15th cent.), and received instruction in the Talmud, decisions, and general science.[5] Don Gedaliah, who had come to Constantinople from Lisbon († before 1487), tried, with the acquiescence of the Ḳaraites, to bring about a re-union with the Rabbinists. One of the pupils of Komtino was Elijah b. Moses Bashyazi, the most eminent Ḳaraite scholar of the day, who resided first in Adrianople and then in Constantinople, and whom the Ḳaraites call 'the last Decisor' (הפוסק האחרון). His most important work is his treatise on the Law, *Adderet Eliyâhû*, a monument of clear expression and arrangement. He favours, on the whole, the less rigorous application of the Law, and he asserts that the divine commandments require to be fulfilled only in accordance with human capacity. He was a man of the most varied culture, and was, *e.g.*, an eager student of mathematics. He owed much to the writings of Maimonides. He died in 1490, leaving his *Adderet* unfinished; it was continued—though still left incomplete—by his brother-in-law and pupil, Caleb Afendopolo (born 1455; †after 1509). He was a polymath, and his writings embrace treatises on jurisprudence, philosophy, mathematics, and astronomy, to say nothing of his poems, both secular and liturgical—over twenty works in all.[6]

The other Ḳaraite writers of Turkey during this and the following division of the period under consideration (15th–17th cent.) are generally of

[1] Cf. L. Zunz, *Die Ritus des synagogalen Gottesdienstes*, Berlin, 1859, pp. 156–162; Jost, *op. cit.* pp. 307–325; G. Margoliouth, *JQR* xviii. [1905–06] 505 ff.; N. Porges, *Zeitschr. für hebr. Bibl.* xi. [1907] 60 ff.; Poznanski, *Die kar. Literatur der letzten dreissig Jahre*, p. 13 ff.

[6] Enumerated by Poznanski, in *Oṣar Yisrael*, *s.v.* (ii. 172); cf. also Steinschneider, in Ersch and Gruber, *Allgemeine Encyklopädie*, *s.v.* (ii. 32, 118), and in *MGWJ* xxxviii. 76.

little importance, being almost wholly wanting in creative power, and they merit no particular notice. An exception should perhaps be made of Moses Bashyazi, a great-grandson of Elijah, and regarded as a youthful prodigy. He knew Arabic, Greek, and Spanish; he travelled widely in the East, where he became acquainted with the writings of the earlier Ḳaraites; he had a leaning towards historical investigation, and wrote a number of works, of which only one, a treatise on incest, has been printed.[1] He died, probably in 1555, at the age of twenty.

The East was at this time the nursery of many other Ḳaraite writers, but for the development of the sect as a whole it had no further significance. We are told that, through the efforts of Abraham Maimûnî II., a great-grandson of Maimonides, a fairly large Ḳaraite community in Egypt was converted to Rabbinist teaching.[2] Cairo was the centre of nearly all the more eminent Ḳaraite writers of the period, viz. Japheth al-Barḳamânî (probably *c.* the middle of the 13th cent.), author of a medical work in Arabic and a refutation of the Rabbinists;[3] Israel ha-Ma'arabî (first half of 14th cent.), the writer of numerous works in Arabic and Hebrew, including one (originally in Arabic, but translated into Hebrew) treating of regulations for the slaughter of animals (1306; printed, Vienna, 1830), as also of many hymns for use in the synagogue; he was regarded as an authority in marriage law, and was the first to assert that the intercalary cycle of nineteen years was instituted by those who returned from the Exile ('the good figs,' see above);[4] Japheth b. Sagîr, a pupil of Israel, and author of a 'Book of Commandments' in Arabic, most of which is extant in MS; Samuel b. Moses al-Maghribî, a physician, and the writer of another 'Book of Commandments' entitled *Kitâb al-Murshid*, which is a model of perspicuity but shows no independence.[5] Of writers not resident in Cairo mention may be made of Ibn al-Hîtî (first half of 15th cent.), who wrote a valuable chronicle of Ḳaraite scholars.[6]

**4. The Taurido-Lithuanian period (17th and 18th centuries).**—Reference was made above to the presence of Ḳaraites in the south of Russia, especially in Taurida (the Crimea), as early as the last third of the 12th century. They increased in number during the 13th century. Towards the close of the 14th cent. the Grand Duke Witold of Lithuania carried away from the Crimea, among other Tatar captives, a number of Ḳaraites, and settled them in Troki, near Wilna, whence they spread to other towns—in Lithuania, Volhynia, and Podolia (now Galicia). The Ḳaraites of the Crimea and Lithuania show at first not a symptom of intellectual life, and the writers whom they are said to have produced at that time are mere fabrications. Towards the end of the 15th cent., however, we hear of a correspondence between the Ḳaraites in Lutsk and Troki and Elijah Bashyazi in Constantinople, who recommended them to send him two pupils.[7] In the Crimea, where under the Tatar sway there was no intellectual life, the Ḳaraites, too, failed to develop one; but in Lithuania, where the Rabbinists founded strong Talmudic schools in the latter half of the 16th cent., they exerted themselves to cultivate the

higher interests. Here about this time arose one very distinguished and interesting writer, viz. Isaac b. Abraham of Troki (1533–94), the author of an unfinished anti-Christian work called *Ḥizzūḳ Emūnā* ('The Confirmation of Faith').[1] The book reveals a wide knowledge of Christian literature; but its author had also engaged in oral discussions with the heads of the Christian Reformers, who were at that time very numerous in Poland. It shows no distinctively Ḳaraite colouring, and the religious beliefs of its writer had to be elicited by literary criticism. Its erudition and its intellectual acumen astounded even Voltaire. It was completed by one of Isaac's pupils, Joseph b. Mordecai Malinovski, himself the author of several works. A brother of this Joseph, Zephaniah by name, wrote, among other works, a treatise on the breadth of the new moon and on the calendar. A contemporary of the brothers was Zerah b. Nathan, who also resided in Troki. The Rabbinic polymath, Joseph Solomon Delmedigo, a native of Candia, was then living in Lithuania as the private physician of Prince Radziwill, and to him the said Zerah appealed for information—first of all in 1620, when he proposed seventy questions, mainly of a mathematical and astronomical nature. Delmedigo responded, to begin with, in an epistle entitled *Iggeret Āḥūz*,[2] which contains also a sketch of the history of Hebrew literature; and subsequently in a series of mathematical writings. Zerah was likewise the author of a long list of liturgical poems.

The dreadful massacres of the Jews at the hands of the Cossacks in 1648–49, and the commotions which followed in Poland, affected the Ḳaraites also, whose destinies here, as generally elsewhere, were closely bound up with those of the Rabbinists. Moreover, the two religious groups were now, as a rule, on good terms with each other. At one of the so-called Synods of the Four Lands endeavours were made to unite the two groups, but were rendered vain by a capricious Rabbi who appealed to a Talmudic calembour.[3]

The example of the Lithuanian Ḳaraites acted as an incentive to those of the Crimea, who sustained a constant intercourse with the former, and, indeed, had already a link of connexion with them in the Tatar language used colloquially by both. The Crimean Khans varied in their attitude towards them; they were often quite friendly, and they entrusted to them the coining of their money. But the Crimean Ḳaraites produced little that could stand beside the intellectual achievements of their northern brethren. In this period their only writer deserving of notice was Elijah b. Baruch Yerushalmī[4] (latter half of 17th cent.; originally from Constantinople), the author of various works; he also transcribed certain writings of the earlier Ḳaraite scholars, principally such as were of an anti-Rabbinic tendency, to which he added bitter invectives of his own. Three Ḳaraites who travelled from the Crimea to Palestine wrote interesting reports of their observations (1641–42, 1654–55, 1785–86), in which they give a varied mass of statistical data.[5] A notable and original writer appears in Abraham b. Josiah Yerushalmī, of Chufut-Kale, whose productions include one entitled *Emūnā Ōmēn*, dating from 1712 (ed. Eupatoria, 1846), and remarkable for its breadth of outlook, its extensive knowledge of Rabbinical literature, its lenient attitude towards the Rabbinists, and its veneration for Maimonides.

The Ḳaraites of the Crimea, however, poor as are their achievements in this period, are certainly superior to those of the Orient. Of the latter, mention should perhaps be made of Jacob Iskandarānī, the Ḥakam of the Ḳaraites in Cairo, who met the above-named Delmedigo there in 1616; and of the family of Fīrūz in Damascus, of whom the most eminent was the physician, Daniel b. Moses (fl. 1665–1700).

From the middle of the 17th cent. Christian scholars began to take an interest in the Ḳaraites. Some of them made visits to the centres of the sect, and especially to Troki, and opened a correspondence with its members. Of these Christian scholars we may name Johann Rittangel, who visited Troki in 1641, and Gustav Peringer, a professor in Upsala, who, at the instance of Charles XI. of Sweden, travelled to Lithuania in 1690, and in the following year addressed to Ludolf his *Epistola de Karaitorum rebus in Lithuania.* Reference should also be made to Johann Puffendorf of Riga, Lewin Warner, and his valuable collection of Ḳaraite MSS in Leyden, Jacob Trigland, of Leyden, and his *Diatribe de secta Karæorum* (Delft, 1703), and Johann C. Wolf, of Hamburg, and his *Notitia Karæorum* (Hamburg, 1721). These scholars were instrumental in arousing the historical sense among the Polish Ḳaraites, though it must be confessed that the Ḳaraite historians frequently tamper with the facts, sometimes in ignorance but sometimes of set purpose, and that they represent their sect as being the genuine Jews, and the Rabbinists as the seceders, while they also do great violence to the chronology. The earliest of these Ḳaraite historians were Solomon b. Aaron, of Troki (fl. 1680–1715), and his relative, Mordecai b. Nisan, of Kokizov, near Lemberg (1699). Solomon, in addition to several other works, and numerous liturgical songs in the Hebrew and Tatar languages, wrote, at Puffendorf's request, his *Appiryōn 'āsā lō*, a short treatise on the severance of the Ḳaraites from the Rabbinists, and the main legal differences between the two parties.[1] Mordecai wrote, in answer to the questions put by Trigland, his *Dōd Mōrd'kai*,[2] and also, in response to the inquiry of Charles XII., a short work called *L'būsh Malkūt*.[3] In the composition of his *Dōd Mōrd'kai* he had the assistance of his relative, Joseph b. Samuel, known as Joseph ha-Mashbīr, who had been a pupil of his father. This Joseph was a native of Lithuania, but removed about 1700 to Halicz in Galicia, and did much for the revival of an intellectual life among the Ḳaraites there, who had been living outside the range of general culture. Of his many works, one in particular, *Pōrāt Yōsēf*, treating of grammar, is highly praised. His descendants were all leading figures among the Ḳaraites of Halicz till well on in the following period.

The most prolific writer of the Taurido-Lithuanian period is Simḥa Isaac b. Moses. He belonged originally to Lutsk, but removed *c.* 1750 to Chufut-Kale in the Crimea, where he died in 1766. He was well versed in the writings of the Rabbinists, and held the Ḳabbālā in high honour. He wrote in all twenty-four works, of which only two have appeared in print,[4] viz. the *Ōr hā-Ḥayīm*, already mentioned as a commentary on the philosophical work of Aaron b. Elijah, and a historical treatise entitled *Ōraḥ Ṣaddīḳīm*, in which he gives the Ḳaraite conception of the origin and historical development of Ḳaraism in its most extreme form.

[1] First edited in J. C. Wagenseil, *Tela Ignea Satanæ*, Altdorf, 1681; it was translated into Yiddish, Spanish, German, English, and Hungarian.

[2] ed. in Isaac b. Solomon's *Iggeret Pinnat Yiḳrat*, Eupatoria, 1834, and in A. Geiger's *Melo Ḥofnayim*, Breslau, 1840.

[3] הקראים אינם מתאחים לעולם; cf. *Mo'ed Ḳaṭon*, 26*a*, at the top.

[4] 'Yerushalmī' denotes a Ḳaraite who had made a pilgrimage to the Holy Land, and is an imitation of the Arab. Ḥajji.

[5] ed. Gurland, *Ginze Israel*, pt. i.

[1] ed. Neubauer, as an appendix to his *Aus der Petersburger Bibliothek*.

[2] Finished on the 18th of July 1699; ed., with Latin tr., by Wolf in his *Notitia Karæorum*; also Vienna, 1830.

[3] ed. Neubauer, *loc. cit.*

[4] See Poznanski, in *Oṣar Yisrael*, s.v. (x. 164).

This work also contains the first bibliography of the sect. Simḥa Isaac's migration to the Crimea was no mere passing event. The Crimea now became the centre of Ḳaraite life, and there, in Chufut-Kale, the first Ḳaraite printing-press was established in 1734. Then came the two political occurrences which served at once to draw the Ḳaraites out of their isolation and to link them together by a common bond, viz. the annexation by Russia of the two districts in which they were most numerous—the Crimea in 1783 and Lithuania in 1792. With these two events begins the final period of Ḳaraite history.

**5. The modern period (19th cent.–the present day).**—From the outset the Russian Government treated the Ḳaraites with good-will. With this attitude there was associated, no doubt, a tendency to play them off against the Rabbinists, the adherents of the Talmud. The last representative of the Ḳaraites at the court of the Khan in the Crimea, Benjamin b. Samuel Aga († 1824), continued to hold the position under Russian rule, though not officially. In 1795, Catherine II. had relieved them of the double tax imposed upon Jews, and in 1827 they were exempted from military service by Nicholas I. They now enjoy the full rights of Russian citizenship. In 1840 they secured what might be called an internal constitution, according to which a non-spiritual official called the Ḥakam—who represents them publicly—presides over them with the assistance of a supreme spiritual board, controlling the Ḳaraites of the Crimea and the South of Russia. This board has its headquarters in Eupatoria; the first Ḥakam was the influential and energetic Simḥa Bobovitch (1790–1855).

The more eminent Ḳaraite scholars of the first half of the 19th cent. were the following: Isaac b. Solomon (1755–1826), of Chufut-Kale, was the reformer of the Ḳaraite calendar (cf. art. CALENDAR [Jewish], vol. iii. p. 120), his views on that subject being set forth in his *Ôr ha-Lᵉbāna* (printed at Zhitomir, 1872); he was also the author of a work on the ten Ḳaraite articles of faith, entitled *Iggeret Pinnat Yiḳrat* (Eupatoria, 1834; Zhitomir, 1872), numerous songs for use in the synagogue, etc. Joseph Solomon b. Moses Lutski, surnamed יש״ר (1770–1844), was a native of Kokizov, and lived for a time in Lutsk, whence he removed in 1802 to Eupatoria; his most outstanding work is his supplementary commentary to the *Mibḥār* of Aaron b. Joseph, issued as *Ṭīrat Kāsef* (Eupatoria, 1835). David b. Mordecai Kokizov (1777–1855), a great-grandson of Mordecai b. Nisan, was an opponent of the foregoing, and among other works wrote a theological treatise called *Ṣemaḥ Dawid* (St. Petersburg, 1897). Mordecai b. Joseph Sultanski (fl. 1850–70), who had a reflective cast of mind, was the author of various grammatical, historical, and theological works. One of his pupils was the kindly-natured Solomon b. Abraham Beim (b. 1817; † before 1860), Ḥakam in Chufut-Kale and afterwards in Odessa, who was the first to introduce secular subjects into Ḳaraite schools; he wrote a little book on the antiquities of Chufut-Kale (*i.e.* 'the Jewish refuge,' as the place formerly known as Kala'a came to be called).

All these writers, however, were eclipsed by Abraham b. Samuel Firkovitch (b. Lutsk, 1786; † Chufut-Kale, 1874), with whom begins a new epoch not only in Ḳaraite historiography, but also in the investigation of Hebrew history and literature. Firkovitch's literary career began with the composition of supplementary commentaries and additions to Aaron b. Joseph's commentary to the Pentateuch (Eupatoria, 1836),[1] and of a vigorous anti-Rabbinical work named *Massā ū-Mᵉrībāh* (do. 1838), which is written in rhyme and arranged in the order of the Ten Commandments, after the manner of the *Eshkōl ha-Kōfer* of Hadassi described above. At the instance of the above-mentioned Ḥakam, Bobovitch, he made repeated journeys, from 1839 onwards, to Caucasia, Egypt, Palestine, and other countries, with the object of discovering archæological materials which might serve to demonstrate the early origin of the Ḳaraites. It seemed at first sight as if he had perfectly succeeded in his purpose. Both in the Crimea and elsewhere he discovered epigraphs in Torah rolls and other writings, tombstones, and the like, in which the most remarkable data were treasured up. These memorials included the famous inscription of Judah b. Moses ha-Naḳdān, dating from A.D. 604, and that of Abraham b. Simḥa, from A.D. 906; the tombstones of Isaac Sangari, who is said to have converted the king of the Chazars to Judaism, and Shabbathai Donnolo, a Jewish scholar of Southern Italy in the 10th cent., etc. Firkovitch contended that these various discoveries sufficed to prove that there were Jews in the Crimea as early as the 6th cent. B.C., having migrated thither in the reign of Cambyses, king of Persia; that the Ḳaraites had persuaded the Chazars to embrace Judaism, and were the founders of the Massora, of Hebrew grammar, of the Biblical sciences, etc. Incredible as some of these inferences must appear, they were nevertheless believed, and were even incorporated in histories of the Jews. Firkovitch's results were accepted, in particular, by a number of eminent Jewish scholars—Pinsker, Fürst, Graetz, and Chwolson. Literary criticism, however, soon entered its protest, and pointed to various clumsy forgeries; we need only recall the strictures of Rapoport, Schorr, Steinschneider, Geiger (who vacillated, however), Neubauer, Strack, P. F. Frankl, and, above all, Harkavy, who showed that the above-mentioned data could not possibly serve as historical evidence. Firkovitch, two years before his death, summed up the result of his discoveries in a work entitled *Abnē Zikkārōn* (Wilna, 1872), in which the epigraphs in question are reproduced. His finds were often assailed by mere hypercriticism, and facts and dates were rejected which in many cases proved to be quite reliable, as was the case, *e.g.*, with regard to the existence of many ancient Ḳaraite scholars and their works. An attempt to defend the genuineness of the suspected tombstones was recently made by a living Ḳaraite writer;[1] and the final solution of many of the problems involved must be left to the future.[2] When all is said, however, the work done by Firkovitch was of an eminently serviceable kind. On his journeys, besides the inscriptions referred to, he discovered, and thus restored to science, numerous Rabbinical and Ḳaraite books that had been regarded as lost. He was also instrumental in creating an interest in the scientific investigation of Ḳaraism, and to some extent supplied the materials for it.

The death of Firkovitch ushers in a period of complete decadence among the Ḳaraites. Since that time they have produced not one single scholar of repute, but at best a few litterateurs, as, *e.g.*, Samuel Pigit (1849–1911), Ḥakam in Ekaterinoslav, who published a volume of sermons, etc., bearing the title *Iggeret Nidḥē Shᵉmū'ēl* (St. Petersburg, 1894), and a collection of Tatar popular

[1] In the thirties of last century there was formed in the Crimea an association for the publication of earlier Ḳaraite works that still remained unprinted or had become rare, and Firkovitch was one of the most zealous supporters of its efforts. To this society we owe a considerable number of valuable printed edd. of Ḳaraite works (cf. Geiger, *Jüdische Zeitschrift*, xi. 144 ff.).

[1] Judah Kokizov, *44 grobnyeh nadpisiey*, St. Petersburg, 1910.

[2] Cf. Dubnow, in *Yevreyskaya Starina* for 1914, p. 1 ff.

tales, *Dabār Dabūr* (Warsaw, 1904); Elijah Kazaz (1832–1912), a man of wide and varied culture, who, *inter alia*, translated the works of several French popular philosophers into Hebrew;[1] and the Judah Kokizov just mentioned, who, however, usually writes in Russian. Among the Ḳaraites, indeed, the Russian language has gradually dispossessed the Tataric.

In 1911 a number of Ḳaraite students at the University of Moscow tried to initiate what might be termed a Neo-Ḳaraite movement, and founded a Ḳaraite monthly in the Russian language and bearing the title *Karaimskaya Zhisn*, which, though it displayed great vigour, did not survive its first year.[2] A further evidence of the spiritual impoverishment of the Ḳaraites is the fact that since the death of their last Ḥakam, Samuel Pampulo († 31st Dec. 1911), they have failed to find an eligible successor, and are thus in a most critical situation.[3] In 1897 the Ḳaraites in Russia numbered 12,894—6372 males and 6522 females (cf. the same periodical, June 1911, p. 30); and it seems unlikely that during the last seventeen years this total has appreciably increased, if indeed it has increased at all, as in 1909 there were but seven additions (*ib.* March–April 1912), and in 1910 only four (*ib.* June 1911, p. 39). Outside Russia, the sect may perhaps number some 2000 souls in all, living in Halicz (in Galicia), Constantinople, Cairo, Jerusalem, and Hit on the Euphrates; its one community of any size is that of Cairo. The future of Ḳaraism—the only Jewish sect in the proper sense of the term—is thus a rather gloomy one. Its vital element all through was polemics, and this was finally exhausted by the death of its last great champion, Abraham Firkovitch.

LITERATURE.—i. *HISTORICAL AND GENERAL.*—The first really scientific account of the Ḳaraites is I. M. Jost, *Geschichte des Judenthums und seiner Sekten*, Leipzig, 1857–59, ii. 294–381; materials for a history of the sect are given by S. Pinsker, *Likkuṭe Ḳadmoniot*, Vienna, 1860, in which, however, the writer too uncritically follows Firkovitch (cf. the notes and remarks of J. H. Schorr, *He-Ḥaluṣ*, vi. 56–85, M. Steinschneider, *Hebräische Bibliographie*, iv. ff., Leipzig, 1859, and A. Geiger, *Gesammelte Abhandlungen* [Heb.], ed. S. Poznanski, pp. 340–373); as H. Graetz, *Geschichte der Juden*, Leipzig, 1853–70, v. ff. (see the indexes, *s.v.* 'Karäer'), and J. Fürst, *Geschichte des Karäerthums*, 3 vols., Leipzig, 1862–69, likewise follow Firkovitch, they are of little use, and the latter especially must be read with the utmost caution; of a more critical stamp are A. B. Gottlober, *Biḳḳoret le-Toledot ha-Ḳara'im* (Heb.), Wilna, 1865; A. Neubauer, *Aus der Petersburger Bibliothek*, Leipzig, 1866, and I. H. Weiss, *Zur Geschichte der jüdischen Tradition* (Heb.), iv., Vienna, 1887, pp. 46–110. The work of the Ḳaraite Isaac Sinâni, *Istoriya voznìknovisheniya i razaitiya Karaimisma* (Russ.), 2 vols., 1888–89, is written from the Ḳaraite point of view, but quite unserviceable. The artt. *s.v.* by P. F. Frankl, in Ersch and Gruber, *Allgemeine Encyklopädie der Wissenschaften und Künste*, Leipzig, 1818 ff.; A. Harkavy, in *JE*; Harkavy, Balaban, and Hessen, in *Yevreyskaya Enzyklopedya* (Russ.), 16 vols., St. Petersburg, 1908–14, and Revel, in *Oṣar Yisrael* (Heb.), 10 vols., New York, 1907–13, are comprehensive and are written in view of modern scientific requirements; B. Ryssel, in *PRE*³, is less reliable.

ii. *MSS.*—The richest collections of Ḳaraite MSS are found in Leyden, St. Petersburg, and the British Museum. An account of the Leyden MSS is given by Steinschneider, *Catalogus Codicum Hebræorum Bibliothecæ Academiæ Lugduno-Batavæ*, Leyden, 1858 (includes also a repertorium of the history of Ḳaraite literature); those in St. Petersburg have not as yet been catalogued; on the Brit. Mus. group see R. Hoerning, *Descriptions and Collation of Six Karaite MSS* (British Museum), London, 1889, and G. Margoliouth, *Catalogue of the Hebrew and Samaritan MSS in the British Museum*, i. [do. 1899] 189–271, ii. [1905] 172–196, 450–478 (notice by Poznanski, *REJ* xli. 305, li. 155). Certain less extensive collections are described by J. Bardach, *Mazkir libne Reshef* (Heb.), Vienna, 1869; E. N. Adler, *About Hebrew MSS*, London, 1905, pp. 17–33 (cf. Poznanski, *ZDMG* lx. [1906] 698), and P. Kokowzow, *Notitia Codicum Hebraicorum*, etc., St. Petersburg, 1905 (cf. Poznanski, *Zeitschr. für hebr. Bibl.* x. [1906] 25).

iii. *'ANÂN AND THE GENESIS OF THE MOVEMENT.*—Harkavy, *Istoričeskiye Očerki Karaimstva* (Russ.), 2 pts., 1897–1902, 'Zur Entstehung des Karaismus,' in Graetz, *Geschichte der Juden*, v.⁴, Leipzig, 1909, pp. 472–489, 'Anan,' in *Jahrbuch für jüdische Geschichte und Literatur*, ii. [Berlin, 1899] 107–122, 'Anan ben David,' in *JE* i. 553 ff.; Poznanski, 'Anan et ses écrits,' *REJ* xliv. 161–187, xlv. 50–69, 176–203.

iv. *WORKS DEALING WITH OTHER EMINENT ḲARAITES.*—These have in most cases been cited in the course of the article; cf., further, the relevant artt. by Poznanski in the Heb. Encyclopædia, *Oṣar Yisrael* (אוצר ישראל), and in the Judæo-Russian Encyclopædia, *Yevreyskaya Enzyklopedya*. On the Ḳaraites who wrote in Arabic see the corresponding artt. in Steinschneider, *Die arabische Literatur der Juden*, Frankfort a. M., 1902 (cf. Poznanski, *Zur jüdisch-arabische Litteratur*, Berlin, 1904). On Ḳirḳisâni see Poznanski, in *Steinschneider's Festschrift*, Leipzig, 1896, pp. 195–218, and *Semitic Studies in Memory of Rev. Dr. A. Kohut*, ed. G. A. Kohut, Berlin, 1897, p. 435 ff.; on Joshua b. Judah, M. Schreiner, 'Studien über Jeschua b. Jehuda,' in *Bericht der Lehranstalt für die Wiss. des Judentums zu Berlin*, xviii. [1900]; on Hadassi, Frankl, in *MGWJ* xxxi. [1882] 1 ff., W. Bacher, *ib.* xl. [1891] 14 ff., and *JQR* viii. [1895–96] 431 ff.; on Isaac b. Abraham of Troki, Geiger, *Isaak Troki*, Breslau, 1853; on Fîrûz, Poznanski, *Die karaitische Familie Firuz*, 1913; on Abraham b. Josiah of Chufut-Kale, Poznanski, הקראי אברהם בן יאשיהו ירושל מי; on the Ḳaraite philosophers, S. Munk, *Mélanges de philosophie juive et arabe*, Paris, 1857–59, p. 474 ff. (obsolete), and Steinschneider, *Die hebräischen Uebersetzungen des Mittelalters*, Berlin, 1893, p. 449 ff.; on the poets of the Ḳaraite synagogue, Luzzatto, in A. Berliner and D. Hoffmann, *Oṣar Ṭob*, 1883, pp. 27–32, 1884, pp. 3–6; on the Greek writings of the Ḳaraites, Danon, in *Actes du xvie Congrès international des Orientalistes*, 1912, p. 170; on their Tatar language, K. Foy, in *Mitteilungen aus dem Seminar für orientalische Sprachen*, i. [Berlin, 1898]; and J. Grzegorzewski, *Ein türktatarischer Dialekt in Galizien*, Vienna, 1903; on their Tatar literature, Poznanski, in *Keleti Szemle* (*Revue Orientale*), xiii. 37–47, 360, xiv. 223 f.; on the Ḳaraites in Galicia, Balaban, in *Yevreyskaya Starina*, iv. [1911] 117–121, and Fahn, in *Ha-Ḳedem*, iii. [1912] 160–173. The special privileges granted to the sect in Russia are tabulated in Z. Firkovitch, *Sbornik*, etc. (Russ.), St. Petersburg, 1890.

v. *FIRKOVITCH.*—There is a voluminous literature on Firkovitch and his discoveries. Only a selection can be given: S. L. Rapoport, in *Kerem Ḥemed*, v. 197 ff., and in *Ha-Meliṣ*, i. [1860] 227, 256; D. Chwolson, *Achtzehn hebräische Grabschriften aus der Krim*, St. Petersburg, 1865; Geiger, in *Jüdische Zeitschrift*, xi. [1875] 142–157; A. Jellinek, *Abraham Firkowitsch*, Vienna, 1875; Harkavy and H. L. Strack, *Catalog der hebräischen Bibelhandschriften . . . in Petersburg*, St. Petersburg and Leipzig, 1875 (cf. Riehm, in *ZDMG* xxx. [1876] 336–343, and Frankl, in *MGWJ* xxv. [1876] 418 ff.); Strack, *A. Firkowitsch und seine Entdeckungen*, Leipzig, 1876; Harkavy, *Altjüdische Denkmäler aus der Krim*, St. Petersburg, 1876; Frankl, 'Karäische Studien,' *MGWJ* xxv. 54 ff., and in *Ha-Shaḥar*, ed. Smolensky, vii., viii.; Deinard, תולדות אבן רשיף, Warsaw, 1875, and משא קרים, do. 1878 (written with considerable bias).

vi. *RECENT LITERATURE AND PUBLISHED TEXTS.*—On Karaite literature since Firkovitch's time see Poznanski, *Die karäische Literatur der letzten dreissig Jahre* (1878–1908), Frankfort a. M., 1910. Karaite texts have been edited by Bacher, Bargès, J. Gurland, Harkavy, H. Hirschfeld, D. S. Margoliouth, G. Margoliouth, Markon, Neubauer, Pinsker, Poznanski, Schreiner, and many others.

SAMUEL POZNANSKI.

[1] Cf. Poznanski, *REJ* lviii. 315.

[2] An earlier Ḳaraite journal was *al-Tahdīb*, a bi-weekly in Arabic, published in Cairo; it lived from the 12th of August 1901 to 1905 (cf. R. J. H. Gottheil, in *Harkavy Festschrift*, St. Petersburg, 1908, p. 120).

[3] Another typical indication of the present condition of the sect appears in the fact that, when a Ḳaraite synod in Eupatoria adopted a mitigation of the marriage law in November 1910, protests against it were at once forwarded from Troki, Constantinople, and Cairo (cf. Poznanski, *JQR*, new ser., ii. 449, note 3).

## KAṚĀ-LIṄGĪS.

**KAṚĀ-LIṄGĪS.**—A class of wandering Indian ascetics. The name is derived from Skr. *kaṭaka*, 'a ring,' and *liṅga*, the male organ. They claim to be worshippers of Śiva, and are also called Sewaras (possibly a corruption of the Skr. *śabara*, the name of a wild mountain tribe, also used as a title of Śiva). They generally go about in troops, with matted hair and red-ochre-coloured garments, but are sometimes solitary and stark naked. To mark their triumph over sensual desires, they affix an iron ring and chain to the male organ, which they also mutilate. They extort money by pretended miracles, such as wringing Ganges water out of their dry matted hair. Khewaras, a sub-variety of Sewaras, carry skulls. One of their tricks is to turn spirituous liquor into milk, and then to drink it; another is to rub their hands together till wheat or other grain issues from them. The name is a fanciful one, derived from 'Sewara.' The writer once met a Kaṛā-liṅgī in Lower Bengal who had his private parts locked up in a kind of

cage. This could never be opened, except with the consent of the head of his order, who kept the key.

LITERATURE.—H. H. Wilson, *Religious Sects of the Hindus*, London, 1861, p. 236; G. A. Grierson, tr. of the *Padumāwati of Malik Muḥammad Jāisi*, Calcutta, 1896, p. 17.

G. A. GRIERSON.

**KARAMNĀSĀ, KARMNĀSĀ** (Skr. *Karma-nāśa*, 'that which destroys the merit of works').—The accursed river of Hindu mythology, which rises in the Kaimūr hills, Bengal; lat. 24° 32′ N., long. 83° 26′ E.; forming in part of its course the boundary between the provinces of Bengal and the United Provinces of Agra and Oudh, and finally, after a course of about 146 miles, joining the Ganges. It has been identified with the Κομμενάσης of Megasthenes (J. W. McCrindle, *Ancient India as described by Megasthenes and Arrian*, Calcutta, 1877, p. 186 ff.). On the borders of the District of Mirzapur it hurls itself over a sandstone precipice, forming, under the name of Chhānpatthar, 'the stone-sifter,' one of the finest waterfalls in India.

In Hindu mythology the stream is connected with the legend of Satyavrata or Triśaṅku, a prince of the solar race and king of Ayodhyā. He aspired to perform a sacrifice by which, in his mortal body, he might ascend to heaven. He requested the sage Vasiṣṭha to officiate for him in this rite. On his appeal being refused, he invoked the aid of the hundred sons of the sage, by whom he was cursed and degraded to the status of a Chāṇḍāla, or out-caste. In this extremity he had recourse to a rival sage, Viśvāmitra, who undertook the sacrifice, and invited the presence of all the gods. They refused to appear, and Viśvāmitra, by his own magic-working powers, transported Triśaṅku to the skies, whence, on his arrival, he was hurled down head-foremost to earth by the enraged deities. But Viśvāmitra arrested his downward course, and he remained suspended between heaven and earth, and formed a constellation in the S. hemisphere. Another tale describes him as a wicked prince, guilty of the three heinous sins (*tri-śaṅku*); and in its modern form the story states that the river is formed by the saliva which drops from his lips as he hangs suspended in the air. The tale seems to represent some ancient conflict of rival cults, represented by the contest between the sages Vasiṣṭha and Viśvāmitra (J. Muir, *Orig. Skr. Texts*, pt. i.², 1872, p. 371 ff.). It may have been attached to this river because, as in other parts of India, the stream may have formed an ethnical or endogamous boundary. It may have marked at an early period the furthest point of the eastern advance of the Aryan-speaking races, as in later days it formed the boundary of the kingdom of Magadha.

Whatever may be the origin of the legend, the river maintains its evil reputation to the present day. Though its water flows clear as crystal, no orthodox Hindu dares to bathe in it or drink from it. In olden days, pilgrims employed the services of men of low caste, who supposed themselves safe from contamination, to convey them on their backs across the ill-omened water. Even the ferrymen, when the river was in flood during the rainy season, were implored by their passengers not to splash up the water with their oars. To obviate the risks to which pilgrims were thus exposed, the famous Rānī Ahalyā Bāī of Indor attempted to bridge it; but she failed, and the work was finally accomplished by a wealthy banker of Benares, Rājā Patnī Mal. This bridge and another on the E. Indian Railway now secure safe transit for orthodox Hindus.

LITERATURE.—H. H. Wilson, *Vishṇu Purāṇa*, London, 1864–77, iii. 284–287; F. Buchanan, in M. Martin, *Eastern India*, do. 1838, i. 399 ff.; J. Dowson, *Classical Dictionary*, do. 1879, p. 288 ff.; Bholanauth Chunder, *Travels of a Hindoo*, do. 1869, i. 234 f.; *Memoirs of Baber*, tr. J. Leyden and W. Erskine, do. 1826, p. 408; *Āīn-i-Akbarī*, tr. H. Blochmann and H. S. Jarrett, Calcutta, 1873–94, ii. 151; *IGI* xv. [1908] 21.

W. CROOKE.

**KARĀRĪS.**—A sect of Indian Śāktas (*q.v.*). The origin of the name is unknown. It may be an Indianized form of the Persian *qarārī*, 'firm,' 'established,' in the sense of 'stanch,' or a derivative of the Skr. *karāla*, 'terrific,' the Karārīs being worshippers of Devī in her terrific form. According to Wilson, they are the modern representatives of the Aghoraghaṇṭas and Kāpālikas, who in former times sacrificed human beings to Kālī, Chāmuṇḍā, Chhinnamastakā, and other hideous personifications of the *śakti* of Śiva. The modern Karārīs inflict upon themselves bodily tortures, piercing the flesh with hooks or spits, running sharp-pointed instruments through the tongue and cheeks, gashing themselves with knives, or lying upon beds with sharp-pointed spikes. This is usually done to extort money rather than for devotion.

LITERATURE.—For the general question of this self-inflicted torture see J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, ed. H. K. Beauchamp, Oxford, 1906, p. 597 ff. For the Karārīs see H. H. Wilson, *Religious Sects of the Hindus*, London, 1861, i. 264, and K. Raghunāthji, in *IA* x. [1881] 78.

**KARENS.**—See BURMA.

**KĀRLĒ, KĀRLĪ** (also known as Vihārgānv, 'temple-village').—A place on the road from Bombay to Poona; lat. 18° 45′ N., long. 73° 29′ E.; famous as the site of important Buddhist caves, excavated a little before the Christian era.

'It is the largest as well as the most complete *chaitya* cave hitherto discovered in India, and was excavated at a time when the style was in its greatest purity. In it all the architectural defects of the previous examples are removed; the pillars of the nave are quite perpendicular. The screen is ornamented with sculpture—its first appearance apparently in such a position—and the style had reached a perfection never afterwards surpassed' (J. Fergusson, *Hist. of Indian and Eastern Arch.*², i. 142).

The building resembles, to a very great extent, an early Christian church in its arrangement, consisting of a nave and side-aisles, terminating in an apse or semi-dome, round which the aisle is carried. Its arrangement and dimensions are similar to those of the choir of Norwich Cathedral, or of the Abbaye aux Hommes at Caen, omitting the outer aisles in the latter building.

'Of the interior we can judge perfectly, and it certainly is as solemn and grand as any interior can well be, and the mode of lighting the most perfect—one undivided volume of light coming through a single opening overhead at a very favourable angle, and falling directly on the *dāgaba* or principal object in the building, leaving the rest in comparative obscurity. The effect is considerably heightened by the closely-set thick columns that divide the three aisles from one another, as they suffice to prevent the boundary walls from ever being seen; and as there are no openings in the walls, the view between the pillars is practically unlimited' (*ib.* i. 147 f.).

Immediately under the semi-dome of the apse is a great *dāgaba*, or relic-shrine, which originally was probably painted and decorated, or adorned with hangings. This is surmounted by a *tee* (Burmese *h'ti*) with the remains of a wooden umbrella which originally overhung it. The cave is entered from three doorways under a gallery like our roodlofts, forming one great window through which light is admitted to the interior. Near the great cave is a Hindu shrine dedicated to Ekvīrā, the goddess of the Kolī tribe, which is probably older than the Buddhist excavations.

**KARMA.—1. Importance of doctrine.**—The Indian solution of the great riddle of the origin of suffering and the diversity of human conditions is to be found in the word *karma*, which, through the theosophists, has become familiar to European ears. Hindus believe that souls have been transmigrating from the beginning; they practically hold that the wellbeing or the suffering of everybody is only the result of former acts (*karma*). This solution of the great riddle is not altogether satisfactory, as we get no answer concerning the 'very beginning'; but it is a happy one, eminently moral, and to a large extent a true one.

The doctrine of *karma*, *i.e.* acts and their retribution, is of great antiquity in India. It gradually broke away from Vedic naturalism, mysticism, and piety.

'Karma struck hard against the old belief in sacrifice, penance, and repentance as destroyers of sin' (E. W. Hopkins, *JRAS*, 1906, p. 583).

It became formulated at an early stage in definite terms:

'As a man himself sows, so he himself reaps; no man inherits the good or evil act of another man. The fruit is of the same quality with the action, and, good or bad, there is no destruction of the action' (*ib.* p. 581).

This doctrine might be called the essential element, not only of all moral theories in India, but also of popular belief. If a person is born deformed or unhealthy, it must be—so people say—because of sins committed in his former life. It is in Buddhism, however, that the doctrine of *karma* reaches its climax and assumes a unique character. Elsewhere it meets with correctives; there are counteractions to human acts; but in Buddhism it may be said that *karma* explains everything, or ought to.

**2. Ego and karma.**—Other Indian philosophies admit the existence of a self-existent soul or an ego. In Buddhist philosophy the ego is merely a collection of various elements constantly renewed, which are combined into a pseudo-personality only as the result of action. It has, therefore, been asserted that Buddhism does not admit transmigration: when a being dies, a new being is born and inherits his *karma*; what transmigrates is not a person, but his *karma*. This explanation is justified by some texts;[1] but it would be more exact to put the matter in a different way: an existence is a section of the existence of a certain soul—or, to use Buddhist terms, of a 'series' composed of thoughts, sensations, volition, and material elements. This series never had a beginning. It has to 'eat' the fruits of a certain number of acts under certain conditions, and the experience of these acts constitutes an existence (see DEATH [Buddhist]). When this existence comes to an end, there are still some acts to be 'eaten,' both new and old. The series, therefore, passes into another existence, and lives a new section of life, under new conditions. It cannot be said that acts are the sole material cause of this re-incarnation; for the physical elements of the new being, blood and seed, are not intelligent; *karma* (the possibilities of retribution called *karma*) is not intelligent; while the new being is intelligent from the embryo. It is the 'series' as a whole, with all its moral and material elements, that is incarnated. If the series does not dissolve at death, if it becomes re-incarnate, it is because its acts must entail retribution. The new being is what its acts have made it: all the pleasant and unpleasant experiences to which it will have to submit are simply the retribution of acts. In fact, there is no agent (*kartar*); there is nothing but the act and its fruit; organs, thoughts, and external things are all the fruit of acts, in the same way as pleasant and unpleasant sensations.

**3. Karma and destiny.**—Over and above human energy and free will Brāhmanism placed destiny (*daiva*, from *deva*, 'god'). To Buddhists destiny is merely 'past acts.' The earlier Indian belief was that the world was re-created by Brahmā at the end of each period of chaos. Buddhists hold that the whole universe, with all its variety, is the work of acts. But by 'acts' we must here understand the combined mass of the acts of all beings; *e.g.*, at the beginning of the re-creation of the world there rise in the vast void of the universe 'winds born of acts,' which heap up the clouds from which the creative rain will pour, and so on (see COSMOGONY AND COSMOLOGY [Buddhist]).

**4. Nature of karma.**—'Act' was variously interpreted by the Indian philosophers. The early thinkers attributed an importance to liturgical action and penance which Buddhists contest or even deny. For them an act is essentially action that can be morally qualified. It is (1) volition (*chetanā*), mental or spiritual act (*mānasa*), and (2) what is born of volition, what is done by volition, what a person does after having willed, *i.e.* bodily or vocal act. Mental acts are acts *par excellence*, inasmuch as there is no act without mental action. We are what we think; we are what we will.[1] No act is imputable, or, in Buddhist terminology, accumulated (*upachita*), put in reserve for future retribution, unless it is intentional, deliberate, accomplished, and free from regret and antidote (remorse, confession, etc.). *Chetanā*, being mental, leaves traces (*vāsanās*) in the 'series of thoughts' (*vijñānasantāna*); this is the explanation of retribution. In certain cases the act of thought is the most potent act; the anger of a *ṛṣi*, *e.g.*, can depopulate a whole region. But the mental act is not the only act; and, as a rule, 'what one does after having willed' is more important than the willing. To kill an enemy is more efficacious and more serious than to wish to kill him. Hence the importance of physical and spoken acts. Physical and spoken acts make something known (*vijñapayati*), for speech and gesture are significant; they are, therefore, named *vijñapti*; but the Buddhist school admits that they create *avijñapti*. By *avijñapti* we must understand a thing of particular nature, derived from the four great material elements, earth, water, etc., but subtle. Once produced by a conscious and voluntary vocal or bodily act, it exists and develops of its own accord, without the agency of thought, unconsciously, whether a man is sleeping, waking, or absorbed in contemplation. It is part of the series that takes the place of the soul in Buddhism.

**5. Saṁvara and asaṁvara.**—Here we must notice the important tenet of *saṁvara*, moral restraint, and its opposite, *asaṁvara*. The man who, in accordance with the established rules of the community, undertakes to keep the Buddhist vows, or simply the five rules 'not to kill,' 'not to steal,' etc., creates by this solemn declaration (*vijñapti*) an *avijñapti* of particular virtue. This *avijñapti* constitutes what might be compared—roughly, of course—to the merit attaching to religious vows in Christian theology. The merit of the man who has declared (*vijñapayati*) his intention of keeping the vows goes on increasing. Every abstention from murder, theft, etc., is reckoned a merit to him, though, as a rule, it is no special merit to the ordinary man to abstain from those crimes. The *saṁvara* constituted by the acceptance of rules continues to exist until the rules are categorically renounced—until an act is committed which is in direct opposition to them.

The man who, on the other hand, devotes himself professionally to a certain sin—the murderer, butcher, judge, or king—lives in *asaṁvara*, and is vowed to perdition.

**6. Pure and impure karma.**—There are two kinds of acts: acts free from *āsravas*, or pure acts, and acts accompanied by *āsravas*, or impure acts. The meaning of *āsrava* is not quite certain ('deadly floods' [according to Rhys Davids]; 'discharge, matter, pus' [Childers]), but it is right to say that it has something to do with desire and ignorance: 'pure' means free from passion (*kleśa*). Being free from desire and ignorance, pure acts have no retribution; they do not contribute to existence; they are, by their nature, the destroyer of existence; they prepare the way to *nirvāṇa*. Such are the 'volitions' by which one gets rid of human and transitory interests to contemplate and

[1] The present writer has recently found one text with this meaning, *Abhidharmakośabhāṣya*, iii. 24; but see *ib.* iii. 11 f.

[1] In this the Buddhists differ from the Jains, who do not recognise mental acts.

meditate upon the four 'noble truths' by which one enters into the path of Arhatship.

All other acts are impure, and are further distinguished as good or bad, merit or demerit. The principle of distinction seems to be retribution: the act with pleasant retribution is good; that with unpleasant retribution is bad. It may also be said that acts performed with a view to happiness in this world are bad; acts performed with a view to happiness in the world beyond are good. We sometimes meet with the noteworthy statement that good and bad actions (*sucharita* and *duścharita*) are characterized by their intention for the good or harm of others.

7. **Roots of karma.**—The good act (*kuśala*) has three roots: the absence of lust (*alobha*), of hatred (*adveṣa*), and of error (*amoha*). All bad acts are in contradiction to good acts; but false doctrine alone (*mithyādṛṣṭi*)—'denial of good and bad, of fruit, of salvation'—cuts the 'roots of the good act.' It must, however, be strong-strong (there are nine categories: weak-weak, weak-medium, weak-strong, etc.). Only men can cut the root; gods cannot, because they know the retribution of acts; women cannot, according to some teachers, owing to their instability of mind. In order to cut the root, a man must be an 'intellectual' (*dṛṣṭicharita*), a being capable of a strong determination to sin; this excludes 'passionate men' (*tṛṣṇācharita*), eunuchs, the damned, and animals. The roots are restored by doubt as to the existence of good and evil, and by recovery of belief in good and evil.

8. **Classifications of karma.**—Acts are distinguished as of three kinds: good (*kuśala*), bad (*akuśala*), and indifferent (*avyākṛta*), *i.e.* beneficial, pernicious, and neither the one nor the other; *i.e.* acts protecting from suffering either temporarily (by assuring a happy lot) or finally (leading to *nirvāṇa*), acts followed by unpleasant retribution, and acts different from both of these—not to be 'enjoyed' pleasantly or painfully.

Acts may also be classified as meritorious (*puṇya*), demeritorious (*apuṇya*), and fixed (*āniñjya*). The good act of the sphere of desire, *i.e.* bearing fruits which will be well rewarded in the sphere of desire (*Kāmadhātu*; see COSMOGONY AND COSMOLOGY [Buddhist]), is called meritorious; when it attaches itself to a higher sphere, it is called 'fixed.' As a matter of fact, the retribution of a good act in the sphere of desire is not absolutely determined: an action which ought to have a retribution of force, beauty, and so on, may in fact be enjoyed in a divine, human, or animal birth. This is not the case with the good act to be rewarded in the higher spheres; here an act never gets retribution in one stage instead of in another. The demeritorious act is the bad act. The act which is a final protection from suffering, *i.e.* which leads to *nirvāṇa*, is good (*kuśala*), since it is 'pure,' but not meritorious (*puṇya*).

9. **Retribution** (*vipāka*).—The fruit of retribution of acts includes not only the sensation, but also everything that determines the sensation—organs, etc. The three kinds of acts produce agreeable sensation (*sukhavedanīya*), disagreeable sensation, and indifferent sensation. The first two are easily understood; the proper sphere of retribution for the third is the fourth ecstasy; but it is also believed that the indifferent act produces the vital organ, etc., and other data hedonistically neutral. It is regarded as good, but not intense.

Acts may be (*a*) determinate (*niyata*), and (*b*) indeterminate (*aniyata*)—*i.e.*, they involve or do not involve a necessary retribution.

(*a*) Five kinds of acts are called *ānantaryas*, 'immediate,' because their retribution (hell) cannot be interrupted by an act allowing of fruit in another existence: matricide, patricide, murder of an Arhat, schism, and malicious wounding of a Buddha. Mother and father are benefactors in an eminent degree; the Arhat, the community, and the Buddha are 'fields of qualities.' To kill one's father in the endeavour to kill flies is not *ānantarya*; but to kill an Arhat without knowing that he is an Arhat is *ānantarya*, because the intent to murder is determined: 'I shall kill some one.'

Acts said to be 'similar to *ānantaryas*,' and necessarily entailing hell, are violation of a mother who is an Arhatī, murder of a Bodhisattva, murder of a saint of the *śaikṣa* class, theft from the community, and destruction of a *stūpa*.

(*b*) The retribution of all other acts may be arrested (1) by the acquisition of the spiritual stage called 'patience' (*kṣānti*), which brings one past the stage of retribution of acts leading to evil destiny, just as a man may escape his creditors by emigrating; (2) by the acquisition of the quality of the saint 'who never returns' (*anāgāmin*); one passes beyond the sphere of desire; only those acts bear fruit which must bear fruit in this present existence; (3) by the acquisition of Arhatship; all *karma* is destroyed, with the reservation already noted. When, by so-called 'worldly' perfection (*laukika*), *i.e.* not properly Buddhist, a man obtains birth into the higher spheres and detachment from all affection for the sphere of desire, the retribution of acts to be rewarded in the sphere of desire is suspended, since the lower sphere cannot be finally abandoned except by the 'noble path.'

Good acts of the body, voice, and thought are purification; they arrest, either temporarily or finally, soiling by the passions of bad acts.

A distinction is also drawn between (1) the act felt in the same life in which it is accomplished; (2) the act felt in the following life; and (3) the act felt later.

10. **Projection of karma.**—An existence is 'projected,' or caused, by an act; but a number of acts combine to condition an existence, and hence the variety of human fortune. Here the theory of the white-black act applies.

Every bad act is black; the act that is good in relation to the higher spheres is white; the act that is good in relation to the sphere of desire is white-black, because, being always weak, it is always mixed with evil. It is good in itself, but co-exists in the 'series' (soul) along with bad acts.

A human existence cannot be projected except by a good act. But, supposing this existence follows an infernal existence, the latter has been projected, in the course of the existence preceding it, by a bad act 'to be punished in a following existence'; the former has been projected, in the course of the same preceding existence, by a good act 'to be rewarded in an existence following the following.' In a human existence following upon an infernal existence, a man may have a short life, or may suffer scarcity of food and property, or may wed an unfaithful wife, etc. All these misfortunes are the fruit of the stream (*niṣyanda*) of murder, theft, adultery, etc., which have had infernal existence as their fruit of retribution (*vipāka*).

A man causes suffering to the living being whom he kills, therefore he must suffer in hell (*vipāka*); he makes him die, therefore he must himself die soon (*niṣyanda*).

Acts have also a fruit of a general kind. Towards the end of the little cosmic period (*antarakalpa*; see COSMOGONY AND COSMOLOGY [Buddhist]), plants etiolate, are crushed by stones and rain, and bear little fruit; this is the result of a superabundance of murder, theft, etc.—the fruit of *karma* as sovereign (*adhipati*). The creation of the universe is the result of the acts of all beings

together; the hells are created by the acts that require to be punished in hell, and so on.

**11. Paths of karma.**—Among good and bad acts ten paths of acts (*karmapatha*) are distinguished because of their gravity: (*a*) for the body: murder, theft, and forbidden love; (*b*) for the voice: lying, slander, insolence, and 'unprofitable conversation' (stultiloquium, etc.); (*c*) for the spirit: covetousness, malice, and false doctrine. Their opposites are abstention from murder, etc.

False doctrine (*mithyādṛṣṭi*) is the denial of good and evil, of retribution and salvation. It is bad because it is the principle of the will to hurt others.

The first seven, from murder to 'stultiloquium,' are physical and spoken acts (*karma*), and paths of acts (*karmapatha*), *i.e.* paths of mental action, *i.e.* volition (*chetanā*); the last three, covetousness, malice, and false doctrine, are not acts, but simply paths of volition. Confusion of passions (*kleśas*) with acts must be avoided.

We must further distinguish in an act the preparation, the act proper, and the 'back' (*pṛṣṭha*)—*e.g.*, all the preparation for the murder of an animal by the butcher (the going to the market to buy the beast, etc.), the actual death-dealing blow, and the cutting up and selling of the meat. The act proper alone constitutes the 'path of act'; and hence important consequences arise from the point of view of responsibility.

It is also to be noted that the 'path of act' presupposes accurate knowledge of what one is doing, and is incompatible with a mistake in the person. When one is in doubt whether the thing which he hits is alive or not, he is thinking of destruction, but not of murder. The Jains hold that the man who commits a murder without intent is none the less guilty, just as a man who touches fire is burned.

This, however, would lead to palpable absurdities. The Jain himself would be culpable for preaching terrible austerities; the embryo and the mother would be culpable for making each other suffer; the murdered being himself would be culpable, since he is the origin of the action of murder. Further, a man would not be guilty of murder if he got another person to commit it; for we are not burned if we touch fire by means of another.

All this is very well worked out, but in other things the school is not so wise.

If a man has intercourse with another man's wife, thinking that she is his own, he is not guilty of adultery. If he has intercourse with another's wife while thinking that she is the wife of a third man, opinions differ as to his guilt. Some hold him guilty of adultery, for the wife of another man is the object of the preparation and the object of the indulgence. Others say that there is no adultery, for the object of the preparation and the object of the indulgence are different persons.

The somewhat mechanical and very scholastic character of the Buddhist theory of retribution may be illustrated by the subjective and objective elements in giving.

For a thorough valuation of the merit of giving, or charity (*dāna*), we must take into account (1) the qualities of the giver (faith, morality, learning, etc.), and the manner of giving (with respect, with the right hand, at the opportune moment, etc.); (2) the qualities of the object given (excellence in colour, smell, etc.); and (3) the qualities of the person who receives: (*a*) excellence in relation to his lot in life; a gift made to an immoral man has 100 times the value of one made to an animal; (*b*) excellence due to suffering; a gift to an invalid, a person who is cold, etc.; (*c*) excellence due to services received (parents, preacher of the True Law, etc.); and (*d*) excellence due to qualities (morality, knowledge, etc.).

There is a hierarchy among acts—*e.g.*, whether one's destiny is human, or infernal, etc., is determined by morality (*śīla*, abstention from murder, etc.). Gifts are only a sort of extra, to assure riches and other enjoyments.

LITERATURE.—*Abhidharmakośabhāṣya*, ch. iv. (tr. in *Muséon*, Louvain, 1914), gives a complete résumé of the doctrine of *karma* in Buddhism; R. Spence Hardy, *Manual of Buddhism*², London, 1880, p. 461 f.; 'Birth Stories' (*Jātakas*) and *Avadānas* contain many details on the retribution of *karma*; see, *e.g.*, E. Chavannes, *Cinq cents contes et apologues extraits du Tripiṭaka*, Paris, 1911. Every work on the philosophies and religions of India contains some exposition of the doctrine of *karma*—*e.g.*, E. W. Hopkins, *The Religions of India*, London, 1896, pp. 199, 231, etc.; A. Barth, *The Religions of India*, do. 1882, pp. 77, 110; P. Oltramare, *Hist. des idées théosophiques dans l'Inde*, i. (Paris, 1906) 99, 196; H. C. Warren, *Buddhism in Translations*, Cambridge, Mass., 1896, Index, *s.v.* 'Karma'; R. C. Childers, *Dict. of the Pali Language*, London, 1875, pp. 178 f., 198. Special mention may be made of the articles by E. W. Hopkins on 'Modifications of the Karma Doctrine' in *JRAS*, 1906, pp. 581–593, 1907, pp. 665–672, which give a clear view of the contradictions and evolution of the doctrine. For the theory of the Jains, who regard action as a subtle matter, see the texts translated by H. Jacobi in *SBE* xxii. [1884] and xlv. [1895], and cf. art. JAINISM.

L. DE LA VALLÉE POUSSIN.

**KARMA-MĀRGA.**—Of the three ways of salvation as commonly conceived in orthodox Hinduism, *karma-mārga*, *jñāna-mārga*, and *bhakti-mārga*, the first, though least considered by the philosophers, has probably been most followed by the vast bulk of the people. These three ways—though not necessarily inconsistent with each other (in this resembling the respective Gospels of the Apostles James, John, and Paul, with their peculiar stress laid upon the necessity for works, knowledge, and faith), and combined, as in the *Bhagavad-Gītā*, into one consistent system—have usually been placed to some extent in mutual opposition, and may well be treated separately here. In particular, we shall find a certain opposition between works and knowledge; the idea of *bhakti*, loving faith, is of considerably later origin. The doctrine of salvation according to works will best be treated by considering the relative importance attached to it in the different phases of religious development in India, taken in the following order: Rigveda, Brāhmaṇas, the philosophical Brāhmanic development, the Dharmaśāstras as reflecting popular Brāhmanism, and the *Bhagavad-Gītā*. But it must always be borne in mind that no real line of demarcation can be drawn between these periods; each merges insensibly into, or exists contemporaneously with, the other.[1]

(1) In the *Rigveda* the gods are concrete, active, anthropomorphic beings; therefore man's attitude towards them must also be something concrete and active. They are not mere abstractions to be apprehended only by the intellect, or by some process of mystical cognition; but they are beings, whose works can be perceived by the ordinary senses, and who must, therefore, be propitiated and appeased by concrete actions. Hence sacrifice, though not as yet grown to unwieldy proportions, is a necessary means to obtaining the favour of the gods, and a share in that after life which, though still misty and undetermined, is the aim of all. Some have seen in the hymns only a simple nature-poetry, others only the accompaniment of an elaborate sacrificial ritual. The truth probably lies in the middle way, that, while many are simple outbursts of devotional feeling, some undoubtedly possess a strictly ritualistic setting.[2] But sacrifice alone was not sufficient; for to find favour with heaven a man must also be piously minded towards gods and *manes*, liberal towards priests, courageous, and truthful; while in the last book we see the first beginnings of the demand for those ascetic austerities that attained to such a monstrous growth in later times.[3]

(2) Coming to the *Brāhmaṇas*, we find a complete change. The sacrifice, now called *karma*, or work *par excellence*, is all-important. It overshadows the whole of life; every action must be regulated with regard to it; and without it nothing can be obtained or hoped for. By its means alone can a man expect to attain salvation, still for the most part looked upon as a material heaven.[4] Not only men but the gods also are subject to its influence,

[1] Von Schroeder, *Indiens Literatur und Cultur*, p. 291; Hopkins, *Religions of India*, p. 7.
[2] Cf. Hopkins, p. 13 ff., and literature there quoted.
[3] *Rigveda*, x. cliv. 2, clix. 4; Hopkins, p. 148.
[4] Hopkins, p. 204 ff.

and by it have obtained their present position.[1] Henceforward *karma*, as a way of salvation, always carries with it the connotation of sacrifice and ritual. The intention that accompanies the deed is of no importance, only the deed itself.[2] At the same time the power of good actions is recognized. In the Brāhmaṇas we meet with the phrase 'man's debts.' These debts are, to the gods, sacrifice; to the seers, study of the Veda; to the *manes*, offspring; to fellow-men, hospitality. Whoever pays them has discharged all his duties, and by him all is obtained, all is won.[3]

(3) Meanwhile *philosophic speculation* had advanced. The universe was no longer an aggregation of separate material entities. Behind all was one uniform self-existent cause.[4] Individual souls owe their self-consciousness to the action of ignorance on the primal non-conscious cause, Brahman; the whole material world is the result of illusion. Self-consciousness will continue as long as actions which lead to re-birth (*saṁsāra*) continue.[5] The aim of religion or philosophy is to free the individual from re-birth and the continuation of self-consciousness. This result can be attained only by knowledge, *jñāna*, a recognition of the essential unity of the seeming individual with Brahman. This is the *jñāna-mārga*, as opposed to the *karma-mārga*, or path of works, which can lead only to re-birth, in accordance with the truth that every action must be followed by its reaction. But, despite this necessity for desisting from action, the Vedāntist recognizes that such a course, at least at first, is not altogether possible. By a right series of actions the searcher after salvation may fit himself to proceed to the higher knowledge: the *karma-mārga* leads into the *jñāna-mārga*, by which alone the goal is to be reached. Rāmānuja, in his commentary on the *Vedānta-sūtra*, says:

'For the fact is that the enquiry into Brahman—the fruit of which enquiry is infinite in nature and permanent—follows immediately in the case of him who, having read the Veda together with its auxiliary disciplines [*i.e.* that part of religious literature dealing with actions, the *karma-kāṇḍa*], has reached the knowledge that the fruit of mere works is limited and non-permanent, and hence has conceived the desire of final release.'[6]

But, since actions may lead to the higher path of knowledge, where is to be found the authority to decide the kind of actions necessary? This is the Veda. Speaking of the authority of the Veda, Śaṅkara says:

'Here others raise the following objection:—Although the Veda is the means of gaining a right knowledge of Brahman, yet it intimates Brahman only as the object of certain injunctions. . . . Why so? Because the Veda has the purport of either instigating to action or restraining from it.'[7]

But to make the Veda the final authority by no means solves all difficulties. The great bulk of the *karma* prescribed by the Veda consists of sacrifice. To begin with, there can be little doubt that before and during the time of the composition of the Brāhmaṇas, among Brāhmans belonging to different schools and different localities, different sacrificial customs had arisen, but that, after the Brāhmaṇas had been composed and had acquired some sort of general authority, it was felt necessary to reconcile these outside sacrificial practices with those prescribed by the Brāhmaṇas. Further, even within the Veda itself was to be found a mass of bewildering inconsistencies—a fact not surprising, when we consider the great differences in time, authorship, and purpose. The difficulties thus arising were many. A few of the more typical may be mentioned. It sometimes happened that the Brāhmaṇa-passage describing the action of a certain sacrifice was not always in harmony with the *mantra* to be recited during the performance:

'The Brāhmaṇa-passage maintains that from out a series of sacrificial acts a certain one is to be performed in the sixth place, while in the section that contains the mantras accompanying the series of acts the mantra referring to the particular act occupies the tenth place.'[1]

Again, it may not be made quite clear who it is that must perform the sacrifice, or how exactly any one of the numerous modifications of the typical sacrifices, which the Veda describes in full detail, is to be performed. The necessity for clearing up all such obscure points led to the formation of a set of rules, in accordance with which it was possible to settle disputed points without impugning in any way the authority of the Veda.

'So for instance . . . it is laid down that, whenever the place of the mantras accompanying a certain action and the place assigned to the action by a Brāhmaṇa-passage are in conflict, the mantra is to have greater weight than the Brāhmaṇa, because the former, being actually recited during the sacrifice, is connected with it more intimately than the latter, which is not directly used during the performance.'[2]

These rules, and the principles lying behind them, are collected in the *sūtras* of Jaimini, which form the ground of the *Pūrva-mīmāṁsā*, or 'Preliminary Investigation,' as opposed to the *Uttara-mīmāṁsā*, or 'Secondary Investigation' (*i.e.* into the nature of Brahman); for the necessity of works comes before the necessity of knowledge. The *Pūrva-mīmāṁsaka* devoted considerable attention to the criteria of knowledge. They are five in number: sense-perception, inference, comparison, presumption, and verbal information, with sometimes a sixth—non-existence. But of only one do they make considerable use—*śabda*, or verbal information, *i.e.* Scripture. For duty cannot rest on human authority, which is fallible, but must rest on some infallible authority, and this is found only in the Veda. Hence there follows the necessity of proving the infallibility and superhuman origin (*apauruṣeyatva*) of the Veda (for a discussion of the proof see Max Müller, *Six Systems of Indian Philosophy*, p. 270 ff.). For the rest the *Mīmāṁsā* is occupied with the explanation and conciliation, in accordance with those principles of interpretation and authority, of apparently conflicting instructions and statements contained in the Veda.

(4) We have now reached a point at which we can consider how these two different religious attitudes—salvation according to works and salvation according to knowledge—were combined into one consistent system for the practical purposes of everyday life. This is seen in the precepts of the *Dharmaśāstras*—books dealing with religious and social duties. In this respect their prescriptions concern only the three upper—or Āryan—castes; neither with the *karma-mārga* nor with the *jñāna-mārga* has the Śūdra anything to do. For the Āryan it was necessary as a boy to study the Veda; as a householder to perform sacrifices; and, finally, there was an ever-growing desire to spend the last few years of life in the quiet shelter of the forest, or as a beggar, wandering from village to village, ever in search of that knowledge of his own unity with the universal Brahman which alone could bring final release from the cycle of birth and death. In this way, with the passing of time the life of an Āryan came to be divided into four definite stages, called *āśramas*. At a certain age, which varied with the caste to which the boy belonged (for the Brāhman the eighth to the tenth year), the young Āryan was sent to the house of a Brāhman, there to live and be taught the Veda. For a period which might vary from twelve to forty-eight years,[3] the student must remain with his teacher, whom it was

his constant duty to help and care for. In return for this the teacher, called the *guru*, instructed the student, or *brahmachārin*, in the knowledge of the Veda. At the end of his time of study the *brahmachārin* left the house of his *guru*, and with the title of *snātaka*, 'one who has bathed,' entered into the *āśrama* of a *gṛhastha*, 'householder.' Now, in addition to the duties which he owed his family, he had to engage in a definite series of sacrifices addressed to the gods and the spirits of his ancestors. But, when his sons were grown up and could themselves found families, his duties were finished; the end of the way of works was already in sight. With or without his wife he might now take refuge in the forest as a *vānaprastha*; freed from almost all duties and sacred rites, he was at liberty to spend his days in meditation. Last of all, renouncing every remaining duty, he was ready to enter the final stage of a *sannyāsin*, and to leave behind him for ever the *karma-mārga*, free to travel along the path of knowledge, wandering from village to village, until death removed the last barrier that prevented his absorption into the universal Brahman. In this way the journey, taken by not a few, began upon the path of works and ended upon the path of knowledge.

(5) Lastly, we have to consider the doctrine of works as it appears in the *Bhagavad-Gītā*. Hitherto the works that have been included under the designation of *karma* have been chiefly the sacrifices and general religious duties laid down in the Brāhmaṇas and the law-books, and they have been performed entirely for the sake of the performer. In the *Bhagavad-Gītā* we meet with a completely different conception. Knowledge is no longer the only way that leads to salvation; that may be reached also through *bhakti* (loving faith), or by works. But works, to be efficacious for salvation, must be disinterested. The *karma-yoga*, as this rule of works is called, has two phases. In the first the follower of the rule must discharge all his religious and social duties in utter indifference and unattachment to their fruits. He makes a sacrifice to the Lord of all his works, so that they no longer bind his soul to existence. Thus detached from all desires, he gains final redemption. The following verse is typical:

'This world is fettered by works, save in the work that has for its end the sacrifice. Work to this end do thou fulfil, O son of Kuntī, free from attachment'[1]—in the words of the Christian: 'Whether therefore ye eat, or drink, or whatsoever ye do, do all to the glory of God.'[2] For a fuller discussion of this see art. BHAGAVAD-GĪTĀ.

The attitude of Buddhism differs little in this respect. In fact, one may reasonably surmise that the author of the *Bhagavad-Gītā* was influenced by Buddhist doctrines. Selfishness is the one thing that the Buddhist must avoid; acts performed with reference to self only bind the doer more firmly to the wheel of existence; but works of unselfish love are without effect, except in so far as they bring the worker nearer that absolute detachment which alone can open the gates of *nirvāṇa*.

'Our mind shall not waver. No evil speech will we utter. Tender and compassionate will we abide, loving in heart, void of malice within . . . and with that feeling [love] as a basis, we will ever be suffusing the whole world with thought of love, far-reaching, grown great, beyond measure, void of anger and ill-will.'[3]

To-day in India we may still find the old contrast between the path of knowledge and the path of works. There is the philosopher, who sits meditating on the infinite and awaiting the moment of final salvation; and there is the peasant, sacrificing his goats to Siva or to Kālī, and punctiliously performing the multifarious round of prescribed duties in his journey along the *karma-mārga*, by which he hopes in the next birth to obtain a better position on the wheel of life.

## KARMATIANS.—See CARMAṬIANS.

## KARNAPRAYĀG

**KARNAPRAYĀG** (Skr. *Karṇaprayāga*, 'the sacred river junction of Karṇa').—A place in the British Himālayan province of Garhwāl in N. India, situated at the junction of the Alaknandā (*q.v.*) and the Pindar rivers; lat. 30° 16′ N., long. 79° 15′ E., at an elevation of 2300 ft. above sea-level. It is an important place of pilgrimage on the upper sources of the Ganges.

As its name denotes, it is connected with the legend of Karṇa, half-brother of the Pāṇḍava heroes of the *Mahābhārata* epic. He was the son of Kuntī by Sūrya, the sun-god, and was born fully equipped with arms and armour. He was exposed by his mother, and reared by Nandana or Adhiratha, charioteer of the warrior Dhṛtarāshṭra. Indra, in the disguise of a Brāhman, induced him to surrender his divine cuirass, and gave him in return a magical javelin charged with certain death to the enemy. Karṇa fought in the great war, and was finally slain by a crescent-shaped arrow discharged by Arjuna. The region from which the streams which form the Ganges rise is closely associated with the story of the Pāṇḍavas, and many places, like this, are supposed to gain their sanctity from them and their companions. The temple dedicated to the hero and some other remains are of no architectural importance.

## KATABANIANS.—See SABÆANS.

## KATĀS

**KATĀS** (according to Cunningham, from Skr. *kaṭākṣa*, 'sidelong glance').—One of the famous places of pilgrimage in N. Panjāb, a holy pool in the Jhīlam District; lat. 32° 43′ N., long. 71° 59′ E. The name is derived, according to the Brāhmanical legend, from the fact that Śiva was so inconsolable at the loss of his wife, Satī, that the tears falling from his eyes formed the sacred lake Puṣkara, or Pokhar, and the Kaṭākṣa pool. The place has been identified with the Śang-ho-pu-lo, or Siṇhapura, of Hiuen Tsiang (S. Beal, *Buddhist Records of the Western World*, London, 1906, i. 143 f.); but the question of distances renders this improbable.

'The Sat-ghara, or "seven temples," are attributed to the Pāṇḍus, who are said to have lived at Katās during a portion of their twelve years' wanderings. On examining the place carefully I found the remains of no less than twelve temples, which are clustered together in the north-east corner of the old fort. Their general style is similar to that of the Kashmir temples, of which the chief characteristics are dentils, trefoil arches, fluted pillars, and pointed roofs, all of which are found in the temples of Katās and of other places in the Salt Range. Unfortunately these temples are so much ruined that it is impossible to make out their details with any accuracy; but enough is left to show that they belong to the later style of Kashmirian architecture which prevailed under the Karkota and Varman dynasties from A.D. 625 to 939' (A. Cunningham, *Arch. Survey Reports*, ii. [1871] 189).

**KĀṬMĀṆḌŪ, KĀṬHMĀṆḌŪ** (Hindī *kāṭh*, Skr. *kāṣṭha*, 'wood'; *maṇḍuā*, 'a hut or shed').—The capital of the kingdom of Nepāl; lat. 27° 42′ N., long. 85° 12′ E., towards the W. side of the valley, at the junction of the Bāghmatī and Viṣṇumatī rivers. It has been known by many names—the earliest Mañju Pātan, 'city of Mañju,' after Mañjuśrī, the Bodhisattva; Yindesī; Kāntipur; and Kāṭhmāṇḍū or Kāṭhmāḍū; the last said to be derived from an ancient building, originally made of wood, which stands in the heart of the city, near the Darbār palace. According to Brown (*Picturesque Nepal*, p. 65), a building still exists which is said to have been made from the wood of one monster tree. The city is oblong in form, and, according to the Buddhist Newār tradition, it was built in the shape of the sword of its founder, Mañjuśrī, while the Hindus profess that it resembles the scimitar of their goddess.

Kirkpatrick (*Account*, p. 159), who visited the city in 1793, suggests that the name of the place is derived from 'its numerous wooden temples, which are, indeed, among the most striking objects it offers to the eye. . . . Besides these, Khatmandu contains several other temples on a large scale, and constructed of brick, with two, three, and four sloping roofs, diminishing gradually as they ascend, and terminating pretty generally in pinnacles, which, as well as some of the superior roofs, are splendidly gilt and produce a very picturesque effect' (for a discussion of the Nepāl style of architecture see J. Fergusson, *Hist. of Indian and Eastern Arch.*[2], i. 277 ff.).

A notable feature of some of these temples is the profusion of indecent carvings, the intention being to scare evil spirits (Crooke, *PR*[2] i. 68 f.). One of the most important Hindu temples is that dedicated to Talejū, or Tallijū, the local form of Tulsī Bhavānī, the goddess of the holy basil plant (*Ocymum sanctum*), who, with the saint Gorakhnāth, is the guardian deity of the royal family.

'In front of several of the temples are tall monoliths, some surmounted by figures of old Rājās, others by the winged figure of Garur [Garuḍa]. The figures are often in a kneeling posture, facing a temple, and are generally overhung by a brazen snake, on whose head is perched a little bird. Not far from the palace, and close to one of the temples, is an enormous bell, suspended to two stone pillars; and in another building are two huge drums, about eight feet in diameter. . . . Here, too, are several huge and hideous figures of Hindu gods and goddesses' (Wright, *Hist. of Nepāl*, p. 10). During his residence in Nepāl, Wright twice heard of persons having committed suicide before these figures. 'The suicide always takes place at night, and the body is found in the morning with its throat cut from ear to ear, and its limbs decorously arranged, lying on one of the steps,' the inference being that these were cases of human sacrifice (*ib.* 10 ff.).

The temple known as Mahenkal [Mahākālā], of great antiquity, is the most popular 'chapel-of-ease' in the valley. Hindus regard it as dedicated to Śiva, while Buddhists maintain that the sacred figure represents Padmapāṇi or Avalokita, and assert that this is proved by the little stone figure rising from the forehead of the idol, which is believed to represent Amitābha (Oldfield, *Sketches from Nipal*, i. 110). However this may be, this temple has become a sort of neutral ground at which Hindus and Buddhists meet to pray before one common god, the Śiva of the former, the Padmapāṇi of the latter. Besides these the city abounds in temples of many kinds.

'Many of them present a most repulsive appearance, being dabbled over with the blood of cocks, ducks, goats, and buffaloes, which are sacrificed before them' (Wright, p. 11).

Of the more modern temples, the chief are that erected by Sir Jang Bahādur in 1852 on the foundation laid by Bhīm Sen, and dedicated to Jagannāth; that to Viṣṇu in the form of Nārāyaṇa; and several at the sacred junction of the rivers Bāghmatī and Viṣṇumatī. While the Hindu temples are generally placed near some of the main thoroughfares, all the chief Buddhist shrines are hidden away in squares or quadrangles in the parts of the city exclusively inhabited by the Buddhist Newārs. The chief of these are the temple of Ādibuddha, known also as Buddhmaṇḍal, the older part of which is now enclosed within the roots of a sacred fig-tree. Nothing is known of its history prior to its restoration in A.D. 1579 (Oldfield, ii. 256 ff.). The most important Buddhist monument, however, is that known as Sambhunāth (Skr. *svayambhu*, 'self-existent'), which is a very fine specimen of a Buddhist *chaitya*, or mound-temple.

'It consists of a solid hemisphere of earth and brick, about sixty feet in diameter and thirty feet in height, supporting a lofty conical spire, the top of which is crowned by a richly-carved pinnacle of copper gilt' (Oldfield, ii. 224).

The same writer (ii. 219) gives a full account of this interesting edifice, which is one of the few existing great Buddhist ecclesiastical buildings of which only the ruins survive in India. It is traditionally attributed to a Rājā of Nepāl named Goradeo, who is said to have flourished between 2000 and 3000 years ago; but there are no trustworthy records of it until its restoration in A.D. 1593. On the whole, Kāṭhmāṇḍū offers a most promising field for archæological investigation; but excavation and surveys of the existing buildings will be impossible so long as the native Government maintains its present policy of jealous seclusion.

LITERATURE.—D. Wright, *History of Nepāl*, Cambridge, 1877; H. A. Oldfield, *Sketches from Nipal*, London, 1880; R. Temple, *Journals in Hyderabad, Kashmir, Sikkim, and Nepal*, do. 1887; L. Oliphant, *A Journey to Katmandu*, do. 1852; P. Brown, *Picturesque Nepal*, do. 1912. Older accounts are those of F. Hamilton (formerly Buchanan), *An Account of the Kingdom of Nepal*, Edinburgh, 1819; W. Kirkpatrick, *An Account of the Kingdom of Nepaul*, do. 1811. For the architecture see J. Fergusson, *Hist. of Indian and Eastern Architecture*[2], London, 1910; Sylvain Lévi, *Le Nepal: Étude historique d'un royaume hindou*, Paris, 1905.

W. CROOKE.

**KĀYASTH, KĀYASTHA** (said to be derived either from Skr. *kāyesaṁsthita*, 'staying at home' [H. T. Colebrooke, *Essays*, London, 1858, p. 273 n.], or from *kāya-stha*, 'situated in the body, incorporate,' being sprung from the body of Brahmā).—The writer class of Hindustān, numbering, at the Census of 1911, 2,178,390, of whom the great majority are found in Bengal and the United Provinces of Agra and Oudh. Practically all of them are Hindu by religion.

In Bengal, Risley classes them in two divisions: those of Bengal proper and those of Bihār. Like all the literary and trading castes, the Kāyasths, since the British occupation of the country, have tried to assert a social status not admitted under native rule. One mark of their promotion is that they usually affect extreme orthodoxy and are liberal in support of Brāhmans, by whom they are barely tolerated. It is singular, as Risley remarks, that, while the teaching of Chaitanya has united almost all the artisan and agricultural castes of Bengal proper in a common Vaiṣṇava faith, the three highest and most intelligent classes adhere to the Śākta ritual, or the worship of the female principle. In E. Bengal all Kulin Kāyasths, and something like three-fourths of the other sections, are believed to practise Śāktism, and it is asserted that a large proportion of these follow the cult in its grosser development, known as the Vāmāchāra, or 'left-hand,' ritual of the Tāntras. Every Kulin family has a domestic chapel in which the *linga* of Śiva is daily worshipped by the head of the household. All Kāyasths, in addition, observe the Śrī Pañchamī, or 'sacred fifth,' the festival which occurs on the fifth day of the waxing moon in the month of Māgh (Jan.-Feb.), known also as the Dawāt Pūjā, or 'worship of the inkstand,' in honour of Sarasvatī, goddess of learning and eloquence, whom they regard as their patron deity.

'On this day the courts and all offices are closed, as no Hindu penman will use pen and ink, or any writing instrument, except a pencil, on that day. When work is resumed a new inkstand and pen must be used, and the penman must write

nothing until he has several times transcribed the name of the goddess Durgā, with which all letters should begin' (J. Wise, *Notes on the Races, Castes, and Trades of E. Bengal*, p. 315).

On this day also the Kāyasth must eat a *hilsā* fish (*clupea aloşa*), whatever its price may be, while from the Śrī Pañchamī festival in January to the Vijaya Dasamī in September-October fish must be eaten daily; but from the last to the first month it must not be touched—a tabu probably founded on some hygienic consideration. The Kāyasths of Bihār follow one or other of the main Hindu sects: Vaiṣṇava, Śaiva, Śākta, Kabīrpanthī, Nānakshāhī, and the like. The worship of Durgā and the Śakti is the most popular. Chitragupta, the mythical ancestor of the caste, is honoured once a year on the 17th day of the month Kārttik (Oct.-Nov.), at the feast of the Dawāt Pūjā, with offerings of sweetmeats and money, and the worship of the pen and ink, the implements of the trade. For religious and domestic rites the caste employs Brāhmans, who are received on equal terms by other members of the priestly body. In the United Provinces they also follow the orthodox Hindu sects, of which the Śaiva, Śākta, and Ārya Samāj are most important. But the fact of belonging to different sects does not bar association and inter-marriage; and, if a man who is a Vaiṣṇava marries a Śākta girl, the former may remain a vegetarian and abstain from meat and spirits, while his wife continues to indulge in these luxuries. The worship of the progenitor Chitragupta and of the Kula Devata, or family gods, is carried on side by side with the cultus of the greater orthodox deities. While the domestic worship is generally conducted by the head of the household, the orthodox ritual is performed by Brāhmans, who do not suffer any social discredit by officiating for Kāyasths. In the Deccan the allied caste, known as Kāyasth-Prabhū, are generally followers of Viṣṇu, while children are known as Devīputra, 'sons of Devī,' because they worship the Devī or local Mother-goddess rather than the orthodox gods.

LITERATURE.—J. Wise, *Notes on the Races, Castes, and Trades of E. Bengal*, London, 1883; H. H. Risley, *Tribes and Castes of Bengal*, Calcutta, 1891; W. Crooke, *Tribes and Castes of the N.W. Provinces and Oudh*, do. 1896; A. Baines, *Ethnography* [=*GIAP* ii. 5], Strassburg, 1912, p. 38 f. For the branch in Bombay see *BG* ix. i. [1901].

W. CROOKE.

**KEDĀRNĀTH** (Skr. *Kedāranātha*, 'lord of Kedār,' a title of Śiva, the derivation of which is unknown; it has been suggested by E. T. Atkinson, *Himalayan Gaz.* ii. [1884] 796, that Kedār is an ancient title of Śiva).—A famous temple and place of pilgrimage in the Gaṛhwāl District of the United Provinces of Agra and Oudh, lat. 30° 44′ N., long. 79° E. The twin peaks of Badarīnāth (*q.v.*) and Kedārnāth rise at a distance of ten miles apart, and between these, at a height of more than 11,000 ft. above sea-level, the temple is situated. The sanctity of the Śiva *liṅga* is extolled in the *Vāmana Purāṇa*.

According to the local legend, Pārvatī asks: 'What is Kedār? What are the fruits of visiting its sacred places and bathing in its waters?' Śiva replies: 'The place that you have spoken of, O goddess! is so dear to me that I shall never forsake it. When I or Brahmā created the universe, Kedār so pleased me that it shall ever remain sacred to me. Brahmā and the other gods are there; whoever dies there becomes one with Śiva.' The title of the deity is Sadāśiva, 'always happy,' and he seems to be the successor of an older god, Paśupati, 'lord of animals.'

The temple ranks among the twelve famous *liṅga* shrines of India. The Pāṇḍavas, it is said, came to the Himālaya, and arrived at the river Mandākinī to worship Śiva. In their eagerness they desired to touch the god, but he avoided them and plunged into the earth, offering to his votaries only the sight of the lower part of his body. The upper part is said to have come to the surface at Mukhār Bind in Nepāl, where it is worshipped as Paśupatinātha. The Pāṇḍavas were cleansed of their sins and built five temples in honour of the god. In Buddhist times the place became a centre of the Bauddhamārgī cultus, which was overthrown about the beginning of the 8th cent. A.D. by the Śaiva reformer, Śaṅkarāchārya, who died here at the age of 32. As is the case at Badarīnāth, the shrine is served by Nambūtiri Brāhman priests from S. India who were introduced by the great Śaiva missionary. The sanctity of the place has been explained by the fact that pilgrims are overpowered by the strong scent of the roses and syringa bushes close to the border of the eternal snow. This, combined with the rarity of the air, produces a sense of faintness, which is naturally attributed to spirit agency, while the strange sounds produced by falling avalanches and rendings of the ice and snow doubtless contribute to the same belief. The existing buildings are of no architectural importance. Sacred places abound in the neighbourhood, the most important of which is Mahāpanth, where there is the famous cliff, known as Bhairava Jhāmp, from which pilgrims were accustomed to precipitate themselves as an offering to Śiva; as in other parts of the Himālaya, a human scapegoat slides down a rope—a rite which has its parallels in other places—the object being apparently to secure the fertility of the crops (J. G. Frazer, *The Scapegoat*, London, 1913, pp. 196 f., 254, *Pausanias*, do. 1898, v. 401). A second form of immolation, of which instances are believed still to occur among fanatics, is to wander up the snowy slopes and court death by exposure.

LITERATURE.—E. T. Atkinson, *Himalayan Gazetteer*, ii. [Allahabad, 1884]. Two early papers are worth reading: H. T. Colebrooke, 'The Sources of the Ganges in the Himādri or Emodus,' and F. V. Raper, 'A Survey for the Purpose of discovering the Sources of the Ganges,' both in *Asiatic Researches*, xi. [1812]; see also J. B. Fraser, *Journal of a Tour through part of the Himālā Mountains, and to the Sources of the Rivers Jumna and Ganges*, London, 1820; E. S. Oakley, *Holy Himalaya*, Edinburgh, 1905; C. A. Sherring, *Western Tibet*, London, 1906; J. Muir, *Notes of a Trip to Kedarnath*, Edinburgh, 1855.

W. CROOKE.

**KEDESHAH.**—See HIERODOULOI (Semitic and Egyptian).

**KENOSIS.**—1. **The scriptural references.**—The word 'Kenosis' is applied in Christian theology to that attitude or action of Jesus Christ, or the Logos, referred to by St. Paul in Ph $2^{6f.}$, where he says of Jesus Christ: *ἐν μορφῇ θεοῦ ὑπάρχων οὐχ ἁρπαγμὸν ἡγήσατο τὸ εἶναι ἴσα θεῷ, ἀλλ' ἑαυτὸν ἐκένωσε μορφὴν δούλου λαβών*. This is practically all that can be said with certainty on the subject. We cannot even say definitely what the Apostle intended to convey by the words quoted. No other passage in his writings casts any light upon them. There is certainly no doubt that by the phrase *ἑαυτὸν ἐκένωσε* he was expressing the same idea as he had in his mind when speaking of 'Jesus Christ' in 2 Co $8^9$: *δι' ὑμᾶς ἐπτώχευσε πλούσιος ὤν*. This passage, however, is no less ambiguous than the former. In both alike the grammatical connexion of the statement with the antecedent designation 'Jesus Christ' seems to indicate that the Apostle had in his mind an action of the historical Jesus. But, on the other hand, the *μορφὴ θεοῦ* and the *μορφὴ δούλου* of the first passage, and the 'being rich' and the 'becoming poor' of the second, are in each case so pointedly antithetic as to suggest that St. Paul was thinking of a surrender of the one for the other, and that accordingly he is speaking here of an action effected by the pre-existent Christ at His incarnation.

In 2 Co 8 the context does not help us, while in Ph 2, though the parenetic aim of the passage seems at first sight to point to the historical Jesus,

the context in reality presents several possibilities of interpretation. This would not be the case, indeed, if we could accept the hypothesis of A. Resch,[1] viz. that in Ph $2^{6ff.}$ St. Paul, on the ground of a primitive gospel which, according to Resch, has left traces in the baptismal liturgy of the Severians, was speaking of a *κένωσις* that began with the baptism of Jesus. Resch had every confidence in his theory, believing that he was justified even in saying (p. 81):

'In place of the life-like impression which Ph $2^{6ff.}$ gives of the historical Christ and His first public appearance at the baptism in the Jordan, unfortunately an unsound theory of Kenosis has been built up upon an ungrammatical foisting in of the λόγος ἄσαρκος as the subject of the passage, and in this way a dogmatizing exegesis has moved further and further away from the original sense.'

But Resch fails to show even the probability—let alone the certainty—of the underlying assumption of his verdict, viz. the use of a primitive gospel by the Apostle.

The exegesis of the passage is thus thrown back upon the actual words. Nor, again, does the clause *οὐχ ἁρπαγμὸν ἡγήσατο τὸ εἶναι ἴσα θεῷ* enable us to decide whether St. Paul was referring to the historical or the pre-existent Christ. Even the so-called 'active' sense of *ἁρπαγμός* ('robbery,' 'usurpation,' 'opportunity for robbery' or 'for self-enrichment') has been made to fit in with either alternative, though the present writer is of opinion that its compatibility with the theory of the pre-existent Christ is far from obvious. The tenability of both interpretations is much less questionable if, with most modern scholars, we decide for the 'passive,' or rather the 'concrete,' sense of *ἁρπαγμός* (*præda*, 'prize'). The translation in that case would be: 'He regarded the *εἶναι ἴσα θεῷ* not *as a prize to be held fast*,' or '*as a prize that he might or must obtain*,' and the former rendering at least is quite in keeping with either interpretation. This may also be said of the *εἶναι ἴσα θεῷ*. If we take the phrase as equivalent to *ἐν μορφῇ θεοῦ εἶναι*, then it has no direct bearing upon the question as to the subject of *ἡγήσατο*; if we feel it necessary, however, to make a distinction in meaning between the two phrases, the former accords very well with the theory that the whole passage refers to the historical Christ, while it harmonizes with the reference to the pre-existent Christ only if we assume—an assumption widely held, but, the present writer thinks, untenable—that St. Paul regarded the pre-existent Christ as the 'heavenly man.'

Nor can we decide with confidence between the exegetical alternatives presented by Ph $2^{6}$ even by an appeal to the only non-Pauline passage of the NT that perhaps rests on the same underlying ideas, viz. that verse of the high-priestly prayer which Origen (*de Princ.* III. v. 6) applied in the same way: *καὶ νῦν δόξασόν με σύ, πάτερ, παρὰ σεαυτῷ τῇ δόξῃ ᾗ εἶχον πρὸ τοῦ τὸν κόσμον εἶναι παρὰ σοί* (Jn $17^{5}$). Not that we would contend that St. Paul should not be interpreted by St. John; as a matter of fact, if the Johannine writings contained an unambiguous passage which exactly agreed with any one of the possible interpretations of Ph $2^{6}$, it would certainly lend a sanction to that interpretation. But is Jn $17^{5}$ unambiguous? Even if, in view of other passages in the Fourth Gospel ($1^{27.30}$ $6^{33.38}$ $8^{58}$), we reject the interpretation of *εἶχον* as implying a possession in the *destinatio divina*—an interpretation endorsed by the Socinians, the Rationalists, and Schleiermacher, and defended with new arguments by H. Wendt—we cannot venture to call it so, for the view that Jn $17^{5}$ refers to a glory regarded as having been surrendered in the act of incarnation cannot be maintained in face of Jn $1^{14}$ $2^{11}$ $11^{4.40}$. If Jn $17^{5}$, accordingly, can be taken only as referring to a complete and plenary re-entrance upon a glory which was in some sense veiled during the earthly life of Jesus, it also fails to help us in determining the sense of the Pauline *ἑαυτὸν ἐκένωσε*. On that interpretation we may certainly regard Jn $17^{5}$ as implying an action of the λόγος ἄσαρκος upon which rested the *possibility* of such veiling, but we may equally well see in the passage an attitude of the λόγος ἔνσαρκος of which His being veiled was the result. Moreover, the exegesis of Jn $17^{5}$ is rendered difficult by the fact that we cannot definitely say whether an appeal to the Logos-idea is here justified at all, or whether the truth lies with those who hold that St. John, in conformity with Jewish thought, usually associates the pre-existence of Christ with His entire person, and that his restricting it to Christ's pneumatic existence, as contrasted with His flesh, is found only in the Prologue.

In the circumstances it is but natural that exegetes should still be at issue as to the interpretation of Ph $2^{6ff.}$. In point of fact they are at present even more divided than they were about thirty years ago, as it seemed for a time that the interpretation which found the subject of *ἑαυτὸν ἐκένωσε* and *ἡγήσατο* in the pre-existent Christ held the field in scientific exegesis, so far at least as this was not under the influence of confessional Lutheranism. Of late, however—and not from the Lutheran side only—the position has been challenged by quite a number of interpreters.[1]

**2. The exegesis of Ph $2^{6ff.}$ in the early Church.**—Even in the early Church exegetes were less agreed with regard to Ph $2^{6ff.}$ than has sometimes been assumed. Here we meet with three types of interpretation that at first sight seem to be quite distinct.

(*a*) *The interpretation which identified the subject of the Kenosis with the λόγος ἄσαρκος.*—The earliest traceable view is that which saw in the phrase *ἑαυτὸν ἐκένωσε* a reference to the act of the λόγος ἄσαρκος in His becoming incarnate. We find it already in the Valentinian Gnostic Theodotus, as, *e.g.*, when he says:

*ἑαυτὸν κενώσας, τουτέστιν ἐκτὸς τοῦ ὅρου γενόμενος . . . ὡς ἀπὸ Πληρώματος προελθών* (Clem. Alex. *Excerpta*, 35).

This interpretation is found also in the Christian Gnosis of the Alexandrians—Clement (*Pædag.* III. i. 2, *Protrept.* i. 8) and Origen:

*ἐκένωσεν ἑαυτὸν καταβαίνων ἐνταῦθα, καὶ κενώσας ἑαυτόν, ἀνέλαβε πάλιν ταῦτα ἀφ' ὧν ἐκένωσεν ἑαυτόν* (*in Jerem. Hom.* i. 7; cf. also, *e.g.*, *de Princ.*, præf. 4, and III. v. 6, *in Joann.* vi. 10);

and it is supported even by Tertullian:

'Et Sermo enim Deus, qui in effigie Dei constitutus, non rapinam existimavit pariari Deo' (*de Carnis Resurr.* 6).

In the East, indeed, it came to be the prevailing view. Not only do we find it in Eusebius (*e.g.*, *de Eccles. Theol.* I. xx. 10) and Apollinaris,[2] but we can trace it also in the line of the orthodox Fathers, from Methodius (*Conviv.* iii. 8), through Athanasius (*e.g.*, *Orat. contra Arianos*, i. 40) and the Young Nicæans,[3] to Cyril of Alexandria and the later orthodox theology. As a matter of fact, the interpretation in question received in some sense an official sanction, as it found expression in Cyril's *Epistula ad Orientales*, which was recognized as a standard of doctrine by the Council of Chalcedon:

*ἐξ οὐρανοῦ καταφοιτήσας ὁ θεὸς λόγος κεκένωκεν ἑαυτόν, μορφὴν δούλου λαβών* (*Ep.* 39 [*PG* lxxvii. 180 A]).

(*b*) *The Pelagian exegesis.*—A diametrically opposite interpretation of the passage is met with *c.* 400 in the West, viz. in the Commentary of Pelagius on St. Paul's Epistles. Pelagius finds the

[1] 'Agrapha'[2], *TU* xxx. 3 and 4 (Leipzig, 1906), p. 79 ff.

[2] Cf. H. Lietzmann, *Apollinaris*, Göttingen, 1904, frag. 124, p. 237, and frag. 71, p. 221.

[3] Cf. Gregory Naz. *Or.* xxxviii. 13: *ὁ πλήρης κενοῦται· κενοῦται γὰρ τῆς ἑαυτοῦ δόξης ἐπὶ μικρόν.*

subject of the expressions *ἑαυτὸν ἐκένωσε*, *ἡγήσατο*, and *ἐταπείνωσεν ἑαυτόν* in the human being in whom the Logos became incarnate: 'Quia se assumptus homo humiliare dignatus est, divinitas quae humiliari non potest eum qui humiliatus fuerat exaltavit' (*PL* xxx. 884 C). Even 'secundum hominem' Christ was, according to Pelagius, 'in forma Dei,' *i.e.* 'in imagine Dei,' because He 'absque peccato erat,' and because He was the one 'in quo Deus erat,' *i.e.* 'plenitudo deitatis' (*loc. cit.*; cf. pseudo-Primasius, *PL* lxviii. 630); although 'quod erat, humilitate celavit, dans nobis exemplum ne in his gloriemur quae forsitan non habemus' (*PL* xxx. 884 BC).

The text of Pelagius—at this point probably not completely traceable in pseudo-Hieronymus—does not provide a particular exposition of *ἐκένωσε* or *οὐχ ἁρπαγμὸν ἡγήσατο, κτλ.*, nor can pseudo-Primasius be used here as supplementing it, since he has manifestly interpolated something of his own; still, the exegesis of Pelagius can be made out distinctly enough. In view of Col $2^{9}$—a passage which he undoubtedly had in his mind—the phrase *ἑαυτὸν ἐκένωσε* is adequately explained by the words 'quod erat, humilitate celavit,' while the words 'dans nobis exemplum ne in his gloriemur quae forsitan non habemus' suggest the following explanation of *οὐχ ἁρπαγμὸν ἡγήσατο, κτλ.*: 'non gloriatus est in his quae habebat' (*i.e.* *τὸ εἶναι ἴσα θεῷ = τὸ εἶναι ἐν μορφῇ θεοῦ*). The latter interpretation, again, is further explained by what Pelagius says with reference to 'formam servi accipiens': 'ita ut pedes lavaret discipulorum; celavit quod erat, Adam vero et antiquus hostis usurparunt superbia quod non erant' (*PL* xxx. 884; H. Zimmer, *Pelagius in Irland*, Berlin, 1901, p. 377).

Thus, in dealing with Ph $2^{6}$, Pelagius, like the recent expositors Lütgert (*op. cit.*) and J. Weiss,[1] has been reminded of Gn $3^{5ff.}$, and under the influence of this reminiscence applies the entire passage in Ph. to Christ as the second Adam. It would seem that this interpretation was suggested to him by earlier tradition, as his older contemporary, Phœbadius of Aginnum, is also reminded by Ph $2^{6f.}$ of the fact that the Logos 'induerat quod servire, quod mori posset: hominem scilicet . . . ut [printed 'et'] secundus Adam per obedientiam restitueret quod primus transgressione perdiderat' (*contra Arianos*, 21 [*PL* xx. 29 A]).

(*c*) *The Antiochene-Occidental interpretation.*—The third interpretation of Ph $2^{5ff.}$ takes a middle course between the two discussed above. It was known to Pelagius, who, however, rejected it in the interests of anti-Arianism:

'Aliqui hunc locum ita intelligunt quod secundum divinitatem se humiliaverit Christus, secundum formam scilicet Dei, secundum quam aequalitatem Dei non rapinam usurpaverit quam naturaliter possidebat, et exinaniverit se, non substantiam evacuans, sed honorem declinans, formam servi, hoc est naturam hominis, induendo, et per omnia ut homo tantummodo apparendo atque humili obedientia nec crucis mortem recusando' (*PL* xxx. 884 A; cf. Zimmer, *op. cit.* p. 377, and pseudo-Primasius).

This interpretation was at that period widely current in the West. It was adopted by Ambrosiaster (*PL* xvii. 409)—though with some points of resemblance to the view of Pelagius, as, *e.g.*, with regard to the 'forma Dei'—and also by Phœbadius (*ib.* xx. 29 A) and his contemporary Gregory of Elvira;[2] while, as regards Ambrose,[3] Augustine,[4] and even Hilary,[5] it is obvious that they too favoured this interpretation, though with certain modifications due to Greek influence, *i.e.* to the view indicated under (*a*) above. Apart from these modifications, this current Western interpretation agrees with the Pelagian in three important particulars. (1) It takes Ph $2^{5ff.}$ as referring to the historical Jesus Christ, though—diverging here from Pelagius—to Christ 'secundum divinitatem,' *i.e.* to the *λόγος ἔνσαρκος*. Ambrosiaster is quite aware of his divergence at this point from the view noted in (*a*), and explicitly says:

'Non enim mihi sicut quibusdam videtur, sic formam servi accepisse dum homo natus est; vide enim quid dicat: Hoc sentite in vobis quod et in Christo Iesu, id est, Deo et homine' (*PL* xvii. 432 A).

But, on the other hand, Phœbadius, Gregory of Elvira, and, above all, the Græcizing Fathers (Hilary, Ambrose, Augustine) include in the Kenosis also the 'incarnatio' of the Logos, as the decisive inception of the process expressed by the words *ἑαυτὸν ἐκένωσε* and wrought out in the life of the historical Christ. (2) The current Western interpretation and that of Pelagius have in common the idea of the *co-existence* of the 'forma Dei' and the 'forma servi'—an idea very prominent also in Hilary, Ambrose, and Augustine (cf. Reuter, *loc. cit.*). (3) In connexion with that view, they agree also in regarding the *κένωσις* as a *κρύψις* ('celavit quod erat').

In all these three points, again, the current Western interpretation coincides with the common Antiochene, though the latter, like the Græcizing Western Fathers, often ingrafts the *ἐνανθρώπησις* into the conception of the *κένωσις*. The correspondence is clearest in the case of Nestorius. While Nestorius recognizes the *ἐνανθρώπησις* as the essential starting-point of the *κένωσις*,[1] he expressly says with reference to Ph $2^{5ff.}$: *οὐκ εἶπε* (sc. ὁ Παῦλος) *τοῦτο φρονείσθω ἐν ὑμῖν ὃ καὶ ἐν τῷ θεῷ λόγῳ* (*Nestoriana*, p. 254).

Moreover, the co-existence of the *μορφὴ θεοῦ* and the *μορφὴ δούλου* which we already find in the Fragments of Nestorius[2] is shown by his *Liber Heraclidis* to have been one of his leading ideas, inasmuch as he identifies *μορφή* and *πρόσωπον*,[3] and the exchange of the *πρόσωπα* is the decisive factor in his conception of the 'unio personalis' of the two natures.[4] Lastly, it has long been recognized that Nestorius attached great importance to the Christological *κρύψις*; thus, to take but a single instance, we quote here what he says regarding the self-restraint of Jesus Christ at the Temptation: *οὐκ ἐκκαλύπτει τὸν κεκρυμμένον θεὸν . . . ἀλλ' ὡς ἄνθρωπος ψιλὸς ἀντιφθέγγεται* (*Nestoriana*, p. 343).

Like Nestorius, Eutherius of Tyana, a writer of kindred views, emphatically asserts that Ph $2^{5ff.}$ ought not to be read as referring to the Logos; in opposition to the words of Cyril quoted above (*a*), he writes:

'Sequere apostolum Paulum . . . ; non ait, Ipse de coelo descendens Deus Verbum exinanivit semetipsum . . . ; sed quid dicit? Hoc sentiatur in vobis quod et in Christo Jesu' (J. D. Mansi, *SS. Concilia Coll.*, Venice, 1759–98, v. 983 B-C; cf. G. Ficker, *Eutherius von Tyana*, Leipzig, 1908, p. 49 f.).

The views maintained by Nestorius and Eutherius in connexion with Ph $2^{5ff.}$ were, however, not distinctively Nestorian; they were rather in the line of the common Antiochene tradition. In fact, notwithstanding the fragmentary form in which the writings of the earlier Antiochians survive, it seems certain that the teaching of Theodore of Mopsuestia regarding the *πρόσωπα* of the two natures in Christ must have been very similar to that of Nestorius, and the former's exposition

[4] Cf. Loofs, *Nestorius and his Place in the History of Christian Doctrine*, Cambridge, 1914, p. 83 ff.

of Ph $2^{6ff.}$ shows that he too regarded the historical Christ (or the λόγος ἔνσαρκος) as the subject of *ἑαυτὸν ἐκένωσε* and interpreted the *κένωσις* as a *κρύψις*:

τὸ οὖν 'ἑαυτὸν ἐκένωσε' ἀντὶ τοῦ 'οὐκ ἔδειξεν ἑαυτόν.' μορφὴ γὰρ δούλου λαβὼν τὴν ἀξίαν ἐκείνην ἀπέκρυψε, τοῦτο τοῖς ὁρῶσι εἶναι νομιζόμενος ὅπερ ἐφαίνετο (*Theodori episcopi Mopsuesteni in epistulas B. Pauli commentarii*, ed. H. B. Swete, Cambridge, 1882, i. 216 f.).

(*d*) *The question as to the priority of the various exegetical traditions; Novatian.*—Which of these three types of exegesis has the longer tradition behind it is a question not to be answered by a mere reference to the fact that Theodotus, Clement, Tertullian, and Origen were of earlier date than Pelagius and the Antiochians. For the circumstance that what is common to the Pelagian and the current Western interpretation appears also among the Antiochians lends probability to the supposition that here too[1] the Antiochene and the Western expositors were dependent upon a common tradition; and this tradition may well have been in existence prior to the period of the Apologists. This possibility is so far borne out by a conjecture which, as the present writer thinks, is urged upon us by a detailed examination of both the Pelagian and the ancient Western-Antiochene view—namely, that the exegesis associated with each of these goes back to a single earlier interpretation, according to which the subject of *ἑαυτὸν ἐκένωσε* was the integral personality of the historical Jesus Christ. An objective argument in favour of the hypothesis in question is provided by the interpretation of Ph $2^{6ff.}$ given by Novatian (*de Trin.* 22 [17] [*PL* iii. 957 f.]). The interpretation is not indeed homogeneous. For the most part it centres in the historical Christ, thus:

'Quamvis ex Deo Patre Deum esse meminisset, nunquam se Deo Patri aut comparavit aut contulit (p. 958 A); exinanivit se, dum ad iniurias contumeliasque descendit, dum audit infanda, experitur indigna' (p. 958 C).

But Novatian, in another passage (p. 959 B), includes also the 'nasci' and the 'humanam conditionis fragilitatem suscipere' in the *exinanitio*, and actually finds (p. 958 C) the *κένωσις* in the circumstance that the

'auctoritas divini Verbi, ad suscipiendum hominem interim conquiescens, nec se suis viribus exercens, deiicit se ad tempus atque deponit, dum hominem fert quem suscipit.'

Even in the last two passages, however, the 'self-emptying' of the Logos is not an action of the λόγος ἄσαρκος, but an attitude of the λόγος ἔνσαρκος—a self-restraint which Novatian ascribes to the historical Christ. Then as regards Ph $2^{6}$, Novatian refers it—in the first instance without making any distinction between the 'homo Christi' and the Logos—to the historical Saviour in His undivided personality, while subsequently he says of the historical Christ that He was man because He had humbled Himself, but was God and Lord because He had received the 'nomen Dei.' Have we not here the common root of the later Pelagian and the current Western view? And does not the interpretation of Novatian, precisely because of its lack of unity, point back to a view of the Philippian passage according to which the subject of *ἑαυτὸν ἐκένωσε* was more clearly and consistently identified with the historical Christ?

**3. Theories of the Kenosis current in the early Church.**—While the early Church thus provides three several interpretations of Ph $2^{6ff.}$, it was, nevertheless, more unanimous in its conception of the Kenosis than that fact might lead us to suppose. The truth is that no theologian of any standing in the early Church ever adopted such a theory of the *κένωσις* of the Logos as would involve an actual supersession of His divine form of existence by the human—a real '*becoming*-man,' *i.e.* a transformation on the part of the Logos.

(*a*) *Popular conceptions.*—Among the masses, no doubt, views of the kind just indicated were widely current at an early period, and, indeed, have always been so. As a matter of fact, they rest upon a legitimate basis, *i.e.* they cohere with a view which is eminently intelligible to a living Christian faith. The genuinely Christian conviction of the perfect revelation of God in the person of the historical Jesus Christ found expression at an early period in the doctrine that the invisible, incomprehensible, and impassible God had become visible, comprehensible, and passible in the historical Jesus (Ignatius, *ad Polyc.* iii. 2); and this type of formulation, which, though it has a 'modalistic' complexion, was not put forward in a modalistic sense, and might be described as 'religious-modalistic,' or 'naive-modalistic,' was especially popular in the theological tradition of Asia Minor.[1] The sense in which such formulations were understood by the 'simplices' may be seen in the so-called modalistic Monarchianism. To that school of doctrine there was nothing objectionable in the idea that God had transformed Himself in the manner indicated, and it could be said of Him:

Τοῦτον εἶναι ἀόρατον ὅτε μὴ ὁρᾶται, ὁρατὸν δὲ ὅτε ὁρᾶται· ἀγέννητον δὲ ὅτε μὴ γεννᾶται, γεννητὸν δὲ ὅταν γεννᾶται ἐκ Παρθένου· ἀπαθῆ καὶ ἀθάνατον ὅτε μὴ πάσχῃ μήτε θνήσκῃ, ἐπὰν δὲ πάθη προσέλθῃ, πάσχειν καὶ θνήσκειν (Hippolytus, *Philosoph.* x. 27; cf. Loofs, *Dogmengesch.* § 27, 3*b*, p. 185).

That in quarters where the subject of the Incarnation was found in the Logos as distinguished from the *θεὸς πατήρ* such conceptions should be transferred to the Logos by simple minds is not to be wondered at, and the fact of such transference is capable of proof. Basil the Great is acquainted with and argues against those who interpret the incarnation of the Logos in the sense that *πᾶσα ἡ τοῦ Μονογενοῦς φύσις ἐτράπη* (*Ep.* ccliii. 2), while in Hilary (*de Trin.* x. 57; cf. 50) and in Cyril of Alexandria (*adv. Anthropomorph.* 19 and 18; cf. *PRE*[3] x. 250. 20 ff.) we have a polemic on the same lines. Thus, when at an earlier stage we find Celsus making sport of the notion that the *θεὸς λόγος* forsook His throne and suffered a *μεταβολὴ ἐξ ἀγαθοῦ εἰς κακόν* (Origen, *c. Celsum*, iv. 5 and 14), we need not imagine that he is maliciously indulging his wit in forced interpretations; it is likely enough that he had already encountered that conception of the *ἐνανθρώπησις τοῦ λόγου* which we can trace in the 4th century. And, indeed, does not the *καταβαίνειν* in Jn $3^{13}$ $6^{33. 38}$ point back to such popular conceptions? At all events it must soon have suggested them; and, alike under the influence of the Johannine passages and apart from them, analogous ideas have been current among the masses in all periods. It may well be that they were not associated with the academic concept *κένωσις*, but so far as the notion was popularly understood it would derive its connotation from the ideas in question. Popular preaching and poetic language frequently adapted themselves to such views. Even to-day, in the evangelical songs of the Church, we are often told, *e.g.*, how the Son of God 'left His throne of glory,' and the like. In all periods, too, there have been theologians whose 'system' was cast in the mould of popular doctrine, or was at least largely indebted to it.

(*b*) *The Apologetic and Arian conceptions of the mutability of the Logos.*—In the early days of Christian theology, among certain of the 2nd cent. Apologists, there appears a train of thought which agreed to some extent with the popular conceptions just noticed, but differed from them widely in origin. Justin (*Dial.* cxxvii.), Theophilus of Antioch (*ad Autol.* ii. 22), and Tertullian, in conformity with the subordinationism of their philosophical doctrine of the Logos, and with a view to preserving both the philosophical idea of God as abstractly supramundane and the reality of the Biblical the-

[1] Cf. Loofs, *Nestorius*, pp. 107–125.

[1] Cf. Loofs, *Dogmengeschichte*[4], Halle, 1906, § 21, 2*b*, p. 142.

ophanies, resolved the ideas of God's becoming visible in Christ indicated above (*a*) into the idea that the Logos [who had appeared in Christ] was a *δεύτερος θεός* who was not equal to the *ἄρρητος πατήρ* in the plenitude of the Divine majesty, and was capable of becoming visible. This idea finds its most uncompromising form of expression in Tertullian—although in a manner that repeatedly betrays its original reference to the historical Christ:

'Constat eum semper visum esse ab initio qui visus fuerit in fine, et eum nec in fine visum qui nec ab initio fuit visus [cf. 1 Ti 6[16]]; et ita duos esse, visum et invisum' (*adv. Prax.* xv.); 'quaecumque exigitis Deo digna habebuntur in Patre invisibili incongressibilique et placido et, ut ita dixerim, philosophorum Deo; quaecumque autem ut indigna reprehenditis deputabuntur in Filio et viso et audito et congresso' (*adv. Marc.* ii. 27).

That this idea was associated with the doctrine of the Kenosis by any of the Apologists can certainly not be proved; it is, in fact, hardly probable; for, so long as the 'Incarnation' could in some sense be brought into line with the theophanies of the OT, or with the operation of the Logos in philosophers (Justin, *Apol.* i. 5) and prophets, it was not an event of the kind that forced one to think of a self-limitation of the *θεὸς λόγος*: the *λόγος* had appeared *ἐν ἀνθρώπου μορφῇ* even to Joshua (Justin, *Dial.* lxi.); and Clement of Alexandria, who shared the Logos-conception of the Apologists, could actually say that the Logos also *διὰ τῶν προφητῶν ἐνεργήσας σὰρξ ἐγένετο* (*Excerpta*, xix.). But these notions of a 'Deus visibilis' existing side by side with the 'philosophorum Deus invisibilis' would have a very different effect among the people generally. Nor is there the slightest doubt that the Arian views of the *per se* mutable Son of God, who Himself became the subject of all the experiences of the historical Jesus, including His growth and His experience of hunger and pain, were connected by tradition with the Logos-doctrine of the Apologists, and it is probable that the Arians too made use of Ph 2[6] in the service of their Christology.

(*c*) *The orthodox doctrine of the immutability of the Logos.*—In the further development of the orthodox theology, if we are to judge by such utterances as are not designed merely for popular edification, the idea that the Logos *per se* could have relinquished invisibility for visibility, impassibility for passibility, and the Divine omnipresence for finite human existence was repudiated in the most positive terms. In Clement of Alexandria we may still trace an echo of his broad conception of incarnation indicated in (*b*) above, when he thus speaks:

*οὐ γὰρ ἐξίσταταί ποτε τῆς αὐτοῦ περιωπῆς ὁ υἱὸς τοῦ θεοῦ, οὐ μεριζόμενος, οὐκ ἀποτεμνόμενος, οὐ μεταβαίνων ἐκ τόπου εἰς τόπον, πάντη δὲ ὢν πάντοτε καὶ μηδαμῇ περιεχόμενος* (*Strom.* VII. ii. 5. 5).

All the later orthodox writers, when speaking in terms of theological science, express themselves in similar fashion. Origen makes use of the same ideas in order to parry the satire of Celsus referred to above. Celsus, he says, does not realize the power of God, nor does he realize that the Spirit of God fills the earth; God has descended in virtue of His *δύναμις*; the Logos, in becoming man, has neither passed from one locality to another nor undergone any other change; God changes not (Mal 3[6]), *μένων γὰρ τῇ οὐσίᾳ ἄτρεπτος συγκαταβαίνει τῇ προνοίᾳ καὶ τῇ οἰκονομίᾳ τοῖς ἀνθρωπίνοις πράγμασιν* (*c. Cels.* iv. 5 and 14; cf. v. 12). During the earthly life of Jesus, accordingly, the Logos was not confined 'intra brevissimi corporis claustra,' but rather 'et in corpore et ubique totus aderat Dei Filius' (*de Princ.* iv. 3 [30]).

This idea, viz. that during the earthly life of Jesus the Logos still continued to rule over all things, and that therefore He was not only wholly in Christ, but also wholly 'extra carnem'—a view which, as held also by the Calvinists, was spoken of by the orthodox Lutherans as the 'Extra Calvinisticum'—represents the settled belief of all the theologians of the early Church. Testimonies to its currency might be adduced alike from the East and from the West. To the theologians of the early Church it was, in view of the immutability of God, as obvious as it was unquestionable. Further, the Nicene Creed, in its anathemas, formulates as a dogma the thesis that the Logos is *ἄτρεπτος* and *ἀναλλοίωτος*. Of the theory that the Logos, in consequence of a mutation in His essential being, confined Himself to an existence in the historical Jesus, Basil the Great writes thus:

*τοῦτο οὐδένα ἡγοῦμαι νοῦν ἔχοντα καὶ τὸν φόβον τοῦ θεοῦ κεκτημένον πάσχειν τὸ ἀρρώστημα* (*Ep.* ccxii. 2).

(*d*) *The common doctrine of the Kenosis in the early Church.*—On the assumption that the ideas discussed above were valid, there remained only one theologically intelligible view of *ἑαυτὸν ἐκένωσε* as implying an act of the Logos—the view, namely, to which Irenæus had given expression, though not in connexion with Ph 2[6]:[1]

*συνενηπίαζεν <ὁ> υἱὸς τοῦ θεοῦ, τέλειος ὤν, τῷ ἀνθρώπῳ, οὐ δι' ἑαυτόν, ἀλλὰ διὰ τὸ τοῦ ἀνθρώπου νήπιον οὕτω χωρούμενος, ὡς ἄνθρωπος αὐτὸν χωρεῖν ἠδύνατο* (IV. xxxviii. 2; cf. 1).

This view was adopted by Novatian (cf. 2 (*d*) above), and also by Origen:

'Per ipsam sui exinanitionem studet nobis deitatis plenitudinem demonstrare' (*de Princ.* I. ii. 8).

Origen explains it by a figure, and his idea may be concisely expressed as follows:

Imagine a statue of such size as to fill the whole world—its very magnitude would preclude its being seen; a small copy of it in the same material, however, would give us some idea of it. Similarly, as we could not have beheld the splendour of the pure light flowing from the Divine majesty of the Logos, by His Kenosis He made it possible for us to look into His divine light; 'brevissimae insertus humani corporis formae ex operum virtutisque similitudine Dei Patris in se immensam atque invisibilem magnitudinem designabat' (*loc. cit.*).

Here the Kenosis is that self-limitation of the Logos which was involved in His manifestation in a human form, though at the same time He is not in any way limited as to His cosmic position. This conception of the Kenosis may be regarded as the recognized view of the early Church. It is the view alike of the theologians who refer the *ἑαυτὸν ἐκένωσε* to the *λόγος ἄσαρκος*, and so identify *κένωσις* with *ἐνανθρώπησις* (2 (*a*)), and of those who find the subject of *ἑαυτὸν ἐκένωσε* in the *λόγος ἔνσαρκος*. For the theologians who identify *κένωσις* and *ἐνανθρώπησις* firmly believe, like the other group, that the Logos, notwithstanding His incarnation, remained *ἀναλλοίωτος*, and, as regards His divine place in the universe, unconditioned—*ἀκένωτος* (as Apollinaris himself puts it; cf. 4 (*b*) below). In the view of all these theologians, moreover, the two *μορφαί* are in reality co-existent, inasmuch as the *πρὸς θεὸν ἰσότης*—even according to Apollinaris (cf. 4 (*b*))—was still retained by the *λόγος ἔνσαρκος*. Both groups were alike convinced that the 'flesh,' i.e. the human vehicle of the manifestation, stood in the way of a complete revelation, or—what is the same thing, *κένωσις* and *κρύψις* being here identical—made it impossible for the Deity to reveal His majesty fully within the limitations involved. Thus the two interpretations given respectively in 2 (*a*) and 2 (*c*) above might frequently merge in each other. Nor, indeed, does the Pelagian exegesis (2 (*b*) above), to which that of the Antiochians frequently approximates,[2] rest upon any other conception of the Kenosis. The idea that the Logos in assuming human nature surrendered the universal operation of His deity certainly seems very far removed from the idea that He became incarnate in a man who veiled the indwelling *πλήρωμα τῆς θεότητος*, humbled Himself, etc. Yet, so long as the 'Extra Calvinisticum' (cf. (*c*) above)

[1] Cf., however, IV. xxiv. 2 [Massuet].

[2] Cf. also Justinian, *adv. Nonnullos*, etc. (*PG* lxxxvi. 1, col. 1063 A).

is adhered to, the Kenosis is taken in a sense essentially the same in both cases.

**4. Diverse aspects of the early Church theories.**—It is nevertheless undeniable that the theories regarding *ἑαυτὸν ἐκένωσε* propounded by the early theologians seem to differ very greatly from one another. The extreme poles of the variation are found in Apollinaris and Pelagius. But the differences do not arise out of any essential disparity of view regarding the Kenosis; they are due rather to the various degrees in which theological theory is mingled with popular doctrine.

(*a*) *The influence of popular doctrine upon the orthodox theologians.*—Although Clement of Alexandria held, as already noted, that a *μεταβαίνειν ἐκ τόπου εἰς τόπον* could not possibly be ascribed to the Logos, we nevertheless find him saying: *αὐτὸς κατῆλθε* (*Quis dives*, xxxvii. 2). Origen often expresses himself in similar fashion, and, indeed, no theologian of the following period ever quite discarded the formulæ and symbols of the popular conception of the *ἐνανθρώπησις*. Even the Nicene Creed, immediately before its anathema upon the *ἀλλοιωτὸν λέγοντας εἶναι τὸν υἱὸν τοῦ θεοῦ*, speaks of *τὸν δι' ἡμᾶς κατελθόντα*. Frequently, too, the old 'religious-modalistic' view of the person of Jesus, or the plethora of rhetorical language that to some extent adopted its terms, made its influence felt. Gregory of Nazianzen, *e.g.*, writes thus:

*μεταβαίνει τόπον ἐκ τόπου ὁ μηδενὶ τόπῳ χωρούμενος, ὁ ἄχρονος, ὁ ἀσώματος, ὁ ἀπερίληπτος* (*Orat.* xxxvii. 2);

and yet he not only accepts, as is shown by these words, the 'Extra Calvinisticum,' but still adheres to the essentially 'Nestorian' view of Origen, viz. that the Incarnation was effected 'substantia animae inter Deum carnemque mediante':

*ὁ ἀχώρητος χωρεῖται διὰ μέσης ψυχῆς νοερᾶς μεσιτευούσης θεότητι καὶ σαρκὸς παχύτητι* (*Orat.* xxxviii. 13).

(*b*) *Apollinaris of Laodicea.*—Of all the theologians of the early Church it was Apollinaris of Laodicea who accommodated his views most fully to popular dogmatics. His doctrine of the Incarnation, according to which the Logos is the *νοῦς* of the *μία φύσις σύνθετος* of Christ, might even be described as a materially and formally ingenious attempt to mould the popular views of the *ἐνανθρώπησις* into a theological theory. In Apollinaris, indeed, we find statements that seem to indicate a type of Kenosis implying a real change in the *λόγος*:

*σάρκωσις κένωσις* (Lietzmann, *Apollinaris*, frag. 124, p. 237); *εἰ μὴ νοῦς ἔνσαρκος γέγονεν ὁ λόγος, ἀλλὰ σοφία ἦν ἐν τῷ νῷ, οὐ κατέβη ὁ κύριος οὐδὲ ἐκένωσεν ἑαυτόν* (*ib.* frag. 71, p. 221, 14 f.). Yet he also says: *κενώσας μὲν ἑαυτὸν κατὰ τὴν μόρφωσιν <δούλου>, ἀκένωτος δὲ καὶ ἀναλλοίωτος κατὰ τὴν θείαν οὐσίαν (οὐδεμία γὰρ ἀλλοίωσις περὶ τὴν θείαν φύσιν) οὐδὲ ἐλαττοῦται οὐδὲ αὐξάνεται* (*de Unione*, 6, Lietzmann, p. 188, 1); *οὐκ ἄρα μετέπεσεν ἡ πρὸς θεὸν ἰσότης, ἀλλ' ἀναλλοίωτος ἡ θεότης ἔμεινεν ἐν ταυτότητι* (*ib.* 15, p. 192, 2 f.).

Even in Apollinaris, therefore, notwithstanding his affinity to the popular doctrine, there is no place for a theory of the Kenosis which diverges from the general tradition of the early Church (cf. 3 (*d*) above).

(*c*) *The Antiochians.*—It is true that the Christology which is furthest removed from Apollinarianism, *i.e.* that of Nestorius, and that of Pelagius (which coincides with the latter in many of its formulæ), does not merely 'seem to differ.' In so far as, in the divergence referred to, the question regarding the agent in the person of Christ was brought to discussion in the theorizings of the early theologians, the differences are profound. The Nestorian doctrine of the Kenosis (cf. Loofs, *Nestorius*, p. 82 ff.) is a lucid development of the Kenotic views to which Irenæus and Novatian had already given expression, and which were never really discarded by the theology of the early Church—a development which had disengaged itself as far as possible from popular dogmatics. The Apollinarian doctrine, on the other hand, tends unquestionably to pass beyond the earlier views and to advance towards a conception of the Kenosis more akin to the popular idea. This tendency also appears, though to a slighter degree, in Cyril's theory of a *ἕνωσις καθ' ὑπόστασιν* of the two natures in Christ which is not clearly distinguished from a *ἕνωσις φυσική*, and also in the orthodox Chalcedonian doctrine of the *ἕνωσις καθ' ὑπόστασιν*, although that doctrine was put forward as an 'unio personalis.' In the early Church, however—even in the hands of Apollinaris and the Monophysites—the tendency never attained its final development. This would have been secured only if the idea of the *μία φύσις σύνθετος* with which Apollinaris had at least attempted to deal in a serious fashion,[1] the idea of the *ἕνωσις φυσική*, to which Cyril sometimes attaches the same meaning,[2] and that of the *ἕνωσις καθ' ὑπόστασιν* had been fully wrought out in Greek theological thought. But the Apollinarian theory of the *μία φύσις σύνθετος* and the allied idea of a *ἕνωσις φυσική* conflicted with that *ἀναλλοίωτον εἶναι* of the Logos which was likewise maintained, and also with the accredited doctrine that the Logos had not forfeited His *πρὸς θεὸν ἰσότης*, while, in the orthodox tradition, the theory of the *ἕνωσις καθ' ὑπόστασιν* broke down in face of Theopaschitism, since even the idea that *εἷς τῆς ἁγίας τριάδος πέπονθε σαρκί* adds nothing to the theologically unserviceable paradox of Athanasius: *αὐτὸς ἦν ὁ πάσχων καὶ μὴ πάσχων* (*Ep. ad Epict.* 6). Nothing but an earnest and resolute handling of the *ἕνωσις φυσική* in an unreserved Theopaschitism could have yielded a real Kenosis of the Logos. But could the Monophysite theologians, who attached great importance to the Trisagion in its monophysitically expanded form, unreservedly maintain the idea expressed in the words *ἀθάνατος . . . σταυρωθεὶς δι' ἡμᾶς*?

**5. The Kenosis in the Middle Ages, and in the Roman Catholic Church.**—Mediæval theology, so far as it was concerned at all with the idea of the Kenosis—the idea certainly never stands out prominently—continued to adhere to the consensus of the early Church in its Western form. The same may be said of Roman Catholic dogma at the present day. Thus, according to Wetzer and Welte (*Kirchen-Lexikon*, iii.[2] [1884] 271) 'semet ipsum exinanivit' (Ph 2[7]) is affirmed of Christ's assumption of human nature, 'and not, as pseudo-mystics and many Protestant theologians believe, of His divine nature and person *per se*.' The *Kirchen-Lexikon* (xii.[2] [1901] 179) can speak of the neo-Protestant theory (see below, 8) thus summarily dismissed only in the most caustic terms:

'Even the overt denial of the hypostatic union is hardly a more mischievous attack upon the deity of Christ than this "Kenosis," which subverts the essential nature of God Himself; not unjustly has Biedermann characterized this doctrine as "a complete kenosis of the understanding."'

**6. The Kenosis in the Reformed theology.**—The Kenosis was insisted upon more strongly by the so-called Reformed theology, which found the subject of *ἐκένωσε* in the Logos—whether *ἄσαρκος*, as becoming man, or *ἔνσαρκος*—and connected the idea with its doctrine of the 'states' of Christ. In the earlier theologians of the Reformed Church, in fact, we occasionally find assertions which readily explain why certain Lutherans spoke of a special 'Reformed doctrine of the Kenosis':

'Christus in assumpta forma servi sese evacuavit omni sua gloria divina, maiestate, omnipotentia, omnipræsentia' (H. Zanchi, in A. Schweizer, *Die Glaubenslehre der evangel.-reformierten Kirche*, ii., Zürich, 1847, p. 297).

The sense in which such utterances are to be understood, however, is made clear by Zanchi

[1] Cf. Lietzmann, frag. 118, p. 234: *μεσότης θεοῦ καὶ ἀνθρώπων ἐν Χριστῷ· οὐκ ἄρα οὔτε ἄνθρωπος ὅλος οὔτε θεός, ἀλλὰ θεοῦ καὶ ἀνθρώπου μίξις.*

[2] *De recta Fide*, xl. [*PG* lxxvi. 1193 B]: Ἰησοῦς Χριστὸς . . . *εἷς ἔν τι τὸ μεταξὺ συγκείμενος.*

himself in his interpretation of ἐκένωσε as an action of the Logos:

'Gloriam illam et maiestatem in qua erat apud patrem, ita abdiderit in forma servi, ut ea penitus evacuasse visus sit, quia nimirum illa gloria in carne non fulgebat, ut ab omnibus conspici posset' (in H. Schultz, *Die Lehre von der Gottheit Christi*, Gotha, 1881, p. 178).

Thus the Reformed theology, even in assertions that seem to go beyond the early Church tradition, does not really break away from the latter. It retained the 'Extra Calvinisticum' in all its precision:

'Cum divinitas comprehendi non queat et omni loco praesens sit, necessario consequitur, esse eam quidem extra naturam humanam quam assumpsit, sed nihilo minus tamen esse in eadem eique personaliter unitam permanere' (*Catechismus Palat.*, quaest. 78). 'Sic λόγος naturam humanam sibi univit ut totus eam inhabitet et totus, quippe immensus et infinitus, extra eam sit' (S. Maresius, in M. Schneckenburger, *Zur kirchlichen Christologie*, Pforzheim, 1847, p. 9, note 2).

And, where the Reformed theology connects the exaltation with *both* natures, this is to be understood in the sense that the 'divina natura exaltata est κατά τι, patefactione maiestatis quae in statu exinanitionis tanquam sub velo sese occultaverat' (J. H. Alstedt, in Schweizer, *op. cit.* ii. 345).

**7. The Kenosis in orthodox Lutheran doctrine.**—The Lutherans and the 'Kenoticists' of the 19th cent. were in their respective ways the first to strike out upon really fresh lines. Luther, who, at an early stage (A.D. 1518; Weimar ed., 1883 ff., i. 268 f.), and, as always (cf. *PRE*³ x. 259), in dependence upon Erasmus (Letter of Feb. 1519, in E. L. Enders, *Briefwechsel Luthers*, Calw and Stuttgart, 1903, i. 439. 65) and in conscious opposition to the Fathers who Ph 2ᵉᵉᵗ· 'ad divinitatem torserunt' (Enders, p. 440. 93), had referred the ἑαυτὸν ἐκένωσε to the historical Christ, and to Him 'secundum humanitatem' (*ib.* p. 93), was led, in consequence of the sacramentarian controversy, to give definite expression to his conviction that Christ was 'Deus revelatus,' precisely in His humanity, in the genuinely scholastic theologoumenon of his doctrine of Christ's omnipresence:

'Where you set God before me, there you must set before me the Humanity likewise: they cannot be separated . . . it has become one person' (*Bekenntnis*, Erlangen ed., 1826-57, xxx. 212).

As regards Luther himself, we may doubt (cf. *PRE*³ x. 259) whether, apart from his theory regarding the presence of Christ's body in the Supper, he ever seriously grappled with the idea that the humanity of Christ had in a real 'communicatio' received the divine attributes at the inception of the 'unio personalis' in the Virgin's womb; but, as regards the Formula of Concord (1577), there can be no question that this idea was endorsed in all seriousness:

'Quod ad maiestatem attinet ad quam Christus secundum humanitatem suam exaltatus est, non eam tum demum accepit, cum a mortuis resurrexit et ad coelos ascendit, sed tum cum in utero matris conciperetur' (*Sol. decl.* viii. 13).

Here the question how, on this assumption, the 'status exinanitionis' is distinguished from the 'status exaltationis' still remained outside the sphere of living interest, and thus received no distinct answer. Even the idea that the Kenosis, which, in agreement with Luther and all the later orthodox Lutherans, was ascribed to the 'humanitas Christi,' presupposed a κτῆσις ('possessio') of the 'idiomata divina' on the part of Christ's human nature in His 'status exinanitionis' was not rigorously adhered to; and still less was the question debated whether, the κτῆσις being assumed, the Kenosis should be regarded only as a κρύψις χρήσεως ('usurpationis') or as a κένωσις χρήσεως; art. viii. 64 seems to assume no more than a κρύψις χρήσεως, while in art. viii. 26 it is asserted that Christ 'secundum assumptam naturam, ad plenam *possessionem* et divinae maiestatis *usurpationem* evectus est' only in virtue of His exaltation.

It was the controversy between the Tübingen and the Giessen theologians (1616-27)—who were at one in their view of the κτῆσις—that first brought this Lutheran problem regarding the Kenosis into the field of serious debate. The Tübingen group, who thought of the κένωσις only as a κρύψις χρήσεως, thereby fell into manifest absurdities and a concealed Docetism. Of the Giessen group, Balthasar Mentzer († 1627) tried to establish the theory that the Kenosis was a κένωσις χρήσεως by arguments[1] which must be regarded as an attempt to supplant the idea of a substance with permanently—even if only potentially—inherent properties (an idea prevalent in the doctrine of the Natures, as also in the doctrine of God) by the idea of the living actuality. Mentzer's formulation triumphed over the Tübingen theologians, but the profounder thoughts by which he tried to establish it were soon forgotten.

**8. The modern 'Kenoticists.'**—Views forming a complete contrast to those of orthodox Lutheranism—views, indeed, which the Formula of Concord bans with an anathema (*Epitome*, viii. 39)—are found among the modern 'Kenotic' theologians, who regard the κένωσις as a real surrender of the 'forma Dei' for the 'forma servi,' and thus assume that the Logos, in order to become man, actually renounced, either wholly or in part, His divine attributes. Such ideas, which recall the popular dogmatics of earlier and later times (cf. 3 (*a*) above), soon emerged sporadically in Protestant theology. They crop out in Menno Simons († 1559);[2] N. L. Zinzendorf († 1760) developed them with all the self-confidence of a lay theologian,[3] and, following the fresh line taken by F. C. Oetinger († 1782), P. M. Hahn († 1790), and other Pietists, the Pietistic physician Samuel Collenbusch († 1803) published lengthy disquisitions on the same side.[4] In the confessional theology of Neo-Lutheranism the first to advocate kindred views was E. W. Sartorius (1831 and 1832). It is possible that popular views supplied the incentive to some of these pioneers of the modern doctrine of the Kenosis. But the present writer thinks that this does not apply to the modern doctrine itself, which originated rather in the endeavour at once to maintain the Trinitarian doctrine of the early Church and to do justice to the true humanity of Jesus Christ and the unity of His person. The writer who gave the doctrine its scientific foundation was G. Thomasius († 1875);[5] and, in Germany, his views, with more or less modification, were adopted by many Lutherans—C. T. A. Liebner († 1871), C. K. Hofmann († 1877), W. F. Gess († 1891), C. F. A. Kahnis († 1888), Franz Delitzsch († 1890), F. Frank († 1894), C. E. Luthardt († 1902), and others—and by a few Reformed theologians, *e.g.* J. P. Lange († 1884) and J. H. A. Ebrard († 1888). In French Switzerland the new doctrine found an early adherent in F. Godet († 1900). It first gained a footing in Britain about 1889,[6] by which date fresh tendencies were already asserting themselves in Germany. As recently as 1903, Sweden had a convinced champion of the doctrine in O. Bensow (see literature at end of art.). The views of these writers vary greatly in detail—appearing now in a purely Biblical (Godet) and now in a speculative (Liebner, Hofmann, Frank) form, here showing great re-

straint, there venturing upon the most daring conclusions (Gess)—and cannot be set forth here; we must simply refer the reader to Bensow's historical introduction (pp. 42–127) and to the works of Dorner, Schultz, and Günther cited below.

One brief observation, however, should be made. The modern theory of the Kenosis is consistent only on condition that it surrenders everything in the nature of an 'Extra Calvinisticum.' Thomasius, in fact, actually ventures to say in his *Beiträge* (p. 236):

'The Logos reserved to Himself neither a special existence nor a special knowledge outside His humanity. He truly became man.'

Such a view certainly secures the true humanity of Jesus and the unity of His person. But as certainly it traverses the immutability of God, and it is fraught with conclusions most incongruous with the conception of the Trinity. If, again, the 'Extra Calvinisticum' be in any degree retained—as it always is when, say, the 'immanent' and the 'relative' attributes of God are distinguished in such a way that the latter alone are regarded as having been relinquished by the Logos—then (to say nothing of the logical difficulties) the theory does not secure what it aimed at securing, viz. the unity of the person of Jesus. If, however, in order to obviate the logical difficulties, the Kenoticists, in their statements regarding the divine nature and its 'idiomata,' seek to bring the ancient doctrine of substance more or less into conformity with that of the living reality, the result is a blurring of the distinction between their own theory and the Christology most repugnant to them, *i.e.* 'Nestorianism.' Moreover, the modern theory of the Kenosis, in all its forms, still carries an air of presumption, inasmuch as it ventures upon constructions which would have a meaning only if God's relation to the world, or, let us say, the relation of the Logos to God, and His divine and divine-human self-consciousness, could be grasped—and analyzed—by the finite mind of man.

9. **Estimate and conclusion.**—Does the foregoing discussion throw any light upon the *κένωσις* in Ph 2[6ff.]? The present writer ventures to think that it does. The early Church exegesis of the passage and the early Church theory of the Kenosis would seem to throw us back upon an interpretation of St. Paul's words that starts from the integral personality of the historical Jesus. In the Jesus Christ of history there dwelt *πᾶν τὸ πλήρωμα τῆς θεότητος*. Can we not therefore also say that He was *ἐν μορφῇ θεοῦ*? This question, more especially in consideration of Gn 1[26] (*ποιήσωμεν ἄνθρωπον κατ' εἰκόνα ἡμετέραν*), 2 Co 4[4] (*Χριστοῦ, ὅς ἐστιν εἰκὼν τοῦ θεοῦ*), and 2 Co 3[18] (*τὴν αὐτὴν εἰκόνα μεταμορφούμεθα*; cf. Ro 12[2] *μεταμορφοῦσθε τῇ ἀνακαινώσει τοῦ νοός*), is, as we think, to be answered in the affirmative. Adam desired to grasp at equality with God (Gn 3[5ff.]); but He in whom dwelt *τὸ πλήρωμα τῆς θεότητος, οὐχ ἁρπαγμὸν ἡγήσατο τὸ εἶναι ἴσα θεῷ, ἀλλὰ ἑαυτὸν ἐκένωσε, κτλ.* No exegete of the early Church ever hazarded the mythological idea that the Logos surrendered the *μορφὴ θεοῦ* for the *μορφὴ ἀνθρώπου*. What, then, is there to justify our ascribing the idea to the Apostle? His words refer to the historical Christ. The theory of Irenæus, that the Incarnation, the self-manifestation of God in a human life, necessarily entailed a self-limitation of God or of the Logos—*οὕτω χωρούμενος, ὡς ἄνθρωπος αὐτὸν χωρεῖν ἠδύνατο* (cf. 3 (*a*) above)—cannot certainly be finally set aside, since as human beings we must perforce think and speak of divine operations in human terms. But it is hardly likely that in Ph 2[6ff.] St. Paul had any such thought. And apart from the (as the present writer believes) erroneous application of Ph 2[6] to the Logos, it is improbable that any theologian would ever have spoken of such a self-limitation as a 'Kenosis.'

FRIEDRICH LOOFS.

**KĒRES** (Κήρ, Κῆρες).—In singular or plural form the word occurs countless times in Greek literature of all periods; it is 'perhaps the most untranslatable of all Greek words' (J. E. Harrison, *Prolegomena*[2], p. 212), ranging from a vivid sense of personal vital energy to mere metaphor out of which all literal meaning has faded.[1]

Kēres are primarily sprites or spiritual beings (*δαίμονες*), invisible yet very real agents, not mere impersonations; the conception is wider and more vital than that of ghosts. Kēres are evil, or at least generally associated with evil for human bodies and souls, and, indeed, all earthly things.

'There are many fair things in human life, but in most of them are, as it were, adherent Kēres which pollute and spoil them'—*οἷον κῆρες ἐπιπεφύκασιν, αἳ καταμιαίνουσιν αὐτά* (Plato, *Laws*, xi. 937 D)—'like a sort of personified bacilli' (J. E. Harrison, p. 166). Cf. Clemens Alex. *Strom.* vi. ii. 21 (p. 749): *Θεόπομπος γράφει· 'εἰ μὲν γὰρ ἦν τὸν κίνδυνον τὸν παρόντα διαφυγόντας ἀδεῶς διάγειν τὸν ἐπίλοιπον χρόνον, οὐκ ἂν ἦν θαυμαστὸν φιλοψυχεῖν, νῦν δὲ τοσαῦται κῆρες τῷ βίῳ παραπεφύκασιν ὥστε τὸν ἐν ταῖς μάχαις θάνατον αἱρετώτερον εἶναι δοκεῖν.'*

All diseases are caused by, or rather are, these spirits, which find entrance to body and mind despite all precautions:

*νοῦσοι δ' ἀνθρώποισιν ἐφ' ἡμέρῃ ἠδ' ἐπὶ νυκτὶ | αὐτόματοι φοιτῶσι, κακὰ θνητοῖσι φέρουσαι | σιγῇ, ἐπεὶ φωνὴν ἐξείλετο μητιέτα Ζεύς* (Hesiod, *Works and Days*, 102 ff.).

Originally these evil sprites, all the manifold ills of man, were shut fast in the great jar (*πίθος*), but in an evil hour Pandora lifted the lid, and they all flew out (*ib.* 90 ff.).[2] Since that day a swarm (Æsch. *Suppl.* 684: *νούσων δ' ἑσμὸς . . . ἀτερπής*) as of noxious insects hovers unseen in wait for man, spirits of calamity, disease, madness, old age, and death, from which he cannot hide or escape:

*Κῆρες ἐφεστᾶσιν θανάτοιο | μυρίαι, ἃς οὐκ ἔστι φυγεῖν βροτὸν οὐδ' ὑπαλύξαι* (Hom. *Il.* xii. 326 f.);

they are so closely packed that the spike of a blade of corn cannot pass between them:

*ὅτι 'πλείη μὲν γαῖα κακῶν πλείη δὲ θάλασσα', καὶ 'τοιάδε θνητοῖσι κακὰ | κακῶν ἀμφί τε κῆρες εἰλεῦνται, | κενὴ δ' εἴσδυσις οὐδ' ἀθέρι'*[3] (fr. in Plut. *Consol. ad Apoll.* 26).

Even Hope (Ἐλπίς), just like other human passions, is often an evil Kēr:

*ἁ γὰρ δὴ πολύπλαγκτος Ἐλπὶς | πολλοῖς μὲν ὄνασις ἀνδρῶν, | πολλοῖς δ' Ἀπάτα κουφονόων ἐρώτων* (Soph. *Ant.* 615 ff.)—'to many is a Delusion that wings the dreams of desire'—an external agent luring men to ruin.[4]

---

[1] The collection of passages in Roscher extends to eleven closely packed pages. The word is connected with Skr. *śar*, 'tear asunder, injure, destroy,' O. Ir. *ir-chre*, 'destruction,' etc. (E. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., pp. 450, 485).

[2] *πρὶν μὲν γὰρ ζώεσκον ἐπὶ χθονὶ φῦλ' ἀνθρώπων | νόσφιν ἄτερ τε κακῶν, καὶ ἄτερ χαλεποῖο πόνοιο, | νούσων τ' ἀργαλέων, αἵτ' ἀνδράσι κῆρας ἔδωκαν.* For the last words ('grievous diseases which give Kēres to men') J. E. Harrison (art. 'Pandora's Box' in *JHS* xx. [1900] 108) proposes *ἅστ' ἀνδράσι Κῆρες ἔδωκαν* ('which Kēres give to men'). This is probably right.

[3] *ἀθέρι* is G. Murray's correction of the MS *αἰθέρι*. Cf. *καὶ ὡς ἔφη τις τῶν παρ' ἡμῖν σοφῶν κενὸν οὐδὲν οὐδ' ὅσον ἀθέρα καὶ τρίχα βαλεῖν*, in the dialogue *Theophrastus* (p. 399 E) by Æneas of Gaza.

[4] Cf. Thuc. v. 103 (the Melian dialogue), where, 'in a style of labyrinthine contortion' (Dion. Hal. *Thucyd.* 40), he makes

So Demokritos calls Jealousy, Envy, and Hatred Κῆρες:

οὐκ ὀλίγας κῆρας ἐν τῷ βίῳ διώσεαι, φθόνον καὶ ζῆλον καὶ δυσμενίην (fr. 191 = Diels, *Fragmente der Vorsokratiker*[3], Berlin, 1912, ii. 101; cf. fr. 285: γινώσκειν χρεὼν ἀνθρωπίνην βιοτὴν ἀφαυρήν τε ἐοῦσαν καὶ ὀλιγοχρόνιον, πολλῇσιν δὲ κηρσὶ συμπεφυρμένην καὶ ἀμηχανίῃσιν).

Theophrastos, in his *de Caus. plant.* v. x. 4, says that each locality has its own peculiar Kēres dangerous to plants, some coming from the soil, others from the air—the naive explanation of men facing the bewildering mutability of Nature before her 'laws' were discovered.

From the swarm of minor ills, two emerge and impress the Greek mind as most relentless and most to be dreaded—Old Age and Death:

Κῆρες δὲ παρεστήκασι μέλαιναι· | ἡ μὲν ἔχουσα τέλος γήραος ἀργαλέου, | ἡ δ' ἑτέρη θανάτοιο (Mimnerm. ii. 5 ff.; cf. Theognis, 765 f., where the prayer τηλοῦ δὲ κακὰς ἀπὸ κῆρας ἀμῦναι, | γῆράς τ' οὐλόμενον, καὶ θανάτοιο τέλος strongly expresses the sense of the personal reality of Kēres; just as in 835—Δισσαί τοι πόσιος κῆρες—the Kēres of Thirst and Drunkenness lurk in the wine-cup, not in a mere metaphorical sense).

The combination 'Kēres of Death' tended to be narrowed in meaning to that of Death simply and the fate of Death; this is the familiar Homeric semi-abstract use in the oft-recurring phrase κὴρ θανάτοιο (generally, but not everywhere, correctly rendered 'fate of death'). In Hom. *Od.* xii. 157, ἤ κεν ἀλευάμενοι θάνατον καὶ κῆρα φύγοιμεν, we seem to 'catch the word at a moment of transition' (J. E. Harrison, p. 174). In one passage only in the *Iliad* (xviii. 535—the Shield of Achilles) is a Kēr materialized, as it were, and exhibited as a demon of slaughter raging on the battle-field; but that is in a work of plastic art. This is further developed in Hesiod (*Shield of Hercules*, 249 f.: a crowd of 'blue-black Kēres' [κῆρες κυάνεαι]; cf. Paus. v. xix. 6: description of a female figure inscribed Kēr on the chest of Kypselos at Olympia).

The conception of Kēres of blessings, and especially of a Kēr within a man as in some sort a Genius, or δαίμων, on which his life depends for good or evil, is almost completely overlaid by the more baneful aspect (cf. the διχθάδιαι κῆρες of Achilles in Hom. *Il.* ix. 411; Hes. *Theog.* 217). Probably this idea lies at the root of the curious Hesiodic epithet κηριτρεφής (*Works and Days*, 416), not 'nourished for death,' but 'Kēr-nourished'[1]—the word bearing witness to a 'primitive doubleness of functions when the Kēres were demons of all work' (J. E. Harrison, p. 185), analogous to the Moirai which control human weal and woe. This conception was never developed to any precision, and remains, even in Homer, incoherent and self-contradictory (see B. Niese, *Entwickelung der hom. Poesie*, Berlin, 1882, p. 34, note 1).

Something of what the Athenians thought about Kēres is discoverable from the customs connected with the Anthesteria, or Feast of All Souls—a festival overlaid in classical times with Dionysiac elements originally foreign and of more recent date.[2] Its real meaning is indicated by the ritual command spoken apparently on the last day, called Chytroi—'Out of the house, ye Kēres! 'tis no longer Anthesteria' (θύραζε κῆρες, οὐκ ἔτ' Ἀνθεστήρια—ὡς κατὰ τὴν πόλιν τοῖς Ἀνθεστηρίοις τῶν ψυχῶν περιερχομένων, Suid. *s.v.* θύραζε).[3] The festival was a great placation of ancestral ghosts, who had been summoned from the tomb on the first day, the Pithoigia (πίθος, 'burial-urn' or 'jar'), which came to be misunderstood as a festival of the opening of the wine-jar and first tasting of the new wine, when the three days of the Anthesteria became a revel of Dionysos (cf. G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 30; and Phot. *s.v.* μιαρὰ ἡμέρα: ἐν τοῖς Χουσὶν Ἀνθεστηριῶνος μηνός, ἐν ᾧ δοκοῦσιν αἱ ψυχαὶ τῶν τελευτησάντων ἀνιέναι).[1]

Kēres, therefore, were also souls of the dead, and on vases they appear as gnat-like figures, winged, but in other respects human, flitting about the grave-mound, or enclosed within it (reff. in Roscher). As ghosts (εἴδωλα) they are powerful for good, but more specially for evil, and quick to take offence (cf. schol. in Aristoph. *Av.* 1490: ἥρωες δυσόργητοι καὶ χαλεποὶ τοῖς ἐμπελάζουσι γίγνονται—quoted in Rohde, *Psyche*[4], p. 246, note 4). They become ministers of death, and actually hale off living souls[2] (cf. Hom. *Od.* xiv. 207; Apoll. Rhod. *Argon.* iv. 1665 ff.: 'Medeia invoked the Death-spirits, devourers of life, the swift hounds of Hades, who, hovering through all the air, swoop down upon the living' [R. C. Seaton, in *Loeb Class. Libr.*, London, 1912]).

Most potent for evil is the vengeful ghost of a murdered man, which has gone to join the great company of maleficent 'elementals':

ὦ μεγάλαυχοι καὶ φθερσιγενεῖς | Κῆρες Ἐρινύες, αἵτ' Οἰδιπόδα | γένος ὠλέσατε πρύμνοθεν οὕτως (Æsch. *Sept.* 1054 ff.).

The word Erinys in this combination Κῆρες Ἐρινύες was originally simply a descriptive epithet meaning 'angry ones,' just as Eumenides is 'kindly ones.'[3] So 'the idea of Erinys as distinct from Kēr is developed out of a human relation intensely felt' (J. E. Harrison, p. 214)—as Plato probably recognized (*Laws*, ix. 865). Already in Homer, however, the Erinyes are no longer human souls, but avengers of souls upon the living (see *Il.* ix. 571: τῆς δ' ἠεροφοῖτις Ἐρινὺς ἔκλυεν—when summoned by Althaia to avenge her *two* brothers). Abstraction being pushed still further, the Erinyes become avengers of offences against all moral law, or even the laws of physical Nature:

τῷ δ' ἄλγεα κάλλιπ' ὀπίσσω | πολλὰ μάλ', ὅσσα τε μητρὸς Ἐρινύες ἐκτελέουσιν (Hom. *Od.* xi. 279 f.)—compared with *Od.* ii. 135 f.: ἐπεὶ μήτηρ στυγερὰς ἀρήσετ' ἐρινῦς, | οἴκου ἀπερχομένη. See also *Il.* ix. 454 and xix. 259, 418.[4]

Formless in Homer, they were first differentiated from Kēres and analogous mythological figures, and portrayed in visible shape in drama, by Æschylus (*Eumen.* 46 ff.). The more primitive view of them reappears later in literature at intervals, as, *e.g.*, in Sophocles (*Œd. Tyr.* 471 and 481), as embodied Dooms (cf. Eur. *Elek.* 1252). It would be hard to prove that the primitive conception ever died out completely.

LITERATURE.—A long art. by O. Crusius, in Roscher, ii. (1890–1897), gives the fullest collection of passages, chronologically arranged; see also O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, ii., Munich, 1906 (in I. von Müller, *Handb. der klass. Altertumswiss.*). The fullest general treatment, apart from mere accumulation of references, is J. E. Harrison, *Prolegomena to the Study of Greek Religion*[2], Cambridge, 1908.

W. J. WOODHOUSE.

the Athenians speak of Hope as turning out for evil for mankind. Eros retained to the last his resemblance to Kēres in being represented with wings.

[1] O. Crusius aptly brings the epithet κηριτρεφής into connexion with the words of Hippokrates (Περὶ ἐνυπνίων, 2, p. 14 K): ἀπὸ γὰρ τῶν ἀποθανόντων αἱ τροφαὶ καὶ αὐξήσεις καὶ σπέρματα γίγνονται. See E. Rohde, *Psyche*[4], Tübingen, 1907, p. 247, note 1.

[2] For the name see A. W. Verrall's art. 'The Name Anthesteria' in *JHS* xx. [1900] 115 ff. (cf. J. E. Harrison, p. 32 f.). It is derived from ἀναθέσσασθαι, and is a Feast of Revocation of the dead.

[3] Suidas gives as a usual form θύραζε Κᾶρες, κτλ. This has a certain plausibility, as we know that the household servants were admitted to the festivities and licence of the Pithoigia. 'Probably in classical days κῆρες had already become an old-fashioned word for souls, and the formulary may have been easily misunderstood' (J. E. Harrison, p. 35, note 1). A. Mommsen, *Feste der Stadt Athen*, Leipzig, 1898, p. 386, will not accept this. But cf. the Lemuria at Rome (W. Warde Fowler, *Roman Festivals*, London, 1899, p. 106).

[1] These ideas and practices of the Athenians were probably a survival from the pre-Hellenic stratum of race and religion.

[2] Cf. the beautiful vase fragment published in *JHS* xii. (1891) 340, where a Κὴρ θανάτοιο, a small winged figure, hovers over the head of a dying warrior, and is in the act of taking the breath of life from his lips—according to the probable interpretation.

[3] See Paus. VIII. xxv. 4: τῷ θυμῷ χρῆσθαι καλοῦσιν ἐρινύειν οἱ Ἀρκάδες, and cf. the story told in Paus. I. xliii. 7 about Koroibos, who slew the fiend Poine, the avenging ghost of the child of Psamathe; cf. *Anthol. Pal.* vii. 154: εἰμὶ δὲ Κὴρ τυμβοῦχος, ὁ δὲ κτείνας με Κόροιβος.

[4] So even an injured dog was said to have his Erinys.

**KHĀKĪS.**—A Rāmaite Vaiṣṇava sect of N. India, said to have been founded by Kīlh, a disciple of Kṛṣṇa-Dāsa Paya-ahārī, the disciple of Anantānanda, the disciple of Rāmānanda.[1] He therefore flourished at the end of the 16th century. The name of the sect is derived from the Persian *ḫāk*, 'ashes,' and, in spite of its traditional foundation by Kīlh, it claims to have existed from the time of the banishment of Rāma-Chandra from Ayodhyā, as described in the Sanskrit *Rāmāyaṇa*. Rāma's brother, Lakṣmaṇa, is said, in his grief, to have smeared his body with ashes. Hence he was called 'Khākī,' and his admiring followers bear that name to the present day.[2] Their principal seat is accordingly at Ayodhyā, in the present Faizābād District of the United Provinces, where they have an *akhāṛhā*, or cloister, founded by one Dayā Rām from Chitrakoṭ in Bundelkhaṇḍ—another locality hallowed by the Rāma story—in the days of Shujāu-'d-daula, the Nawāb Vizier of Oudh (1754–75). In 1905 the Order numbered 180 persons, of whom 50 were resident and the rest itinerant. The then head was eleventh in succession from the founder. At the temple of Hanumāngaṛhī[3] in the same city, dedicated to the monkey-god Hanumān, the friend and helper of Rāma, the priesthood consists of these Khākī ascetics.[4]

Another cloister of the sect, of some local celebrity, exists at Luṇāvāḍā, in the Rewakantha State, lying between Gujarāt and Rājputānā, with an important branch at Ahmadābād.[5] This, together with the fact recorded by Nābhā-Dāsa (*loc. cit.*) that Kīlh himself belonged to a Gujarāt family, lends countenance to the hearsay statement of H. H. Wilson[6] that the *samādh*, or spiritual throne of the founder, is in Jaipur in Rājputānā.

Our knowledge of the customs and doctrines of the Khākīs is confined to what is said by Wilson (*op. cit.*). Although Vaiṣṇavas, and worshippers of Rāma, Sītā, and, especially, Hanumān, in accordance with the Indian tendency to syncretism they have adopted several Śaiva customs, such as the use of ash-smearing, dressing the hair in the fashion of the Śiva *jaṭā*, going about almost naked, and the use of the term *samādh* for the throne of their founder. Those who reside in fixed establishments generally dress like other Vaiṣṇavas, but those who lead a wandering life go either naked or nearly so, often with only a thick black cord round their loins,[7] and always with their bodies smeared with the pale grey mixture of ashes and earth.

LITERATURE.—This is given in the footnotes. A summary of Wilson's notice will be found in E. Balfour, *Cyclopædia of India*[3], ii., London, 1885, *s.v.* 'Khaki.'

GEORGE A. GRIERSON.

**KHALSA.**—See SIKHS.

**KHARWĀR, KHAIRWĀR** (the former title derived from Hindī *khar*, Skr. *khaṭa*, 'thatching grass,' said to be the tribal totem; the latter from Hindī *khair*, Skr. *khadira*, the tree *Acacia catechu*, the preparation of which is one of their industries).—A non-Aryan tribe found in Bengal, the United Provinces of Agra and Oudh, and the Central Provinces, numbering, at the Census of 1911, 147,231. As is the case with many similar tribes, they fall into two groups—the one primitive and isolated, retaining animistic forms of belief, the other influenced by the Hindus in whose vicinity they live.

According to E. T. Dalton, the Cheros and Kharwārs both 'observe, like the Kols, triennial sacrifices. Every three years a buffalo and other animals are offered in the sacred grove, "sarna," or on a rock near the village. They also have, like some of the Kols, a priest for each village, called páhn. He is always one of the impure tribes—a Bhúiya, or Kharwár, or a Parheya, and is also called baiga [see BAIGĀ, vol. ii. p. 333], and he only can offer this great sacrifice. No Brahmanical priests are allowed on these occasions to interfere. The deity honored is the tutelary god of the village, sometimes called Duár Pahár, sometimes Dharti, sometimes Purgahaili or Daknai, a female, or Dura, a sylvan god, the same perhaps as the Darhá of the Kols' (*Descriptive Ethnology of Bengal*, Calcutta, 1872, p. 129).

In one village of Kharwārs the same writer found that the Baigā priest was offering, in the name of the village, biennial sacrifices to Chindol, a male spirit, to Chanda, a female spirit, and to Parvin.

'Buffaloes, sheep, and goats are offered to these promiscuously. They do not associate Chanda with Káli, and make no prayers to any Hindu gods; but when they are in great affliction, they appeal to the sun. They have no particular name for the luminary, calling it "súraj" [Skr. *sūrya*], and any place on which he shines may be the altar. The other gods have shady retreats. These villagers honored their ancestors by a yearly offering of a wether goat; this is strictly a family affair. The animal is killed and eaten at home' (*ib.* p. 130). According to H. H. Risley, 'the main body of the tribe, and particularly those who belong to the landholding class, profess the Hindu religion, and employ Sákadwipi Brahmans as priests. Mahadeo and Sitaram are the popular deities; Gauri and Ganesh being worshipped during marriages. In addition to these, the miscellaneous host of spirits feared by the Mundas and Oraons are still held in more or less reverence by the Kharwárs, and in Palámau members of the tribe sometimes perform the duties of páhan or village priest' (*TC*, Calcutta, 1891, i. 476).

In the United Provinces they call themselves Hindus, but they do not regularly worship any of the orthodox gods, except Sūraj, the sun, to whom they appeal in time of trouble. Their chief goddess is a local Juālāmukhī (*q.v.*) Devī, who must not be confounded with the Panjāb goddess of the same name. They also worship a local deity called Rājā Lākhan or Lakhana Deva, who is one of their deified Hindu conquerors, son of the famous Rājā Jai Chand of Kanauj, who fell at Benares under the sword of Shihāb-ad-dīn, the Musalmān invader, and became a popular hero (V. A. Smith, *Early Hist. of India*[2], Oxford, 1908, p. 356). He is annually worshipped at the platform where the tribal dead are propitiated. As in Bengal, they also worship Rājā Chandol, and Dhartī, or Mother Earth, while those under Hindu influence employ Brāhmans to worship Śiva on their behalf. Dūlhā Deo, said to be a deified bridegroom who died under tragical circumstances, is their marriage god. Darapāt Deo and his spouse, Angārmatī, are the tribal gods of war.

The most remarkable cult practised by the branch of the tribe in Chotā Nāgpur, however, is that of Mūchak Rānī, who is said to belong to the Chamār caste (see CHAMĀRS). Every three years a sacrifice in her honour is made at the village threshing-floor, and her marriage is performed with much ceremony.

The people, accompanied by musicians, ascend the hill where she is supposed to live. One of the party acts as the marriage priest, and marches in front of the procession, shouting and dancing until he works himself into a state of frenzy. They halt at the mouth of her cave, into which the priest enters, and brings out the Rānī, who is represented by a small, oblong, smooth stone, daubed all over with red lead. This is draped with silk and cotton robes, slung in a bamboo, and carried away like a bride. The procession halts for a time under a tree, and then proceeds to another hill, where her consort, who is believed to belong to the Agariā (*q.v.*) tribe, is said to live. Offerings are made to the bride, and she is then flung into the cave of

[1] See art. BHAKTI-MĀRGA, vol. ii. p. 546. For an account of Kīlh see Nābhā-Dāsa, *Bhakta-Mālā* (17th cent.), 40 f. and comm.

[6] *Religious Sects of the Hindus*, London, 1861, i. 98 f. Wilson mentions another Khākī cloister at Farrukhābād, on the Ganges, but there is no reference to this in modern Gazetteers.
[7] M. A. Sherring, *Hindu Tribes and Castes*, iii. (Calcutta, 1881) 60.

her bridegroom, which is believed to be of immense depth. As she falls the people eagerly listen to the crash of the stone as it strikes the sides of the abyss. When the sound ceases, they return and end the rite with dancing. These two caves are supposed to be connected by an underground passage; and every third year the Rāni is believed to return, in the form of the same stone, to her parents' home.

Formerly, it is said, the rite was performed annually; but on one occasion the Rānī caused a scandal by appearing at the house of the Baigā priest on the morning after the rite. This conduct being deemed improper, she was punished by the cessation of the annual marriage rite, which is now performed every three years. This seems to be a rite of sympathetic magic intended to promote the fertility of the members of the tribe and of their crops, like the *ἱερὸς γάμος* of Zeus and Hera (*Il.* xiv. 346 ff.) and similar rites in many other parts of the world (J. G. Frazer, *The Magic Art*, London, 1911, ii. 98 f.; J. E. Harrison, *Prolegomena*, Cambridge, 1903, p. 482).

For the marriage-rite of Mūchak Rāni see L. R. Forbes, *Settlement Report of Palamau*, Calcutta, 1875, reprinted in *NINQ* iii. [1893] 23 f., 167. The Khairwārs of the Central Provinces are described in *Reports of the Ethnographic Survey*, pt. v., Allahabad, 1911, p. 45 ff.

W. CROOKE.

**KHĀSIS.**—The Khāsis are a hill tribe inhabiting the Khāsi and Jaintiā Hills District of Assam, which is situated between 25° 1′ and 26° 5′ N. lat., and between 90° 47′ and 92° 52′ E. longitude. The District contains an area of 6157 sq. miles, and is mountainous. About half of it, including the country around the capital, Shillong, is outside the limits of British India. It consists of a collection of small States in political relations, regulated by treaty, with the Government of India, but enjoying almost complete autonomy in the management of their local affairs. In the remainder, called the Jaintiā Hills, the indigenous system of administration through officers called *dolois* has been maintained. The population of the Khāsis resident in the Khāsi and Jaintiā Hills consisted of 161,865 at the last Census, exclusive of 28,245 Christians, the greater portion of whom are Khāsis belonging to the Welsh Calvinistic mission. The Khāsis are linguistically allied to the Mon-Khmer family of Further India, and by their appearance are sharply differentiated from the Mongoloid tribes which surround them in Assam, the Khāsi skull being mesocephalic, the eyes horizontal and not oblique, with openings round and broad and not like narrow slits, the base of the nose wide, the skin varying from dark to a light yellowish brown, according to locality (fairer in the upland than in the lowland), the hair black and straight, the stature short, and the males very muscular. These physical characteristics closely correspond with those of all speakers of Austro-Asiatic languages (as reported by Schmidt), of which the Mon-Khmer form an integral part.[1] The calves are very highly developed—which is due probably to the Khāsis, both males and females, being accustomed to carry very heavy burdens up and down hills. The females, when young, are comely and of a buxom type. The people are cheerful in disposition, good-tempered as a rule, and fairly industrious, especially the females. An interesting trait is their fondness for music, the hymn tunes which are taught them by the Welsh missionaries being rapidly learned and retained without difficulty. The most important and probably the most interesting characteristic of the Khāsis is the observance of the matriarchate.

'Their social organization presents one of the most perfect examples still surviving of matriarchal institutions, carried out with a logic and thoroughness which, to those accustomed to regard the status and authority of the father as the foundation of society, are exceedingly remarkable. Not only is the mother the head and source, and only bond of union, of the family: in the most primitive part of the hills, the Synteng country, she is the only owner of real property, and through her alone is inheritance transmitted. The father has no kinship with his children, who belong to their mother's clan; what he earns goes to his own matriarchal stock, and at his death his bones are deposited in the cromlech of his mother's kin' (C. J. Lyall, in P. R. T. Gurdon, *The Khasis*, p. xxiii f.).

[1] See review by G. A. Grierson of W. Schmidt's *Die Mon-Khmer Völker*, in *JRAS*, 1907, pp. 187–191.

**1. Origin and affinities.**—The origin of the Khāsis is a difficult question. In the opinion of the present writer,[1] they are an offshoot of the Mon people of Further India; but as to their ultimate source, apart from their fairly close approximation to the Malay type, all that we can guess now is that we are on the right track, originally pointed out by J. R. Logan as regards India and Further India, and it is to be hoped that the researches of scholars such as W. H. R. Rivers, in Melanesia, will help us very greatly (see Gurdon, pp. 12–18).

The use by the Khāsis of a very peculiarly shaped spade (*mokhiw*), which may perhaps be regarded as the prototype of the 'singular shoulder-headed celts' found in the Malay Peninsula and Chotā Nāgpur and figured in the *JASB* of 1875, may be mentioned. These shoulder-headed celts are, according to E. Aymonier (*Le Cambodge*, Paris, 1900–04, iii.), neolithic.

'Ces celtes, dits épaulés, parcequ'ils possèdent un talon d'une forme particulière, paraissent appartenir en propre à l'Indo-Chine et à la presqu'île dekkhanique. Ils fourniraient donc un premier indice, non négligeable, d'une communauté d'origine des populations primitives des deux péninsules, cis- et trans-gangétiques.'

Here, again, we may hope for some important discoveries, during the researches of Rivers in Melanesia, as to the relative affinities of peoples which belong to the Austronesian family.

It should be clearly understood that the Khāsis are not Indian as regards appearance, proclivities, or language, and that we must look more to Further India and possibly beyond, among the peoples of the Pacific, for tribes exhibiting like peculiarities.

**2. Domestic life.**—The greater number of the population subsist by agriculture, but a considerable proportion earn their livelihood as porters, carrying potatoes to the *hāts*, or markets, and various commodities to their homes therefrom. There is also a fair demand for Khāsi domestic servants, both among the Europeans and among the Bengali and Assamese clerks who are employed at the headquarters of the administration at Shillong. The manufacture of country spirit gives employment to a considerable number of persons, most of whom are females. The Khāsis, although in some villages acquainted with the art of weaving, do not seek this form of employment on a large scale, but import most of their cloths from the Plains Districts. In the Wār country they both keep bees themselves and collect the wild honey. The honey is exceptionally good, but little organized export of it exists, the trade being mostly local. There is probably an opening for a productive business in the export of honey from the Khāsi Hills. The houses of the people in the interior are, as a rule, substantial thatched cottages with plank or stone walls, and raised on a plinth some 2 to 3 ft. from the ground. The only window is a small opening on one side of the house. The fire is always burning on an earthen or stone hearth in the centre, and the smoke hangs in a dense cloud about the room, as there is no chimney. Above the hearth is a swinging shelf upon which the firewood is placed to dry. In Shillong, Cherrapunji, and Jowai, houses built after the European style have largely displaced the Khāsi thatched

[1] *Khasis*, p. 10.

cottages. The Khāsis build their villages a little below the tops of the hills, and seldom change their sites. The villages have been situated in their present positions for many years, as is evidenced by the large number of memorial-stones and cromlechs which are to be seen near them. The Khāsi chief, or Siem, lives in the village, in the midst of his people. There is little furniture in the houses in the interior, although the more up-to-date Khāsis use furniture of European patterns. In every house are to be seen the *ki knūp*, or rain shields, which are made of basket-work, and also the baskets, *ki khoh*, of different sizes for carrying on the back. The Khāsis possess very few musical instruments, and those which they do have are of the Assamese or Bengali patterns. They are hard-working cultivators, and achieve very fair results, considering the unproductive nature of the hill-sides on the uplands. There is a considerable amount of wet paddy cultivation among the Syntengs of the Jowai subdivision. The most important crop in the uplands is the potato, the tuber having been introduced into the country by the British. The cultivation of oranges in the Southern portion of the district is of equal importance with that of the potato in the Northern. Oranges grow best in the warm valleys lying on the Sylhet side of the hills. The Khāsi orange has always been famous for its excellence. According to *Letters received by the East India Company from its Servants in the East*, i. (London, 1896), it was exported many years ago to Europe with the oranges of Garhwāl and Sikkim.

Khāsis use bows and arrows for hunting, and spears for both casting and thrusting. Fishing is largely resorted to, the method employed being to poison the streams. The Khāsis eat practically all flesh, except that of the dog, which they consider to be 'the friend of man.' In this respect they differ from the Nāgā, Gāro, and Kuki tribes of Assam, all of whom eat the dog. The Khāsis, except some of the Christian community and some of the people of Mawkhar in Shillong, do not use milk or its compounds, following in this respect the Kāchāris and Rābhās of the plains or the Gāros of the hills. The Mongolian race in its millions, as a rule, does not use milk for food; but the Tibetans and some of the Turkoman tribes are exceptions. The Khāsis are heavy drinkers of both rice-beer and rice-spirit. Archery may be said to be the national game. Manufactures are few in number, and do not tend to increase. The iron industry in former days was an important one, but has now died out completely.

3. **Tribal organization.**—The people of the Khāsi and Jaintiā Hills may be divided into Khāsi, Synteng, Wār, Bhoi, and Lynngām. These sections are subdivided, the Khāsis into the inhabitants of the central high plateau, Cherra and Nongstoin, Māhārām, Mariaw, Nongkhlaw, and the neighbouring Siemships; the Syntengs into Syntengs proper, Nongtungs, and Khyrwangs; the Wārs into Wār proper, and Wār Pnar; the Bhois into Jinthongs, Mynris, Rynkhongs, and the Khāsi-Bhois, *i.e.* Khāsis who inhabit the low country to the north of the district which is called generally the 'Bhoi.' The Lynngāms are a separate division, being half Khāsi and half Gāro. These tribes and sub-tribes are neither strictly endogamous nor strictly exogamous, but they are more endogamous than exogamous; *e.g.*, Syntengs more often marry Syntengs than Khāsis, and *vice versa*, and it would usually be considered derogatory for a Khāsi of the uplands to marry a Bhoi or Wār woman, and a disgrace to marry a Lynngām.

These divisions are subdivided into a number of septs, taking Risley's definition of 'sept' as the largest exogamous division of the tribe, and these septs may be called 'clans' for the purpose of this article. Many of the clans trace their descent from ancestresses, or *kiaw* (grandmothers), who are greatly revered, indeed almost deified, and in some of the clans the names of the ancestresses survive, *e.g.* the Mylliem-ngap and the Mylliem-pdah clans. The descendants of one ancestress of the clan, *ka Iawbei Tynrai*, are called *shi kur*, or one clan. Next comes the division called the *kpoh*, or sub-clan, all the descendants of one great-grandmother (*ka Iawbei Tymmen*) being styled *shi kpoh*. Then comes the *iing* (lit. 'house'), or family. The grandmother, styled *ka Iawbei Khynraw*, or the young grandmother, to distinguish her from the two other grandmothers already mentioned, is the head of the *iing*, or family.[1] A prominent characteristic of the Khāsi clan is the common clan sepulchre; another is strict exogamy: a Khāsi can commit no greater sin than to marry within his own clan, the women of which are *sang*, or tabu, to him. Some of the clans bear the names of animals, or, as in the case of the Diengdoh clan, a tree name; but the clan members apparently do not regard the animals or trees as totems, since they do not abstain from killing, eating, or otherwise utilizing them.

4. **State organization.**—The Khāsi States may be said to have been formed by the voluntary association of villages or groups of villages, their heads being the Siems, or chiefs. These chiefs possess little authority except that derived from the Durbar, or State assembly; indeed, Khāsi States are limited monarchies, being constituted on distinctly democratic lines. A fact of universal application is that succession to the Siemship is through the female line, the sons of the eldest uterine sister inheriting in order of priority of birth; here it should be noted that this rule of succession differs from the ordinary rule of succession to real property, which passes to the youngest daughter of the deceased's mother, and after her to her youngest daughter (for a more detailed description of the rules of inheritance see Gurdon, pp. 68–75).

5. **Marriage and divorce.**—The most remarkable feature of Khāsi marriage is that it is usual for the husband to live with his wife in his mother-in-law's house and not to take the bride to his own home, as in other communities. As long as the wife lives in her mother's house, all her earnings go to her mother, who expends them on the maintenance of the family. Among the Syntengs, however, and the people of Maoshai, if the husband does not live in the mother-in-law's house, he visits his wife there only after dark, and does not take his meals in the house. Divorce is common and may occur for a variety of reasons, such as adultery, barrenness, incompatibility of temperament, etc. The essential act in divorce is the giving or exchange of five cowries or pice. The wife gives her five cowries or pice to her husband, who places them with his own and returns the ten pieces to his wife, who again returns them to him. The husband then throws the cowries or coins on the ground, and the divorce is complete.

6. **Inheritance.**—The Khāsi saying is *long jaid na ka kynthei* ('from the woman sprang the clan'). When reckoning descent, they count from the mother only; the man is nobody. If he is a brother, *u kur*, he will be lost to the family or clan when he marries; if he is a husband, he is regarded merely as *u shong kha*, 'a begetter' (for further details see Gurdon, pp. 82–85).

7. **Head-hunting.**—The Khāsis are not head-hunters, like the Nāgās of Assam, nor do they appear to have practised such a custom in former times; since the period of the Jaintiā rebellion they have settled down into a nation of peaceful cultivators. There is little crime among them, but many murders have been caused by a curious superstition called *u thlen*. The *thlen* is believed to be a gigantic snake which requires to be appeased periodically with human victims (Gurdon, pp. 98–104).

8. **Religion.**—The main religion of the Khāsis is the cult of ancestors, although the propitiation of spirits of evil by means of offerings is also al-

[1] For an explanation of how the Khāsi clan developed from the Khāsi family see Gurdon, p. 63 f.

most universal. The propitiation of ancestors was formerly thought to be effected by offering food to them on the flat table stones, or *maw-kynthei*, so much in evidence in the Khāsi and Jaintiā Hills, and this practice still obtains in the villages in the interior of the hills. The more popular practice, however, at the present time is to make the offerings in the house, either annually or at times when it is thought necessary to invoke the aid of the departed. As is the case in other countries, and among other people, it is possible that some of the Khāsi gods of to-day are merely the supposed spirits of deceased ancestors (for a comparison between the Khāsi ancestor-worship and that of the Shinto cult of Japan see Gurdon, pp. 109–111).

Of the deceased ancestors the Khāsis revere *ka Iawbei* the most. *Ka Iawbei* is the ancestress of their clan; a large number of the flat table stones to be seen in front of the Khāsi menhirs are erected in her honour. In former times it was the custom to offer food to her on those stones. In cases of family quarrels or dissensions among the members of the same clan, which it is desired to bring to a peaceful settlement, it is customary to perform a sacrifice to *ka Iawbei*, the first mother, but before sacrificing it is necessary to take an augury by breaking eggs.[1] The next ancestor in importance is *U Suid-Nia*, or *U Kni Rangbah*, the first maternal uncle, *i.e.* the elder brother of *ka Iawbei*. The great central menhir in the Khāsi line of stones is erected in his honour. The offering of food to placate the spirits of Khāsi ancestors may be compared with the practices of some of the tribes in the Malay Archipelago (*GB*[2] ii. 462 f.). The Khāsis, like other rude tribes, propitiate also the spirits of fall and fell, especially at times of ill news or other misfortune, when the name of the particular malignant being must be ascertained by the breaking of eggs. They possess priests called *lyngdohs*, who perform sacrifices either for the good of the State or for private purposes. The *lyngdoh* must be assisted at these sacrifices by a priestess, and merely acts as her deputy when sacrificing. This priestess is probably a survival of the time when females took a more important part in public religious life than they do at present.

**9. Disposal of the dead.**—The bodies of the dead are burned, the ashes and uncalcined bones being collected and placed in small *kistvaens* on the hill-sides to await collection to the great ossuaries of the clans. Such collections are made often after very long intervals, and are carried out under an elaborate ritual, part of which is the erection of memorial stones. The main object of the collection in the ossuaries is to confine the spirits of the dead and to prevent them from haunting the living. The bodies of deceased Siems are disposed of with the greatest formality, the remains of U Ram Singh, Siem of Cherra, having been cremated recently before several thousand spectators. The corpse of this Siem has been preserved in a dwelling-house of the Siem family for more than 30 years by the peculiar Khāsi system of embalming.

**10. Memorial stones.**—This is a subject on which much could be written. Those who are interested in observing a custom which may possibly have accounted for some megalithic remains in other parts of the world may be referred to Gurdon, pp. 144–155. A striking feature of the Khāsi stones is the flat table stone, or dolmen, in front of a line of menhirs, the menhirs being almost invariably of uneven numbers, *e.g.* 3, 5, 7, 9, or even 11 stones. Here it may be noted that the unevenness in number is also a special feature of the Belgaum stones. The largest existing Khāsi menhir is that of Nartiang in the Jaintiā Hills, which is 27 ft. high and 2¼ ft. thick, and the largest table stone is that at Laitlyngkot in the Jaintiā Hills, which is 23¼ ft. by 13⅝ ft. and 1 ft. 8 in. thick. There are some table stones in the Khāsi and Jaintiā Hills which may have been for sacrificing human victims (cf. the great table stones at Jaintiāpur and the stone at Ieu Ksih near the Kapili river).

[1] For divination by egg-breaking see Gurdon, App. C, p. 221.

**11. Folklore.**—The Khāsis possess a considerable amount of folklore which shows very few signs of Indian or Aryan influence. The story of the *thlen*, or fabulous snake, has already been referred to (for a detailed account see Gurdon, p. 98 ff.). This tale or superstition may possess counterparts in Cambodia or in the Mon country or among the Palaungs.

**12. Language.**—Khāsi has been placed by Grierson in the Mon-Khmer group. As far back as 1853 the connexion of Khāsi with the other languages of the Mon-Khmer family was recognized, when Logan in his paper on the 'General Characters of the Burma-Tibetan, Gangeitic, and Dravirian Languages' in the *Journal of the Indian Archipelago*, spoke of it as a

'solitary record that the Mon-Kambojan formation once extended much further to the North-West than it now does.'

It was not, however, till 1889 that E. Kuhn showed conclusively the true affinity of this language. W. Schmidt of Vienna not only confirms Kuhn's conclusions, but goes a step further and includes Khāsi in the Austro-Asiatic family of languages, a western branch of a still larger family of languages stretching from the Panjāb in the West through Indonesia, Melanesia, and Polynesia, right across the Pacific to Easter Island in the East; from the Himālaya in the North to New Zealand in the South, which Schmidt names the 'Austric' field of languages.

'We must confess that it is the most widely spread speech family of which the existence has yet been proved' (Grierson, *loc. cit.*).

Schmidt's theory has thus been accepted by Grierson, our greatest living authority on Indian languages. For a description of the Khāsi language, see the chapter on language in Gurdon, which is based chiefly on C. J. Lyall's skeleton grammar contained in *Linguistic Survey of India*, ii.; cf. also the treatises of Kuhn and Schmidt.

**KHAWĀRIJ.**—*Khawārij*, plural of *khārij*, 'a rebel,' is used as the name of a group of Muslim sects, of which apparently only the Ibāḍis (*q.v.*) now survive. They are first heard of in connexion with the murder of the third Khalīf Uthmān—an event which, owing to the want of contemporary documents, is somewhat obscure. Of the offences with which this personage was charged the most serious appears to have been his ordering the destruction of all existing copies of the Qur'ān, in order that the recension which he introduced should be unchallenged; but, since this order was effectively carried out, the Muslim historians are compelled to express approval of the act, as

otherwise they would be throwing doubt on the authenticity of the only surviving copy. It would appear that 'Alī obtained the Khalīfate by the support of the insurgents who had killed Uthmān, but afterwards was compelled to express abhorrence of that act; and, by accepting arbitration in the dispute which afterwards arose between himself and Mu'āwiya (founder of the Umayyad dynasty), he incurred the enmity of those who had organized the plot against Uthmān. He defeated them in the bloody battle of Nahrawān (37 or 38 A.H.), but was soon assassinated by one of the survivors in revenge. Their shibboleth for some time appears to have been a declaration that Uthmān had deserved his death, and their formula was 'None but God is judge,' with reference to the arbitration to which 'Alī had consented. They are sometimes known by the name *shurāt*, said to mean 'those who buy God's favour with their lives.'

During the whole of the Umayyad period, persons who employed these names and formulæ gave the government trouble, sometimes being able to carry on protracted civil war, at times only able to organize ephemeral revolts. The greatest success which they attained was under the command of one Shabīb, who, in the reign of 'Abd al-Malik, repeatedly occupied the important city Kūfa. The wars of al-Muhallab b. Abī Ṣufra with the Khārijite Qaṭarī are recorded at length in the *Kāmil* of the grammarian Mubarrad († 285 A.H. = A.D. 998).

In the chronicles and popular literature the Khārijites are represented as Puritans, driven to take up arms against a government which failed to satisfy their ideals of piety and asceticism. Familiarity with the Qur'ān is claimed for their women (*Rauḍat al-'Uqalā*, Cairo, 1328, p. 35; Yāqūt, *Dictionary of Learned Men*, London, 1913, vi. 94), one of whom declares that the ignorance of the sacred volume displayed by the ruling powers was what forced them to rebel. One of their revolts was occasioned, it is said, by a magistrate's failing to give redress to a Muslim who had been given wine in lieu of vinegar at a shop. Those who organized the risings are described as devotees and students of the Qur'ān, and indeed the name *qurrā'*, literally 'readers,' but often used for 'devotees,' is sometimes given them. Besides these qualities they had a reputation for fanatical courage. This they retained in the 3rd cent. of Islām, when, under 'Abbāsid rule, they played a less important part than under the Umayyads. Towards non-Muslims they are represented as scrupulous in their dealings; but towards Muslims who disagreed with them they were inordinately savage; they slaughtered women and children, though some of their number disapproved of this practice.

The author of ***Al-Farq bain al-Firaq*** ('The Distinction between the Sects'; † 429 A.H. = A.D. 1037) divides the Khawārij into twenty branches. The doctrine common to them all was the obligation to resist an unjust sovereign; besides this they all applied the name *kāfir* ('unbeliever') to Uthmān, 'Alī, the two arbiters, all who approved of the Arbitration, and all who had taken part in the first Civil War (the Battle of the Camel). Some made their characteristic doctrine the application of this name to all who committed capital offences. It would appear, however, that their most important doctrine was that any Muslim of good character might be sovereign, whence they were in permanent opposition to the supporters of the hereditary dynasties.

It is not easy to fit the number 20 to the list of sects given by the author quoted; the main divisions come far below that number, whereas the subdivisions far exceed it. An artificial classification with the view of obtaining the number 20 was afterwards made by Shahrastānī (*Religionspartheien und Philosophenschulen*, tr. T. Haarbrücker, Halle, 1850–51, i. 128 ff.). 'Abd al-Qādir al-Jīlānī († 561 A.H. = A.D. 1166) reduces it to 15 divisions. One of the names meets us frequently in Arabic literature, viz. the Ṣufriyya; references to the Ibāḍiyya also occur. The differences between them were largely on the same doctrinal questions as divided the other communities—*e.g.*, predestination, the relation of capacity to conduct, whether infants are Muslims, etc. But there were also differences which emanated from their own special doctrines—*e.g.*, whether an evildoer was to be called *mushrik* ('pagan') or only *kāfir* ('denier'), and whether the latter word could be interpreted 'ungrateful' as well as 'unbelieving.' Certain other differences belonged to the details of Islāmic jurisprudence—*e.g.*, the minimum theft whereby the punishment of handcutting was incurred, the amount of alms to be paid on the produce of land watered by rivers and springs, etc.

Although some of these sects were able to maintain themselves in various Islāmic provinces for a time, and the Ibāḍīs have done so permanently, it is probable that the historians of the sects have in many cases overrated their importance, and represented the followers of some particular insurgent as continuing in existence long after the movement had been defeated. As might be expected in the case of such warlike communities, their literature was rich in ballad-poetry, which the archæologists collected. Of their controversial and juristic treatises little has as yet come to light.

D. S. MARGOLIOUTH.

**KHIḌR.**—Khiḍr (pronounced by the Persians and Turks as Khisr),[1] 'the green one,' is the name or, rather, the title of a Muhammadan saint who, according to the popular conception in Islām, is still alive to-day. The origin of the name is obscure, although different attempts have been made to explain it (see below). Whatever the origin of the name, it is certain that the figure of Khiḍr as conceived in Islām is not derived from one definite source, but is rather the composite of a large number of legends and myths of widely divergent origin and character, which were current in the lands of Islām prior to the Muhammadan occupation. It has been justly said that Khiḍr is the product of Muhammadan syncretism (K. Vollers, *ARW* xii. [1909] 238), implying thereby that the whole Khiḍr figure, while a prominent feature of the religion of the Muhammadan masses, is yet entirely made up of non-Muhammadan elements, and owes to Islām only the amalgamation of all these heterogeneous elements into one whole. It is impossible here to enter into a discussion of the extremely complicated problem of the Khiḍr legend. We shall limit ourselves to a brief indication of the principal sources upon which it has drawn and of the salient features now attributed to Khiḍr and originally derived from those sources.

Frequently in Muhammadan literature and innumerable times in Persian poetry Khiḍr is mentioned as one (or rather the only one) who has gained life immortal by drinking from the Fountain of Life. According to a more definite statement quoted by early Muhammadan historians, Khiḍr was the vizier of Dhū-l-ḳarnain, 'the two-horned' (the Syro-Arabic title of Alexander the Great), who discovered the Fountain of Life which his royal master had failed to find. This leads us unmistakably to the famous story of the Fountain of Life recorded in the Greek Alexander romance which goes under the name of pseudo-Callisthenes, a work of a very complex literary character, which was finally completed about A.D. 300.

According to this account, which is recorded in several varying recensions, Alexander went out to search for the Fountain of Life in order to attain to life everlasting. By the merest chance his cook, who in some of the recensions is called Andreas, discovered the fountain. He was cleaning a salted

[1] With a different vocalization the name is also pronounced Khaḍir and Khuḍr.

(or dried) fish in the fountain in preparation for a meal, when the fish came to life again and disappeared in the water. The cook partook of the life-giving liquid and became immortal. Alexander, who could not find his way back to the fountain, decided in his jealousy and disappointment to kill the cook; but, as death had no power over him, Alexander threw him with a millstone round his neck into the sea, where he became a sea-demon.

This story, which originally formed a separate legend and was transmitted as such long before and long after pseudo-Callisthenes, came in this shape to the Syrians, and through them into Arabia. A reflexion of it is found in the Qur'ān (xviii. 59–63), in which, like so many other legends, it has been mutilated almost beyond recognition. It is obvious, and indeed is expressly and circumstantially related in later Muhammadan sources, that Khiḍr is identical with Alexander's cook who discovered the Fountain of Life by means of the salted fish. According to a conjecture put forward by several scholars and upheld by the present writer, Khiḍr, 'the green one,' is the original designation of the sea-demon into which the cook Andreas was transformed when thrown into the sea.[1]

A far more important prototype of Khiḍr is the prophet Elijah. The Tishbite is, no doubt, the most prominent and the most popular figure in the legendary world of post-Biblical Judaism. The most striking attributes of this post-Biblical hero are eternal life and omnipresence. He attends every circumcision ceremony performed in a Jewish family, and it is still customary to keep a special seat, the so-called 'chair of Elijah,' ready for his reception; and he visits every Jewish home on Passover eve, when a special cup of wine is set aside for him. In contrast to his vehement Biblical prototype, the post-Biblical Elijah figures essentially in the amiable rôle of an adviser and helper. He reveals himself to scholars, whom he enlightens on the 'secrets of heaven' and on different points of Jewish law. He is particularly to be met with on the road and in deserted places. The ḳabbalists, or Jewish mystics of a later age, laid particular stress on this popular belief of *gillūy Ēliyāhū* ('revelation of Elijah'), and many of them claimed to have derived their mystical ideas, and even whole books, from their personal association with the prophet.

One such Elijah story quoted by a Jewish authority of the 11th cent., but undoubtedly of much older origin, must be singled out from among the rest. In this story Elijah accompanies a famous Rabbi of the 3rd cent. on his travels, and shows him several incidents which, on the surface, seem to militate against God's justice, but, when interpreted by the prophet, are revealed as wonderful instances of the wisdom and justice of Divine Providence.

This story, or rather some earlier variant of it, has found its way into the Qur'ān (xviii. 64–81). The place of the Talmudic Rabbi is taken by Moses, while Elijah is designated anonymously as 'one of our servants.' This fact alone suffices to prove what is to be assumed *a priori*, that this most striking figure of post-Biblical Jewish legend was known in Arabia in the time of Muḥammad. Since Khiḍr's salient attribute was everlasting life, just like that of Elijah, it was natural to identify the two figures. Hence the exegetes and theologians of Islām declare with remarkable unanimity that the servant in the Qur'ān (xviii. 64) is no one but Khiḍr. This is the first express reference to the name of Khiḍr in literature. As a result of this combination, the story of the Fountain of Life in the Qur'ān (xviii. 59–63), on the one hand, and the Elijah legend (64–81), on the other, which originally had nothing to do with one another and are easily distinguishable by their different rhymes, were subsequently made to follow one another, and were in a most artificial and clumsy manner welded into one continuous narrative, which has been accepted as a unit not only by all Muhammadan theologians, but also, in spite of the obviousness of the underlying facts, by many European scholars. The combination has had the additional result that it has suppressed the further development of the original, undeniably pagan, conception of Khiḍr as sea-demon in Islām, and transformed him into a sacred figure, who is classed by various Muhammadan theologians either as a prophet or as a saint (*walī*), and by some even as an angel. Whatever of the original Khiḍr myth was still known (and a great deal of it *was* still known) to the legend-collectors and story-tellers in Islām was forced into a new channel. Khiḍr, the cook of Alexander, was raised to the rank of general and vizier, and in this capacity was made the leading figure in the Muhammadan Alexander romance, completely overshadowing his heathen master.

There can be no doubt that originally the Muhammadans themselves were conscious of the identity of the legendary character of Khiḍr with that of Elijah, for they declare—and the view is generally accepted within Islām—that the real name of Khiḍr is Iliya (afterwards corrupted into Balya), the Jewish form of Elijah. The Jews living in Muhammadan countries took the same combination for granted, for those whose name was Elijah called themselves Khiḍr, and the Turks still imply the same combination by calling our prophet Khiḍrlās (Khiḍr=Ilyās). What is of far greater importance, the prevalent conception of Khiḍr is an exact reproduction of the Elijah figure, to a degree which is truly astonishing. Khiḍr, like Elijah, is the eternal prophet who is omnipresent, 'who appears when his name is called.' He is helper and adviser in the time of need; he reveals himself to those worthy of his companionship, to whom he transmits divine secrets; he appears, according to a story recorded in the canonical Muhammadan tradition (the so-called *Ḥadīth*), at the death of Muhammad to offer his condolence to the bereaved companions of the founder of Islām. Like the ḳabbalists in Judaism, the Ṣūfīs, or mystics, of Islām lay particular claim to intimate companionship with Khiḍr. Innumerable stories are told of the opinions, doctrines, and prayers entrusted by the prophet to particularly favoured Ṣūfīs, and many works are declared by their authors to be the direct product of his personal instruction. The remarkable closeness between the Jewish Elijah legend and the Muhammadan Khiḍr belief may be gauged from the fact that, just as Elijah in Jewish sources is identified with Phinehas, so is Khiḍr in Muhammadan writings, and that, just as Elijah in the Talmud, so does Khiḍr in the Muhammadan legend appear occasionally in the disguise of a Bedawī. Numerous details of a similar kind which can be easily supplied testify to the same relationship.

Owing to the fact that the prophet Elijah is mentioned in the Qur'ān by name (in the Græco-Syrian form Ilyās), and is described in Biblical rather than in post-Biblical colours, the Muhammadan theologians saw themselves subsequently compelled to make of Khiḍr=Iliya, on the one hand, and of Ilyās, on the other, two distinct personages. The primitive relationship, however, shows itself in the attempt to identify Khiḍr with Elisha, the disciple of Elijah, and in the countless legends in which Elijah (or, more correctly, Ilyās) and Khiḍr appear as inseparable twins. The original distinctive function of both Elijah and Khiḍr is clearly revealed in the belief, commonly accepted by Muhammadans and illustrated by

[1] Since the story of the Fountain of Life bears a striking resemblance to the Glaukos myth, it has been suggested, and is believed by the present writer, that Khiḍr and Γλαῦκος, which are identical in meaning, are also ultimately identical in origin, although the literary medium cannot as yet be definitely ascertained. Others explain the name as the genius of vegetation, or as a mutilation of Khāsisatra, the ancestor of Gilgamesh in the famous Babylonian epic.

innumerable stories, that, while both prophets are entrusted with the task of protecting the travellers on their journeys, Elijah is *mukallaf fī l-barr*, 'the guardian of the dry land,' particularly of deserted places, while Khiḍr is *mukallaf fī'l baḥr*, 'the guardian of the sea.' The maritime character of Khiḍr, which the Muhammadans accept as an unalterable fact without being able to explain it, is preserved throughout the whole field of Muhammadan folklore. Down to this day Khiḍr is essentially the *Khawwāḍ al-buḥūr*, 'the one who traverses the seas'; he is the patron of sailors, who invoke his aid in time of need; a sacrifice is offered to him when a boat is launched (S. I. Curtiss, *Primitive Semitic Religion To-day*, Germ. ed., Leipzig, 1903, p. xvi f. and p. 111). This conception and the rites reflecting it are still current throughout the whole of Syria, and can even be traced as far as Northern India.

The combined figure of the sea-demon Khiḍr and the prophet Elijah followed in the wake of the Muhammadan arms. It is now generally recognized that the conquered nations who were converted to Islām managed to carry with them into the new religion many of their former doctrines. In a similar way Khiḍr became the depository of all kinds of ancient myths and popular rites current in the lands occupied by Islām. The data on this aspect of the Khiḍr figure are not yet complete. As far as Syria is concerned, extremely valuable material has been collected by Curtiss (in the volume referred to above), and, in part prior to him, by C. Clermont-Ganneau (*Horus et Saint-Georges*, Paris, 1877). From this material it is evident that Khiḍr, as now revered, indeed one may say worshipped, in Syria, embodies many conceptions of primitive Semitic religion, perhaps also including the ancient Babylonian Tammuz cult. The whole coast of Syria is dotted with Khiḍr sanctuaries in which sacrifices and the first-born of animals are still offered to him. In the crude vagueness of the popular religion Khiḍr has become a divine being. As an unsophisticated Muhammadan innocently put it to Curtiss, 'Khiḍr is near, but God is far' (*op. cit.* p. 111). Through the identification with St. George (*Mār Jirjis*), whose origin lay in the same country, new relations have been created which made our versatile prophet acceptable to the Christians, as he is also popular among the Jews.

The official theologians of Islām are, and always have been, averse to these excesses of the popular Khiḍr belief. Many of them have insisted—and, indeed, have made Muhammad himself declare—that Khiḍr, who, as they were compelled to admit (largely because of the canonical account of his appearance at the death of Muhammad), was a contemporary of the Prophet, died shortly after him. This attempt, however, which was directed against the extravagant Khiḍr cult, particularly as cherished by the Ṣūfīs, remained unsuccessful. On the other hand, the theologians had no hesitation in making Khiḍr a favourite object of their scholarly speculations. Muhammadan literature records a bewildering number of conjectures which identify Khiḍr with various figures of Biblical and Apocryphal legend. Of these conjectures, which are purely the product of unfettered speculative fancy, the identifications with the following personages may be mentioned: Melchizedek, Seth, Enoch, Jonah, Jeremiah, Lot, and the Messiah.[1] Finally, it may be mentioned as a possibility that another striking attribute of Khiḍr, his incessant wandering—'to wander like Khiḍr' is a current Arabic phrase—is responsible for the name of the Wandering Jew. Ahasuerus may be an adaptation of Khiḍr in its Persian-Turkish pronunciation as Khisr.

[1] It can be shown that all these personages were believed, either in Rabbinical or in Christian legend, to be immortal.

LITERATURE.—The literature on the subject is extensive and extremely scattered. The relations between the Khiḍr legend and the Alexander romance are treated in detail by I. Friedlaender, *Die Chadhirlegende und der Alexanderroman*, Leipzig and Berlin, 1913 (full bibliography on pp. xviii-xxiii). For the sake of completeness, G. Zart's essay, 'Chidher in Sage und Dichtung,' in *Sammlung gemeinverständlicher wissenschaftlicher Vorträge*, new series, vol. xxxii. (Hamburg, 1897), no. 280, may be added. Cf. also T. Nöldeke's note in *ARW* xiii. [1910] 474 f. Meijer de Hond, *Beiträge zur Erklärung der Elhiḍrlegende und von Korān, Sure 18, 59 ff.*, Leyden, 1914, merely confuses the issue.

I. FRIEDLAENDER.

**KHŌS.**—A race inhabiting the Chitrāl Valley and adjoining country south of the Pāmirs, on the N.W. frontier of British India. To the E. lie Yasin and Gilgit, where the language is Shiṇā; to the W. is Kāfiristān, where various Indian Kāfir dialects are spoken; to the N., across the Hindū Kush, lie the Pāmirs, where the language is Iranian; and to the S. lie a number of small tribes, mainly of Shiṇ origin, but partly also Paṭhān, separating them from India proper. The Khōs (properly *Hōs*), together with the Shiṇs of Gilgit and the Kāfirs of Kāfiristān, are often classed together as 'Dards'; but this name is properly applied only to the Shiṇs. The present writer looks upon all three as representing the ancient *Piśāchas*. The habits and customs of the Khōs much resemble those of the true Dards, and in the present article attention will chiefly be drawn to those particulars in which they differ from the latter (see DARDS, vol. iv. p. 399).

The Khōs are not the ruling class of Chitrāl. These call them contemptuously *Fakīr Mushkīn*, or 'poor beggars' (quasi-Arab. *Faqīr Miskīn*). A superior grade, who are paid servants of the Mehtar, or ruling chief, of Chitrāl, are known as *Erbābzādas* ('sons of possessors'). The two grades intermarry. Above them are the later conquerors of the country—the *Ādamzādas* ('sons of men').[1] The origin of these last is uncertain, but some of them at least came from the north, across the Pāmirs, in the 16th cent. A.D. The Khōs have imposed their language upon them.

According to tradition, the whole Chitrāl Valley was once occupied by Kāfirs, and some Kāfir tribes, *e.g.* the Kalāshās, still inhabit it. This tradition is borne out by the fact that the Kāfir dialects are much more nearly related to the Shiṇā dialects of Gilgit than either of the two groups is to Khō-wār,[2] the language of the Khōs. The last, although undoubtedly belonging to the same linguistic group, differs from the other two in some essential particulars, such, even, as the forms of the pronouns, in regard to which they agree rather with the Iranian Ghalchah languages of the Pāmirs.[3] It looks as if the whole tract composing the present Kāfiristān, Chitrāl, and Gilgit was once occupied by one homogeneous race, which was subsequently split into two divisions by a wedge of Khō invasion, representing members of a different, but related, tribe coming from the north (cf. Biddulph, p. 158 f., for a slightly different explanation).

According to Biddulph (p. 73), the Khōs show certain physical peculiarities not shared by their Dard relations. In personal appearance they may be called Aryans of a high type, not unlike the Dards, but more handsome, with oval faces, finely cut features, and large beautiful eyes, so that they would compare favourably with the highest type of beauty in Europe. They are famous for their long hair, of which they are inordinately proud, and in this they differ from their Kāfir

[1] O'Brien, *Gram. and Vocab. of the Khowār Dialect*, p. vi.

[2] Called by Leitner (*Languages and Races of Dardistan*) 'Arnyia,' a name based on the Shiṇ word *Arinah*, employed to designate a portion of Yasin where Khō-wār is spoken.

[3] Cf. Biddulph, *Tribes of the Hindoo Koosh*, p. 155.

neighbours, whom they style 'bald' (p. 65). The women were formerly sought out for their beauty in the slave-markets of Kābul, Peshāwar, and Badakhshān.

The men wear caps bound round with a scanty turban, a cotton shirt, loose drawers tucked into coloured knitted stockings, and soft leather boots. The women wear a white silk embroidered skull cap, a loose chemise of coarse coloured cotton stuff, fastening at the throat and reaching to the knees, and wide drawers. They wear boots and stockings like men, but, as a rule, only when travelling (Biddulph, p. 73 f.; O'Brien, p. vi). It is a common practice (O'Brien, p. ix) for young women and girls to blacken their faces with burnt powdered horn, which is supposed to soften the skin and to prevent sunburn.

Great stress is laid upon customary rules of politeness. Friends embrace on meeting. An inferior always dismounts on meeting a superior, and kisses his hand. The other then kisses him on the cheek (Biddulph, p. 75; O'Brien, p. viii). Excitable creatures of impulse, the Khōs have been well described by G. S. Robertson (*Chitrāl*, London, 1898, p. 6 f.):

'Sensuality of the grossest kind, and murder, abominable cruelty, treachery or violent death, are never long absent from the thoughts of a people than whom none in the world are more delightful companions, or of simpler, gentler appearance. So happy seems everyone,—the women are mostly secluded,—so lovely are the little children, so much natural politeness is met everywhere, that if it were not for the occasional glimpses of famished slaves living on fruit or dying of starvation when past their first youth, a hurried traveller might almost imagine himself in a smiling dreamland.'

Polo-playing (*ghal*) is the national game, and is played with great dash. It is slightly different from the polo of Gilgit. The ground is long and narrow, with low walls at each side, off which the ball rebounds in play. A couple of large stones at each end mark the goal. The sticks in use are very short, and the players, going at full speed, reach almost to the ground. The losers have to do what the winners order—usually dance. Every village has its polo-ground, called *janāli* (Biddulph, p. 84; O'Brien, p. xi). Shooting at a popinjay from horseback is also a favourite pastime, and, considering the clumsiness of the weapons used, the marksmanship is sometimes wonderfully good (Biddulph, p. 85; O'Brien, p. xi). Other national amusements are music and dancing. Feast-day, birthday, wedding, or any occasion for a gathering serves as an excuse for the latter. Music is always played at the polo-matches, a goal being the signal for a wild flourish and beat of drums. Some of their airs are very taking (Biddulph, p. 85; O'Brien, p. xii f.).

In former times the religion of the country was Buddhism.[1] A Buddhist rock-cut figure, bearing a Sanskrit or Pāli inscription which is not older than the 3rd cent. A.D., and is probably later, has been found about 20 miles north of the town of Chitrāl (Biddulph, p. 149). The Khōs are now Musalmāns, mostly Sunnīs, but in the northern valleys, as in northern Gilgit, they are generally members of the Maulā'ī sect.[2] Islām was introduced about the 14th cent., and the present Musalmān dynasty came from Khorāsān in the 16th (*ib.* 117, 150). The Khōs differ from the Dards in not hating the cow and in not worshipping the *chilī*, or juniper tree (*ib.* 113, 116; *ERE* iv. 401). As regards festivals, the Dard *Nōs*, in honour of the winter solstice, is called *Dashti*, and is celebrated without bonfires (Biddulph, p. 101). The Dard *Bazono*, or spring festival, is not held, but the *Ganoni*, or festival of the wheat harvest, is observed under the name of *Phindik* (*ib.* 103). The *Jastandikaik*, or 'devil-driving,' in honour of the completion of the harvest, corresponding to the Dard *Domenika*, is celebrated by the firing of guns and shooting at a sheep's head set up as a mark (*ib.* 103). Corresponding to the Dard *Chilī*, or festival of the beginning of wheat-sowing, is the Khō *Binisik* (*ib.* 105).

When a child is born, the mother is unclean, and no one will eat from her hand for seven days. North of the Hindū Kush the same rule obtains, but the period is extended to forty days, and even the infant may not suck its mother's breast for seven days. In some of the higher Chitrāl clans there is a custom that every infant is suckled in turn by every nursing mother of the clan, so that each becomes its foster-mother. There is thus a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity (*ib.* 81, 83). Marriage ceremonies are conducted much as among the neighbouring tribes, but the following customs are peculiar to Chitrāl.

After the Mullāh has read the marriage service, the bride is led out by her mother, who hands her over to the bridegroom, receiving a present in exchange. He starts at once for home, but, after leading her out, returns alone and deposits a present of a sword or a gun on the hearth. On the other hand, north of the Hindū Kush he is taken to the bride, and does not go off with her till the next day. In Gilgit the custom is again different, as there is a formal ratification of the marriage on the third day (*ib.* 79 f.). Polygamy is practised, and the custom of the levirate is also common, although it is not compulsory on the widow. In Gilgit, on the other hand, it is compulsory (*ib.* 76). Marital infidelity is extremely common, and the men show little jealousy of their wives. In the neighbouring States of Hunza-Nagar, where old traditions still prevail, infidelity is not regarded as an offence, and custom requires that a man should place his wife at the disposal of his guest. The *droit de seigneur* was also in force down to a comparatively late time, and even now a man considers himself as highly honoured if his wife has attracted the attention of the Thum, or tribal chief, of either of these two States. At the same time, in Chitrāl, a husband has the right to slay the erring couple when he finds them together; but, should he kill one and not the other, he is held guilty of murder (*ib.* 77).

The common form of Musalmān interment is now used. A piece of flat stone or slate, three or four feet long, is placed at each end of the grave, which is neatly plastered over (*ib.* 82). Superstitions are much as in Dardistān. There is a general belief in fairies (cf. *ERE* iv. 401). Tirich Mīr, the highest peak (25,426 ft.) in the country, is said to swarm with them, and to them the Khōs attribute the sounds coming from its glaciers (O'Brien, p. x; cf. Biddulph, p. 59).

LITERATURE.—Almost the only source of information regarding the Khōs as a people is J. Biddulp.., *Tribes of the Hindoo Koosh*, Calcutta, 1880, which contains a full description of the people and a grammar and vocabulary of their language. D. J. T. O'Brien, *Grammar and Vocabulary of the Khowār Dialect*, Lahore, 1895, gives a brief account of Chitrāl and its inhabitants in the Introduction. These two works have been freely utilised in the foregoing account. A vocabulary mixed up with much grammatical information is contained in G. W. Leitner, *The Languages and Races of Dardistan*, Lahore, 1877.

## KIERKEGAARD.—I. Relation to his father.

—Sören Aabye Kierkegaard was born at Copenhagen on the 5th of May 1813. He was the youngest child of Michael P. Kierkegaard, a retired woollen draper in good circumstances, another of whose sons, P. C. Kierkegaard (1805-88), rose to eminence as bishop of Aalborg. The life of Sören Kierkegaard has but few points of contact with the external world; but there were, in particular, three occurrences—a broken engagement, an attack by a comic paper, and the use of a word by H. L. Martensen—which must be referred to as having wrought with extraordinary effect upon his peculiarly sensitive and high-strung nature. The intensity of his inner life, again—which finds expression in his published works, and even more directly in his notebooks and diaries (also published)—cannot be properly understood without some reference to his father.

The latter came from a peasant home near Ringkjöbing in Western Jutland, and, as it would seem, was, while yet a mere child, deeply influenced by a Pietistic movement in the

[1] Cf. S. Beal, *Si-yu-ki, Buddhist Records of the Western World*, London, 1884, i. 119; T. Watters, *On Yuan Chwang's Travels in India*, do. 1904, i. 226.

district. It is probably to be read as a manifestation of his sincere and earnest temperament, that once, while tending sheep on the moors, the boy Michael, overcome with hunger and cold and a sense of loneliness, mounted a hillock and solemnly cursed God as the dispenser of so wretched a lot. Shortly afterwards he went to a situation in Copenhagen, where he soon began to prosper; but, with his natural tendency to morbid introspection, strengthened by stern religious feeling, he interpreted his later success as a sign that he had with his boyish curse committed the sin against the Holy Ghost; the turn of the tide showed at once that he had been presumptuous in denying God's care of him, and that the sin was too great to be punished (as a less grave sin might have been, *e.g.* by adversity) in this world. This idea still further suffused his religious views and his religious life with gloom and melancholy, and these, again, descended, partly by inheritance and partly by training, upon both of his distinguished sons.

Sören, the child of his old age, came, even as a youth, to surmise that there was some dark secret gnawing at his father's heart, and at length, shortly before his father's death, learned the true facts about the curse. The discovery shook him, as he says, like an earthquake. He made a note of the circumstance, and put it among his private papers, where it was found a considerable time after his death; and, when H. P. Barfod, the first editor of his posthumous papers, showed the note to Bishop Kierkegaard, the latter burst into tears with the cry: 'That is our father's history and ours also.' It should be added that the father was a man of remarkable intellectual gifts, and that, with all his severity, he won the devoted affection of his sons.

2. **His personality.**—The fundamental and decisive element in Sören Kierkegaard's personality is found by George Brandes in his combined reverence and scorn; by H. Höffding (more in accordance with the fact that he was his father's son) in his melancholy; by O. P. Monrad, his latest biographer, in emotion or passion. Certainly the emotional factor—as it forms the decisive element in personal character generally—best suggests the distinctive feature of Kierkegaard's personality. In his published writings and in his journals we are in touch with a nature of unwonted intensity, with an inner life at white heat. This is seen in his abnormal sensitiveness; he was touched to the quick by things that others might have ignored or easily forgotten. Again, while he was admittedly the most original mind that Denmark ever produced, his thought seldom operated in cool dialectic, but was in its nature 'existential,' expressive of his whole personality; with amazing imaginative fertility he constructs, not chains of reasoning, but 'experiments in psychology,' *i.e.* persons and situations depicting a real, living experience. Similarly, religion was for him, not a group of doctrines requiring merely to be believed, defended, or systematized, but a fact making a tremendous demand upon life; the joy of salvation was to be won in the most intense appropriation of the truth and the most impassioned submission to its claim. His natural melancholy was, as already said, partly an inheritance, strengthened by his early training, and doubtless also by the sickly and infirm body with which his impetuous spirit was united; but it was deepened by his sense of the awful imperative of Christianity and his failure to realize it. His perfervid nature appears also in the iron resolution with which he wrought out his, as he thought, divinely appointed task; for he might claim, as few others, that in all his work he had striven for but one thing; and in prosecuting it he lost friends, means, health, was mocked by the crowd and denounced by the religious, but held on, if not serene, yet undismayed, to the end.

3. **His purpose and method.**—What, then, was the 'one thing' that he willed? As he makes clear in *Om min Forfatter-Virksomhed* ('My Literary Activity,' 1851), it was religion; or, more definitely, his one aim was to teach his age what it is 'to become a Christian.' When he was about twenty-five years of age—after a period of irresponsible life—the discovery of his father's secret, and his father's death, constrained him to live more earnestly, and he passed his examination for orders and took his degree. About this time, too, he became engaged, but adhered to the engagement for little over a year, being convinced that his melancholy (and perhaps something else) unfitted him for married life. This was, in fact, one of the turning-points of his career. The broken engagement has left its tragic mark on the writings of his earlier period, but this was simply because it had brought him to see that he was not as others, and to realize his true vocation, viz. to hold up the ideal Christian life before his contemporaries. How was this to be done? We shall never understand the real Kierkegaard, never even comprehend rightly any of his books, until we first of all grasp his proposed method—a method not fully understood by himself at first, but gradually revealed to him in the course of events.

His starting-point was the conviction that once more in Denmark the times were out of joint; his fellow-men were so far astray that they could not profit by a direct Christian message. They were all 'Christians'—Christians by birth, just as Jews are Jews by birth—but their life was lived on the plane of sense (the 'æsthetic'), or, at best, on the plane of customary morality. Moreover, Christianity had been appropriated by philosophy, had become part of the 'system' (Hegelianism) which reduces existence to thought, and sees unity and harmony everywhere. The Church itself had forgotten the ideal, and the necessity of personal choice; it preached peace without the sword. The situation seemed to Kierkegaard like that of Greece in the age of the Sophists; and, just as Socrates (who had been the central figure in his graduation theses on *Irony*) sought by his 'irony' to bring his hearers to a sense of their own ignorance, and by his 'maieutic' to help them to bring forth truth, so Kierkegaard proposed by the method of 'indirect communication' to arouse his age from its self-content, and lead it—not in the mass, indeed, but as individuals—to realize what it is to live, and, above all, what it is to live the Christian life. Where the prevailing mode of thought made all easy, he would 'make difficulties.' And his method would be to take his stand, as did Socrates, beside those whom he wished to instruct. He would fabricate characters representative of various aspects of contemporary life, letting each work out his own views. Hence Kierkegaard's most characteristic works are pseudonymous; he is not to be considered as their author, and, indeed, it is only when, in the elaboration of his plan, his fabricated personalities approximate to his own standpoint that he puts his name, as editor, on the title-page.

4. **His works.**—(*a*) *The 'indirect message.'*—The first phase of the 'indirect message' appears in *Enten—Eller* ('Either—Or,' Feb. 1843), a work in two parts, A's Papers and B's Papers, with Victor Eremita as the ostensible editor. A's Papers are eight in number (including 'The Seducer's Diary,' which is not by A, *i.e.*, it is still further removed from Kierkegaard's own position), and depict various aspects of the 'æsthetic' life—the life of sensuous enjoyment in its most refined form. B's Papers are letters to A, and show how the ethico-religious man, in fitting himself into the ordinary human relations, such as marriage, from a sense of duty, really attains to a higher æsthetic condition than the æsthetic man himself, whose only hope is to realize his state as one of despair, and so 'choose himself,' *i.e.* become a personality. B closes with a sermon which sets forth the true

religious attitude as one of continued penitence—'that we are always in the wrong in relation to God'—and ends with the undogmatic dogma that 'only the truth that edifies is truth for thee.' The necessity of decision, of choosing one's personality, of coming to oneself (what one actually decides for is not so important)—such was the message of *Enten—Eller*.

For the moment Kierkegaard thought that his task was done. But in writing B's Papers he had personally attained to a deeper grasp of Christianity, and had come to feel that there was a stage of life higher than the ethico-religious standpoint of B. It was now, probably, that he became more fully cognizant of his plan, and of what was necessary to its development. The higher and more distinctively Christian form of religion is set forth in *Frygt og Bæven* ('Fear and Trembling,' Oct. 1843), the message of which is illustrated by the fact that Abraham was commanded to do what was ethically wrong, *i.e.*, to kill Isaac, and obeyed in virtue of a personal relation to God; he had faith—he staked the earthly, and yet believed that he should possess it still. Such faith is no common or easy thing, but is a relation to the Absolute which baffles reason, and can be won and held only in an infinite passion. In *Gjentagelsen* ('Repetition,' Oct. 1843), Kierkegaard sketches an abortive transition to the religious sphere. 'Repetition' is one of his characteristic ideas; it signifies persistence in, and faithfulness to, a chosen course of life, and is thus opposed to the æsthetic standpoint, with constancy only in change. But Kierkegaard also gives the word a more special meaning—that rather of 'resumption' (*Gjentagelse*, 'taking again')—implying that each higher stage of life carries with it the lower in a transfigured form. *Gjentagelsen* tells of a young man who seeks to pass from the æsthetic to the religious sphere, but for want of a true penitence becomes merely a romanticist; *i.e.*, he simply resumes his old self; and his case is contrasted with that of Job, who humbled himself utterly before God, and at last regained all that he had lost, and more—the true 'repetition."

In *Philosophiske Smuler* ('Philosophical Bits,' June 1844, by 'Johannes Climacus,' with Kierkegaard as editor) he comes closer to his real problem, 'How to become a Christian,' but so far discusses only the general question, 'How can an eternal salvation be based upon a historical event?' As an 'experiment in thought' his pseudonym argues that an appearance of God in time-relations must be a 'paradox' for human reason. Thought must find such an appearance a stumbling-block, and may seek either to reject it or to explain it—both equally in vain. The true procedure of the intellect is to abase itself before the 'paradox,' which can be grasped only in the passion of faith. Such is the condition of salvation, in regard to which, accordingly, the earliest and latest generations are essentially on the same ground. The next step was to indicate what is at once the presupposition of and the obstacle to the great work of faith. This is done in *Begrebet Angest* ('The Idea of Dread,' June 1844), a psychological investigation of the Fall, and so of sin in general. Sin is not to be explained scientifically; psychologically it is preceded by a vague apprehension (*Angest*) of something that both attracts and repels, but this does not bring us to sin itself, which, as an act of the human personality, comes by a 'spring.' In *Stadier paa Livets Vei* ('Stages on the Way of Life,' April 1845) is given a kind of résumé of the foregoing books. This work exhibits the three spheres of life—the æsthetic, the ethical, the religious—and thus supplements *Enten—Eller*, developing the ideas of *Frygt og Bæven* and *Gjentagelsen*. The most important section is the third, entitled 'Guilty—Not Guilty' (based, as are also in part *Frygt og Bæven* and *Gjentagelsen*, upon his personal experiences in connexion with his engagement), a narrative of suffering—suffering resulting from the break with the natural life and from the sense of guilt, which drive the subject of the narrative towards religion in its highest form. Isolated from man, isolated before God, he does not reach peace, for he represents only the approximation to religion. The full statement of what is involved in becoming a Christian is given in the *Afsluttende uvidenskabelig Efterskrift* ('Concluding Unscientific Postscript,' *i.e.* to 'Philosophical Bits,' Feb. 1846, by the same pseudonym and editor). The starting-point of the book is the individual's passionate desire for his own salvation, and its problem is not 'Is Christianity true?', but 'How am I to become a Christian?' The passionate desire rejects the proofs from Biblical theology, from the existence of the Church, and from the philosophy which, in identifying being and thought, distorts Christianity and subverts individuality. Man may construct a logical system; a system of existence is for God alone. The essential truth of Christianity, viz. that the Absolute has entered into time-relations, is a paradox for thought, and can be appropriated only by an impassioned faith. Subjectivity is truth; the essential thing is not *what*, but *how*, we believe.

These works were produced within about four years; but in addition to, and concomitantly with, the pseudonymous books Kierkegaard had issued a series of *Opbyggelige Taler* ('Edifying Discourses') designed for the 'individual' whom his other works might have awakened. By these, moreover, he intended not only to indicate his own religious position, but also to show that—should it ever be questioned—he was a religious writer from the outset. These 'discourses' are marked by the finest spiritual discernment.

(*b*) *The portrayal of ideal Christianity.*—Once more Kierkegaard believed that his special task was finished, and actually thought of seeking a rural charge. But now came the second event that deeply influenced his life and thought. In the early forties the *Korsar*, a satirical journal edited by M. A. Goldschmidt, a friend of Kierkegaard, while holding up to ridicule everybody else of note in Copenhagen, always spoke with something like veneration of Kierkegaard's works. In 1846, Kierkegaard invited the paper to attack him too, and the challenge was accepted. The *Korsar* satirized him—his person, his clothes, his pseudonyms—with pen and pencil. The better class left him in the lurch; the crowd grinned. All this struck Kierkegaard to the heart; he saw in it a proof of the awful depth to which a 'Christian' people had sunk. His scorn for the multitude grew apace, and the political ferments of the time at home and abroad only served to intensify it. But in this bitter experience he won, as he believed, a deeper comprehension of Christianity. He began to work at a series of distinctively Christian writings, mainly in the form of discourses, and published under his own name. Pre-eminent among these are: *Opbyggelige Taler i forskjellig Aand* ('Edifying Discourses in various Spirits'), *Kjerlighedens Gjerninger* ('The Deeds of Love'), and *Christelige Taler* ('Christian Discourses')—all of them 'direct messages.' The first develops the idea that the Christian life necessarily involves suffering; the second sets forth the absolute demand of Christianity ('Thou *shalt* love')—the inevitable suffering must not provoke to hate or scorn; in the *Christelige Taler*, composed of four series of discourses (the third of which bears a motto asserting that Christianity does not call for defence, its function being to attack), Kierkegaard depicts the

Christian life as in its hope, its suffering, its earnestness, entirely unconformable to the world; and in this work we hear, in fact, the first clear note of the coming open challenge to conventional Christianity. Thereafter he wrote *Sygdommen til Döden* ('The Sickness unto Death') and *Indövelse i Christendom* ('Practice in Christianity'), but delayed their publication for various reasons—his respect for J. P. Mynster, primate of Denmark ('my father's priest'), his sympathies with simple-minded people, and his desire not to arrogate to himself a higher Christian standing than he really had. In the meantime he published *Tvende ethisk-religieuse Smaa-Afhandlinger* ('Two Short Ethico-religious Treatises,' 1849); one of them arguing that none but an apostle has a right to let himself be martyred for the truth, the other setting forth the distinction between a genius and an apostle. Then at length followed *Sygdommen til Döden* (1849) and *Indövelse i Christendom* (1850)—by 'Anticlimacus' (indicating that they exhibit an ideal of Christianity which Kierkegaard himself, who is merely the 'editor,' had not attained)—his most powerful works. In the former he analyzes sin as a state of conscious or unconscious despair, as the fatal disease which true Christianity alone can cure; in the latter he depicts reconciliation with Christ, but only through a personal appropriation of Him in His humiliation and suffering, *i.e.* by becoming contemporary with Him in spirit; He who said, 'Come unto me, all ye that labour and are heavy laden,' was in the form of a servant—a poor, despised man; and faith is precisely the resolve, produced by a consciousness of sin as the one bane of human life, to follow Him in suffering and humiliation. In *Til Selvprövelse* ('For Self-examination,' 1851) he sums up his conception of Christianity in a popular form. The general conclusion of these works was that Christendom, existing Christianity, the Church, was in reality a travesty of true Christianity. Kierkegaard hoped—and from conversations with Bishop Mynster he believed that he had good grounds for hoping—that the primate would publicly and officially concede this; then would he gladly point the way of grace. But Mynster, on the contrary, was bitterly offended by the works, and kept silence. Kierkegaard still waited, however; and that he too kept silence—for three years—must be regarded as a proof of the absolute sincerity of his hope.

(*c*) *The direct attack upon the Church.*—The final act in Kierkegaard's life-drama—the dark and stormy close—turned upon a word used by H. L. Martensen. Bishop Mynster died in January 1854, and Martensen, in the funeral sermon, spoke of him as a 'witness for the truth' (*Sandhedsvidne*)—as a link in 'the chain of witnesses that extends from the apostles' days to our own.' Kierkegaard had a profound respect for Mynster, but had latterly come to feel that the primate embodied in his own person that travesty of Christian thought and life which the whole series of books from *Enten—Eller* to *Indövelse i Christendom* had been designed to expose and impeach. That Mynster should now be designated a 'witness for the truth' demanded, therefore, a strong protest. Kierkegaard at once drafted an article in which he asserted that Mynster, far from being a *Sandhedsvidne*, had, in fact, completely failed, alike in life and in word, to present the Christianity of the NT, one distinctive note of which is 'suffering.' This article, however, was held over until Martensen was appointed to the vacant see, and was eventually published in *Fædrelandet* in December. It made a great sensation. Martensen replied, and Kierkegaard followed with one philippic after another, evoking rejoinders from many hands, and kindling a controversy of such fierceness that Danish writers compare it with Pascal's conflict with the Jesuits. Kierkegaard then issued successively the nine numbers of *Öieblikket* ('The Moment'), in which the master of irony set forth his indictment of existing Christianity in language that none could mistake. His standing thesis here was that the Christianity of the NT was now simply non-existent. His claim was, not that he was a Christian, but that he understood what Christianity was. His demand was 'honesty'—a frank avowal on the Church's part that it was not Christian, and he called upon every honest man to sever himself from it till that avowal was made.

The strain was too much for Kierkegaard's sickly frame. The bitterness and ruthlessness of his language in these last days were doubtless partly due to the pain and weakness which now oppressed him. In September 1855 he fainted in the street and was taken to a public hospital. Here he was occasionally visited by Pastor Emil Boesen, a friend from childhood's days, who found him very low, but looking for death with humble trust. On one occasion Boesen asked him if he would take the sacrament, and Kierkegaard, resolute to the last, answered, 'Yes, but not from a clergyman.' He died on 11th November 1855.

5. **His achievement.**—Kierkegaard had in an extraordinary measure the gifts of poetic passion and keen dialectic power. Either alone might have sufficed to give him a place among the great figures of European literature or philosophy. In combination they produced the 'indirect communication' and the arraignment of the Church. The indirect message pulsates with emotion, but is rendered obscure by its dialectic structure; the attack upon the Church moves on logical lines, but was virtually a failure by reason of its violence. Kierkegaard's critics have drawn attention to the fundamental antinomy in his literary production as a whole—his earlier insistence upon the subjectivity of truth, and his later demand for unconditional submission to an objective Christianity. Formally, no doubt, the contradiction is glaring; yet one may ask whether it is not inherent in Christianity itself. For the Apostle Paul, too, everything turns on the objective fact that God has become man, and yet all depends upon the subjective appropriation of that fact. It must certainly be admitted that the peculiar manner in which Kierkegaard developed the two sides of the antithesis has served to keep his distinctive views outside the main current of European thought, though in substance—identified, it may be, with other names—they have found their own place; we must remember, moreover, that what Kierkegaard had in view from first to last was not the universal idea, but the individual soul. Be this as it may, there remain in Kierkegaard's achievement the keen psychological analysis with which he struck at the roots of the 'system'; the searching presentation of the Christian life as the ideal in the light of which the existing Church shrivels to a mere travesty; the often tender and always impressive appeal of his 'discourses'; and the profound suggestiveness of his doctrines of subjectivity, the paradox, repetition, the spring, and the necessity of our becoming contemporary with Jesus Christ—to say nothing of the brilliant style and the lyrical profusion which he brings to their expression. There remains also the pathos of his lonely life—that of a great sympathetic soul, like Isaiah or Dante—seeking the response that never came; and, last—perhaps greatest—of all, the absolute self-consecration and singleness of purpose with which, in bodily and mental suffering, and in 'the loss of all things,' he strove, both in his personal life and in his work, to realize the ideal.

**KIN, KINSHIP.**—I. *INTRODUCTORY.*—1. Use of term.—At the present time the word 'kinship' is used in different senses by writers on human society. In one of these senses, which corresponds with the ordinary usage of the English language, the word applies to the relationship set up by consanguinity, and is dependent ultimately on the institution of the family, this term being used for the social group consisting of a man, his wife, and their children. When used in this way, the term may include cases in which the relationship depends on some kind of social convention, such as adoption. By many writers on sociology, on the other hand, the meaning of the word has been extended so as to include, or even apply primarily to, the relationship set up by common membership of a clan or other similar social group. In this sense, the meaning of the word is not dependent on the institution of the family, but it is applied to persons with whom there is no tie of consanguinity, or of the equivalent conventional relationship. Every member of an American or African clan or of an Australian or Melanesian moiety stands in a social relation to every other member of his clan or moiety, a relation which involves definite social duties; and some sociologists use the words 'kin' and 'kinship' explicitly for this relationship, while still more use the words loosely so that they apply both to this group-relationship and to that set up by consanguinity or conventional membership of the family. The use of the terms in these widely different senses is a potent source of confusion, and it is therefore necessary to limit the use of 'kinship' to one or other of the two senses. In this article both kinds of relationship are dealt with, but the first of the two senses will be implied when the words 'kin' and 'kinship' are used in the body of the article.

2. Definition.—The fact of kinship can be determined and defined in several different ways: by consanguinity, genealogy, terminology, or function.

(1) The least satisfactory is *consanguinity*. Among ourselves such a relationship as that which exists between parent and child, or between brother and sister, can also come into existence by social conventions such as adoption (*q.v.*), but among many peoples this formation of relationships by social processes may be the habitual practice. A consanguineous relationship may count for little or nothing unless it has been ratified by some kind of social process, or a social process may result in the formation of a relationship between persons wholly devoid of any consanguineous tie. Thus, in the Banks Islands in Melanesia the relationship of parent does not come into existence by the facts of procreation and parturition, but it is such acts as the payment of the midwife, the first feeding of the child, or the planting of a tree on the occasion of a birth that determine who are to be the parents of the child for all social purposes. Similarly, among a polyandrous people like the Todas, it may be the performance of a ceremony during pregnancy that determines which of the husbands of the mother is to be regarded for all social purposes as the father of the child. Indeed, the fact of fatherhood is so strictly determined by this ceremony that a male who performs it becomes the 'father' of the child even if he be only a few years of age or have never seen the mother before he is called upon to take part in the ceremony. Kinship cannot be determined and defined by consanguinity even among ourselves, still less among other peoples.

(2) *Genealogy.*—Nearly all, if not all, peoples of the world preserve, either in writing or in their memories, a record of those with whom they are related by consanguinity or by those social conventions which, as we have seen, serve the same social purpose. Among many peoples, and especially among those of rude culture, the knowledge of relationship thus genealogically determined is far more extensive than among ourselves. Pedigrees preserved in the memories of a rude tribe of cannibals may rival, if not surpass, anything which even the most enthusiastic genealogist is capable of carrying in his mind. Among such peoples it is the facts recorded in the pedigree of a person that largely determine his use of terms of relationship and regulate all the social functions which those terms connote.

(3) If the use of terms of relationship is determined by pedigrees, it follows that the definition of kinship by the *terminology* of relationship must be less satisfactory than by genealogy; but this third mode of defining kinship is even less valuable for another reason: the terms used for relatives as determined genealogically are precisely the same as those used for the relationships set up by membership of the clan or other social group, and therefore it is impossible by their means to define the tie of kinship in the strict sense.

(4) *Function.*—Two persons may be regarded as kin if their duties and privileges in relation to one another are of the kind usually associated with ties of kinship. Thus, a number of social functions and psychological ties belong to the relationship of parent and child, and it has been held[1] that those functions and ties can be used as a means of defining kinship. It is evident that such a mode of definition could be of no practical utility even in the case of near relatives, and it would break down absolutely in the case of more distant relationships. Any description of kinship must take into account the social functions and psychological ties which exist between kin, but they cannot be used as a means of definition.

The genealogical mode, therefore, is that which furnishes the most exact and convenient method of defining kinship. Kinship may be defined as relationship which can be determined and described by means of genealogies. As thus defined, kinship will be both narrower and wider than the relationship set up by membership of the clan or other similar social group. If, as is now customary,[2] the term 'clan' is used for an exogamous social group, it would be only members of the father's or mother's clan, according as descent is patrilineal or matrilineal, who would be kin if the term were used for membership of the social group. To take a specific instance: if kinship were used exclusively

[1] B. Malinowski, *The Family among the Australian Aborigines*, London, 1913, p. 172 f.

[2] See *Notes and Queries on Anthropology*, London, 1912, p. 156.

for the clan-relationship, the father would not be kin where there is matrilineal descent, nor would the mother's brother be kin where descent is patrilineal. If, on the other hand, kinship is used for relationship determined genealogically, both father and mother's brother will be kin, whatever the mode of descent, but members of the father's or mother's clan so remote that no genealogical connexion can be traced will not be kin.

The definition of kinship as genealogical relationship will also exclude the metaphorical sense in which terms of relationship are often used by peoples at all stages of culture. This article deals especially with kinship as thus defined, but the relationships set up by common membership of the social group are also considered, especially in so far as those relationships are connected with kinship proper.

II. *THE TERMINOLOGY OF RELATIONSHIP.*—The collection of terms denoting relationship used among a people is usually spoken of as the system of relationship of that people. Such systems comprise a definite body of social facts which can be described, classified, and compared with one another. Such comparison shows that the systems used by different peoples vary greatly, and these variations are found to depend on the application of different principles of classification of relationships. For instance, while we class together the father's brother and the mother's brother under the common denomination of 'uncle,' most peoples of the world assign these two relatives to social classes so distinct and with such different functions that their social systems would be reduced to chaos if they were driven to adopt our mode of classification. On the other hand, two relatives whom we distinguish definitely, as the father and the father's brother are by nearly all peoples of rude culture put into one social category, and the social life of these peoples is such that this mode of classification leads to no confusion, but the common nomenclature carries with it an organized system of common social functions.

Two chief varieties of system of relationship are usually distinguished, which, following Lewis Morgan, are called the classificatory and the descriptive. This distinction is not a happy one; for all systems are classificatory in that they class together certain relatives, while the term 'descriptive' is unsatisfactory, as many of the systems to which it is usually applied, such as our own, are not in any way descriptive, while descriptive terms are often prominent in the systems called classificatory. The classificatory principle is, however, so pronounced and shows itself so conspicuously in a large group of systems used by peoples of rude culture that it is a fairly appropriate term and will probably long continue to be used.

The use of Morgan's other term cannot be so readily justified. His 'descriptive' systems include many which are wholly devoid of a descriptive character. Thus, if our own system were truly descriptive, we should not speak of a grandfather or uncle, but should always distinguish between the father's father and the mother's father, and between the father's brother, the mother's brother, the husband of the father's sister, and the husband of the mother's sister. Such descriptive nomenclature occurs in many European and in some African systems of relationship, and Morgan justified his inclusion of systems like our own in the descriptive category by the assumption that they had formerly possessed a truly descriptive character.

**1. The classificatory system.**—As already indicated, the special feature of this system is the application of its terms to large groups of persons so that in its most complete form no single term can be used as the means of distinguishing an individual. Thus, the term 'brother' is not only used for sons of the same father and mother, but is also applied to all the sons of the father's brothers and of the mother's sisters, the terms 'brother' and 'sister' in these latter cases being used in a similar wide sense. In other varieties of the classificatory system, the term is used even more widely for all the sons of the father's sisters and of the mother's brothers, 'brother' and 'sister' being used in a similar wide sense. Similarly, the term applied to the father is also used of all the brothers of the father and of all the husbands of the mother's sister, 'brother' and 'sister' being again used in the classificatory sense. One result of this usage—one which is a potent source of misunderstanding and perplexity—is that the language of a people who follow the classificatory system possesses no equivalents for our European terms of relationship, so that an accurate translation of those terms is impossible. Similarly, European languages have no equivalents for the terms of a classificatory system. It is, therefore, necessary to state at the outset that, when an English term of relationship is used in this article, it is to be taken in its usual English meaning except when definitely stated to be used in a classificatory sense.

There are several classes of terms of relationship. In the case of certain relatives, and especially the father and mother, it is often the case that one term is used when addressing such a relative, and another term when speaking of him or her to others. The terms used in address correspond to our familiar terms, such as 'Papa' or 'Daddy,' but the distinction between the two kinds of term in classificatory systems is much more rigorous than we are accustomed to.

Another variant is found in some places where terms of relationship are used in a collective or reciprocal sense. Thus, a Fijian highlander will address his father's father as *tai*, but, when speaking of himself and his father as a social group, he will say that they are *veitumbuni*, using a word *tumbu*, which in other parts of Fiji is a term by which a grandfather is addressed.

A feature very widely present in classificatory systems is a peculiar reciprocity in the use of terms of relationship, which suggests that they denote relationships rather than relatives. This reciprocal usage, which among ourselves is limited to relatives of the same generation, such as brother, sister, and cousin, occurs between persons of different generations in the classificatory system, so that a man and his mother's brother or a man and his grandchild may use only one term between them; there may be only one term for the relationship between mother's brother and sister's son, or for that between father's father and son's son. A similar usage occurs between husband and wife so that there is only one in place of our two terms. It is as if the word 'spouse' were the only term in the English language for the partners in a marriage.

It is probably a variation of this principle of reciprocity that is seen in a very peculiar and characteristic mode of terminology for brothers and sisters. In most classificatory systems, two brothers use one term, two sisters the same or another often closely related term, while a brother and sister use a wholly different term. A similar custom is general in the nomenclature for brothers- and sisters-in-law: two men use one term, two sisters the same or a different term, while a man and woman use still another term or other terms. This feature also characterizes the nomenclature for cross-cousins in some Fijian systems. Looked at from another point of view, this character-

istic of classificatory systems means that the use of a term of relationship does not depend merely, as it does with us, on the sex of the person addressed, but also on that of the speaker. Thus a man may use one term for his sister and a woman another; similarly, a man may use one term for his sister's son and a woman a quite different term for hers, and men and women may use different terms for their grandchildren. In some cases, even, a father and mother may use different terms for their child.

Another feature which is very general in classificatory systems is the use of different terms for certain relatives according to age. This is especially frequent in the case of the relationships between brothers and between sisters, while frequently the brothers of the father, and less frequently the sisters of the mother, are denoted differently according as they are older or younger than the father or mother. This practice occurs only very rarely, if at all, in the case of the relationship between brother and sister, and is very exceptional in the case of the mother's brothers or the father's sisters. Thus, systems are very frequent in which there is a term for elder brother (man speaking) and elder sister (woman speaking); another for younger brother (man speaking) and younger sister (woman speaking), but only one reciprocal term is used both for brother (woman speaking) and for sister (man speaking), irrespective of age.

Two varieties of this practice occur: in some cases the usage is determined by the relative ages of those who use the terms, while in other cases it is determined by the ages of the children of some more or less distant ancestor. In the latter case, a man will address a relative as elder if the latter belongs to an elder branch of his pedigree, even if he (the speaker) is the older in years. These usages may be distinguished as dependent on age and seniority respectively.

Still another feature very general in classificatory systems is the presence of a rigorous distinction between relatives through father and mother. This is especially frequent in the case of those whom we call uncles and aunts, and less frequently applies also to grandparents and grandchildren.

One result of these various peculiarities of the classificatory system is that it usually possesses a far richer terminology than exists among ourselves or other European peoples. Thus, even without distinctions according to age, it is theoretically possible to have sixteen different terms for the different varieties of the grandparent-grandchild relationship; two each for father's father, father's mother, mother's father, and mother's mother, one term of each pair being used by the grandson and the other by the granddaughter; and, similarly, two terms each for son's son, son's daughter, daughter's son, and daughter's daughter, one term of each pair being used by the grandfather and the other by the grandmother. There is no known system of relationship in which all these sixteen possible terms are present, but in some Fijian systems as many as eight of them are in use, the absent terms being those which depend on the difference in sex of the grandchildren.

The richness of terminology of classificatory systems may also be increased by the presence of terms for relationships for which we have no special designation. Thus it is common to find special terms used beween men who have married sisters or between women who have married brothers, and special terms may also be used between the parents, or even between the grandparents, of a married couple, marriage between two persons thus setting up a relationship between their parents or their grandparents which is of sufficient social importance to lead to the use of a special term.

If the principle of reciprocity is in full action, so that two persons of different generations use only one term for each other, the number of terms will be diminished; but, even so, most classificatory systems are very rich in terminology.

It is also common in the classificatory system to find relatives classed together whom we distinguish. Some of these classifications, such as the father's brother with the father or the mother's sister with the mother, are due to the working of the classificatory principle, and are found in nearly all classificatory systems, but there are others which occur only here and there. Thus, the mother's brother is frequently denoted by the same term as the father-in-law and the father's sister's husband, or the father's father may be classed with an elder brother, or the father's sister's son with the father. Most of these correspondences in nomenclature can be shown to be due to special forms of marriage, and will be considered more fully in the various sections of art. MARRIAGE; all that need be noted here is that features of this kind introduce an element of complexity into classificatory systems of relationship which combines with their variations in richness of nomenclature to give these systems an immensely greater variety than is found in European systems. This variety is so great, and there are so many gradations, that any systematic grouping of classificatory systems is far from easy; but certain main distinctions are possible.

**2. Varieties of the classificatory system.**—In his great work on the *Systems of Consanguinity and Affinity of the Human Family*, Morgan considered three main varieties of the classificatory system—the Ganowanian system found in N. America, the Turanian in Asia and some parts of Oceania, and the Malayan in Polynesia—but the Ganowanian and Turanian systems were found to be so similar that he regarded them as forming one variety, the Malayan forming another. Though the name was badly chosen, the Malayan system has much right to be regarded as a special variety. Morgan drew his chief example from the Hawaiian Islands, and hence we may call it the Hawaiian system. It occurs also among the Maoris of New Zealand and probably in other parts of Polynesia. It is a very simple system, in which the classificatory principle is carried to an extreme degree, so that all relatives of the same generation are classed with brothers or sisters, all of the previous generation with the father and mother, and of the generation before that with the grandparents, so that in the Hawaiian Islands, excluding relatives by marriage, there are only fifteen terms of relationship altogether.

There is, however, no hard and fast line between this system and the more usual forms of the classificatory system. Thus the system of Eddystone Island in the British Solomons differs only in the fact that, while all relatives of the generation older than the speaker are classed with the father or mother, one relative in the generation following the speaker, viz. the sister's son, is distinguished from the rest.

A more definite principle of classification can be based upon the special features derived from different forms of marriage. Thus, the cross-cousin marriage (see MARRIAGE) produces a number of special features which enable the system of a place where this marriage is practised to be recognized at a glance. Similarly, other special forms of system dependent on forms of marriage can be distinguished, though numerous gradations are possible owing to the fact that the special features dependent upon a form of marriage often

persist after the marriage has ceased to be practised, and their disappearance may be so gradual that no line can be drawn between a system dependent on a given form of marriage and one in which the evidence for such dependence is definitely absent. Again, systems of relationship may depend on more than one form of marriage, such systems being, as a rule, very complex.

If special varieties of the classificatory system are thus dependent on social institutions such as marriage, the question arises whether its general character has not been determined by some form of social organization, and there can be little doubt that it has been derived from the clan. Wherever the clan exists, classificatory terms of relationship are used, and they are not only applied to persons with whom definite genealogical relationship can be traced, but they are also used to denote membership of the clan. Thus, all the men of the clan of the speaker and of his own generation are classed in terminology with his brothers. If the clan is patrilineal, all men of the previous generation of his clan are classed with his father, and all of the succeeding generation with his sons. Similarly, all the men of his mother's clan and of her generation are classed with his mother's brother, and all the men of the succeeding generation with his mother's brother's children.

Moreover, most forms of the classificatory system possess certain features which suggest that they may have arisen out of that special form of the clan system which may be called the dual organization, in which a tribe or other community consists of two exogamous moieties. The children of the father's brothers and of the mother's sisters are classed with brothers and sisters, while the children of mother's brothers and of father's sisters are classed together, but distinguished from brothers and sisters; this is a mode of classification which would be the natural result of the dual organization. If the term 'classificatory' is regarded as unsatisfactory, one would be justified in speaking of the group of systems to which this name is usually applied as 'clan systems.'

3. **Morgan's descriptive system.**—The systems classed together by Morgan as descriptive show a number of varieties characterized by the different degrees in which the descriptive principle is in action. A fully descriptive system would contain a number of terms denoting single persons or very small groups of persons, and all other relatives would be named by combinations of these primary denotative terms. The Celtic and Esthonian systems appear to be examples of this descriptive usage, in which many relatives, including the grandparents, uncles, aunts, and cousins, are described by their relation to the father and mother.

At the other end of the scale come such languages as English, which are completely devoid of any descriptive character, but consist exclusively of denotative and classificatory terms.

An intermediate variety is found among the peoples who speak Arabic, in which there are simple denotative terms for the grandparents and for the brothers and sisters of father and mother, while the wives and children of the latter are indicated by descriptive terms; thus, the mother's brother being *khāl*, the mother's brother's wife is *marat khāl*, his son *ibn khāl*, and his daughter *bint khāl*.

Morgan classed such systems as our own with the descriptive variety, because he inferred that they had once had this character. It is, however, far from satisfactory to class together systems which differ so widely from one another. In spite of the objection that all terms of relationship are in one sense denotative, such systems as our own might be classed together as 'denotative,' while the term 'descriptive' might be reserved for those systems in which description is prominent. These different systems might also be named by means of the forms of social structure from which they are derived. Our own system and those of most Teutonic and Romance languages contain a number of terms which can be used of one person and of one person only, and the persons thus definitely indicated are the members of the family (a social group consisting of a man, his wife, and their children). The more remote from the family the relationship is, the less definite becomes the nomenclature. Such systems are clearly founded on the social institution of the family. It is only for those persons who form part of the family that an exact system of nomenclature is necessary. Such systems might appropriately be called 'family' systems.

Such a system as that of the Arabic language, on the other hand, shows the past or present existence of a state of society in which some special motive exists for the clear distinction of brothers and sisters of the father and mother as well as of their wives and children. Such social motives are to be found in some form of the kindred or extended family, and it has been suggested[1] that these systems might be called 'kindred' systems.

It is an interesting illustration of the neglect of the subject of relationship by sociologists that only recently has any attempt been made to use European systems of relationships as instruments for the study of social organization. When the lesson taught by the study of the classificatory system has been learnt, much light will be thrown on the nature of Indogermanic and Semitic social organization by means of the terminology of relationship.

4. **Geographical distribution of relationship-systems.**—(1) *Europe.*—Most of the Romance and Teutonic languages possess systems of relationship in which denotative terms are prominent and from which descriptive terms are absent. The systems of these peoples are of a simple character, possessing relatively few terms; only in French is there any sign of distinctions according to age. In the past, however, European languages were richer in nomenclature, Anglo-Saxon, Middle High German, and Latin distinguishing the brothers and sisters of the father from those of the mother—relatives now classed together. The Latin system was an extremely definite example of a denotative or family system, but it is possible that it was largely a legal product, and that a less strictly scientific nomenclature was in use among the people. The Celtic languages present high development of the descriptive principle, and this principle also shows itself to some extent in the Scandinavian languages.

Slavic systems of relationship are in the main denotative, but some of them present features of a classificatory kind. Thus, in Bulgaria the father's brother's son is called *otchicha brat*, or 'brother through the paternal uncle,' being thus classed with, and at the same time distinguished from, a brother. Similarly, in Poland cousins are classed with brothers or sisters, but distinguished by terms referring to their relationship through an uncle or aunt. In Poland also the grandfather's brothers may be classed with the grandfather, and the terms used for the father's and mother's brothers are also applied to the cousins of the father or mother. These features suggest that Slavic systems are not very far removed from a classificatory form, that they are classificatory systems in which special denotative terms have come into use for the brothers and sisters of father or mother, but their children still show by their nomenclature that they were once definitely classed with brothers and

[1] Rivers, *Kinship and Social Organisation*, p. 80.

sisters. In this connexion it is interesting that some Slavic systems, such as the Bulgarian, show the distinction between elder and younger brothers which is so characteristic of the classificatory system; thus, in Bulgaria there are special terms for the younger brother and younger sister of the husband.

The Magyar system has many features which distinguish it in a striking manner from other European systems, and shows many points of similarity with certain systems of N. America, and possibly also with those of northern Asia. Especially striking in this respect is the presence of definite terms for elder and younger brother and for elder and younger sister, and the classification of uncles and aunts with elder brothers and sisters. Another feature of interest is the wide use of a term *unoko*[1] in the designation of cousins and uncles, which seems to show the existence of a mode of social grouping in which descendants of a grandparent are classed together.

The Finnish system differs much less from Indo-germanic systems, and the linguistic character of some of the terms suggests that this is the result of modification produced through the present environment of the people. According to the list furnished to Morgan, the Esthonian system is characterized by a very high degree of development of the descriptive principle.

The Turkish system resembles the Magyar to some extent, the differences being probably due to Arabic influences.

The Basque language preserves the use of a single reciprocal term between brother and sister, a feature so characteristic of the classificatory system as to suggest that the whole system must once have had this character.

(2) *Africa.*—Most of the peoples of the northern part of this continent have been influenced by the Arabic system, the special features of which have already been described. Closely similar systems are found among the Shilluks, Dinkas, and other Nilotic peoples. These systems are likewise characterized by the use of special distinctions for half-brothers and sisters, arising out of the practice of polygyny. This feature is also present in the systems of the Bantu peoples, which differ, however, from the Nilotic systems in being definite examples of the classificatory principle with complexities dependent on certain forms of marriage.[2] In W. Africa, on the other hand, the available evidence points to the absence of the classificatory system, its mode of nomenclature being largely descriptive.[3]

(3) *Asia.*—Some of the peoples of Asiatic Turkey appear to use systems of relationship of the same kind as the Turks and Magyars, with decided traces of Arabic influence, while the Armenian system is descriptive.

The systems of northern Asia are definitely of a classificatory kind, approaching the Hawaiian type in the north-eastern part of the continent. The system of the Tungus classes the elder brothers of a man with his father's younger brothers—a feature similar to those characteristic of the Magyar system.

The Persian system is largely descriptive, and the use of terms borrowed from Arabic for uncles and aunts suggests that these relatives had originally no distinctive terms; but this would leave open the question whether the previous nomenclature was classificatory or descriptive.

All the Dravidian languages, and probably most of the other languages spoken in India at the present time, use the classificatory system, but this appears to have been absent from Sanskrit, which had to some extent a descriptive character.

The systems of the Burmese and Karens are not only definitely classificatory, but they show an extreme development of the classificatory principle which brings them very near to the Hawaiian form.

The Chinese system resembles those of Burma in its highly developed classificatory character, but with the important difference that in any one class, such as 'brother,' a number of distinctions are made according to the line of descent to which a relative belongs. The Chinese system has carried out the method of classification on special lines, and may be regarded as a highly specialized variety of the Hawaiian form of classificatory system. The Japanese use a classificatory system approaching the Hawaiian type, but, in place of the further development of the classificatory character which has taken place among the Chinese, there appears to be a movement in the denotative direction. Little is known of the nomenclature of relationship of the Malays or of other peoples of the Malay Archipelago.

(4) *Oceania.*—In New Guinea and Melanesia the classificatory principle is universal. Their systems show very great variety, due partly to different degrees of simplification in the direction of the Hawaiian form, partly to the influence of numerous peculiar forms of marriage.

Most Polynesian systems are of the Hawaiian type; but some, such as the systems of Tonga and Tukopia, show forms intermediate between the Hawaiian and the more usual forms of the classificatory system.

(5) *Australia.*—The systems of this continent are classificatory, and are characterized by great richness of nomenclature, but by few of the complexities which are so general in Melanesia. The relationship of Australia is closely connected with the elaborate system of social groups known as matrimonial classes, which seem to be only systematizations of the classificatory system. They seem to form a highly specialized mode of putting the classificatory principle into action in the regulation of marriage.[1]

(6) *America.*—Chiefly through the work of Morgan we have a larger collection of material from N. America than from any other part of the world, and with one exception all the recorded systems are definitely classificatory, with all the main features, including the distinction of age, well developed. These systems are subject to much variation, depending partly on the occurrence of changes in the direction of the Hawaiian system, partly on the classing together of certain relatives, probably as the result of certain ancient forms of marriage. At present, however, this subject has received so little attention that these features may be found to depend on social conditions different from those which have determined similar features elsewhere. There seems to be a tendency in N. America to class together relatives of different generations if of one clan, and it is possible that this may explain certain features which elsewhere depend on forms of marriage.

The single exception to the subjection to the classificatory principle is formed by the Eskimos, whose system is chiefly denotative and descriptive. The brothers and sisters of the grandparents are classed with the grandparents, and the children of

[1] The present writer is indebted for his knowledge of this term to Mrs. Singer and Mr. L. K. Kiss. It is remarkable that none of the terms in which this word occurs were included by Paul Hunfalvy in the list which he drew up for Morgan.

[2] See esp. J. Roscoe, *The Baganda*, London, 1911, p. 128; and H. A. Junod, *The Life of a South African Tribe*, Neuchâtel, 1912–13, i. 217.

cousins with nephews and nieces, and on those grounds Morgan assigned the Eskimo system to the classificatory category; but it is less classificatory than such European systems as the Bulgarian and Magyar, which it resembles in the use of distinctions for age. Like these systems, it has classificatory features which point to its having once been a classificatory system which has now been greatly modified in the denotative and descriptive directions.

At present we have no exact knowledge of the system of relationship of any S. American people.

III. *SOCIAL FUNCTIONS OF RELATIONSHIP.*—These may be grouped under three heads: duties, privileges, and restrictions. An examination of the social functions of relationship shows that a given relative may be subject to an obligation to perform certain social actions, or may be allowed to perform certain actions which are not permitted to others, or may not be permitted to perform actions which are allowed to others.

The very important place which these functions of relationship take in the culture of many peoples may be illustrated by contrasting them with similar functions found among ourselves. In our own society it is the duty of a father to provide for his child up to a certain age, but it is very difficult to state in any exact way the social actions which are included under the term 'provide.' The duties of a father may be put under two heads: his legal obligations, and those which devolve upon him by custom, the latter differing greatly in different ranks of society. The duties of a child towards his father are even less definite and obligatory, and, when we pass to more distant relatives, their social functions become so indefinite that they can hardly be said to exist. Many may regard it as a duty to help all those related to themselves by the exercise of social interest, if not in a more material way, but such duties are in no way obligatory, and are not even sufficiently habitual among all classes to allow them to be described and classified. If we study the past of our own society, however, we find that the social duties of relatives have been much more definite, the best known of these duties being that of assisting in the payment of *wergeld*, or blood-money, the proportions of this payment due from relatives of different kinds being very strictly regulated.

In other European countries the duties of relatives are more definite and more strictly regulated than in England, one such function in France, for instance, being that of taking part in a family council.

Among such peoples as the Hindus and Chinese the social functions associated with relationship are very definite and strictly regulated, this regulation being especially obvious in those cases in which social institutions, such as marriage, are associated with much ceremonial.

It is, however, when we pass to peoples of ruder culture that the social functions of relationship reach their highest degree of definiteness and strictness of regulation, and among these peoples definite duties, privileges, and restrictions are not limited to the parents or other near relatives, but are present, and may even be more numerous and definite, in the case of other relatives, such as the husband of the father's sister or the son of the mother's brother. Sometimes the duties and privileges associated with relationship seem to have become the basis of important social institutions.[1]

Before considering these social functions in detail, we may point out the definite relation between the presence of social functions and the terminology of relationship. In such a region as Oceania, there is a definite correlation between the presence of special terms for relatives and social functions. It is only when such a relative as the mother's brother or the father of the son's wife has definite social functions that a special term is applied to him, distinguishing him from other relatives. There is reason to believe that one relative is distinguished from another in nomenclature only if his social functions produce a need for this distinction. At present we have little information about the social functions of relationship in other parts of the world, but the rule which holds good of Oceania will probably be found to be of general application.

1. **Parents and children.**—In general, we have little definite knowledge concerning the social regulations connected with parent and child. Among peoples who use the classificatory system these relatives do not appear to be subject to such clear-cut regulations as occur with other relationships. It is possible, however, that this may be due only to lack of interest in this relationship on the part of the collector of ethnographical data. The presence of special regulations connected with such relatives as the mother's brother or the mother-in-law is apt to attract the attention of the investigator and lead him to neglect the more homely relationship of parent and child. Nevertheless, there is a certain amount of evidence derived from the comparison of the duties of parents with those of other relatives. In general, it would seem that the relations between parents and children associated with the classificatory system are much like those which exist among ourselves. The father and mother provide for the child, feed, clothe, and train him, while the child obeys his parents and assists them in their occupations. There are, however, definite exceptions. Thus, among many peoples, while the duty of obedience to the father may exist, it is nevertheless a matter of explicit social regulation that this duty is less obligatory than in the case of other relatives, such as the mother's brother. Disobedience to the father is explicitly recognized as a privilege, and may perhaps even be an obligation. Similarly, there may be definite restrictions on the conduct of father and child, as in the Banks Islands, where a father and son should not eat together. The social functions of the mother must also be judged chiefly by the exceptions. In some societies the duty of suckling is not confined to the mother, but other women have a right to share in this function, and cases are known in which a child is definitely removed from all social contact with the mother at a certain age, sometimes as early as three years. In general, however, it would seem that the social relations existing between parents and children among peoples who use the classificatory system differ but little from those customary among ourselves.

2. **Brother and sister.**—Here, as in the case of parents and children, we have little knowledge concerning social functions except in those cases where there are definite restrictions. In some societies the restrictions between brother and sister are of the most rigorous kind, being examples of the custom usually known as 'avoidance' (see below). In several parts of Melanesia a brother and sister are not allowed to speak to one another or even see one another, and this avoidance may be so strict that it continues after death, a man not being allowed to enter a house in which his dead sister is lying. Avoidance between brothers is not known to occur in any pronounced form, but in Lepers' Island in the New Hebrides a man may not laugh in the presence of his brother, and this practice is probably to be associated with the custom of avoidance.

[1] See A. M. Hocart, *JRAI* xliii. 101 ff., 109 ff.

**3. Mother's brother and sister's son.**—Special customs associated with this relationship are very frequent among those who use the classificatory system, and the importance of the distinction of the mother's brother from the father's brother is shown by the fact that such special functions are quite unknown in connexion with the latter relative.

Among many peoples who use the classificatory system the mother's brother is definitely responsible for the welfare of the child, for his upbringing and training for adult life. He may take the chief place, or at any rate a more important place than the father, in the ceremonies which accompany social events, such as naming, the assumption of the first clothing, circumcision, initiation, and marriage. The duty of obedience to the mother's brother may be so strict that a boy will at once respond to any command, however contrary to his own wishes. A man and his sister's son often share their property in common, and there is little doubt, even if the practice no longer occurs, that in Melanesia they once had their wives in common.

In other cases a man's sister's son has the right to use, or even to take for his own use, any of the possessions of his uncle. This right has reached its highest development in Fiji, where the rights of the sister's son, or *vasu*, of a chief over the property of his uncle extend to the property of all the subjects of his uncle, so that the *vasu* of a chief is able to take for his own use any of the property, as well as the women, of the district over which his uncle rules.

The close relation between a man and his mother's brother is natural in a state of mother-right, in which these persons necessarily belong to the same social group. The relation is often found, however, in combination with patrilineal institutions, in which cases it is probably a survival of an older matrilineal condition (see MOTHER-RIGHT). In other cases the special position of the mother's brother may be the result of other social institutions (see MARRIAGE).

**4. Mother's brother's wife.**—Sometimes there are definite privileges or restrictions on conduct in connexion with this relative, but these are usually the result of her position as a potential wife (see MARRIAGE).

**5. Father's sister.**—Special privileges in connexion with this relative have been recorded only in Melanesia, Polynesia, and India, but probably occur elsewhere. In Melanesia this relative is especially honoured, but with this honour rules of avoidance are sometimes associated, while the relationship resembles that between a man and his mother's brother in that to some extent a woman and her brother's child have their property in common. In India this relative is important chiefly in marriage ceremonial (see MARRIAGE).

**6. Father's sister's husband.**—Special conduct towards this relative has been recorded only from Melanesia, where it forms an extreme example of the joking relation (see below), a man being the natural butt for the wit and practical jokes of his wife's brother's son.

**7. Cousins.**—Rules of conduct between cousins are best known in the case of those, often called cross-cousins, who are the children of brother and sister. Where special rules of conduct exist between those of different sex, they are usually the outcome of the potential relationship of husband and wife.

**8. Grandparents and grandchildren.**—Sometimes the grandfather has a special position of authority, while in other cases definite ceremonial duties in connexion with his grandchild may be assigned to him.

For relatives by marriage see MARRIAGE.

**9. Avoidance.**—Many of the restrictions on the conduct of relatives have in common the feature that relatives avoid one another or avoid certain modes of conduct, and these restrictions are often grouped together as customs of avoidance. These customs have attracted especial attention from anthropologists in the case of relatives by marriage, and will be again considered in the art. MARRIAGE, but their general character may be discussed here.

They are very various in kind. In the most extreme cases relatives must never be in the presence of one another. The avoidance may be so strict that a person who has to avoid a relative will not even enter a village where this relative is living, and in the extreme case of Lepers' Island in Melanesia the avoidance between brother and sister persists after death. In other cases the avoidance is less absolute. A person may leave a house into which a relative enters, or, if relatives who should avoid one another meet, they may get out of each other's way sufficiently to ensure that they do not touch one another, or they may pass with averted eyes.

Sometimes avoidance includes the total prohibition of speech, or relatives may speak to one another only so long as they do not see one another. In other cases, relatives may speak to one another at a distance, or conversation may be limited to strict matters of business, and it is only familiar conversation that is disallowed. Another manifestation of avoidance is that relatives may not use certain words or expressions when speaking to one another.

A custom which seems to be related to these customs of avoidance is the prohibition of the personal name, not only when relatives speak to one another, but when one speaks of the other in his absence. This prohibition applies not only to relatives who avoid one another, but often to a much wider circle of relatives. In other cases, the avoidance may apply only to special acts, *e.g.*, touching the head, taking a load from another, or approaching a relative when he is sitting.

Customs of avoidance are more frequent, and usually more strict and elaborate, between persons of different sex than between those of the same sex, and it is certain that they are often associated with the idea that sexual relations between those who avoid one another are liable to take place. In some parts of Melanesia certain relatives of different sex will practise avoidance only so long as sexual relations have not taken place between them, and the practice of, or failure to practise, avoidance will be a sign to all of the nature of the relations existing between the persons in question. This association of avoidance with the possibility of sexual relations seems to be especially definite in the case of relatives by marriage, but there is little doubt that the association is also present in connexion with the avoidance between brother and sister, and that, where this avoidance is present, sexual relations between brother and sister are recognized as liable to occur. It would seem as if one of the functions of customs of avoidance is to ensure that sexual relations shall not occur between certain relatives. The presence of these regulations in connexion with certain relatives and not with others shows that a tendency towards sexual relations is present in the one case and not in the other. They suggest that the relations now so strictly forbidden that the persons concerned are not even allowed to see or speak to one another must once have occurred frequently, if not habitually and as an organized practice, between those who now avoid one another. The fact that similar avoidances exist between persons of the same sex shows, however, that the prohibition of sexual relations is not the

only factor in the production and maintenance of these customs. In Melanesia the avoidance between male relatives is less pronounced than between relatives of different sex, and usually applies only to such actions as one approaching when the other is sitting down, or one taking a load from the shoulder of the other. There is much reason to believe that these customs are the result of social relations arising out of the interaction and fusion of peoples.

**10. Privileged familiarity.**—In Melanesia customs exist which seem to be the converse of those of avoidance. Customs of avoidance prohibit any kind of familiarity between certain relatives, while the customs now to be considered enjoin such familiarity and make it a regular and habitual feature of conduct. In the Banks Islands, for instance, the relation of the custom to avoidance seems to be shown by the fact that one of the most frequent forms which avoidance takes is the prohibition of the custom of joking. In these islands the highest development of such joking occurs in the case of the husband of the father's sister. Whenever a person meets this relative, it is not merely his privilege, but it would seem almost his duty, to jeer at, insult, or play practical jokes upon him. In the cases of other relatives, this mode of behaviour seems to be less habitual. It is possible in these islands to arrange relationships in a series, from the husband of the father's sister at one end to the wife's mother at the other, in which there is a gradual transition from a condition in which joking is habitual to one in which not only is it absolutely forbidden, but the social relations are of a kind which remove all opportunity for its occurrence.

The only other people among whom this organized system of joking has been recorded are the Crow and Hidatsa Indians of N. America,[1] but in their case it would appear that the privileged joking is practised between members of certain clans rather than between certain relatives. It is persons whose fathers belong to the same clan who are allowed to play practical jokes upon one another.

Kohler, *Zur Urgeschichte der Ehe*, Stuttgart, 1897; A. L. Kroeber, *JRAI* xxxix. [1909] 77 ff.; J. G. Frazer, *Totemism and Exogamy*, London, 1910, *Psyche's Task*², do. 1913 (for avoidance); W. H. R. Rivers, *Kinship and Social Organisation*, do. 1914, *History of Melanesian Society*, Cambridge, 1914.

W. H. R. RIVERS.

**KINDNESS.—1. Etymology and usage.**—The etymology of the word 'kindness' (connected with A.S. *cynde* or *cunde*, 'natural' or 'in-born,' O.E. *ȝecyndnys*, 'generation,' 'nation'; cf. Lat. *genus*) indicates the original meaning of the word as equivalent to 'kinship,' 'near-relationship' (see *OED*, *s.v.*), or the natural right or title derived from birth. Afterwards it came to be used of natural aptitude or inclination; and, finally, of (1) the quality of being kind, and (2) kind feeling or affection, *e.g.*, S. Johnson, *Lives of the English Poets*, ed. G. B. Hill, Oxford, 1905, i. 89 ('Milton'): 'He left the university with no kindness for its institution' (quoted in *OED*). The objective use of an act prompted by kind feeling (*e.g.*, 'a kindness' or 'kindnesses') easily followed from the above usages. In general, kindness, whether viewed as a subjective quality or as manifested objectively in outward behaviour, word, or act, carries with it varying shades of goodwill, which may be expressed in such terms as friendliness, mercifulness, generosity, thoughtfulness, and the like. It is opposed to the spirit of harshness, unrelenting anger, or *hauteur*, vengeance, callousness, etc.

[1] R. H. Lowie, *Anthropological Papers of the American Museum of Natural History*, ix. [1912] 204.

**2. Ethics.**—As a manifestation under special conditions of a fully developed justice, or benevolence (*q.v.*), or love (*q.v.*), the virtue of kindness occupies a high place in the ethical teaching of both OT and NT (see *HDB*, art. 'Kindness'). It is associated with the character of God in such passages as 1 S $20^{14}$, 2 S $2^{6}$ $9^{3}$, Neh $9^{17}$, Ps $31^{21}$, and Is $54^{8.10}$, where חֶסֶד, often used with the suggestion of hospitality, is applied to the dealings of God with men. Further, as connected with the Christian doctrine of the Fatherhood of God, it finds expression in Lk $15^{20}$, Mt $5^{45}$, Ac $14^{17}$. In the teaching of our Lord the spirit of kindness is inculcated in various directions—*e.g.*, as one with the forgiving disposition (Mt $18^{15}$), as the love of enemies or persecutors (Mt $5^{44}$), as an exhibition of the law of mercy overriding legal enactment (Lk $13^{15}$ $14^{1-6}$ [in relation to the Sabbath]), as a tenderness towards little children or babes (*βρέφη*, Lk $18^{15}$), and in the 'golden rule' (Mt $7^{12}$) as defining our general treatment of humanity. Such parables as the Prodigal Son, the Good Samaritan, the Two Debtors, or Dives and Lazarus illustrate kindness in action. Similarly, it finds expression in apostolic ethics—*e.g.*, Ro $12^{10}$, 1 Co $13^{4}$—and elsewhere, while it calls forth a whole group of beautiful words, like *χρηστότης* (Ro $3^{12}$, Gal $5^{22}$, 2 Co $6^{6}$, Col $3^{12}$, Eph $2^{7}$, Tit $3^{4}$), *φιλανθρωπία* (Ac $28^{2}$, Tit $3^{4}$), *φιλαδελφία* (Ro $12^{10}$, 1 Th $4^{9}$, He $13^{1}$, 1 P $1^{22}$, 2 P $1^{7}$), *ἀγαθωσύνη* (Ro $15^{14}$, Gal $5^{22}$, Eph $5^{9}$, 2 Th $1^{11}$), the last of which differs from its synonym *χρηστότης* in expressing a more active type of good-will, *bonitas* as compared with *benignitas* (R. C. Trench, *Syn. of the NT*⁹, London, 1880, p. 231 f., who quotes Lightfoot on Gal $5^{22}$ to that effect). We may add to the above list *φιλοξενία* (Ro $12^{13}$) and *φιλόξενος* (1 Ti $3^{2}$, Tit $1^{8}$, 1 P $4^{9}$) as indicating a form of kindness—hospitality to strangers—commended by the apostles to the early Church.

The doctrine of the divine Fatherhood may lead, as has frequently been noted, to a one-sided conception of God's nature. God's *φιλανθρωπία* is a kindness that coexists with 'wrath,' the eternal hostility of perfect Holiness to evil. It is not to be interpreted as 'softness and sentimentalism.'

> 'The mere amiability of "le bon Dieu" of much modern opinion is but one step removed from the moral indifference of Omar Khayyám's "Good Fellow"' (W. H. Moberly, in *Foundations*, London, 1912, p. 279, referring to the *Rubáiyát*, lxiv.: 'He's a Good Fellow, and 'twill all be well').

The Christian conception of kindness marks a great advance on Greek ethics. Perhaps the highest conception of benevolence is to be found in Aristotle's portraiture of the *ἐλευθέριος*, or liberal-minded man, in *Nic. Eth.* IV. i. 16 f., where nevertheless 'we do not find a word about benevolence or love to others as prompting acts of liberality' (A. Grant, *The Ethics of Aristotle*³, London, 1866, ii. 60). The claims of others do not enter into the activity of Aristotle's virtuous man, for whom 'the first requisite to nobleness seems to be self-respect' (*ib.* 59). Kindness, like *caritas*, begins at home—*i.e.*, as a virtue of kinship. In general, 'one touch of nature makes the whole world kin' (Shakespeare, *Troilus and Cressida*, III. iii. 175); but it is in the family that the virtue of kindness finds its earliest sphere of influence. The love of the mother for her child is the original ethical source of the law of kindness in human life.

> 'Love for children is always a prior and stronger thing than love between father and mother' (Drummond, *Ascent of Man*, London, 1894, p. 392).

Drummond finds in the struggle for the life of others the ethical principle which many observers eliminate from the cosmic process. The emergence

of affection or kindness from the circle of the home is due to the advance in ethical conception which accompanied the moral progress of mankind. It was seen that kindness narrowed to a circle might readily become a vice.

'Mollis illa educatio, quam indulgentiam vocamus, nervos omnes et mentis et corporis frangit' (Quintilian, *Inst.* I. ii. 6).

It may rightly be argued, as J. H. Muirhead has done (*Elements of Ethics*[3], London, 1904, p. 199), that 'love of humanity is the best guarantee against the exclusiveness which turns family affection into a vice.' It is the function of 'justice touched with emotion' to extend the relationships of human beings from those of mere contract to actual friendship or love. As a disposition of the character or as a practical outcome of the humanitarian spirit, kindness of temper, of speech, and of act is a potent civilizer of human intercourse. To it belong the ideas of courtesy, cheerfulness, good humour, and hospitality, the desire to make the best of all, irrespective of social status, to behave so as to cause people to feel at home in the society to which they belong or have been introduced, to diffuse the spirit of radiant goodwill and sympathy, and to practise all 'the chivalries of the Christian gentleman.' The full ethical history of kindness would deal with the various motives and sanctious by which a primitive sentiment developed into a duty which embraced the realm of human and animal life. In Christian ethics 'the cup of cold water' (Mt 10[42]) is the symbol of the everyday habit of charitableness, which is expressed with striking emphasis in contradistinction to the old law of revenge in the precept 'Give to him that asketh thee' (Mt 5[38-42]; see C. Gore, *Sermon on the Mount*, London, 1896, ch. v.). Even quixotic kindness may on occasion be justified as a Christian duty: the classic example is the bishop's treatment of Jean Valjean in *Les Misérables*. 'Indiscriminate charity' (see art. CHARITY), on the other hand, is not Christian, inasmuch as it is a mere 'indulgence of our feelings of compassion with little trouble to ourselves and at the expense of society' (Gore, *loc. cit.*). Furthermore, the higher ethic demands a certain delicacy of method and manner in the doing of a kindness.

The truly kind man 'knows for how much the manner, because the heart itself, counts, in doing a kindness. He goes beyond most people in his care for all weakly creatures; judging, instinctively, that to be but sentient is to possess rights' (W. H. Pater, *Marius the Epicurean*[4], London, 1898, ii. 7).

If the kindness of the Christian ideal founds a Society for the Prevention of Cruelty to Children, it will likewise support a Society for the Prevention of Cruelty to Animals, and protest against unnecessary inhumanity in vivisection. Indeed, the rights of all dumb creatures to kind treatment, as passages quoted above show, is an integral feature of Christ's teaching, besides being a certain corollary of His broad humanity. Browning is but expressing the Christian standpoint in this matter when he says:

'God made all the creatures and gave them our love and our fear,
To give sign, we and they are his children, one family here'
(*Saul*, vi.).

3. **Psychology.**—To the psychologist kindness is a subjective emotion owing its development and practical manifestations to the nature of the object or stimulus which acts on it. There is a difference of opinion among experts as to whether tender emotion is primary or otherwise; but the former opinion is now more generally held. The maternal instinct which compels a mother to protect and cherish her child is common to the higher ranges of animal life, and was probably transferred to members of the other sex. Infanticide among savages might seem to negative this theory; but, in replying to this objection, W. MacDougall (*Introduction to Social Psychology*[5], London, 1912, p. 69) writes:

'There is no feature of savage life more nearly universal than the kindness and tenderness of savages, even of savage fathers, for their little children. All observers are agreed upon this point. I have many a time watched with interest a bloodthirsty head-hunter of Borneo spending a day at home tenderly nursing his infant in his arms. And it is a rule, to which there are few exceptions among savage peoples, that an infant is only killed during the first few hours of its life. If the child is allowed to survive but a few days, then its life is safe; the tender emotion has been called out in fuller strength, and has begun to be organised into a sentiment of parental love that is too strong to be overcome by prudential or purely selfish considerations.'

The same writer combats Bain's view that tender feeling is as purely self-seeking as any other pleasure, and pronounces it to be 'a gross libel on human nature.' The extensions of this primary impulse from the relationship of a mother and her child are almost endless. It has a marked association with the emotion of pity on the one hand and moral indignation on the other, especially in relation to the sight of helpless suffering, the sounds or cries of pain or distress, and, imaginatively, to the woes depicted in some moving romance. Here disgust or aversion caused by the sight of blood or wounds is overcome by the impulse of kindness, as in the case of the Good Samaritan. With the priest and Levite of the story, neither pity nor disgust ripens into the impulse to succour. Kindness is an element 'of the system of emotional dispositions that constitutes the sentiment of love' (MacDougall, *op. cit.*, p. 123). In its active manifestations it is really a complex emotional state. The germ is tender emotion, but tender emotion tinged with pity, moral indignation, or sympathetically induced pain or pleasure, as the case may be. That such emotions appear to be innate in some people is a matter of experience. Cf. the Scots proverb, 'Kindness comes o' will: it canna be coft' (bought). On the other hand, it is also a psychological law that reciprocation intensifies sentiment. Some instincts die for want of satisfaction; 'the milk of human kindness' tends to foster a corresponding impulse in those to whom it is imparted; cf. Sophocles, *Aj.* 522:

χάρις χάριν γάρ ἐστιν ἡ τίκτουσ' ἀεί.

And 'kindness, nobler ever than revenge' (Shakespeare, *As You Like It*, IV. iii. 130), is one of those altruistic impulses which bind the human family together and ennoble the social order.

LITERATURE.—In addition to the authorities quoted above, the following may be consulted: H. Sidgwick, *Methods of Ethics*[6], London, 1901, bk. iii. chs. iv., viii.; J. R. 'Upon the Love of our Neighbour.'

R. MARTIN POPE.

# KING.

**KING (Introductory).**—The title 'king' is difficult to define, except in rather broad terms. The history of the institution of 'kingship' is similarly complex; various lines of social evolution have produced it at different times and in different ways. The following definition may be accepted

as applying to modern times: 'king' is 'the usual title of the male sovereign ruler of an independent State, whose position is either purely hereditary, or hereditary under certain legal conditions, or, if elective, is considered to give to the elected the same attributes and rank as those of a (purely or partly) hereditary ruler.'[1] In English history the term 'king' first appeared as the name of chiefs of the Anglo-Saxon kins. The O.E. *cyning*, *cyng*, or *cing* seems to imply the 'representative' of the *cynn*. Each tribe elected its *cyning* from a 'royal' *cynn*. When Wessex rose to predominance in the 10th cent., these tribal kings disappeared, and the Wessex king was the representative of the Angel-cynn.

The Greek βασιλεύς, the Latin *rex*, the Persian *shāh*, and the Hebrew *melek* present other aspects of the institution. The early Greek ἄναξ is an ethical rather than a political term. In βασιλεύς and *rex* there are proofs of priestly office and survivals of magical duties. The reasons for the abolition of the monarchy by the Romans remain somewhat obscure. It is a remarkable fact that the term *rex* was practically a tabued word ever afterwards. To avoid it, the emperors adopted such designations as *imperator* and *princeps*. The Oriental ideas of a divine king, as exemplified by Persia, China, and Japan, hardly suffice to explain the horror of the Roman attitude. The religious aspect of kingship is to be seen in the Hebrew *melek*.

**1. Origins.**—Anthropological research has lately revolutionized opinion as to the origin of kingly office. Without excluding the elements of leadership, organization, and generalship in war, J. G. Frazer has established by a long array of facts the theory that among primitive peoples it was the medicine-man, the shaman, or public magician who laid the foundations, at least in part, of the kingly office.

'Beginning as little more than a simple conjurer, the medicine-man or magician tends to blossom out into a full-blown god and king in one.'[2]

R. H. Codrington observes of the Melanesian political system:

'The power of chiefs has hitherto rested upon the belief in their supernatural power derived from the spirits or ghosts with which they had intercourse. As this belief has failed, in the Banks' Islands for example some time ago, the position of a chief has tended to become obscure; and as this belief is now being generally undermined a new kind of chief must needs arise, unless a time of anarchy is to begin.'[3]

Here the spiritual and temporal powers are combined in one person. In other cases there is a convergence of the two.

Thus, in New Guinea, 'chiefs have not necessarily supernatural powers, but a sorcerer is looked upon as a chief';[4] and in Matabele land the power of the witch doctors was as great as, if not greater than, the king's.[5]

It is true, in a logical sense, that the dual rule of the pope and the emperor in mediæval Europe is a case of division; historically it was a case of accidental competition, the spiritual power aiming at political ascendancy. This result had been anticipated in lower cultures. Centuries later in date, but ages earlier in evolution, the Pelew Islanders provide an instructive example.

'In some of the islands the god [a man possessed by a divinity] is political sovereign of the land; and . . . is raised to the same high rank, and rules, as god and king, over all the other chiefs.'[6]

Two psychological tendencies may be traced in these elemental ideas about the divine king or human god: a veneration for authority and a belief in magic. The intense feeling of loyalty shown by the Jacobites is a modern instance of the former tendency; popular beliefs about the supernatural power of the pope and even the priest among Roman Catholic peasants are an instance of the latter.

The Siamese language has no word 'by which any creature of higher rank or greater dignity than a monarch can be described; and the missionaries, when they speak of God, are forced to use the native word for 'king.'[1] 'In India every king is regarded as little short of a present god.'[2] Among the Battak of Sumatra there rules a king who is held to be a god.[3] The Sultan of Menangkabau was worshipped similarly.[4] In the South Sea region the same ideas prevailed. The king of Tahiti was identified with the gods of the land.[5]

Frazer's view has its most luminous illustration in the Malay beliefs collected by W. W. Skeat.

'The theory,' he concludes, 'of the real divinity of a king is said to be held strongly in the Malay region. Not only is the king's person considered sacred, but the sanctity of his body is supposed to communicate itself to his regalia and to slay those who break the royal taboos. Thus it is firmly believed that any-one who seriously offends the royal person, who imitates or touches even for a moment the chief objects of the regalia, or who wrongfully makes use of the insignia or privileges of royalty, will be *kĕna daulat*, that is, struck dead by a sort of electric discharge of that divine power which the Malays suppose to reside in the king's person and to which they give the name of *daulat* or sanctity. The regalia of every petty Malay state are believed to be endowed with supernatural powers; and we are told that "the extraordinary strength of the Malay belief in the supernatural powers of the regalia of their sovereigns can only be thoroughly realised after a study of their romances, in which their kings are credited with all the attributes of inferior gods, whose birth, as indeed every subsequent act of their after-life, is attended by the most amazing prodigies." Now it is highly significant that the Malay magician owns certain insignia which are said to be exactly analogous to the regalia of the divine king, and even bear the very same name. . . . It seems, therefore, to be a probable inference that in the Malay region the regalia of kings are only the conjuring apparatus of their predecessors the magicians.'[6]

**2. The supernatural aspect of kingship.**—Turning to special aspects of the curious personal influence which is the prototype of the divinity that 'doth hedge a king,' and to some extent of his political power, we find the primitive king (or tribal or clan chief) to be very often not so much a representative of his people as a puppet responsible for their welfare and the course of nature determining it.

'At Rome and in other cities of Latium there was a priest called the Sacrificial King or King of the Sacred Rites, and his wife bore the title of Queen of the Sacred Rites. In republican Athens the second annual magistrate of the state was called the King, and his wife the Queen; the functions of both were religious. . . . Many other Greek democracies had titular kings, whose duties, so far as they are known, seem to have been priestly.'[7]

Again, Asia Minor in historical times was 'the seat of various great religious capitals peopled by thousands of sacred slaves, and ruled by pontiffs who wielded at once temporal and spiritual authority, like the popes of mediæval Rome. Such priest-ridden cities were Zela and Pessinus. Teutonic kings, again, in the old heathen days seem to have stood in the position, and to have exercised the powers, of high priests. The Emperors of China offer public sacrifices, the details of which are regulated by the ritual books. The King of Madagascar was high-priest of the realm.'[8]

Such cases are complete prototypes of priestly rule as it has occurred in Hebrew and European society, but they derive from the exactly analogous authority of the savage sorcerer, who establishes an unofficial, but imperative, influence over native credulity. The fact is interesting that, where the ruler, either in primitive or in modern times, has not combined religious duties with political office, the credulous public have often treated him as a priest or a god. The fact indicates a more or less

permanent association between authority and supernatural power in the popular mind.

The primitive sorcerer and the primitive 'king,' his successor, were associated with the regulation of natural forces and the course of the seasons. Terms equivalent to 'god' or 'king' are regularly applied to the sorcerer of the seasons, just as his powers are demanded of the political ruler. Responsibility for the social welfare is balanced by social veneration.

'The king of Loango is honoured by his people "as though he were a god. . . . They believe that he can let them have rain when he likes; and once a year, in December, which is the time they want rain, the people come to beg of him to grant it to them."'[1] Among the Wanyoro of Central Africa, 'the great dispenser, he who has absolute and uncontrollable power over the rain, is the king; but he can divide his power with other persons, so that the benefit may be distributed over various parts of the kingdom.' The Barotse on the Zambesi believe 'that a chief is a demigod, and in heavy thunderstorms the Barotse flock to the chief's yard for protection from the lightning. I have been greatly distressed at seeing them fall on their knees before the chief, entreating him to open the water-pots of heaven and send rain upon their gardens. . . . The king's servants declare themselves to be invincible, because they are the servants of God (meaning *the king*).'[2] Rajah Brooke, the English ruler and benefactor of Sarawak, was regarded by his subjects as possessing magical powers for social welfare. 'Once when a European remarked that the rice-crops of the Samban tribe were thin, the chief immediately replied that they could not be otherwise, since Rajah Brooke had never visited them, and he begged that Mr. Brooke might be induced to visit his tribe, and remove the sterility of their land.'[3] To come nearer home, 'it was the belief among the ancient Irish that when their kings acted in conformity with the institutions of their ancestors, the seasons were favourable, and that the earth yielded its fruit in abundance; but when they violated these laws, that plague, famine, and inclemency of weather were the result.'[4]

The last case, among others, indicates that a social inertia has its effect in producing such dependence upon responsible persons. It is so in the relations of people and priest, and of labour and capital. When science is yet unborn, results meteorological are believed to be in the control of human rulers, on the same lines as are social happenings.

The power of the people against the 'king' is very early exemplified. Primitive folk dealing with a defaulting magic-king are not unlike the Commonwealth dealing with Charles I. The difference is one of education.

In W. Africa, 'when prayers and offerings presented to the king have failed to procure rain, his subjects bind him with ropes and take him by force to the grave of his forefathers, that he may obtain from them the needed rain.'[5] If harvest fails in Loango, the king is deposed.[6] 'Fetish kings' are common in Africa; they afford remarkable instances of the combination of religious and civil power. On the Grain Coast there was one who was regarded as 'responsible for the health of the community, the fertility of the earth, and the abundance of fish in the sea and rivers; and if the country suffers in any of these respects [he] the Bodio is deposed from his office.'[7]

Put into modern terms, this is merely dissatisfaction with the government, whose permanent, and in many cases nominal, head is a king.

Popular resentment for failure to fulfil responsible functions has gone further.

'In the time of the Swedish king Domalde a mighty famine broke out, which lasted several years, and could be stayed by the blood neither of beasts nor of men. Therefore, in a great popular assembly held at Upsala, the chiefs decided that King Domalde himself was the cause of the scarcity and must be sacrificed for good seasons. So they slew him and smeared with his blood the altars of the gods.'[8] When the Chukchi suffered from a pestilence, the shamans persuaded the people that the chief must be slain.[9]

3. **Departmental kings.**—The association of sacred or magical functions 'occurs,' says Frazer, 'frequently outside the limits of classical antiquity, and is a common feature of societies at all stages from barbarism to civilisation. Further, it appears that the royal priest is often a king not only in name but in fact, swaying the sceptre as well as the crosier.'[1] It appears that specialization was as familiar to primitive society as it is to us. Kings of rain, of fire, and of water are described by Frazer.

The natives of the Upper Nile acknowledge as 'kings' only 'the Kings of the Rain, *Mata Kodou*, who are credited with the power of giving rain at the proper time, that is, in the rainy season. . . . Each householder betakes himself to the King of the Rain and offers him a cow that he may make the blessed waters of heaven to drip on the brown and withered pastures. If no shower falls, the people assemble and demand that the king shall give them rain; and if the sky still continues cloudless, they rip up his belly, in which he is believed to keep the storms.'[2]

Two famous instances of 'departmental' kings of nature are the Cambodian king of the fire and king of the water.[3] These men have no political authority; 'they are simple peasants, living by the sweat of their brow and the offerings of the faithful.' Accounts vary, however; one avers that they are members of royal families, that is to say, their families are 'royal.' The offices are hereditary—another interesting point. There is a political king of Cambodia who interchanges gifts with those two mysterious personages. They are clearly survivals, and the term 'king' as applied to them is significant.

4. **Royal tabus.**—Where royal tabus are connected with a ruler's daily life and action, the same magical or supernatural functions are to be inferred as existing or surviving. The tabus are intended to preserve not so much the life of the king as his mystic power and communion with the forces of nature—his 'virtue,' or *mana*. In the case of a special language employed when speaking to or of the king, it is not clear whether we have to deal with a mere ceremonial respect for royalty or a real tabu.

The sacred language devoted to the king of Siam includes special terms for his head, feet, and even his breath. Particular verbs are used for sleeping, eating, and other actions.[4] The smallest detail of the life of a king in Loango was regulated by tabus.[5] For the kings of Egypt 'everything was fixed . . . by law, not only their official duties, but even the details of their daily life. . . . The hours, both of day and night, were arranged at which the king had to do, not what he pleased, but what was prescribed for him.'[6]

A widely spread tabu is that the king may not be seen when eating or drinking. Again, the king is confined to his palace, and his face is veiled.[7] The case of the Mikado was an extraordinary instance of tabu.[8] The practice of killing the king is explained by Frazer as due to a desire to prevent his mystic power from decaying,[9] but the subject is still obscure.

The continuity in European civilization of these ideas with the later aspects of kingship is shown by the case of the Athenian βασιλεύς, the Roman *rex*, and others.[10] In England and France the belief that the touch of the king cured scrofula lasted till comparatively modern times.[11]

The theory of the divine right of kings was a recrudescence of the same tendency, but not a

survival. It was a legal theory, chiefly due to Hobbes, and then exaggerated by Filmer.[1]

**5. Division of political and religious kingship.**—The process and causes of the gradual separation of the civil and religious functions of the king have been described by Frazer:

'The burdensome observances attached to the royal or priestly office produced their natural effect. Either men refused to accept the office, which hence tended to fall into abeyance; or, accepting it, they sank under its weight into spiritless creatures, cloistered recluses, from whose nerveless fingers the reins of government slipped into the firmer grasp of men who were often content to wield the reality of sovereignty without its name. In some countries this rift in the supreme power deepened into a total and permanent separation of the spiritual and temporal powers, the old royal house retaining their purely religious functions, while the civil government passed into the hands of a younger and more vigorous race.'[2]

Typical examples are those of Japan, Mexico, and Athens.[3] The W. African practice of having a 'fetish,' or religious, king and a political king seems not to be due to the causes cited above.

**6. Evolutionary importance of the king.**—An interesting aspect of the early evolution of the kingship is its social importance. It has been argued that the rise of monarchy was essential to the emergence of the race from savagery.[4] The development proceeds from the chief of a clan or tribe to the king, generally *primus inter pares*, and not autocratic, of various tribes federated or consolidated into a nation. The case of Wessex is typical. In the Roman world 'king' was a superior title to 'emperor'; mediævalism reversed the precedence. In mediæval times also the nation was often in contrast with the kingdom, the latter being rather the domain of a lord.

Apart from the advantages of organization under one sovereign, various social privileges follow from the institution. Thus the king serves as a general asylum and refuge for the poor, the weak, and the wronged. The appeal to Cæsar and the Haro of the Channel Islands are two cases out of many. The king protects strangers and fatherless children. He is a focus of patriotic feeling.

**7. Intellectual aspect of the early kingship.**—With regard to the primitive religious or fetish king, Frazer observes that such men must have been the ablest. They were not mere fighting men, but medicine-men, dealing with the crude elements of science and art. Carpenter has pointed out that the savage sorcerer, shaman, and medicine-man are very frequently of a type intermediate between the two sexes, and that such types are often credited, and justly, with unusual insight. But for the power exerted by these types, he thinks that social functions would never have broadened out, but that men would have remained hunters and fighters, and women agricultural labourers and managers of the house.[5]

**8. The modern attitude to kingship.**—Since the 17th cent. there has been a tendency to regard kingship as a survival, unsuitable to a democratic political society. America and France have substituted a president of the republic. This involves once more the question of terminology. The president with a veto or casting vote is a king in effect; the king who may only advise is not a king in effect.

**9. Dramatic and mock kings.**—The imitation of kingship in folk-drama and ritual may be a survival from the old religious office and its duties, or merely an assimilation. The extraordinary prevalence of this is illustrated by Mannhardt and Frazer abundantly. It includes the May King, King Hop, King of the Bean, and others. The mock kings, suffering death as substitutes for the real, form a curious problem.[1]

# KING (Egyptian)

**KING (Egyptian).**—A vast subject like kingship in Egypt demands delimitations and eliminations. The Pharaoh, in the Nile valley, was, in a sense, an epitome of the whole life of the nation, and the Egyptian monuments and texts are full of his names and symbols. We need not discuss the historical or administrative aspect of the monarchic institution, or the material life of the king, but shall confine ourselves to a treatment of the kingship of classical Egypt in its religious and ethical bearings.

**1. The religious character of Egyptian kingship.**—From the very first the most striking characteristic revealed by the examination of the titles, names, and prerogatives of the king in Egypt has been the exclusively religious—or rather divine—origin of the various elements involved in the Egyptian definition of monarchy. Even the references to functions or prerogatives of a feudal or military character are, in reality, simple deductions from the divine functions or nature of the monarch. This is true even of things which might at first sight seem to be survivals or reminiscences of historical or political events. Investigation shows that here also the reminiscences are purely mythological in character (*e.g.*, the alleged protohistoric wars from which the king derives some of his titles, or whose anniversaries he celebrates). In fact, there is nothing in any of the attributes or denominations of the kingship (titles, costume, functions, etc.) which might be a survival or indication of the historic modes of formation or of the origins of the monarchy. Some material signs (such as the sceptre [*hiḳū*] of the shepherd people, or the plaited lock, worn exclusively by gods and their royal heirs) enable archæology to outline hypothetical theories regarding the possible origin of the masters who imposed their rule upon the Nile valley; but the texts and monuments yield no information whatever regarding these beginnings; and, as far back as we can go, we find ourselves in the presence of a conception of monarchy which is composed of purely theological elements and based solely upon the assimilation of the king to the gods who are the makers of the world and the mythical founders of Egyptian society. This explains the importance attached by the Egyptians to the power and to the exact utterance of the different names by which they designated the king. These names, taken together, form a kind of *abrégé* of the nature of the Pharaoh, and of the royal attributes.

**2. The divine lineage of the king.**—The various names of the king prove, by all their elements, that the divine filiation of the master of Egypt is as ancient as Egyptian society. The earliest form of Egyptian religion which we can reach by the Pyramid texts and the funerary literature belongs to a period remotely pre-historic. We find here the old 'sky-god,' source of life and death, of rain and heavenly fire. Among his names, that of Horū (symbolized conventionally by the hawk) has given rise to the so-called 'hawk names,' which appear among the most ancient forms of royal names with which we are acquainted—viz. the series of names from the monuments belonging to the Thinite period (Ist and IInd dynasties). These show, when set in order, that the reigning

[1] Frazer, *Magic Art*, i. 11, ii. 84 f., 378 f., *The Dying God*, pp. 149 f., 205 ff., *The Scapegoat*, London, 1913, pp. 218 ff., 307 ff., 313 ff.

king is a form or emanation upon this earth of the Supreme Being—or, more exactly, one of the 'souls' of that Being. The 'hawk name,' probably the most ancient of all those that have been borne by the sovereigns of the Nile valley, persisted to the very end of the nation's history, preserved by the subtlety of successive theologies at the periods when the original 'sky-god' had been replaced by the 'sun-god' as creator of the world. How this has taken place cannot be explained here; it must suffice to say that that ancient name had become, in historic times, what is still called in Egyptian archæology the 'Horus name,' or sometimes (very inaccurately, through the perpetuation of an old error) the 'standard-name' (see below).

The primitive conceptions of the pre-historic Egyptian religions later than the sky-god are found in the titles and epithets given to the king in the very ancient liturgies, and in the protocol of the Thinite monuments. There, where he is called, *e.g.*, 'the two Horū,' or the 'Horū-Siti,' we see a reminiscence of the system which divided the world into two halves, each with its Supreme God, in heaven and on earth. Similarly, the religion of the sky-goddess Nuit, who was believed to have produced the world, first by her own activity, and later by union with the earth-god Sibū, gave the king the name of 'son of Nuit' or 'eldest son of Sibū.' This prepared the way for the assimilation of the Pharaoh to Rā, then to Osiris, according as the successive theologies, reversing the order of the first cosmogonies, have made Rā the son of Nuit, or, on the other hand, the father of Sibū and Nuit, and the grandfather of Osiris. In the last form, the Pharaoh is the successor of Osiris, as the direct descendant of Horus, son of the pair Isis-Osiris. These various assimilations have been justified by an examination of hundreds of Egyptian texts, and may be accepted here. The point which it is essential to keep in mind is that at all periods, and throughout all the cosmogonic religions of Egypt, the outstanding characteristic of the king has always been that he was either an incarnation of the god who made the world or his son (in the literal sense of the word, not symbolically, or by a mystic adoption, but by real filiation). The king of Egypt has thus never been merely a representative or interpreter of the Supreme God, or his 'vicar'; either he is the god himself, manifest upon the earth in a human body in which is incarnate one of the souls of the god, or he is the god's own son.

The form of this affirmation best known to us is the title of Sē Rā, 'son of the sun,' which was inaugurated as early as the middle of the Vth dynasty, under the influence of the priesthood of Heliopolis, and persisted as long as the Pharaonic protocol was in existence (see below).

This divine descent was, as a rule, proved by the ordinary genealogy. From ancestor to ancestor, the reigning king was able to trace back his lineage to the fabulous Menēs, or Mini, the legendary founder of the first human Egyptian dynasty, and from him he went back through the mythical reigns of the Menēs as far as Horus, son of Isis, and son and avenger of his father Osiris, the first king-god of the valley of the Nile. But in certain exceptional cases (of which we possess three or four historical examples), in order to establish his legitimacy indisputably, the Pharaoh seems to have claimed the testimony of a more direct and recent intervention of the Supreme God. Thus (1) in the temple of Luxor for Amenhotep III., (2) in the temple of Deir-el-Bahri for Hatchopsitū, and (3) at Erment for Cæsarion, the bas-reliefs tell how the god himself descended to the earth in order to have union with the queen and himself beget the little prince who should one day reign over Egypt. They also show the birth of the divine scion, the magic charms which accompanied him, and the benediction of the god upon the new-born child when it was presented to him.

To the priesthood of the Nile valley, however, such a conception of the king appeared inadequate. They felt that the kingship must be the final result of all that legendary Egypt had known of divine domination; or, rather, that it meant the total heritage of all that the world contained of the forces belonging to the beneficent gods. Hence the walls of the temples show the king as heir and adopted son of all the great deities of the national pantheon in succession—the great feudal gods of the Nile valley and the chief elementary or stellar gods.

In the case of gods, the king is styled 'well-beloved son,' and he addresses all the gods by the name 'Father.' In the case of goddesses, they make the young king their veritable son by giving him milk from their breast in token of adoption (*q.v.*). Even this accumulation of divinity seemed insufficient to the Egyptians to constitute their god-king completely. The true Pharaoh does not exist, theologically speaking, until he has received, at Heliopolis, all the magico-religious consecrations which transform him into a living incarnation of Rā, the sun-god, creator of the world. The elaborate series of ceremonies employed to accomplish that transformation is well known to us to-day through: (1) the historical inscriptions, such as that of the celebrated Ethiopian conqueror Piankhi, (2) the ritual published in the Pyramid texts, (3) the bas-reliefs and special enactments of the solar temples of Abūsir, (4) the extracts from anointing and coronation scenes sculptured in the great temples, chiefly at Thebes, (5) the statues and statuettes commemorating coronations (notably at Karnak), and (6) the descriptive scenes telling of the 'jubile' feasts of *habsadū* (see below). Finally, the Thinite monuments discovered at Abydos provide evidence that the whole of this ceremonial was already established, in its essential elements, at the Thinite period. Even under the Ist dynasty there appeared scenes of that distant epoch similar to those found in the Greek period upon the walls of the temple of Edfū or other sanctuaries built in Egypt by the Ptolemys.

**3. The royal titles.**—The king, then, is a being constituted by all that, in this world, religion could know of divine forces, governing powers, magic resources, and super-terrestrial science. The enumeration of the many virtues and heritages of the king naturally resulted in the redaction of a long protocol, which was practically an *abrégé* of all the historical and pre-historical sources that had contributed to form such a personage. A king of Egypt had at least five names in the classical period: (1) 'birth-name,' which is his human name, expressing the relation of the reigning dynasty to one or another of the great provincial gods of Egypt (*e.g.*, Thōthmes='Thōth has fashioned him'; Amenhotep='he is united to Amen'); this is the name which is preceded by the epithet 'son of the sun' (Sē Rā) in the inscriptions; (2) the coronation name, preceded by the affirmation of kingship over the world of the north and world of the south by the heraldic figuration of the Reed and the Bee;[1] this name (chosen by

[1] This figuration of the king as heir of the crown of the north and crown of the south is of purely sacerdotal origin, and not historical, resting upon an astrological conception of the division of the world and its forces. It was regarded as figuring a state of things which had actually existed in Egypt, and it has given rise to the idea that at the period anterior to history there had really been two kingdoms in Egypt, one of the north and one of the south, and that they were united under Menēs I. Most scholars seem to have adopted that view, unconsciously instigated, perhaps, by the opinion of the first Egyptologists,

the astrological colleges of priests according to horoscopic indications) materialized, somehow or other, the aspect and attributes of the particular solar soul that came to transform the young prince into a god on the day of his anointing; it was sometimes a long motto expressing the rôle or the energies of Rā in this world (*e.g.*, 'Rā is the lord of the cosmos,' 'Great are the successive becomings of Rā'); (3) the hawk name (*i.e.* sky-god name [see above]); this was enclosed in a kind of panel or rectangle representing a façade of a palace, and surmounted by the hawk, divine Horū; (4) a name called in archæology 'name of the vulture and of Uræus,' intended to express the king's authority, which reached to the extreme frontiers of Egypt, from El Kab to Būlo; (5) a name, often incorrectly called 'golden hawk name,' which, preceded by the figure of a hawk perched on a sign of gold (*nūb*), declares in reality that the king is the heir to the stellar powers who share the two astrological halves of the universe.

To this list, absolutely necessary for the complete title of a reigning king, etiquette usually added a number of almost imperative epithets intended to express aspects or important attributes of the king-god. Sometimes, as heir of the warlike gods, he was called 'Powerful Bull,' sometimes 'the master who can do everything' (Nib iri khitū), or 'Resplendent in his glorious appearings' (Nib khaū). Some of these names expressing the virtues or forces of the kingship bear a curious resemblance to those which describe (or designate) the kings of certain monarchies in black Africa (*e.g.*, the sovereigns of Dahomey or of Benin), and it would be worth while to draw up a list of the possible comparisons. None of these epithets should be regarded (as they too often are) as arising from vanity or grandiloquence, for each corresponds theologically to a very precise definition of a function or force belonging to one or other of the great gods of Egypt.

One of the most characteristic epithets, which, moreover, has not yet been found in any other African religion, is the epithet 'Good God' (Notir Nofirū); it is of constant occurrence, and is one of the most manifest signs of the rôle which the earthly kingship filled in the ideas of the Egyptians (see below).

The laudatory titles and titles of etiquette imagined by the protocol (*e.g.*, 'Double Palace,' 'Sublime Gate,' 'Sun of the two Earths') are too numerous to detail here. One of the secondary epithets of this official phraseology has had a singular fortune. It designates the king by the veiled expression 'Great Dwelling' (=the Royal Residence), the equivalent of which is found in the royal title-list of certain black monarchies of W. Africa. The Egyptian term *pir-aō* has become the word 'Pharaoh,' which served throughout the classical world to designate the king of Egypt.

**4. The earthly counterpart of the gods.**—The sovereign is thus a singularly complex person, whose body contains even more souls (*biū*), doubles (*kaū*), and 'shadows' (*ḫaibit*) than that of ordinary men (see BODY [Egyptian]). These are frequently figured being formed by the gods in heaven, or being suckled at birth by the fairies, or accompanying the king (but distinct from him) in coronation and procession scenes.

As the king of Egypt is a living epitome of all that is divine in the Nile valley, the explanation of his functions is clear. First, he is in every function an earthly image of the various gods, and performs their legendary activity on the earth. In his justice he is Thōth, in his power he is Rā; like the first divine masters of the divine valley, he destroys the enemies of the work done by the ancient gods when they assisted Rā in the conflict against darkness and in the organization of the κόσμος. This view, the very beginning of dualism (*q.v.*), originated in the primitive cosmogony, and was later transformed by the Osirian legend into the myth of the conflict between the partisans of Horus and the bad spirits who were the friends of Set. The Pharaoh is thus heir to the powers and qualities of the good gods, whose powers are symbolized by, and materialized in, the various pieces of the royal costume (sceptres, crowns, necklaces, bracelets, pectorals, girdles, talismans, amulets, precious stones, magic jewels, etc.). These symbolical ornaments probably originated in the same way as the magical disguise worn by heathen fetish-chiefs; they were neither purely priestly tradition nor simply magical in character. The organized theologies ascribed to the royal person a thousand different rôles, implying a thousand traditional moral duties and magical powers. Some of these duties concern war, and perhaps may seem somewhat brutal for our taste; others are as noble as modern thought could desire. Scenes and texts display the king 'as a bull young, ardent, and resistless, which tramples down under its hoofs the enemies of Egypt' (*Hymn of Thothmes III.*), the 'rebels,' the 'accursed,' the 'children of ruin'; as a 'devouring lion'; as a Sūdan leopard; or as a hawk which tears and rends the foreign nations with beak and claws (cf. the Thinite palettes). To each of these representations there is attached a rôle formerly played by the national gods, which the king assumed when he ascended the throne of Horus. The lion, the griffin, the bull, the hawk, and the sphinx are repetitions in painting and sculpture of statements made by hundreds of texts. The king 'treading the nine bows under his feet,' and 'placing his sandals on the head of his foes,' represents an essential side of the perpetual duty of the divine monarch—as essential as the side represented by the expression 'Lord of all order and truth,' or by the figuration, under his throne, of the Nile gods gathering into sheaves the heraldic flowers of the Lotus of the North and the Red Lily of the South. Rā and his friends, the gods, organized the world; their final purpose was the reign of order and the triumph of good. Egypt and its people were the land and people chosen and beloved by the gods; it was, therefore, essential that the son of the gods should be able to bring the work to a successful issue, and this enterprise demanded that strangers, the ungodly, the enemies of Egypt, and all that was hostile to the ultimate triumph of the good should be destroyed or subdued.

That obligation presupposed that in the practice of those virtues by which the conflict for the good is maintained the king should be the pattern for his subjects. The Pharaoh was thus the living image and continuation of that 'Good Being,' called Osiris, who was the first god reigning on the earth in human form. He must maintain order in his kingdom, for administrative regularity is the first condition of material prosperity. He must ensure equal justice for all, protect the feeble, abhor iniquity, and be like a father to his children (as he himself communes with the god 'as a son talks to his father'). He must be Notir Nofirū, the 'Good God.' That in practice the kings of Egypt were not adequate for so noble a task is of secondary importance, and the objection that the reality was remote from the official ideal has little philosophic value. The fact of real importance is

who were more or less influenced themselves by some fugitive connexions with Biblical history. Things took place probably in a less simple manner, and the collection of kingdoms or of pre-historic principalities of which Egypt was formed must rather have passed through phases similar to those of the formation of the modern kingdom of the 'King of Kings' of Ethiopia.

the rise of a human society able at such an early date to express in these outlines the origins and obligations of royal power.

The moral ideal of the nation was consequently, at every step of the social scale, the imitation of the type of perfection incarnate theoretically in the Pharaoh, the son of Osiris. Baillet (see Literature) has shown the importance of that ideal in the evolution of Egyptian ethics and the influence which the moral character of the kingship exercised in the codification of obligations.

**5. Practical results of the kingly ideal.**—This ideal of kingship moulded all the manifestations of religious and public life in Egypt. As son and successor of all the divinities (national or local) of the kingdom, the Pharaoh is by right the chief servitor of the Supreme God (*honūf*) and the chief pontiff of all the priesthoods. In the bas-reliefs of the temples he is figured as the chief officiating priest, and everywhere he is represented in the dwellings of his divine fathers, celebrating sacrifice, offering incense or libations, or consecrating the offering, opening the tabernacle, adoring the divine image, and going in front of his retinue.

He is also the necessary mediator between the gods and men; to him the divine will speaks in divination (*q.v.*) or in dreams (*q.v.*). And he is the depositary of and the surety for the private endowments for the worship of the dead; it is he who explains the invariable title of the *proscynèmes* of the tombs: *sūton dū hotpū* (=royal constitution of the offering).

For the living and the dead the assurance of the royal approval is the supreme recompense. The episode of a dignitary commanded to the palace, arriving at the royal audience, and receiving the eulogy, or honorific distinctions (such as the 'collar of gold') from the divine monarch, is the culminating point of his whole career, and the crowning moment which he wished to have depicted on the walls of his 'eternal abode.' When he appears before the tribunal of Him who is the ancestor of Pharaoh, that will be the decisive proof of his merit for worthy service of the gods. To his children it will be his last message, at once an example and a claim upon the Pharaoh's goodwill. The highest reward which the dead can attain is to receive from the king, in recognition of their services, materials for the rich parts of the tomb (the stela, the sarcophagus, and rare stones to be sculptured into figures of the 'double' of the deceased). The Theban frescoes of Gurneh and Amarna, stelæ, as those of Ouni or Ahmes, tales like the romance of Sinūhit, and the laudatory biographies of every period prove that such ideas existed at the earliest period known to us, and that they persisted throughout the whole duration of Egyptian society.

Finally, the ideal of the Pharaonic kingship explains how, in public law, the god-king is regarded as the only master or possessor of the earth, and the only person who can give valid investiture in any office, fief, or dignity (see INHERITANCE [Egyptian]).

**6. The royal life.**—Since so many divine principles are incarnate in the Pharaoh, the consequences are apparent in his life. He is at once god and man, and thus combines two groups of 'personalities,' which are curiously separated in certain religious circumstances where the man-king worships the god-king—himself. He builds and consecrates sanctuaries in his lifetime to his own 'statues of millions of years' (see, *e.g.*, that of Thothmes III. at Karnak and the relative inscriptions at the temple of Ptah at Thebes); as king he publicly worships his own consecrated images in the temples of his fathers; and he is even seen (*e.g.*, at the Nubian temple of Soleb) coming in great pomp to inaugurate the edifice erected for the worship of his 'souls' (*biū*); the living king, as a mortal prince, renders worship to the immortal fraction of divinity which became incarnate in him on his coronation day, or perhaps even to particles of a solar soul deposited in the human embryo on the very day of its conception in his mother's womb. In the present state of our knowledge this theological distinction is offered with great reserve.

This duality suggests a solution of the very difficult problem of the Egyptian *habsadū*, usually translated by the term 'jubile,' which is only a provisional approximation. Few problems of Egyptology have been so much discussed as the problem of the exact significance of these great solemn feasts. They are mentioned in thousands of temple formulæ, and representations of them exist, more or less abridged, from the earliest Thinite monuments down to the Ptolemaic inscriptions. It is certain that the feast is an anniversary and a repetition of coronation scenes; but, although these ceremonies were the most important of the sovereign's life, there is no precise knowledge of their religious purpose or of the chronological conditions required for their celebration. The Greek term *τριακονταετηρίς* has suggested the idea of a jubile every thirty years, but that is contradicted by repeated celebrations of the *habsadū* sometimes at very short intervals by the same Pharaoh. A recent theory finds in the *habsadū* an 'osirification' of the king, viz. a fictitious death of the sovereign, who returns through a fictitious resurrection for a new reign. That would be the substitution of a simulacrum for a pre-historic ceremony in which the king was really put to death at the end of a certain number of years, because he had gradually lost the divine forces which made him the natural chief of the nation. No positive confirmation of such a practice has been found in any Egyptian text or scene. Egyptologists who are influenced by the examples collected by J. G. Frazer in his *Golden Bough* seem to believe that they have found an explanation of the ideal of kingship in the Nile valley in the practices of the non-civilised races; but the opinion of the present writer is that the *habsadū* was rather a feast whose variable dates were indicated by astrology, and whose purpose was to infuse into the royal person a new particle of divinity, and that the sovereign was not at any time put to death either in fact or in symbol.

**7. Death.**—The destinies of the king, *post mortem*, were equally varied. His human principle received the usual worship offered to ordinary dead men; his tomb, statues, funerary furnishings (at least in part), and sacrifices corresponded to the hypogees and *mastabas* of his subjects. Like the 'doubles' of other men, the 'double' of the king's human principle goes to dwell in the fields of the Osirian paradise, there to work and harvest (see, *e.g.*, the scenes of the temple of Ramses III. at Medinet Habū). His divine principles go in other directions. The solar soul which formed part of his secret essence returns to Rā, the star from which it emanated. The *biū* return to the sky, where they are mingled with the sun, and perhaps accompany the sun in its course across the world and in its conflicts during the twelve hours of its nocturnal journey through the inferna (see, *e.g.*, the frescoes of the royal hypogees of the Bibān-el Molūk). Here we see the adaptation to the solar theologies of more ancient conceptions, according to which the souls of the kings were one by one assimilated to the various stellar gods, as well as to the sun, moon, and planets. In spite of efforts towards unification made by the priests of Heliopolis, the Pyramid texts retain evident traces of the beliefs which are so characteristic of the primitive religions of Egypt. Another divine principle survived on earth, in the temples, where it was worshipped as one of the living forms, or *khopirrū*, of Osiris which had occupied the throne of Egypt.

Finally, as a divine son of Rā (or, later, of Amon-Rā), the dead king became, in the funerary temples raised for his worship, a patron deity, theologically distinct from the ancestor-god, though one of his manifestations. Ignoring these difficult dogmatic subtleties, popular superstition sometimes took possession of these royal funerary cults, and transformed the dead king into a kind of tutelary god, who was an oracle, a healer of sickness, and a protector of the unfortunate. Such has been the case at the sanctuary of Montūhotep

(XIth dynasty) at Deir-el-Bahri and in the celebrated cult of the Statue of the Theban king Ahmes I. (XVIIIth dynasty).

LITERATURE.—The subject is treated throughout the whole expanse of Egyptological literature. The following may more specially be consulted: J. Baillet, *Le Régime pharaonique dans ses rapports avec l'évolution de la morale en Égypte*, Paris, 1913; E. A. W. Budge, *The Book of the Kings of Egypt*, London, 1908, Introduction, pp. xii-lix, *History of Egypt*, do. 1902, vol. i. ch. 2 f., pp. 112-171; A. Erman, *Life in Ancient Egypt*, tr. H. M. Tirard, do. 1894, pp. 58, 78; G. Foucart, *Histoire des religions et méthode comparative*[2], Paris, 1912, pp. 177-216; G. Maspero, *Histoire ancienne des peuples de l'Orient classique*, do. 1895, i. 259-287; A. Moret, *Du Caractère religieux de la royauté pharaonique*, do. 1902; E. Naville, *The Festival Hall of Osorkon II. in the Great Temple of Bubastis*, London, 1892; W. M. F. Petrie, *The Palace of Apries (Memphis II.)*, do. 1909, pp. 5-10, and pls. ii.-ix.; A. E. P. Weigall, *The Life and Times of Akhnaton*, Edinburgh, 1910, pp. 7, 18.

G. FOUCART.

**KING** (Greek and Roman).—I. *GREEK*.—**1. Evolution of the conception.**—The Greeks themselves did not fail to observe the wide prevalence of monarchy during the early history of their race, or to speculate on its origin as an institution. Aristotle (*Pol.* iii. 14, 1285b 6), speaking of the monarchies of the heroic age, makes the suggestion that the founders of a dynasty won their thrones by services performed for the people, either by their eminence in the arts of peace or by their achievements in war; and that the office became hereditary after their death. The view that success in war was the principal avenue to the throne has met with some approval (*e.g.*, A. H. J. Greenidge, *Greek Constitutional History*, London, 1896, p. 14); but, while no inference can be drawn concerning the office from the name βασιλεύς, the derivation of which is unknown,[1] the elevation of a chieftain on account of his warlike prowess implies the existence of an organization to which the royal dignity was already familiar, and the functions performed by the kings of the heroic age indicate that their authority was the result of a more complex development. In another passage (*Pol.* i. 12, 1259b 10), Aristotle draws a comparison between the position of a king in relation to his subjects and that of a father to his children, without attempting to conclude therefrom that the former was a historical product of the latter. The comparison is sound and valuable. The heroic king actually exercised in a wider sphere prerogatives similar in character to the authority which the father of the family wielded over the members of his household. It should be observed, in particular, that the king in his priestly character was associated with the common hearth of the State in the Prytaneum (Æsch. *Suppl.* 376, etc.), which has been identified with the primitive residence of the royal family (J. G. Frazer, in *JPh* xiv. [1885] 145 ff.). Although we cannot trace the process in history, it seems a reasonable inference that, when the separately organized families coalesced into the larger unity of the tribe, the chieftain took over from the patriarch the duties performed and the privileges enjoyed by the latter within his narrower circle; and that the same absorption was repeated on a larger scale when the tribal system in its turn grew into a commonwealth. In *Pol.* i. 2, 1252b 19, Aristotle declares that such was the case, and that the reason why States (πόλεις) were at first governed by kings was that they were aggregates of households which were accustomed to this kind of rule. Further, it seems natural to regard an institution so developed as essentially hereditary, and such was in fact the character of the office in the Homeric age. But recent investigations into the history of the family (see art. FAMILY [Greek]) have shown that the patriarchal system was by no means primitive, and traces of an earlier prevalence of mother-right have been discovered in Greek tradition (W. Ridgeway, in *Cambridge Prælections*, 1906, p. 148). Again, it is certain that the regular succession of the eldest son to his father's kingdom was not distinctive of early Aryan civilization (F. Susemihl and R. D. Hicks, on Arist. *Pol.* iii. 4, 1285a 16 [London, 1894]). It follows, therefore, that the evolution of the kingly office did not proceed from a realized type of household organization, but rather that the development of the monarchy and of the family advanced on parallel lines. The conclusion is fortified by the discovery in Greek custom and legend of another type of monarchy than the heroic, betraying a conception of the royal functions much more primitive and remote. That is the conception of the medicine-man as king, because he possesses magical powers which are employed in due season to maintain the well-being of the community; as one whose period of office is not for life, but for a fixed term, or until his powers decay; as one who ultimately must be put to death, in order that by his death the welfare of his people may pass into the keeping of his more vigorous successor. The classic instance is the priesthood of the *Rex nemorensis* at lake Nemi near Aricia, which has been exhaustively investigated by J. G. Frazer in his *Golden Bough*. Less familiar examples of temporary kingship may be found in the recurring sacrifice at Halus of the eldest son of the Athamantidæ (Herod. vii. 197); in the sovereignty for nine seasons of the divine Minos in Crete (G. Murray, *Rise of the Greek Epic*, Oxford, 1907, p. 127); and in legends like those of Codrus and Menœceus, where one of the royal house is bidden by an oracle to slay himself for the safety of the people. Similarly, reasons have been given for believing that the Dorian kings of Sparta were formerly deposed at intervals of eight years (J. G. Frazer, *The Dying God*, London, 1911, p. 58 f.); or, if not at fixed periods, the king might be punished by deposition, imprisonment, or death, if the crops failed or were spoilt by drought or floods (Frazer, *The Magic Art*, London, 1911, i. 366 f.; cf. *GB*[3] i. 157). In all such cases the king is merely the representative of the vital force of the tribe, and is distinguished from his fellows because in him is concentrated the common heritage of magical power which is available for the control of nature. But, when a higher level of culture is reached in the supersession of magic by the maturer conceptions of law and government, the medicine-man of the savage is succeeded by the legitimate monarch. For the development see Frazer, *Lectures on the Early History of the Kingship*, pp. 35, 81, etc. The manner in which the idea of the king as we know him gradually emerged from the clan-consciousness, as the embodiment in his various aspects of law, of religion, and of individuality, is clearly sketched by F. M. Cornford, *From Religion to Philosophy*, London, 1912, p. 102 ff.

**2. Varieties in the kingly office.**—The various kinds of monarchy with which he was familiar were thus classified by Aristotle (*Pol.* iii. 14, 1285a 1 ff.): (1) generalship for life, typified in the authority of the Spartan kings; (2) the absolute monarchy of the barbarian type, distinguished from 'tyranny' by the permanence of its establishment; (3) 'elective tyranny' (αἰσυμνητεία), exemplified by the rule of Pittacus at Mytilene; (4) the monarchies of the heroic age; (5) an absolute monarchy (παμβασιλεία) after the pattern of domestic economy, in which the ruler is as supreme as the head of a household in his family. The last is Aristotle's designation of the ideal type of kingship, and need not be considered further; nor is it necessary to discuss in detail the αἰσυμ-

[1] For the chief attempts at explanation, with literature, see E. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 115 f.

νητεία, which was an occasional office somewhat similar to the Roman dictatorship.

3. **Heroic monarchy.**—Thucydides (i. 13), when speaking of the establishment of tyrannies, contrasts them with the earlier monarchies, which he describes as hereditary and as enjoying fixed privileges; and Aristotle uses language of an exactly similar character (*Pol.* iii. 14, 1285ᵇ 22). The hereditary element implies a divine ancestor (cf. διοτρεφής, etc.), and may be taken to be a later expression of the traditional divinity of primitive kings (Frazer, *The Magic Art*, i. 387 f.). The sceptre passed from father to son as the symbol of office, and was originally the gift of Zeus (*Il.* ii. 101 ff.). Agamemnon is described as 'most kingly' (βασιλεύτατος, *Il.* ix. 69); but neither this nor the title 'king of men' (ἄναξ ἀνδρῶν), which is given most frequently to him, though not to him alone, signifies that he was other than *primus inter pares* as commander of the whole confederacy. On the other hand, the existence of thirteen kings in Phæacia (*Od.* viii. 390 f.) and the protest against the evils of divided sway in *Il.* ii. 204 f. have been referred to a time when the growing power of the feudal nobility was ousting the earlier supremacy of the overlord (v. Schoeffer, in Pauly-Wissowa, iii. 56). The Homeric king was at once general, priest, and judge (Arist. *Pol.* iii. 14, 1285ᵇ 9). In the first capacity he exercised the power of compelling a levy (*Il.* xxiii. 297), of marshalling his army (ii. 362), and of maintaining discipline to the extent, if necessary, of imposing the penalty of death upon the disobedient (ii. 391 f., xv. 248). As priest the king performed on behalf of his people all such sacrifices as were not specially reserved for members of the priestly caste (Arist. *Pol.* iii. 14, 1285ᵇ 9), and these functions would doubtless be found even more important, if it were possible to trace them still further back. Temples are seldom mentioned in the Homeric poems (P. Cauer, *Grundfragen der Homerkritik*², Leipzig, 1909, p. 296 ff.), but it has been held (v. Schoeffer, *loc. cit.* 58) that the τέμενος was a plot of land assigned to the king (*Il.* vi. 194, etc.) in order to compensate him for the expenses incurred in his religious duties, and that this is indicated by the later universal application of the word to sacred property as well as by the close connexion of the king's house with the oldest sanctuaries (*Od.* vii. 81). Another view (W. Ridgeway, in *JHS* vi. [1885] 335 ff.), however, regards the king's τέμενος as the sole instance of private property in a land-system otherwise organized on the basis of the common field. His duties as judge were the most important of his civil functions. In virtue of these he was the guardian of the 'dooms' (θέμιστες, *Il.* i. 238, ix. 99), a body of common-law precedents, inherited as a privileged possession of the royal house. But his jurisdiction was scarcely wider than that of an arbitrator in private disputes submitted for his decision, and the enforcement of the award seems to have been dependent upon the terms of the submission, if it has been rightly inferred that the two talents mentioned in *Il.* xviii. 507 were a deposit to be paid out to the successful litigant (J. H. Lipsius, *Das attische Recht*, Leipzig, 1905, p. 4). There is no trace of a magisterial control directed to the punishment of crime; vengeance for the wrongs of its members was exacted by the clan (see art. Crimes and Punishments [Greek]). It was customary to make presents to the king in his capacity of judge (*Il.* ix. 155), and this custom, exercised in favour of unworthy recipients, became a fruitful source of oppression and corruption (Hes. *Op.* 39). Similar privileges in the partition of booty (*Il.* i. 163) or of the sacrificial meal (*Il.* viii. 161 ff.) were awarded to the general and the chief priest. The power of the monarch rested more upon custom and personal character than upon his material resources. The influence of the assembly of the commons does not seem to have been great, except in war, when it was necessary to obtain its assent; at other times it was rarely convoked (*Od.* ii. 26). On the other hand, the support of the nobles was essential, whether in the field or in the council-chamber; and it would be easy to collect from the poems instances of their independent or hostile action (*e.g.*, *Il.* ix. 32 ff.). It is thought that the age of the Epics was characterized by a steady growth in the power of the subordinate chieftains (v. Schoeffer, 65), and the opinion is certainly confirmed by the downfall of the monarchies in the succeeding period.

4. **Decay of monarchy.**—Although there are traces of the earlier existence of the kingly power in almost every part of the Hellenic world, in Argos, Corinth, Elis, Arcadia, Messenia, Thebes, and Athens, as well as in the Ionian and Dorian colonies of Asia Minor and the islands, all these monarchies decayed and disappeared in the course of the period extending from the beginning of the 8th to the end of the 6th century. Sparta stood alone in the retention of her kings, but the importance of the exception is, as we shall see, diminished by its special circumstances. The cause assigned by the Greeks themselves for this remarkable revolution in government was that the occupants of the throne became enervated by luxury or were guilty of wanton violence towards their subjects (Plat. *Legg.* 690 D; Polyb. vi. vii. 6–9). The explanation is clearly superficial, and it is hardly more satisfactory to suppose that the kings everywhere sought to extend their power beyond its legitimate limits (A. Holm, *Hist. of Greece*, Eng. tr., London, 1894–98, i. 256). Grote remarked (*Hist. of Greece*, iii. 7) that the need for a single ruler as a bond of union between outlying territories ceased to be felt owing to the smallness of the various Hellenic societies—which also explains why the monarchy continued to exist in the wider areas of Epirus and Macedonia. But Grote's suggestion may be supplemented and extended. The heroic monarchies had flourished in a period of national unrest. After the cessation of the migrations, an era of comparative quiet followed; and the nobles, with their attention concentrated on the local interests of their community, were able to extend their authority against the weakly-supported prerogatives of the king. The same period was marked by the change to city life, perhaps the deepest cause of all those which undermined the power of the monarchies (J. B. Bury, *Hist. of Greece*², London, 1902, i. 73). The course of events was naturally various; but the result was usually not the expulsion of the royal family, but the limitation of the royal power, and particularly its restriction to the sacerdotal sphere, as in the case of the βασιλεύς at Athens. The immediate occasion for the change of government was often afforded by rivalries within the royal house, or by the minority or incapacity of the legitimate heir. The change itself was gradually effected. Thus the royal clan of Bacchiadæ at Corinth supplied the annual πρύτανις for at least a century (Paus. ii. iv. 4); and the Medontidæ at Athens alone enjoyed the decennial archonship (*Paroem.* i. 214). A similar history may be assigned to the rule of the Basilidæ at Erythræ (Arist. *Pol.* v. 6, 1305ᵇ 18) and of the Penthelidæ at Mytilene (*ib.* v. 10, 1311ᵇ 25).

5. **The Spartan kingship.**—This was distinguished from all others by the duplication of its tenure. The two kings belonging to the rival clans of Agidæ and Eurypontidæ, of which the former was accounted the more honourable in virtue of its seniority, both claimed an Achæan as

distinguished from a Dorian origin. There was a curious provision respecting the royal inheritance, according to which the eldest son was not necessarily the heir unless he was also born while his father occupied the throne; otherwise he was excluded in favour of the eldest of his brothers so born (Herod. vii. 3). The traditional account of the double kingship starts with a legend concerning the birth of twins in the royal family (*ib.* vi. 52); but modern scholars are inclined to reject it in favour of the theory that the double kingship arose from the fusion of two separate communities (Busolt, *Gr. Gesch.* i.[2] 546, n. 4; Gilbert, *Gr. Staatsalt.*, i.[2] 4). However this may be, the duality probably contributed to the shrinkage of the royal power which is discernible in the historic as compared with the heroic age. The statement of Aristotle, that the Spartan kings were not much more than hereditary commanders-in-chief of the army during their lives (*Pol.* iii. 14, 1285b 27), is a sufficiently accurate definition of their office, so far as we are acquainted with it from the 6th cent. onwards. Even this power tended to be restricted. Originally capable of declaring war or concluding peace without interference, and possessed of absolute authority in the conduct of a campaign and in the maintenance of discipline (Herod. vi. 56; Thuc. v. 66, etc.), they were afterwards accompanied on all their expeditions by two ephors appointed to act as overseers of their conduct (Xen. *Rep. Lac.* xiii. 5), and from 418 a board of advisers was chosen to control the king's initiative (Thuc. v. 63). There are sufficient indications in their surviving privileges that the authority of the kings had been formerly more extensive than it afterwards became. Apart from complimentary precedence and other rights enjoyed at banquets, sacrifices, and games (Herod. vi. 56 f.), and extraordinary honours paid to them after death (*ib.* 58), the kings possessed extensive domains in the occupation of the περίοικοι, from which they drew the revenues, so that they were accounted the richest individuals in the Greek world ([Plat.] *Alcib. I.* 123 A). The priestly functions of the king were of considerable importance, especially during war, when he conducted the sacrifice on every critical occasion (Xen. *Rep. Lac.* xiii. 2). He also possessed the sole right of consulting the Delphian oracle and of receiving its replies, and was accordingly invested with the power of appointing two delegates called *Pythii*, who became the channel of communication (Herod. vi. 57). The greater share of the civil jurisdiction at Sparta belonged to the ephors, while criminal trials were conducted before the council of elders, of which the king was president. He had, however, sole jurisdiction in claims for the hand of an heiress, and probably in other cases of inheritance. Further, he was competent to deal with disputes concerning the public roads, that is to say, to decide questions of boundaries and rights of way (Herod. vi. 57). The political influence of the kings was largely diminished by the transference of executive authority to the ephors. The king had a seat and vote in the council of elders, with the proviso that if he was absent his vote should be given by the elder most nearly related to him by blood (Herod. vi. 57; Thuc. i. 20). But, in spite of all the restrictions to which his office was subject, a king who possessed military ability was in a position to add to his venerable privileges the exercise of predominant political power.

**6. Various titular kingships.**—In many other Greek States we find the kingly title assigned to priestly or judicial officers, who appear to be the representatives of the former ruling dynasty. For the present purpose the facts may be briefly stated. In most cases we have merely the record of the title, sometimes an indication of the character of the office, but only at Ephesus an express statement that the descendants of Androclus, the founder, continued to bear the title of king with such privileges as the presidency of the games and the right to wear the royal purple (Strabo, 633). The other evidence, which is largely derived from inscriptions, may be divided into two classes according as it refers to a college of kings or to a single official. The former occurs only in connexion with States which had an aristocratic—or originally aristocratic—constitution, so that the 'kings' are the later representatives of the old heroic nobility. The States in question are Elis, Cyme, Mytilene, and Cyzicus. On the other hand, a single 'king' appears as a municipal officer in States where the government of the nobles had been overthrown—a category which comprises Argos, Megara, Chios, Miletus, Olbia, and Siphnos (for the details see Gilbert, *Gr. Staatsalt.*, ii. 272, 323).

**7. The sovereignty at Athens.**—The history of the sovereignty at Athens is obscure. The traditional lists of the Attic kings bear the signs of various influences, and are clearly untrustworthy. This much alone is certain, that the powers of the king were gradually curtailed, until he became a member of the annually appointed college of nine archons, with definite sacerdotal and judicial functions assigned to him. For the tradition which identified the king-archon with the early ruler of the State is scarcely to be doubted. The earliest settlement, known as that of Ion, recognized the division into four tribes, each represented by its tribal king. These tribal kings (φυλοβασιλεῖς) were perhaps an advisory body to the sovereign; in later times we find them still associated with the king-archon as judges in the court of the Prytaneum (Arist. *Ath. Pol.* lvii. 3). The name of Theseus is connected not merely with the unification of the whole of Attica and the centralization of its government under a single king (συνοικισμός, Thuc. ii. 15), but also with a limitation of despotic power which earned for him the title of founder of the democracy (Arist. *Ath. Pol.* xli. 2; Paus. I. iii. 3). The early chapters of Aristotle's *Constitution of Athens* are unfortunately lost, and we have no means of estimating the nature of these reforms, which, though referred to an individual, may have been actually spread over a long period. The royal power was reduced by the participation of others in its functions and by its limitation in point of time. The first change, traditionally ascribed to the feebleness of some of the kings, was the appointment of a war-chief (πολέμαρχος), and the first holder of the new office was Ion, when he took part in the war against Eleusis (Paus. I. xxxi. 3; Arist. *Ath. Pol.* iii. 2). At a later date, variously assigned to the reigns of Medon and Acastus, the office of chief archon (ἐπώνυμος, as giving his name to the current year) was introduced. The reason for his appointment is unknown; Aristotle merely states that his administration was confined to additional (ἐπίθετα) as distinguished from established (πάτρια) functions, and that the subsequent dignity of the office was due to the increasing importance of the former (*Ath. Pol.* iii. 3). The archonships were held at first for life, and subsequently for ten years (*ib.* iii. 1); at a later date (683 B.C.) they became annual. The king-archon was entrusted chiefly with religious duties, especially those of old inherited usage (πάτρια). As a survival from primitive times may be mentioned the mystic marriage of his wife (βασίλιννα) with the god Dionysus, which was celebrated during the festival of the Anthesteria in the βουκολεῖον, the precinct of the god worshipped in bull-form (Arist. *Ath. Pol.* iii. 5; [Dem.] lix. 74 ff.). It should be

added that the *βουκολεῖον*, which was also the residence of the king-archon, was in the immediate neighbourhood of the Prytaneum. The functions of the king-archon may be classed as administrative or judicial. The former comprised the general superintendence of the State religion, and in particular the supervision of priestly appointments, the organization of important festivals such as the Eleusinian mysteries and the Lenæa, and the management, subject to various limitations, of sacred property. The chief of his judicial functions was the presidency of the court in all cases of homicide. It should be observed that this duty is an addition to those assigned to the heroic king; but it is clear that the responsibility must have been imposed before the abolition of the kingship, on the ground that the king was particularly concerned, as representative of the commonwealth, in removing the pernicious consequences of the blood-feud, and, as religious head of the State, in purifying it from the taint of homicide. For a more particular account of the judicial duties of the king-archon see CRIMES AND PUNISHMENTS (Greek).

**8. Epirus, Thessaly, and Macedonia.**—It has already been remarked that monarchy continued to exist for a much longer time among the half-Hellenized States on the northern boundaries of Greece. Thus, the kings of the Molossi, who claimed descent from Pyrrhus, the son of Achilles, and before 400 B.C. had extended their sway over the whole of Epirus, maintained their power until the latter part of the 3rd century. Aristotle attributes the survival of the Molossian kingdom to the limitation of the royal authority, and compares it in that respect with the Lacedæmonian (*Pol.* v. 11, 1313ᵃ 23). We have hardly any means of verifying his statement, but we know that king and people annually exchanged oaths, of submission to the laws on the one hand, and of loyalty on the other (Plut. *Pyrrh.* 5). Shortly before its final overthrow, the king's power was temporarily increased by Pyrrhus, who owed the enlargement of his authority to his popularity with the army. Thessaly never formed a united monarchy, although there is some evidence that in comparatively late times a chieftain was elected as general (*ταγός*) to represent the whole people. Such was the position occupied by Jason of Pheræ (Xen. *Hell.* VI. iv. 28), and possibly by Aleuas and Scopas at an earlier date. But Jason's ascendancy was short-lived, and as a rule the Thessalian tetrarchies were distracted with rival jealousies, especially those of the Aleuads of Larisa and the Scopads of Crannon. The kings of Macedon traced their descent to Temenus the Heraclid. Their constitutional position, so far as it can be ascertained, was analogous to that of the Homeric king, when allowance has been made for the change of circumstances. The king received all taxes and tribute together with the rents of the domain lands, but his power depended upon custom only and upon the strength of his individual character. The nobility were always ready to put themselves in opposition, if the king failed to conciliate or to overawe them; and to this cause must be ascribed the constant struggles for the throne, and the risings of pretenders supported by a party of the nobility against a legitimate heir, if weak and unprotected (see also J. P. Mahaffy, *Greek Life and Thought*², London, 1896, p. 23 ff.).

**9. Later Greek monarchies.**—The career of Alexander opened a new chapter in the history of Greek monarchy. Alexander made himself the successor of the Persian king, whose sovereignty was that of an absolute owner over his chattels (Arist. *Pol.* iii. 14, 1285ᵃ 18). On this model were founded the kingdoms which established themselves after the wars of the Diadochi—those of Egypt, Syria, Pergamus, and Macedonia. Of these the Syrian Seleucids came nearest to the pattern of an Oriental monarchy, from which their rule was distinguished only by its dependence upon Greek resources. The Ptolemys in Egypt were less despotic, partly because they relied upon Macedonian troops for their support, and partly because their government was based upon the semi-Greek city of Alexandria. The Attalids at Pergamus, while retaining the chief power in their own hands, made a show of submitting to the forms of a democracy. The condition of Macedonia remained much as it had been in former days, except that the power of the nobles, many of whom were dispersed in foreign lands, was less adequate for resistance to the encroachments of an ambitious monarch. The Macedonians were a race of soldiers, no less backward in culture than untrained in civil government; and they were always ready to follow a capable leader who understood how to humour them (Mahaffy, p. 231 f.).

II. *ROMAN.*—**1. Nature of kingship.**—The traditional history of early Rome begins with a period of monarchical government; and, although the details partake largely of a legendary character, there is no reason to doubt its general truth. In addition to *a priori* considerations, tradition is confirmed by the survival into republican times of traces of an earlier monarchy, such as the use of the *regia*, or king's house, as the office of the *pontifex maximus*, and the continuance of the titles *interrex* and *rex sacrorum*. We must not, however, add the festival *regifugium*, although this was traditionally explained as a festival held in celebration of the banishment of the kings (Ov. *Fasti*, ii. 685 f.); for it has now been brought into connexion with other sacerdotal flights on the occasion of a sacrifice, which, whatever their real nature, were certainly not the mimic representations of historical events (W. Warde Fowler, *The Roman Festivals*, London, 1899, p. 327 ff.; Frazer, *The Magic Art*, ii. 308–310, and *Lectures on Kingship*, p. 264). On the other hand, it is unreasonable to doubt that the peculiar odium which attached to the title *rex* was inspired by a deep-rooted prejudice, springing from the recollection of the overthrow of a hateful tyranny. The charge of aiming at the throne was the most heinous form of treason, and was as fatal to Sp. Cassius and Sp. Mælius in early times as to Tib. Gracchus and Julius Cæsar in the days of the later Republic.

It will be remembered that the tyrant against whom Brutus conspired was the representative of a foreign dynasty which aspired to establish hereditary power. The native Roman kingship was of a different character. Its patriarchal and primitive origin is attested by the proximity of the king's residence to the hearth of the State—the perennial fire in the temple of Vesta—and to the store-houses under the protection of the Penates (*di penates publici p. R. Q.*), who were housed under the same roof (Tac. *Ann.* xv. 41). Some modern scholars have concluded that the Vestals and Flamens were in the first instance the daughters and sons of the king, who by his direction undertook the duties of kindling and maintaining the sacred fire (Warde Fowler, *op. cit.*, pp. 147, 288). But the king was more than the head of the clan. The genius of the Roman people asserted itself at an early date in the discovery that legal limitations might be imposed upon the exercise of an authority otherwise uncontrolled (*imperium legitimum*, Sall. *Cat.* vi. 6). The king was during his life the sole repository of powers derived from the people, which he exercised subject to the condition that he must act,

not like a slave-owner, but as the mandatory of his free fellow-citizens. Thus the king, while free to follow the inclination of his will, was checked by the conviction that he must act not contrary to, but in accordance with, the law. The people were the source of the law, which could not be altered without their sanction. Thus, as Mommsen has suggested, the constitution of Rome resembled, in some measure, constitutional monarchy inverted.

'In the Roman constitution the community of the people exercised very much the same functions as belong to the king in England: the right of pardon, which in England is the prerogative of the crown, was in Rome the prerogative of the community; while the ordinary operations of government devolved entirely on the crown' (*Hist. of Rome*, Eng. tr., i. 84).

This conception was undoubtedly the outcome of a period of growth, the various stages of which are lost to our view. Our evidence respecting the regal constitution comes from writers who relied entirely upon a tradition incapable of verification; and it is scarcely possible that their accounts have not been coloured by the introduction of features characteristic of a later age.

Our authorities agree in denying that the kingship was hereditary (Cic. *Rep.* ii. 24), and also in the assertion that the king was elected by the people on the proposal of the *interrex*, and with the previously expressed approval of the senate (Livy, i. 17; Cic. *Rep.* ii. 31). The existence of the office of *interrex*, on the one hand, shows that the demise of the crown was not necessarily and immediately followed by the succession of the heir; but, on the other, the nomination of the *rex sacrorum* and of the dictator in later times suggests that free election was not so primitive an institution as the authorities affirm. The view of Mommsen (*Röm. Staatsrecht*, ii. 7, and *Hist. of Rome*, i. 68) is now generally adopted that the king was entitled, if not required, to nominate his successor; and that, if he failed to do so, the duty fell upon an *interrex* chosen from the senate. In either case, however, the approval of the senate was normally, if not necessarily, obtained; and the new king immediately submitted himself to the people, by himself proposing the adoption of a *lex curiata* as the ratification of his assumption of the supreme power (cf. Livy, i. 41). The entrance into office was incomplete until the assent of the gods had been obtained by a formal inauguration, in which the auspices were taken by a member of the priesthood other than the king himself (*ib.* i. 18).

**2. Insignia.**—In virtue of his pre-eminent authority, the king was invested with various insignia of office. Thus, whenever he appeared in public, he was preceded by twelve lictors (Cic. *Rep.* ii. 30), bearing rods and axes as a mark of his continuous right to command (*imperium*) during peace as well as in war. He wore a purple robe known as *trabea* (Verg. *Æn.* vii. 612; Juv. viii. 259), so called because crossed by belts of scarlet (Mayor, on Juv. x. 35); but in general his official dress varied in accordance with the succession of his duties. He wielded the ivory sceptre surmounted by an eagle, wore a crown of oak-leaves fashioned with gold, and occupied an ivory throne (Dion. Hal. iii. 61). He alone rode in a State-chariot within the city walls; and from this custom the *sella curulis* of the republican magistrates was said to be derived (Fest. p. 49). He was endowed with ample domain lands, which were occupied on sufferance (*precario*) and kept in cultivation by the royal *clientela* (Cic. *Rep.* v. 3).

**3. Functions.**—(*a*) The king was the representative of the community in all its relations, including the superintendence of the State religion. For the first organization of the priesthood and the distribution of its duties Numa was traditionally responsible (Livy, i. 20). Accordingly, he is represented as having instituted the appointments of the three chief Flamens (those of Juppiter, Mars, and Quirinus), of the college of Salii, and of the Pontifex, while retaining for himself the administration of the chief religious ceremonies (Plut. *Tib. Gracch.* 15). After the expulsion of the Tarquins, the *rex sacrorum* was appointed to take over the sacred functions personally exercised by the monarch, while the *pontifex maximus* succeeded to the general presidency over the ecclesiastical bodies, which the king had held as chief of the State (for the difficulties in details see Greenidge, *Roman Public Life*, p. 51 f.).

(*b*) In secular as distinguished from religious functions the king was at once the highest civil authority and the supreme military commander. He had no colleague who could interpose a veto; he might, if he chose, delegate his powers, and subsequently resume them at will. The limitations of his authority were established by custom and precedent, followed or created by the holders of the office themselves (Tac. *Ann.* iii. 26). Thus, though the king completely controlled the division of booty and the disposition of conquered land (Cic. *Rep.* ii. 26), he was accustomed to consult the senate, whenever it was practicable, on all matters of foreign policy (Livy, i. 32). An exception would be the making of a treaty which closed a war; for on a foreign campaign it was impossible to postpone a decision until a reference was made to the authorities at home. On the question of a declaration of war it was even usual to obtain the ratification of the people (Dion. Hal. ii. 14).

**4. Delegates.**—Since it was impracticable for the king to perform in person all the duties required of his office, it was usual for him to appoint delegates to represent him, who exercised their functions during the king's pleasure. Chief of these was the *præfectus urbi*, who was left behind in Rome to take over the government during the king's absence in the field. The chief subordinate commands in war were those of the generals of infantry and cavalry (*tribuni militum* and *celerum*). With respect to criminal jurisdiction, we are informed that the more important cases were heard by the king in person, and the less important transferred to judges chosen from the senate (Dion. Hal. ii. 12). Further, it was made a charge against Tarquinius Superbus that he tried cases of serious importance without employing a panel of advisers to assist him (Livy, i. 49). Some scholars hold that such a *consilium* is to be found in the *duoviri perduellionis* (commissioners of high treason), who were appointed by Tullus Hostilius to try the case of Horatius (Livy, i. 26). These, again, have been identified with the *quæstores parricidii*, who are supposed to have existed in the time of the kings (Tac. *Ann.* xi. 22), although Mommsen (*Hist. of Rome*, i. 159) regards the latter as police officers, whose primary duty was to search for and arrest murderers. It has been inferred from the brief account of the trial of Horatius that, though the king might allow an appeal to the people (*provocatio*), he was not bound to do so. According to a statement of Dionysius (iv. 25), the king tried public causes himself, but remitted to others the adjudication of private suits, and in the latter case prescribed the formula by which the competence of the *iudex* was limited. This is the basis of the later distinction between proceedings *in iure* and *in iudicio*, when the prætor had succeeded to the office formerly occupied by the king. The power of legislation was theoretically vested in the people, who were the sole source of law (Dion. Hal. ii. 14); but the initiative was confined to the king, who alone possessed the right of consulting the assembly.

Ant.*[3] ii. 549, and *Roman Public Life*, London, 1901, pp. 42–65.

A. C. PEARSON.

**KING (Indian).**—The Indian kingship is peculiar in that the king belongs to the second—the Kṣatriya, or warrior—of the four great castes, the first and most powerful being the Brāhman caste. Throughout orthodox Sanskrit literature, therefore, a strict distinction is drawn between the priest and the king; anything even approximating to a priest-king is unknown in Aryan India. The king is inferior in position to the priest, who, as has frequently happened in modern times (*e.g.*, in the case of the Peshwas of the Mahratta dynasty), often became practically the real ruler, though nominally only chief counsellor of State.

The essentially administrative character of the Indian king is borne out by his name, *rājan*, 'the director,'[1] cognate with Lat. *rex* and O. Ir. *rí*, 'king' (from the Celtic group is probably borrowed Goth. *reiks*, 'ἄρχων,' and the Germanic group represented by Eng. *rich*), as well as with dialectic Turfān *paṭ-raśtū*, 'ordered, arranged,' Skr. *rāji*, 'line, row,' Gr. *ὀρέγω*, 'I stretch out,' Lat. *rego*, 'I keep straight, guide, rule,' *rectus*, 'right,' O. Ir. *rigim*, 'I stretch out,' *recht*, 'law,' Germ. *richten*, 'to direct,' etc.

Among other synonyms for 'king' are 'lord of men' (*narapati*), 'lord of earth' (*bhūpati*), 'protector of earth' (*bhūpāla*), 'sustainer of earth' (*kṣitibhṛt*), etc. As Indra is the king of the gods, so the king is the 'Indra of men' (*narendra*, *manujendra*, etc.; cf. Böhtlingk-Roth, i. 803), and, although the 'god on earth' (*bhūdeva*) is, properly speaking, the Brāhman, the king is occasionally termed a 'god' (*deva*) or a 'god of earth' (*kṣitideva*; Böhtlingk-Roth, iii. 788). This does not, however, imply any divinity of the king, but merely that he is as much superior to the lower castes—Vaiśyas and Śūdras—as the gods are superior to mankind.

The king, says Manu, 'is a great deity in human form' (vii. 8: *mahatī devatā hy eṣā nararūpeṇa tiṣṭhati*), and, according to *Nārada Dharmaśāstra*, xviii. 54 f., there are eight sacred objects which must be reverenced, worshipped, and circumambulated sun-wise: a Brāhman, a cow, fire, gold, *ghī* (clarified butter), the sun, the waters, 'and a king as the eighth.'

When Brahman created the king, we are told (Manu, vii. 3–7; cf. v. 96) that he took

'eternal particles of Indra, of the Wind, of Yama [the god of justice and of the dead], of the Sun, of Fire, of Varuṇa, of the Moon, and of Kubera [the god of wealth].' This passage receives its explanation in ix. 303–311: the king must shower benefits upon his realm as Indra [the rain-god] sends rain upon the earth; he must be as omnipresent as the wind; he must control all his subjects as does Yama; he must draw revenues from his kingdom as the sun draws water from the earth; he must be brilliant and of blazing anger against crime like the radiance of the fire; he must bind criminals as the fetters of Varuṇa enchain the wicked; he must be as beautiful in the sight of his subjects as is the moon in the eyes of mankind; like the earth—which in this list replaces the earth-godling Kubera—he must support all his subjects. A similar list, omitting Wind, Sun, and Varuṇa, is given in *Nārada DS*, xviii. 26–31.

The object of all this is, however, very explicitly stated to have been 'for the protection of this whole [creation]' (Manu, vii. 3), and it is for this reason that kings are always pure, 'lest their business be impeded' (*Gautama DŚ*, xiv. 45), at least 'while engaged in the discharge of their duties' (*Viṣṇu DS*, xxii. 48), for

'as fire is not polluted even though it always burns the creatures of this world, even so a king is not polluted by inflicting punishment on those who deserve it' (*Nārada DŚ*, xviii. 18); and, moreover, he 'is seated on the throne of Indra . . . for the protection of his subjects' (Manu, v. 93 f.).

Another point of resemblance between the king and a god is that 'through his word an offender may become innocent, and an innocent man an offender in due course' (*Nārada DŚ*, xviii. 52); and the king is named in connexion with the gods in the requirement that a non-Brāhman must take his oath 'in the presence of the gods, of the king, and of Brāhmans' (*Gautama DŚ*, xiii. 13), as well as in the prohibition that a *snātaka* 'shall not speak evil of the gods or of the king' (*Āpastamba DŚ*, I. xi. 31. 5).

The death of a king or an accident to him interrupts the study of the Veda (*Gautama DŚ*, xvi. 32; *Baudhāyana DŚ*, I. xi. 21. 4; *Viṣṇu DS*, xxx. 23); and a *snātaka* may not step on a king's shadow (Manu, iv. 130).

The transfer of guilt in case of royal pardon is a rather striking feature of the Indian kingship. If a thief or other criminal is pardoned by the king, the guilt of the original crime devolves on the monarch (*Āpastamba DŚ*, I. vi. 19. 15 [quoting from an earlier text-book], ix. 25, II. xi. 28. 13; *Gautama DŚ*, xii. 45; Manu, viii. 316), because, if he kills the criminal, 'he destroys sin in accordance with the sacred law' (*Vasiṣṭha DŚ*, xix. 46, quoting from an earlier text-book). If the king grants such a pardon, he must fast a day and a night; if he punishes an innocent man, the length of the fast must be tripled (*ib.* xix. 40, 43).

The association of the king with Indra, already noted, appears again in the statement that the king in whose realm are no criminals 'attains the world of Indra' (*Viṣṇu DS*, v. 196; cf. *Bṛhaspati DŚ*, ii. 38); and we may also note that Soma is the 'lord of kings' and Varuṇa 'lord of universal sovereigns' (*chakravartin* [*q.v.*], *Śatapatha Brāhmaṇa*, XI. iv. 3. 9 f.).

There were, however, in India kings who by no means fulfilled the royal ideal. It is very bluntly declared that wicked kings go to hell (*Quotations from Nārada*, v. 10), and a *snātaka* must not accept gifts from a king who is wicked or a non-Kṣatriya, or, indeed, any king (Manu, iv. 87 ff., 84, 91); yet such was the reverence for the royal office that an attack upon even a wicked ruler was deemed one hundred times worse than the extremely heinous offence of murdering a Brāhman (*Nārada DŚ*, xv., xvi. 31).

Specifically royal tabus were rare in India, practically the only instances being that a king might never stand bare-footed on the ground and might not shave his head for a year after his inauguration (*Śatapatha Brāhmaṇa*, v. v. 3. 1 f., 6 f.).

The ceremony of inaugurating a king (Rājasūya) was very elaborate (cf. especially A. Weber, 'Ueber die Königsweihe,' *ABAW*, 1893; A. Hillebrandt, *Ritual-Litt.* [=*GIAP* iii. 2, Strassburg, 1897], pp. 143–147); but in this, as in the Vājapeya (on which see Weber, 'Ueber den Vājapeya,' *SBAW*, 1892, pp. 765–813; Hillebrandt, 141–143; both the Rājasūya and the Vājapeya are also discussed in art. ABHIṢEKA) and the Aśvamedha (*q.v.*), while the king was regarded as the sacrificer, the actual celebrant was his Brāhmanical representative, his *purohita*, or 'house-priest' (cf. H. Oldenberg, *Rel. des Veda*, Berlin, 1894, pp. 377–379). The Brāhmans were also entrusted with magic charms for the welfare of the king, specimens of these being such hymns of the Atharvaveda

[1] One of the terms for emperor, *rājarāj(a)*, 'king of kings,' is interesting as paralleling the O. Pers. *xšāyaθiya xšāyaθiyānām*, Modern Pers. *shāhān shāh*, 'supreme king' (cf. O. Böhtlingk and R. Roth, *Sanskrit-Wörterb.*, St. Petersburg, 1855–75, vi. 323).

as iii. 3 f., iv. 8, 22, and vi. 98 (cf. the series translated by M. Bloomfield, *SBE* xlii. [1897] 111–133).

Although the early Indian kingship was usually hereditary, there are clear indications that election to royal office was not unknown (Rigveda, X. cxxiv. 8: 'as subjects choosing for themselves a king,' *rājānaṁ vṛṇānā*; cf. VI. viii. 4); and with this may be connected an incident not uncommon in modern Indian folk-tales, and repeated in the Indian stratum of *The Thousand Nights and One Night* (tr. R. Burton, *Supplementary Nights*, London, n.d., i. 323), where the hero, wandering to a city whose king has just died, is singled out by one of the royal elephants, whose choice is regarded as a divine indication that the stranger is to be the next monarch.

In view of the inability of the Indian king to sacrifice or to take any other active part in religious rites, it is very significant to observe the rôle which is ascribed to him, particularly by the Upaniṣads, in the development of philosophy. Thus King Aśvapati Kaikeya instructs five learned Brāhmans concerning the nature of the Ātman Vaiśvānara after their fellow casteman Uddālaka Āruṇi had been unable to solve their perplexities (*Chhāndogya Upaniṣad*, v. 11–24; cf. *Śatapatha Brāhmaṇa*, X. vi. 1); Pravāhaṇa Jaivali, prince of Pañchāla, teaches two Brāhmans the nature of Ākāśa (*ib.* i. 8 f.) and also explains to Śvetaketu, Uddālaka's son, the nature of metempsychosis (*ib.* v. 3–10, *Bṛhadāraṇyaka Upan.* vi. 2; cf. also *Kauṣītaki Upan.* i.); and the great Vedic scholar Gārgya Bālāki, after repeatedly failing to elucidate the nature of Brahman, receives the solution from King Ajātaśatru of Kāśī (*Bṛhadāraṇyaka Upan.* ii. 1, *Kauṣītaki Upan.* iv.). Considering this, it may well be that, as P. Deussen maintains (*Philosophy of the Upanishads*, tr. A. S. Geden, Edinburgh, 1906, p. 19 f.; cf. also R. Garbe's little essay on the origin of Indian monism in his *Philosophy of Ancient India*, Chicago, 1897),

'the doctrine of the ātman, standing as it did in such sharp contrast to all the principles of the Vedic ritual, though the original conception may have been due to Brāhmans, was taken up and cultivated primarily not in Brāhman but in Kshatriya circles, and was first adopted by the former in later times'; and that this teaching 'was fostered and progressively developed by the Kshatriyas in opposition to the principles of the Brāhmanical ritual.'

We must also remember, in this connexion, that the two great heterodoxies of India—Buddhism and Jainism—proceeded from the Kṣatriya caste, and that Buddha was himself an heir apparent (*yuvarāja*), being the son of Suddhodana, king of the Śākya clan in Kapilavastu.

LITERATURE.—The chief references are given by M. Winternitz, *s.v.* 'King (*a*) in India,' *SBE* l. [1910] 322–324; cf. also H. Zimmer, *Altind. Leben*, Berlin, 1879, pp. 162–168; W. Foy, *Die königliche Gewalt nach den altind. Rechtsbüchern*, Leipzig, 1895.

LOUIS H. GRAY.

KING (Iranian).—The kingly office has always played a most important part in Iranian history and religion from the earliest times, both in the ancient Persian Empires and in the Mazdean religion. Indeed, to the Greeks the Persian monarch was known simply as *βασιλεύς*, or *ὁ μέγας βασιλεύς*, as constantly in Herodotus, Æschylus, and other classical writers. 'The Great Kings' styled themselves *khshāyaθiyā khshāyaθiyānām* ('King of Kings')—a title which has been perpetuated through the centuries to the present day, when the non-Iranian Persian sovereign still boasts the proud, though empty, title of *Shāhān Shāh*, which is merely the modernized form of the ancient title. Nowhere has royal power ever been more exalted or more absolute than in successive monarchies of both ancient and modern Irān. It is a curious fact, therefore, that, in strong contrast with so many of the ancient religions, there is no certain trace of 'king-worship' or of divine genealogies in any of the ancient Iranian dynasties, whether historical or legendary[1] (on 'king-worship' see C. Lattey, *Ancient King-Worship*, London, 1910; also E. Kornemann, *Zur Geschichte der antiken Herrscherkulte*, Leipzig, 1901). This is a necessary result of the practical monotheism of the Mazdean religion, in all its various forms. We have just indicated the distinction between the 'historical' and the 'legendary' dynasties in ancient Irān. By the former is meant, of course, the well-known great Persian Achæmenid monarchy of Cyrus, Darius, and their successors, familiar to us from the Greek historians and, in modern times, from their own famous rock inscriptions, which have thrown a flood of light upon both the political history of their reigns and the form of Mazdeism which they professed (see art. BEHISTŪN). Small and monotonous as is this 'literature,' it is distinguished by the deeply religious note that rings throughout, incessantly repeating the declaration of a burning faith, in which we have evidence of a sincere piety shown towards 'the great God,' the one God of the king and of his people. No question can be raised as to the religion professed by these kings, at least Darius and his successors, for we find that Darius, in the great Behistān inscription, adopts, with a sense of the deepest satisfaction, the title of 'Auramazdean'—proudly declaring:

'As an Auramazdean I swear (? or proclaim) that this is true' (*Dar. Bh.*, col. 4, § 57).

There is no mistaking the attitude of these old Persian kings; there is no claim to divine ancestry, as in the case of the Egyptian monarchs or Alexander the Great, nor to any apotheosis after death, as in that of the Roman Emperors, but the pious expression of the most absolute dependence upon Auramazdā, the one God. By his will or divine grace kings are allowed to reign ('per me reges regnant'); thus Darius exclaims:

'By the will of Auramazdā I am king' (*ib.*, col. 1, §§ 5, 6).

By the same will the nations are made subject to him:

'By the will of Auramazdā, these nations have become my slaves and my tributaries' (*ib.*, § 7).

It is Auramazdā who gives to kings all their power:

'Auramazdā has invested me with sovereign power' (*ib.*, § 5).

A true Lord of hosts, it is he that gives the victory in battle:

'By the will of Auramazdā I put to flight the army of Nidintu-Bel. . . . I took possession of Babylon. . . . I defeated the armed bands of the rebels,' etc. (*ib.*, §§ 18–20; col. 2, § 26, etc.).

In a word, everything depends absolutely on the divine will:

'Everything that I have done, I have done, without exception, by the will of Auramazdā' (*ib.*, col. 4, § 62).

In another place, referring to his conquests, the king says:

'That which has been done, I did it all by the will of Auramazdā' (*Naqsh-i Rustam*, a, § 5).

It is a remarkable fact that, when we turn to that form of Mazdeism which is preserved in the Avesta, the sacred book knows nothing of the great Persian monarchs, Cyrus, Darius, Artaxerxes, and the others of the Achæmenid dynasty, whose names are so familiar in history. It knows, on the contrary, other great dynasties—the Pēshdādian and the Kayanian—utterly unknown outside of the Avestan literature and the folk-legends preserved in the poetry of later Persia, especially Firdausī. The legends of those dynasties are, of course, largely mythical. The first royal house, whose date, as usual, is thrown back to a fabulous antiquity, began with Haoshyanga (the later Hōshang), said to have ruled over the *daēvas*, or demons (probably the non-Iranian tribes), under

[1] But see Spiegel's view in Literature, below. There is, however, reason to believe that the Iranian kings were sometimes put on a plane with the gods, as in *AS*, Aug., i. [1867] 838; see also A. Rapp, *ZDMG* xx. [1866] 118 f.; E. Wilhelm, *ib.* xl. [1886] 108.

whose reign metals were first discovered and worked. His successor, with the very totemistic name Takhma Urupa ('strong fox,' the later Tahmūraf), taught his subjects how to use skins for clothing, to hunt, and to tame domestic animals, and caused them to be taught by the 'demons' the art of writing, but fell away into idolatry, and was slain by the evil spirit Ahriman. His successor was the great hero Yima Khshaēta (the later Jamshīd, familiar to readers of Omar Khayyām), who plays in the Avesta the part of both an Adam and a Noah, and is connected with the 'Great Winter' that so strikingly corresponds with the Noachian Deluge. He was overthrown by the demoniacal monster Azhi Dahāka, the later Zohāk. After the latter's usurpation, the national revival took place under the most celebrated of these ancient heroes, Thraētaona (the later Farīdūn), who is spoken of as 'king of the earth,' and whose successor was Manushchithra, the later Minochihr. A later dynasty, that of the Kayanians—perhaps a Bactrian dynasty—derived their name and descent from Kai Kobādh (Av. Kavi Kavāta), followed by Kai Kāūs (Av. Kava Usa), Siyāvash (Av. Syāvarshan), Kai Khosru (Av. Husrava), Lohrāsp (Av. Aurvaṯ-aspa), and, finally, Gushtāsp (Av. Vishtāspa), in whose reign appeared the great Prophet Zarathushtra, who converted the king and his court.

Although these kings are no doubt largely legendary, and although the accounts of their reigns contain much that is mythological—indeed some of the names suggest Vedic or, rather, Indo-Iranian prototypes—still it is not improbable that some degree of historical truth underlies many of their legends. It may very well be that some of these dynasties, whose names and exploits are preserved either in the Avesta or in popular tradition, were the ruling families of different Iranian tribes, whether in Media, Bactria, or other regions outside of Persia proper; or that some of them may have been contemporaneous with one another, if not with the Achæmenid Empire. It is a remarkable fact that the Avesta itself knows nothing of the last-mentioned great dynasty. The great national Persian poet, Firdausī, in his epic, the *Shāh-nāmah*, ingeniously co-ordinates all these various dynasties from the earliest legendary hero-kings right through the historical Achæmenid era down to Alexander the Great. This skilful manipulation of legend, folklore, and sober history was necessary for the unity of his epic, but, of course, cannot be regarded as corresponding to historical facts.

Although no divine character was attributed to Iranian royalty, still there is one peculiar attribute of a supernatural character with which the Avesta endowed its kings, and also its prophets. This was the so-called *khvarenō*, which was regarded as a kind of effulgence or bright glory that attached to the kings, but could be forfeited by moral evil.

'It was a mythical talisman which belonged essentially to the royal house of Iran, though it vanished with Yima's sin, flying away in its three successive manifestations in the form of a bird. . . . The Glory can be seized by no sinner' (J. H. Moulton, *Early Zoroastrianism* [*HL*], London, 1913, p. 276; we need not enter here into the author's discussion of the relation of the *khvarenō* with the *fravashi*).

Under the Old Persian form *farnah*, the word occurs in several well-known proper names, and even in Media, more than a century before Cyrus. The prophet Zarathushtra was also endowed with this *quasi*-divine splendour, and at the end of the world it is also to be the attribute of the Saviour Saoshyant.[1]

After the conversion of the monarch and the royal house to the Zoroastrian reform, the king of Irān was regarded in the religious system of the Avesta and the later Mazdean literature—in accordance with the favourite 'dualism' that all through has characterized Iranian thought (see DUALISM [Iranian])—as supreme head of the material or civil world, whilst the prophet Zarathushtra (and his successors, who enjoyed as a title the curiously formed superlative 'Zarathushtrōtema') was the corresponding supreme head in spiritual things. This is expressly laid down in the *Dīnkarṯ*, where it is said that the 'spiritual medicine' which depends upon 'the Good Law' (*i.e.* the Mazdean religion) is 'rendered more excellent by the rule of Master of the Worlds, the King, and of the Spiritual Director of the worlds, the Zarathushtrōtema' (*Dīnk.*, ed. P. B. Peshotan, Bombay, 1874 ff., vol. iv. ch. 157, § 4, tr. Casartelli, Louvain, 1886). This is of a piece with the frequent distinction between *ahu* and *ratu*, when meaning respectively 'prince' (or temporal ruler) and 'spiritual guide' or 'priest' (though at times the terms have other significations). It also corresponds exactly with the positions assigned respectively to *pāṯōkhshāyīh* (sovereignty) and *dīno* (religion), the one on the 'material' (*stīhīk*) and the other on the 'spiritual' (*mīnōīk*) side of the curious table of the *Dīnk.* (vol. iv. ch. 137), cited in the art. DUALISM (Iranian). The Pahlavi translator of *Yasht* i. deduces from § 8 of the hymn that 'a man is not fit to be a king unless he possesses twelve virtues' (quoted by J. Darmesteter, *SBE* xxiii. [1883] 25).[1] As to the relations of the subjects to their king, J. J. Modi has lately published an interesting little volume (*Moral Extracts from Zoroastrian Books*, Bombay, 1914), in which he has a section (pp. 8–10) on 'Obedience to the King' as one of the chief virtues inculcated by Zoroastrianism.

Referring to Herodotus (i. 132, on the duty of prayer for the king, and viii. 118, for an instance of heroic loyalty), he quotes a striking prayer for the king[2] from *Āfrīngān*, i. 8-12; and of later authorities he cites: 'Be always truthful and obedient to your Kings' (*Paivand-nāmah*); 'O almighty God, give a long life, a happy life, and a healthy life to the ruler of our land' (*Tan-darustī*); 'Commit no fault against Kings and chiefs'; and again, 'Speak no evil against the rulers of the land, for they are the guardians of the land and through them prosperity flows upon earthly beings' (*Pand-nāmak-i Āṯūrpāṯ-i Māraspandān*, §§ 66, 108, following de Harlez's version in *Muséon*, vi. [1887] 66–77).

All this is quite in accordance with the ethics of the Achæmenid inscriptions, for in them the chief of all evils that are stigmatized is 'falsehood' (*drauga*, 'the lie,' whether personified, as Moulton surmises [*op. cit.* p. 1], and so equivalent to the Avestan name of the evil spirit, or merely an abstract noun); and it is to this evil that rebellion against the king is attributed.

Darius tells us that during Cambyses' absence in Egypt 'the people became hostile, and lying became widespread in the land' (*Dar. Bh.*, col. 1, § 10). In another place the same king, relating how a rebellion had taken place in many of the provinces of his vast empire, states that 'these provinces had broken into rebellion; it was lying that had made them rebellious' (*ib.*, col. 4, § 54).

Every time that a usurper rises up against the lawful sovereign it is said, 'He is one that lies' (*adurujiya*, from the root *duruj*, *druj*)—a phrase that constantly recurs. On the other hand, despotism and cruelty on the part of the sovereign are also considered as great crimes. Thus does Darius break forth with pride and say:

'Auramazdā has brought me help . . . for I have been neither a liar nor a tyrant' (*Dar. Bh.*, col. 4, § 63 f.).

In spite of such grandiloquent professions, however, the gruesome cruelties inflicted by the Iranian monarchs throughout the ages are only too well known, and it has been surmised, not without good reason, that the shockingly barbarous punish-

[1] On *khvarenō* see E. Wilhelm, 'Hvarenō,' in *Sir Jamshetjee Jejeebhoy Zarthoshti Madressa Jubilee Volume*, Bombay, 1914.

[1] Darmesteter's translation of *Sīrōzah*, i. 9, making Nairyōsanga, the divine messenger of Ahura Mazda, to 'reside in the navel of the King,' seems quite untenable (see C. de Harlez, *Avesta traduit*[2], Paris, 1881, ii. 597 n.).

[2] Other translators, *e.g.* F. Wolff, Strassburg, 1910, take the supplication as being in favour of the speaker himself.

ments detailed in the *Inferno* of Ārṭā-ī Vīrāf, the 'Persian Dante,' are but too faithful a picture of those practised at the Persian court (see Casartelli, 'The Persian Dante,' in *Jamaspji Memorial Volume*, Bombay, 1914).

Anyhow the Avesta itself draws a sharp distinction between good and bad kings.

'May good Kings rule over us, not bad Kings, O Armaiti' (*Ys.* xlviii. 5).

Especially those rulers who were hostile to the Prophet and his reform are denounced and condemned to eternal perdition; amongst them is mentioned by name one Grēhma (*Ys.* xlvi. 11, xlix. 11, xxxii. 12–14).

A word must here be said of the relations between the royal dynasties and the national religion. As we have seen, there is no doubt about the religious convictions of the great Achæmenid kings—at least after Cyrus, for his religious position is still doubtful. They were professedly and devoutly Mazdeans—though the present writer is by no means yet convinced that they were Zoroastrians in any sense (see his *The Religion of the Great Kings*, London, 1910; *per contra*, the very striking arguments of Moulton, *op. cit.*, especially p. 40 ff., are deserving of careful consideration). The Avestan legend represents the Vishtāspa of the Kayanian dynasty and all his royal house as converts of the Prophet, the king playing the part of a Constantine or an Ethelbert. Coming back again to later and historical times, the relations of the Arsacid or Parthian dynasty (250 B.C.–A.D. 225) to the faith are unknown or obscure. The Sasanian kings (A.D. 226–651), however, were so fully and completely Zoroastrian that they made the Avestan system, in the greatly modified form in which it then existed, the State religion, and did not shrink from religious persecution in its defence or interests. It was under Shāhpūr II. (A.D. 350–438) that, according to the tradition, our present Avesta, *i.e.* whatever was left of the original scriptures after Alexander the Great's destruction of the greater part, was collected, revised, and corrected by the efforts of his great prime minister Āṭūrpāt-ī Mārāspandān, whilst under his successor, Yazdagird II., the edict of his minister, Mihr Narseh (A.D. 440), played an important part in the religious life of the country. In the *Dīnkarṭ* (vol. i. ch. 28) we find the categorical assertion that 'the law of Irān is the Mazdean religion' (*Aīrāno dāṭo dīno Mazdayasno*), which, together with other indications, has always seemed to the present writer to point to the *Dīnkarṭ* as essentially of the Sasanid era.

LITERATURE.—In addition to writers quoted in text, W. Geiger, *Ostīrānische Kultur im Altertum*, Erlangen, 1882, p. 425 ff.; F. Spiegel, *Erânische Alterthumskunde*, Leipzig, 1871–78, esp. iii. 596 ff., where he endeavours at some length to prove that the ancient Iranian kings *did* claim divine parentage, probably from Mithra; E. Wilhelm, 'Königthum und Priesterthum im alten Erân,' *ZDMG* xl. [1886] 102–110.

L. C. CASARTELLI.

**KING (Muslim).—I. Sovereignty.**—Originally in Islām the conception of sovereignty was directly theocratic. There was no doubt on this point. Muhammad ruled in the religious order, the military order, and the judicial order; and in each of them his authority was accepted without dispute. Neither he nor any of his adherents seems to have thought of analyzing or dissecting sovereignty. They regarded it as divine in its source; Muhammad possessed it not as elected by men, but as a prophet sent by God. Originating thus, it was both integral and absolute.

This conception continued during the period immediately after Muhammad, which is called 'the perfect Khalīfate.' The first successors of the Prophet did not, indeed, regard themselves as real sovereigns, that position belonging to the Prophet alone. They called themselves 'lieutenants,' which is the meaning of the word *khalīf*.[1] In practice they preserved their sovereignty in the military order; but in the religious and judicial orders the Qur'ān, which is regarded as perfect, had fixed the law, at least in its most important points. The Khalīf had nothing to add, and sovereignty in these matters passed into the hands of specialists, whose duty it was to criticize the texts, and to develop and apply the principles.

After the Arab conquest the Muslim Empire was immense; and, as it included regions and cities of advanced civilization, administration became complicated and difficult, and the Khalīf had to delegate a large part of his sovereignty to ministers. These were known at first by the modest title of 'vizīrs' (*chargés d'affaires*). They were of considerable importance in the Empire; it might even be said that some of them were the real sovereigns, until the day when they were crushed by a caprice of their master. Vizīrs played an equally important rôle in the Osman Empire after the Turkish conquest.

Towards the end of the history of the Arab Khalīfate, during its decline, the general state of the Empire was very unsettled, and the military element assumed predominance over the administrative. The Khalīf, his power gone, was confined in his palace, and the actual authority was exercised by the chief guards, generally Turks and sometimes eunuchs.

In the feudal period authority was divided and subdivided just as in the West, but in a less systematic manner. The Khalīf had now only a theoretical power; princes of various races formed kingdoms for themselves out of the dismembered Empire, and arrogated to themselves a sovereignty *de facto*, which was no longer of a theocratic character, but was based on strength of arms. The dynasties which they founded have been of comparatively short duration. The Osman Sultans constituted a stronger unity in Islām than that which existed under the Arab Khalīfs. Their power was absolute, except that they were required to respect the law of the Qur'ān and its interpreters (*muftī*, *'ulamā*, etc.), and were dependent on the fidelity of the troops. This despotic regime has lasted even to our day.

In Turkey at the present time the sovereignty resides in the Parliament, and the Sultan is only a constitutional monarch—a system which brings the Ottoman Empire into line with the other States of Europe, but which it is difficult to reconcile with the principles and the spirit of Islām.

**2. Legitimacy.**—The legitimacy of the Khalīf does not exactly depend on the manner of his election or on a law of succession; it is derived from the proclamation of the people. This proclamation consists in naming the sovereign in the Friday sermon (*khuṭba*) in the mosques, and in praying for him. When mention of a Khalīf has thus been made, without arousing protests, in the cathedral mosque of the capital of the Empire, this Khalīf is regarded as legitimate.[2]

[1] The title *khalīf* was borne by the first four successors of Muhammad, by the Umayyad and 'Abbāsid dynasties, and, among the Shī'ites, by the Fāṭimids. The title *imām*, denoting 'president,' was in use among the sects which recognized the right of the descendants of 'Alī. The title *amīr al-mu'minīn*, 'commander of the faithful,' was given to the Arab Khalīfs; it had been used, even during the life of the Prophet, by one of his lieutenants in the year 2 A.H. As for the title 'Sultan,' it was in use among such secondary dynasties of the Middle Ages as the Ḥamdānids, the Būyids, the Ṭūlūnids, and the Ghaznavids from the end of the 9th century. It was the title of the celebrated Saladin (Ṣalāḥ ad-Dīn), of the Ayyūbid dynasty.

[2] The ceremony of proclamation is called *bī'at*. Among the Osmans it is renewed every year in the festivals of the Bairām, under the name of *muayad*. The *shaikh al-islām*, in these ceremonies, kisses the front of the Sultan's robe, and, raising his eyes towards heaven, prays for the prosperity of the Empire, and for the preservation of his Highness. The Sultan

A legitimate sovereign might be deposed. Among the Osmans deposition is regarded as just when it has been authorized by a *fatwā*, *i.e.* by a decision of the *shaikh al-islām*.[1]

The mode of succession of Muslim sovereigns varied. Muhammad had given no rule. Abū Bakr, his first successor, was chosen by the most influential party in the Muhammadan community; 'Omar was designated by Abū Bakr; Othmān, by electors whom 'Omar had named; the election of 'Alī was contested, and led to civil war; with Mu'āwiya the dynastic rule was established, first in the family of the Umayyads. Even within the dynasties the order of succession was not always constant. Sometimes the Khalīf chose one of his sons as his heir apparent; *e.g.*, the famous Hārūn al-Rashīd designated three of his sons with entail. The first of the three, Amīm, wished to oust the second, Ma'mūn; but the latter revolted and Amīm was beaten and killed. Among the Osman Sultans it is rather the brother who succeeds; and it has often happened that a Sultan, on his accession, has put his brothers and nephews to death. Formerly the Empire was divided among the brothers, especially in the Middle Ages. This was the case with the Būyids in Persia.

In principle the Khalīf, who was the president of the entire Muhammadan community, had to be of the Quraish race; but that was not the case with the Osman Sultans. In order to legitimatize them, it was admitted that they had inherited rights from the ancient Arab Khalīfs when, in the time of Salīm I., they conquered the sacred cities Mecca and Medina.

Among the Shī'ites the idea of legitimacy presents a rather peculiar religious character. Founding their belief on certain traditions, they hold that Muhammad had designated 'Alī as his successor, and in their eyes all the Khalīfs except 'Alī and his descendants are illegitimate. This belief has given rise to many troubles in the history of Islām. Secret societies have been formed and have long worked for the succession of the 'Alī dynasties; they succeeded in establishing the famous Fāṭimid dynasty in N. Africa and Egypt, thus named from Fāṭima, the daughter of the Prophet and the wife of 'Alī, from whom it claimed to descend.

The Mahdist idea is developed in the sects which maintain the rights of 'Alī. The Mahdī, a sort of king-prophet and expected Messiah, who is to perfect religion and to begin in the world an era of happiness, is to be of the family of 'Alī. The so-called sect of the Imāmites had a curious idea about him: they believed that the Mahdī, also named *imām*, was to be the twelfth descendant of 'Alī. The latter being dead, having disappeared at an early age, this sect professes that he continued to live a mysterious and endless life, from which he will return with glory when his hour is come. The time during which the Mahdī is to remain hidden is called the period of 'occultation' (cf. Carra de Vaux, *Le Mahométisme*, Paris, 1898, p. 134).

**3. The status of the sovereign.**—The power of the Khalīf is absolute within the limits of the religious law. Theoretically, he might dispose of the land and revenues of his Empire. The principle is that the soil belongs to God, and consequently to the Sultan, who is His mandatory. The Sultans, however, had a private estate, which was always of a considerable size. Thus under Sulaimān the Magnificent the private estate of the Sultan produced a revenue of five million ducats, while the general revenues of the Empire were only a little more than nine million ducats. This Sultan reserved to himself the right of granting the great fiefs; and, as a result of the same principle, confiscations were easy and remain so to this day.

As regards taxes, some are prescribed by the Qur'ān; such are the tithe for Muhammadans and the poll-tax for non-Muhammadans. Others are administrative taxes, which long ago acquired a certain regularity, and are therefore called *ḳānūni*, *i.e.* 'regular'; such are taxes on marriages, law dues, transit and warehouse dues, and stamps. Besides these two kinds of taxes, the Sultan, under the old regime, reserved the right to impose as many as he pleased. Under Sulaimān the Magnificent imperial offices were sold, but not military offices.

Until 1877 the Sultan drew as he pleased on the Treasury for the needs of his ḥarīm. At this time, of eight million Turkish pounds that the budget produced, two-thirds passed to the palace. The Sultan published budget estimates, but he began by deducting his share of the receipts. He had, however, a civil list, which had been established since 1855; at first it was £1,200,000, but was reduced afterwards to £800,000. The property left to the mosques, as pious foundations, called *waqf* property, escapes the sovereignty of the Sultan, and is inalienable.[1] It forms an important part of the imperial territory.

Until the recent revolution, which made him a constitutional monarch, the Sultan naturally had the right of declaring peace or war. He has always preserved the right of commander-in-chief of his armies. He had the right of life and death even over the greatest personages in his Empire. When one of his old favourites who had fallen into disgrace received the noose with which he had to strangle himself, he accepted it as an order legitimately given, and as one which his conscience commanded him to obey. The Sultan was recognized to have the right to make subjects 'disappear,' to dispose of the life of his wives within his palace, and even to order massacres. The religious system of Muhammadanism does not condemn the massacres either of the Janissaries or of the Armenians.

Islām has a special law for the sovereign regarding wives. According to the Qur'ān (xxxiii. 52), he might have nine legitimate wives, all other Muhammadans having only four.

**4. The ethics of the sovereigns.**—There exist in Muhammadan literature several important treatises on the ethics of kings. One of the greatest philosophers of Islām, Fārābī († 950), wrote a treatise on the 'Model City,' in which he represents the princes as wise men, whose principal thought must be to prepare their subjects for the happiness of the other life. This theory, devoid of any practical character, is only an adaptation of the Platonic doctrines (cf. Carra de Vaux, *Avicenne*, Paris, 1900, p. 104). Another very well known author who studied this question is

in the meantime places his hands on the shaikh's shoulders, and bends his head to kiss him (M. d'Ohsson, *Tableau général de l'empire othoman*, Paris, 1787–1820, iv. 503, 550).

[1] *e.g.*, the *fatwā* which was given for the deposition of the Sultan 'Abd al-'Azīz by the Grand Mufti Ḥasān Khair Allah (the *shaikh al-islām* is the Grand Mufti of Constantinople): 'If the Commander of the Faithful pursues a foolish course of conduct, or if he has not the political knowledge necessary for governing; if his personal expenses are such that the empire cannot support them; if his continuing on the throne will have disastrous consequences, must he be deposed?' Reply: 'The law (the *sharī'ah*) says, Yes.'

[1] The institution of the *waqf* furnished a means by which a testator might save his fortune from confiscation. The Sultans very often confiscated the property of prominent persons and public officials. The *waqfs* might be bequeathed to the mosques or set aside for some charitable purpose. The founder designated the person who should act as administrator. This was often the chief minister of a mosque or an inferior officer. But sometimes the choice of the administrator was left to the inspector general of the *waqfs* (d'Ohsson, ii. 524). Several Grand Vizirs—*e.g.*, Keuprulu, Rāghib, and Baraiktar—tried to secularize the *waqf*. An irade of 1873 and the law of August 28, 1875, imposed on them a fixed law of transmission and an annual tax, regulated according to the estate (A. de la Jonquière, *Histoire de l'empire ottoman*, Paris, 1881, p. 617).

Māwardī († 1058). He wrote a treatise entitled *Kitāb al-aḥkām al-sulṭāniyya* (i.e. *Constitutiones politicæ*), a work edited by R. Enger at Bonn in 1853, and recently translated into French by Léon Ostrorog. It contains the theory of the Khalifate, a description of the qualities necessary for a Khalif, a study of the different methods of election, and a definition of the power of the vizīrs and provincial governors, with an indication of its limits. This treatise has been highly valued in Islām. The same author has also left a collection of 'Counsels to Kings,' a work on the rules which ministers must follow, and still another on politics and government, entitled 'The Means of facilitating Reflexion and of hastening Victory' (*Tashīl al-Naẓar wa-ta'jīl al-Ẓafar*; see C. Huart, *Littérature arabe*, Paris, 1902, p. 242, Eng. tr., London, 1903, p. 243 f.).

A celebrated Seljūk vizīr, Niẓām al-Mulk, the founder of the academies of Baghdād, Nīshapūr, and Baṣra († 1092), wrote on the art of government, which he himself practised in a very superior manner. His book, entitled *Siasat Nāmah*, 'A Treatise on Government,' and dedicated to the Sultan Malik Shāh, has been edited and translated into French by C. Schefer (Paris, 1891-93). Although this vizīr admits that kings are 'chosen by the most high God,' he allows them attributes which are not specially moral. They must, according to him, respect the learned doctors, must love a pure religion, and have a strong faith; but it is not their domain to govern religion. Their duty is rather to occupy themselves with economic interests: to drain the land, to build bridges, to found villages, to attend to the cultivation of the soil, to build strongholds, caravanserais, and beautiful monuments. These works will gain for a prince the gratitude of his people, an eternal recompense. Niẓām al-Mulk recommends kings to guard against the influence of women, and to have scant trust in ministers of another religion. We know that from the time of the Arab conquest, Christians have been employed by the Khalifs in their administration, and have rendered them great service. This custom was followed also by the Osmans, and continues to this day (cf. Carra de Vaux, *Gazali*, Paris, 1902, p. 140).

To the great Persian poet Sa'dī († 1264) we owe some very fine pages on the ethics of kings. The whole of the first chapter of his *Būstān* (translated into French by C. Barbier de Meynard, Paris, 1880) is devoted to the duties of kings and good government. Nūshīrwān exhorts his son Ormazd thus:

'Be the defender of the weak, and sacrifice your rest to work for them, to the alleviation of poverty and misfortune. A king owes the crown to his subjects; . . . avoid grieving the heart of your people; that would be to thoroughly destroy your own power.' 'The people,' the poet says further, 'is a fruit tree which must be cared for if its fruits are to be enjoyed.'

He has recommendations for labourers:

'The labourer works with more energy when he can count upon peace and prosperity.'

He has also some for merchants:

'The king who oppresses the merchants closes to the people and to the army the sources of wealth.'

He also recommends that 'men of war' and 'men of advice' should be befriended and soldiers well paid. Yet this great kindness which the poet wishes to find in the sovereign must be accompanied by mistrust and craft; he evidently prefers the latter to strength.

'While clever negotiations may assure the success of a transaction, gentleness is preferable to the use of force. Instead of traps, sow gold under your steps; your benefactions will blunt the sharpened teeth of the enemy. The empire of the world belongs to cleverness and craft; kiss the hand that you cannot bite; lavish caresses on your enemy as you would on your friend, while waiting for an opportunity to flay him alive. Dread the blows of the most humble of your adversaries; it is the drops of water that make the torrents.'

LITERATURE.—See the works cited throughout the article and in the notes.

B. CARRA DE VAUX.

**KING (Semitic).**—In Semitic languages the usual word for 'king' comes from the root *m l k*. In Babylonian the meaning is 'to advise'; this is common in Aramaic, and occurs in Hebrew. In Arabic and Ethiopic it means 'to possess,' 'have power over.' The king then would be the decider of conduct, the source of wisdom for his people. It is best to take the subject in three divisions: Syriac (chiefly Hebrew), Babylonian, and Arabian.

**1. Hebrew.**—It is very seldom that a true kingdom develops among nomads, and the Hebrews are no exception. Indeed it was not till after many years of settled life (tradition says four hundred) that the government crystallized into kingship. This development was gradual—through the judges, men of mark who by force of character and religious enthusiasm supplanted the tribal chiefs and, for a time at least, usurped their authority. In the case of Abimelech this authority became hereditary in the second generation, but this was largely due to the fusion of Israelites with the old settled population, the Canaanites. When the government was finally settled in the person of a king, it was in direct imitation of the nations round about (1 S $8^{5}$)—recognition of the advantages of a fixed central authority. The older tradition believed that this change had the approval of God and was carried through by His instrument, the prophet Samuel. (Later tradition saw in this imitation of the Gentiles apostasy from God.) As in the case of the judges, Saul first proved his powers at the rescue of Jabesh-Gilead, and then the people ratified the position that he had won for himself. Possibly Samuel had looked to Benjamin for a king in the hope of thus avoiding the jealousy of the North and South. Saul the soldier, however, proved unequal as a politician to cope with the Philistines; and David, the idol of the South, was shown by events to be necessary to the Hebrew nation, and as such was acclaimed king by all parties. But even his genius and personal attractiveness failed to create a national feeling. The kingdom which he had created by his resistance to the Philistines was kept together by the fear of a hostile neighbour, and split along the natural line of cleavage as soon as that fear was removed.

These early kings were little more than the tribal chiefs of nomad days. The main differences were their recognition by the whole people and their possession of a bodyguard, consisting largely of foreigners, which was more serviceable than the tribal militia. At first there was very little organization. The vagueness of history suggests that Saul had no fixed capital. The king was judge (2 S $14^{5ff.}$), general, and priest, the officers set apart for these duties being only his deputies. There is no clear statement of the king being the chief priest, but there are many indications that he sometimes exercised priestly functions. In Phœnicia, Tabnit styles himself 'priest of Astarte, king of the Sidonians,' like his father. His son Eshmunazar calls his mother (she was his father's sister) 'priestess of Astarte' and 'queen,' though he himself does not bear the priestly title. The story of Agag shows that Saul saw nothing wrong in offering sacrifice (1 S 15). At the coming of the ark to Jerusalem David wore a linen ephod (2 S $6^{14}$), a priestly garment such as Samuel wore (1 S $2^{18}$; cf. also Ex $28^{4}$). Both David and Solomon blessed the people (2 S $6^{18}$ and 1 K $8^{14}$; cf. Nu $6^{23}$). The priests were the servants of the king, to be deposed or appointed at pleasure (1 K $2^{27. 35}$), while David's sons were priests, as if this were a prerogative of the royal family. Jeroboam I. probably acted as priest (1 K $12^{33}$).

The army was a militia, and campaigns seem to have been confined to the summer. But a point

was given to this army by the institution of the royal bodyguard of mercenaries. Under David the captain was apparently a Philistine, and loyalty to their master was stronger than other motives. It was the fidelity of these hirelings that prevented Absalom from sweeping the country at the outset of his rebellion.

We have no certain information about the revenue of the early kings. As tradition insists on the lowly origin of both Saul and David, we must suppose that from the first they had a regular revenue from taxation apart from the booty that they might win in war. Jg $9^{4}$ makes it probable that in those times taxes were not unknown, and that each State had its treasury. 1 S $17^{25}$ assumes that taxes were the regular thing in the days of Saul. It is significant that in the second list of David's officials (2 S $20^{24}$) an addition is made to the earlier (2 S $8^{16ff.}$)—the overseer of the tribute. The later version of Saul's appointment assumes a tax of 10 per cent. It is assumed on the strength of 1 S $16^{20}$ and a few other verses that the kings were frequently the recipients of presents; but probably these were, like gratitude, in expectation of favours to come. In Solomon's reign an elaborate system of tax-collectors was set up—a system which was intended further to break down the tribal divisions still existing among the people. The king also possessed certain agricultural privileges (Am $7^{1}$), and in later times financial emergencies were met by special taxation (2 K $15^{20}$ $23^{35}$). Solomon is credited with a large income from taxation apart from the profits of trade and foreign tribute. In addition he employed the *corvée* (cf. 1 S $8^{12}$). David's kingdom illustrates Ibn Khaldûn's theory that a dynasty lasts only three generations: one of comparative barbarism, one of organized government and developed luxury, and then the crash. Solomon asked too much from his subjects; the splendour of the court was bought by the impoverishment of the countryside, and, as the tribes had not had time to degenerate into serfs, they broke away from the government that pillaged instead of protecting them. The Phœnician kings were at first absolute, but later their power was limited by the nobles, and the government became an oligarchy. David's successors were not equal to the task which almost crushed him—that of welding Judah and Joseph into one nation. While in the North the throne was a prize for any adventurer, in Judah all revolutions left David's family the crown—a tribute to the power of the king of all Israel.

As a general rule the crown was hereditary, descending to the eldest son—the chief exception being Solomon. In this case a palace clique abused the prestige of the dying king and the authority of religion in favour of its nominee. The king was a sacred person appointed by God (1 S $24^{17}$ and 2 K $9^{6}$), and in him centred the hopes of the prophets. It is probable that anointing referred specially to the priestly side of the king's character.

2. **Babylonian and Assyrian.**—Though the Babylonian rulers of whom we hear first were Sumerians, yet the later forms of kingship are developments or modifications of Semitic ideas. In the earliest period of which anything is known the machinery of government was already well developed. We cannot trace the beginnings of any element of social life. The land was split up into a number of city-States, each under its own ruler, called either 'king' or 'patesi,' 'king' being the secular and 'patesi' the more religious title, signifying vicar of God. There is no clear distinction between the two titles, though a little later 'patesi' is used for a vassal king. Thus Eannatum of Lagash (*c.* 2900) calls himself both patesi and king, while Enannatum I., who reigned a little later, uses only the title patesi. The early rulers of Assyria (*c.* 1800) call themselves Ishakku (=priest-king). Whatever his title, the king ruled by divine right. Many inscriptions have been found in which a king boasts that his god had appointed him king of his land and shepherd of his people. 'Thou hast created me and intrusted me with dominion over men' (Nebuchadrezzar [Rawlinson, $1^{53}$, col. 1, line 55 f.]). In theory at least the king was an autocrat, however much his power may have been limited in practice.

The king is the agent of his country's god; in the treaty between the cities of Lagash and Umma (before 3000) the patesis of the towns are not mentioned at all, but only the gods. They contended for their cities. 'Patesi' included the idea of priest, and it sometimes happened that one who assumed the style of king kept the older form, even putting the priestly rank first of his titles. It is not a very big step from regarding the sovereign as agent or representative of the god to considering him the manifestation of deity or as himself the god. This change took place very early. Perhaps it was helped by the rulers' habit of putting statues of themselves in the temples which they built, to keep themselves fresh in the memory of the gods. Then offerings were made, not to the statues, but for the persons whom they represented. It is specially noted that the offerings for the statue of Ur-nina (king of Lagash *c.* 3000) were continued during the reign of Lugal-anda, perhaps a hundred and fifty years later. The first kings to receive divine honours were the Semitic rulers of Akkad, northern Babylonia (*c.* 2600); Shar-gani-sharri is called the god of his land, and Narâm-Sin's name always has the determinative for 'god.' Thence the custom spread to the Sumerian rulers of S. Babylonia; and Gudea, patesi of Lagash *c.* 2450, was deified after his death. About fifty years later, Dungi, the second king of the dynasty of Ur, always describes himself as god, and a temple is built in his honour. In later times Ashurbanipal calls himself offspring of Ashur and Belit. The suggestion that the deification of the king is due to Egyptian influence has not found favour.

At first the ruler was supreme in both the secular and the religious sides of life, but in time the priesthood developed till its help was needed for all religious actions. Yet the king remained priest in theory. God still spoke to him directly; Ishtar visited him in dreams to give him her commands. Lugal-zuggisi is proud to be called 'prophet of Nidaba.' He was the manifestation of the god, but also the representative of his people. This was never forgotten. The kings of Erech and Lagash are priests of Anu; another boasts himself 'keeper of the temple of Bel' at Nippur, and down to the latest times the Assyrian kings are priests of Ashur, sometimes giving the religious title the precedence. A son of Narâm-Sin became a priest, and his daughter a priestess. The priests were always under the control of their chief, the king; their subservience appears in the attempts of the oracle priests to find in omens that were obviously unfavourable meanings pleasing to the king.

Another aspect of this is the national significance of the king's person: a calamity to him is a national disaster; hence the elaborate rules that fence his conduct. All ill omens must be kept far from him. Thus the ceremonies for the purification of a king are much longer and more complicated than in the case of a private person; royalty is so dangerous that the king has become the slave of the priesthood. On five days in the month he must not touch animal food, nor change his garments, neither dare he bring an offering to the gods. Thus the

question whether certain of the penitential psalms are individual or national is beside the point; it is the king, the people's representative, who speaks for the nation. The law tells the same tale. The court sits in a temple, and the oath is taken in the name of a god or gods, and sometimes in the king's name also; yet he is the final court of appeal (cf. the Hebrew oaths 'by the life of Jahweh' and 'by the life of the king,' also the association of Tiglath-pileser and a god in Barrekub's inscription from Zenjirli). As lawgiver he is guided by social and political expediency, but his decrees are published under divine auspices. The series of omens founded on the exploits (whether real or imaginary is immaterial) of Sargon I. can hardly be explained on the ground of the political importance of these exploits. It was the deeds of a hero peculiarly under divine protection that became normative for future ages.

Naturally the king was absolute, but he was the 'shepherd of his people,' and the government was always rather patriarchal. The people had their rights, which the monarch could not outrage. The splendid title 'king of righteousness' was not borne altogether in vain. In the South we have a witness in the reforms of Urukaginu of Lagash (*c.* 2800) and the Code of Ḥammurabi, while in Assyria, even in the days of its greatest power, any person could make a written appeal to the king. Though the Assyrians are unpleasantly notorious for bloodthirsty cruelty, they devoted great care to the internal economy of their own land. Not only was Assyria plentifully supplied with cattle of all sorts, the booty of innumerable wars, but the kings introduced new trees, and in other ways encouraged agriculture. The system of irrigation was, of course, their constant care. From the first the throne was hereditary, though we do not know whether primogeniture was the rule. In Assyria it is claimed that for fifteen hundred years the crown descended from father to son. The king's material power rested on the army. The idea that the king owned his domain had long since died out, yet part of the soil belonged specially to the State, being held on feudal tenure. The occupier was bound to military service, in payment for which he held his fief. This could not be alienated, and in default of heirs returned to the State. If the owner were summoned for service and had no one to leave in charge of his land, the State appointed a bailiff, who was charged to pay one-third of the produce to the owner's family. In addition, the feudatories had certain privileges, were, to some extent, outside the jurisdiction of ordinary officials, and were not liable to the *corvée*. The Assyrian government appears to have lived often on the tribute of vassal States.

3. **Arabian.**—It is scarcely an exaggeration to say that no settled government has evolved among the nomads of Arabia. The dynasties of Ḥira and Ghassān are only apparent exceptions. All Arabian States have had their centre in the cities that lie on the borders of the country, open to foreign influence by land or sea. Among the nomads the tribal chief is the leader in war, but at other times he has only advisory authority and the weight of personal influence. Even among the settled tribes in the hinterland of Aden it is often impossible to put a criminal to death; for by so doing the chief (he calls himself 'Sultan') would expose himself to the dangers of a blood-feud.

Among the fertile valleys of Yemen it was different, and at an early date settled States came into being. Unfortunately, the materials for a study of this period are scanty and largely inaccessible. No agreement has yet been reached as to the date of many of the inscriptions, the two schools of interpretation differing by some six hundred years. The chief States were (1) the Yemen, ruled by two dynasties having their capitals at Ṣirwāḥ and Ma'rib, and later by the Ḥimyarite kings of Saba and Dhū Raidān known to Arabic tradition as Tubba's; (2) Ma'īn or Ma'ān in the Jauf; (3) Qatabān; and (4) Ḥaḍramaut. The date of the kings of Ma'ān is uncertain. In Yemen the earliest rulers were the *m k r b*, probably Mukarribs, the priest-kings of Ṣirwāḥ. We have the names of thirteen princes who ruled between the 9th and the 6th cent. B.C., but their functions and powers are unknown. The title seems to mean 'he who makes offerings.' Their rule probably extended well to the east, for Sargon (715 B.C.) mentions one Ith'amara the Sabæan, presumably one of the dynasty. The name occurs on the monuments.

Next followed a line of kings ruling at Ma'rib, coming to an end about 115 B.C. and followed by the Ḥimyarite kings, whose kingdom was finally destroyed by the Abyssinians in A.D. 525. It is probable that the kings of Ma'ān were contemporary with the earlier rulers of Yemen (Saba), though Hommel and Glaser would put the first of them about 1500 B.C.

The royal title was not restricted to the head of the State, but was shared by his sons. In one inscription a father and two sons bear the title, just as in a State of that description to-day all members of the ruling house are called Sultan. Elsewhere Alhan Nahfan, king of Saba, does not give himself that rank, though he gives it to his sons (*CIS* iv. 308). Besides kings we read of lords, and it is probable that the people were divided into classes or castes; and the lords in their inaccessible castles may well have been as independent as the feudal barons in Europe. According to one tradition, the downfall of Dhū Nuwās, the last king of Yemen, was largely due to his lack of control over his barons. Women held an honourable position in the land; two together appear as 'lords,' and, like the king, receive the commands of their god through an oracle (*CIS* iv. 387). Occasionally the kings seem to be invoked along with the gods, though in a secondary place (*CIS* iv. 374)—reminding one of Babylonia.

Two other States rose in early Arabia, Ḥira and Ghassān, though they were native in part only, being due to outside influence. Rome and Persia were continually annoyed by the incursions of the Bedawīn into the settled lands of Syria and Mesopotamia, so one protective measure was to make friends with the nearest Arabs. Ḥira was a vassal of Persia, and in very close touch with its overlord; Arabs filled responsible posts at court, and Bahrām Gur, who afterwards became king, was educated at Ḥira. These States closely resemble the rule of the Rashīds at Hail in the last century; the Sultan's power rested on the Bedawīn, who were held to their allegiance by tribal honour and presents from the taxes contributed by towns and trade. History has preserved the memory of the mixed population at Ḥira—the tent-dwelling Arabs, the Christians of the town, and the allies—a mixed population which for various reasons settled under the government. There is no explicit evidence, but conditions must have been very similar in Ghassān, where the government remained migratory and Roman gold helped to uphold the loyalty of the Arabs. Ṭabarī tells us that Gadhīma, the founder of the dynasty of Ḥira, was a prophet and soothsayer, suggesting that authority there was religious in its origin.

Muhammad founded a State where divine revelation was the supreme law, and after his time religion has played the greatest part in most States formed and ruled by Arabs. Ibn Khaldūn's observation remains true, that religion alone will not make a

State; the feeling of nationality must also be present (*Prolegomena*, Beirut ed., p. 159). The Umayyad Khalifs claimed to be the successors of the Prophet, and made this the chief prop of their authority; yet their power depended on the solidarity of their supporters, and, when the old strife of Qais and Kalb, Mudar and Yemen, broke out afresh, their kingdom collapsed; till then they had made head against all religious revolts of 'Ālids and Khawārij (*q.v.*). The Carmatians (*q.v.*) can hardly be called a kingdom; yet the Imāms of Oman claimed first spiritual authority, as did the Wahhābīs. Leadership might be hereditary or elective, but religion gave power and opportunity to the strength latent in a tribe or group of tribes. All these States are small copies of Muhammad's great example. There is one exception, the dynasty of the Rasūlids in Yemen; but that was founded by a foreigner, and it had to fight continually against leaders whose authority was spiritual, the descendants of the Prophet. After the fall of the Rasūlids the native authority was exercised by a spiritual head, the Imām. See, further, 'Muslim' section, above.

LITERATURE.—Hebrew: the Bible dictionaries. There is no special literature for the other countries. Phœnicia: R. Pietschmann, *Gesch. der Phönizier*, Berlin, 1889. Babylonia: L. W. King, *Sumer and Akkad*, London, 1910, and *Chronicles concerning early Babylonian Kings*, do. 1907; M. Jastrow, *Religion Babyloniens und Assyriens*, Giessen, 1905 ff. Arabia: C. Huart, *Hist. des Arabes*, Paris, 1912; R. A. Nicholson, *Lit. Hist. of the Arabs*, London, 1907; *CIS*, pt. iv.; scattered notices in native authors.

A. S. TRITTON.

**KING** (Teutonic and Litu-Slavic).—**1. Sources relating to the Litu-Slavs.**—In seeking to trace the early historical development of kingship in Northern Europe, it will be well to deal first of all with the facts relating to the Litu-Slavic peoples, as these provide a basis also for a knowledge of the early Teutonic conditions. We begin, therefore, by quoting from the oldest available authorities a number of references to modes of government among the Litu-Slavs of Eastern Europe.

(*a*) The *Chronicle of Nestor* (ed. F. Miklosich, Vienna, 1860, ch. vi.): 'They lived each with his family and in his own locality [*i.e.* separate from one another], each ruling over his own family.'

(*b*) Procopius, *de Bell. Goth.* iii. 14: *τὰ γὰρ ἔθνη ταῦτα Σκλαβηνοί τε καὶ Ἄνται οὐκ ἄρχονται πρὸς ἀνδρὸς ἑνὸς, ἀλλ' ἐν δημοκρατίᾳ ἐκ παλαιοῦ βιοτεύουσι, καὶ διὰ τοῦτο αὐτοῖς τῶν πραγμάτων ἀεὶ τά τε σύμφορα καὶ δύσκολα ἐς κοινὸν* ('assembly of the people') *ἄγεται.*

(*c*) Mauritius, *Strategicum*, ix. 5 (ed. J. Scheffer, Upsala, 1664, p. 218): *τὰ ἔθνη τῶν Σκλάβων καὶ Ἄντων ὁμοδίαιτά τε καὶ ὁμότροπά τέ εἰσι καὶ ἐλεύθερα μηδαμῶς δουλοῦσθαι ἢ ἄρχεσθαι πειθόμενα . . . πολλῶν δὲ ὄντων ῥηγῶν καὶ ἀσυμφώνως ἐχόντων πρὸς ἀλλήλους οὐκ ἄτοπον τινὰς αὐτῶν μεταχειρίζεσθαι ἢ λόγοις ἢ δώροις καὶ μάλιστα τοὺς ἐγγυτέρω τῶν μεθορίων καὶ τοῖς ἄλλοις ἐπέρχεσθαι, ἵνα μὴ πρὸς πάντας ἔχθρα ἕνωσιν ἢ μοναρχίαν ποιήσῃ* ('. . . it will be well by means of conversations or gifts to win some of them, and especially those nearer the frontiers, to our side, and then fall upon the rest, so that a common hatred may not bring about a union or a monarchical government').

(*d*) Pseudo-Caesarius of Nazianzus, in his theological tractate dating from the beginning of the 6th cent. A.D. (*PG* xxxviii. 985, dialogue 110, quoted in *Archiv für slav. Philologie*, xxxi. [1909] 579): *Σκλαυηνοὶ . . . ὑπάρχουσιν αὐθάδεις, αὐτόνομοι, ἀνηγεμόνευτοι, συνεχῶς ἀναιροῦντες, συνεσθιόμενοι ἢ συνοδεύοντες, τὸν σφῶν ἡγεμόνα καὶ ἄρχοντα.*

(*e*) Constantinus Porphyrogenetus, *de Administrando Imperio*, ed. Bonn, 1840, p. 128: *ἄρχοντας δὲ, ὥς φασι, ταῦτα τὰ ἔθνη μὴ ἔχει πλὴν ζουπάνους* [*zupan*; see below] *γέροντας, καθὼς καὶ αἱ λοιπαὶ Σκλαβίνιαι ἔχουσι τόπον.*

(*f*) Thietmar of Merseburg, vi. 18 (*MGH*, 'Script.' iii. [1839] 812), writing of the Wilzi: 'his autem omnibus qui communiter Liutici vocantur dominus specialiter non presidet ullus; unanimi consilio ad placitum suimet necessaria discucientes, in rebus efficiendis omnes concordant. Si quis vero ex comprovincialibus in placito contradicit, fustibus verberatur, et si forinsecus palam resistit, aut omnia incendio et continua depredatione perdit, aut in eorum presencia pro qualitate sua pecuniae persolvit quantitatem debitæ.'

(*g*) The *Chronicle of Boguchwal*, ch. i. (A. Bielowski, *Monumenta Poloniae historica*, Lemberg, 1864–72, ii. 473; quoted by H. Schreuer, *Untersuchungen zur Verfassungsgeschichte der böhmischen Sagenzeit*, Leipzig, 1902, p. 78, note 24): 'Lechitae, qui nullum regem seu principem inter se, tanquam fratres et ab uno patre ortum habentes, habere consueverant, sed tantum duodecim discretiores et locupletiores ex se eligebant, qui quaestiones inter se emergentes diffiniebant et rem publicam gubernabant, nulla tributa seu invita servitia ab aliquo exigentes. Gallorum impetum formidantes quendam virum strenuissimum nomine Crak, cuius mansio protunc circa fluvium Wislam fuerat, sorte sibi divinitus inter fratres suos Lechitas tributa, in eorum capitaneum seu ducem exercitus, ut verius dicam, nam iuxta Polonicam interpretationem dux exercitus woyewoda appellatur, unanimiter elegerunt. Iste Crak, qui latine Corvus dicitur, victor effectus, per Lechitas est in regem assumptus.'

(*h*) Adam of Bremen, iv. 18: '[the Prussians] nullum inter se dominum pati volunt.'

(*i*) Alfred the Great's tr. of Orosius (see F. Kluge, *Angelsächsisches Lesebuch*³, Halle, 1902, p. 36): 'þæt Eastland [*i.e.* the Prussian country] is swyðe mycel, and þær bið swyðe manig burh, and on ælcere byrig bið cyningc. And þær bið swyðe mycel hunig and fiscnað; and se cyning and þá ricostan men drincað myran meolc (mare's milk), and þá unspédigan and þá þéowan drincað medo.'

(*j*) Peter of Dusburg, *Chronica*, iii. 228: 'De latrunculis, qui LXX regulos terre Lethowie occiderunt.'

(*k*) Privilegium of the city of Bartenstein, in C. Hartknoch, *De republica veterum Borussorum* (quoted by O. Hein, 'Altpreussische Wirtschaftsgeschichte bis zur Ordenszeit,' in *ZE* xxii. [1890] 162): 'reges, nobiles et communis populus.'

(*l*) *Scriptores rerum Livonicarum*, Riga, 1846–53, i. 557. Here we read that, in a general rising of the Samlanders for the purpose of demolishing the Memel fortress, there was, first of all, an assembly of the 'wisest' by themselves, whose decision was then to be submitted to the public assembly.

(*m*) The *Olivaer Chronicle* (*Scriptores rer. Pruss.*, Leipzig, 1861–74, i. 680; quoted in O. Hein, *op. cit.* p. 155): 'Illo in tempore erat in Warmia una *generatio* ['clan,' 'tribe'] valde potens, quae dicebatur Bogatini, qui simul congregati aedificaverunt Schrando.'

(*n*) The Arabian traveller, Ibn Rustah, writing of the 'Russians' (as regards whom, however, we do not know whether in the writer's day [10th cent.] they were Slavs or Scandinavian Varangians), says: 'When any of the Russians has a matter against another, he takes him to law before the Czar. Here they argue their case with each other; and when the Czar gives his judgment, what he commands is done. But if both parties are dissatisfied with the Czar's judgment, the final arbitrament must, by order of the Czar, be left to the sword' (quoted by L. K. Goetz, *Das russische Recht*, Stuttgart, 1910, i. 191).

**2. General development among the Litu-Slavs.**—While these fragments of what is at best a very meagre literary tradition show considerable differences in date and place of origin, we shall nevertheless not err very greatly in drawing from them the following general impression of the early conditions of government in Litu-Slavic Europe. We must necessarily take as our starting-point the family union (*a*, *g*, *m*), which formed a local community, and was governed by one (*a*) or more (*g*) of its members. The verb used of this type of rule is Old Slav. *vlasti* (cf. Lith. *wāldyti*, Goth. *waldan*). The rulers themselves are referred to by writers using Greek and Latin as *ῥῆγες* (*c*) and *reguli* (*j*), and in A.S. as 'kings' (*i*); and within a particular province or district they might be very numerous (*e.g.*, in Lithuania, seventy; cf. *j*). In their own language they are called simply *staroste* (Czech *cos mi starosta dá*; cf. Schreuer, *op. cit.* p. 59, line 49), *i.e.* *γέροντες* (*e*), 'elders,' and this term is found also in the Prussian district (cf. Hein, *op. cit.* p. 162). Another designation in current use was *zupan*, from *zupa*, 'county,' 'district' (*ζουπάνους*; cf. *e*), as regards which we cannot say whether it is a native Slavic word cognate with Skr. *gópā*, 'oxherd' (lit. 'cattle reservation'), or a loan-word from the Turco-Tatar family of languages (cf. *Archiv für slav. Philologie*, xxxi. [1909] 587, note 3). Besides the *ῥῆγες*, *reguli*, 'kings' of the Prussian region, who are said to have lived in strongholds and drunk mare's milk—the ordinary man having to be content with mead (*i*)—we hear also of a kind of aristocracy, viz. 'discretiores et locupletiores' (*g*), A.S. 'ricostan men' (*i*), *nobiles* (*k*), the 'wisest' (*l*), who take the place of the 'kings' and are sometimes hardly to be distinguished from them. In times of danger, again, these men of rank choose from among themselves a *voyevoda* (*g*), 'duke.' This term, which means literally 'army-leader' (cf. O. Russ. *voy*, 'army,' *voditi*, 'to lead,' and is already found in the Greek of Constantinus Porphyrogenetus as *βοεβόδος*, can be

traced in the Old Polish and South Slavic dialects (see below), and may, therefore, be safely regarded as a primitive Slavic word. When such a *voyevoda* had led his forces to victory, he might become a *rex* (*g*). The position of these clans or family chieftains —*voyevode*, *reguli*, *staroste*, etc.—in relation to their people was by no means a secure or permanent one. If their rule came to be unsatisfactory to their subjects, they were assassinated at a meal or on the march (*d*). In particular, their authority was everywhere subordinate to that of the tribal assembly (*b*, *f*, *l*), the primitive Slavic name for which probably appears in O. Russ. *veče*, Czech *vešce*, Pol. *wiece* (? connected with Skr. *vāc*, Gr. *Ϝέπος*, 'discourse'); for the uniform and characteristic feature that manifests itself amid great diversity throughout all Eastern Europe is the democratic type of social order in which, with their intolerance of rule in the proper sense, the Slavs and Litu-Prussians lived (*b*, *c*, *d*, *f*, *h*). In some cases the affairs to be resolved upon by the popular assembly, where disorder and violence might prevail (*f*), were decided beforehand by the 'wisest' (*l*). We have very little information as to the rights and duties of these chiefs. They had no power to impose 'tributa seu invita servitia' (*g*). The first, in fact, to introduce regular imposts (*obroki*) among the Russians was Oleg (879–912), as we learn from other sources. In time of war, or, at least, in the more important campaigns, the command was assigned to the *voyevoda*, or 'duke.' We learn from Peter of Dusburg that this was also the practice among the Prussians (cf. Hein, *op. cit.* p. 162). The reference to the king among the Russians, as having a power of arbitration, perhaps applies to Scandinavians, and not to Slavs at all (*n*). Among the latter, in fact, the universal practice seems to have been the blood-feud in its most ruthless form (cf. BLOOD-FEUD [Slav.], vol. ii. p. 733 ff.; also Peter of Dusburg, in Hein, *op. cit.* p. 166: 'nulla compositio potest intervenire, nisi prius homicida vel propinqui eius occidantur'). One important duty and prerogative of the clan-chieftain, however, was to decide as to the territory which his people were to occupy—a task which would frequently fall to him in the numerous migrations of the age. Such an assignment is mentioned in the Bohemian legend related by Cosmas:

'Senior, quem alii quasi dominum comitabantur, inter cetera suos sequaces sic affatur, o socii . . . sistite gradum . . . haec est illa terra quam saepe me vobis promisisse memini' (i. 2; cf. Schreuer, *op. cit.* p. 77).

Finally, it should be mentioned that the several clans or family-unions lived in a state of constant mutual warfare, that they were all essentially alike in their social structure, and that they could be most easily subjugated by the policy expressed in the maxim 'divide et impera' (*c*).

We have been thus far unable to point to any fundamental difference between the Slavs and the Litu-Prussians in regard to their forms of government. But there is one remarkable feature, not as yet satisfactorily explained, peculiar to the Litu-Prussians, viz. the existence among them of a chief priest possessing an almost supreme authority. Of this personage Peter of Dusburg writes:

'Fuit autem in medio nationis huius perversae, scilicet in Nadrowia, locus quidam dictus Romow, trahens nomen suum a Roma, in quo habitabat quidam dictus Criwe, quem colebant pro papa, quia sicut dominus papa regit universalem ecclesiam fidelium, ita ad istius nutum seu mandatum non solum gentes praedictae sed et Lethowini et aliae nationes Lyvoniae terrae regebantur. Tantae fuit auctoritatis, quod non solum ipse vel aliquis de sanguine suo verum etiam nuntius cum baculo suo vel alio signo noto transiens terminos infidelium praedictorum *a regibus et nobilibus et communi populo* in magna reverentia haberetur' (*Script. rer. Pruss.* i. 53).

**3. Points of resemblance among the Southern Slavs.**—Apart from this figure among the Litu-Prussians, the general sketch of the Litu-Slavic mode of government given above holds good to a remarkable extent also of the Southern Slavs, more particularly in Montenegro and Herzegovina, almost to the present day, as we learn from the accounts of F. S. Krauss, *Sitte und Brauch der Südslaven*, Vienna, 1885, pp. 24 ff., 58 ff. etc., and P. A. Rovinsky, 'Geographical and ethnographical Description of Montenegro' (Russ.), in *Collection of the Royal Academy of Sciences*, lxiii. (1897), esp. p. 158 ff. From the modern system of government among the Southern Slavs we may, accordingly, glean a wider and more precise knowledge of the state of matters among the ancient Slavs and Litu-Prussians. In Montenegro and Herzegovina likewise our starting-point must be the conception of the tribe or clan (*pleme*) based upon, or at least regarded as based upon, agnatic kinship, such clan or tribe, again, being subdivided into a number of brotherhoods (*bratstva*) and villages (*sela*). Those who were chosen by their people to stand at the head of these *plemena* are designated in various ways, *e.g.* as 'chiefs' (*glavari*), 'elders' (*stareyšine*), *župani*, and, most commonly, as 'dukes' (*voyevode*); certain other terms applied to them are clearly borrowed from foreign usage, as, *e.g.*, *guvernadur* (Ital. *governatore*), *sirdar* (from Perso-Turkish; Mod. Pers. *sardār*, Pahl. *sālār*, O. Pers. **sara-dāra*; cf. Mod. Pers. *sar*, Avest. *sarah*—'head'), *knez* (from Teutonic; see below), *ban* (*βοεάνος* in the Greek of Constantinus Porphyrogenetus, from Turk. *bayan*, 'rich'). A number of these titles are applied specially to the heads of the smaller groups.

The position of these chiefs of the *pleme*, if we may take that of the *voyevoda* as generally representative of the others, may be described as follows. The *voyevoda* was, above all, the leader of an army, and would, of course, be chosen for the post as one who had specially distinguished himself in war. His appointment was for life, although he might be deposed if he failed to justify his people's choice —if, *e.g.*, he fell short in heroic qualities or judicial ability. He could bequeath his position to his sons, though not without the consent of the people, who might, if they regarded the nominated son as incapable of leading them, choose instead a nephew or some other relative; the right of succession, in fact, pertained rather to the *bratstvo* to which the former *voyevoda* belonged, or, at least, the *bratstvo* retained the privilege as long as it had power to defend it. From time immemorial certain eminent families had possessed the right, not indeed *de iure*, but *de facto*, of appointing one of their own number to the leadership of the *pleme*. Among the Southern Slavs, accordingly, the families of the *župani*, *bani*, and *voyevode* now represent what we should call the oldest nobility. But the main consideration in the choice of a leader was always personal character. The *voyevoda* was at first a herdsman like the rest, and it was only gradually, and mainly as a result of his military achievements, that he attained the position in which at length he controlled all the external and internal affairs of his *pleme*. Various honours were then accorded to him; in particular, he was assigned the place of honour at the top of the table. The present writer is unable to give any information regarding the revenues of the *voyevoda* (as regards the *župan*, cf. Krauss, *op. cit.* p. 27). It was only the stronger *plemena*, however, that had their own *voyevoda*; the weaker ones put themselves under the power of the stronger.

The power of the *voyevoda* was thus in some cases very great; nevertheless, the real authority was in the hands of the people, who exercised it through their representatives in the public assembly (*sbor*, *skupština*). Each *pleme*, accordingly, had certain favourite places—a shady grove, a full-flowing spring—at which it held its assembly. The as-

semblies did not meet regularly, but were convened only on occasions of importance, as, *e.g.*, for the purpose of electing a *voyevoda*, of settling a long-standing feud, of adjusting a legal dispute that threatened the public peace, of conducting negotiations with hostile peoples, etc. The several *bratstva*, villages, and families also held assemblies. The separate *plemena* united only in times of great danger, and, as a rule, like the ancient Slavic family-societies already considered, lived in a state of savage warfare with one another.

4. **Corresponding general features among the Teutons.**—From the Litu-Slavs we turn to the Teutons, not so much, however, with the intention of giving a detailed and complete account of their forms of government—this has frequently been done already (most capably by H. Brunner, *Deutsche Rechtsgeschichte*, i.[2], Leipzig, 1906, and R. Schröder, *Lehrbuch der deutschen Rechtsgeschichte*[5], do. 1907)—as with a view to showing, in connexion with what has been said above, that the same (or at all events a very similar) mode of government must have once obtained among the Teutons as among the Slavs, and that, moreover, in the earliest historic, partly indeed in pre-historic, times, that mode of government had attained to a more advanced constitutional stage under Western, *i.e.* Celtic, influences.

The most comprehensive political term used by Cæsar and Tacitus in connexion with the Germans is *civitas*, 'a nationality,' 'a State,' Goth. *þiuda*, O. Norse *þjóð*, A.S. *þéod*, O.H.G. *diota*, cognate with O. Irish *túath*, 'people,' Oscan *τωϝτο*, '*civitas*,' Umbr. *tota*, '*urbs*,' Lett. *tàuta*, 'community,' 'people,' O. Pruss. *tauto*, 'land,' originally 'the whole' (cf. Lat. *totus*). The name given by the Romans to a subdivision of the *civitas* was *pagus*. The meaning of *pagus*, or at least its original meaning, as applied by Cæsar and Tacitus to the German institution, may be inferred from the primary signification of the Teutonic word which was rendered by the Lat. *pagus*, viz. Goth. *gawi*, O.H.G. *gewi* (Germ. *Gau*), 'canton,' 'shire.' The present writer was the first to suggest the theory (cf. *Reallexikon der indogermanischen Altertumskunde*, Strassburg, 1901, p. 799)—now accepted also by F. Kauffmann (*Deutsche Altertumskunde*, Munich, 1913, i. 79; questioned by Rietschl in J. Hoops, *Reallexikon der germanischen Altertumskunde*, Strassburg, 1911–13, ii. *s.v.* 'Gau')—that Goth. *gawi* comes from **ga-aw-ya-m*, that it is cognate with Gr. *οἴη*, 'village,' *ὠγή* (=*ὠϝή*), *οὐαί* (=*φυλαί·* Κύπριοι) and thus means 'local union of village septs,' *i.e.* of clans united in villages. These clans are doubtless what Cæsar (*de Bell. Gall.* vi. 22) speaks of as 'gentes cognationesque hominum qui una coierint,' and to which their 'magistratus ac principes quantum et quo loco visum est agri attribuunt' (on the assignment of territory by the chieftains of family-societies see above). They are also to be identified with the consanguineous communities which in grave emergencies could send some thousand warriors into the field; the *pagus*, in short, was the 'thousand' (cf. Eng. 'hundred,' as the division of a shire, in which, however, the reference is to families, not soldiers), at the head of which stood the *þûsundi-faþs*. The Teutonic *pagi*, which, as we have seen, were, in the Roman period, subdivisions of the *civitas*, must certainly have been relatively independent in earlier times; and, indeed, as late as the war with Arminius, the Cheruscan *pagus* of Inguiomer, the uncle of Arminius, was still in a position to maintain its independence (cf. Brunner, *Deutsche Rechtsgeschichte*, i. 115). Thus all our available data combine to show that the Teutonic *gau*—what the Romans called *pagus*—corresponds generally to the *pleme*, 'tribe,' 'clan,' which, as we saw, existed among the Slavs.

Of the development of kingly rule among Teutons as well as Slavs, accordingly, we are now in a position to form some such general impression as follows. Already in the remote primitive Aryan period, as appears from the linguistic group Goth. *þiuda*, Irish *túath*, Osc. *τωϝτο*, etc., noted above, certain clans combined at the call of special circumstances; and, just as among the Slavs such combinations were placed under the leadership of a *voyevoda*, so among the Teutons they were directed by an 'army-leader' (O. Norse *hertogi*, A.S. *heretoga*, O.H.G. *herizogo*)—a fact distinctly attested by early writers; thus Cæsar writes:

> 'Cum bellum civitas aut illatum defendit aut infert, magistratus, qui ei bello praesint, ut vitae necisque habeant potestatem, deliguntur. In pace nullus communis est magistratus; sed principes regionum atque pagorum inter suos ius dicunt controversiasque minuunt' (*de Bell. Gall.* vi. 23);

and Bede, speaking of the Saxons, says:

> 'Non enim habent regem iidem antiqui Saxones, sed satrapas [A.S. *aldorman*, in Beowulf *alder*—precisely like the Slav. *starosta*] plurimos suae genti praepositos, qui ingruente belli articulo mittunt aequaliter sortes, et quemcunque sors ostenderit, hunc tempore belli ducem omnes sequuntur, huic obtemperant; peracto autem bello, rursum aequalis potentiae omnes fiunt satrapae' (*HE* v. 10).

But, while among the Slavs such combinations, formed for a special purpose, soon dissolved again into their component parts (the *plemena*, or clans) when that purpose had been effected, they must, among the Germans, have been of a more incorporate and more permanent kind; and, in point of fact, this important advance towards the formation of a political State (in place of the primitive family, or clan-State, which was longest maintained among the Slavs) must have been the result of influences emanating from Western Europe, *i.e.* from the Celts, as the primitive Teutonic word denoting the domain of the *þiuda* (*civitas*), viz. Goth. *reiki*, A.S. *rīce*, O.H.G. *rīhhi*, primitive Teut. **rīk-yo-m*, 'realm,' 'kingdom' (Germ. *Reich*), is on indisputable linguistic grounds (cf. Schrader, *Reallexikon*, p. 451) a derivative of the O. Irish *ríge* (**rēg-yo-m*, **rīg-yo-m*), and this, again, is derived from the Celtic term for 'king,' O. Irish *rí*, acc. *ríg* (cf. Orgeto-rīx, Dumno-rīx).

As regards the form of government, the *civitates*, as they were called by the Romans, fell into two classes, viz. those which were governed by a single *rex*, and those which were governed by a number of *principes* from the several *pagi*. The Teut. term for the king of a nationality (i.e. *rex civitatis*) appears in the series Goth. *þiudans*, O.N. *þjóðann*, A.S. *þéoden*, all connected with the *þiuda* discussed above. The chiefs of the several *pagi* ('clan-rulers,' or whatever we may call them) were, no doubt, originally called 'kings' (O.N. *konungr*, A.S. *cyning*, O.H.G. *chuning*). This word is related to Goth. *kuni*, 'kin,' 'tribe'; it means, however, not, as was formerly supposed, one belonging to a family (*i.e.* a family of rank), but rather something like 'king's son,' 'prince,' being derived, in fact, by the addition of the patronymic suffix *-inga* (cf. Wulfing, Atheling, etc.), from a simple form **kuni-s*, 'king,' which is found in such compounds as O.H.G. *kuni-rīchi*, 'kingdom,' A.S. *cynehelm*, 'king's helmet.' This **kuni-s*, or **kunyo-s*, differs from *kuni*, **kunyo-m*, 'tribe,' O.H.G. *chunni*, 'people,' only as regards gender, the relation of the two being exactly the same as between A.S. *léod* (masc.), '*princeps*,' and *léod* (fem.), '*gens*,' or between Salian Frank. *theod*, '*dominus*,' and O.H.G. *diot*, 'people' (cf. also Goth. *kindins*, '*ἡγεμών*,' connected etymologically with Lat. *gens*, *gentis*). The **kunyo-s*, one might say, was the **kunyo-m* personified, and thus, since *kuni*, being etymologically identical with Gr. *γένος*, Lat. *genus*, denotes a tribe formed, or regarded as formed, upon a basis of kinship, the

philological evidence, too, brings us to the result that the *pagus* (the Goth. *gawi*; cf. the 'gentes cognationesque hominum' of Cæsar), which was governed by the *chuning* (*princeps*), must have been a group closely resembling in structure the Slavic *pleme*. Now the more frequently the *chuninga* (*principes pagorum*), by first gaining the leadership in war (the *hertog*- or *voyevoda*-ship), raised himself to the position of the king of a nationality, the more generally would the term *chuning* come to bear the fuller signification of the latter, so that at length the distinction between *piudans* and *chuning* became quite indefinite—the more so, indeed, as the constitutional position of the *reges* [*civitatum*] and the *principes* [*pagorum*] among the Teutons was in principle the same as, and in its main features virtually identical with, what it was among the Slavs and Litu-Prussians. As among the latter peoples, so among the Teutons, the *reges* and *principes* were elected by the people:

'reges ex nobilitate . . . sumunt' (Tac. *Germ.* vii.); 'eliguntur in isdem conciliis et principes' (*ib.* xii.).

Among the Teutons likewise the kingship was to some extent hereditary—in so far, namely, as in the several States there were *regiæ stirpes*, *i.e.* powerful families of rank, or, as it might be put with reference to the Slavs, powerful *bratstva*, who were able to procure the election of one of themselves (*e.g.*, the son or other relative of the previous *rex* or *princeps*). As among the Slavs, moreover, the tribe, to whom the king or prince owed his election, might also depose, expel, or kill him—*e.g.*, when under his rule it suffered a failure of crops or a disaster in war, or found him acting contrary to its will:

'Apud hos [Burgundios] . . . rex appellatur Hendinos [*i.e.* "the first," connected with Irish *cét*, "primus," O. Gaul. Cintugnâtus; cf. O.H.G. *furisto*, "prince," lit. "the first"], et ritu veteri potestate deposita removetur, si sub eo fortuna titubaverit belli vel segetum copiam negaverit terra' (Amm. Marc. XXVIII. v. 14).

Among the Germans, as among the Litu-Slavs, the *rex* or *princeps* had a very limited power in relation to his people:

'Nec regibus infinita aut libera potestas' (Tac. *Germ.* vii.); they were obeyed 'non precario iure parendi' (*ib.* xliv.); 'Verrito et Malorige, qui nationem eam [Frisiorum] regebant, in quantum Germani regnantur' (*Ann.* xiii. 54).

In the royal as in the princely states of both races under discussion, the real power was in the hands of the people, and its organ was the public assembly (Goth. *mapl*, O.N. *mál*, A.S. *mæðel*, O.H.G. *mahal*), in which the *rex* or the *princeps*, or whoever else happened to speak, effected his will, not by the influence of his position, but by the personal prestige which he enjoyed:

'Mox rex vel princeps, prout aetas cuique, prout nobilitas, prout decus bellorum, prout facundia est, audiuntur auctoritate suadendi magis quam iubendi potestate' (Tac. *Germ.* xi.).

Finally, the Teutons seem to have resembled the Slavs in providing no fixed revenues for their *reges* or *principes*; as regards the Germans, at all events, we have the express statement of Tacitus:

'Mos est civitatibus ultro ac viritim conferre principibus vel armentorum vel frugum: quod pro honore acceptum etiam necessitatibus subvenit' (*ib.* xv.).

**5. Features peculiar to the Teutons.**—There were several points of difference between the Teutons and the Slavs with regard to the position of their rulers. Among the Teutons a very prominent part of the duties that fell to the king or prince was his share in the administration of the law. So far as the *rex* is concerned, this may be inferred from the fact that he could claim a portion of the compensation paid by an offender (cf. Tac. *Germ.* xii., 'pars multae regi'). Of the *principes* Cæsar writes:

'Principes regionum atque pagorum inter suos ius dicunt controversiasque minuunt' (vi. 23);

and Tacitus says:

'Eliguntur in isdem conciliis et principes, qui iura per pagos vicosque reddunt' (*Germ.* xii.).

With this may be compared what was said regarding the Slavs with reference to the extract (*n*) (p. 728ᵇ), though it was there observed that what the Arabian writer says of the function of arbitration that belonged to the king (Czar) may not refer to real Slavs at all. It is true that, according to the Chronicle of the year 862, the Slavs, in appealing to the Varangians, use the words: 'Permit us to seek a prince who will rule over us and judge according to law' (*sudilŭ po pravu*); but in the first redaction of the Russian *Pravda* (i. 19) it is still a communal court of twelve members (*starci*, 'elders') that decides legal cases (on these questions cf. L. K. Goetz, *op. cit.* i. *passim*).

Another feature characteristic of the Teutonic kingship, even in primitive times, was its relation to the gods, which is clearly brought out by Tacitus in his description of the German practice of divination:

'Proprium gentis equorum quoque praesagia ac monitus experiri: publice aluntur isdem nemoribus ac lucis, candidi et nullo mortali opere contacti: quos pressos sacro curru sacerdos ac rex vel princeps [N.B. a single prince] civitatis comitantur hinnitusque ac fremitus observant' (*Germ.* x.).

Here, again, the present writer is unable to adduce any clear analogy from the Litu-Slavic world.

Thus, on the whole, we may say that alike on Teutonic and on Slavic soil the position of the king or prince was in a political sense a distinctly weak one, and it is only among the Northern and Eastern Teutons that Tacitus finds a more vigorous grasp of royal power:

'Trans Lygios Gothones regnantur paulo iam adductius quam ceterae Germanorum gentes; nondum tamen supra libertatem. Protinus deinde ab Oceano Rugii et Lemovii; omniumque harum gentium insigne . . . erga reges obsequium' (*Germ.* xliii.). 'Suionum [Swedes] hinc civitates . . . est apud illos et opibus honos; eoque unus imperitat . . .' (*ib.* xliv.).

It is perhaps no mere coincidence that the Celtic term for 'king' survived only in the Eastern Teutonic dialect (Goth. *reiks*, from Irish *rí[g]*), while other derivatives from *rí[g]* denoting 'kingdom' (Goth. *reiki*) and 'powerful' (*reikeis*) are found in all branches of the Teutonic family of languages.

**6. General features of the Teutonic development.**—We are now in a position to summarize the development of kingly rule among the Teutons. Our first datum here, as among Slavs, Lithuanians, and Prussians, is the existence of agnatic family-groups, which survive in the *pagi* of the Roman writers (Teut. **ga-aw-ya-m*, 'village community of blood-relations,' Goth. *gawi*; and **kunyo-m*, 'family,' 'clan,' Goth. *kuni*). At the head of such a group stood the clan-chieftain, the **kunyo-s* (O.H.G. *chuning*; cf. *kuni-rîchi* above), but the actual seat of communal authority was the public assembly (**maplam*, Goth. *mapl*). From the earliest times these family-groups had combined with one another for common action under a chosen leader (**haritugên*, O.H.G. *herizogo*), so forming groups (**peuðô*, Goth. *piuda*), which, once their object had been attained, were as a rule soon broken up into their component parts. Such temporary combinations, however, tended more and more to follow the Celtic model and to become permanent, even in times of peace, and at length resulted in the political structure which Roman writers call a *civitas*. The domain of a *civitas*, again, was designated **rîk-yo-m* (Goth. *reiki*), a Celtic loan-word, while the title of its chief might either be the Celtic term **rîks* (Goth. *reiks*), or the Teut. **peuðana-s* (Goth. *piudans*), or, again, **kunyo-s* (O.H.G. *chuning*), the name applied originally to the head of the family-group. Frequently, however, the *civitas* itself had a plurality of heads; but, whether it had one or more, the real power was vested in the public assembly, and the government was, at least

originally, of an essentially democratic form. Now this Teutonic phase of kingly rule exerted an influence in very early times upon the East of Europe—upon Lithuanians, Prussians, and Slavs. This is shown in the clearest way by the evidence of language. From the Teutonic sphere come the O. Pruss. *rīks*, 'kingdom,' *rikaut*, 'to rule,' and *rickaūsnan*, 'government,' while a term traceable in all the Slavic tongues—O. Bulg. *kŭnedzĭ*, Russ. *knyazĭ*, Czech *knez*, Pol. *ksiadz*, etc.—was borrowed in primitive times from the Teut. * *kuningas*. These derivatives seem to indicate that among the Litu-Slavs likewise royal authority was here and there being more effectively established, and that there were movements tending to pass away from the old family-State. When the Slavic chroniclers wish to convey the idea of real authority, of actual government in a political State, as contrasted with a mere management of affairs in a district, they have to resort to the borrowed words *knyazenič*, *knyaziti*, in place of the native *vlasti*, *vladeti* (see above, p. 728b). It was as *knyae* that the Scandinavian Varangians were invited by the Slavs:

'Our land,' said the latter, 'is large, good, and blessed with all things, but there is no order in it; come to be *knyae* among us, and to rule over us' (*kŭneziti i vladeti nami*; cf. A. A. Sachmatov, *Story of the Invitation of the Varangians* [Russian], St. Petersburg, 1904, *passim*).

It is to be assumed, though we cannot follow up the subject here, that in an early epoch true *civitates* were formed upon the Teutonic pattern both in the East and in the West of the Slavic area—among Russians, Czechs, and Poles, and doubtless also in Prussia and Lithuania. Among the Southern Slavs, however, the primitive family-State, as was indicated above, survived until the political reconstructions of the 18th and 19th centuries. It is interesting to note that in the early Middle Ages the Slavs adopted a new term for 'king' from the proper name of Charlemagne, who came into hostile contact with them both in the East and in the South. This relatively modern importation appears in O. Slav. *kralĭ*, Russ. *korolĭ*, Czech *král*, etc. Here, accordingly, we have a phenomenon analogous to what had taken place about a century earlier among the Teutons, who adopted the term *Kaiser* (Goth. *kaisar*, A.S. *cásere*, O.H.G. *keisar*) from the name of the great Cæsar, used as a title of the Emperors of Rome.

LITERATURE.—This is given in the article. There is as yet no special work in which ancient Teutonic and ancient Slavic modes of government are considered in their mutual relations.

O. SCHRADER.

**KINGDOM OF GOD.**—I. *IN THE OT.*—**1. Introduction.**—Behind the ideal Kingdom of God, which appears in the prophets and psalmists, there had doubtless been, as the author of 1 S $8^{7}$ assumes, the conception that Jahweh was Israel's King. This is found in the ancient song of Balaam (Nu $32^{21}$); it is perhaps reflected in the name Malchishua, given to Saul's third son; and the manner in which the term 'King' is applied to Jahweh by the earliest literary prophets (*e.g.*, Is $6^{5}$, Hos $10^{3}$) indicates that it was an old practice. It was not peculiar to Israel; the Ammonites, *e.g.*, called their supreme god Moloch ('King') (1 K $11^{7}$). The Kingship of Jahweh was not thought to be lowered by the rise of an earthly kingship in Israel; at least such a feeling did not long persist. For the worship of Jahweh was manifestly promoted by the centralization of the government under the kings, and the prophets of the 8th and 7th centuries thought of the government of Israel in the great future as vested in kings. If, then, there had ever been a feeling that the adoption of a kingly form of government was equal to the rejection of Jahweh's rule, as the editor of Judges and Samuel supposed (Jg $8^{23}$, 1 S $8^{7}$ $12^{17}$), it must soon have been overcome. The presence of two thrones in Jerusalem, that of Jahweh in the Holy of Holies and that of David, was regarded as normal for Israel. But Jahweh had not been long enthroned on Zion before the earthly kingdom was divided, and the period of decline began which was to end in exile and foreign domination. It was in this period and against this dark background that visions of an ideal kingdom arose in Israel.

**2. The data.**—Glimpses of the coming Kingdom of God, more or less vivid and detailed, are found from Amos onward, in the Psalms also, and to some extent in the historical writings, even those which deal with the remote past. Of these data none can claim to be much older than the age of the first literary prophets; some may be younger than the book of Daniel; the larger part, however, belongs to the period between Jeremiah and the Maccabees. The section of this long period which seems to have been most fruitful in visions of the ideal Kingdom is that of the Babylonian Exile, and the most barren section the first century after the rebuilding of the Temple (516 B.C.), unless, with some scholars, we assign the last eleven chapters of Isaiah to the period of Ezra-Nehemiah. The three events that occasioned the most clearly defined groups of data regarding the ideal Kingdom were the approach of the Assyrian power (722–701 B.C.), the fall of Jerusalem (586), and, the destruction of the Babylonian kingdom by Cyrus (538). In view of the first of these events, Amos and Hosea, Isaiah and Micah, spoke of a great future beyond the approaching day of evil; in view of the second, Jeremiah wrote; and, in view of the last, a part at least of Is 40–66 was composed. The Psalms which contain general features of an ideal future seem to presuppose such an acquaintance with the nations and with suffering as came to Israel with the Exile, and those Psalms that may concern an individual king of the Davidic line, as 2, 18, 21, 45, 61, 72, 89, and 110, are most easily understood as written after the fall of Jerusalem.

**3. Jahweh and the ideal Kingdom.**—The invariable and supreme factor in the great future is Jahweh. On this all prophetic writings are at one. Whatever agents assume prominence now and again, it is always Jahweh who is the efficient cause of the new and more perfect age. It is Jahweh who brings back the dispersed of His people (Am $9^{14f.}$, Hos $11^{10f.}$, Is $11^{11f.}$, Mic $2^{12}$, Jer $3^{14}$, Ezk $11^{17-19}$ etc.); Jahweh who gives material prosperity in the land of Israel (Hos $14^{5}$, Jer $30^{19}$, Ezk $34^{26}$, Is $27^{2-6}$, Jer $31^{4}$, Ps $69^{35}$, Is $66^{12}$); Jahweh who makes a new people for His new land, washing away the filth of the daughters of Zion (Is $4^{4}$), making a new covenant with His people (Jer $31^{31-34}$), giving them a new heart (Ezk $36^{26}$), and putting His spirit upon them for ever (Is $59^{21}$); Jahweh who judges the nations (Am $1^{3}$ etc.), brings foreigners to His temple (Is $56^{7}$), and sends blessings on all flesh (Is $2^{3}$ $55^{5}$). The ideal future presents itself as a time when Jahweh reigns in Zion over His people (Is $24^{23}$, Mic $4^{7}$), and teaches His ways to all nations (Is $25^{6}$). This relation of Jahweh to Israel's ideal future is rooted in Israel's past. It is not something quite new, but a glorification of the old. The Mt. Zion of the ideal future is but the ancient mount made higher (Is $2^{2}$), and the new people are people of a new covenant with Jahweh, more inward than the old (Jer $31^{31-34}$). Thus at all points the ideal Kingdom is an idealization of the greatest facts of Israel's past.

**4. Davidic rule and the ideal Kingdom.**—A common but not constant feature of Israel's ideal future, important but never supreme, is the element of a Davidic rule. Davidic 'rule,' or house, we must say rather than Davidic 'king,' because it is relatively seldom that attention is fixed on a partic-

ular individual, and even in these exceptional cases it may be doubted whether the prophetic vision ever rested on an individual who was thought of as having no successor. Again, Davidic rule is to be preferred to the term 'Messiah,' which, as W. H. Bennett says (*Religion of the Post-Exilic Prophets*, Edinburgh, 1907, p. 348), is 'inconvenient and misleading.'

Davidic rule, it was said above, is a common but not a constant feature of Israel's ideal future. We find it in Amos (unless $9^{11f.}$ be regarded as post-Exilic), Hosea, Isaiah, and Micah, in Jeremiah, Ezekiel, Haggai, and Zechariah, perhaps in Ps 2 and Ps 18, but there is only a shadow of it (Is $55^{4}$) in that section of the OT which is so rich in visions of the future Kingdom (Is 40–66); it is not found in the Minor Prophets (except in those mentioned above), in Is 24–27, or in Daniel. This element of Davidic rule, where found, is of very unequal significance. Thus, *e.g.*, in Hosea it is almost lost in the glory of Jahweh's presence ($3^{5}$). In Ezekiel it is obscured by the ideal temple; the Davidic representative is a 'prince,' with princely rather than kingly functions (Ezk $45^{7}$ $46^{2.16}$ etc.). In the Psalter it is represented vaguely at times (Ps 21 and 61 [?]), and again with authority (Ps 110). It stands out most conspicuously in Is $9^{6f.}$ and $11^{1-10}$. This fluctuation in the value of the Davidic rule may have been due to changes in the political environment or to individual peculiarities of the various writers. In the prophetic outlook on an ideal future the Davidic house, as has been said, is more commonly mentioned than an individual Davidic king. In Amos and Hosea it is only the line of David that comes into view; in Jeremiah and Ezekiel an individnal is indeed mentioned (Jer $23^{5f.}$, Ezk $34^{23}$, and possibly a different individual in Ezk $21^{27}$), but their common references are to a royal house (Jer $33^{22}$, Ezk $37^{25}$); in the later visions of the book of Zechariah it is again the Davidic house that is considered ($12^{7.8.10.12}$ $13^{1}$); in the Psalms both the house and an individual king appear (Ps 45, 72, 2, 110); in 2 S $7^{12-16}$ the divine promise concerns the royal succession down to the end; in Isaiah and Micah, Haggai and Zechariah (1–8), we confront primarily an individual. In view of the prevailing prophetic usage, in view also of the fact that Jeremiah and Ezekiel speak of an individual king and at the same time of a royal house that is to exist indefinitely, it seems doubtful whether, in the relatively small number of passages which contemplate an individual king, we are to suppose that the author, in any case, thought that this individnal was to be without a successor. This would amount to attributing everlasting existence to him, which the texts nowhere seem to warrant. If claimed for Is $9^{6f.}$ and Ps 110, then these passages are not to be reconciled with Jeremiah and Ezekiel, for an individual and a succession of individuals are different conceptions. But Is $9^{6f.}$ may be concerned rather with a quality of government than with its agents. It is hardly possible to hold any other view if Isaiah had the young Hezekiah in mind as the man through whom Jahweh was about to introduce a new era for Israel. As to Ps $110^{4}$ more can hardly be said with confidence than this, that, if there was in the OT the conception of a Davidic king who should reign for ever, this word of the Psalm would seem to confirm it. Alone, it is not sufficient to form a basis for such a doctrine.

It remains to sketch the character and limits of the Davidic rule in the ideal future. This rule is conceived in general as an improved copy of the historic rule of David. The name 'David,' not 'son of David,' is often given to the ideal ruler, as though he were thought of much as a re-incarnation of the heroic king who was a man after God's own heart. Special stress is laid on the ethical character of the ideal ruler and line, and the picture in this respect surpasses all that was ever realized in the founder of the royal house. The spirit of Jahweh rests upon him (Is $11^{2}$); he is beautiful and glorious (Is $4^{2}$); his righteousness is so perfect that it is likened to the righteousness of Jahweh (Jer $23^{6}$); he loves peace, and makes it, not only in Israel but among the nations (Is $9^{6}$ $11^{6-9}$, Zec $9^{9f.}$, Ps $72^{2.7}$). In the attitude of the ideal house towards the wicked and the Gentiles the language of physical force and a tone of severity are employed. Thus the Davidic ruler slays the wicked with the breath of his mouth (Is $11^{1-10}$) or with swords and arrows (Ps 45), and, unless the Gentiles do homage to him, he will dash them in pieces as a potter's vessel (Ps 2). In the time of Isaiah it was thought that the nations would flock to his standard (Is $11^{11}$), but in the time of Ps 110 the outlook on the nations is one of judgment. This function of judging is habitually attributed to Jahweh, but the execution of judgment is sometimes given to the king (*e.g.*, Ps 2, 45, 110). Thus the king of the ideal future is an ideal man, and in his rule he is an idealized David. The picture varies with the times, for it reflects what the leading spirits of different generations held most dear in a ruling house. The question of natural or supernatural cannot be raised in connexion with the king or the royal line of the ideal future (Is $7^{14}$ $9^{6}$, Mic $5^{2}$, historically interpreted, do not transcend natural limits).

**5. The material side of the ideal Kingdom.**—The ideal future of Israel is invariably bound up with the land which Jahweh gave to the fathers. It is a future on the earth and on the hither side of the grave. With Amos, the shepherd-prophet, the material side of the ideal future is naturally set forth in rural imagery ($9^{13}$), which is variously enriched by subsequent writers (Is $32^{15}$ $29^{17}$, Jer $31^{12}$, Ezk $34^{13-16}$ $36^{35}$ $47^{1-12}$, Is $30^{25}$ $51^{3}$, Jl $3^{18}$, Zec $14^{8}$). To the material blessings of Israel's ideal future Hosea added a covenant of peace between Jahweh and wild beasts ($2^{18}$)—an image elaborated by Isaiah ($11^{6-9}$) and the unknown prophet of the Exile (Is $65^{25}$). Ezekiel puts extermination in place of the covenant of peace ($34^{25}$), a circumstance illustrative of the freedom with which the prophets handled the details of the ideal future. With Isaiah, the city-prophet, a glorified Jerusalem comes into the foreground of the vision of an ideal future ($4^{5}$ $30^{19}$ $33^{20}$). Later prophets dwell on this feature (Jer $33^{9}$ Is $62^{3f.}$ $60^{13}$ $66^{24}$). The inhabitants of this ideal city and land are multiplied until the places are too strait for them (Jer $30^{19}$, Ezk $36^{10f.}$ $37^{26}$, Zec $10^{10}$); they blossom as the lily, and cast forth their roots as Lebanon (Hos $14^{5f.}$); a little one becomes a thousand and a small one a strong nation (Is $60^{22}$); no one says, 'I am sick,' and the days of the life of a man are as the life of a tree (Is $33^{24}$ $65^{22}$). Once, indeed, the prophetic language rises to the assertion that death is swallowed up for ever (Is $25^{8}$), which is probably to be regarded as affirming no more than is affirmed in Is $65^{20}$, that the child shall die a hundred years old. Very long life shall be the lot of those who inherit the ideal Kingdom.

**6. The spiritual side of the ideal Kingdom.**—In the prophetic view of the ideal future the spiritual side, though resting on the real past, departs from that past more widely than does the material side. The present paragraph will set forth what is implied in the statement already made, that the supreme factor in the ideal Kingdom is Jahweh. In the first place, the people who are to constitute the community at the beginning of the ideal future are a 'remnant' (Is $4^{3}$ and often). They are the good 'kernels' that Jahweh does not suffer to fall and be lost (Am $9^{9}$), the chosen ones who are left when

Jahweh makes a 'full end' of judgment in the land (Is 10[22f.]). Thus the beginning of society in the ideal future was thought of somewhat as the new planting of the race after the Flood. The new stock is not sinless, but it is purified and ennobled. Even Jeremiah thinks of men in the ideal future as needing priestly intervention with offerings and sacrifices, though the covenant with Jahweh is then written on the heart (Jer 33[18. 22]). With Ezekiel the need of a temple and priesthood is conspicuous (40–48), though he thought of the people as having experienced a profound change (37[13]).

Nor did Isaiah, while declaring that every one who was left in Zion should be called holy (4[3]), think of a sinless race of men. Like the post-Exilic Malachi (3[1-4]), he thought rather of a people who were morally and spiritually quickened and exalted, but yet capable of sin (Is 33[24]). The hopeful prophet of the Exile, though seeing by faith a city and land in which Jahweh would take delight (Is 62[5]), a Zion whose children were all to be taught of God (54[13]), and all righteous (61[3]), nevertheless believed that this new Zion would have a temple (44[28]), and seems to admit the existence of sin when he says that the 'sinner' being a hundred years old shall be accursed (65[20]). Thus, while neither the little company with whom the ideal future society begins nor their descendants are thought of as sinless, their moral and spiritual state is indeed exalted. The prophets are fond of setting this forth in two closely related terms, that of knowing Jahweh and that of intimate association with Him. The new Israel shall address Jahweh as Ishi, 'my husband' (Hos 2[16]), and Jahweh shall rejoice over His people as a bridegroom over his bride (Is 62[5], Zeph 3[17]). Much more frequently the happy state of the redeemed in the great future is summed up as 'knowing Jahweh.' That is the key to Isaiah's vision of peace (11[9]), the fruit of Jeremiah's new covenant in the heart (31[34]), and it is promised to all the children of the tempest-tossed Zion (Is 54[13]). Of the depth and vital character of this knowledge we have indications in Hosea's sorrowful word, 'My people are destroyed for lack of knowledge' (4[6]), in Jeremiah's connecting it with the new inward covenant (31[33-34]), as well as in his thought that the shepherds who shall teach the new Israel will be according to Jahweh's heart (3[15]), and clearly in the statement of the Exilic prophet that Jahweh Himself will be the teacher (Is 54[13]). This is a knowledge that permeates the entire man, the will and the heart no less than the understanding. In Ezekiel and certain post-Exilic writings the moral and spiritual state of restored Israel is conceived less profoundly. Ezekiel's New Jerusalem is dominated by ritual. He speaks indeed of a new heart, but it is to be manifested in keeping the old statutes and ordinances (36[26f.]). In Joel and Zechariah the holiness of redeemed Israel seems to be thought of as physical separation from everything that is ceremonially unclean. No stranger shall pass through Jerusalem, no Canaanite come into Jahweh's temple (Jl 3[17], Zec 14[21]).

Such were the prophets' thoughts of the individual member of the ideal Kingdom. Other features of that Kingdom remain to be mentioned. Judah and Israel, which had been separated for three hundred years when Jeremiah wrote, are again to walk together (Jer 3[18], Ezk 37[15-17]). Justice and righteousness are to prevail everywhere, in the wilderness as well as in the fruitful field (Is 32[16]). Moreover, the new knowledge of Jahweh bears fruit not only in right relations between man and man, but also in great joy and abiding peace. The redeemed shall not sorrow any more (Jer 31[12]), but shall have a wreath of everlasting joy upon their heads (Is 35[10]). Jahweh will create Jerusalem a rejoicing and her people a joy (Is 65[19]). Such statements, since sin and death are still to exist in the ideal future, must be understood in a relative sense; not less so the announcement that a deep, universal, and abiding peace will characterize the new Israel (Is 2[4] 11[9] 32[16] 54[13], Zec 9[10]).

To the spiritual side of the ideal Kingdom belongs its religious relation to the nations. This is variously conceived by different prophets. It is not touched by Amos or Hosea. According to Is 2[2f.] all the nations flow unto Jahweh's house in Jerusalem, apparently by a spontaneous movement. Jahweh's house is exalted so high that they see it and are attracted. They have confidence that Jahweh will teach them, and they come with a purpose to walk in His ways. Since peoples do not readily change their gods, this conception of Isaiah that *all* nations would be drawn to Jahweh's house implies that, in his view, the religion of the new Israel would be far more powerful in the lives of men than religion had ever been in the past. There is no suggestion of missionary work on the part of Israel in the conversion of Egypt (Is 19). Jahweh sends a deliverer to Egypt in a time of crisis, and in consequence Egypt worships Jahweh. Not only so, but the prophet appears to teach that the Assyrians become worshippers of Jahweh through the influence of Egypt. This outlook of Isaiah has no parallel for a century and a half, but in the latter part of the Exile and in the post-Exilic age we hear again of Israel's religious relation to the Gentiles in the ideal future. In Deutero-Isaiah, exclusive of the Songs of the Servant, and in Ps 2 and Ps 72, the religious influence of Israel is associated with the idea of its political dominion, and owes to this fact a certain tone of severity (Is 45[14] 60[12]). In one of the late visions attributed to Zechariah (14[16-19]), the remnants of the nations are to go up to worship Jahweh and to keep the Feast of Tabernacles; if they do not, they are to be punished. Far different is the conception of Jahweh's purpose in Is 25, which may be later than the return from Babylon: Jahweh is to give a great banquet in Zion to all nations, and is there to destroy the 'veil that is spread over all nations.' There is no hint of political subjection to Israel. The nations come into the spiritual light and joy which Jahweh gives.

Still more significant is the conception of Israel's ideal religious service to the Gentiles which is found in the Songs of the Servant. It is not now in Zion, but afar, in their respective homes, that they receive Jahweh's salvation (Is 49[6]). It is not at a banquet given by Jahweh, but through the efforts of His faithful people, that the nations have the 'veil' removed. It is not here through the largess of the King that the Gentiles are blessed, but through the quiet and patient testimony (Is 42[2f.]), through the bitter suffering and martyrdom, of the Servant (Is 52[13] 53[12]; cf. 61[6]). With this profound view of Israel's ideal relation to the spiritual welfare of the Gentiles we may associate the prayer of the psalmist (67), that God would bless Israel *to the end* that His salvation might be made known to all nations, and also those Psalms in which the faithful people seem to be Jahweh's 'anointed,' to serve Him among the Gentiles (Ps 68[30. 34. 26. 35] 22[27f.]; cf. 84[9]). This view of Israel's spiritual relation to the world is the deepest ethical thought of the OT on the subject.

7. **Realization of the ideal Kingdom.**—To judge intelligently of the prophets' visions, we must, of course, assume the prophets' point of view. When we do this, and look out upon Israel's ideal future, we see that what the prophets anticipated did not come to pass. The great pacific king of Isaiah's vision did not come, nor did the event which was

to have immediately preceded it, that is, the breaking of Assyria's power; the mountain of Jahweh's house was not exalted above the hills, and the nations did not flow unto it; Egypt was not brought to Jahweh; nor did Egypt lead Assyria to worship the God of Israel. The ideal future of which Jeremiah spoke did not dawn after seventy years ($29^{10}$), nor did the Davidic deliverer of Ezk $29^{13-21}$ arise at the close of the forty years' desolation and captivity of Egypt. The hope associated with the return of the exiles whom Cyrus released (Is $41^{1ff.}$ $45^{1ff.}$ 60) was not fulfilled; nor was Zerubbabel the Davidic king who was to bring in the long-expected day (Hag $2^{23}$, Zec $6^{12}$ $4^{9}$). As with these hopes which contained an element of time, so with the others. The vision of Jahweh's glory in restored Israel and Zion—a city most splendid, a temple surpassing Solomon's, and the Shekinah rendering sun and moon unnecessary—did not find an embodiment when Jahweh brought back the captives; nor did the reign of peace among the nations and peace in Nature begin. The restored people were not multiplied until they overflowed into Gilead and Lebanon, the land was not more fertile nor the hills and mountains more plentifully supplied with water, life was not prolonged so that a child died a hundred years old, nor was prosperity secure from one generation to another. Judah and Israel were not re-united on the return from Babylon; indeed, Israel never returned.

As for the people who came back to Jerusalem, they were not the men of the ideal future of whom Jeremiah and Deutero-Isaiah had spoken. They were doubtless a chosen remnant in respect of their loyalty to Jahweh and their patriotic devotion to Zion, but the literature that deals with post-Exilic history plainly shows that they were not a people in whom Jeremiah's new covenant was realized, not a people taught of Jahweh in a unique manner and established in righteousness. The one conspicuous event of the prophetic outlook that was accomplished was a return from captivity. This does not appear to have been on a scale commensurate with the prophetic expectation, or to have been carried out with the glory with which it had been depicted; nevertheless it was an event of such surpassing importance for the development of religion in the earth that it justified the promise of those prophets who had sought to kindle Israel's hope and faith by their words of a better future.

Another fact is to be noted in this connexion. The prophets themselves were well aware that prophetic expectations had been disappointed, and yet they did not cease to speak with confidence of God's purposes for Zion. In 734 B.C. Isaiah expected, within a little while, the Davidic prince who, the Assyrian power having been broken, would inaugurate the ideal Kingdom; and then, a generation later, in 702 B.C., though his earlier expectation had not been accomplished, he spoke again, with equal assurance, of the turning back of the invader and the dawn of a new age (Is 30). Sennacherib's army was, indeed, turned back, but the hoped-for age was not therewith inaugurated. A century later, in the new crisis that had arisen with the approach of the Babylonians, the prophet Jeremiah put the new future, which Isaiah had looked for in his own day, beyond an exile of long duration. Deutero-Isaiah foresaw Israel's return in connexion with the overthrow of Babylon as an event of the near future, and associated the ideal Kingdom with that return; and, though this hope was not realized, Zechariah, in those very days, declared that Jahweh had returned to Zion, and that He would gather His dispersed into the midst of Jerusalem and would do good to His people (8). Later, perhaps much later, we hear an unknown prophet foretelling that after the distress which was to befall Jerusalem the new age would dawn, when Jahweh's name would be one in all the earth (Zec $14^{9}$). Thus the vision of an ideal future which had arisen with Amos and Hosea did not fade into the light of common day, though its realization was again and again vainly though confidently expected. As time passed it underwent modifications more or less important; but the succession of the prophets, undeterred by its failure to become embodied on earth, and bating no jot of heart or hope, looked for its realization in a future not too remote.

This persistence of hope, taken together with the fact of a considerable element of change in the visions of the ideal future, seems to show that the prophets were not greatly concerned with the particular details of their pictures, but were established in certain great principles of Jahweh's character and will. Their thoughts of times and seasons, of agents and methods of fulfilment, of fit material and political accompaniments of the coming ideal State, might vary one from another, and might all be very imperfect or quite wrong; they still held to an ideal perfecting of Jahweh's gracious will in a glorious Kingdom for His chosen people. Whether the vision of the prophets in its essential elements found its fulfilment in Jesus and His work, or is yet to find it there, is a question that lies beyond the limits of this article.

II. *In the NT*.—1. **Introductory note.**—For the study of the Kingdom of God in the NT two points are of fundamental importance: (1) the use of the term by Jesus, and (2) the word 'Church' as used by the early disciples. The present article is limited to the former. In determining the content of the term 'Kingdom of God' in the thought of Jesus, the hope of progress lies in a more careful analysis and valuation of the various sources of His teaching.

The apocalyptic literature, beginning with Dn $7^{13.14}$, influenced the form rather than the content of Jesus' teaching on 'the Kingdom of God,' or, in particular, on the consummation of that Kingdom. Even this influence is often exaggerated. The *Logia* contain very little that presupposes an influence of apocalyptic literature (as Mt $19^{28}$ $24^{26-28. 37-41}$), and Mk 13 cannot all be ascribed to Jesus. The thought of the nearness of the Kingdom of God sprang out of Jesus' consciousness of God's presence with Him, and was not at all due to the apocalypses. Moreover, what is most characteristic of Jesus, His supreme emphasis on the ethical-religious life, is hostile to the spirit of much of the apocalyptic literature, for the authors of that literature lived in visions of the consummation.

2. **The data.**—It is significant that the term 'Kingdom of God' (or 'Kingdom of heaven') occurs in the material which is peculiar to Matthew about three-quarters as many times as in the *Logia*, the oldest Gospel, and the matter peculiar to Luke taken together (*Logia* eight, oldest Gospel eleven, matter peculiar to Luke three, matter peculiar to Matthew seventeen). We infer that it was a favourite term with the editor of the First Gospel—an inference that receives support from the fact that he has sometimes prefixed the term to parables where its use appears to be extremely vague (*e.g.*, Mt $25^{1}$). If, however, the term was a favourite one with this editor, we should form our judgment regarding the prominence of the conception in the teaching of Jesus, not from his usage, but from the *Logia* and the oldest Gospel. Having regard to these sources, we must say that the term does not seem to have been employed by Jesus with great frequency. The *Logia* may count slightly less than 200 verses, and the words of Jesus in the oldest Gospel a few more

than that, and, as was said above, the former source contains the term in question but eight times and the latter only eleven. The matter peculiar to Luke contains approximately 164 verses which are words of Jesus, and in these the term 'Kingdom of God' occurs but three times, while in Matthew's peculiar material, which contains about 187 verses which are words of Jesus, the term is found seventeen times. Further, it may be noted here that no one is reported to have asked Jesus what He meant by 'Kingdom of God,' and that He never felt called upon to declare in what sense He used the term. His thought on the subject, like His thought on Messiahship, was left by Him to be inferred by those who had seeing eyes and understanding hearts. His handful of disciples occupied Jesus' thought far more than did the 'coming of the Son of man with the clouds of heaven,' and the least detail of their spiritual life was more important in His sight than all the computations of the apocalyptists regarding the day and hour of the 'end,' or how the 'end' was to be ushered in.

**3. Content of the term 'Kingdom of God' as used by Jesus.**—(*a*) *His agreement with the Prophets.*—The word of the oldest Gospel (Mk $1^{15}$) that, when Jesus came into Galilee, He preached, saying, 'The time is fulfilled, and the kingdom of God is at hand,' shows clearly His consciousness of being in the prophetic line, a continuator of the prophetic hope of a divine Kingdom. But, when we hear what He said of the Kingdom at different times, it becomes plain that He was not a continuator of the prophetic hope in its entirety, and that His thought moved in line with what the great prophets had said of the spiritual side of the ideal Kingdom. He said nothing of the restoration of the Davidic throne, and nothing of the glory and riches of Palestine in the day of fulfilment. The only kingship that He contemplated was the Kingship of God (Mt $13^{41}$ is regarded as unauthentic). That this rule of God was regarded by Him as a teaching of the OT appears, *e.g.*, in the manner in which it is introduced into the model for prayer which He gave His disciples. They are taught to pray 'Thy kingdom come' (Lk $11^{2}$), and it is taken for granted that they will understand this term. The petition is, indeed, a petition for the fulfilment of such OT words as Is $24^{23}$ and Mic $4^{7}$.

(*b*) *Personal elements in His usage.*—(1) Jesus' thought of the Kingdom of God is not altogether identical with the spiritual side of that Kingdom as seen by the prophets. It is more inward and personal. Thus we read in the *Logia* that the Kingdom of God is like unto leaven (Lk $13^{20}$), and in the oldest Gospel it is compared with the earth which, once the seed is deposited in it, carries forward its development until the corn is full (Mk $4^{26-29}$). In both cases the Kingdom is a force working from within. It is self-propagating in the parable of the Leaven, and in that of the Automatic Earth it is a seed that the heart mysteriously germinates and matures. These parables go further than the prophets in their implications regarding the nature of man and his relation to God.

(2) Again, it is peculiar to Jesus, in distinction from the prophets, that He thought of the Kingdom of God as having a lowly beginning. The heart of a child is the most favourable soil for it (Mk $10^{14}$). The mustard seed is the fittest symbol of it, both in smallness and in the size of the plant which it produces (Mk $4^{30}$).

(3) The usage of Jesus differs from that of the prophets, further, in that He speaks of a Kingdom of God as existing on both sides of the grave, or in two spheres, an earthly and a heavenly. No difference between the earthly and the heavenly Kingdom of God is clearly marked in His words (Mt $6^{10}$ is probably a Christian expansion of the last clause of Lk $11^{2}$). The *Logia* have one saying, possibly two, in which the Kingdom of God is equivalent to heaven (Mt $8^{11}$ = Lk $13^{28}$, Lk $6^{20}$ = Mt $5^{3}$), and the oldest Gospel has one such saying, possibly more (Mk $9^{47}$; cf. $10^{14}$ $10^{23-25}$ $14^{25}$).

(4) Finally, the usage of Jesus differs most widely from that of the prophets in that He thought of the Kingdom as having actually begun with Him and His disciples. In an important sense it was still future, but it was also present. This is clearly implied in a saying of the *Logia*, though it does not contain the term in question. Jesus said to His disciples (Lk $10^{23f.}$), 'Blessed are the eyes which see the things that ye see: for I say unto you, that many prophets and kings desired to see the things which ye see, and saw them not; and to hear the things which ye hear, and heard them not.' This reference to the OT hope determines the meaning of the words 'what ye see' and 'what ye hear'; it is the fulfilment of the prophetic vision of a better future. Again, in the oldest Gospel there are at least two sayings of Jesus that belong here. He said to His disciples: 'Unto you is given the mystery of the Kingdom of God' (Mk $4^{11}$). The 'mystery' was something to be revealed and known, and the disciples were learning it in that very hour. Secondly, to a scribe who answered discreetly, Jesus said: 'Thou art not far from the kingdom of God' (Mk $12^{34}$). It would seem a necessary inference from this word that His own disciples were regarded by Him as *in* the Kingdom of God. Quite in accord with this is the saying preserved in Lk $17^{20f.}$, 'The kingdom of God cometh not with observation: neither shall they say, Lo, here! or, There! for lo, the kingdom of God is within you.' The new age had begun; therefore that of the Law and the prophets had come to an end. On the other hand, it is equally clear in the oldest sources that Jesus looked for the coming of the Kingdom of God in some future day. He taught His disciples to pray for it (Lk $11^{2}$), and He assured them that it would come with power within a generation (Mk $9^{1}$). The reconciliation of these apparently discrepant views lies in the nature of the Kingdom of God as Jesus conceived of it. Neither view can be ignored by the historical student. Both are contained in the conception of the Kingdom as a seed that develops and matures for the time of harvest (see, further, art. JESUS CHRIST, iii. *B.–C.* 2, above, pp. 510–513).

G. H. GILBERT.

**KING'S EVIL.**—This is the name given to scrofula, a disease which was supposed to be cured by the touch of the king of England. The same belief was held regarding the king of France. The Lat. *regius morbus* originally denoted jaundice, but, with *conincsevel* (Mid. Dutch) and *le mal le roy* (Old Fr.), was applied to scrofulous affections, and especially glandular swellings of the neck and face (see *OED*, *s.v.*). Doubtless other ailments were at times popularly included in the phrase 'the Evil' or 'the King's Evil.' There was a belief that the seventh son could cure the malady (H. Crooke, *Body of Man*, London, 1615, p. 340). This is sometimes extended to the seventh son of a seventh son, and even to the ninth son of a ninth son. This belief also was common to England and France. The method was by stroking. Fantastic medicines were prescribed for the curing of the Evil, such

as goose dung, viper's flesh, and lion's blood (Gulielmus vanden Bossche, *Historia Medica*, Brussels, 1639, Index, *s.v.* 'Scrophulis remedia').

Edward the Confessor is said to have been the first to cure by touch those suffering from ulcers. William of Malmesbury states that some of these miracles happened in Normandy before he came to the throne (*Gesta Regum*, London, 1840, ii. 222). It is, however, remarkable that Caxton's *Golden Legend*—a 15th cent. unhistorical view of the canonized king—whilst presenting an idyllic picture of England in his day and recording several of his miracles, does not mention any by touch. Shakespeare (*Macbeth*, IV. iii. 146) expresses the view of a later age when he makes Malcolm say:

'Tis call'd the evil:
A most miraculous work in this good king;
Which often, since my here-remain in England,
I have seen him do. How he solicits heaven,
Himself best knows: but strangely-visited people,
All swoln and ulcerous, pitiful to the eye,
The mere despair of surgery, he cures;
Hanging a golden stamp about their necks,
Put on with holy prayers: and 'tis spoken,
To the succeeding royalty he leaves
The healing benediction.'

The touch is not mentioned among the reasons for Edward's canonization in the bull of Alexander III. About 1180 Peter of Blois (*Ep.* 150 [*PL* ccvii. 440]) mentions this kingly power as well known. There is no evidence of the rite under the Norman monarchs, but it appears to have been fairly continuous from Henry II. to Queen Anne.

There is a curious passage in Sir John Fortescue's tract on the title of the House of York that is not mentioned in the recantation which he was forced to make in 1471 as a condition of his restoration. Arguing that a queen regnant is not allowed by the Constitution, he says: 'And sithen the Kinges of England ben enoynted in theyre hands, and by vertue and meane thereof God commonlie healeth sicknes, by putting to and touching the maladie, by thenontinge hands; and also gould and silver handled by them, and so offered on Good Friday have ben the meane and cause of great cures, as it is knowne, and therefore such gold and silver is desired in all the world. Which good things must needs cease for all the time that a woman were so Queene of that land because that a woman may not be enoynted in her hands' (first printed in T. F. Clermont, *Life, Works, and Family History of Sir John Fortescue*, London, 1869, i. 498). In the corresponding Latin of the *Defensio Juris Domus Lancastriæ* the name of the malady is given—*regius morbus* (*ib.* p. 508). Fortescue's doctrine was not accepted either as to the throne or as to the power of healing.

Edward I. gave money as alms, but Henry VII. was the first to bestow the small gold medal, which Shakespeare assigns to the generosity of the Confessor. There are cases in which it was alleged that the Evil had been cured by wearing the touch-piece originally given to another sufferer.

The healings were performed mostly in London (by Charles II. at the Banqueting Hall, Whitehall), but the ceremony was possible wherever the Court might be; and Langley, Newmarket, Chester, Bath, Salisbury, and Oxford are known to have witnessed such functions. Easter, Whitsuntide, and Michaelmas were the usual seasons, and the hot weather was avoided.

The first separate treatise on the King's Evil is *Charisma* (London, 1597), by William Tooker, who declares that Queen Elizabeth cured many thousands. In 1602 William Clowes, a famous surgeon of his day, published *A right frutefull and profitable treatise for the artificial cure of the malady called in Latin Struma, and in English the Evill cured by kinges and queenes of England.* He professed firm belief in the healing power. Thomas Fuller, who when young had seen James I. touch in Salisbury Cathedral, also professes unwavering faith.

'If any doubt of the truth thereof, they may be remitted to their own eyes for further confirmation.' He further asks: 'Shall we be so narrow-hearted as not to conceive it possible that Christian men, the noblest of corporeal creatures, kings, the most eminent of all Christian men, kings of Britain, the first-fruits of all Christian kings; should receive the peculiar privilege and sanative power, whereof daily instances are presented unto us?' (*Church History*, ed. J. S. Brewer, Oxford, 1845, i. 387-390).

As the finances of Charles I. contracted, he substituted silver for gold in the touch-pieces, and many received only the imposition of the royal hands. The monarch regarding whose healings we have the fullest information was Charles II., who touched 90,798 persons. Evelyn, in his *Diary*, ed. W. Bray, London, 1890 (6th July 1660), gives a detailed account of one, and also notes that on 28th March 1684 there was so great a concourse of people, with their children, that six or seven were killed in the crush at the office where the tickets had to be obtained. Each applicant had to bring a certificate from the clergyman of his parish, and signatures of the churchwardens also were required by a proclamation issued in 1683. The parishes were expected to keep a register of the certificates they issued. At the public healings the king sat in his chair uncovered and surrounded by members of his court. One of the chaplains read the Gospel from Mk 16, and at the latter part of v.[18], 'they shall lay hands on the sick, and they shall recover,' the chief surgeon brought up the sick persons in order. The words from v.[18] were repeated for each person. The king stroked the face or neck, where the disease was evident, with both hands, and a second surgeon then took charge of the patient. The reading from Mark was finished after all the patients had been touched; and a second Gospel from the first chapter of John was commenced. At v.[6] the surgeons presented each patient a second time. The Clerk of the Closet, kneeling, presented to the king the gold medal on a white silk ribbon, which he then placed round the neck of the patient as the chaplain read v.[9]; the Gospel was continued to v.[14], and followed by prayers. At the close the Lord Chamberlain and two other noblemen brought linen, basin, and ewer for the king to wash his hands, and with this the ceremony ended. Such was the procedure under Charles II. The office for the healing appears to have been drawn up in the time of Henry VII. in Latin, and was in part a modification of the blessing for sore eyes, and the exorcism against evil spirits. This was sometimes modified. Elizabeth used the sign of the cross, which was omitted by her successors, but restored by James II., by whose authority the office was printed in English in 1686. It was reprinted along with the *Office for consecrating cramp rings* from a MS belonging to Dr. A. C. Ducarel, by F. G. Waldron (*Literary Miscellany*, 1789). The final modification was in the reign of Queen Anne, and was included in the Prayer Book, incorporating that of 1724, although George I. never performed the ceremony—a fact duly noted by his disaffected Jacobite subjects. The forms used by James II. and Queen Anne are given in the third and fourth editions of Hamon L'Estrange's *Alliances of Divine Offices* (1699, 1846). Occasionally there were private healings, when the ceremonial was less elaborate.

Patients were occasionally sent from various parts of the country at the partial cost of the places to which they belonged. In 1682 the Corporation of Preston paid 10s. for a bricklayer's son to go to London 'in order to the procuring of His Majesty's touch.' In 1687 5s. each was paid for two girls to be sent to Chester, where James II. then was (J. Harland and T. T. Wilkinson, *Lancashire Folklore*, London, 1867, p. 77). Similar payments from Ecclesfield, York, and Kirkham have been printed (W. Andrews, *The Doctor*, London, 1895, p. 19; H. Fishwick, *History of the Parish of Kirkham*, London, 1874, pp. 98, 106).

The Stuart pretenders as well as the Stuart kings claimed the healing power, and one of the charges

in the trial of the Duke of Monmouth was that he had touched children for the Evil. The last recorded instance of the rite occurred in the Jacobite rising of 1745, when Prince Charles Edward touched a scrofulous child at Holyrood Palace. 'Touch-pieces' were struck for James III. and Henry IX., *i.e.* the Old Pretender and Cardinal York. Thomas Carte, in the first volume of his *History of England* (London, 1747), in arguing that the healing power of the kings was not due to anointing, recited the case of Christopher Lovel, who went abroad to be touched by 'the eldest lineal descendant of a race of kings' who had not been crowned or anointed. This obvious reference to the Old Pretender led to a controversy, and the Corporation of London withdrew their subscription from the *History* (see J. Nichols, *Literary Anecdotes of the 18th Century*, London, 1812–15, ii. 495, where many details are given).

The power of healing the King's Evil was also claimed by the kings of France, and was said to have been given to Clovis at his anointment. Another account states that Philip I. was the first to touch, and that he was deprived of the power on account of his dissolute life. The ritual was settled by St. Louis. After coronation at Rheims, the king went on a pilgrimage to the shrine of St. Marcoul, who died in 658, and who was so successful in curing scrofula that it was called St. Marcoul's Evil after him. The sick were ranged in the church, or, when the number was too large, in the cloisters or in the park, where they were touched by the king and received a gift from the Grand Almoner. Healings are recorded by Charles VII. (1422), Louis XI. (1461), and Charles VIII. (1483). Cardinal Wolsey was present in 1527 when Francis I. touched 200 people. When Henry IV. was crowned at Chartres in 1594, as many as 1500 were present at a healing. His physician Laurentius asserts that 50 per cent were cured within a few days after being touched. Peter Lowe (*Discourse of the Whole Art of Chyrurgerie*[2], London, 1612) mentions the touch as used in France:

'The diseased first is viewed by the Chyrurgions, who findes it to be the kirnells or King's Evil, then the diseased is set on his knees, and presented to the king, who maketh a crosse on his forehead with his hand, saying: *Le roy te touche, Dieu te guerrie*, which is to say, the King doth touch thee, God make thee whole' (J. Finlayson, *Account of the Life and Works of Maister Peter Lowe*, 1889, p. 8).

Louis XIV. is said to have touched 2600 persons two days after his coronation, and 1600 on the Easter Sunday of 1686. Every French patient received 15 sous, every foreigner 30 sous. When Louis XV. was crowned, the shrine of St. Marcoul was brought to Rheims, and over 2000 persons were touched. The custom continued until 1776, and the authorized programme of the coronation of Charles X. included the healing ceremonial.

R. J. Dunglison (*History of Medicine*, Philadelphia, 1872, p. 209) asserts that the healing touch was not restricted to the kings of England and France; 'it appears to have been not unfrequently employed in Scandinavia.' He conjectures that it arose from Druidic practices—a theory for which there appears to be no evidence. The kings of Hungary were credited with the power of curing jaundice, to which the name of *morbus regius* was formerly also applied. The *Salutatori* in Spain and the Netherlands claimed to cure sores by the touch, white linen, and prayers; but their efforts were prohibited. Valentine Greatrakes, an Irish gentleman, in 1662 conceived the idea that he could cure the King's Evil, and from that time until 1666 'stroked' a great number of people for scrofula, ague, rheumatism, and other diseases, with varying success. He accompanied his operations by prayer.

It may be noticed that in all these cures, whether by kings, seventh sons, or healers, the common feature is that of stroking with the hands. That many patients were apparently benefited by the touch need not be doubted. The change of air involved in a journey to the Royal Court, religious solemnity, the expectant attention, even the belief in the touch-piece as an amulet, would all tend to help the natural curative process. The history of the royal healing suggests that it is a fragmentary survival from a time when priesthood and kingship sometimes centred in the same person, and when, as disease was regarded mainly as demonic possession and medicine as exorcism and magic, the priest had often to exercise the function of the physician. It is noteworthy that in England the healings were most numerous in the reign of Charles II., when the 'patriarchal theory' of the origin of monarchy was held by the Royalists in an extreme form. But the materials at command are scarcely sufficient to warrant any broad generalization.

LITERATURE.—Most of the historical references are given in an art. 'On the Cure of Scrofulous Diseases attributed to the Royal Touch' by Edward Law Hussey, *Archæol. Journal*, x. [1853] 187 ff. (with engravings of touch-pieces). See, further, William Tooker, *Charisma*, London, 1597; William Clowes, *Treatise on Struma*, do. 1602; John Browne, *Charisma Basilicon*, do. 1684; William Becket, *Inquiry into Antiquity and Efficacy of Touching for the King's Evil*, do. 1722; John Douglas, *Criterion*, do. 1754; Thomas Joseph Pettigrew, *Superstitions connected with Medicine and Surgery*, do. 1844 (with engravings of touch-pieces); *Cérémonies et prières du sacre des rois de France*, Paris, 1825; Hamon L'Estrange, *Alliances of Divine Offices* (Oxford ed., 1846); N. WILLIAM E. A. AXON.

**KISMET.**—Kismet is an Arabic word, meaning 'lot,' 'distribution,' 'fate.' It is not found in the Qur'ān in this philosophical sense, the idea of fate being there expressed by comparison with a bird: 'Every man's augury (lit. bird) have we fastened on his neck' (xvii. 14); 'your augury (bird) is in God's hands' (xxvii. 48). Zamakhsharī interprets thus: 'The source of good and evil is in God; and this is your destiny (*ḳadar*) or your fate (*ḳismet*). If God wishes, He gives you; if He wishes, He denies you.' In Qur'ān xxxvi. 18 we read: 'Your augury (bird) is with you,' *i.e.* 'Your evil destiny accompanies you.' The origin of this comparison is unknown.

The idea expressed by the word *ḳismet* relates to events of the earthly life; it is the share of good luck or of accidents, of fortune or of misery, which falls to each. The term is not used in a theological sense like the words *ḳaḍā* and *ḳadar*, which refer to man's good or bad deeds and to his destiny in the hereafter (see art. FATE [Muslim]).

The belief that each one's fate is settled beforehand by God, and that, whatever one may do, one can scarcely modify it, is popular in Muslim countries, and is often to be found in Muslim literature, especially among the poets and story-tellers. In the rich collection entitled *Al-Mustaṭraf* (Fr. tr. by G. Rat, Paris, 1899) there are several chapters on fate and destiny, on fortune and its vicissitudes.

A man said one day to the philosopher Buzurgmihr: 'I have seen an ignorant person enjoying the favours of heaven, and a wise man being excluded from them; hence I have understood that man has not in his hands the disposition of his fate' (*al-Mustaṭraf*, i. 711). A poet has written: 'I know very well that it is only God who can be helpful or hurtful' (*ib.* 713).

Sa'dī, in his *Būstān* (tr. C. Barbier de Meynard, Paris, 1880, ch. v.), groups several anecdotes in which he explains the idea of fate and the duty of resignation.

'Happiness,' he says, 'is a gift of the divine justice' (it would be more exact to say 'of the divine arbitrariness,' adding, however, that man has never the right to regard this arbitrariness as unjust). A clever archer can usually pierce an iron target with his arrow, but, when fate deserts him, he cannot

even make a hole in a piece of felt or silk. A poor man loses a penny and searches for it in vain; an indifferent passer-by comes along and finds the penny immediately. 'What is the use then,' concludes the poet, 'of struggling against the force of destiny?'

The following quatrain is from Abū Sa'īd or from Khayyām:

'If your situation is good, it is not the result of your clever measures; neither is it your fault if it is unhappy. . . . Live resigned and content, since the good and evil of this world do not depend upon you' (Hoceyne-Azad, *La Roseraie du savoir*, Paris, 1906, tr., p. 303).

In the story entitled 'The Story of the Sheik with the generous Palm,' in the *Thousand and One Nights*, a rich man twice gives a purse to a poor rope-maker to help him to free himself from his poverty; but scarcely has he received it than he loses it. Some one then gives him a worthless piece of lead, and this lead becomes the source of his fortune (tr. J. C. Mardrus, Paris, 1899–1904, xiv. 64 ff.; R. Burton, *Supplemental Nights*, London, n.d., iv. 341–365).

This doctrine of chance, which conduces to idleness and indifference, is one of the causes which hinder the progress of Muslim peoples in matters of economics. It is, however, only a popular belief, and is not accepted in theology, as has already been indicated in the art. FATE (Muslim).

LITERATURE.—This is given in the article.

B. CARRA DE VAUX.

**KISSING.**—Kissing is a universal expression (in the social life of the higher civilizations) of the feelings of affection, love (sexual, parental, and filial), and veneration. In its general use it is more or less symbolic, but in maternal and in sexual love it has an essential value of its own as a focus of physical emotion, which it not only expresses but stimulates.

**1. General description.**—A refinement of general bodily contact (the instinct to which is irreducible), kissing supplies a case, in the higher levels of physiological psychology, of the meeting and interaction of the two complementary primal impulses, hunger and love. It is remarkable that, though the act in its civilized form is very rare among the lower and semi-civilized races, it is fully established as instinctive in the higher societies. This is a case of an acquired character or of some corresponding process. Equally remarkable is the fact that a line can be drawn between the higher civilizations; thus, the kiss seems to have been unknown to ancient Egypt; in early Greece and Assyria it was firmly established, and probably its development in India was as early as the 'Aryan' age.

Touch is 'the mother of the senses,' and the kiss may be referred generally to a tactile basis, as a specialized form of contact. Animal life provides numerous analogies; the billing of birds, the cataglottism of pigeons, and the antennal play of some insects are typical cases. Among the higher animals, such as the bear and the dog, there is a development which seems to lead up to those forms of the act most prevalent among the lower races of man and also characteristic of the peoples of Eastern Asia. Far more similar, however, to the civilized human kiss and the non-olfactory forms of the savage kiss is the habit attested for cats of pressing or squeezing one another's nose.[1]

**2. Forms of the kiss.**—The lower types are incorrectly grouped by travellers under the term 'rubbing noses,' and various forms are often confused. The olfactory form occasionally includes mutual contact with the nose, as among the Maoris, Society and Sandwich Islanders, the Tongans, the Eskimos, and most of the Malayan races. The rubbing of noses, often styled 'the Malay kiss,' is described by Darwin thus: the giver of the kiss places his nose at right angles on the nose of the other, and then rubs it; the process occupies no longer time than a handshake among Europeans. Cook and others describe the South Sea Islands form as a vigorous mutual rubbing with the end of the nose, omitting the olfactory element.[1] Elsewhere, as among the Australians, general contact of the face occurs—'face-rubbing.'[2] In many lower races mothers lick their infants. But the typical primitive kiss is contact of nose and cheek; the Khyoungtha, for instance, apply mouth and nose to the cheek, and then inhale.[3] Among the Chinese, Yakuts, and various Mongolian peoples, and even the Lapps of Europe, this method is characteristic, and is thus described by d'Enjoy: the nose is pressed on the cheek, a nasal inspiration follows, during which the eyelids are lowered; lastly, there is a smacking of the lips. The three phases are clearly distinguished.[4] It is remarkable that this Eastern Asiatic method, typically primitive, should be retained by Chinese civilization. The Japanese have no word for kiss, and the act is known only between mother and child.

The European kiss consists essentially in the application of the lips to some part of the face, head, or body, or to the lips of the other person. Normally there is no olfactory element, and any tactile use of the nose is absolutely unknown. It is thus a distinct species, and to describe it as having been evolved from the savage form is erroneous. As a 'racial' habit, it distinguishes the European peoples, and their cultural or racial ancestry, the Teutons, the Græco-Romans, and the Semites, but it appears to have been unknown to the Celts.

As for its physiological derivation, we have excluded certain elements. Nyrop refers it to taste and smell; Tylor describes it as a 'salute by tasting,' d'Enjoy as 'a bite and a suction.'[5] Each of these definitions is untenable. Though popular metaphor inevitably speaks of taste, and even eating and drinking, there is nothing gustatory in the kiss.[6] Such suction as may be ascribed to it is merely the mechanical closing of the lips,[7] as in speaking and eating. This may be described as a refinement of biting, but it would be misleading. Similarly in abnormal forms some use of the tongue occurs. But no connexion with the bite can be maintained, except in the sense to be explained below. It is true that playful biting with the teeth is practised by savage mothers, and among various peoples by passionate lovers, but there is no derivative connexion between this and the kiss proper. The suggestion has been made that the kiss is practically a mode of speech. Emphasis is here laid on the weak or loud sound which often accompanies the 'sucking movement' (*sic*) of the muscles of the lips; this 'inspiratory bilabial sound' is compared to the lip-click of many barbarous languages.[8] The suggestion does not go far; the element of truth is the fact that the kiss,

[1] H. Gaidoz, quoted by C. Nyrop, *The Kiss and its History*, p. 180.

[1] E. B. Tylor, art. 'Salutations' in *EBr*[11] xxiv. 94; H. Ling Roth, 'On Salutations' in *JAI* xix. [1890] 166; G. Turner, *Samoa*, London, 1884, p. 179; C. Nyrop, p. 180.

[2] E. M. Curr, *The Australian Race*, Melbourne, 1886, iii. 176.

[3] T. H. Lewin, *Wild Races of S.E. India*, London, 1870, p. 118.

[4] H. Ellis, *Sexual Selection in Man*, p. 220, quoting d'Enjoy.

[5] Ellis, p. 66; Nyrop, p. 185. As regards smell, the incident of Isaac proves no connexion.

[6] W. W. Skeat, *Etym. Dict.*, London, 1898, *s.v.*, traces the word to a Teutonic base, connected with Latin *gustus*, Gothic *kustus*='test,' and 'kiss' is a doublet of 'choice.' This is, however, very doubtful. The word may be connected with the Lat. (loan-word?) *basium*, 'kiss' (cf. A. Walde, *Lat. etymolog. Wörterb.*[2], Heidelberg, 1910, p. 84 f.), and is frequently compared with Gr. *κυνέω* (for **κυ-νε-σω*, cf. aor. *ἔκυσσα*), 'kiss' (so most recently P. Persson, *Beitr. zur indogerm. Wortforschung*, Upsala, 1912, p. 260, note 2), appearing with a different 'root-extensor' in Goth. *kukjan*, 'kiss.' O. Irish and Welsh have no Celtic word for 'kiss'; *póc* and *póg* are borrowed forms of Lat. *pax*.

[7] The *OED* defines kissing thus: 'to press or touch with the lips (at the same time compressing and then separating them).'

[8] Nyrop, p. 6.

like language, is a refinement of the nutritive processes of the mouth.

The kiss is a special case of tactile sensory pleasure. In it the lips (whose skin is the very sensitive variety between the ordinary cuticle and the mucous membrane) are alone concerned. The movement made is the initial movement of the process of eating. There is, no doubt, a true psychological nexus between affection and hunger, which is no less truly expressed in the mechanism of the kiss. The act is a secondary habit of the lips, just as speech is a secondary habit of the whole oral mechanism. The intimate connexion between the development of language and the masticatory processes of man has been drawn out by E. J. Payne.[1] The kiss, therefore, is not to be referred to the bite, or even to gustation, much less to mastication, suction, or olfactory processes. The primary movement of the lips is simply transferred to a metaphorical use, so to say, and their sensitiveness is applied to a secondary object, whose stimulus is not hunger, but the analogous emotions of love, affection, and veneration.

Lombroso has argued that the kiss of lovers is derived from the maternal kiss.[2] It is true that the latter is sometimes found among peoples who do not practise the former. The Japanese, for instance, are ignorant of the kiss, except as applied by a mother to her infant.[3] In Africa and other uncivilized regions it is a common observation of travellers that husbands and wives, and lovers, do not kiss. But all mothers seem to caress and fondle their babes. Winwood Reade has described the horror shown by a young African girl when he kissed her in the European fashion.[4] The argument, however, of Lombroso is of the same order as that which derives sexual love from maternal, and in neither case can there be any derivation, precisely because the subject during adolescence comes into a new physical and psychological environment, which itself is sufficient to explain a new reaction.

Some variation in the kiss proper (which we identify with the European) may here be noted. The kiss of North American Indian women is described as consisting in laying the lips softly on the cheek, no sound or motion being made.[5] This would not come under the Chinese criticism of the European kiss as being 'voracious.'[6] When Australian or negro women are mentioned as employing the kiss,[7] we may assume that it is of the olfactory variety. The former people (recently argued to be relatively high in the scale of human development) have one branch, the North Queensland tribes, where the kiss is well developed. It is used between mother and child, and husband and wife. In contrast with many early languages, the Pitta-Pitta dialect has a word for kissing.[8] As for distinctions in the civilized Western kiss, that of the ancient Romans still applies, though modern languages do not employ three terms for the three forms. In Latin, *osculum* was the kiss on the face or cheeks, as used between friends; *basium* was the kiss of affection, made with and on the lips; *suavium* (or *savium*) was the kiss between the lips, confined to lovers alone. The modern French retain, and other continental peoples (to some extent the English also) follow them, the distinction between the kiss on the cheek and the kiss on the mouth, the latter being reserved for lovers. Both in social custom and in literature

the erotic symbolism of the lovers' kiss has assumed a remarkable importance among the French, who regard a kiss on the mouth, except in cases of love, as a real social sin.

It is interesting to note that Græco-Roman, Hebrew, and early Christian civilization have combined to form the modern European habit.

**3. Social history.**—Though kissing is said to be unknown in any form among the Japanese, prior to European influence, among the Indians of Guiana, the ancient Celtic peoples, and the ancient Egyptians, each statement is probably too dogmatic. The general conclusion is that the habit in some form or another has been prevalent since primitive times, and has received its chief development in Western culture.

Among the Greeks and Latins, parents kissed their children, lovers and married persons kissed one another, and so did friends of the same or different sexes.[1] The kiss was used in various ceremonial and religious acts. Very similar was the Hebrew practice,[2] with the exception that kissing between persons of different sex was discountenanced, though a male cousin might kiss a female cousin. The Rabbis advised that all such kisses should be avoided, as leading to lewdness, and restricted the kiss to greeting, farewell, and respect.[3] In Semitic life also there was more use of the ceremonial kiss than among the Greeks and Romans.

The early Christian habit of promiscuous kissing as a symbol of fellowship was an application of pagan social practice, and there are grounds for supposing that it offended the Hebrew element as it certainly shocked the Jewish Church.[4] This is St. Peter's 'kiss of love'; and St. Paul frequently writes: 'Salute one another with an holy kiss.' It possessed a sacramental value.

'The primitive usage was for the "holy kiss" to be given promiscuously, without any restriction as to sexes or ranks, among those who were all one in Christ Jesus.'[5]

Later, owing to scandals, or rather to such feeling as Tertullian mentions,[6] the practice was limited, and it was ordered that men of the laity should salute men, and women women, separately.[7]

The classical practice, rendered slightly more free by the early Christian extension, prevailed throughout the Middle Ages, with the curious detail that English women had more liberty than continental in kissing male friends. Erasmus in a famous passage describes the freedom possessed in this matter by English girls.[8] In Catholic ritual the kiss dwindled to more or less of a survival. In court ceremonial it persisted with other details of etiquette; and the same was the case with certain ecclesiastical and legal formalities. Knights after being dubbed, persons elected to office, and brides on marriage were kissed.[9] After the Renaissance a change appeared in England, and kissing became more and more restricted to parental and sexual relations. Thus, W. Congreve, at the end of the 17th cent., writes:

'In the country, where great lubberly brothers slabber and kiss one another when they meet; . . . 'Tis not the fashion here.'[10]

At the same time the practice of kissing between friends of different sex, other than lovers and relatives by birth or marriage, fell out of use. It had done so in France a century earlier, and the restriction was copied by English society.[11] In-

[1] Tylor, *loc. cit.*; Ellis, p. 7. Under the early Empire the practice assumed remarkable forms in social intercourse; it was fashionable, for instance, to perfume the mouth.

creasing moral refinement, or perhaps the increase of restrictions necessitated by an extension of individualism, may be assigned as a cause.

In modern social life the kiss is confined to lovers, members of the family, and women-friends. Between fathers and sons, and between brothers it does not survive adolescence. In continental countries it still persists, especially in France, between male friends, and this fashion is preserved between sovereigns. The courtly use of kissing a lady's hand as a mark of respect came from the court life of Renaissance times. It is obsolete in common life, but clings to the etiquette of great personages. As already stated, the distinction is carefully preserved among continental peoples between the kiss of affection and the kiss of affianced love.

4. **Social and religious usages.**—(1) In the etiquette, natural or artificial, of salutation, the kiss is a central point, where the relations involve tenderness or veneration, or where these emotions are supposed. Its importance is illustrated by various facts of language. The 'embrace' and the 'salute' are synonymous with it. Where the act is obsolete, language preserves its memory. The Spaniard says 'I kiss your hands'; the Austrian describes an ordinary salutation by the phrase *Küss d'Hand.*[1]

According to Rabbi Aḳiba, the Medes kissed the hand only.[2] Odysseus, on his return, was kissed by his friends on the head, hands, and shoulders.[3] In Greece generally inferiors kissed the hand, breast, or knees of superiors.[4] In Persia equals in rank kissed each other on the mouth, and those slightly unequal on the cheek, while one much inferior in rank prostrated himself.[5] Esau 'fell on the neck' of Jacob and kissed him.[6] Among the Hebrews the cheek, forehead, beard, hands, and feet were kissed; some deny the practice of kissing on the lips. The phrase in the Song of Songs does not prove its existence, but there is no *a priori* reason against it in the case of the lover's kiss.[7] The customary kiss in modern Palestine is thus described:

'Each in turn places his head, face downwards, upon the other's left shoulder ["falling on the neck"], and afterwards kisses him upon the right cheek, and then reverses the action, by placing his head similarly upon the other's right shoulder, and kissing him upon the left cheek. . . . A man will place his right hand on his friend's left shoulder, and kiss his right cheek, and then lay his left hand on his right shoulder, and kiss his left cheek.' This is a second form. A third consists in the following process—the giver of the kiss lays his right hand under the head of his friend and supports it while he kisses it.[8] The last appears to be referred to in Joab's assassination of Amasa.[9] It has been suggested that, when Absalom to gain popularity kissed the people, he employed the second form.[10]

Equals saluted one another on the cheek or head; so Samuel saluted Saul. Inferiors kissed the hands of superiors. If, in the betrayal of Jesus, Judas kissed his Master on the face, it was an act of presumption.[11] The fact that the kiss was passed over without remark seems to show that it was, as it should have been from disciple to master, a kiss on the hand. The Prodigal Son would kiss his father's hands before being embraced and kissed.[12] Inferiors also kissed the feet (the woman 'who was a sinner,' and would-be borrowers),[13] or, again, the 'hem of the garment.' Vassals, in the Assyrian inscriptions, show submission by kissing the monarch's feet. Similar homage may be assigned to the phrase of Ps $2^{12}$, 'kiss the Son.' As an act of piety, the Pharisees practised kissing the feet, as did the pious generally.[1] The humiliation of the symbolic act of Christ in kissing the disciples' feet has been preserved till recent times by some religious orders, and even by European monarchs. The foot of the pope is kissed in ceremonial audiences. By the year A.D. 847 it was said to be an ancient usage. There are grounds for supposing it to be derived from a usage in the Emperor-worship of Rome.[2] Prostration is an instinctive expression of fear, awe, or adoration; to clasp the knees, as was the custom with Greek suppliants, is equally instinctive. The act of kissing the feet is a refinement of these. The OT phrase 'licking the dust' is doubtfully referred to the kiss upon the feet. In ancient India it was a familiar salutation of respect.[3] The feudalistic aspect of the little court held by the old Roman *patronus* is illustrated by Martial's epigram, which complains of the burdensome civility of the kisses of clients.[4] In the court ceremonial of mediæval and modern Europe, the kiss on the cheek obtains between sovereigns; subjects kiss the sovereign's hand. In mediæval Europe the vassal thus saluted the lord, while it was not unusual to kiss a bishop's hand.[5] In modern Europe a kiss conveying blessing or reverence is usually on the forehead. 'In Morocco equals salute each other by joining their hands with a quick motion, separating them immediately, and kissing each his own hand.'[6] The Turk kisses his own hand, and then places it on his forehead. The Arab kisses his hand to the storm.[7] Such is the gesture of adoration to sun and moon referred to in the OT, and also used by the Greeks to the sun.[8] It was the Greek and Roman method of adoration. In explanation of the gesture, Oriental folklore agrees with European in identifying life or soul with the breath. More exactly, the thrown kiss is a symbolical act, transferring to an object at a distance merely the essence of the kiss.

The kiss in its legal aspect is a natural application of the ideas which produced hand-shaking and similar modes of contact. Mediæval knights kissed, as modern boxers shake hands, before the encounter. Reconciled foes kiss as a sign of peace.[9] It was specially in connexion with marriage that the kiss, *osclum*, *oscle*, was prominent. *Osclum* was a synonym generally for *pactum*; *osculata pax* was a peace confirmed by a kiss; *osclare* meant 'dotare'; and *osculum interveniens* was a term applied to gifts between engaged persons. If one of them died before marriage, the presents were returned should no kiss have been given at the betrothal.[10] It is significant that the kiss was symbolical of marriage as 'initium consummationis nuptiarum.' In old French and mediæval law generally the term *oscle* was applied to the principle that a married woman kissing or being kissed by another man than her husband was guilty of adultery.[11]

(2) Besides the permanent objects of the kiss, in family and analogous relations, the relations of superior and inferior, lord and vassal, sovereign and subject, there are many others which, with more or less permanence, have claimed the kiss as a religious service. It is very significant of the affectionate element in religion that the kiss should have played so large a part in its ritual. The meeting-point between the social and the religious

aspect of the kiss is perhaps to be found in the application of the salute to saints and religious heroes. Thus, Joseph kissed Jacob, and his disciples kissed Paul.[1] Joseph kissed his dead father, and the custom is retained in our civilization of imprinting a farewell kiss on dead relatives. To suggest, however, that the act of Joseph proves the worship of Jacob as a divine being is against psychology.[2] All that can be said is that so fine a human sentiment is on the border-line between social and religious feeling. In mediæval Europe there was a similar feeling about the kiss of state. This is shown by the instances of Henry II. and St. Thomas of Canterbury, and of Richard I. and St. Hugh.[3] Similarly in social life generally; it is said that among the Welsh the kiss was used only on special occasions, and a husband could put away his wife for kissing another man, however innocently.[4] The early Christians exploited the social value of the kiss. Though in strong contrast to the Welsh custom, this is equally sacramental. It has been argued that the ritualistic 'kiss of peace' alone obtained among the Christians, and that the social salute was not practised. But the evidence is strong enough to prove the latter custom.[5] For St. Ambrose this was 'pietatis et caritatis pignus.'[6] The custom involved a peculiar sentiment, if we consider it in connexion with the Christian ideal and practice of love, in which passion was encouraged, though chastity was enforced (see art. CHASTITY [Christian]).

In the early Church the baptized were kissed by the celebrant and the congregation after the ceremony.[7] Roman Catholic ritual still includes the kiss bestowed on the newly ordained by the bishop. The bishop on consecration and the king when crowned received the kiss.[8] The kiss bestowed on penitents after absolution was connected with the kiss received by the Prodigal Son. The practice of giving a farewell kiss to the dead is probably connected with the old Italian rite of receiving the soul of the dying in his last breath. In the 6th cent. the Council of Auxerre (A.D. 578) prohibited the kissing of the dead.[9] Penitents were enjoined to kiss sacred objects.[10]

**5. The kiss of peace.**—First mentioned in the 2nd cent. by Justin,[11] the kiss of peace was one of the most distinctive elements in the Christian ritual. To Clement of Alexandria it was a 'mystery.'[12] The *εἰρήνη* was a preliminary rite in the primitive mass. Conybeare has suggested that it was derived from an institution of the synagogue.[13] Philo speaks of a 'kiss of harmony' like that between the elements; the Word of God brings hostile things together in concord and the kiss of love.[14] However that may be, the *pax* became a feature of both Western and Eastern ritual, more conspicuously in the former. St. Cyril writes:

'This kiss is the sign that our souls are united, and that we banish all remembrance of injury.'[15]

This kiss seems to have been given at the beginning of the offertory, between the washing of hands and the *sursum corda*. But, later, the kiss was in close connexion with the Communion. It has therefore been conjectured that the *pax* was twice given.[16] In the modern Roman ritual it is given only at High Mass, and rarely to any of the congregation. The celebrant kisses the corporal, and presents his left cheek to the deacon, with the formula *pax tecum*, answered by *et cum spiritu tuo*. The deacon conveys the kiss to the subdeacon, and he to the other clergy. In the Greek liturgy the celebrant says, 'Peace be to all,' and kisses the gifts, while the deacon kisses his own stole.[1] On Easter Sunday in the same church the congregation kiss one another.[2]

The fact that the Christians of the time of the younger Pliny were called upon, when arrested, to 'adore' the effigy of the Emperor was sufficient to emphasize the ritual importance of the kiss. *Adoratio* ('the act of carrying to the mouth'), the Roman form of homage and worship, consisted in raising the right hand to the lips, kissing it, and then waving it in the direction of the adored object,[3] after which the worshipper turned his body to the right.[4] During the ceremony the head was covered, except when Saturn or Hercules was adored. Plutarch suggests fantastic reasons for exceptional uses in which the worshipper turned from right to left.[5]

But both Greeks and Romans employed the kiss direct in worship. Cicero observes that the lips and beard of the statue of Heracles at Agrigentum were almost worn away by the kisses of the devout.[6] The kiss indirect, or the kiss at a distance, may be described as a natural extension of the direct, capable of development by any people independently. But it is a curious fact that it can be traced from Græco-Roman civilization to that of modern Europe, where, however, it appears to be instinctive in children.

The adoration of the Roman Emperors was influenced by Oriental ceremonial. It consisted in bowing or kneeling, touching the robe, and putting the hand to the lips, or kissing the robe; a variation was the kissing of the feet or knees.[7] It does not seem to have become the fashion before Diocletian.

The kiss of homage in the Middle Ages was so important a part of the ceremony that *osculum* became a synonym for *homagium*.[8] The vassal kissed the lord's feet (rarely his thigh).[9] Afterwards he offered a present for the privilege, a *baise-main*, a term which shows the connexion or confusion with the equally prevalent fashion of kissing the hand of the sovereign. It is said that Rolf the Ganger, the first Duke of Normandy, when receiving the province as a fief from Charles the Simple, kissed the monarch's feet by lifting them to his mouth as he stood erect.[10] When homage was paid in the lord's absence, the vassal kissed the door, lock, or bolt of his castle; this was *baiser l'huis* or *le verrouil*.[11] Mediæval charters make pretence of kissing the king's feet.

**6. Death by kissing.**—Rabbinical lore includes a unique fancy, explanatory of the death of the righteous. According to this, the death of a favourite of God is the result of a kiss from God (*bi-nᵉshîkāh*). Such a death was the easiest of all modes, and was reserved for the most pious. Thus died Abraham, Isaac, Jacob, Aaron, Moses, and Miriam.[12] There is a legend that, as St. Monica lay dying, a child kissed her on the breast, and the saint at once passed away. Italian folklore preserves the Hebrew idea in one of its phrases for death: 'addormentarsi nel bacio del Signore.'[13]

7. **Kissing sacred objects.**—Kissing the image of a god was a recognized rite of adoration among both Greeks and Romans. The early Arabs had the same rite. On leaving and entering the house they kissed the house-gods.[1] In the Eleusinian Mysteries the sacred objects were kissed.[2] The toe of St. Peter's statue is kissed by Roman Catholics. The Muslim kissed the Ka'ba at Mecca. In the wall there is a black stone believed by Muslims to be one of the stones of paradise. It was once white, but has been blackened by the kisses of sinful but believing lips.[3] The Hebrews often lapsed into the idolatrous practice; Hosea speaks of 'kissing calves'; the image of Baal was kissed.[4] Together with kneeling (*q.v.*), the kiss comprises belief and homage. The Hebrews kissed the floor of the Temple,[5] and to this day, in the Hebrew ritual, it is the practice to kiss the *ṣiṣith* of the *ṭallith* when putting it on, the *m'zūzāh* at the door when entering or leaving, and the Scroll of the Law when about to read or to bless it.[6] It is even customary among Jews, though not obligatory, when a Hebrew book is dropped, to kiss it. *Kissing the Book* is a case, surviving (as a real living ceremony) in the highest civilization, of primitive conceptions of the oath. These were expressed in various forms.[7]

One method of 'charging an oath with supernatural energy is to touch, or to establish some kind of contact with, a holy object on the occasion when the oath is taken.'[8]

The view of Westermarck, that *mana* or *baraka* is thus imparted to the oath, is further developed when the name of a supernatural being is introduced; thus the modern English ceremony retains the words, 'So help me God.' A complementary aspect is supplied by forms whose object is to prevent perjury.

The Angami Nāgas 'place the barrel of a gun, or a spear, between their teeth, signifying by this ceremony that, if they do not act up to their agreement, they are prepared to fall by either of the two weapons.'[9] In Tibetan law-courts 'the great oath' is taken 'by the person placing a holy scripture on his head, and sitting on the reeking hide of an ox and eating a part of the ox's heart.'[10] 'Hindus swear on a copy of the Sanskrit *haribans* [*Harivaṁśa*].'[11]

The European ceremony of kissing the book of the New Testament after taking the oath in a law-court connects in its material form rather with the kiss of reverence, as instanced in the kissing of relics and sacred objects generally. But in essence there is still some of the primitive sense of responsibility by contact, rendered stronger by the invocation of the name of the deity. Derived indirectly from the Græco-Roman ritual kissing of sacred objects and the Hebrew reverence for the Scroll of the Law, it was early developed by the Christians into their characteristic ceremony of oath-taking. Chrysostom writes:

'But do thou, if nothing else, at least reverence the very book thou holdest out to be sworn by, open the gospel thou takest in thy hands to administer the oath, and, hearing what Christ therein saith of oaths, tremble and desist.'[12]

Ingeltrude is represented repeating the words:

'These four Evangelists of Christ our God which I hold in my own hands and kiss with my mouth.'[13]

In the former quotation the act of kissing can only be inferred from the word 'reverence.' The holding of the book is less definite than the Hebrew rite of placing the hands on the scroll when swearing. Even in the Middle Ages an oath was often taken merely by laying the hand on the Missal.[1] The Lombards swore lesser oaths by consecrated weapons, the greater on the Gospels, but it is not certain whether they kissed the book.[2] An oath ratified by contact with a sacred object was a 'corporal oath'; the object was the *halidome*, the equivalent of the Greek ὅρκος, oath and object being identified. No doubt contact by means of the lips was at an early date regarded as more efficacious than contact by means of the hand, and thus the more primitive notion was superimposed upon that of adoration. In Islām the rite is that usual in adoration and does not include the kiss.[3] In modern England a detail to be noted is that the hand holding the book must be ungloved. The book varies according to the creed; a Jew is sworn on the OT; a Roman Catholic on the Douai Testament. The term 'book,' employed with special reference to the oath upon the NT, has been regular in England since the 14th cent. at least.[4]

Among Anglican clergy it is customary to kiss the cross of the stole before putting it on. The Catholic Church enjoins the duty of kissing relics, the Gospels, the Cross, consecrated candles and palms, the hands of the clergy, and the vestments and utensils of the liturgy. It was formerly part of the Western use that the celebrant should kiss the host. He now kisses the corporal. The altar is regarded as typical of Christ, and as such is kissed by the celebrant.[5] In the Greek Church relics are kissed.

The 'kiss of peace' was in mediæval times the subject of a curious simplification of ritual, by which it became, as it were, a material object. In the 12th or 13th cent., for reasons of convenience, the *instrumentum pacis*, or *osculatorium*, was introduced.[6] This was a plaque of metal, ivory, or wood, carved with various designs, and fitted with a handle. It was brought to the altar for the celebrant to kiss, and then to each of the congregation at the rails. This is the pax-board or pax-brede of the museums.[7]

8. **Metaphor and myth.**—The metaphorical applications of the idea of the kiss are not numerous. In some phrases it expresses a light touch. Generally it implies close contact or absolute reconciliation or acquiescence;[8] to kiss the dust is to be overthrown; to kiss the rod is to submit to chastisement;[9] to kiss the cup is to drink. Philostratus inspired Ben Jonson's image of the loved one leaving a kiss in the cup.[10] A 'butterfly kiss' is a light one.

Folklore developed in interesting ways the connexion between the emotional gesture and the ideas of magic and charms. Relics were kissed to regain health. Conversely, the kiss of a sacred person, a specialized form of his touch, cures the leper, as in the case of St. Martin.[11] Some similar association of thought may attach to the nursery practice of 'kissing the place to make it well'; gamesters used to kiss the cards in order to secure luck with them; an Alpine peasant kisses his hand before receiving a present. Pages in the French Court kissed any article which they were given to carry.[12] A famous instance of symbolism is the kiss bestowed by Brutus on his mother-earth—an application of the kiss of greeting. But in German

folklore to kiss the ground is a synonym for to die.[1] The privilege in English folk-custom known as 'kissing under the mistletoe' is a Christmas festal practice connected by Frazer with the licence of the Saturnalia. It may have originated independently as an expression of festivity. Greek, Latin, and Teutonic mythology employed the motive of unbinding a spell by a kiss—*le fier baiser* of Arthurian romances, which changes a dragon into the maiden who had been enchanted.[2] The Sleeping Beauty awakened by the kiss of the lover is a widely-distributed motive. An analogy, without actual derivation, is to be found in many primitive cases of cancelling a tabu. Thus in Australian ceremony bodily contact, analogous to the kiss, in various forms, removes the tabu between two persons, such as the celebrant and the subject of a rite. An analogy may be seen between Teutonic and early Christian ritual in the connexion drawn out by Grimm between minne-drinking and the kiss. He finds this both in sorcery and in sacrificial rites.[3] Closely parallel to the magical power of the kiss in breaking tabu and restoring to consciousness is the myth-motive in which a kiss produces both forgetfulness and remembrance. This capacity is evidently based on human experience, and is significant in connexion with the practice of the kiss in religion. It brings to one focus the kiss of love and the kiss of adoration. In the psychology of adolescence the kiss produces a forgetfulness of old conditions and awakens the subject to a new life. The kiss appears to have no symbol in art. European children and adolescents express it in writing by a cross, perhaps merely an accidental choice. The Slavic Jews style an insincere kiss as a 'kiss with dots.' Some Rabbis explain that Esau's kiss was insincere (Gn $33^{4}$), and every letter of the word וישקהו is dotted by the Massoretes.[4]

**KISTNA** (Skr. *Kṛṣṇa*, 'the dark one').—One of the great rivers of S. India, which, like the Godāvarī (*q.v.*) and Kāverī, to which it is inferior in sanctity, flows nearly across the entire peninsula from W. to E. It rises in the Mahābaleśwar plateau of the W. Ghāṭs, only 40 miles from the Arabian Sea.

At its source is an ancient temple of Śiva, inside which the infant stream pours out of a stone formed in the shape of a cow's mouth (*gaumukhi*). This place, known as Kṛṣṇabāī, 'the lady Kṛṣṇa,' is a favourite resort of pilgrims. Fifteen miles down stream is the old Buddhist town of Wāī, one of the most sacred places in its course, with a group of cave-temples and several later Hindu shrines (*BG* xix. [1885] 610 ff.). Farther on it passes close by the town of Sātāra, Karād, or Karhād, at the junction with the Koyna and Māhulī, where it is joined by the Yennā. In the Bijāpur District, Sangam, at its junction with the Mahāprabhā, possesses a temple of some sanctity, dedicated to Śiva under the title of Saṅgameśvara, 'lord of the sacred meeting of the waters,' the site of an annual religious fair. Thence passing through the dominions of the Nizām of Haidarābād, it reaches the Bay of Bengal in the British Kistna District. Here Bezwāda contains some rock-caves of the Buddhist period and a few ancient Hindu temples.

**KIZIL BASH.**—Kizil Bash, 'Red Heads,' is the name by which are denoted the members of a sect distributed throughout the whole of Asia Minor. They call themselves 'Alevis; their nickname, which in Persia and Afghanistan was and is given to other peoples also, originates doubtless from the colour of their head-dress. Their total number is estimated at more than a million; they form an important section of the population of the vilayets of Sivas (about 305,000), Erzerum (107,000), Angora, and Mamurete ul-Aziz (Kharput), and in certain districts constitute even the majority. Their language is Turkish or Kurdish. Though reckoned officially as Musalmān Sunnites, in reality they are not such; they practise Islāmism only in a formal way to avoid persecution. When they think they are in safety, they do not attend the mosques, read the Qur'ān, say the prayers, or perform the Muhammadan ablutions. Except in the presence of a Sunnite, their women are not veiled. They drink wine, they do not observe Ramadān, and some of them do not practise circumcision or shave the head and other parts of the body as the Turks do. Moreover, they cherish a profound aversion to the Turks, and regard them as unclean; when they are obliged to entertain them, they even go so far as to pollute the dishes with which they serve them. On the other hand, they show great goodwill in their villages towards the Christians. They have secret beliefs and practices which they reveal only with extreme reluctance, and no one has hitherto been able to penetrate, except very imperfectly, the mystery with which they are surrounded.

Their sect, like some Christian Churches, has a hierarchical organization. They have priests called *dédéhs*, whose dignity is hereditary from father to son, and who are the necessary intermediaries between God and the rest of the community. This sacerdotal caste is subject to a species of bishops. These themselves render obedience to two patriarchs, who are regarded as descendants of 'Alī, and who are invested with a sacrosanct authority. One of these is the Shaikh of Khubyār (about 34 miles to the N.W. of Sivas), a popular place of pilgrimage. It is certain that the Kizil Bash possess a sacred book, probably liturgic in character, but as yet no part of it has been made public.

Three superimposed stratifications in the religion of the Kizil Bash may be distinguished.

(1) There is an old *pagan foundation* going back to the ancient Anatolian beliefs, tinged with Persian Mazdæism, which were practised in the country before its conversion to Christianity. The Kizil Bash regard certain heights or certain rocks as sacred, *e.g.* near Kara Hissar (Taylor, *Journal Royal Geogr. Society*, xxxviii. [1868] 297), and on holidays they sacrifice sheep and fowls on these summits. The trees which grow there—usually pines—are surrounded with superstitious regard, and no one is allowed to carry an axe near them (cf. F. and E. Cumont, *Voyage dans le Pont*, Brussels, 1906, p. 172 ff.). The Kizil Bash, like the ancient Mazdæans, worship streams and especially springs. They also venerate fire; when they build a house, they light a fire with great ceremony, and this must be kept burning as long as the house remains standing. The place of honour is near the hearth, and to spit there is sacrilege. A fire-

[4] Jacobs, *loc. cit.*

altar hewn out in the rock is still the object of devotion at Manasgerd (C. Wilson, *Handbook of Asia Minor*, London, 1895, p. 250). They worship the sun at its rising and setting, and a day in which it does not appear is for them a day of mourning. They also worship the moon.

Everybody in the East accuses the Kizil Bash of giving themselves up to orgies in their nocturnal ceremonies (cf. below), when, the lights out, each man has commerce with a woman taken by chance. That is why the Turks call them, in derision, *terah sonderan*, 'extinguishers of the light.' It is difficult to know what degree of truth there is in this imputation. But it is remarkable that the same promiscuity was, during their feast of 1st January, laid to the reproach of the Paulicians in the 9th cent., who were distributed throughout the same regions as the Kizil Bash of to-day (Manichæan formula of abjuration, in *PG* i. 1469: *μετὰ δὲ τὴν ἑσπερινὴν μέθην ἀποσβεννύουσι τὰ φῶτα, σαρκικῶς τε ἀλλήλοις ἐνασελγαίνουσι, καὶ μεδεμιᾶς ὅλως φειδομένοις φύσεως ἢ συγγενίας ἢ ἡλικίας*). It is possible that those supposed acts of debauchery may be an inheritance from the sacred prostitution of the worship of Mā and Anaïtis. This would also be true of the custom, if it were well attested, of offering a young girl every year to the *dédéhs*, whose son, they say, if one is born, becomes a priest, or whose daughter must remain a virgin and set herself apart for the cult (C[te] de Cholet, *Arménie, Kurdistan et Mésopotamie*, Paris, 1892, p. 96).

(2) The influence of *Christianity* is evident both in the beliefs and in the rites of the sect. The Kizil Bash teach that God is One in Three Persons, and that the principal incarnation of God, before 'Ālī, is Jesus Christ, the Saviour of the world, who intercedes with God for humanity. They are devoted to Mary, who is, they believe, the Mother of God, and who conceived without ceasing to be a virgin. At the same time, they acknowledge the existence of five powers, lower than the Trinity, mediators between the Supreme Being and man, analogous to the *yatīm* of the Nosairis, a kind of archangels which are perhaps derived from the Iranian Amesha Spentas (*q.v.*). Moreover, they assume the existence of twelve ministers of God, who correspond to the twelve apostles and the twelve *naqībs* of the Nosairis. Unlike the Yezidis, they offer no worship to Satan, whom they regard as the irreconcilable adversary of God. Like the Nosairis, they believe that at the end of the ages the spirit of evil will come to fight a final battle against the last incarnation of Jesus. Mazdæan dualism is here combined with Christian ideas.

The Kizil Bash have a ceremony which they celebrate by night on certain holidays—the 10th of the month of Muḥarram was mentioned to the present writer—and also at irregular intervals, when a *dédéh* visits their villages.

'Accompanying himself with a musical instrument, the priest who officiates sings prayers in honour of 'Ālī, Jesus, Moses, and David. . . . The priest has a willow cane which suggests the *barsom* [*q.v.*] of the Avesta. He dips it in water while he says the prayers. The water thus consecrated is afterwards distributed throughout the houses. In the course of the ceremony those who take part make public confession of their sins, after the manner of the early Christians. The priest prescribes various penances, frequently in the form of a fine, in money or in kind. Then they put out the lights and engage in lamentations over the faults of which they have been guilty. When the lights are re-kindled, the priest pronounces the absolution; then he takes some slices of bread and a cup of wine or some analogous liquid, consecrates them solemnly, dips the bread in the wine, and distributes it to those of the company who have obtained absolution. . . . Among the Kurd Kizil Bash a sheep is sacrificed according to a certain rite after the public confession, and portions of it are distributed by the priest along with the bread and the wine. . . . The Kizil Bash celebrate Easter on the same Sunday as the Armenians, and they pay homage to several Christian saints, as, for instance, St. Sergius' (Grenard, in *JA* x. iii. 516).

(3) What the Kizil Bash have borrowed from *Islāmism* affiliates them with the Shī'ites rather than with the Sunnites. They have adopted the legend of 'Ālī, whom they regard as an incarnation of God the Father, while Jesus is an incarnation of the Son. Like the Shī'ites, they fast during the first twelve days of Muḥarram, and bewail the death of Ḥasan and Ḥusain. Some say that they regard Muhammad as the hypostasis of the Spirit, the Paraclete, but the veneration which they show towards the prophet is only formal; in reality they refuse to credit him with any divine inspiration.

To sum up: the religion of the Kizil Bash is in many respects a survival of the ancient paganism of Anatolia, which in the east of the peninsula was deeply marked by the die of Mazdæism (cf. F. Cumont, *Religions orientales dans le paganisme romain*[2], Paris, 1909, p. 213 ff., Eng. tr., Chicago, 1911, p. 143 ff.). The country population of these regions was imperfectly and slowly converted to Christianity, and we know that colonies of Magi dwelt there until at least the end of the 5th cent. (cf. F. Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, Brussels, 1895–99, i. 10), and perhaps until the Musalmān conquest. Further, in the 12th cent., Nerses Shnorhali gives interesting details regarding the 'Sons of the Sun,' who worshipped the stars, and who venerated, among trees, the poplar (F. C. Conybeare, *The Key of Truth*, Oxford, 1898, p. 159). In the 8th and 9th centuries it was in the countries inhabited by the Kizil Bash that the dualistic Paulicians (*q.v.*) found their most numerous adherents, and even after their extermination by the Byzantine emperors their teaching probably did not cease to exert an influence there. Finally, the relations of the Kizil Bash with Shī'ism are probably explained by their forced conversion to Islām under the Seljuks, at a time when the Persian influence was powerful, perhaps also by the transportation of Shī'ites of Turkish origin into Kurdistan in the time of the Sulṭāns Salim I. and Sulaimān I. (16th cent.). It is much to be desired that a copy of the sacred book of the sect should be obtained, or that a transcription should be made at least of the hymns of its service. It would then be possible to clear up the mysteries surrounding this very curious religion which retains numerous disciples even in our own times.

LITERATURE.—R. Oberhummer and H. Zimmerer, *Durch Syrien und Kleinasien*, Berlin, 1899, p. 393 ff., where citations will be found from the more ancient authors; F. Grenard (Consul of France at Sivas) has collected some new and accurate information in *JA* x. iii. [1904] 511–522. The writer of this article has added here some facts gathered by himself among the Kizil Bash of the region of Amasia in 1900.

FRANZ CUMONT.

**KNEELING.**—Kneeling may be described as a natural reaction to the emotions of self-abasement and supplication. As such, it has been observed among unsophisticated peoples. In a less degree only than prostration, it symbolizes inferiority and dependence, by the abandonment of the erect posture of human active life. According to Tylor,[1] kneeling as a ceremonial posture prevails in the 'middle stages of culture.' The same limitation, however, applies to prostration as still practised in Islām and Hinduism. Both in the middle and in the higher stages kneeling is more or less constantly associated with a third gesture—bowing, a symbolic expression of respect or reverence. It would be quite erroneous to 'derive' ceremonial kneeling from prostration, or bowing from kneeling. But certain forms of the bow, surviving in modern etiquette, include some bending of one or both knees: such are the curtsey, still made by ladies at court, and the bow of ceremony in which one

[1] Art. 'Salutations' in *EBr*[11] xxiv. 94.

foot is moved backward while the knee of the other leg is bent.

Primitive peoples hardly developed kneeling as a ceremonial posture in either of the two spheres in which it obtains—social etiquette and religious ritual. What generally corresponds to kneeling in the latter sphere is squatting on the heels, still the Muslim mode of kneeling and certainly a primitive posture, though originally expressing attention rather than reverence. It is employed largely by the Australian natives in their ceremonies.[1] As the stages of the higher barbarism are reached, kneeling appears, developed from the natural supplicatory posture. In Central Africa it is a tribute paid to rank. When a chief passes, the native drops on his knees and bows his head.

'When two grandees meet, the junior leans forward, bends his knees, and places the palms of his hands on the ground.'[2]

At higher stages prostration is usual among Oriental peoples, except the Chinese, who bow, or kneel and bow, according to the rank. To kings they kneel.[3] It is chiefly in Semitic and Græco-Roman culture that kneeling has been prevalent as a ceremonial posture.

In Greek and Roman civilization much prominence was given to the suppliant and the act of supplication, just as was the case in the Middle Ages with the practice of sanctuary. In both ceremonial customs kneeling, the natural posture of earnest entreaty and self-abandonment, was the constant attitude. Such phrases as 'nixæ genibus' (Plaut. *Rud.* III. iii. 33) and 'genibus minor' (Horace, *Ep.* I. xii. 28) are common in metaphor. It seems that in the Assyrian States not only subjection to kings but worship of gods was expressed by kneeling.[4] In the latter case it may be assumed as certain that the attitude has no essential connexion with prayer, as in the Christian use; the king and the god alike were, it appears, pre-eminently despotic, and court and temple ceremonial had similar forms expressing similar ideas, the chief of which was submission.

Among organized religions Christianity alone has given special significance to the posture of kneeling. During half its history the posture signified penitence; during the rest it signified prayer. At the change (marked by the Reformation) it was, by a curious association of ideas, identified with adoration or idolatry.

The process by which Christianity adopted kneeling as a ceremonial posture is somewhat uncertain in detail. The Hebrews, deriving many elements of their worship from Mesopotamian cults, may be supposed to have adopted kneeling from that source, and as a posture of humility it is found in the OT.[5] The Talmud speaks of bending the knee with the face touching the ground—a still more Oriental gesture,[6] almost identical with prostration. Elijah on Carmel 'put his face between his knees'[7]—a similar posture. Kneeling to Baal[8] may have been a form of prostration. Kneeling in prayer is mentioned in the cases of Solomon, Ezra, and Daniel. At the dedication of the Temple Solomon knelt on his knees with his hands spread up to heaven. Ezra fell upon his knees and spread out his hands unto the Lord. Daniel knelt upon his knees and prayed.[9] The posture in those three cases seems identical with the Christian.

The Jews usually prayed standing, but knelt in prayer on special occasions of solemnity or dis-

tress.[1] Hannah stood and prayed.[2] It was the same in the time of Christ; He said, 'When ye stand praying.' In the parable both Pharisee and publican stood to pray.[3] The posture of supplication or homage referred to in Mk $10^{17}$ and Lk $5^{8}$ (προσκύνησις) seems to be complete prostration. Kneeling in prayer occurs once only in the Gospels, when Christ Himself knelt during the Agony.[4]

The first Christians may be assumed to have, like the Founder, usually stood in prayer, following the practice which was common to both Hebrew and Græco-Roman ritual. The catacomb frescoes represent the *orantes* standing with outstretched arms.[5] But earlier than this, at the period represented by the Acts, kneeling appears to have become a characteristic posture. When Stephen knelt just before his death, after the stoning, no posture of prayer can be assumed.[6] It seems as if the posture were so regular a feature of the faith that it was applied indiscriminately on every occasion by the chroniclers. But there is no doubt that the attitude was a feature of the faith at this time. Peter knelt down and prayed; Paul knelt and prayed with them all; 'we kneeled down on the shore and prayed.'[7] For St. Paul kneeling and praying are synonymous.[8] In view of the catacomb evidence and of that of the next stage, it is clear that there is some prejudice in the evidence of Acts. But clearly there is a presumption in favour of the early adoption of kneeling for some aspect of Christian worship. The facts may perhaps be reconciled in this way: the pioneers of the faith probably emphasized the penitent and suppliant posture (which was familiar both to Jews and to Greeks and Romans) on all possible occasions;[9] but, when the faith attained a secure position, the posture was relegated to its traditional use. The case would thus be a microcosm of the change of attitude shown by Christianity itself as a whole.

By the time of the *Shepherd* of Hermas (the middle of the 2nd cent.) kneeling had become familiar in Christian prayer and worship.[10] The position has been summed up thus for the ante-Nicene period:

'The recognized attitude for prayer, liturgically speaking, was standing, but kneeling was early introduced for penitential, and perhaps ordinary ferial, seasons, and was frequently, though not necessarily always, adopted in private prayer.'[11]

The strange thing is that in neither the pre- nor the post-Pentecostal period has kneeling a penitential aspect. This may possibly have been a special development of the Hebrew solemn use of the posture, as in mourning, or of the Græco-Roman and Mesopotamian use in supplication or homage. However that may be, kneeling has ever since in Roman Catholicism retained a primary connexion with penitence. In private prayer it is still, as it has been since the 2nd cent., usual but not obligatory. In public adoration it is regular, though prostration may be used.

But as the posture for public prayer kneeling has never been regular except in Protestantism. The subject requires some detail. Origen in the 3rd cent. is one of the earliest writers to emphasize the penitential meaning; if forgiveness is required, he says, kneeling is essential.[12] St. Ambrose, in the 4th cent., writes:

[12] *de Orat.* 31 (*PG* xi. 552).

'The knee is made flexible, by which the offence of the Lord is mitigated, wrath appeased, grace called forth.'[1]

Pseudo-Alcuin has the general explanation:

'By such posture of the body we show forth our humbleness of heart.'[2]

As early as Tertullian's time a distinction was marked; he observes that on Sundays and during Pentecost prayer was not to be said kneeling.[3] The implication that a divergence of use existed is proved by the ruling of the Council of Nicæa, more than a century later:

'Because there are some who kneel on the Lord's Day and on the days of Pentecost, that all things may be uniformly performed in every parish or diocese, it seems good to the Holy Synod that the prayers be by all made to God, standing.'

Standing was the attitude of praise and thanksgiving. Hence standing was obligatory during the psalms, hymns, and Eucharistic prayer. For a similar reason, perhaps, St. Benedict uttered his dying prayer standing, 'erectis in cœlum manibus.'[4] In his lifetime he had instructed his monks to kneel during private prayer, not to stand as when in choir.[5] There was, it is to be assumed, an inner meaning of penitence attaching to private prayer, and some importance here seems to have been given to the Gospel account of Christ's kneeling in solitary prayer. Naturally, public penance made use of the attitude of kneeling. The custom of the early Church is clearly marked by St. Basil, who describes kneeling as the lesser penance (μετάνοια μικρά) and prostration as the greater (μετάνοια μεγάλη).[6] A posture with such associations was a favourite one for anchorites and ascetics. Some such associations of thought may have inspired Eusebius's observation that the knees of James, 'the Lord's brother,' became callous like a camel's, from continual kneeling.[7]

The Canon Law emphasized still further the distinction between standing and kneeling. The latter was forbidden in public prayer at all the principal festivals. To be degraded into the class of *genuflectentes* or *prostrati*, who were obliged to kneel during public service even on Sundays and in paschal (or pentecostal) time, was a severe punishment.[8] A gradation of posture appears in the two terms quoted, which still obtains in Roman Catholic adoration.

That kneeling is a posture characteristic of prayer, as such, is a principle developed by the Reformation Churches, adoration, on the one hand, and penance, on the other, being disregarded. The 'Declaration on Kneeling' during the Lord's Supper illustrates the avoidance of Roman Catholic adoration. The Presbyterians sat to receive the Communion. The originally threefold use of the attitude was perhaps assisted towards its Protestant simplification or reduction into one for prayer alone by the negative emphasis which it received from contrast with the Roman Catholic idea.

It is also remarkable that the practices of kneeling and genuflexion, or bending of the knee, are relatively modern in their application to ideas of reverence or adoration.[9] Here, no doubt, religious and social ritual reacted upon one another. Genuflexion with one knee was developed in the Middle Ages, clearly showing a connexion with homage. The Carthusians are noteworthy for a traditional objection to kneeling in worship; they bend the knee without touching the ground.[10]

In Roman Catholic ritual the rules governing kneeling are precise. The congregation kneel throughout a Low Mass, except during the reading of the Gospel. At High Mass they kneel or prostrate themselves at the words 'et incarnatus est' and 'verbum caro factum est'—a modern development. When adoring the Blessed Sacrament unveiled, the faithful genuflect with both knees, but with the right knee only when revering it in the tabernacle. In the old bidding prayers, as in the diaconal litanies of the Greek Church, the officiating priest, asking the congregation to pray for some special 'intention,' said, 'Flectamus genua.'[1] In penance and confirmation, and at the coronation of a king or queen, the blessing of a new knight, reconciliation, etc., kneeling is prescribed. The celebrant in the Roman, Greek, and Anglican Churches kneels in adoration, but communicates standing. The Lutheran Church and the Church of England have always prescribed reception of the sacrament kneeling. The Lutherans, however, stand at prayer. The Presbyterians stood at prayer, but in recent times they have adopted kneeling.

In European history the social uses of kneeling are confined to court ceremonial, when subjects salute the monarch, the ritual of homage in mediæval feudalism, and various courtly symbolic fashions, as between gentleman and lady. In feudal times the rule was kneeling on one knee in homage, on two in worship. Social friction has been produced in recent times by insistence on the kneeling attitude in connexion either with religious prejudice or with ideas of military discipline.[2]

The differences in the form of the posture of kneeling are simple. The only uncertainty is with the early Christian forms. Most probably there was in these an element of prostration, as was usual in Oriental forms then and is now, being characteristic also of Islām. The Muslim kneels by sitting on his feet, and in that position can make various grades of prostration of body and head.[3] The words of Seneca, 'inflexo genu adorare,'[4] refer to an Oriental, not Græco-Roman, posture of reverence. The classical *adoratio* was performed standing. The fashion of venerating the Roman Emperor in a posture of prostration, complete or from the knees, was of Persian origin, and its introduction is ascribed to Diocletian. It still obtains in Asiatic courts. Prostration in a more natural form was usual in Greek times for suppliants. Its incomplete form was kneeling. Here Augustine illustrates the natural evolution of the posture, and suggests at the same time the lines of its introduction into Christianity, by identifying kneeling with the suppliant attitude:

'They fix their knees, stretch forth their hands (a gesture of prayer), or even prostrate themselves on the ground.'[5]

LITERATURE.—This is fully given in the article.

A. E. CRAWLEY.

**KNOTS.**—The symbolical use of the knot and the ceremony of tying and untying are practices of great antiquity and of world-wide distribution. Knots have, among practically all primitive races, a special mystical signification, namely, that as amulets they possess the power of hindering or impeding specific conditions. Generally speaking, the ultimate reason for this is not abstruse: the act of tying a knot implies something 'bound,' and hence the action becomes a spell towards hindering or impeding the actions of other persons or things. Similarly, the act of loosing a knot implies the removal of the impediment caused by the knot, and from this belief are derived the various customs of unloosing knots, unlocking and opening doors and cupboards, setting free

captive animals, etc., at periods when undesirable hindrance of any event is feared. Such customs are instances of imitative or homœopathic magic, and the same principle underlies cases in which the tying of knots has a beneficent influence; a person suffering from disease, *e.g.*, may rid himself of it by tying knots in some object, such as a string or twig. The examples here given from the vast number which exist in literature may best be grouped according to their principal uses.

**1. General.**—The theory of knots from a scientific point of view was first discussed by J. B. Listing,[1] and later, more exhaustively, by P. G. Tait, who analyzed knots in their various forms according to the number of their crossings.[2] The expression 'knot' enters into several phrases of an obscure nature: thus 'nuts of May' is a corruption of 'knots of May,' from the custom of gathering knots of flowers on May-day. The 'Gordian knot' refers to the famous tradition that Gordius, a peasant called to the throne of Phrygia, in obedience to an oracle of Jupiter, dedicated to that deity his waggon, the yoke of which was tied to the draught pole so that it could not be unloosed; another oracle declared that he who unloosed the knot would become ruler of Asia, and Alexander the Great accomplished the task by cutting the knot with his sword.[3] Among the Romans the augur's wand, or *lituus*, which was used to mark out the sacred region (*templum*) for the observation of birds, had to be made from wood containing no knot.[4] In China the earliest means of communication, other than oral, is stated to have been by knotted cords.[5] Similar to this are the *quipus* of ancient Peru.

'The *quipu* was a cord about two feet long, composed of different-coloured threads tightly twisted together, from which a quantity of smaller threads were suspended in the manner of a fringe. The threads were of different colours, and were tied into knots.' The signification of the cords depended on their colour, their order, the number of knots, and their distance from the main string.[6]

Similar contrivances are found in Hawaii and among various African tribes, as well as in eastern Asia and the Pacific Islands.[7] Among some of the tribes of the southern United States, if a definite time was set for a certain event, count was kept by untying one knot each day; by this means the Pueblo Indians were enabled to make simultaneous revolt against the Spaniards in 1680.[8] The nautical 'knot' is another case in point.

**2. Knots in religious ceremony.**—In the religious systems of the East the importance of the knot in various ceremonies is well recognized. At the initiation ceremony the sacred girdle with which the Brāhman was invested was wound round the waist three times from left to right and tied with one, three, or five knots;[9] at a later stage in the ceremony the initiator made a threefold knot in the girdle on the north side of the navel and drew this to the south side of it.[10] Girdles with three knots are also worn by the Dervishes in S.W. Asia.[11] In the *naŏjot*, or initiation ceremony, of Zoroastrianism, the sacred *kustī*, or girdle, is wound round the waist three times and fastened with two knots, one in front and the other at the back, these knots symbolizing certain religious thoughts (see INITIATION [Parsi]).[12]

In the religious ceremonies of the Assyrians the god Marduk is directed to soothe the last moments of a dying man by knotting a woman's kerchief with seven knots and tying it on his head, hands, and feet. The gods will then receive his dying spirit.[1] Similar ideas may underlie the origin of the phylacteries of the Jews and their practice of binding holy texts round the limbs.[2] The Jewish phylacteries, or 'frontlets,' are small leather boxes in which are strips of parchment with passages from Hebrew Scripture. They are fixed on the forehead and on the back of the right hand. That on the head is attached by having its strap tied at the back of the head into a knot of the shape of a 'daleth.' The strap attached to the hand is formed into a noose by means of a knot of the shape of a 'yod.' These knots, together with the letter 'shin' of the head phylactery, make up the letters of the sacred name 'Shaddai' ('Almighty').[3] In Roman religious ceremonials the Flamen Dialis, the priest of Jupiter, was not allowed to have any knots in his clothing, the ring on his finger was broken, and any one coming to his house in chains had instantly to be loosed.[4] Muslim pilgrims on the journey to Mecca also avoid having knots about their person when in a state of sanctity.[5] The Qur'ān contains a reference (cxiii. 4) to 'those who puff into knots,' and these words are believed to refer to women who tie knots in cords and blow and spit on them for magical purposes. It is even recorded that a Jew once bewitched the prophet Muhammad by tying nine knots on a string; Muhammad fell ill and recovered only when the baleful thing was found and its knots undone by the recitation of certain charms.[6] In Biblical literature there are many references to the ceremony of 'binding,' the signification of the term being similar to that of tying a knot.

**3. Knots in relation to love and the marriage ceremony.**—The magic of knots and the ceremony of binding and loosing had a particular reference in earlier times to women; in classical times, *e.g.*, the unloosing of the girdle (*q.v.*) was symbolical of the loss of virginity,[7] and by tying three knots on three strings of different colours a maid might seek to draw her lover to her side.[8] Among the Arabs a girl, in order to attract the object of her affections, would tie knots in his whip.[9] The true-love-knot is a symbol of plighted affection; the direct origin of its symbolism is uncertain, but from its form and signification it is possible that Thomas Browne's suggestion[10] of its derivation from the *nodus Herculaneus* and the *caduceus* is correct.

The symbolical use of the knot in the marriage ceremony is widely distributed and dates back to extremely ancient times. Among the Brāhmans, towards the end of the marriage ceremony, the husband advances towards his young wife, who is seated facing the east, and, while reciting *mantras*, he fastens the *tali*—a little gold ornament which all married women wear—round her neck, securing it with three knots; before these knots are tied the father of the bride may refuse his consent, but after they are tied the marriage is indissoluble.[11] A cord

is also tied round the bride's waist,[1] and, when she departs from the house, the verse 'I loosen thee' is said.[2] In the Parsi marriage ceremony, a curtain is held up to screen the bride and groom from each other; under this they grasp each other's right hand, after which another piece of cloth is placed round them so as to encircle them, and the ends of the cloth are tied together by a double knot. In the same way, raw twist is taken and wound round the pair seven times. It is then tied seven times over the joined hands of the couple as well as round the double knot of the ends of the cloth around them.[3] The Bhandāris tie the hands of the wedded pair together with a wisp of *kuśa* grass.[4] The Karans of Bengal believe the essential part of the marriage ceremony to be the laying of the bride's right hand in that of the bridegroom and the tying of their two hands together with a piece of thread spun in a special way.[5] In upper India the clothes of the bride and bridegroom are knotted together as they revolve round the sacred fire.[6]

The greatest development of the symbolism was in classical times. At the Roman marriage ceremony the bride's garments were bound with a girdle made of sheep's wool and tied with a Herculean knot; after the marriage the bride, on proceeding to her husband's house, tied the door-posts with woollen fillets,[7] and later, in the bridal chamber, the Herculean knot was untied by her husband and the girdle removed; over this loosening ceremony Juno Cinxia presided.[8] Further details of the ceremony are given by Festus,[9] who states that the application of the girdle symbolized the binding character of the marriage oath, while its unloosing was for a good omen, so that they might be as fortunate in rearing children as was Hercules, who had seventy offspring. On the other hand, Macrobius,[10] in his description of the *caduceus*, states that this represents the union of a male and female serpent as an offering to Mercury, and that they are united by a Herculean knot, which symbolizes necessity; Athenagoras[11] says that the wand of Mercury is a symbol of the union of Jupiter and Rhea, whom Jupiter, disguised as a dragon, bound to him in the form of a Herculean knot. A. Rossbach[12] suggested that the Herculean knot was associated originally with the god Sancus, and that the latter, as god of light, protected men from illness and witchcraft—apotropæic powers which the knot possessed, as being his symbol. In the opinion of the present writer, the symbolism of its tying was that of the binding character of the ceremony, and its loosing represented the loss of virginity. From a physical standpoint the Herculean knot was difficult to unloose.[13]

A somewhat similar custom prevails among the natives of the East Indian island of Rotti. A cord is fastened round the waist of the bride, and nine knots are tied in it and smeared with wax in order to increase the difficulty of unloosing them; the bride and bridegroom are then secluded, and the latter has to untie the knots with the thumb and forefinger of his left hand. Not until this has been done may the man possess the woman as his wife. Frazer, in recording this case, suggests that the

nine knots may refer to the months of pregnancy.[1] Before the wedding procession a Macedonian bride has a girdle tied round her waist with three knots by one of her brothers;[2] and among the Russians, during a marriage ceremony, a net, 'from its affluence of knots,' is thrown over the bride or the bridegroom, and the attendants are girt with pieces of net or girdles, 'for before a wizard can begin to injure them he must undo all the knots in the net, or take off the girdles.'[3]

Not only was the knot important in the consummation of marriage and in the protection of the married couple from witchcraft; it was also a powerful amulet in the hands of a third person in preventing the wedding ceremony or the union of the parties concerned. Thus in the Middle Ages a person could prevent a marriage by tying a knot in a cord or fastening a lock. The cord or lock had then to be thrown into water, and, until the charm was recovered and undone, no real marriage could take place.[4] Such practices were punishable, and in 1705 two persons were condemned to death in Scotland for stealing charmed knots which had been made, with intent to mar the wedded bliss of Spalding of Ashintilly.[5] The tying of these knots was known in Germany as *Nestel knüpfen* and in France as *nouer l'aiguillette*. Those who made or used such spells were, as early as 1208, directed to be excommunicated,[6] and the *Ritual* of Paris of 1630 contains the statement:

'Nous dénonçons pour excommuniés tous magiciens et magiciennes, sorciers et sorcières, devineurs et devineresses, noueurs d'aiguillettes et autres qui par ligatures et sortilèges empêchent l'usage et consummation du saint Mariage.'[7]

There are innumerable examples of this superstition in mediæval literature, and the same idea seems to have been prevalent among the Northern Semites in A.D. 700, since mention is made of persons 'who bend a needle and insert the head in the eye, or set seals on locks and throw them into a deep well or hide them in the ground that a man may be kept away from his wife.'[8]

In Perthshire, in 1793, knots were also tabued at the marriage ceremonies, as is illustrated by the following custom, recorded by the minister of Logierait:

'Immediately before the celebration of the marriage ceremony every knot about the bride and bridegroom (garters, shoe-strings, strings of petticoats, etc.) is carefully loosened. After leaving the church, the whole company walk round it, keeping the church walls always upon the right hand. The bridegroom, however, first retires one way with some young men to tie the knots that were loosened about him, while the young married woman in the same manner retires somewhere else to adjust the disorder of her dress.'[9]

For a similar reason it was a common practice for the bride and bridegroom to have one or both shoes untied during the marriage ceremony.[10] In Syria the bridegroom must have no knots or buttons fastened in his wedding garments; otherwise their magic will deprive him of his marriage rights.[11] Similar beliefs exist among the North African races.[12] A curious belief connected with marriage is that prevalent among the Pidhireanes, a Ruthenian people on the hem of the Carpathians,

where a widow who wishes to remarry unties the knots on her dead husband's grave-clothes;[1] here again the magic is imitative and symbolizes her freedom from her bond.

**4. Knots at child-birth.**—The symbolism of the knot at birth is obvious, and its use is probably the most widely distributed of all such beliefs. Birth is associated in all countries with the idea of unloosing, and various peoples adopt different charms of a homœopathic character to facilitate delivery. Hence arise such customs as opening doors and windows, undoing hair, girdles, and all knots in the clothing, preventing the husband and other persons from sitting with the legs crossed, setting free captive animals and even school children, etc. A few examples of these customs must suffice.

In ancient India it was a custom to unloose all knots at the time of child-birth,[2] and among the Romans and Greeks such beliefs were common. Thus Ovid states that the pregnant woman is to unbind her hair before praying to the goddess of child-birth,[3] and she must also avoid having knots in her clothing.[4] At the delivery of Alcmene, Eileithyia is represented as having sat cross-legged before the house in order to delay matters.[5] The same superstition as that mentioned by Ovid occurs in Bilāspur, where the woman's hair is never allowed to remain knotted while the child is being born,[6] and unmarried Jewish girls undo their hair if a difficult labour occurs in the house.[7] The prospective mother, among the Kayans of Borneo, must refrain from tying knots;[8] and in Persia, when a birth was imminent, the school-masters were asked to give liberty to the boys, whilst birds in cages were allowed to escape.[9] In Denmark knots had to be undone when a birth was about to occur; and in Smaaland, to render future parturition easy, the bride should untie the straps of her horse's saddle when returning from the church. Here also the bride did not tie her shoe-laces before the wedding, in order that 'she might bear children as easily as she could remove her shoes,' and she would have toothache at the birth of her child if anything were tied over her bridal crown.[10] Among the Hos of Togoland, when a difficult confinement occurs, a magician is called, who declares: 'The child is bound in the womb, that is why she cannot be delivered.' To loose the bonds he binds the hands and feet of the patient with a tough creeper and then, after calling the woman's name, he cuts through the creeper with a knife, saying, 'I cut through to-day thy bonds and thy child's bonds.' The creeper is then cut up into small pieces and put in water, with which the woman is bathed.[11]

Similar superstitious beliefs and customs may be traced in the folklore of ancient and modern India, Java, Sumatra, the Sea and Land Dayaks, Cochin China, Central Australia, Mecklenburg, Voigtland, Transylvania, and even to the present day in Scotland.[12]

**5. Knots in the cure of diseases.**—Knots were largely employed by the Assyrians in their spells for removing illness; thus, for headache, the head of the sick person must be bound with a bundle of twigs, accompanied by the recitation of magic words, and at eventide the twigs are to be cut off and thrown into the street 'that the sickness of his head may be assuaged.'[1] Another text recommends the use of the hair of a virgin kid, spun and bound with twice seven knots to the head, neck, and limbs of the sufferer.[2] As a charm for ophthalmia, black and white threads or hairs are woven together, with seven and seven knots therein, and during the knotting an incantation is said; the thread of black hair is then to be fastened to the sick eye, and the white one to the sound eye.[3] The Babylonian witches could strangle their victims or seal their mouths, etc., by tying knots in a cord, and by undoing these knots the sufferer could be relieved.[4] Similar customs have been found among the Persians[5] and Arabs[6] in modern times. Pliny, referring to wounds, remarks:

'It is quite surprising how much more speedily wounds will heal if they are bound up and tied with a Hercules' knot; indeed, it is said that, if the girdle which we wear every day is tied with a knot of this description, it will be productive of certain beneficial effects, Hercules having been the first to discover this fact.'[7]

He also states that inguinal tumours could be cured by taking a thread from a web, tying seven or nine knots on it, and then fastening it to the patient's groin, although it was also necessary to name some widow as each knot was tied.[8] Again, to cure swelling of the groins due to ulcers, the patient is directed to insert in the sores three horse hairs tied with as many knots.[9] In 1718 the Parliament of Bordeaux sentenced an individual to be buried alive for spreading desolation through a family by means of knotted cords;[10] and in Scotland,[11] Denmark, and Sweden[12] knotted cords are still in use to protect both men and beasts from illness, the number of knots being usually three or nine. In Russia a skein of red wool is wound about the arms and legs to protect the wearer from fever, and nine skeins tied round a child's neck protect it from scarlatina.[13] One of the most common of such beliefs is that warts may be cured by tying as many knots in a string as one has warts, and to obtain the ultimate cure either the knots are unloosed or the string is thrown away or placed under a stone, when the first person to tread on the stone or pick up the string acquires the warts;[14] or each wart is to be touched by one of the knots.[15] In the days when the belief in the possibility of transferring diseases to inanimate objects was prevalent, knots were made in the branches or twigs of trees; the ceremony, being accompanied by spells, transferred the disease to the tree.[16] For protection against disease the Hos of Togoland tie strings round the different parts of the body.[17] Knots are even believed to be a protection against death itself, and the soul cannot leave the body till they are loosed.[18]

**6. Other beliefs in knots as amulets.**—Among the Assyrians the knot was used to prevent the spirits of the dead from annoying the living. To attain this end, the following directions are given:

'Spin a variegated and a scarlet thread together, and tie seven knots in it; thou shalt mix together oil of cedar, spittle of the

man, the leavened dough, earth from an old grave, a tortoise's (?) mouth (?), a thorn (?), earth from the roots of the caper, earth of ants; thou shalt sprinkle the knots with this. While thou tiest them, thou shalt repeat this incantation [(and) bind it] on the temples [of the man]. Thus shalt thou tighten it, until the darkening of the white part of the face and the whitening of the dark-coloured part of the face takes place.'[1]

To remove a tabu from a man, directions are given to bind his limbs with a double cord of black and white threads which has been twisted on a spindle; the cord then appears to be cut by the hands of Marduk, who also releases the man from the tabu.[2] Evidently a witch could cast a tabu on a man by tying knots and chanting a spell, for we are told that 'her knot is loosed, her sorcery is brought to naught, and all her charms fill the desert.'[3] The ancient Hindus believed that knots tied in the garments of a traveller would protect him on a dangerous journey;[4] and in classical times spells were removed by knots, for Petronius mentions that, in removing a spell from Encolpius, 'she then took from her bosom a web of twisted threads of various colours and bound it on my neck.'[5] Charms of many coloured threads were tied on the necks of infants to protect them from fascination.[6] The same idea explains the wearing of the sacred thread, or *janeū*, by high-caste Hindus. The knots on it, known as *Brahma-granthi*, or 'the knots of the Creator,' repel evil influences, and Muhammadans on their birthdays tie knots in a cord, which is known as the *sālgirah*, or 'year knot.'[7] To drive away rain, the Mirzāpur natives name twenty-one men blind of an eye (and, therefore, ill-omened), and make twenty-one knots in a cord, and tie it under the eaves of the house.[8] The tying of knots in a string and subsequently unloosing them to raise wind for sailing is a custom common to many fishing people—*e.g.*, Finlanders, Laplanders, Shetlanders, and natives of the Hebrides and Isle of Man.[9] South African natives before starting on a journey will knot a few blades of grass so that the journey may be prosperous,[10] and the knotting of grass in a forest is supposed by Laos hunters to prevent others from being successful there in the pursuit of game.[11] Russians have the belief that knots act as a protective against violent death from weapons, which, as it were, are 'tied' by the knots; and knots also prevent the death of cattle and people by 'binding up' the mouths of wolves and other ravenous animals—a belief which is also current in Bulgaria[12] and Armenia.[13]

CHARMS AND AMULETS. For Egyptian knotted cords (use unknown) see W. M. F. Petrie, *Amulets illustrated by the Egyp. Collection in Univ. Coll., London*, London, 1914, p. 29, and plates xvii.–xix.

WALTER J. DILLING.

**KNOWLEDGE.**—See EPISTEMOLOGY.

**KNOX.—1. Birth and early life.**—Neither the place nor the date of John Knox's birth is certain; but Giffordgate, a hamlet contiguous with Haddington, is the site for which most and against which least can be said; and a date between 24 Nov. 1513 and 24 Nov. 1514 (not 1505, as, until recently, was usually supposed) is most probable.

Local tradition in favour of Giffordgate was old in 1785 (G. Barclay, in *Trans. Soc. of Antiq.* i. 69; publ. 1852), and is accepted by D. Laing (*Works of Knox*, Edinburgh, 1864, vi. xviii.), A. F. Mitchell (*Scottish Reformation*, do. 1900, p. 79), and D. Hay Fleming (*Original Secession Mag.*, 1889). The ancient *Registre* of Geneva and Knox's contemporary, Archibald Hamilton (*de Confusione Calvinianæ sectæ*, Paris, 1577, p. 64), describe him as a native of Haddington. His designation by Beza (*Icones*, 1580) as 'Giffordiensis,' and the statement by J. Spottiswoode (*Hist. of the Church of Scotland* [published 1655], ed. 1850, ii. 180) that he was born in Gifford, are consistent with the above (Giffordgate being on the Gifford Estate), but are believed by T. McCrie (*Life of John Knox*[6], Edinburgh, 1839) and by S. Kerr of Yester (*Where was Knox born?*) to indicate Gifford village, 4 miles from Haddington, as the real birthplace—a village, however, which appears in no map older than the 17th century. D. Louden (*History of Morham*, London, 1889, pp. 34–51) advocates Morham, within Haddington Constabulary; and it is favoured by P. Hume Brown (*John Knox: A Biography*, London, 1895). In the 14th cent. this parish passed by marriage to the Giffords, and in Knox's time was owned by the Bothwells—which would account best (it is held) for Knox's acknowledgment (Laing, *Works of Knox*, ii. 323) of feudal obligation to that family. But, against this view, the name Morham was never superseded by Gifford.

The two earliest authorities for Knox's birth-year are Peter Young, of Edinburgh, and Theodore Beza, of Geneva—both personal friends of the Reformer. Beza states (*Icones*) that Knox died after reaching the age of 57; but Young's testimony that he died in his 59th year is to be preferred as being contained in a letter (recently recovered) written from Edinburgh expressly in answer to Beza's inquiry. The date 1505 (formerly accepted) rests on Spottiswoode's authority (*Hist. of Church of Scotland*, ii. 180), followed by D. Buchanan (*Life and Death of Knox*, published 1644), who had access to Spottiswoode's then unpublished MS. McCrie found confirmation (perhaps the basis) of Spottiswoode's statement in the recorded entrance of *a* John Knox into Glasgow University in 1522; but eight John Knoxes were students there in the 16th and 17th centuries.

Knox is stated by Beza to have been a student at St. Andrews under John Major, who was settled there in 1531. His student life must have begun not very long after Patrick Hamilton's martyrdom at St. Andrews in 1528, and the words in Knox's *History* (i. 36), 'when those cruel wolves had devoured their prey, there was none within St. Andrews who began not to enquire wherefore was Patrick Hamilton burnt?' sound like a personal reminiscence. At any rate Knox was probably affected by the martyrdom; and this, along with the teaching of Gavin Logie, who fled from St. Andrews about 1534 on account of Reformed views, and also the oath which graduates had to take against 'Lollardism,' may have led to Knox's non-graduation as *Magister Artium*. On the other hand, Major's influence and Knox's keenly patriotic spirit may have kept him from identifying himself with a cause which, in its earlier stages, came, justly or unjustly, under suspicion of being associated with unpatriotic subservience to England. Knox entered the priesthood at some date prior to 1540; and, up to 1545, there is no evidence of his public support of the Reform cause. In 1543, however, he had received a lively impression of the truth from Friar Thomas William, one of the Regent Arran's evangelical chaplains (D. Calderwood, *History of the Kirk of Scotland*, i. 155 f.); and the seed fructified under the ministry of George Wishart, who came to East Lothian in 1545. Knox, then tutor in Hugh Douglas's family at Longniddry, 'waited on Wishart from the time he came to Lothian,' and attended him in Haddington on the evening before Wishart's midnight arrest. Henceforth Knox was a recognized adherent of the Reformation.

**2. Call and ministry at St. Andrews.**—The assassination of Beaton in May 1546 was condoned by Knox as a 'godly fact,' justified by the failure of the civil authority to punish the Cardinal's illegal oppression. He had no scruple, therefore, about taking refuge from peril in the Castle of St. Andrews held by the conspirators and other opponents of the Roman Catholic religion. From the Castle congregation, led by John Rough, an evangelical preacher, he accepted a solemn call to the Reformed ministry. From the pulpit of the Parish Church he declared that the evil lives of the clergy (from popes downward), corrupt Roman doctrine, unscriptural enactments, and

blasphemous papal pretensions proved that the Church of Rome was 'not the body of Christ, but the whore of Babylon.' 'A great number openly professed' Reformed doctrine at St. Andrews; and Holy Communion was celebrated for the first time publicly in Scotland according to a Reformed ritual. What had hitherto been only a Protestant movement thus grew into a Reformed Church. Meanwhile, however, partly as a divine judgment (so Knox declared) on account of the evil doings of a portion of the Castle community, the garrison were constrained, in the autumn of 1547, to surrender to the French fleet, and Knox, along with other prisoners, was consigned to the 'torment' of the galleys.

3. **Ministry in England.**—After eighteen months of toil and tribulation as a galley bondsman, Knox was released through the English Government's intervention. Gratitude to his liberators and the impracticability, then, of effective ministry in Scotland induced him to settle in England, where Archbishop Cranmer and Protector Somerset were accomplishing, under Edward VI., a more real Reformation than that of Henry VIII. In Berwick (1549-51) Knox ministered to a congregation consisting of garrison and citizens, using a Puritan form of service. The Communion office was largely borrowed from Swiss sources, and the practice of kneeling was discontinued as a symbolical endorsement of the Adoration of the Host. During this Berwick ministry he publicly testified against the 'idolatry' of the Mass before the ecclesiastical 'Council of the North,' and vindicated the Puritan position that 'all worshipping invented by the brain of man, without God's express command, is idolatry.' Such action and testimony justify Carlyle's designation of Knox as 'the Chief Priest and Founder' of English Puritanism (*Heroes and Hero-worship*, London, 1872, p. 132). In 1551 he was promoted to Newcastle, and in 1552 he became one of six royal chaplains, who also itinerated on behalf of the Reform cause. He declined the bishopric of Rochester, not owing to any objection to episcopacy in itself, but because he disapproved of 'your prowde prelates' great dominions and charge (impossible by one man to be discharged)' (Laing, v. 518). As a patriotic Scot, moreover, he would be reluctant to undertake responsibilities which might debar him from eventual service to his native land. Partly through Knox's influence, sitting at Communion was favoured by many; and in Edward's Second Prayer Book, while kneeling was retained, the existing rubric was inserted at Knox's instigation (J. Foxe, *Acts and Monuments*, vi. 510; P. Lorimer, *John Knox and the Church of England*, London, 1875, pp. 99-107), declaring that by kneeling no adoration is intended either of the sacramental elements or of Christ's 'natural flesh and blood.' At Edward's death Knox not only took no part in the plot to enthrone Lady Jane Grey, but, as Royal Chaplain, prayed publicly for 'our Sovereign Lady Queen Mary,' and besought God to 'repress the pride of them that would rebel.' When the Queen's policy of persecution, however, became assured, Knox crossed over to Dieppe early in 1554. 'My prayer,' he writes, 'is that I may be restoirit to the battell again' (Laing, iii. 154 f.).

4. **Leader and pastor of Protestant exiles on the Continent** (1554-59).—Knox's exile was no period of inactivity. He not only accomplished much literary work,[1] and kept himself in constant touch, through correspondence, with reforming friends in Scotland and England, but he also ministered to congregations of fellow-exiles. In Frankfort he became pastor, in March 1554, to an English community of Puritan tendency, using a Service-book of his own based on Calvin's Liturgy. The subsequent arrival, however, of other exiles, who desired the use of Edward VI.'s Second Prayer Book, led to conflicts which issued in Knox's withdrawal and in his settlement, early in 1555, at Geneva, as one of two pastors chosen by the British exiles there. Knox's Genevan ministry continued until Jan. 1559, with two breaks—viz. a nine months' visit to Scotland in 1555-56, and a ten weeks' sojourn, in the winter of 1557-58, at Dieppe, where he organized a French Protestant community of 800 members. His stay at Geneva was the most peaceful and perhaps the happiest period of his ministry. 'The Church of Geneva,' he writes in 1556, 'is the most perfect school of life since the days of the Apostles.' Fellowship with Calvin was a joy and a strength, an education and an incentive. To Geneva, in Sept. 1556, he brought his wife, Marjory Bowes, whom Calvin describes as 'suavissima'; her mother had been a devoted member of Knox's Berwick flock. Mrs. Knox died in Dec. 1560. In Geneva were born his sons Nathanael and Eleazar, who entered Cambridge University after their father's death; the latter became vicar of Clacton Magna in 1587. Among notable members of Knox's Geneva congregation were Miles Coverdale, William Whittingham, and two future prelates, Bentham and Pilkington (afterwards bishops respectively of Lichfield and Durham).

5. **First return to Scotland.**—The anxiety of the Regent Mary of Guise to secure the marriage of her daughter, Mary Stuart, to the Dauphin of France led her to court the favour of Scottish Protestant nobles, and to adopt a tolerant religious policy which encouraged Knox to visit Scotland in Sept. 1555. In districts where influential laymen gave him support, particularly West Lothian and Midlothian, Forfarshire, Ayrshire, and Strathclyde, he propagated Reformed doctrine and persuaded Protestant leaders to abstain from Mass and to celebrate Holy Communion with a Reformed ritual. Scottish Protestants thus acquired courage and consolidation. Knox even made a bold attempt to win the Regent by a conciliatory letter in which he praises her 'moderation and clemency.' In vain; she treated his elaborate address as a 'pasquil.' The Bishops cited him to trial for heresy at Edinburgh in May 1556, and Knox arrived to meet his accusers; but they received no support from the Regent, and departed from the charge on the ground of some alleged informality. On the very day appointed for his trial Knox preached to a larger congregation than ever before had listened to him. An appeal, however, in midsummer, from his Geneva flock, and the conviction that the Reform cause, strengthened by his visit, might now be better served by his withdrawal for a time to prevent the resumption of persecution, led to his return to Geneva.

6. **Final return to Scotland and accomplishment of the Reformation** (1559-60).—In Dec. 1557 there was drawn up at Edinburgh, largely through the absent Reformer's stimulating influence, the first Scottish 'Covenant,' an organized Protestant league for defence against religious despotism and for the advancement of the Reform cause. This movement, along with Mary Stuart's marriage to the Dauphin in 1558, and the consequent removal of the Regent's motive for toleration, led to renewed persecution; and the Scottish Reformers, realizing their need of Knox, invited him to return. He arrived at an opportune moment, on 2nd May 1559. Four notable preachers—

[1] This included his *First Blast of the Trumpet against the Monstruous Regiment* [i.e. *Rule*] *of Women*, his *Appellation against the Scottish Hierarchy*, a *Brief Exhortation to England*, and a *magnum opus* on *Predestination*.

Harlaw, Willock, Christison, and Methven—had been cited to Stirling on 10th May to answer the charge of unauthorized and heretical ministrations, in rebellious defiance of the Privy Council's prohibition. For non-appearance they were declared to be outlaws, and the raising of an army of 8000 (partly French) by the Regent provoked the gathering of a Protestant host. A trifling incident precipitated the conflict. On 11th May Knox preached in St. John's Church, Perth, against the 'idolatry' of the Mass. While the congregation were dispersing, a priest began the celebration of what Knox had been denouncing. A lad protested loudly, was struck by the irritated celebrant, and retaliated by throwing a stone which broke an image. It was as if a lighted match had been applied to a heap of combustibles. Wide-spread 'purging' of churches and demolition of monasteries ensued. After temporary truces and fruitless attempts at compromise, the Regent, supported by France, and the Reformers, by England, carried on civil war which terminated only with the Regent's death in June 1560. Knox took a leading part in the conflict as preacher and counsellor. A significant sermon at St. Andrews on the 'Cleansing of the Temple'; another in St. Giles vindicating the Reformers' aim as being not any alteration of authority, but the reformation of religion and suppression of idolatry; an extensive itinerancy for the enlightenment of the people and the establishment of a Reformed ministry in chief centres; an important share in the negotiations which issued in the alliance between the Scottish Reformers and the English Government; a signal service at Stirling after a defeat by the French army, when the depressed spirits of the Reformers were 'wondrously re-erected' by Knox's inspiring assurance that their cause *must* and shall prevail because 'it is the eternal truth of the eternal God'—these are some of the Reformer's contributions to the Reform movement during that critical time (Laing, i. 348, 365, 471, vi. 30. 56, 78). The Regent's dying counsel to both sides was to procure the withdrawal of both the English and the French armies. This was effected; and the settlement of Scottish ecclesiastical affairs was left to the Estates of the realm. The issue was the establishment of Protestantism as the national religion by the Convention (a virtual parliament) of Aug. 1560, so far at least as this was constitutionally possible in the absence of monarch and regent.

To Knox and five colleagues was entrusted the composition of a Confession of Faith; the outcome was the 'Scots Confession,' which held the field until it was superseded by that of Westminster. Inferior in logical precision to its successor, the older Confession is superior in theological breadth and spiritual warmth (see art. CONFESSIONS, vol. iii. p. 872). Knox and his associates drew up a Church polity embodied in the *First Book of Discipline*. It recognizes five classes of office-bearers—superintendent, minister, elder, deacon, and reader. The first office was apparently a tentative arrangement, whose continuance or discontinuance might depend on its effectiveness or otherwise; gradually it disappeared; the readers were a temporary institution until sufficient ministers became available. The Church courts were the Kirk Session, Synod, and General Assembly; the Presbytery was developed after Knox's death. Worship was regulated by his *Book of Common Order*. A school as well as a church was to be established in every parish, and a 'college' in every 'notable town,' at which preparation was to be provided for the University. The *Book of Discipline* anticipated modern legislation by advocating compulsory education. The patrimony of the Church, which, prior to the Reformation, included nearly half the property of the realm, was to be expended on the maintenance of the ministry, the education of the young, and the relief of the poor; but unfortunately, notwithstanding Knox's indignant protest, the Scottish landowners 'greadelie gripped to the possessionis of the Kirk' (Laing, ii. 128), which had to be content with a sixth of her ancient patrimony.

**7. Knox and Queen Mary.**—The young Queen's return in 1561 and the permission of the otherwise interdicted Mass in the private chapel at Holyrood filled Knox with anxiety. He declared from the pulpit that 'one Messe was more fearful to him then gif ten thousand armed enemyes war . . . in the Realme' (*ib.* 276). His first interview with Mary deepened his solicitude. The chief subject of conversation was the right of subjects to resist their princes, particularly in the religious sphere. 'God commandis subjectis to obey thair Princes,' said Mary; 'think ye that subjectis having power may resist thair Princes?' Knox, long before, had learned from John Major the principle of constitutional monarchy, and he replied: 'Yf Princes exceed thair boundis, and do against that whairfoir they should be obeyed, . . . thei may be resisted.' 'I perceave that my subjectis shall obey you, and not me,' said the Queen. 'My travell,' responded Knox, 'is, that boyth princes and subjectis obey God.' He closed the interview with the loyal prayer that Mary might be 'as blessed within the Commoun-wealth of Scotland as ever Debora was in the Commoun-wealth of Israell'; but he stated to friends his conviction, 'yf thair be not in hir a proud mynd, a crafty witt, and ane indurat hearte against God and his treuth, my judgment faileth me' (*ib.* 277-286). This first encounter fairly exemplifies their relations. Knox in his bearing towards the Queen united on the whole the courtesy of a gentleman with the firm and sometimes stern maintenance of his right as a 'profitable member within the commonwealth' publicly to criticize his sovereign's doings, especially in religious concerns. At their last recorded meeting, in Dec. 1563, when Knox appeared before the Queen and her Council to answer the charge of 'convoking the lieges' without her authority, he uttered the memorable manifesto: 'I am in the place quhair I am demandit of conscience to speik the treuth; and thairfoir I speik. The treuth I speik impung it quhoso list' (*ib.* 408).

**8. Knox and the Protestant statesmen.**—Amid general agreement between Knox and lay Reformers on the vital question of dethroning the Roman Catholic and establishing a Protestant Church, there was serious disagreement as to important details. The difference consisted chiefly in the familiar divergence between principle and expediency. While Knox was against the toleration of the Mass even in the Queen's private chapel, Moray and Maitland thought this a cheap price to pay for Mary's acquiescence in Protestant supremacy. Knox emphasized the necessity of free Assemblies: 'Take from us the freedom of Assemblies, and you take from us the Evangel.' The Protestant statesmen, especially Maitland, saw in the freedom of convocation and enactment a perilous *imperium in imperio*. Knox demanded the legalizing of the *Book of Discipline* by royal and parliamentary endorsement; the lay leaders of the Reformation resisted the claim alike as an occasion of rupture between Church and landowners and as a dangerous aggrandizement of ecclesiastical wealth and power. There was never much love to lose between Knox and Maitland, but the temporary estrangement between Knox and Moray (1563-65), the immediate occasion of which was the latter's unwillingness to press the Queen formally to recognize the Reformed as the National Church, caused a painful breach between two men

who had regarded each other with esteem and affection. The breach was closed about the time of the Queen's marriage to Darnley, when the statesman (who opposed it) became an exile, and the Reformer the leader of a depressed Church. Common misfortune helped to heal discord.

When Mary's mad marriage with her husband's murderer alienated the national sentiment and led to her enforced abdication, Knox and the Regent Moray co-operated loyally in securing the full establishment of Protestantism, a guarantee against the accession of any non-reformed sovereign, and more adequate maintenance of a Protestant ministry. To Knox Moray's tragic death was not only a great public calamity, but a heavy personal bereavement; and his funeral sermon, from the significant text, 'Blessed are the dead which die in the Lord,' moved a vast congregation to tears (Calderwood, *Hist.* ii. 526).

9. **Last years and death.**—The eventide of Knox's life was clouded with trouble. Moray's removal strengthened the party which favoured Mary's restoration; and some influential men now seceded to it, including Maitland and Kirkcaldy of Grange. On the other hand, the Regent's party, to which Knox loyally adhered, strained the fidelity of the Reformer and others by 'merciless devouring' of the Church's patrimony and oppressive interference with her liberty. When to these troubles was added in 1570 a stroke of apoplexy, Knox was persuaded to leave Edinburgh for the quieter environment of St. Andrews, where he remained for half a year. He describes himself as there 'lying half-dead,' but he did not cease from preaching.

He had to be 'lifted to the pulpit,' writes James Melville, an eye-witness (*Memoirs*, p. 75), 'where he behoved to lean at his first entry; but ere he had done, he was like to ding that pulpit in blads and flee out of it.'

During his residence in St. Andrews took place that introduction of a modified episcopate into the Reformed Scottish Church which became the fruitful source of discord, despotism, and rebellion. Knox did not protest against episcopacy in itself; but he warned the Church of the abuses to which it might lead, and suggested safeguards against the appointment of unqualified persons and the simoniacal alienation of ecclesiastical property to secular use. In autumn he returned to Edinburgh—to die; but two notable functions he lived to discharge: his sermon after the massacre of St. Bartholomew, when he denounced 'that murderer the king of France' in the white heat of righteous indignation, and his last pulpit service on 9th November, when James Lawson was inducted as his successor, and when Knox with 'weak voice' but fervent heart 'prayed that any gift which *he* had possessed' might be bestowed on his successor '1000 fold' (R. Bannatyne, *Memoriales*, p. 281). A 'last good night' to the elders and deacons of St. Giles; a solemn and affectionate Godspeed to his colleague; farewell interviews and messages, in particular a meeting with Morton whom he supported but did not love, and an assurance of divine mercy to Kirkcaldy whom he loved but opposed; a dying prayer for 'the troubled Kirk'; a dying vision of the 'Delectable Land'; and a last request to his devoted young wife[1] to read the 15th chapter of 1st Corinthians, 'where,' he said, 'I first cast anchor'—these are some of the chief incidents of the Reformer's latest hours (*ib.* p. 288 f.). He was buried in what was then the churchyard of St. Giles, at or near the spot afterwards indicated by his initials between the church and Parliament House. As the remains were laid in the grave, Morton uttered his disinterested witness: 'Here lyeth a man who in his life never feared the face of man' (J. Melville, *Memoirs*, p. 60). This panegyric indicates what in Knox's character most impressed his contemporaries. But beneath this fearlessness towards men was his steadfast faith in God, and in his own call to be God's servant. Knox was intolerant towards Romanists as well as Romanism; but we must remember the great difference between the Roman Church of Scotland in the 16th cent. and in the 20th. He was a stern man when conscience demanded severity; but there was in him a vein of tenderness and sympathy of which life-long conflict did not deprive him. We catch a glimpse of this side of his character in the almost intolerable pain which (as he told the Queen) he felt when constrained to punish his children; in the yearnings of a wounded yet affectionate spirit which are revealed in his letter to Moray at the time of their quarrel; and in the solicitude which he manifested on his deathbed for the salvation of Kirkcaldy, his antagonist but former friend. Knox's unreserved self-dedication—at once patriotic and devout—to the Scottish Reformation contrasts well with the defective patriotism and ignoble self-seeking of some of his fellow-labourers, who reaped spoil from the Church's heritage. His incessant and devoted labours after his final return to Scotland, notwithstanding 'a weak and fragile body,' his courageous maintenance of divine truth, by voice and pen, before high and low, and his heroic faith through which the faith of others was sustained, in the eventual triumph of Protestantism, justify the historian Froude's judgment that 'no grander figure can be found, in the entire history of the Reformation in this island, than that of Knox' (*History of England*, London, 1856–70, x. 455).

## KODAS.—See MUṆḌĀS.

**KOL, KOLARIAN.**—'Kol' and 'Kolarian' are terms applied to a race and a group of languages spoken by people found on the Vindhyan-Kaimūr hill range, which flanks the Ganges valley to the South in N. India. The origin of these names presents many difficult questions. Skr. *kola* means 'a hog,' and, according to some authorities, the tribal designation is a term of contempt applied by the early Hindus to the dark-skinned aborigines. According to Jellinghaus (*ZE* iii. [1871] 326), the word means 'pig-killer'; but it is more probably, like Orāon (*q.v.*), a variant of *horo*, the Muṇḍā term for 'man' (H. H. Risley, *TC*, Calcutta, 1891, ii. 101; E. T. Dalton, *Descript. Ethnology of Bengal*, do. 1872, p. 178). The term Kola used in the *Harivaṁśa* and other Purāṇas (J. Muir, *Orig.*

[1] Margaret Stewart, daughter of Lord Ochiltree, to whom Knox was married in 1564. The youngest of their three daughters, Elizabeth, became the wife of the celebrated John Welch, minister of Ayr.

*Skr. Texts*, ii.[2] [1874] 422; H. H. Wilson, *Vishṅu Purâṅa*, London, 1864–77, iii. 293) is supposed to be applied to the Karṇāṭa or Kanarese people; but it seems more probable that it refers to the N. tribe (R. Caldwell, *Comparative Grammar of Dravidian Languages*[2], London, 1875, Introd. p. 18). The origin of the term Kolarian is more remarkable. F. Wilford tried to show (*Asiatic Researches*, ix. [1809] 92) that 'Colar' was the oldest name of India, this hypothesis being based on a passage in pseudo-Plutarch (*de Fluviis*, iv. 1) which speaks of a nymph Kalauria in connexion with the origin of the Ganges. The use of the term Kolarian to designate this people and their language is due to G. Campbell (*JASBe* xxxv. pt. ii. [1866], supplement, p. 27 f.), and was adopted by Dalton and other ethnologists, but was repudiated by Risley on anthropometric grounds:

'Another theory of the origin of the Dravidians was adopted by Sir William Hunter in the account of the non-Aryan races of India given by him in *The Indian Empire*. According to this view there are two branches of the Dravidians—the Kolarians, speaking dialects allied to Mundāri, and the Dravidians proper, whose languages belong to the Tamil family. The former entered India from the North-East and occupied the northern portion of the Vindhya table-land. There they were conquered and split into fragments by the main body of Dravidians who found their way into the Punjab through the North-Western passes and pressed forward towards the South of India. The basis of this theory is obscure. Its account of the Dravidians seems to rest upon a supposed affinity between the Brâhui dialect of Baluchistan and the languages of Southern India; while the hypothesis of the North-Eastern origin of the Kolarians depends on the fancied recognition of Mongolian characteristics among the people of Chota Nagpur. But in the first place the distinction between Kolarians and Dravidians is purely linguistic, and does not correspond to any differences of physical type. Secondly, it is extremely improbable that a large body of very black and conspicuously long-headed types should have come from the one region of the earth which is peopled exclusively by races with broad heads and yellow complexions. With this we may dismiss the theory which assigns a trans-Himalayan origin to the Dravidians' (*Census Report of India*, 1901, i. 508, *The People of India*, Calcutta, 1906, p. 46 f.).

The question has assumed another form as the result of linguistic researches. The original substratum of the type of languages now known as Mōn-Khmēr is found to have

'covered a wide area, larger than the area covered by many families of languages in India at the present day. Languages with this common substratum are now spoken, not only in the modern Province of Assam, in Burma, Siam, Cambodia and Annam, but also over the whole of Central India as far west as the Berars. It is a far cry from Cochin China to Nimar, and yet, even at the present day, the coincidences between the language of the Kōrkūs [see Kōrkūs] of the latter District and the Annamese of Cochin China are strikingly obvious to any student of language who turns his attention to them' (G. A. Grierson, *Linguistic Survey of India*, ii. [Calcutta, 1904] p. 2, iv. [1906] 'Muṇḍā and Dravidian Languages,' p. 2 ff.).

Further, many ethnologists are not prepared to admit Risley's doctrine of the uniformity of the brachycephalic type in trans-Himalaya (*JRAI* xlii. [1912] 450 ff.); and the origin of the Muṇḍā-speaking races is now attributed to the arrival of the first of three great invasions of Further India from the eastern uplands of Central Asia. It is improbable that the wide distribution in N. India of languages of the Mōn-Khmēr type could have occurred in any other way than by an emigration of these people from Further India. The identity of physical type between the Kolarians and the Dravidians may be the result of contact metamorphosis and the control of a common environment. The latest authority, A. Baines (*Ethnography* [=*GIAP* ii. 5], Strassburg, 1912, p. 3), thus sums up the question:

'The other race, to which the title of Kōl or Muṇḍā is generally attached, is not known south of the forest Belt, in which it is at the present time concentrated under its distinctive tribal appellations. Formerly, however, it was spread over the whole of the great plains of Upper India, and, according to recent philological discoveries, it is akin, at least in language, to communities now settled on the borders of Assam, and far to the east of the Bay of Bengal. Some investigators, indeed, spread its former habitat over a still wider area. In the east and north-east of India, however, its identity has been obscured, if not obliterated, by the successive immigrations of people of Mongoloidic race from eastern Tibet and the head waters of the great Chinese rivers, whose main streams of migration have sought the sea by the valleys of the Irâwadi, Salwin, and Mekhong. In the Gangetic plain the type is traceable throughout the population, slightly, indeed, along the Jamnâ, but more distinctly as the east is approached, and almost everywhere more prevalent as the social position is lower. This graduation is due to miscegenation between the Kōl, who, as far as ethnography is concerned, may be considered the autochthonous inhabitants of these tracts, and a taller and fairer race, which entered India by the passes of the north-west or the plains of Balûchistân.'

**KORAN.**—See Qur'ān.

**KOREA.**—The Korean Peninsula, very mountainous and well watered, projects from the continent towards Japan. On the north it adjoins the wooded mountains of Manchuria, and the plain of Lyao, which has always been a cause of contention to the Chinese, the hunters of the north-east, the shepherds of the north-west (the Manchus), and the Mongols (or their predecessors); on the south-west side it stretches well into the vicinity of Shantung and Central China; the southern extremity comes close to Tsushima; but the north-eastern coast, on the Sea of Japan, is somewhat inhospitable.

1. **History.**—The history of Korea may be extracted from the above remarks: its neighbours, when more advanced or stronger, have prevailed over it by virtue of their civilization, and have often brought it into subjection by force of arms; at some rare intervals it has lived its own life. Its unity was brought about with difficulty. Its entrance into history was about the time when it was invaded first by Chinese and then by Japanese, while the natives settled down as independent kingdoms, Kokurye in the north-west, Paikchei in the south-west, Sillā in the south-east, Kārāk between the two latter—to say nothing of the tribes of the Yei on the Sea of Japan, and the kingdom of Puye situated in the country which is now Manchuria. At last, through the assistance of China, a union was accomplished in the interest of Sillā (668) and in opposition to Japan. To that southern kingdom succeeded the kingdom of Korye (918), and then that of Chosen (1392); the latter was absorbed by Japan in the year 1910.

2. **Nature-worship.**—Numerous facts indicate that earlier than the Korye dynasty there was a nature-religion whose traces are still visible to-day. Sacrifices to heaven were offered by the kings or the people in Sillā, Paikchei, Kokurye, and Puye, and among the Yei. Under the dynasty of Korye the worship of heaven was celebrated by the king, although he was a vassal of the Emperor; the rites had probably become Chinese, and the place of the ceremony was, as in China, a round knoll. The first sovereigns of the Chosen dynasty kept up these old rites. As early as the reign of Thāi-chong, in 1410, 1411, and 1414, debate had arisen regarding the right of the king of Korea to celebrate a sacrifice which the Chinese rituals reserved for the Emperor. Suppressed, then re-established, the sacrifice to heaven does not reappear after 1457 until 1897, when Korea was independent and known as the Empire of Tāi-hān.

Worship of the sun, moon, and stars existed in Sillā and in Kokurye, and is found again during the Korye dynasty. In the last-mentioned period, and also in that of Chosen, mention is made of

altars dedicated to the stars; at these altars offerings and prayers were burned. In the middle of the 15th cent. these ceremonies, Taoist in character, were suppressed; like the sacrifices to heaven, they did not conform to the strict orthodoxy of Confucianism.

In the kingdom of Sillā, at a period when the Chinese civilization had already penetrated, the sacrifices in connexion with agriculture kept their national character; they took place three times a year—in spring, summer, and autumn.

One of the most important points in the ancient religion was the worship of mountains, rivers, and seas. The *Sām kuk sa keui* gives a list of the holy places of the kingdom of Sillā, classified into three groups, according to their importance. Under the dynasty of Chosen, sacrifices were regularly offered, sometimes at the places consecrated by tradition, sometimes at a mountain- or river-altar (after 1405 the altars had official guardians). The regulations of 1866 include ritual rules along with a kind of sacred geography. In spite of the intolerance of the Confucianists, who have gradually effaced so many traces of the ancient beliefs, this worship has survived. It is very deep-rooted among the people; there is hardly a sacred mountain where some sanctuary is not to be found, dedicated to the spirit of the place or to a Buddha as its substitute. At every important or difficult pass there is a sacred tree, at the foot of which each passer-by lays a pebble; some travellers tear strips from their garments and tie them to the branches; the devout present rice. Similar offerings are made at the fords and at the eddies of the rivers. The great trees, the *miryek* (gigantic statues, perhaps Buddhist in origin, which occur in fairly large numbers), and the posts painted red, with the tops roughly representing a human head, are the objects of a similar devotion.

A last mark of the ancient religion has reference to ritual purity. At the beginning of each year there were general sacrifices of propitiation and purification; these were offered also in time of war; and at such times all rejoicings were forbidden. Practices analogous to that great annual purification may be found in the feudal China of the Cheu and in ancient Japan. In the modern Chinese worship, fasting and the washing of hands which precedes every sacrifice have not so general a significance. The use of purifications and of public prayers on the occasion of calamities, fires, and invasions is often noted even during the period of Korye, under names which recall the Japanese *Ohobarahi*. The people observed a custom of the same nature; each year, on the 15th day of the 6th moon, they went to wash their hair at the river in order to remove all misfortunes; then they gathered together to drink and make merry.

3. **Ancestor-worship.**—The *Sām kuk sa keui* assigns a remote origin to the worship of the royal ancestors of Sillā.

'Under the king Nām-hai, the second reign, the 3rd year (A.D. 6) in spring, they set up for the first time the temple of Si-cho Hyekkesei; at the four seasons they offered sacrifices to him. His own younger sister, Āro, presided at the sacrifices. King Chi-cheung (500–514), 22nd reign, at Nāi-eul, birthplace of Si-cho, founded a temple in order to offer sacrifice to him. Coming to the 36th reign, king Hyei-kong (765–780) for the first time determined the five temples; he chose king Michu (262–284) as the first ancestor of the Kim family; kings Thāi-chong (654–661) and Mun-mu (661–681), who had pacified Paikchei and Kokurye, and had great merits, were each of them ancestors whose [worship] the successive generations [might] not abolish: with these were grouped his two nearest temples, that made five temples.'

The place of a woman in the ceremonies makes us think of the Imperial Japanese priestesses of Ise and Kamo; and, as in Japan, the guardians of the royal tombs seem to have formed a hereditary class of the population in Sillā and in Kokurye.

The worship of dead kings in Kokurye is thus attested:

'The 3rd year of king Tāi-mu-sin (A.D. 20), the temple of the first ancestor, king Tong-myeng (37–19 B.C.), was built.' The Chinese historians confirm the existence of this worship: 'They have two temples for the spirits; one is called the spirit of Puye, represented by a carved wooden image of a woman; the other is called the spirit of Ko-teung (or, rather, the spirit which rose to the heights); they say he is Si-cho, son of the spirit of Puye. For each temple they have established officials, and send men to guard them. These would be the daughter of the god of the river and Chumong.'

The last phrase, added by the author of the *Sām kuk sa keui*, indicates very precisely that Kokurye adored their first king and his mother; the legend of these two personages, recorded in the *Sām kuk sa keui* and in the inscription of 414 of Kokurye, testifies that Si-cho (Chumong, the king Tong-myeng) and his mother were born in Puye; Si-cho did not die a natural death, but disappeared, rising up to heaven, whence the name Ko-teung.

The worship of the founder of the dynasty is likewise observed in Paikchei and in Kārāk.

Since the 10th cent., at least, the worship of the royal ancestors has been Chinese as regards formulæ and rites; and since the year 988 the Korean rituals have been directly inspired by Chinese rituals. The formalities of ancestor-worship have been extended, in accordance with Chinese principles, to the worship of all spirits. Generally a wooden tablet is inscribed with the name of the spirit; the tablet represents him or acts as a support for him; for the ceremony it is set up on a throne. The name of the sacrifice varies: *chei* and *sa* are applied to the worship of the spirits of nature, the first term referring to the earthly, and the second to the heavenly, spirits; *hyāng* is reserved for the manes; *keui* is a requisition or a proclamation made to the spirits; in the worship of Confucius the expressions *hyāng* and *sek tyen* are found. Some of the sacrifices are offered at a fixed time—*e.g.*, at new moon and full moon, at each season, or in spring and in autumn, according to the diversity of spirits; others take place when special events call for them. The king is sacrificer by right, and officiates in person or by his representatives. The principal sacrificer is assisted by various acolytes, masters of ceremonies, invocators, and others; these are merely assistants, not priests. There is no specially constituted priesthood.

The essential elements of the sacrifice are the offering of incense, cloth, wine, and different kinds of food, and the reading of a prayer; at the great sacrifices, musicians chant hymns and dancers perform evolutions at different points in the ceremony. A consecrated cup is handed to the principal sacrificer, who empties it; a part of the consecrated food is then handed to him, which he receives, and, after the ceremony, consumes. The rest of the offering, along with the text of the prayer, is interred in a trench dug for the purpose. The text of the prayer, and the quantity and nature of the offering, vary according to circumstances.

The offerings placed before each tablet for the sacrifice of the proclamation to the gods of the harvests were: two bamboo baskets, covered (dried stag-flesh, chestnuts); two wooden bowls, covered (salted stag-flesh, pickled vegetables); two copper plates, rectangular, covered (rice, sorghum); two wooden plates, round, covered (two kinds of millet); a wooden tray (pork fat); a bamboo basket, covered (cloth); two wax tapers, one perfume-burner, one cup for libations; two bowls of plain wood (pure water, sweet wine); and two pitchers of carved wood (pure water, clarified wine).

Of the places where the official worship is celebrated, some—*myo, tyen, sa*—are covered buildings, separated by courts, and contained within an enclosing wall; and these buildings, more or less extensive and sumptuous, are consecrated to the worship of the manes. The others, *tān*, are altars in the open air, formed of a levelled surface which is raised above the surrounding ground and is

reached by steps; these are encompassed by one or two enclosing walls, square or rectangular in form, often rather low, and built of stone; the altar and the walls are orientated. In the middle of each of the walls is an opening which serves as a passage; it is adorned with the Korean wooden gate, called *hong săl mun*. The altars are employed for the most part for the worship of the spirits of nature. Several other temples, called *kung* or *myo*, are dedicated to different members of the royal family, heirs to the throne, wives of the second rank, and so on. At death-anniversaries and at several feasts, worship is celebrated at the tombs of the kings and other members of the royal family. The tombs of the kings and queens, *săn reung*, 47 or 48 in number, are situated mostly in the neighbourhood of Se-ul; the tombs of the second and third class, *uen* and *mo*, number more than 10. There are also temples consecrated to Confucius and to various celebrated men and benefactors of the country.

*Principal temples and altars.*—*Chong myo*, at Se-ul, temple of the royal ancestors of Chosen; *Yeng-heui tyen*, at Se-ul, where the portraits of several kings are honoured; *Kyeng-mo kung*, at Se-ul, built in 1764 for the manes of the crown-prince Chăng-hen (Sa-to); *Hăm-heung pon kung*, at Hăm-heung, an ancient habitation of Thăi-cho, who founded the Chosen dynasty; *Sung-in tyen*, at Phyeng-yăng, in honour of the legendary Keui-cha, founder (A.D. 1122) of the second kingdom of Chosen; *Sung-tek tyen*, at Kyeng-chu, dedicated to the first king of Sillă; *Mun-sen oăng myo*, temple of Confucius at Se-ul; *Koăn oăng myo*, at Se-ul, temples of the god of war who fought with the Korean army against the Japanese in 1592 and 1597; *Sen-mu sa*, at Se-ul, in honour of two Chinese generals who fought for Korea in that war; *Mu-ryel sa*, at Phyeng-yăng, dedicated to several Chinese mandarins who took part in the war against the Japanese (1592–98); *Chhung-min sa*, at Sun-thyen, where Ri Sun-sin is honoured, the great Korean admiral who so often conquered the Japanese; *Tăi-po tăn*, at Se-ul, an altar dedicated to three Ming Emperors—Thai-tsu, Shen-tsung, who rescued Korea in 1592–98, and Yi-tsung, the last of the dynasty; and *Să-chik tăn*, at Se-ul, altar of the gods of the harvests.

In theory ancestor-worship exists in every family, just as in the royal family: the eldest son inherits the sacrifices and presents offerings to his father, his grandfather, and great-grandfather, as well as to their wives, *i.e.* to one, two, or three generations of ancestors in the male line; the more remote ancestors have neither tablets nor special offerings. The ceremonies take place at the same periods and in connexion with the same events as those of the worship of the royal ancestors, and may be performed in the principal room of the house, in a room or chapel set apart for this purpose, or near the tombs.

For the sacrifice presented by a man of the people (*i.e.* not an official) to his father and mother, the offerings are by right the following: a bowl of vegetables, a plate of fruits, a bowl of dried meat and of salted meat, a bowl of roasted liver, two bowls of cooked rice, two bowls of broth, a spoon and chopsticks for two persons, and six cups (of wine).

In practice the aristocracy of the *ryăng-păn* and the demi-aristocracy of the *chung-in* seem to be the only people who celebrate this private worship. It is regulated by the ritual of Chu Hi and by many Korean commentaries, but it is not mentioned, even in a native form, earlier than 1015.

There are many buildings, more or less important, bearing the name of *sa*, *se-uen*, or *myo*, which belong neither to the official nor to the domestic worship. They are dedicated to celebrated men, Korean or Chinese, philosophers, officials, and soldiers, distinguished by their loyalty, their virtues, and the loftiness of their teaching. The little work entitled *Cho tu rok* mentions no fewer than 383 outside of Se-ul—*i.e.*, on an average, more than one for each district. In some of the chapels not more than one personage is adored, in others half a dozen or more; some men receive sacrifices only in one locality, while the names of others are found in all the provinces, or in several districts of each province. If the terms were taken in their exact sense, the *sa* and the *myo* would be essentially the places of worship; in the *se-uen*, the principal part would be the *kăng tăng*, where the disciples gather together to read and comment upon the works of their master, and to discuss and expound his teaching; as a matter of fact, the three expressions are not kept distinct. These chapels, built by the piety of descendants, disciples, and adorers in order to honour the memory of a respected master, received from their founders gifts of rice-plantations and slaves; and often the king bestowed similar benefits on them, exempted them from taxation, or gave them a tablet bearing characters written by his hand.

There is no doubt that the new international conditions of Korea will modify the religious customs.

4. **Buddhism.**—The formalities of Buddhism in Korea do not differ essentially from those in China, whence it has penetrated into the peninsula. The bonze Sun-to, carrying images and sacred texts, was sent to Kokurye by the king of Tshin in A.D. 372; in 384 the bonze Marananda coming from Tsin went to Paikchei; fifty years later some bonzes from Kokurye entered Sillă, which practised the Buddhist precepts in 528. Before long it was forbidden in that kingdom to kill any living thing; many people became monks and gave their goods to the monasteries; some kings took the bonze's robe; and in 551 the dignity of patriarch of the kingdom was created. Under the Korye dynasty Buddhism shone with incomparable radiance; the *kouk sa*, preceptor of the kingdom, was often possessed of great power, while the bonzes, fortified in their monasteries, and owners of numerous slaves and extensive domains, intrigued, plotted, and strove by force of arms against the ministers who displeased them. The dynasty of Chosen, however, treated the monks mainly with distrust; the *chong*, Buddhist Orders or sects, were, by decree, reduced to the number of two (1419), and then abolished (1512). The monastic profession was surrounded by many hindrances (1469); the monasteries of Se-ul were destroyed, and it was forbidden to build others; the bonzes were prohibited from entering the capital and were ranked among the lowest castes. These persecuting laws have been suppressed since the Japanese domination.

5. **Confucianism.**—The accession of the dynasty of Chosen had been, in fact, a reaction against the bonzes and against the Mongols. In opposition to that twofold tyranny, the nobles had become Confucian *literati*. In spite of the encouragement given by several of the first kings of Korye, the teaching of the Chinese sage, scarcely approved of in Sillă, had failed to find more adherents later on, and in the middle of the 13th cent. An Yu complained that he saw the temple of Confucius in ruins and the Great School without pupils. After the fall of the Sung in China, many Confucian books were introduced, and *literati* came into the country. This was the beginning of a Confucian renaissance, of which the great names are those of Ri Saik and Cheng Mong-chu (second half of the 14th cent.). The triumph of the *literati* in Korea followed the fall of the Mongols and the accession of the Ming at Peking. The first kings of Chosen, in particular Thăi-chong (1400–1418) and Sei-chong (1418–1450), organized their kingdom according to the principles of the School, revived the competitive examinations and the rules for the conferment of offices, and surrounded themselves with *literati*, whom, however, they knew how to keep in subjection. In the following century, however, the Confucianists grouped in the official provincial schools, the temples, and colleges around renowned masters, communicating from town to town, and represented at Se-ul by the *literati* of the temple of Confucius and often by the highest officials, spoke

out to the court and to the kings. Two princes resisted and were deposed; the others had usually to submit to a strict puritanism founded upon the classics, and to take part in the persecution of all dissenters, Buddhist and others. It was the reign of Chinese rituals; but the *literati* were not of one mind about the interpretation of the texts. They split up into parties, and fought for power; hence arose exiles, massacres, and violation of tombs; all parties at certain times showed equal ferocity, especially in the 16th and 17th centuries, before and after the invasion of the Japanese and that of the Manchus. Among the great sages of that period mention must be made of Ri Theŭ-kyei, Seng U-kyei, and Ri Ryul-kok, who kept themselves apart from the factions, and He Mok and Song Si-ryel, whose partisans stained the land with blood. Since the 18th cent. the Confucian philosophy has continued to be studied, and the rites have been practised, with milder feelings.

**6. Christianity.**—Christianity was introduced from Peking in 1784 by some members of the annual embassy; the priests were at first Chinese. The first European missionary who made his way into Korea (1836) was M. Maubant. In 1866 there were in Se-ul and in the provinces twelve missionaries and ten thousand converts, but the massacres decreed in that year almost annihilated the Korean Church. Since 1883, in consequence of the treaties with the European powers, it has been possible to establish all the religious missions openly in the land.

## KOURETES AND KORYBANTES.

**1. Kouretes.**—The nature and functions of the Kouretes are in great part deducible from a right understanding of their name. We must, in all probability, distinguish between *κούρητες* and *κουρῆτες*, which apparently come from entirely different bases.

Κούρης, 'young man, warrior' (*e.g.*, *Il.* xix. 193, 248), is probably to be connected with Homeric *κοῦρος*, *κούρη*, 'youth, maiden,' Doric *κῶρος*, *κώρᾱ*, which, as shown by the Arcadian form *κόρϝᾱ*, 'maiden,' are for **kor-vos*, **kor-vā*, and are to be connected with the base **kere-*, 'to grow,' which appears, among many other words, in Lat. *creo*, 'I create' (H. Osthoff, *Etymolog. Parerga*, Leipzig, 1901, i. 37; E. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 497). It means properly 'adolescent.' Κουρῆτες (Cretan *κωρῆτες*), on the other hand, the subject of the present art., may represent an original **qor-s-ētes*, and thus be connected with Gr. *κουρά*, 'shearing, tonsure,' and with *κείρω* (**qer-s-yō*), 'I shear, cut.' The Greek lexicographers confused the two bases, and connected *κοῦρος*, *κούρη* with *κουρά*, as in the *Etymologicum Magnum*, *s.v.* *κουρόσυνα*: *κοῦρος . . . λέγεται δὲ καὶ ὁ ξυρῶν αὐτοῦ τὸ γένειον*; *Etymologicum Gudianum*, *s.v.* *κούρη*: *κόρη καὶ Ἰωνικῶς κούρη . . . ἡ κειρομένη ἔτι*. On the other hand, both lexicons, as well as Hesychius, rightly distinguish between *κούρητες* and *κουρῆτες*.

The *κουρῆτες*, then, may be regarded as meaning those who had undergone some form of tonsure, and this tonsure was one of, and perhaps among the Greeks the most important among, the rites of puberty-initiation. Hair among most primitive people is sacred because regarded as a source and vehicle of life (cf. art. HAIR AND NAILS, vol. vi. pp. 474–477). The sprouting of the beard is a mark of virility attained; and, as puberty both for man and for woman has significance only in relation to marriage, Greek custom enacted that a young man should offer his beard and a maiden her locks before entering on marriage. Our earliest definite evidence for hair-shearing as a rite preliminary to marriage is in the *Hippolytos* of Euripides (1425 ff.). Artemis says to Hippolytos:

> Τιμὰς μεγίστας ἐν πόλει Τροζηνίᾳ
> δώσω· κόραι γὰρ ἄζυγες γάμων πάρος
> κόμας κεροῦνταί σοι.

And Lucian (*de Syr. Dea*, 60), quoting the custom of Troezen, says that it was the same at Hierapolis in Syria.

'The young men offer the firstfruits of their beards (*τῶν γενείων ἀπάρχονται*), and they then let down the locks of the maidens, which have been sacred from their birth. They then cut these off in the sanctuary and place them in vessels, some of silver, and many of gold.' Lucian notes that the name of the dedicator was often inscribed, and adds: 'I did this myself when I was still a youth, and my lock of hair and my name still remain in the sanctuary.'

The Kouretes, then, we may conjecture, were the mythological projection of youths who had undergone puberty-initiation. The custom of hair-shearing survived in the ceremony of *κουρεῶτις*, which gave its name to the third day of the Apatouria at Athens, on which the youths and maidens were enrolled on the phratry-lists, and the children's hair was shorn and dedicated to Artemis.

Strabo devotes most of the 10th book of his *Geography* to the discussion of the Kouretes. What puzzled him was that he knew of two sorts of Kouretes—one sort real young men living and giving their name to tribes living in Eubœa, Ætolia, and Acarnania; the other sort a kind of magical priest, a semi-mythical person attendant on the gods, and akin, according to him, to other mythical ministrants—like Satyrs, Seilenoi, and Tityroi—to Korybantes, Kabeiroi, Idæan Daktyls, and Telchines. The confusion that seems hopeless to Strabo is cleared up for us by comparative anthropology. Two principles necessarily hidden from Strabo serve to unravel the tangle. First, we know now that social institutions tend to 'project' mythological figures. Actual men dancing in animal skins for ritual purposes beget the notion of mythical figures half-men, half-animal, *e.g.* Satyrs. Actual young initiates, or *kouretes*, tend to project mythological idealized Kouretes. The process is marked by the capital letter. The second principle is even more important. Tribal initiation ceremonies, once their purport is obscured, tend to become the mysteries of secret societies. Privileges once open to all at puberty are confined to the few willing to purchase them either by actual payment to already existing members or by submission to particular tests. The initiate, the *koures*, develops into the professional medicine-man.

All over Greece in primitive days there were presumably Kouretes, warriors who had shorn their hair at puberty, but in Krete only do we find the Kouretes as a special sect of medicine-men or embryo priests. The chorus in the *Hypsipyle* of Euripides (frag. iii. 24) tell how Europa landed on holy Krete, rearer of Zeus, 'nurse of the Kouretes,' and the Bacchants sing (Eur. *Bach.* 119):

> ὦ θαλάμευμα Κουρή-
> των ζάθεοί τε Κρήτας
> Διογενέτορες ἔναυλοι.

In Krete, it would seem, was not only the sacred birth-place of Zeus, but the marriage-chamber of the Kouretes. Here, though the Kouretes are half-mythologized, their primary function as marriageable initiates is still remembered, and in the light of this function we can understand the characteristic myth in which they appear as attendants of the Mother (Rhea) and rearers and

protectors of the holy child (Zeus), as *παιδοτρόφοι* and *φύλακες*.

'In the Kretan discourses the Kouretes are called the nurses and guardians of Zeus' (Strabo, x. 468).

Krete, then, was by common consent the birth-place of the Kouretes, and, wherever Kretan civilization spread, the specialized Kouretes are apt to be found. Their particular geographical distribution is matter of the general history of the spread of Kretan civilization, and does not here concern us.

The great central worship of Krete was the worship of the Mother-goddess. In the bridal-chamber (*θαλάμευμα*) of Krete the young men, before they might win their earthly brides, were initiated to the Mountain-Mother, and became symbolically her consorts or husbands; by this ceremony her fertility was promoted and theirs safeguarded. In natural sequence these potential fathers became the guardians of the Mother's child, re-born each year, on whose re-birth the fertility of nature and man alike depended. This marriage of the initiate with the Queen or Mother underlies all the Kretan and Asia Minor mysteries. On an Orphic gold tablet the mystic avows *Δεσποίνας δὲ ὑπὸ κόλπον ἔδυν χθονίας βασιλείας*, and one formulary of the mysteries of Dea was *ὑπὸ τὸν παστὸν ὑπέδυν*, where the *παστός* corresponds exactly to the marriage-chamber (*θαλάμευμα*) of the Kretan Kouretes.

The functions of the *koures* in the secondary and derivative sense as medicine-man, a member of a secret society, were not confined, any more than were those of the young tribal initiate, to that of marriage. It was the multiplicity of these functions that puzzled Strabo. He finds that the Kouretes are magicians, prophets, and armed dancers, as well as child-rearers, and always half-dæmonic. These manifold functions are natural enough if we regard the Kouretes as a blend of medicine-man and culture-hero. The medicine-man is always half-dæmonic, and often dressed up as a bogey; he is always a seer and a healer, always charged with magical power, and it is interesting to find that Epimenides, the great magician-healer of Krete who was summoned to Athens to purify the city, was hailed as the 'New Koures' (*Κουρής*, not *Κοῦρος*, as in the printed edd.). He was a man of Phaistos, according to Plutarch (*Vita Sol.* xii.), 'an adept in religious matters dealing with the lore of orgiastic and initiatory rites,' and his life, with its magical sleep in the Diktæan cave and its dream-taught lore, reads like the tale of the initiation of a savage medicine-man.

Diodorus brings the Kouretes before us as culture-heroes, as the projections, half-historical, half-mythological, of man's primitive energies and discoveries. They dwelt, he tells us, on mountains and in wooded places and glens where there was natural shelter. They were distinguished by their ingenuity in inventing things for the common good. They first taught men to collect four-footed beasts in flocks, to tame wild animals, the art of bee-keeping, how to hunt and shoot, and they

'taught men how to live together in societies, and were the originators of harmony and a certain good order. They also discovered swords and helmets and armed dances, and by means of those they made a great din and deceived Kronos' (v. 65).

Following Diodorus, modern mythologists have always explained the characteristic clashing of arms by the Kouretes as part of the tendance of the holy child. As such it appears in the reliefs and on the various coins where the birth is represented. The Mother and child, or sometimes the child only, are figured in the centre, and above them the Kouretes clash their shields. Rendel Harris has shown that the shield- or, rather, cymbal-clashing was connected with the child's sacred *food*, as much as or more than with the child. 'Butter and honey shall he eat.' His nursing mothers (*τροφοί*) are Amalthea ('she of the milk') and Melissa, the honey-bee. It was 'a rude music meant to call the swarming bees to a new hive' (*Boanerges*, p. 350). It finds its counterpart in the 'noise of tin pans and kettles which may be heard in the neighbourhood of any cottage in the country when the bees are swarming.' Virgil remembers the connexion between bees and the cymbals of the Mother. When the bees swarm, he says, strew bruised balm-leaves and honey-wort,

'Tinnitusque cie, et Matris quate cymbala circum' (*Georg.* iv. 64),

and a little later he definitely connects the bees and the Kouretes, speaking of the bees as

'Curetum sonitus crepitantiaque aera secutae' (*ib.* 151).

It is important to note that on our earliest monument representing the Kouretes—one of the votive bronze shields, found actually in the sacred cave on Mt. Ida and dating about the 8th cent. B.C.—the Kouretes are clashing not shields but cymbals or a sort of gong.

Though their aspect as culture-heroes was of great importance, the central function of the Kouretes remained that of husbands and potential fathers. On the symbolic performance in ritual of this function depended the fertility and, in general, the luck or fate of the whole community. Of this, happily, we are certain, owing to the discovery of a priceless monument, the Hymn of the Kouretes, recently found at Palaikastro in Eastern Krete. The Hymn dates from about the 4th cent. A.D., but it embodies a much older original. It opens with an invocation to the 'Kouros most great,' the mythical projection of the band of *kouroi*. He is addressed as 'Kronian,' as 'Lord of all that is wet and gleaming' (*παγκρατὲς γάνους*), *i.e.* lord of moisture and of life begotten and nurtured by moisture. Moreover—an all-important point—he is bidden to come to Dikte 'for the year' (*ἐς ἐνιαυτόν*). The birth and nurture of the holy child are then recounted—a birth which implied to the ears of the initiated a sacred ritual marriage. The Hymn then passes to the consequences of the holy birth. Because the child is annually born, the Seasons (Horæ) began to be fruitful year by year; the cause of the Seasons, their order and way (Dikē), is inaugurated, never again to be disturbed, and in virtue of this birth there results fertility for man and beast, for flocks and herds and bee-hives, for cities and seafaring ships, and finally, by virtue of this goodly rite (*θέμιν*) of initiation, fertility for the newly initiated citizens (*κές ν[εοὺς πολ]είτας*). For all this the worshippers and their god are bidden in primitive fashion to 'leap' (*θόρε*). The Kouretes stand then as salient examples of two fundamental principles in primitive Greek religions. (1) Mythological figures are the projection of (*a*) social structure, and (*b*) human activities. The Kouretes reflect the matrilinear social structure, which centres in the Mother and Child, with accessory consort or consorts. Their religion was obscured and all but effaced by the later patriarchal system in which the Father dominates the Mother, and in which tribal initiation at puberty has ceased to be prominent; the human energies expressed by the Kouretes are those of fighting and fatherhood combined with early food-producing activities—the tending of flocks and herds and bees. (2) Primitive ritual is always magical in character; *i.e.*, the worshipper *does* what he wants done, his rites are those of magical induction; he marries that the land may be fertile, he tends symbolically a holy child that his own children may be nurtured.

Then, as the religious instinct develops, he projects a dæmon leader—a Greatest Kouros, to whom he hands over the functions which he himself performed.

**2. Korybantes.**—The Korybantes are but a specialized form of one function of the Kouretes; they are the embodiments or projections of the orgiastic ritual-dance. Their name is of interest; it means 'peak.' Thus the Macedonian form of *koryphe*, 'mountain-peak,' is *korybe*, and is probably akin to *kurbasia*, a peaked head-dress worn by, *e.g.*, the Persian king and the Roman Salii, figures near akin to the Kouretes. The Korybantes, like the Kouretes, had initiation-mysteries which seem to have emphasized death and burial rather than marriage and birth; but it must be borne in mind that death and burial rites, followed by resurrection, are equally effective 'medicine' for fertility with rites of marriage and birth. The Peak-Men were naturally, like the Kouretes, satellites of the Mountain-Mother, and in her honour celebrated wild mountain dances (ὀρειβάσια). Some said that they were the first men sprung from the Earth in the form of bees. Their worship was confused with that of the Kabeiroi, and they were at home in Phrygia rather than in Krete. To Plato the Korybantic dances are the stock instance of orgiastic κάθαρσις (*Legg.* 790 D: τὰ τῶν Κορυβάντων ἰάματα). This κάθαρσις by dancing included for the ancient Kouretes and Korybantes, as for the modern savage, two elements apparently contrasted, but in reality closely inter-connected—the expulsion of evil, *i.e.* barrenness, sickness, madness, and the induction of good, *i.e.* fertility, health, growth, and sanity. To-day in French Guinea, while some of the natives sow seed, a man armed with a musket dances, and the intent of this is explained as twofold: for exorcizing the spirits and causing the grain to sprout; and in West Africa at sowing time half of the people go out armed for battle, the other half carry only farm tools.

LITERATURE.—For literary and monumental evidence see Roscher, *s.v.* 'Kureten,' Daremberg-Saglio, *s.v.* 'Curetes,' and O. Gruppe, *Griech. Mythol. und Religionsgesch.*, Munich, 1906, Index, *s.v.* 'Kureten' and 'Korybantes.' For the Palaikastro Hymn of the Kouretes see three artt. in *BSA* xv. [1908–09] 309–365, by R. C. Bosanquet, Gilbert Murray, and J. E. Harrison, discussing respectively the finding of the Hymn, the editing of the text, and its religious significance. For the Kouretes as initiates and culture-heroes see J. E. Harrison, *Themis*, Cambridge, 1912, pp. 6 ff., 51 ff.; for their relation to matrilinear culture, *ib.* p. 492 ff. For the Kouretes as consorts of the Mother see A. B. Cook, *Zeus, the Indo-European Sky-God*, Cambridge, 1914, p. 650, and *ib.* pp. 23, 24, note 6, for the interpretation of the Kouretes as those of the shorn hair. For the Korybantes as Peak-Men, *ib.* p. 107. For the cymbal-clashers as bee-keepers see J. Rendel Harris, *Boanerges*, Cambridge, 1913, pp. 348–357. For prophylactic and inductive functions of armed dancing priests see J. G. Frazer, *GB*[3], pt. vi., 'The Scape-goat,' London, 1913, p. 231 ff. For bronze shields of the Idæan cave see F. Poulsen, *Der Orient und die frühgriechische Kunst*, Leipzig, 1912, pp. 74–82.

**KŪRKŪS.**—**1. Race, habitat, and census.**—The Kūrkūs belong to the Muṇḍā family of India, and are closely akin to the Kols of Chotā Nāgpur and the Santāls of the Santāl Parganas.[1] They inhabit the Sātpurā hills and the contiguous plains in the Central Provinces, especially the Districts of Hoshangābād, Nimār, Betūl, and the Melghāt Tāluq of Ellichpur. Their total number, as given in the Census of 1911, was 152,363, which marks an increase of 27 per cent on the returns of 1901, whereas the latter showed a decrease of 8 per cent on those of the previous decade, due to the famine years from 1897 onward.

**2. Tribal organization.**—The Kūrkūs are also known by the name Muāsī; but this, again, is used as a subdivisional name along with three other terms, viz. Bāwariā, Rūma, and Bondoyā. Thus the Kūrkūs are divided into four sub-tribes, mainly on a territorial basis, but also with a marked traditional cleavage approximating to caste distinction. The sub-tribes are further divided into totemic septs, named, for the most part, after trees, plants, animals, and other natural objects, animate or inanimate—*e.g.*, Chilātī (*Cæsalpinia sepiaria*), Jāmbū (*Eugenia jambolana*), Bētē (*Gmelina arborea*, Roxb.), Tākhēr (cucumber), Sākōm (leaf), Mūrirānā (peafowl), Dhāprī (ass), Ākhandī (mountain), Kāsā (earth), and Āthoā (wooden ladle). Accounts vary as to the correct number of these septs. According to one version, each sub-tribe has 36 septs. The writer of this article has been assured by Kūrkūs that the number is properly 12½, which is also the figure given by Driver;[1] but the sept names in actual use are found to exceed these limits, so that the statement is probably due to Gond—and ultimately to Hindu—influence. The origin of these sept divisions is naturally hidden in obscurity, though various stories are current which purport to give the explanation. The art. 'Korku' in the *Ethnographic Survey of the Central Provinces* (iii. 'Draft Articles on Forest Tribes' [1907] 54) records a tradition that

> 'the names are derived from trees and other articles in or behind which the ancestors of each sept took refuge after being defeated in a great battle.'

A variant of this was told to the present writer to the effect that the names were given by Bhagwān on an occasion when he called the ancestors of the tribe into his presence and inquired whence they had come, and, as each one indicated the locality by reference to some special object, Bhagwān named him accordingly. Perhaps this version looks more in the direction of J. G. Frazer's theory that the ultimate explanation of totemistic names is to be sought in connexion with primitive ignorance regarding the processes of procreation, though it would be precarious to lay particular stress on any special interpretation of such unstable traditions. With the predominance of the totemic sept, there is a corresponding weakness in the development of the clan principle. But, while the latter fails to affect the general organization of the tribe, various degrees of relationship are distinguished with great particularity, as among the Hindus; and what Frazer (*Totemism and Exogamy*, London, 1910, iii. 21) notes as characteristic where the 'classificatory system' prevails holds good among the Kūrkūs, viz. that the language

> 'has separate terms for elder brother [*dādā* or *dādū*] and younger brother [*bōkō*], for elder sister [*bāī* or *fiji*] and younger sister [*bōkōjī*], but no term for brother in general or for sister in general.'

The Kūrkūs, like some sections of the Goṇḍ tribe, occasionally seek to establish a Rājput ancestry, and various tales are current with this intent. The element of truth here seems to be that some measure of intercourse has taken place, resulting in the loss of caste on the part of individual Rājputs and their identification with the Kūrkū people. The term Rāj Kūrkū is, however, regarded as an honourable distinction and is usually reserved for the wealthier and more powerful members of the tribe.

**3. Social and religious practices.**—The Kūrkūs are animists, but their animism is modified by a considerable admixture of Hindu beliefs and practices. This is reflected in the 1911 Census, which

[1] For an account of the distribution of this family, and a discussion as to the propriety of the various terms by which it has been dominated, see *Linguistic Survey of India*, iv. [1906] 2 ff.; and cf. *Census of India*, 1901, i. 278.

[1] *JASBe* lxi. pt. i. [1893] 128 ff.

gives figures showing more than half the Kūrkū people as Hinduized. But the figures cannot be relied on as an exact index of the change. The process is too gradual and imperceptible to admit of mathematical treatment, especially at the hands of unskilled enumerators. The influence of Hinduism is distinctly noticeable in the current folklore of the Kūrkūs, the simpler substrata of which are now largely overlaid with names and notions foreign to the tribal tradition. Thus the horse, which to the Kūrkū is the agent of malevolent spiritual powers—a notion which perhaps echoes some old-time terror aroused by the incursions of a warlike foe—has become associated with Indra; the crow, which fulfils a traditional function reminiscent of Noah's raven and dove, is transformed into Kāgeśwar; and the spiritual powers, which, according to the limitations of the Kūrkū language and the genius of their primitive animism, were expressed, in highest terms, by the names for the sun and the moon, are now resolved into a council of gods in which not only Bhagwān but also Mahādeo, Indra, and other deities and demi-gods find a place. But the more original elements can usually be distinguished and the crude fabric of a naive cosmology pieced together. They have their own story of creation, in which man is fashioned from red earth; stories to account for the origin of vegetation and of death; a story of a lost revelation in which a dog, the agent of the beneficent spiritual powers and the enemy of the horse, appears with the message written in the venation of a leaf of the Kēndē Nāngan creeper—the signs are still there, but are no longer legible! While the Kūrkūs are coming gradually to recognize Hindu deities and to observe some of the Hindu festivals, much of their religion is still peculiarly their own. Their everyday beliefs and practices are of the aboriginal order, their normal hopes and fears continuing to find common expression by means of animistic symbols and rites. Their more familiar objects of worship—Mūtūā Gōmōij (the village god), Dōngōr Gōmōij (the jungle god), and Hardūlī Gōmōij (the cholera god)—come under this category. They usually consist of mere heaps of stones, frequently with a lump of quartz crystal on top. *Gōmōij* is the Kūrkū word for the sun, which, according to Kūrkū conceptions, is the supreme power in the universe. The Kūrkūs have their own priests (*bhūmkās*), and are in no way dependent on Brāhmanical direction. The customs observed at the birth of a child, and at marriage and funeral ceremonies, are, in the main, likewise peculiar to the people, though in the case of marriage customs in particular there is a tendency to copy their Hindu neighbours.

On the birth of a child, the father is excluded from the house for five days, and compelled to rest content with the shelter of a cattle-shed or similar building not used as an ordinary human habitation. Child-marriage is the exception among the Kūrkūs, though it is said to be increasing under Hindu influence. The septs are exogamous; the sub-tribes normally endogamous. Usually a marriage is arranged through the mediation of friends of the prospective bridegroom's family. These wait upon the parents of the girl, who, as a matter of etiquette, reject the proposals and maintain their opposition thereto for a period which may extend from a few months to two years. But at last their consent is gained and the bride-price is agreed on—usually about sixty rupees. One peculiar custom observed at a Kūrkū wedding may be noticed here, because of its probable relation to earlier polygamous practices: the bridegroom and his elder brother's wife are made to stand on a blanket and embrace seven times. Sometimes the father of the girl insists on the would-be husband working for a period of years in lieu of the payment of the bride-price, but not infrequently this leads to a runaway marriage on the part of the couple concerned, in which case an indemnity may be demanded of the boy's parents. Polygamy is permitted, the main restriction being the practical one which arises from the very frequent absence of means to support a large household. The women-folk are well-treated, but there is no trace of the matriarchate with regard to sept-genealogy or inheritance: children belong to the sept of the father, and the property is divided among the widow and the unmarried sons. Kūrkūs may either burn or bury their dead. The latter is the more common method. The spirit of the deceased is set at rest at a subsequent ceremony called *shidūli*, in connexion with which elaborate rites are performed, extending over three days, and consummated by the erection of a memorial post rudely carved with representations of the sun and the moon, facing the east, and other figures of men on horseback, dancers, apes, peacocks, fowls, crabs, spiders, trees, etc.

The Kūrkūs have many practices which give evidence of their belief in imitative and sympathetic magic.

JOHN DRAKE.

**KURUKH.**—See ORĀONS.

**KUŚINAGARA** (**Kuśanagara**, or **Kusinārā** [Pāli]).—The most ancient name is said to have been Kuśāvatī, which is connected in *Jātaka* 531 with a legendary king Kusa, son of Okkāka (Ikṣvāku). Well-authenticated and credible tradition affirms that Gautama Buddha, Śākyamuni, died and was cremated close to Kusinārā, which consequently became one of the four most holy places of Buddhism, and one of the most frequented pilgrim shrines.

At the time of Buddha's death (*c.* 487 B.C., or, as others prefer, 483), Kusinārā was described as 'this sorry little town, this rough little town in the jungle, this little suburban town' (Introd. to *Jātaka* 95, tr. E. B. Cowell and R. Chalmers, i. 231), and evidently was a place of no intrinsic importance. But its association with the last scene of the Buddha's life made it famous throughout the Buddhist world, and drew such multitudes of pilgrims that the petty town became the centre of important religious establishments and grew in population and size. It was visited at the beginning of the 5th cent. after Christ by Fa-Hian (Fa-Hsien), the first Chinese pilgrim, who writes briefly as follows:

'East from here [Rāmagrāma] four [three, Beal and Giles] *yojanas*, there is the place where the heir apparent [Gautama Buddha] sent back Chaṇḍaka with his white horse, and there also a tope was erected. Four *yojanas* to the east from this (the travellers) came to the Charcoal tope, where there is also a monastery. Going on twelve *yojanas*, still to the east, they came to the city of Kuśanagara, on the north of which between two trees, on the bank of the Nairañjanā river [Hiraṇyavatī, Beal; Hsi-lien, Giles], is the place where the World-honoured one, with his head to the north, attained *parinirvāṇa* (and died)' (*Travels*, ch. xxiv., Legge's version). The pilgrim mentions several topes [*stūpas*] and monasteries as still existing, and proceeds: 'In the city the inhabitants are few and far between, comprising only the families belonging to the (different) societies of monks.' He then traces the road in a south-easterly and easterly direction for 17 *yojanas* [12+5, the 5 being 10 in Legge] to Vaiśāli, the modern Basārh (about 25° 58′ N., 85° 11′ E.), which lies about 27 miles a little west of north from Patna.

The earlier Pāli account in the *Parinibbāna Sutta* gives the names of several villages lying between Vaiśāli and Kuśinagara (Kusinārā) which would settle the position of the place, if they could be identified, but, unfortunately, there is no clue to their identification. The next and only other detailed description of Kuśinagara after that of Fa-Hian is that recorded by Hiuen Tsiang (Yuan Chwang), about A.D. 637. He enters into much detail concerning both the geographical position of the town and its topographical features. At first sight it would seem that his account should preclude all doubts, and yet, when it is critically considered, doubts remain as to the identification of the site. The publications enumerated in the Literature below examine the question in all its bearings.

The later pilgrim agrees substantially with the earlier in the statement of the distance and direction of the Ashes (=Embers=Charcoal) *stūpa* from the fixed point of the Lumbinī garden

(Rummindēī), the distance according to Fa-Hian being 12 *yojanas*, and according to Hiuen Tsiang about 480 or 490 *li*, at the rate of 40 *li* to the *yojana*. In direction the only difference is that Fa-Hian gives an easterly bearing for all the stages, whereas Hiuen Tsiang places the Ashes *stūpa* to the S.E. of the next preceding stage, namely, the *stūpa* of Chandaka's return. He is habitually more precise in the indication of direction than his predecessor. Fa-Hian states that Kuśinagara lay 12 *yojanas* (about 90 miles marching distance) to the east of the Ashes *stūpa*. Hiuen Tsiang does not give the distance, but places Kuśinagara to the N.E. of that *stūpa*, and notes that the road was a narrow and dangerous path, infested with wild oxen, wild elephants, and murderous robbers who haunted the great forest.

From those elements, combined with the statement that Kuśinagara was close to the river Airāvatī (*al.* Ajitavatī, *al.* Hiraṇyavatī), the present writer deduced the conclusion that the site of Kuśinagara must be sought in Nepāl beyond the passes, close to the Little Rāptī or Airāvatī, somewhere about 84° 51′ E., 27° 32′ N. General H.H. Prince Khaḍga Sumsher Jung Rana Bahadur, sometime Governor of West Nepāl, in a letter to the *Pioneer Mail*, dated Feb. 26, 1904, declared that the spot where Gautama Buddha attained *nirvāṇa* 'was at the confluence of the Hiraṇyavatī and Achīravatī, near Bhavasār Ghāṭ,' *i.e.* the confluence of the Little Rāptī with the Gaṇḍak. That site seems best to satisfy the terms of both the pilgrims' itineraries as traced from the Lumbinī garden, but the identification has not been verified by local examination. So far, the result of the investigation seems to be satisfactory enough; but, when we come to discuss the bearings of Kuśinagara in relation to two other fixed points, Benares and Vaiśālī, fresh difficulties arise. Fa-Hian makes Vaiśālī lie in a south-easterly direction from Kuśinagara, at a distance of 17 *yojanas* (=about 127 miles), and those details do not at all suit the site indicated in Nepāl, while they suit the rival site near Kasiā. Hiuen Tsiang reckons about 700 *li* (say 130 miles marching distance) from Kuśinagara to the kingdom of Benares, in a south-westerly direction. If he meant to reckon the distance to the city of Benares, the actual distance from the supposed Nepālese site is much greater; but, if we assume that the distance was reckoned to the river Ghāgrā (Gogra), the pilgrim's estimate might be accepted. These remarks are enough to indicate the nature of the difficulties which exist in interpreting the detailed itineraries recorded by the Chinese pilgrims in the 5th and 7th centuries. Full statement and discussion of those difficulties is impossible in this place.

Kuśinagara has usually been identified with the remarkable group of Buddhist ruins lying near Kasiā (about 26° 45′ N., 83° 55′ E.), 35 miles due east from Gorakhpur city and in the Gorakhpur District. The principal remains, which lie in the lands of Biṣanpur, to the west of Kasiā, were formerly enclosed within a boundary wall surrounding a space of about 36 acres. They comprise many structures, including a great *stūpa* and a temple containing a colossal recumbent image of the Dying Buddha, almost unique in India, and executed in the 5th cent. A.D. Excavation has proved that the site was regarded as one of the highest sanctity continuously from the time of Aśoka to the end of the 12th cent.—during some fourteen or fifteen centuries. Several great monasteries of various dates have been revealed, besides other buildings and crowds of votive *stūpas*. The site unquestionably was one of the most venerated spots in the world for Buddhist pilgrims, and the colossal image of the Dying Buddha agrees well with Hiuen Tsiang's description of a similar image at Kuśinagara. But in other respects the remains do not agree with the pilgrim's detailed account. He saw the remains of a walled town.

'The city walls,' he observes, 'were in ruins, and the towns and villages were deserted. The brick foundations of the "old city" (that is, the city which had been the capital) were above ten *li* [2 miles] in circuit; there were very few inhabitants, the interior of the city being a wild waste' (Watters, ii. 25).

It is difficult to believe that all trace of the old walls should have disappeared, but it is admitted that now there is no sign of them, although plenty of extremely ancient fortifications remain at numerous sites in the Gorakhpur District. In the neighbourhood of Kasiā there is no considerable town, and the demand for bricks has never been large. Moreover, the pilgrim places the Ajitavatī (*al.* Airāvatī, *al.* Hiraṇyavatī) river to the N.W. of the town, but there is no river near Kasiā. He also states that in his time the great *stūpa*, although ruinous, was still above 200 ft. high. The existing great *stūpa*, re-constructed or repaired apparently in the 5th cent., prior to the pilgrim's visit, never can have been more than half that height. These facts led the present writer in 1896 to reject decisively the identification of the remains near Kasiā with Kuśinagara. His finding to that effect was generally accepted for some years.

The later explorations of the Archæological Survey, however, have produced fresh evidence complicating the problem. Many hundreds of seals belonging to the Mahāparinirvāṇa monastery have been discovered, besides others belonging to the Makuṭabandha or Bandhana ('Diadem') monastery. Both those institutions undoubtedly were at Kuśinagara. The fact that most of the seals were broken, as if torn from letters and parcels, seems to indicate that the sealed packets were sent from Kuśinagara to the dependent institution near Kasiā. The people at the latter place cannot have addressed letters to themselves. The inference thus deduced is confirmed by the discovery of one seal-die belonging to the Veṭhadīpa or Viṣṇudvīpa monastery, which stood at one of the eight places among which the relics of Buddha were originally divided. So far as the seals go, they lead to the conclusion that the ruins near Kasiā mark the site of Veṭhadīpa or Viṣṇudvīpa.

A still later discovery, however, throws doubt on that conclusion. The Survey found enshrined in the relic chamber of the *stūpa* adjoining the colossal recumbent image a copper plate distinctly inscribed as having been deposited 'in the [*Parini*]*rvāṇa chaitya*.' We know that a building called the *Parinirvāṇa* temple ('temple du Pan-nie-p'an') existed at Kuśinagara (travels of Ta-ch'êng-têng in Chavannes, *Voyages de pèlerins bouddhistes*, p. 73). That discovery of the copper plate, consequently, seems to indicate that the remains near Kasiā must be those of Kuśinagara. The only other conceivable explanation is that the shrine at Viṣṇudvīpa also may have been called a *Parinirvāṇa chaitya*. The remark must be added that the bearings from Kuśinagara to both Vaiśālī and Benares as given by both pilgrims agree much better with the Kasiā site than with the Nepāl site. On the other hand, it has been shown that the detailed itineraries from the Lumbinī garden, an absolutely certain fixed point, cannot be reconciled with the position of the Kasiā site, which, moreover, has no river and no walled town.

On the whole, the present writer is of opinion that the remains near Kasiā most probably are those of Veṭhadīpa or Viṣṇudvīpa, that the site of Kuśinagara is to be sought in Nepāl, and that it is most likely to be found at the confluence of the Little Rāptī with the Gaṇḍak. But positive certainty is not attainable at present. Almost conclusive evidence against the Kasiā site is

afforded by the testimony of the pilgrims that in or about A.D. 405 and 637 Kuśinagara and its vicinity lay desolate and in ruins, whereas we know that at the Kasiā site building was in active progress during the 5th cent., and that it continued for some seven centuries later. Moreover, it is not credible that the road from Kasiā to Benares can ever have been the narrow and difficult path, infested by wild beasts and robbers, described by Hiuen Tsiang. His account suits well if applied to the passes of the Somēsar range.

The writer of this article suggests that 'the *upachaitya* named Viśuddha in the land of the Mallas,' *i.e.* Tirhût, mentioned in a Tibetan work as one of the most ancient buildings in India, may be the *parinirvāṇa chaitya* near Kasiā, which was dependent (*upa*) on the homonymous holy place at Kuśinagara (*Ostasiatische Zeitschr.* ii. [Berlin, 1914] 483).

V. A. SMITH.

**KWAN-YIN.**—Kwan-yin or Kwan-shi-yin (Kwan-non or Kwan-je-on in Japanese) is the Chinese name for Avalokiteśvara, and means 'one who looks (*kuan*) towards a (supplicatory) sound (*yin*) of the world (*shi*).'

**1. History.**—(*a*) *China.*—The oldest Chinese name was Kuang-shi-yin, 'shining over the sound of the world,'[1] and the original name appears at about the same time in a vague transcription, 'A-ha-Lou-huan,' in a Sukhāvatīvyūha text translated into Chinese A.D. 147–186.[2] The worship of Kwan-yin, however, does not seem to have been very popular until Kumārajīva translated the *Saddharmapuṇḍarīka* (the 'Lotus of the Good Law'), A.D. 402–412, in which he introduced the name Kwan-shi-yin, of which Kwan-yin is a curtailed form. The section on the *Samantamukha* (25th in Chin. and 24th in Skr.) of the text in question specially relates to the Bodhisattva, and has been widely read in China.[3]

The popularity of the belief was further increased when the famous Chi-i, the founder of the Tien-t'ai school in China, wrote several treatises on the *Samantamukha* section (589–618),[4] and since that time practically all the schools of Chinese Buddhism seem to have adopted the worship.

The pilgrims who witnessed the worship of the saint in India also contributed much to the propagation of the belief at home. Fa-Hian (399–414) says that all the followers of the Mahāyāna in India honour the saint, and, when his home-bound ship is in danger during a gale, he hastens to pray to him. Hiuen Tsiang (629–645), who introduced a new translation of the name, viz. Kuan-ts'u-ts'ai, 'Self-existent who gazes' or 'Gazing Lord,' records the presence of images of the saint almost everywhere in India, and mentions a *pūjā* to him by King Śilāditya of Kanauj during the festival. I-Tsing (671–695) distinguishes the Mahāyāna from the Hīnayāna by the worship of Bodhisattvas, which is peculiar to the former. These facts are fully borne out by the discovery of the sculptured images of the saint from the valley of Gandhāra to the caves of Ellora for a period of about eight or nine centuries.

With the introduction into China of the *mantra* school of Buddhism during the T'ang and the Sung dynasties (*c.* A.D. 700–900), the cult of Kwan-yin seems to have become exceedingly powerful, its climax being reached in the reign of Wen-tsung, who, in 828, ordered that an image of Kwan-yin should be set up and worshipped in all monasteries of the Empire, which then numbered about 44,600.[1] We do not know its fate after the decline of the mystic school in China.

(*b*) *Japan.*—The worship of Kwan-non in Japan is almost as old as the introduction of Buddhism (A.D. 552). In the reign of the Empress Sui-ko (593–628) the saint found an able devotee in the Crown Prince Shōtoku, who built a special hall for him called Yume-dono, 'Hall of Dreams,' in the Hōriuji monastery. Here he used to sit and meditate every morning before he attended to State affairs. He himself wrote a commentary on the *Saddharmapuṇḍarīka*, including the *Samantamukha* section. The subsequent development of Japanese Buddhism centres in the text of the 'Lotus,' the two powerful sects of Tendai and Hokké being founded on the doctrine of the text. The twelve sects of Japanese Buddhism all honour or worship the saint directly or indirectly; there is, in fact, no other deity so popular as Kwan-non. He is the principal figure in art, both pictorial and plastic, in general literature, and in the religious life of the Japanese.

A religious reform movement started lately, basing its foundation solely on the doctrine of Avalokiteśvara, and it is fairly successful.

**2. General character.**—Kwan-yin is a bodily healer as well as a saviour. His relation to Amitābha is like that of Maitreya to Śākyamuni, and the boundless mercy of Amitābha is made known only through his efforts. Until all beings have been saved he himself will not become Buddha. He would, it is said, ever remain in midstream with his boat ready to carry beings across. There are more than 60 books in the Chinese Tripiṭaka which profess to teach the mercy of the saint.

The principal exposition, however, will be found in the *Samantamukha* section already mentioned. The devotees make this a separate text, calling it the 'Avalokiteśvara sūtra,' and recite it every day. The expedients (*upāya*) with which he approaches the world are minutely described in the text, and are literally believed by the people.

**3. Incarnations.**—Thirty-three manifestations in which Kwan-yin has approached the people are given in Kumārajīva's translation of the 'Lotus,' whereas in the Sanskrit text only sixteen are mentioned. But the number thirty-three has become so sacred and peculiar to the saint in China and Japan that a simple mention of thirty-three *avatārs* implies him. While instructing the people he would assume any form of incarnation that was necessary, such as a Buddha, *Pratyekabuddha*, *śrāvaka* ('disciple'), Brahmā, Indra, Īśvara, Maheśvara (Śiva), the heavenly general (*Senāpati*), Vaiśravana (Kubera), a Rāja, a merchant, a female merchant, a retired man, a retired woman, a minister, a minister's wife, a Brāhman, a female

[4] Nanjio, *Cat.*, nos. 1555, 1557, 1562.

[1] See E. H. Parker, *China and Religion*, London, 1905, p. 135.

Brāhman, a mendicant, a female mendicant, an *upāsaka* (layman), an *upāsikā* (laywoman), a boy, a girl, a *deva*, a *nāga*, a *yakṣa* (demon), a *gandharva* (heavenly musician), an *asura*, a *garuḍa*, a *kinnara*, a *mahoraga* (great serpent), or *vajra-pāṇi*. That the number thirty-three was not originally intended, however, is obvious from the fact that the names enumerated often differ from one another. Actually thirty-three forms of Kwan-yin have been created and often represented in art. In Japan there are thirty-three sacred places of pilgrimage where some one of the seven Kwan-nons given below is enshrined and worshipped. The thirty-three shrines of the Western region (Saikoku) are the most famous, while those of the Eastern region (Ban-tō) and those of Chichibu are also renowned. Besides, there is in Kyoto a great hall of Kwan-non called the 'Thirty-three partitioned Hall' (San-jū-san-gen-dō), which contains 1,000 images of the saint. There are smaller heads on the foreheads and haloes, or held in the hands of these images, altogether making up the number 33,333.

**4. Activities.**—Seven cases of distress are generally specified in which Kwan-yin is ready to extend his hand of mercy. These are generally selected from the thirteen cases of distress of the *Samantamukha* section; they are dangers caused by a sword, fetters or chains, fire, water, demons (*rākṣasa*), goblins (*bhūta*), and an enemy. Sometimes danger by storm is added to these to make four pairs complete, and facilitate pictorial representation.

In the so-called Buddhist litany represented in some sculptured reliefs of Ajanta (no. 4), Ellora (no. 3), Aurangābād (no. 7), and Kānheri (no. 4), we can trace several scenes of dangers more or less akin to the above seven. In the cave of Ajanta (no. 4) we see a representation of dangers from an elephant, a lion, an enemy with a sword, and a young man against a woman, on one row, and those from a fire, a snake, a flood, and a female against a male, on the other, while a standing figure of Kwan-yin is represented at the centre. In Ellora (no. 3), fire, sword, and flood are noticeable, while the rest are quite indistinct. In one of the eastern caves, Aurangābād (no. 7), we have a very good representation of the litany. The eight scenes are specified by a fire, a sword, a thief, and a shipwreck on the right, and a lion, a snake, an elephant, and a man with a woman on the left. Kwan-yin is flying towards the centre to their rescue.

Further, in one of the 108 caves of Kānheri (no. 4) the scenes are ten instead of eight: (1) a girl with a man; (2) a man in a striking attitude before a snake-king; (3) a man brandishing a sword against a female with a child; (4) a man with a stick before another who is prostrating himself; (5) a man squatting and one side invisible; (6) an elephant; (7) a lion; (8) a serpent; (9) a man lifting both hands over his head, his body invisible, probably drowning; (10) a man with his hands raised, probably in a pushing attitude. Thus almost all the thirteen cases mentioned in the 'Lotus' are to be found represented in these caves, which are probably excavations of the 7th or 8th cent. and are certainly Mahāyānistic.

We can safely conclude from these facts, and from the records of eye-witnesses of the same period, that the text of the *Samantamukha* section of the 'Lotus,' or at any rate the belief in Kwan-yin as the saviour of the distressed world, was in vogue and very popular among Buddhists during the same period as it was in China and Japan.

**5. Kwan-yins adopted into the mystical school of Buddhism.**—Six or seven Kwan-yins are enumerated and often represented in art in China and Japan, especially in the latter.

(1) Āryāvalokiteśvara (Shō-Kwan-non, 'Holy'), otherwise called Mahākāruṇika ('Great Compassionate'). This is the original Bodhisattva and the most Buddhistic of all Kwan-yins. He is always shown with a lotus-flower in the left hand, with his right hand held up to his breast, and with or without an image of Amitābha over his head.

(2) Sahasrabhuja (Sen-ju, 'Thousand-armed'), otherwise called Sahasranetra (Sen-gen, 'Thousand-eyed'), or Mahāpadmarāja ('Great Lotus King'). This Kwan-yin, as he has the names common to Viṣṇu, Indra, and Durgā, seems to have been borrowed from the Brāhmanical deities. He is generally represented with three eyes (*trilochana*) and forty or thirty-eight arms, the palm of each hand being marked with an eye. Among the things which he carries are a sword, an arrow, a halberd, an axe, a *vajra*, a book, a rope, or a skull-banner, mostly peculiar to Durgā. He is far the most popular of all Kwan-yins, at least in Japan, fifteen of the thirty-three shrines having him as the chief object of worship against three in the case of (1).

(3) Hayagrīva (Ba-to, 'Horse-headed'), otherwise called Siṁhābhaya (Shishi-mui, 'Lion-fearless'). He is depicted as horse-headed, two-tusked, and with eight arms, two of which hold a *vajra* and a lotus. He is a *daitya* (demon), hostile to Viṣṇu in the Hindu pantheon, probably converted into a Tantra deity by mystic Buddhists. Only one of the thirty-three temples gives the place of honour to him.

(4) Ekādaśamukha (Jū-ichi-men, 'Eleven-faced'). He has eleven faces, of which the three front are compassionate, the three left wrathful, and the three right admonishing, while the one at the top and the proper face show equanimity. He has four arms, which carry a rosary, a lotus, a waterpot, and a mark of *abhayanda* ('bestowing security'), *i.e.* a raised hand with its palm outward. Ekādaśottama, 'chief of the eleven (Rudras),' is an epithet of Śiva, and so is Chaturbāhu ('Four-armed'). Thus this Kwan-yin too seems to have originated from the Hindu deity. Five places of worship are accorded him.

(5) Chaṇḍī (according to Nanjio, Chuṇḍī), otherwise called Saptakoṭibuddhamātṛ ('Mother of seven Koṭis of Buddhas'). Different from the rest of the Kwan-yins, this is from the beginning a female deity, and her name is never translated, being always Chun-t'i in Chinese and Jun-iei in Japanese. She is represented with three eyes (*trilochana*) and eighteen arms (*aṣṭādaśabhuja*), and is no other than Chaṇḍī Mahā-devi Durgā, also called 'the Goddess of eighteen arms,' who destroyed the *asura* Mahiṣa. An auspicious pot (*bhadrakumbha*), a mark of security (*abhayandamudrā*), a rope, a lotus, a *vajra*, etc., are among the articles carried by her. Only one place honours her.

(6) Chakravartīchintāmani, or sometimes Chintāmaṇichakra (Nyo-i-rin, 'Wishing wheel'). He is generally two-armed, rarely six-armed, and is represented in a meditative attitude with his right hand against his cheek, his head slightly turned to the right, and his left hand on his left knee. When he is six-armed, he carries a wishing gem (*chintāmaṇi*), a wheel (*chakra*), a rosary, and a lotus. He occupies six places of worship.

(7) Amoghapāśa (Fu-kū-ken-saku, 'Unfailing rope'), or sometimes simply Amogha ('Unerring'). The common feature of this Kwan-yin is that he has three faces and eight arms, and a rope in his hand. As Amogha is the name of Śiva and a rope is often carried by Durgā, this deity also is probably imported from the Hindu pantheon. One of the thirty-three shrines is sacred to him.

**6. Kwan-yins known among Buddhists generally.**—We shall name only five here, which are important for their artistic representations.

(1) Byaku-e (Pauṇḍravāsinī, 'White-robed'), the goddess with a white veil and robe, is the chief favourite among artists. Two other Kwan-yins, Byaku-shin (Śvetabhagavati, 'White-bodied deity') and Yō-i (Palāśāvali, 'Leaf-streaked'),[1] are closely allied with this deity.

(2) Yō-riu ('Willow-tree'). The peculiarity of this deity is a willow leaf either held in the hand or placed in a pot beside her. The origin of this emblem is doubtful, though an off-hand explanation is not wanting among Buddhists. It may have originated from an olive tree or a palm-leaf, seeing that the goddesses Athene and Victory have been sculptured in Gandhāra. It is, however, just possible that it may be of purely Chinese origin, for we do not know how far this form of Kwan-yin carries us back.

(3) Gyo-ran ('Fish-basket') is another very popular deity who carries a basket with a fish in it. He is probably a counterpart of the fish *avatār* of Viṣṇu, or a representation of Matsyendra or Mīnanātha, who is sometimes worshipped in India and Nepāl.

(4) Koyasu ('Easy-child-birth') is a female Kwan-yin like Tārā, and is often represented with a child in her arm or below her. Properly speaking, she is not a separate Kwan-yin, for any Kwan-yin who is celebrated as answering prayers for easy labour can be called Koyasu. It was under this name that the Madonna of the Christian Church found her way among the worshippers of the Virgin, during the period of persecution in Japan under the Shōgunate government (1603–1867).

(5) Shōgyō (Nīlakaṇṭhaiśvara, 'Blue-necked lord') seems to be another imported from the Hindu pantheon, for Nīlakaṇṭha is the name of a form of Śiva in his capacity of churning the ocean. He is white and three-faced, with a lion's face on the right and a boar's on the left. The Buddha Amitābha is found on his proper head. He has four arms, which hold a stick, a lotus, a wheel, and a conch-shell.

**7. The sacred resort of Kwan-yin.**—As this article is in a way a continuation of that on Avalokiteśvara (*q.v.*), all the characteristics of the saint found there are omitted here. Only one

[1] Nanjio, no. 978; Parṇaśavari seems to be an error.

thing not found there has to be supplied here. That is Potala, Potalaka, or Potaraka,[1] the name of a place sacred to the Bodhisattva, and never separated from the worship. It is sometimes said to be an island in the sea or sometimes a rocky hill. We have Potala (=Πατάλα), a harbour at the mouth of the Indus in an island called Patale,[2] and the river here is said to begin to form a Delta like the Nile. If this name can be identified with Patara, now Patera, the capital of Lycia in Asia Minor on the eastern side of the mouth of the river Zanthus, we can further identify Avalokita or Apalokita (in Pāli) of Potalaka with Apollo Patareus, both being in this case patron deities of mariners. This conjecture was once proposed by the present writer to solve the riddle of the strange name 'Avalokita,' though there are some philological difficulties in the identifications. Be this as it may, the name Potala is always transferred with the worship of the saint. In the 7th cent. we find Potalaka as the resort of Kwan-yin in the eastern side of the Malaya range near the extreme corner of the south coast of India.[3] The island Pu-t'o-lo (Potala), in the Chusan group off Ningpo, is the centre of the worship of Kwan-yin in China. This shrine was founded by a Japanese priest, Ye-gaku by name, who was sent by an Imperial order to China as a Buddhist student, but remained there as the founder of the famous Pu-t'o-lo (Potala) monastery (A.D. 858).

We are familiar with the existence of the Potala palace in the heart of Tibet as the residence of an incarnated Kwan-yin, viz. the Dalai Lāma; and in Japan we can trace two or three places which bear the Buddhistic name Fu-da-la-ku as shrines of Kwan-non.

**8. The formula of invocation.**—The famous six-syllable formula, *Oṁ maṇi padme hūṁ*, was once Indian, for it is often mentioned in the texts of the Chinese Tripiṭaka translated from Sanskrit (see art. JEWEL [Buddhist]). At present, however, this formula is exclusively Tibetan or at least Lāmaistic. The non-Lāmaistic Buddhists use the old formula *Namo 'valokiteśvarāya Bodhisattvāya* (*Namu-Kwan-je-on-Bosatsu*), 'Hail to the Bodhisattva Avalokiteśvara.'

**LABOUR.**—See EMPLOYMENT, ECONOMICS.

**LAISSEZ-FAIRE.**—So great a part has this celebrated phrase played in economic and sociological, and even in religious, discussion during the past century that a whole book was published at Berne in 1886 upon the maxim—A. Oncken's *Die Maxime Laissez faire et laissez passer*. The occasion of its origin is perhaps best understood by a comparison of the policies of two great French Ministers of Finance—Colbert (1619–83) and Turgot (1727–81). The former, towards the end of the 17th cent., brought industry and commerce under a system of extreme regulation and coercion; his ideals were those of the Mercantilists—protection, subsidy, and privilege. A century later, we see a complete reversal of this policy in the financial administration of Turgot, who worked on the principle of commercial freedom. Between these two men stand the founders of scientific economics in France, whose school is usually known under the name of the Physiocrats. It is said, indeed, that the first authentic use of the phrase *laissez-faire* was a retort made by a merchant to Colbert himself.

The names which are of chief importance are those of Gournay (1712–59) and Quesnay (1694–1774). Gournay was an administrator rather than an economist, but he had great influence on Turgot, who accompanied him on some of his official journeys. It is through Turgot that we know of his principles. In his *Éloge* of Gournay, Turgot attributes to him maxims of trade and welfare, based on the utmost liberty of personal competition, and on the view that private interest and general welfare were coincident, if this kind of freedom were given. The complete phrase *laissezfaire, laissez passer* is first attributed to him. Quesnay was the real head of the Physiocrats, and holds a place in French economic science similar to that of Adam Smith in Great Britain. Competition and self-interest were the bonds out of which a compact system of industrial life could alone be created. Though he does not use the phrase *laissez-faire*, he is obviously in line with the movement.

In view of the expressions of Adam Smith, it is of importance to note that the identification of *laissez-faire* with the 'natural system' had taken place in France in the writings of the economist Boisguillebert (1646–1714). It was left to Smith to introduce into the system a still further idea—that of religious guarantee.

Free competition as the advantageous, as the natural, and as the divinely ordered basis of industry—these are the steps of the development. The evil aspects of the phrase are usually charged to Adam Smith's account, and it is, therefore, of interest to understand his statement of the case. Smith was not only an economist, but a moral philosopher, and a Scottish one at that. The classical passages of the *Wealth of Nations* (1776) are in bk. iv. ch. ii. They sum up and extend the whole preceding statement of *laissez-faire*, without, however, using the phrase itself. What is of advantage to the individual is 'advantageous' to the society; this is so 'naturally, or rather necessarily'; and, if we ask the reason of the coincidence, that is because the individual, in seeking his own gain, is 'led by an invisible hand' to promote the social good, although this was no part of his intention. Now, if we turn to Smith's earlier work on the *Moral Sentiments* (1759), we find some remarkable passages, showing that the basis of his ideas in this respect was ethical or religious rather than economic. In the section on 'Utility' (pt. iv. sect. i.)—to quote only one extract—there is a remarkable vindication of the luxury of the rich and the inequality of wealth.

'The rich only select from the heap what is most precious and agreeable. They consume little more than the poor, and in

[1] Potalagāma occurs in the *Buddhacharita* (Chinese), and Potala and Potalaka are the names of two demons living there (see *SBE* xix. [1883] 244).

[2] See Monier-Williams, *Sanskrit-English Dictionary*, Oxford, 1872, *s.v.* 'Potala'; Ptolemy, VII. i. 59; Pomponius Mela, iii. 7; see also C. Lassen, *Ind. Alterthumskunde*, i.[2] [Leipzig, 1867] 125, ii.[2] [1874] 191 f., and especially V. A. Smith, *Early Hist. of India*[2], Oxford, 1908, pp. 99–102.

[3] S. Julien, *Mémoires de Hiouen-Thsang*, Paris, 1857–58, x. 123.

spite of their natural selfishness and rapacity, though they mean only their own conveniency, they divide with the poor the produce of all their improvements. They are *led by an invisible hand* to make nearly the same distribution . . . as if the earth had been divided into equal portions among all its inhabitants.'

It is no wonder that, after the miseries of the Industrial Revolution, teaching of this kind brought some odium upon economic science; and it was overlooked that Smith had established his objections to existing forms of regulation by inductive, far more than by deductive, reasoning.

Smith's views must be judged in the light of two general facts: (1) that he was leading a reaction against excessive regulation; and (2) that the *form* of industry in his time was itself so individualistic. It was still the day of the individual manufacturer and the small unit; to ask for freedom at that time was practically to ask for independent competition. It does not follow that, when the form of industry had changed, Smith would have construed freedom in the same way. With the larger unit created by the Factory System for both labour and capital, it must have become apparent that to combine was a free act, and that economic freedom could no longer mean independent or individualized competition.

Some hidden fallacies in the early statement of *laissez-faire* are exposed by D. G. Ritchie in his *Natural Rights* (London, 1895). Especially dangerous was the introduction of the word 'natural.' For the natural is taken to mean the ideal, or the original, or the non-human. As soon as we say that a certain system is a 'natural' system, we first idealize it, and then, by a transition to another meaning of the word, we identify it with what is not of human device or with what is prior to human institution. Thus we slip into the position that a non-regulated system is an ideal one. But, in fact, nature in its broadest sense includes human life; and 'is made better by no means, but nature makes that means.'

Competition without control has not actually been taught by any English economist; but phrases have been seized on and misapplied. In spite of the opposition created to the idea of competition by stressing the words of early writers, an analysis of recent thought shows a desire not to suppress, but only to reorganize, this force. The claims of democracy are often, indeed, for greater freedom of competition; it is sought to remove privileges and monopolies, to extend education, to make it possible for any one with ability to challenge any position in the State. And the greatest social bitterness is not between those who compete most with each other, as workman with workman, or employer with employer, but between classes who do not compete, such as employer and employed, and often simply on the ground that effective competition is so limited across that line. The real objection that is summed up in the bitter use of the phrase *laissez-faire* is to the defects of a *certain organization* of industrial competition.

We may indeed say that, properly understood, *laissez-faire* is a maxim quite in keeping with the extension of State control, if the form of industry so changes as to require this. What is the object of the verb? In Smith's time it was the individual who was the economic agent; then, said Smith, leave him free. In Mill's time it was the group; then let the group be free to work. In our time, for many purposes which only economic evolution could have revealed, it is the municipality or the State; then let the State be free to do its proper work. The object of the verb can be the individual, the group, or the public authority; for we cannot fix the form of industry, or force on modern conditions the meaning which any maxim had a hundred and thirty years ago. The law of the land should not suppress, or refuse to give scope for, any kind of social agency or force; but, in the changing conditions of industrial life, it must guard the rights and watch the limits of each force and agency.

**LAITY, LAYMEN.**—This article is not concerned, unless indirectly, with the origin, development, and nature of the Christian ministry. It deals only with the position, rights, and duties of those Christians who are not of the official ministry, and the latter will be referred to only negatively, or in connexion with elections by the laity or similar matters. A large controversy will, therefore, be left entirely on one side. We have to consider what the laity were called by the older Christian writers, and what position they held in the divine society, especially with reference to appointments, to worship and the sacraments, to councils, and to Church work generally.

**I. Names of the laity.**—In the Bible ὁ λαός is used of the Jewish people, as distinguished from their priests and rulers, in Mt $26^{5}$, Ac $5^{26}$ etc., and especially as distinguished from the high priest and the priests in He $5^{3}$ $7^{5.27}$; so, in the OT, in Ex $19^{24}$, 2 Ch $24^{10}$. Similarly, ὁ λαός is frequently used in the Greek liturgies to denote the congregation as distinguished from the officiating priest; for an early example see *Apostolic Constitutions*, viii. 12 (at end): 'Let all the people say, Amen.' The Latin liturgies have *populus* in a similar place, and the Syriac liturgies have the Syriac equivalent *'amā* (*e.g.*, *Testament of our Lord*, i. 21, which we possess only in a Syriac translation by Jacob of Edessa, *c.* A.D. 700). Elsewhere in Latin writings *plebs* is used for the laity, as ordinarily in Tertullian, Cyprian, Jerome, and Augustine, and in can. 77 of the Council of Elvira (*c.* A.D. 305).

From λαός is derived λαϊκός (*laicus*), which, however, is not found in the NT or LXX. In Clement of Rome (*Cor.* i. 40, a passage which describes the relation of the layman to the clergy) a step is taken (*c.* A.D. 95) towards the somewhat later use of λαϊκός as a technical substantive, 'a layman'; but it is there used only as an epithet. The 'lay-man' (ὁ λαϊκὸς ἄνθρωπος) is bound by the lay ordinances (τοῖς λαϊκοῖς προστάγμασιν). At the end of the 2nd cent. Clement of Alexandria (*Strom.* iii. 12, near end) uses λαϊκός as a substantive, 'a layman,' in contrast to 'presbyter' and 'deacon,' with reference to marriage, clerical and lay; but he also uses it as an adjective, and speaks of λαϊκὴ ἀπιστία in *Strom.* v. 6, *i.e.* 'the unbelief of the people.' Tertullian also uses *laicus* for 'a layman' (*de Bapt.* 17, *de Exhort. Cast.* 7), as do the Roman clergy in a letter to Cyprian (Cypr. *Ep.* xxx. 5). The substantive λαϊκός is found in the *Answers to the Orthodox* (Ἀποκρίσεις πρὸς ὀρθοδόξους, § 97), which at one time was assigned to Justin Martyr, but is certainly of a somewhat later date; and often in the 4th cent., as in the *Clementine Homilies* (now usually assigned in their present form to that date): see the *Ep. of Clement to James*, § 5; in the Sacramentary of Sarapion (*JThSt* i. [1899–1900] 101), where a prayer is called χειροθεσία λαϊκῶν ('blessing of the laymen'); and in the *Apost. Const.* (*e.g.*, viii. 11 and 28, where λαϊκοί are opposed to 'the clergy' [οἱ τοῦ κλήρου or κληρικοί]); it is also found frequently in the *Apostolic Canons*. In Syriac we find as a rendering of λαϊκός the words *'ālmāyā* and *'ālmānāyā*, lit. 'one of the world,' as in the *Test. of our Lord*, i. 35, in the litany which has a suffrage for 'the faithful laymen'; see other instances in R. Payne Smith, *Thesaurus Syriacus*, ii. (Oxford, 1901) 2900 f.

Another, but less common, word for 'layman' is ἰδιώτης, which has sadly degenerated in meaning, having become in English 'idiot.' But in classical Greek it means simply 'private person.' Philo (*de Vit. Mos.* iii. 29, ed. Mangey, ii. 169) uses it to denote a Jew who is not a priest. In 1 Co $14^{16.23}$ it probably means 'one who has not the charisma of tongues' (RVm; see notes by A. Robertson and A. Plummer *in loco* [*ICC* '1 Cor.,' Edinburgh, 1911, pp. 313 f., 318 f.]). In Ac $4^{13}$ it means 'unlearned' or 'uneducated'; here Tyndale and Coverdale render it by 'laye people,' a translation which may be compared with our use of the word 'layman' to denote one who is

not versed by training in the particular matter in hand, a sense in which ἰδιώτης was also used in classical Greek (see Liddell and Scott, *s.v.*). The word is similarly used in 2 Co $11^{6}$. In 1 Co $14^{16}$ the 'place of the ἰδιώτης' can hardly refer to the special seats occupied by laymen in the Christian assembly (below, § 6). In an interpolation in Pr $6^{8}$ cited in the *Apost. Const.* (ii. 63), ἰδιῶται is opposed to βασιλεῖς, and means 'the king's subjects'; the corresponding passage of the older *Didascalia*, which the *Constitutions* incorporate, here has 'rich and poor' (see F. X. Funk, *Didasc. et Const. Apostolorum*, Paderborn, 1905, i. 180). Isidore of Seville, early in the 7th cent., uses *privatus* (as well as *laicus*) in the sense of 'layman' ('nec privatis nec clericis,' *de Eccl. Off.* ii. 25).

Another name of the laity is 'the brethren' (οἱ ἀδελφοί). In the *Apost. Const.* ii. 57 (near the beginning) they are so called in contrast to the bishop and deacons (not in the parallel *Didascalia*); cf. 1 Ti $4^{6}$, where 'the brethren' means 'the whole community.' It is a little curious to note in this connexion that in Ac $15^{4.\ 22}$ the expressions 'the church,' 'the whole church,' are used in contrast to 'the apostles and elders.'

**2. Who is a layman?**—Hitherto 'the laity' have been spoken of negatively, as being those Christians who are not ministers. But, owing to modern conditions, and especially owing to the divisions of Christendom, some further definition is necessary. For instance, in England, it has been maintained that every Englishman there resident is in the eye of the law a layman of the Church of England, unless he is a bishop, priest, or deacon. Apart, however, from legal rights, every Christian community is bound to ask itself who are its laymen, not only from a negative, but also from a positive point of view. The first step in the definition has usually been to affirm that he must be a baptized person, or at least a catechumen; with regard to the latter qualification we may note—and this has a bearing on the practice of missionary Churches of the present day—that the *Canons of Hippolytus* style catechumens 'Christians' (can. x.; ed. H. Achelis, in *TU*, new ser., Leipzig, 1891, § 63). But the question whether a baptized person is a layman belonging to a particular Christian community is not so easy to answer. A positive definition of 'laity' may perhaps be found in some such phrase as 'those who (not being ministers) from baptism or after baptism have been attached to' that community, and 'who have not by any overt act declared their dissent from its communion.' This does not raise the question of 'full membership,' by which is often meant the status of a communicant.

**3. The priesthood of the laity.**—This, which seems at first sight to be a contradiction in terms, is nevertheless asserted of Christians in 1 P $2^{5.\ 9}$ and Rev $1^{6}$. They are a 'holy priesthood, to offer up spiritual sacrifices . . . a royal priesthood, a holy nation.' Christ 'made us [all Christians] to be a kingdom, to be priests unto his God and Father.' The same thing had been asserted with equal emphasis of the Jews in Ex $19^{6}$: 'Ye shall be unto me a kingdom of priests, and an holy nation.' The NT asserts in the first place the priesthood of our Lord (*e.g.*, in Hebrews, *passim*), and then, as derived therefrom, the priesthood of His people. In the highest sense of the word, Christianity is a sacerdotal system. But this must not be misunderstood. It does not mean that the Christian ministry is vicarious, and that its ministers take the place of the people in approaching God. When, therefore, J. B. Lightfoot says, perhaps rather hastily (Essay on 'The Christian Ministry,' *Philippians*, ed. London, 1903, pp. 181, 185), that Christianity 'has no sacerdotal system,' he means, as he himself most truly explains (*ib.*), that 'it interposes no sacrificial tribe or class between God and man, by whose intervention alone God is reconciled and man forgiven. Each individual member holds personal communion with the Divine Head. To Him immediately he is responsible, and from Him directly he obtains pardon and draws strength. . . . As individuals, all Christians are priests alike.' For the same view of the priesthood of the laity see C. Gore, *The Church and the Ministry*[4], p. 76 ff.

Let us consider one practical result of this NT doctrine. It follows, as the ancient liturgies so often assert, that the laity offer the Christian sacrifice of prayer and praise equally with the officiating minister, though he is or may be the instrument by which they offer it, for it would ordinarily be inconvenient if all people spoke at once in Christian worship. This fact is the rationale of the 'Amen' or 'So be it' by which the laity audibly 'seal' the prayers and praises. Jerome compares the Amen of the people at Rome to a thunder-clap, so loud and hearty was it:

> 'Ubi sic ad similitudinem caelestis tonitrui *Amen* reboat, et vacua idolorum templa quatiuntur?' (*Com. on Galatians*, Procem. in lib. ii.).

The same may be said of the 'prayers in common' of which Justin (*Apol.* i. 65) and Augustine ('communis oratio,' *Ep.* lv. 34 Ben. [cxix.] *ad Inquis. Januarii*) speak, and which must have involved some audible partaking by the laity in the supplication (see INTERCESSION [Liturgical]). Such also are the litanies and hymns (especially the Sanctus) which became common at least from the 4th cent. onwards. In the *Test. of our Lord* the whole people are bidden to repeat with the bishop part of the central act of the Eucharist (i. 21), a direction with which we may compare the old custom of 'concelebration' (priests audibly celebrating the Eucharist along with the bishop). All this is evidence of the universality of the doctrine that every Christian layman possesses a priesthood.

The same teaching is much emphasized by the Fathers. In the middle of the 2nd cent. Justin Martyr (*Dial.* 116 f.), quoting Mal $1^{11}$, dwells on the fact that all Christians 'are the true high-priestly race of God,' and that the Eucharist is offered by 'Christians in all places throughout the world.' He speaks similarly, addressing Jews, of the Jewish sacrifices being offered 'by you and by those priests of yours.' So, at the end of the century, Irenæus (*Hær.* IV. viii. 3, V. xxxiv. 3) says that 'all the righteous possess the sacerdotal rank' and that 'all the disciples of the Lord are Levites and priests'; and, a little later, Tertullian (*de Exhort. Cast.* 7) asks, 'Are not even we laics priests?' (this work was written after his secession to Montanism). In the 3rd cent. Origen (*Hom.* 9 *in Lev.* § 1) says to the layman in general:

> 'Dost thou not know that the priesthood (*sacerdotium*) is given to thee also, that is, to all the church of God and the people of believers? [he quotes 1 P $2^{9}$]. Thou hast, therefore, the priesthood because thou art a priestly (*sacerdotalis*) race [cf. Justin above], and so thou oughtest to offer to God the sacrifice (*hostiam*) of praise, of prayer, of pity, of modesty, of justice, of holiness.'

In the 4th cent. Jerome declares (*c. Lucif.* 4) that the priesthood of the layman is his baptism ('sacerdotium laici, id est, baptisma'); he uses the word 'baptism' in the full sense of the complete rite.[1] So Augustine (*de Civ. Dei*, XVII. v. 5) says, 'He gives the name priesthood to the very people whose priest is the mediator of God and man, the man Christ Jesus' (he quotes 1 P $2^{9}$). Many other such passages might be cited. The teaching was common to all ages.

The doctrine that all Christian people are priests does not, it need hardly be said, mean that there is no such thing as a ministerial priesthood. The whole nation of Israel were priests, and yet Aaron and his sons had a special or ministerial priesthood. And so, without discussing controverted questions, we may conclude that there is at least no contra-

[1] It has often been held that the priesthood of the laity is given to the baptized, not at the immersion, but at the laying on of hands or confirmation (A. J. Mason, *Relation of Confirmation to Baptism*, London, 1891, p. 462 f.). But it seems unnecessary to distinguish thus sharply between different parts of what was originally one rite.

diction involved in the assertion of the same characteristic in Christianity. The confusion of minister and layman as to function is such ἀταξία ('want of order') as the author of the *Apost. Const.* so eloquently protests against (viii. 31, 46). Clement of Rome (*c.* A.D. 95) says that the Christian ministers are 'rulers' and 'presbyters' (ἡγούμενοι, προηγούμενοι, πρεσβύτεροι), to whom the laity are to be subject (ὑποτασσόμενοι) and to give reverence (*Cor.* i. 1, 21). Hermas, a little later, calls the clergy 'the rulers' (προηγούμενοι, *Vis.* ii. 2, iii. 9). The same nomenclature is found in He 13$^{7. 17. 24}$, and also in 1 Th 5$^{12}$, where the ministers are 'they that are over you' (προϊσταμένους ὑμῶν). See, further, § 5.

4. **Election of bishops and clergy by laity.**—Under this head we have to consider a very important part in the Church played by laymen. We note that in Ac 6$^{3. 6}$ the people choose, but the apostles appoint (cf. ἐπισκέψασθε and ἐξελέξαντο with καταστήσομεν). The laity elected the Seven and placed them before the apostles, who laid hands on them with prayer. And this was the ancient method of appointment, though the details might vary. In the *Didache* (§ 15, *c.* A.D. 120?) the writer bids the people to elect (χειροτονήσατε) for themselves bishops and deacons, *i.e.* the local ministry; nothing is said of the appointment of the itinerant 'apostles and prophets.' It must here be remembered that χειροτονεῖν does not necessarily carry with it the idea of ordination by the persons electing (see below). Early in the 4th cent. popular election is much insisted on by Athanasius. He quotes (*Apol. c. Arian.* 6) a letter of the Egyptian bishops which says that he was elected (A.D. 326) 'by a majority of our body [the bishops] in the sight and with the acclamation of all the people,' in order to refute a calumny of the Arians that he was clandestinely consecrated by six or seven bishops unknown to the laity. Gregory of Nazianzus (*Orat.* xxi. 8) says that Athanasius was elected 'by the vote of the whole people, not in the evil fashion which has since prevailed, nor by means of bloodshed and oppression; but in an apostolic and spiritual manner, he is led up to the throne of St. Mark.' He means, no doubt, that this was the ancient method of election. The same practice is seen in the Church Orders—*e.g.*, in the *Test. of our Lord* (i. 20), which speaks very emphatically about the election of bishops ('being chosen by all the people according to the will of the Holy Ghost'), and somewhat less so about presbyters ('testified to by all the people,' i. 29) and deacons ('chosen as has been said above,' i. 33). The other Church Orders make similar provisions (*Canons of Hippolytus*, can. ii. [ed. Achelis, § 7], *Verona Latin Fragments of Didascalia*, etc., ed. E. Hauler, Leipzig, 1900, p. 103, *Egyptian Church Order*, § 31 [ed. H. Tattam, *The Apostolical Constitutions*, London, 1848, p. 32], *Ethiopic Church Order*, § 21, *Apost. Const.* viii. 4). We find the same regulations in the Gallican code known as the *Statuta Ecclesiæ Antiqua*, perhaps made by Cæsarius of Arles, *c.* A.D. 500 (formerly cited as the canons of a supposed Fourth Council of Carthage, A.D. 398). In can. 22 it is directed that a bishop is not to ordain any one without the advice of his clergy, and that he is bound to seek the assent (*conniventiam*) and testimony of the citizens—a phrase which has a bearing on a well-known dictum of St. Cyprian (see below, § 8; for a translation of the *Statuta* see C. J. Hefele, *Councils*, Eng. tr., Edinburgh, 1871-96, ii. 410 ff.).

On the other hand, the people were at an early date deprived of this right. The Council of Laodicea (*c.* A.D. 380) says that 'the choice of those to be appointed to the priesthood shall not rest with the multitude' (can. 13). This movement may have been due in part to the encroachments of the State and its officials after the time of Constantine, and it may have also been due to the interpretation placed in the East on the 4th canon of Nicæa (A.D. 325), which says that the bishop is to be appointed (καθίστασθαι) by the comprovincial bishops, three of whom at least shall meet. The first of the *Apostolic Canons*, a collection made *c.* A.D. 400, though some of them are doubtless older, has a similar provision, but with χειροτονείσθω.[1] The Nicene rule was understood by the second Council of Nicæa, the '7th Ecumenical' (A.D. 787, can. 3), as meaning that only the bishops could *elect*, and it forbids, with reference to *Apost. Canon* 31, the election of a bishop, priest, or deacon proceeding from a secular prince; but the Latins at first interpreted the Nicene canon to refer to the confirmation of election and consecration to the episcopate by the comprovincial bishops (Hefele, *op. cit.* i.$^2$ [1894] 385 f.). And this is probably the real meaning. A bishop, before being consecrated, must be approved by the people (and clergy) whom he is to serve, and also by the bishops of the province. This is the true reason (one can hardly doubt) of the ancient rule about the three bishops consecrating the elect. At a later date it was suggested that this was to remove all fear of invalidity in the position of any one of the consecrators; but this could hardly have been a consideration at so early a date. Three bishops, or, as *Apost. Canon* 1 says, 'two or three,' must come together to the election that they may signify the assent of the comprovincials.

In Western Europe, from the time of Charlemagne onwards, the election by the laity to bishoprics was represented by the sovereign's nomination, or in England in Anglo-Saxon times by that of the Witenagemot. But patronage of benefices by laymen became very common. This was exercised (*a*) by an individual, who originally, in many cases, was, or represented, the founder of the church; or (*b*) by a corporation external to the benefice, for the same reason; or (*c*) by the persons to be ministered to, either as a whole body—rarely in the Anglican, but normally at the present day in the Presbyterian, polity—or through representatives chosen by them. The system of the Church of Ireland is a variation of the last method. When a benefice is vacant, a nomination to it is made by a patronage committee, consisting of the bishop of the diocese, three persons nominated by the diocese, and three persons appointed by the parish where the vacancy had occurred. In all Episcopal bodies the bishop has, at least in theory, a power of veto on elections to parishes, though there is usually an appeal to the metropolitan or to the comprovincial bishops if he refuse to institute; but in the Church of England this veto can be exercised only with considerable difficulty.

The share of the laity in appointing bishops, etc., in the present day may be seen from the following conspectus.

(*a*) *Anglican Communion* (see further details in art. 'Diocesan Bishop,' by E. A. Welch in the *Prayer Book Dictionary*, London, 1912, p. 279 ff.).—In *England and Wales* the sovereign issues a *congé d'élire*, and on the advice of the Prime Minister nominates a person to the dean and chapter of the cathedral, who elect, and the election is confirmed by the metropolitan; if there is no dean and chapter, the sovereign nominates directly. In *India* the sovereign acts on the advice of the Secretary of State for India. In *Scotland* a bishop is elected by a special body chosen *ad hoc*, consisting of two chambers of presbyters and laity of the diocese, and for his election a simple majority in either chamber is necessary; the assent of a majority of the comprovincial bishops is required to confirm the election, and, unless it be thus confirmed, proceedings must begin again. In *Ireland* the system is similar (except in the case of the diocese of Armagh, where an abnormal procedure takes place), but the

[1] This word, which often means 'elect,' apparently in these canons means 'ordain,' as the 2nd canon says that a presbyter and deacon and the other clergy (κληρικοί) are to be 'ordained' (χειροτονείσθω) by one bishop.

majority must be one of two-thirds; in some cases the choice, or the selection from certain names, is left to the bishops (see the *Constitution of the Church of Ireland*, Dublin, 1909, vi. 5). In *Canada*, *New Zealand*, *Australia*, and *S. Africa* the system is similar, with some variations of detail, especially as to the majority required in the different orders; in S. Africa the electing body is a special one, called the 'Elective Assembly'; the clergy elect, and the laity assent. In the *United States of America* a like practice is in vogue for the ordinary diocesan bishoprics, but to the 'missionary bishoprics' the House of Bishops appoints. Each diocesan 'convention' (synod) makes its own rules for election. In all the non-established branches of the Anglican federation the assent of the laity is required to an episcopal election.

(*b*) *Roman Communion.*—The laity appear to have no official share in the election of bishops, but in countries where a concordat with the pope is in force, as was the case till recently in France, the sovereign or the State nominates.

(*c*) *Eastern Orthodox Communion.*—Here the laity usually have a voice in electing bishops, though the practice differs in different countries; for a detailed account see M. G. Dampier, *The Organization of the Orthodox Eastern Churches*, London, 1910 (which, however, does not give information about the patriarchates of Alexandria, Antioch, and Jerusalem; these seem to follow Constantinople closely). In the patriarchate of *Constantinople* the bishops of the Holy Synod and the laity elect the patriarch; the whole assembly selects three names, and the bishops choose one of them. A mixed council of bishops and laymen attend to the temporal affairs of the patriarchate. A diocesan bishop is appointed by the Holy Synod, which consists of bishops only. The laity must be consulted before the bishop appoints a parish priest, or the parish priest appoints a deacon; and each parish has a lay committee for parochial affairs. In *Russia* the Holy Synod—which here consists of bishops, a few archimandrites (heads of monasteries), two representatives of the parish clergy, and the Tsar's procurator (a layman who has no vote in doctrinal matters, but is the connecting link between Church and State)—submits three names for bishoprics to the Tsar, who selects one. The parish priests are appointed by the bishop, and the clergy and laymen of each parish appoint a layman to administer the finances. In *Cyprus* the clergy and laity elect the bishops. The Synod consists of bishops only, for managing all ecclesiastical affairs. In *Mount Sinai* the archbishop is elected by the monks. In *Greece* the Holy Synod (consisting of bishops only) submits three names for bishoprics to the king, who selects one. Priests and deacons are appointed by the bishop after consulting their laymen. The king appoints a commissioner (ἐπίτροπος) to attend the Holy Synod, but he has no vote. In *Rumania* the bishops are elected by the other bishops and by (lay) members of Parliament. In *Servia* they are elected by the synod of bishops, but the metropolitan of Belgrade is elected by the bishops and the chief clergy and lay officials of the country. In *Montenegro* the metropolitan is nominated by the king; priests are appointed by the metropolitan. There are no other bishops besides the metropolitan. In *Bulgaria* the laity have a share in the election of the exarch and of the other bishops, and also of the parish priests. In *Austria-Hungary* practice varies. The metropolitan of Karlowitz is appointed by a mixed body, but the bishops of the metropolitanate appoint to the other bishoprics; while in Hermannstadt both metropolitan and bishops are elected by a mixed body. The metropolitan and bishops in Dalmatia are nominated by the Crown.

(*d*) *Armenian Communion.*—For details see M. Ormanian, *Church of Armenia*, ch. xxxi. (Eng. tr., London, 1912, p. 151 ff.). In most countries the Armenian parish priests are elected by the parishioners in the first instance, but the laity have no voice in the selection of priests ordained in monasteries. The 'catholici' of Sis and Aghthamar, the patriarchs of Constantinople and Jerusalem (patriarchs are of inferior rank to the catholici among the Armenians), and the diocesan bishops are elected by mixed councils of laymen and clergy, the former largely preponderating. In Russia the influence of the laity is much less. 'The government permits the existence of lay councils (ephorates) [of parishes], but it has done away with the diocesan councils, whose prerogatives have been transferred to a synod and to consistories made np of ecclesiastics' (Ormanian, p. 153).

(*e*) *East Syrian or Nestorian Communion.*—The laity have an indirect share in clerical appointments. The bishops are supposed to ordain a parish priest only when the parishioners elect him, and, as a matter of fact, they generally consult their wishes; but ordinations without 'titles' or cures of souls assigned are somewhat frequent. In the case of bishoprics, a vacancy is usually filled from the late bishop's nephews or cousins, as the office can be held only by those who have been brought up as 'Nasirites'; of these there are sometimes more than one, and the laity are supposed to choose from them a successor. See A. J. Maclean and W. H. Browne, *The Catholicos of the East and his People*, London, 1892, pp. 186 ff., 205 f.

From what has been said it will be seen that the ancient share of the laity in electing to ministerial offices has remained, though more or less altered, in a large part of Christendom till the present time.

**5. The laity and the sacraments.**—(*a*) *The Eucharist.*—No real instance has been found, except in some heretical or separated bodies, of a layman being allowed to celebrate the Eucharist, even in cases of emergency. In connexion with this it is perhaps necessary to repeat the caution that εὐχαριστεῖν is sometimes used in Christian antiquity in the sense of 'saying grace' or 'asking a blessing' at a meal, and that it does not always mean 'to celebrate the Eucharist.'

The 18th canon of Nicæa (A.D. 325) asserts that even deacons have not the power of 'offering,' *i.e.* of celebrating, the Eucharist[1] (τοὺς ἐξουσίαν μὴ ἔχοντας προσφέρειν), while presbyters are expressly called 'those who offer' (τοῖς προσφέρουσι). The same thing is found in the Church Orders, where the bishop and the presbyter are expressly recognized as being capable of celebrating the Eucharist (for the presbyter, cf. *Apost. Const.* iii. 20, vii. 26, *Ethiopic Didascalia*, § 16, *Test. of our Lord*, i. 31), while the deacon is explicitly forbidden to do so (*Apost. Const.* viii. 46); cf. the repeated statement that a deacon is not ordained to the priesthood—which would have been meaningless if the deacons had not been pushing their claims (*Test. of our Lord*, i. 38; *Statuta Ecclesiæ Antiqua*, § 4; *Egyp. Ch. Order*, § 33; *Ethiop. Ch. Order*, § 24; *Verona Fragments of Didascalia*, ed. Hauler, p. 109). But, if a deacon could not celebrate the Eucharist, *a fortiori* a layman could not do so.

Nor was this a prohibition invented in the 4th century. Not only is there no evidence of a layman inside the Church celebrating the Eucharist in ante-Nicene times, but Tertullian, in a work written before his secession (*de Præscr. adv. Hær.* 41), by implication strongly repudiates such a theory. He condemns the heretical sects because they confused the functions of laity and ministry.

> 'To-day one man is their bishop, to-morrow another; to-day he is a deacon who to-morrow is a reader; to-day he is a presbyter who to-morrow is a layman. For even on laymen do they impose the functions of priesthood.'

With this it is instructive to compare the same writer's language after his secession. In *de Exhort. Cast.* 7, after saying that all laymen are priests (see above, § 3), he continues:

> 'It is the authority of the Church, and the honour which has acquired sanctity through the joint session (*consessus*) of the Order, which has established the difference between the Order and the laity. Accordingly, where there is no joint session of the ecclesiastical Order, you offer [see above], and baptize (*tinguis*), and are priest, alone for yourself. . . . You have the right of a priest in your own person, in cases of necessity.'

Here Tertullian, writing in his later days, claims for a layman, if necessity urges, the right *inter alia* to celebrate Holy Communion.

It might be suggested that in this respect Montanism was conservative of an old custom which had elsewhere died out, owing to the supposed increase of 'sacerdotal' feeling in the Church. But, whatever Montanism was, it was not, and did not profess to be, conservative. Such, indeed, is not the characteristic of any movement which magnifies 'charismatic' powers. Montanism professed to have received a new inspiration by the Holy Ghost, and rather despised than honoured old existing customs. See, further, a long investigation in Gore, *op. cit.* pp. 184–196, and Appended Note H on Montanism (pp. 355–359).

(*b*) *Baptism.*—Had we no history to guide us, we might have imagined that, if the laity could not celebrate the Eucharist, neither could they baptize. And yet, though Christian opinion has not been unanimous on the subject, the great majority have held that, in cases of necessity, a layman, and even a laywoman, may rightly baptize.

It is not quite conclusive that the apostles did

[1] For this meaning of προσφέρειν or ἀναφέρειν see the present writer's *The Ancient Church Orders* (Cambridge, 1910), p. 48 f. These words sometimes mean 'to bring the oblation to the bishop' (*ib.* and Ancyra [A.D. 314], can. 2; but the latter has 'to offer the bread and the cup').

not, as a rule, themselves baptize, though they laid on hands after baptism. St. Paul says that it was not his usual custom to baptize (1 Co $1^{14ff.}$); St. Peter *commanded* Cornelius and his company to be baptized (Ac $10^{48}$). It is also not quite certain, though it is probable, that the apostles did not themselves baptize all the three thousand converts in Ac $2^{41}$; if they did not do so, lay brethren must have baptized, since there was as yet no ministry other than the Twelve. But, though the NT evidence is not quite conclusive, opinion from early times favoured lay baptism. Tertullian (*de Bapt.* 17) allows it to deacons and laymen, but not to women; in *de Virg. Vel.* 9 also he forbids women to baptize. But we may note that his argument in the former passage, that 'what is equally received can be equally given,' if valid, should refer to women no less than to men. The older *Didascalia* (3rd cent.; iii. 12; Funk, i. 210) allows it to deacons, but (iii. 9; Funk, i. 198) forbids it to women; the permission to deacons is not found in the parallel *Apost. Const.*, which here incorporate the *Didascalia*. The Spanish Council of Elvira (*c.* A.D. 305) says that a catechumen on a sea voyage or in a place where there is no church near can be baptized in great illness by a layman who has not apostatized or been a bigamist (can. 38), and similarly allows a deacon on some occasions to 'rule' a congregation—apparently in a country district—and to baptize (can. 77); but in all these cases confirmation by the bishop is to follow unless the baptized person dies. The *Test. of our Lord* (*c.* A.D. 350?) allows deacons to baptize (ii. 10). Jerome (*c. Lucif.* 9) says that, 'if necessity so be, even laymen may, and frequently do, baptize.' Augustine (*c. Ep. Parmen.* II. xiii. [29]) says that baptism by a layman, 'if necessity urges, is either no sin or a venial one.' But he appears to be a little doubtful about the matter. The *Statuta Ecclesiæ Antiqua* (can. 100), by saying that 'a woman may not baptize,' probably imply that a man, even if a layman, can do so. Isidore of Seville very grudgingly says that lay baptism is for the most part allowed, but only when a person is *in extremis* (*de Eccl. Off.* ii. 25).

A striking case, which brings in other considerations of importance, occurred in the 4th century. The famous Athanasius is said, when a boy, to have administered baptism in play. This was observed by Alexander, the bishop of the diocese (Alexandria), who, on hearing that the proper words had been used, forbade re-baptism, but administered confirmation. For this story see Sozomen (*HE* ii. 17) and Rufinus (*HE* i. 14); Socrates (*HE* i. 15) alludes to it without mentioning Alexander's action. Whether the story is historic or not, it is instructive as showing that the historians treated lay baptism as an actual and not unusual fact. On the other question, that of 'intention,' Alexander's decision is much more doubtful.

We find that a contrary opinion as to lay baptism was not unknown in the 4th century. Even a deacon is forbidden to baptize in the *Apost. Const.* viii. 28, 46, and so are the laity and minor orders in iii. 10 f., and women in iii. 9; of baptism by women it is said that 'there is no small peril to those who undertake it, for it is dangerous, or, rather, wicked and impious.' The *Ethiopic Didascalia* (§ 13 f.) also negatives lay baptism; this manual is largely derived from the *Constitutions*.

We may notice opinion on this question in later times. In the mediæval West lay baptism was fully and officially recognized and, in cases of necessity, encouraged. Midwives were instructed how to baptize infants when in danger of death. This is the present attitude of the Roman Communion. It was also the attitude of the Church of England in the Middle Ages and down to 1604. Lay baptism was extremely common. The Sarum manual provided for it, as did the English Prayer Books of 1549, 1552, and 1559. The rubrics before the Office of Private Baptism in these three books say that baptism is to be administered by laymen only when 'great need shall compel,' but that, if so, they 'that be present' are to 'call upon God for his grace, and say the Lord's prayer, if the time will suffer. And then one of them shall name the child, and dip him in the water, or pour water upon him, saying,' etc. After the Hampton Court Conference, however, as a concession to Puritan feeling, a change was made in the Prayer Book, and since 1604 only an official minister has been explicitly recognized therein. Yet we notice that in the questions directed in the Prayer Book to be asked at private baptism there is a distinction. First they that bring the child are asked by whom he was baptized, and who was present; then 'because some things essential to this Sacrament may happen to be omitted,' the persons are asked with what matter and words the child was baptized. The implication would seem to be that the status of the baptizer is not one of the 'things essential.' Lay baptism has never been forbidden in England, and has been a continuous custom. Hooker has defended its validity, even if administered by women (*Eccles. Polity*, v. 61 f.; this book was first published in 1597), and his great influence has prevailed, though not quite universally, to this day. The English law-courts (in 1809, Kemp *v.* Wickes, and in 1841, Mastin *v.* Escott; see J. H. Blunt and W. G. F. Phillimore, *Book of Church Law*[9], London, 1899) have upheld the same view.

To the Eastern mind the matter has presented itself in a different way. A Western can distinguish between what is irregular and what is invalid, and is accustomed to the saying 'fieri non debet, factum valet.' But an Eastern makes no such distinction; to him 'irregular' and 'invalid' mean the same thing. Quite irrespectively of the validity of the Western Orders, the question has arisen in the East whether Western baptisms are irregular, and therefore (to the Eastern) invalid. To this question the Russian Church has replied No, and has admitted Western, including Lutheran and Calvinist, baptisms since 1718; but the Constantinople Church has replied Yes. On this very complicated subject see W. J. Birkbeck, *Russia and the English Church*, London, 1895, p. 63 n.

**6. The laity in the Church services: churchwardens.**—From the earliest times, as it would appear, the laity had a place of their own in the Christian synaxis, or assembly. Putting aside Justin Martyr's description (*Apol.* i. 65–67), which does not help us here, the first account of the arrangements of the synaxis is in the older *Didascalia* (3rd cent.). In this description the presbyters sat on either side of the bishop, the laymen behind the presbyters, and the women behind them, all apparently facing east (ii. 57; Funk, i. 158, 160). In the corresponding passage of *Apost. Const.* (ii. 57; Funk, 159 ff.), the description is somewhat confused, but it would seem that the bishop and his presbyters here sat (at least at the beginning of the Eucharistic service) behind the altar, facing the west. In this account also the laity sat by themselves, the men in one place and the women in another; the young people and the older people sat separately, the younger women, the mothers, the widows, the virgins, and the elder women all having distinct places. In this work the assembly is likened to a ship, the bishop being the commander, the deacons the mariners, the 'brethren' (the laity, see above, § 1) the passengers—a metaphor still carried out in the word 'nave' for the part of the church where the congregation worship. In the *Test. of our Lord* (i. 19), and also in the derived chapters of the *Arabic Didascalia* (§ 35; Funk, ii. 124), the laymen and the

laywomen sit in separate places. For a somewhat later period see W. E. Scudamore, in *DCA* ii. 915[b].

Now, in the Church Orders (*e.g.*, *Didascalia* and *Apost. Const.*, *locc. citt.*; *Test. of our Lord*, i. 34) the deacons are represented as moving about rather than as having seats, and, in the case of several of them, as keeping order in the assembly, watching the doors, and assigning seats to the different classes. But, as time went on, deacons, who, as the Church Orders show, were constantly pressing their claims (Maclean, *Ancient Church Orders*, p. 69), devolved their duties on sub-deacons and members of the minor orders. At a somewhat later date—though it is not easy to say when—lay officials took over these duties of deacons, and received the name of 'church-wardens.' But their duties were not and are not confined to keeping order in church. They are in the present day charged with the supervision of the church fabrics and churchyards, with seating the people, with parochial church finance, and with the relief of the poor. In Lyndwoode's *Provinciale* (15th cent.) they are called *guardiani ecclesiæ*. The English canons of 1603 call them also 'quest men.' Their assistants are called 'sidesmen' (see below, § 8). In England there are ordinarily two church-wardens in each parish, one usually nominated by the rector or vicar, and one by the parishioners, and these are admitted to office by the archdeacon. For a full account see P. V. Smith in the *Prayer Book Dictionary*, p. 205 f.

**7. Lay preaching.**—It was often discussed in the early ages of the Christian era how far a layman might be allowed to teach or preach in church. The case of the learned Origen (3rd cent.), who was, when still a layman, allowed to do so, caused some misgivings in certain quarters; and J. B. Lightfoot (*Apost. Fathers*, pt. i. 'Clement of Rome,' ii. [1890] 195 n.) remarks that the objections raised in his case show that the practice was rare. Eusebius (*HE* vi. 19), to whom we are indebted for the information, evidently approved of the invitation given to Origen. At the end of the 4th cent. the *Apost. Const.* (viii. 32, near the end) speak approvingly of lay teachers, but the reference is perhaps not to public teaching in church. The *Statuta Ecclesiæ Antiqua* (can. 98) say that a layman may not teach in the presence of the clergy except at their command. The Quinisext or Trullan Council (A.D. 692) decrees that the laity are to be excluded from preaching publicly in religious services (can. 64).

We should gather from the gospel story that among the Jews any layman who had the capacity to give instruction in the synagogue might do so. From the Jewish point of view, our Lord, when He taught in the synagogue service, was a 'lay preacher' (Lk 4[16-32]). So Paul and Barnabas were invited by the Jewish authorities to speak in the synagogue at Pisidian Antioch (Ac 13[15]) and elsewhere. And in the early ages of the Church, when charismatic gifts were common, it is probable that the same liberty was frequently allowed. These charismata included 'the word of wisdom,' 'the word of knowledge,' 'prophecy,' and 'interpretation of tongues' (1 Co 12[8-10]). See, further, J. Wordsworth, *The Ministry of Grace*, London, 1901, pp. 163–166.

There was, however, except among the Montanists and some other sects, a great objection to women preaching. Tertullian, even after he became a Montanist, disliked it; he says:

> 'It is not permitted to a woman to speak in the church, nor yet to teach' (*de Virg. Vel.* 9).

Even the *Test. of our Lord*, which enthusiastically advances the claims of the order of widows, and admits them within the sanctuary in the Eucharistic Service, will not allow them to speak in church (i. 40: 'in the church let her be silent'), though it bids them teach women in private. So the *Apost. Const.* (iii. 6) strongly forbid them to 'teach in church,' and bid them 'pray and listen to the teachers.' The prohibition of St. Paul (1 Co 14[34]; cf. 1 Ti 2[12]) was considered conclusive.

**8. The laity in councils.**—There is a considerable contrast between ancient and modern practice with regard to the position of laymen in ecclesiastical synods or councils. With the growth of the parliamentary conception in the civil State has arisen the organization of corresponding Church Parliaments in which the various orders give a vote on the questions decided, and each has a veto on the decisions of the others. It will be of interest to watch the growth of this conception. In the NT we have the description of two 'councils,' one of which may be called the prototype of the general or ecumenical synods of later days, and the other of the diocesan synods. In Ac 15 we read of a meeting called to discuss a difficult question which had arisen in the Church, whether the Gentile converts to Christianity must keep the Law of Moses—whether, in fact, the only entrance to Christianity was through Judaism. Delegates, including Paul and Barnabas, were sent up to Jerusalem to discuss the question with the 'apostles and elders' (v.[2]), who came together to consider the matter (v.[6]). But others than the apostles and elders were present. The delegates were received not only by them but by 'the church' (v.[4]; see above, § 1), who heard them declare the progress of the gospel. And, when the meeting for discussion took place, 'the multitude' were present (v.[12]). It is not clear what part these 'laymen' took in the proceedings. There was much 'questioning' (ζήτησις) before Peter spoke, and they may have had their share in this. When Paul and Barnabas began to describe the wonderful progress made among the Gentiles, 'all the multitude kept silence' (ἐσίγησε, v.[12]). The aorist would imply that before that they had not kept silence; but whether they had contributed to the debate by speeches or by acclamation does not appear. After Paul and Barnabas had spoken, James, the Lord's brother, who presided over the local church at Jerusalem, summed up the discussion and gave as the finding of the meeting what was clearly the mind of those assembled. Then 'the apostles and the elders, with the whole church,' determined to send chosen men of their own company to Antioch with Paul and Barnabas (v.[22]); but the letter which these 'chosen men' carried ran in the name of 'the apostles and elder brethren' only (v.[23] RV; the AV has a faulty text here). We thus see that laymen (but local laymen, not representatives of other Churches) were certainly present at the Apostolic Council, and perhaps spoke at it, and yet that there was a difference between their position at the meeting and that of the 'apostles and elders' in whose name the decree ran. In Ac 21[18] we have an assembly more closely resembling a diocesan synod of succeeding ages, which was a meeting for discussion between a bishop and his presbyters—though the term 'diocesan synod' is now often used in a different sense. Paul and his companions (including Luke) came to Jerusalem and conferred with James and his 'elders' on further aspects of the question which had been discussed at the Apostolic Council. It seems that on this occasion no laymen were present.

The impression which one receives from Ac 15 is that the apostles determined to carry with them not only the official ministry, but also the whole Christian community. A similar deduction may be made from Cyprian's famous dictum that from the beginning of his episcopate he had proposed to act only after taking the advice (*consilium*) of

the clergy, and the concurring feeling (*consensus*) of the laity (*Ep.* xiv. [v.] 4, 'To the presbyters and deacons'). But modern ideas have been read into this saying. It has been interpreted as meaning that Cyprian disclaimed the power to take any action unless the laity gave their consent. The Latin word *consensus*, however, has not the same sharply defined meaning as our 'consent'; it conveys no idea of voting or of vetoing. Cyprian very rightly determined to carry his people with him in his episcopal rule, and this is the meaning of his expression *consensus*. That this view is just may be inferred from the fact that, if the dictum meant that the laity had the right to veto the bishop's actions, they would have had a higher position than that of the clergy, who had only the right to give advice (*consilium*).

In the provincial councils of the earlier centuries the bishops were the constituent members. But the essence of conciliar action is publicity, and both clergy and laity were present, often in considerable numbers, not only for their own information, that they might learn from the deliberations of the bishops, but in order that they might give information. Those who were qualified to do so, whether clergy or laymen, were brought or invited to the councils. Athanasius was present at Nicæa, in attendance on Bishop Alexander, though only a deacon (Socrates, *HE* i. 8). Eusebius (*Vit. Const.* iii. 8) says that the bishops brought in their train an immense number of presbyters, deacons, acolytes, and other attendants. Yet there is no record in ancient times of either clergy or laity exercising a veto on the bishops' decisions. Their influence was often great, but it was an indirect influence, one wielded not as an exercise of right by a class or an order, but from the qualification of knowledge and experience. They were called in, *e.g.*, to give advice about the lapsed in Cyprian's day (*Ep.* xvii. [xi.] 3, 'To the people'). See, further, art. COUNCILS AND SYNODS (Christian), vol. iv. p. 186 f.; and A. W. Haddan, in *DCA*, art. 'Council' (i. 481 f.).

The opinion of the latter writer is that, while 'bishops were the proper, ordinary, and essential members of a provincial council,' the presbyters 'as a body were consulted, as of right, down to certainly the 3rd century, and not only continued to be present, but were admitted to subscribe in several instances in later centuries.' But he doubts if 'they ever actually voted in a division'; while deacons and laity were often present and sometimes subscribed decrees, 'no proof at all exists that the laity, and no sufficient proof that the deacons, ever voted individually in actual divisions.'

We may notice here a saying of Hooker. He maintains (*Eccl. Pol.* viii. 451) that 'in all societies, companies, and corporations, what severally each shall be bound unto, it must be with all their assents ratified.' But whatever force such an opinion may have as regards the laws of a voluntary society, in matters of religion it is of very doubtful application; even to the laws of a State it can be applied only by somewhat unsatisfactory explanations. In this case it would appear that Hooker is less 'judicious' than usual.

A difficulty in the relation of laymen to synods arises from the fact that synods have so often had to deal with Christian doctrine. To legislate on doctrine is to exercise the office of teaching, and the laity have not, as a class, been commissioned, as the clergy have been commissioned, to teach, even though individual laymen may have been so commissioned (see § 7 above). Had the synods had to deal only with practical questions of Church organization, no doubt laymen would much sooner have been admitted to take a more active share in them.

An early step towards the more modern idea of a Church Parliament was the organization of the English Convocations (also called synods), in which the clerical representatives of the Lower House have a vote or veto on the decisions of the bishops in the Upper House;[1] for, without the concurrence of both Houses, no decision is an Act of Convocation. It is true that the Convocations were first thus fully organized (in the 13th cent.) for fiscal purposes; but, whatever the purpose, the result has been as stated. The addition of Lay Houses of Convocation, as consultative only, is a quite recent experiment.

Since the Reformation there has been a great movement in the West towards giving the laity an equal voice with the clergy in ecclesiastical synods. In Ireland and the British Colonies the Anglican communities have, as a rule, done this. This is also the case in the Presbyterian Communion, in which ministers and 'elders' are admitted to the General Assemblies on equal terms. It has, indeed, been discussed whether these 'elders' are or are not properly laymen, inasmuch as they have received a certain ordination or commission by laying on of hands. Neither the Church of England nor the Episcopal Church in Scotland has gone so far. The position of the laity in the former has been described above. In the latter the provincial synods are composed of the bishops and representatives of the clergy only, the clergy having a veto on the findings of the bishops, and the bishops on those of the clergy; but no legislation can take place without the representatives of the laity having an opportunity of expressing their opinion upon it, and all matters of business organization are dealt with by the Representative Church Council, in which laymen have at least an equal voice with clergymen. In this system a clergyman accused of an ecclesiastical offence can be tried only by his bishop as advised by his fellow-presbyters in diocesan synod—a sort of jury system; and he has an appeal to the 'Episcopal Synod,' which consists of the whole body of bishops.

In the Roman Catholic Communion the laity have no part, as of right, in synods, though they have sometimes been called in to give advice. In the Eastern Orthodox bodies, as will have been seen from what is stated above (§ 4), laymen have often a very considerable share in ecclesiastical councils of some kinds; but questions of doctrine are reserved for the bishops. In this connexion it may be observed that the difficulty, which has so often been felt in the West, of distinguishing questions which are doctrinal from those which are not doctrinal—for so many fall into both categories, according to the aspect in which they are viewed—does not seem to have troubled the more subtle but less logical East.

In connexion with the summoning of laymen to give evidence before synods, mention may be made of the interesting relic in England and Ireland of 'sidesmen' (in the 1603 canons 'sydemen' or 'sidemen'). It was the custom in the Middle Ages for the bishop to summon to his diocesan synod laymen as *testes synodales*, to bear witness to the moral condition of their parishes. The name 'synodsmen' is thought to have been corrupted into 'sidesmen.' Since the Reformation, however, these lay officials have been merely assistants to the church-wardens, and help to keep order in the church (English canon 90).

LITERATURE.—On the general relation of laity to clergy see J. B. Lightfoot, essay on 'The Christian Ministry' in *Philippians*[4], London, 1878, and many later editions (since reprinted in a volume of essays); C. Gore, *The Church and the Ministry*[4], do. 1900; A. Barry, *The Position of the Laity in the Church*, do. 1903; and W. E. Scudamore, art. 'Laity' in *DCA*. On lay baptism see R. Hooker, *Ecclesiastical Polity*, new ed., Oxford, 1843 ff.; J. Bingham, *Scholastical History of Lay Baptism*, London, 1712 (these two writers are in favour of the practice); W. Elwin, *The Minister of Baptism*, do. 1889; D. Waterland, *Letters on Lay-Baptism*, new ed. by F. N. Oxenham, do. 1892 (these two writers deny or doubt the validity of lay baptism); and T. Thompson, *The Offices of Baptism and Confirmation*, Cambridge, 1914, pt. ii. ch. iii. On the laity in councils see E. B. Pusey, *The Councils of the Church*, Oxford, 1857; A. W. Haddan, art. 'Council' in *DCA* (an exhaustive treatise on the subject); and A. Barry, *op. cit.*

A. J. MACLEAN.

**LAKE-DWELLINGS.** — The term 'lake-dwellings' (Fr. *habitations lacustres*; Germ. *Pfahlbauten*; Ital. *palafitte*) is a generic expression to designate those singular habitations which certain peoples were formerly in the habit of constructing, chiefly on fresh-water lakes, and the remains of which are at the present time not infrequently disinterred from ancient lacustrine deposits, either along the shallow margins of existing lakes or on the sites of some of the smaller lake-basins which, in the course of time, have been obliterated by the growth of peat. It is only in comparatively recent times that even the existence of such structures has come to the knowledge of archæologists, but practical researches have already abundantly shown that they were at one time common in many parts of the world, especially in Central Europe and in the British Isles. Herodotus (4th cent. B.C.) describes (v. 16) a lake-dwelling community in Lake Prasias, in Thrace, who lived in huts placed on a wooden platform, supported on tall piles, and connected with the shore by a wooden gangway. Each habitation had a trap-door which gave access to the water beneath; and the lake so abounded with fish that a man had only to open his trap-door and let down a basket by a rope into the water, and, on drawing it up in a short time, he would find it full of fish. But this, and a few other historical notices suggestive of the custom of constructing lake-habitations, failed to disclose the archæological treasures which have lain buried for so many centuries in the ancient lacustrine deposits of nearly all the lake-basins of Central Europe. Now the antiquarian materials collected on lake-dwelling sites are so vast and varied that they hold a prominent position in the principal archæological museums of Europe. To have rescued the evidence of so remarkable a phase of human civilization from oblivion is justly regarded as one of the greatest triumphs of pre-historic archæology. In 1890 the present writer described the *terremare* of the Po valley, the *terpen* of Holland and other analogous structures in Hungary and elsewhere, as mere variants of the lacustrine system of habitation, and, as some remarkable discoveries have since been made in these somewhat obscure fields of research, it is desirable to include a brief notice of them in this article as separate sections.

**I. Lacustrine researches.**—Although the discovery of the remains of pile-structures in Lake Zürich during the winter of 1853–54 is generally regarded as the starting-point of lacustrine archæology, we are not without valid evidence to show that analogous structures, though not so ancient, were known in Ireland fifteen years earlier. It seems that in 1839 curiosity was roused at the Museum of the Royal Irish Academy by the frequency of the visits of a local dealer offering for sale objects of a miscellaneous character, many of which were of rare antiquarian value. These objects were said to have been found in a peat-bog in County Meath, and their assortment in such a place seemed so strange to the Museum authorities that G. Petrie and W. R. Wilde determined to visit the locality. On this expedition they were conducted to the peat-bog of Lagore, near the village of Dunshaughlin, where, within the boundaries of a drained lake and under a thick covering of peat, was an artificial mound then partially exposed by peat-cutters. It seems that this mound had been well known to bone collectors for upwards of ten years; during that time they had dug out and exported to a factory of bone-manure in Scotland no fewer than 150 cart-loads of bones.

The mound was 520 feet in circumference and along its margin were 'upright posts of black oak, measuring from 6 to 8 feet in height; these were mortised into beams of a similar material laid flat upon the marl and sand beneath the bog, and nearly 16 feet below the present surface. The upright posts were held together by connecting crossbeams, and (said to be) fastened by large iron nails.'

An abstract of a paper by Wilde on the Lagore 'find,' from which the above extract is taken, was published in the *Proceedings of the Royal Irish Academy* for 1840, and its contents were so suggestive to local antiquaries that almost immediately several other sites were recognized as island-forts, or *crannogs* (the name given to such structures in the Irish annals). Moreover, during the workings of the Commission of the Arterial Drainage and Inland Navigation of Ireland, no fewer than 22 *crannogs* were brought to light throughout the counties of Roscommon, Leitrim, Cavan, and Monaghan. Reports of these discoveries by the engineers of the Board of Works, with plans, maps, sections, and a large assortment of relics, were deposited at the time in the Museum of the Royal Irish Academy.

The fortuitous circumstances which led to the discovery of the pile-structures (*Pfahlbauten*) of Switzerland are so well known that it is hardly necessary to dwell on them here. It appears that, owing to the lowness of the water in Lake Zürich during the winter of 1853–54, two of the inhabitants of Ober-Meilen, whose vineyards in ordinary times came close to the water in the lake, began to extend their limits by enclosing portions of the exposed shore with a stone wall and filling in the space with the adjacent mud. In course of these operations they came upon the decayed stumps of wooden piles, stone axes, flint implements, and various worked objects of horn and bone, which excited some curiosity among the workmen. J. Staub (*Die Pfahlbauten in den Schweizer-Seen*, Fluntern, 1864, p. 8) informs us that the village schoolmaster, Herr Aeppli, having seen some of the objects with his pupils, went to inspect the locality, and was so impressed with the importance of the find that he sent a brief statement of the facts to the Antiquarian Society at Zürich. Within four hours of the dispatch of his epistle three representatives of the Society arrived at Ober-Meilen, among them being the president, Ferdinand Keller. After careful consideration of the facts, Keller came to the conclusion that originally the piles had supported a platform upon which huts had been erected; that these huts had been inhabited by an industrious population, who were the owners of the stone axes and the other primitive relics disinterred from the mud; and that the lacustrine village had come to an untimely end by a conflagration which destroyed the entire structures down to the water edge.

News of the discoveries at Ober-Meilen spread rapidly among the Swiss people, with the result that an army of explorers immediately began to search for similar remains in other lakes. Guided partly by traditional stories of submerged cities long current among the fishing community, and partly by the knowledge of local fishermen, who, from practical experience of disasters to their nets, could at once point to numberless fields of submerged woodwork, the efforts of these pioneer *lacustreurs* were speedily crowned with success. Keller's first report on the Swiss lake-dwellings, which appeared towards the close of 1854 under the title of 'Die keltischen Pfahlbauten in den Schweizerseen,' at once brought this singular mode of human habitation prominently before the scientific world.

To dredge the bed of a lake with hand-worked appliances in a small boat was a slow process, always expensive, and often unproductive. Yet such was the enthusiasm with which that kind of work was carried on year after year by the Swiss antiquaries that there is scarcely a Cantonal

Museum in the country but contains a valuable collection of lacustrine relics secured in this way. In the course of time, these prosaic methods were powerfully supplemented by the prosecution of various kinds of public works, such as drainage operations, the deepening of harbours, the construction of railways, jetties, etc. Of exceptional importance among such incidental works was the completion of the gigantic operation known as the 'Correction des Eaux du Jura,' which embraced the deepening of the entire waterway of the Jura valley, from the junction of the Lower Thièle with the Aar to the outlet of the Broye at Lake Morat, the result of which was to lower the surface of the lakes of Bienne, Neuchâtel, and Morat from 6 to 8 feet. The permanent effect of these works on the Jura lakes, especially Lake Neuchâtel, was very marked—harbours, jetties, and extensive tracts of shoreland being left high and dry by the subsiding waters. This was the harvest time of archæology. Many of the sites of lacustrine villages became dry land and were visited by crowds of eager relic-hunters; even fishermen forsook their normal avocation, finding it more profitable to fish for pre-historic antiquities.

Another illustration of how public works were utilized for the advancement of archæology was the construction of the splendid bridge which now spans the Limmat at its outlet from Lake Zürich, and the laying out of the adjacent promenades, gardens, and ornamental quays, which occupy what was formerly part of the lake. The filling up of this large area necessitated the use of dredgers, by means of which gravel and mud were raised from the most convenient shallows along the shore and transported as required. Among the localities selected for these operations were the 'Grosser Hafner' and the outskirts of the Bauschanze. The rich loamy deposits of the 'Haumessergrund' at Wollishofen were found to be a suitable soil for the floral gardens. All these localities turned out to be the sites of lake-villages, and yielded an enormous amount of industrial remains of all ages. Indeed, the collection of Bronze Age relics from Wollishofen now deposited in the Antiquarian Museum at Zürich is one of the most valuable hitherto brought to light through lake-dwelling researches.

It is not necessary to notice the successive investigations which have been made throughout Europe in consequence of the publicity given to these discoveries in Switzerland. Suffice it to say that systematic explorations on an extensive scale have conclusively shown that lake-villages, generally in the form of pile-structures, had been prevalent during the Stone and Bronze Ages in the sheltered bays of nearly all the lakes of France, Switzerland, S. Germany, Austria, and N. Italy. More recently the area of their distribution has been extended to Bosnia, Greece, Asia Minor, and probably other localities.

The remarkable development of lake-dwellings during the pre-historic ages in Central Europe seems to have come to a sudden end in the early Iron Age, and so completely had the system fallen into desuetude that scarcely a trace of it has survived in the local traditions of the districts in which such dwellings were most numerous. The habit of constructing houses built on platforms supported on piles is not, however, absolutely confined to pre-historic times, for we find from various books of travel that such habitations are still prevalent in various parts of the world—*e.g.*, in the Gulf of Maracaibo, the mouths of the Orinoco and Amazon, on the Coasts of New Guinea and Borneo, at Singapore, along the creeks and harbours running into the Straits of Malacca, etc. V. L. Cameron (*Across Africa*, London, 1877, ii. 63) describes three villages in Lake Mohrya, in Central Africa, with drawings of their picturesque appearance as seen from the shore. A. Goering (in *Illustrated Travels*, London, 1869–75, ii. 19–21) gives an account of a visit which he paid to the pile-dwellers of a tribe of Goajiro Indians in the neighbourhood of the town of Maracaibo, from which the following extracts may be interesting:

'In this way we reached the Goajiro village. Here a lively scene presented itself. The houses, with low sloping roofs, were like so many little cock-lofts perched on high over the shallow waters, and they were connected with each other by means of bridges, made of narrow planks, the split stems of palm trees. . . . Each house, or cock-loft, consisted of two parts, the pent-roof shelter being partitioned off in the middle; the front apartment served the double purpose of entrance-hall and kitchen, the rear apartment as a reception and dwelling chamber, and I was not a little surprised to observe how clean it was kept. The floor was formed of split stems of trees, set close together and covered with mats. Weapons and utensils were placed in order in the corners.'

Access was got to these villages from the shore by dug-out canoes, the inhabitants mounting to their 'cock-lofts' by a notched tree-trunk, which served as a ladder. Goering states that such villages are numerous along the shores of the great 'Lake,' or Gulf, of Maracaibo. 'The piles on which they rest are driven deep into the oozy bottom, and so firmly do they hold that there is no shakiness of the loftily-perched dwelling perceptible, even when crowded with people.'

Pile-structures are still more numerous in the east Indian islands. J. S. C. Dumont d'Urville (*Voyage de découvertes autour du monde*, Paris, 1836) describes the inhabitants of the bay of Dorei as living on four groups of pile-villages, each containing from eight to fifteen houses entirely constructed of timbers. Some of these houses have a double row of cells or cabins, separated by a passage which runs from end to end, and give accommodation to several families.

As early as 1860, F. Troyon (*Habitations lacustres*) quotes from the books of a number of travellers recording the existence of pile-structures in nearly all parts of the world; but little further information is to be derived from this class of evidence.

The discovery of an older lacustrine civilization in Switzerland was hailed by Irish antiquaries with the greatest enthusiasm, for it was only then that the significance of their own *crannogs* came to be fully realized; and henceforth *crannog*-hunting was pursued with renewed vigour. The Irish annals were now carefully searched for references to *crannogs*, and many of the localities thus indicated were identified and partly explored. In 1857 Wilde published the first part of his well-known catalogue of the antiquities in the Museum of the Royal Irish Academy, in which he gave an excellent account of the *crannogs*. In it he states that 46 were known up to date, and predicts that many more would come to light as the drainage of the country advanced—a prediction which has been amply verified, as every succeeding year has seen an increase to their number. Now the total number of Irish *crannogs* known and more or less explored is upwards of 200.

In 1857 Joseph Robertson read a paper on Scottish *crannogs* at the Society of Antiquaries of Scotland. The chief facts adduced by him consisted of historic references to island-forts, and submerged wooden structures exposed in the course of the drainage of lochs and marshes during the last two centuries. The first great discovery, however, which brought the subject on the field of practical research in Scotland, was made in the Loch of Dowalton, Wigtownshire, upwards of fifty years ago. In order to drain the extensive meadows occupying the western portion of the Dowalton valley the proprietor, William Maxwell, conceived and successfully carried out a project of draining the loch by cutting a new outlet through a narrow lip of rock which separated its waters from the lower grounds beyond. This excavation was completed during the summer of 1863, and, as the waters subsided, a group of five or six artificial islands gradually emerged from the bosom of the lake. The antiquarian remains collected on these islands ultimately disclosed a picture of early Scottish civilization hitherto unknown.

A descriptive account of the Dowalton *crannogs* was read by the Duke of Northumberland (then

Lord Lovaine) at the meeting of the British Association held at Newcastle-on-Tyne in 1863.

Two years later J. Stuart, secretary of the Society of Antiquaries of Scotland, visited Dowalton, and, owing to the more complete drainage of the loch, was enabled to examine the islands under more favourable conditions. The result of his labours was an elaborate paper to the Society (1866), in which he gave a detailed account of their structure and of the relics found on them.

The discovery and excavation of the Lochlee *crannog* (1878–79) was the beginning of a series of explorations, conducted under the auspices of the Ayr and Galloway Archæological Association, which culminated within a few years in the excavation of about half a dozen typical *crannog* sites throughout the counties of Ayr and Wigtown. The assortment of relics recovered from their débris indicates the range of their occupancy to have extended from the Romano-British period down to mediæval times. Since the publication of the reports on these excavations three other typical *crannogs* have been investigated in Scotland, viz. one in Lochan Dughaill, Argyllshire, one at Hyndford, near Lanark, and one in Ashgrove Loch, near Stevenston, Ayrshire. The Hyndford *crannog* is of special interest on account of the number of objects belonging to Roman civilization which were among its relics.

Until the discovery of the Glastonbury lake-village, in the spring of 1892, by Arthur Bulleid, the recorded indications of lake-dwellings south of the Scottish border are too meagre and fragmentary to call for any notice in this sketch. The excavation of the Glastonbury settlement has been in progress since its discovery, and is now completed. Its site occupies some 3 or 4 acres of flat meadow-land, within the boundaries of what is justly supposed to have been formerly a marshy lake. Before excavations were begun, all that the eye could discern was a group of low mounds huddled in the corner of a field. These mounds turned out to be the sites and débris of dwelling-huts resting on a foundation of layers of brushwood and the stems of small trees. These under-structures were sometimes bound together with transverse mortised beams, precisely similar to those so commonly met with in the Scottish and Irish *crannogs*. A thick palisading of piles and brushwood surrounded and protected the village. Its marginal boundary was very irregular, probably owing to the fact that enlargement of the original area of the village had been subsequently made by the addition of huts projecting from its sides. The huts were circular or slightly oval, and varied in size from 20 to 35 ft. in diameter. Each hut contained a central hearth, sometimes neatly made of flat stones embedded in the clay flooring which existed in all of them; and, as subsidence, due to the compression and decay of the under-structures, progressed, the occupants superadded new clay floorings, which on section showed a well-marked stratified appearance. Several hearths, five or six not being an unknown number, were thus observed to have been superimposed one above the other—precisely as was the case on the Lochlee *crannog*.

The relics collected on the site of this remarkable lacustrine village are so numerous and varied that they illustrate, with rare and singular completeness, the life-history of the community who inhabited it. They exhibit the special characteristics of 'Late Celtic' art, as it existed prior to the spread of Roman civilization in that part of Britain; and it is this fact that gives the Glastonbury collection an exceptional importance among the antiquarian remains hitherto discovered within the British Isles.[1]

[1] Within the last few years another lacustrine village has been discovered at a place called Meare, about two miles from Glastonbury, and is now in the course of being excavated during each summer. So far, both the structural and cultural relics disclosed at this new site are precisely similar to those of the Glastonbury village.

**2. Structure of lake-dwellings.**—It will be understood from the foregoing remarks that the structural details of lake-dwellings have to be gathered more or less from different, and sometimes widely separated, settlements, and re-constructed on the principles of comparative archæology. As regards the pile-structures of the Stone and Bronze Ages, everything—huts, platforms, and even the submerged piles, except their lower ends—has disappeared ages ago, either from natural decay or by conflagrations. The complete destruction of a lake-village by fire was by no means a rare catastrophe, and, strange to say, it was, from an archæological point of view, the most fortunate termination that could have happened to it. During the bustle and scrimmage consequent on the conflagration of such combustible materials not only did many articles of value drop into the water beneath, but some of the most perishable commodities, such as grain, fruits, bread, cloth, portions of the clay mouldings which covered the cottage walls, etc., were more or less charred before being deposited in the lake-silt—a condition which rendered them less liable to decomposition. It is by collecting, assorting, and comparing such fragmentary materials that archæologists are enabled to form some idea of the appearance and internal structure of these lacustrine villages, as well as of the culture, civilization, and domestic economy of their inhabitants.

The preliminary problem which had to be solved before habitable huts of any kind could be erected was the construction of a level platform, sufficiently elevated above the surface of the water to place the dwelling-huts beyond the action of the waves and floods. The methods adopted to secure this end may be briefly described.

(*a*) One method was by driving long piles of wood into the bed of the lake, leaving their tops projecting at a uniform height above the water, and then placing over them transverse beams with mortised holes, into which the tops of the piles were fitted—thus forming a platform capable of supporting human habitations, and, of course, varying in size according to the requirements of the community. That the earliest lake-dwellers had the requisite skill to accomplish such work is established beyond doubt by the discovery among the débris of nearly all the stations of mortised beams, tenons, portions of wood containing both round and square holes, together with a various assortment of wooden implements, vessels, etc. A common method of steadying the piles was to throw around them after being placed in position large quantities of stones. The stones were transported from the adjacent shore in canoes, one of which, still containing its load, was actually observed buried in the mud off the Ile de St. Pierre, in Lake Bienne, where it had evidently been swamped. These extensive collections of stones formed here and there a kind of submerged mound, which from time immemorial was locally known as a *Steinberg*. One or more of these *Steinbergs* have been found on almost all the sites of the pile-villages of the Stone Age. The long straggling settlement at Schaffis contained three, the largest measuring 217 ft. in length by 65 ft. in breadth. The fishermen, in order to prevent injury to their nets, were in the habit of pulling up these piles; and so abundant were they in the three great lakes known as the 'Jura waters' that they had become the source of a small industry among cabinet-makers, who had long recognized the valuable properties of the black oak for the manufacture of ornamental articles. A more striking appearance has rarely been seen than that which the stations of Möringen and Lattringen presented shortly after Lake Bienne became affected by the operations of the 'Correction des Eaux du Jura.' Photographs then taken show quite a forest of black stumps rising a few feet above the muddy bottom which then, for the first time, became exposed to view.

It is estimated that the actual number of piles used in the construction of some of the larger settlements was not far short of 100,000. One of the stations at Morges, in the lake of Geneva, was 1200 ft. long and 150 ft. broad; and the whole of this area was thickly studded with the stumps of the piles which formerly supported the village. E. von Fellenberg calculated, by counting the number of piles in one or two selected localities, that the entire number requisite for the Bronze Age settlement at Möringen could not have been less than 10,000.

In the construction of the earlier villages the piles were simply round stems of trees, but latterly, apparently for the purpose of economizing the wood, they were split into two and

sometimes into four portions—a structural feature said to be characteristic of the Bronze Age. It may also be noted that, when a Stone Age site continued in occupation during the Bronze Age, the débris of the latter settlement lay invariably on the outside of the former, showing that with the use of metal tools their constructors were enabled to plant the piles in deeper water. During the Stone Age the woodwork had been manipulated by stone implements—a fact which was clearly demonstrated by Keller on the occasion of the first discovery of the kind at Ober-Meilen. Here some of the piles, on being freshly pulled up, were observed to have their tips pointed by blunt implements, and it was experimentally ascertained that the cuts on them could be closely imitated by using the stone axes which were picked out of the surrounding mud.

(b) A second method by means of which lake-dwellers secured an adequate basis for their huts was to construct a series of rectangular basements of wood a few feet apart, each basement having its sides formed by a succession of horizontal beams lying one above the other, like the logs in a Swiss châlet. The ends of the beams overlapped for a few feet, and at the four crossings a few uprights were placed, apparently for the purpose of steadying the structure. These compartments varied in size from a few feet in diameter to as many yards. The lowest beams rested on the bed of the lake, and, when the requisite height above the water was reached, transverse beams to form the habitable platform were laid across, thus covering up the empty spaces underneath. This plan, which was probably selected for the purpose of saving the structural materials, may be regarded as analogous to the vaulted foundations of modern houses. Examples of such structures have been found in Lake Paladru in France (Merovingian period) and in the lakes of Persanzig, Arys, Daber, and in a few other sporadic lake-dwellings of the Iron Age in N. Germany.

(c) Contemporary with the pre-historic pile-structures already noticed, there existed throughout the same regions of Central Europe certain lake-dwellings which, instead of platforms supported on piles, had solid sub-structures composed of closely set timbers arranged in horizontal layers and often alternating with beds of clay. Such structures were commonly erected in the smaller lakes, and their remains are now generally embedded in peat. Characteristic specimens of this class belonging to the Stone Age have been investigated at Wauwyl, Niederwyl, Schussenried, and a few other localities. An artificial island in the lake of Inkwyl, near Soleure, was shown by C. A. Morlot to have been originally a pile-structure which at a later period had become consolidated into an island by the gradual accumulation of the débris of a lengthy habitation. Another in Lake Nussbaumen is, according to Morlot, surrounded by a circle of piles, after the manner of the Scottish and Irish *crannogs*. It has also been proved that the prettily wooded Isola Virginia in Lake Varese, though now about three acres in extent, was originally a pile-structure. At present it contains several buildings, one of which is a valuable archæological museum erected by the proprietor, Ettore Ponti.

It was, however, within the British Isles that the artificial islands, or *crannogs*, acquired their greatest development. Precise information as regards their structure has been supplied by an exhaustive investigation of a few Scottish specimens, notably those at Lochlee and Buston, in the county of Ayr, the result of which may be briefly summarized as follows.

A suitable locality having been selected—the topographical requirements seem to have been a small mossy lake with its margin overgrown with water-plants—the next consideration was the selection of materials for constructing the island. In a lake bed composed of many feet of decayed vegetable matter it is manifest that heavy substances, such as stones and earth, would be inadmissible, owing to their weight, so that solid logs of wood in the form of trunks of trees would be the best material that could be used. The plan adopted seems to have been to make in the first place a floating raft of tree-stems, brushwood, heather, bracken, etc., with which were mingled stones and earth. On this basis they continued to add similar materials until the mass grounded. It was then surrounded with a stockade in the form of one or more circles of piles united by intertwining branches, or, in the more elaborately constructed specimens, by horizontal beams with mortised holes to receive the ends of the piles. Those horizontal beams were arranged in two ways. One set ran along the circumference and bound together all the uprights in the same circle, while others took a radial direction and connected each circle together, some of these radial beams being long enough to bind the uprights in three circles together. The mechanical skill displayed in the construction of these stockades was specially directed to give stability to the island, and to prevent superincumbent pressure from causing the general mass to bulge out laterally.

The internal structure of the Lochlee island was carefully ascertained by cutting a large rectangular hole near its centre down to the original silt of the lake—a depth of some 10 ft. from the lowest floor of the dwelling-house, or about 16 ft. from the original surface of the mound. The result of this was to show that nearly the entire mass was composed of the unbarked stems of various kinds of trees, from 6 to 12 ins. in diameter, laid in transverse layers one above the other. Interspersed here and there among the woodwork were some long slender oak planks, which appear to have formed a binding framework between the central parts of the island and its margin. One such beam, on having its attachments traced out, was found to have its inner end pinned by a long wooden peg to an adjacent large tree-stem, while its outer end was pinned to another slender oak plank which extended outwards and was similarly attached to the marginal structures.

Some of these *crannog* islands in Scotland and Ireland had been constructed of stones with or without a wooden foundation. According to G. H. Kinahan, the largest and most typical example of the stone *crannog* in Ireland is Hag's Castle, Lough Mask, Co. Mayo. As a Scottish example may be cited a mound on the margin of the White Loch of Ravenstone, Wigtownshire, explored a few years ago by Lord Borthwick and the present writer. It turned out to be a mass of stones, presenting a level surface of about 80 ft. in diameter and 6 or 7 ft. thick, resting on a foundation of large beams. On the surface of this mound were the foundations of stone buildings divided into five compartments.[1]

Most of the pile-structures of Central Europe had been connected with the shore by one or more gangways, supported on a double row of piles, with dimensions varying according to the requirements of each village. E. von Fellenberg informs us (Keller, *Lake-Dwellings*, p. 181 f.) that the bridge leading from the shore to the Bronze Age settlement of Möringen was about 200 yards in length, and nearly 20 ft. in width, while that to the Stone Age settlement in the same locality was considerably shorter, and only 5 to 8 ft. wide. The area occupied by piles at Robenhausen extended to about 3 acres, and the nearest point of the old lake shore was some 2000 paces distant; but yet, from traces of piles found in the peat, it would appear that a wooden bridge traversed the whole of this distance. Remains of similar approaches have occasionally been discovered in connexion with the later dwellings of the Iron Age, both in N. Germany and in the British Isles. Some of the Scottish and Irish *crannogs* were also accessible by a submerged stone causeway, the existence of which had become known in some instances only upon the drainage of the lake. It has been conjectured that such submerged approaches might have been intentionally constructed so as to supply to the initiated a secret means of escape in emergencies—an idea strengthened by the zig-zag direction presented by some of them, such as a stone causeway in the Loch of Sanquhar. Other *crannogs*, however, appear to have been completely insulated and accessible only by boats. The frequency with which canoes have been disinterred from the débris of lake-dwellings of all ages shows how prevalent and widely distributed was their use as a means of communication with the shore. These primitive boats, whether emanating from a Swiss *Pfahlbau* or from a mediæval *crannog* of the British Isles, were almost invariably dug-outs, and presented no special feature either in form or in structure by which their age or provenance could be determined.

The evidential data, on which our knowledge of the structure of the actual habitations of the lake-

[1] During the last few years a preliminary survey of the artificial islands in the Highland lochs, preparatory to excavating the more promising sites, has been completed by F. Odo Blundell of St. Benedict's Monastery, Fort Augustus, under the auspices of a Committee of the British Association. Several interesting reports have already been published by the Association, as well as in the *Proceedings of the Society of Antiquaries of Scotland*. For the year 1914 a small grant has been obtained from the Carnegie Research Fund towards the expense of investigating the artificial island in the Loch of Kinellan, Ross-shire.

dwellers is founded, consist of portions of burnt clay mouldings, the position of hearths and culinary implements, traces of walls and partitions, the disposition of food refuse, etc. The inference from the clay castings is that the timbers which formed the walls of the huts had been placed close together in an upright position, and then plastered over with puddled clay. Burnt clay impressions found at Robenhausen indicated timbers about an inch and a half in diameter, but other fragments indicated merely a kind of wicker-work. It may be noted that clay mouldings found in Lake Bourget, supposed to have been portions of the ceiling of a room, were ornamented with concentric circles and parallel lines. Other burnt fragments from the same locality were portions of the funnel of a small furnace or stove.

As to the form of the huts archæologists are divided in opinion, some, in their ideal restorations, figuring them as circular, and others as rectangular. F. Troyon, judging from some clay casts found at Wangen, came to the conclusion that they were circular, and, accordingly, figures them as such in his *Habitations lacustres*. On the other hand, E. Frank, the investigator of Schussenried, came upon the foundations and portions of the walls of a cottage embedded in peat. The structure was rectangular, measuring 33 ft. in length and 23 ft. in breadth, and was divided into two compartments by a partition. The walls and partitions were constructed of split stems of trees set upright, and plastered over with clay. On the south side there was a door, a little over 3 ft. wide, which opened into one of the chambers. The flooring of both these chambers was composed of four layers of closely laid timbers separated by as many layers of clay. These repeated floorings may have been necessitated by the gradual rise of the surrounding peat, which ultimately compelled the inhabitants to abandon the dwelling altogether.

The diameter of the circular area enclosed by the stockades at Lochlee was about 60 ft., and in its central portion there was a space, measuring 39 ft. square, paved with closely laid beams like railway sleepers, and along each of its sides were the stumps of posts, apparently the remains of a wooden wall. A row of similar stumps divided the paved area into two compartments. Five or six superimposed hearths occupied the middle of the northern compartment, and the doorway, clearly defined by portions of two stout posts, was situated on the south side, while facing it on the left was an immense refuse heap, beyond which were the remains of a gangway connecting the island with the shore. On the other hand, the structural remains on the Buston *crannog* indicated one large circular dwelling-house, a form of habitation which was also disclosed by the excavation of the *crannog* in Lochan Dughaill. We have already seen that the huts of the Glastonbury lake-village were more or less circular. It may, therefore, be inferred that both forms were indiscriminately used by the lake-dwellers not only during the prehistoric period, but also during the subsequent ages in which such structures were in vogue.

On the pile-structures proper the hut floor was made of clay mixed with rushes, and over this was placed the hearth, which consisted of a few flat stones embedded in clay. From discoveries made at Niederwyl, Jacob Messikommer (Keller, *Lake-Dwellings*, p. 73) concluded that the roofs of the huts in that settlement were thatched with straw and rushes. That thatch of some kind was used in Western Europe in proto-historic times finds some corroboration in the writings of classical authors.

Thus, Strabo (iv. iv. 3) writes that the Belgæ lived in 'great houses, arched, constructed of planks and wicker-work, and covered with a heavy thatched roof'—a description which correctly applies to many of the Scottish *crannogs*.

**3. Culture and civilization of the lake-dwellers of Europe.**—There is no class of antiquities which gives greater support to the general accuracy of the chronological sequence of the so-called three ages of Stone, Bronze, and Iron than the various collections of lake-dwelling remains which are to be seen in the archæological museums of Europe. Founded in the Stone Age, these pile-structures continued to flourish during the whole of the Bronze Age, and even overlapped into the early Iron Age, so that the period of their duration entirely covers the introduction and development of bronze into Middle and Western Europe. It is beyond doubt that from the very start the lake-dwellers were acquainted with, and sedulously practised, various arts and industries, that they reared most of the ordinary domestic animals, and that they cultivated the growth of flax, fruits, and various kinds of cereals.

Several varieties of cloth, fringes, nets, cords, and ropes were brought to light by Messikommer from the very lowest relic-bed at the Stone Age station of Robenhausen; and even specimens of embroidery were found at the adjoining station of Irgenhausen. Remains of linen cloth, thread, nets, basket-work, etc., have also been found on many other stations, as at Vinelz, Locras, Schaffis, Lagozza, Laibach, etc. The absence of such fragile relics from other stations is not to be taken as evidence that their inhabitants were unacquainted with such industries; for it is only when fabrics are carbonized, or deposited in circumstances exceptionally favourable to their preservation, that they resist for a prolonged period the process of natural decay. Thus, at Schussenried, though there was no actual specimen of cloth found, the impression of a well-woven fabric was clearly visible on a consolidated mass of wheat—probably that of the sack in which the grain had been stored. At Laibach, a similar impression was observed on a fragment of pottery. In the museum at Freiburg (Switzerland) there is a carbonized spindle from Lake Morat, which shows fine threads still coiled round it; and Gross figures a similar object from Locras.

One of the stations at Moosseedorf-See, which was carefully investigated by the experienced archæologists Jahn, Morlot, and Uhlmann, yielded a large assortment of the osseous remains of animals, among which the following were supposed to have been in a state of domestication: dog, sheep, goat, pig, and various kinds of oxen. A few bones and teeth of the horse were also found, but these might have belonged to the wild species, as it is not agreed that this animal was domesticated till the Bronze Age. The cultivated plants recorded from this station were barley, two kinds of wheat, pea, poppy, and flax. At Wangen two varieties of wheat and the two-rowed barley were distinctly recognized both in whole ears and as detached grain—the latter in quantities that could be measured in bushels.

That the ceramic art was well known to, and practised by, the early lake-dwellers is amply proved by the quantity of pottery, mostly fragmentary, indicating bowls, plates, cups, jugs, spoons, and large vessels, now stored among lacustrine relics in the various museums throughout Europe. These vessels were made without a knowledge of the potter's wheel, and the paste frequently contained coarse sand or small pebbles; but a finer kind was also used for the manufacture of smaller vessels. Generally speaking, they were coarsely made in the earlier stations, having perforated knobs instead of handles; yet examples are occasionally found which show that handles

were not unknown. The ornamentation consisted of finger- and string-marks, irregular scratchings with a pointed tool, raised knobs, and perforations round the rim, together with dots and lines variously combined.

For the prosecution of the ordinary avocations of social life the lake-dwellers were in possession of a varied assortment of tools and implements, the precise function of some of them being, however, difficult to determine. They used axes, knives, saws, scrapers, borers, etc., of flint and other hard stones. Cutting instruments, pointers, chisels, etc., were also made of horn, bone, and the tusks of the wild boar. With such tools they constructed wooden houses, scooped out canoes, and shaped wood into various kinds of dishes, clubs, and handles.

The food supply derived from agriculture and the rearing of domestic animals was supplemented by the produce of hunting, fishing, and gathering such seeds and fruits as nature produced in the vicinity. The weapons and tools used in these pursuits are abundantly met with. Arrow- and spear-points of flint, and sometimes of rock-crystal and jade, or other mineral, and of bone, are common among lake-dwelling remains; and even a few of the bows made of yew wood, notwithstanding their liability to decay, have come to light—two from Robenhausen, and one from each of the stations of Vinelz, Sutz, and Clairvaux.

The introduction of cutting implements of bronze into general use among the lake-dwellers gave a great impulse to the advancement of all the industries and ordinary affairs of life. In lieu of the primitive weapons and tools previously in use, we now meet with a splendid array of swords, daggers, lances, axes, knives, razors, chisels, gouges, sickles, etc., all made of the new material. The simple dagger of bone or flint, which could be used only by a thrusting blow, not only became more effective, but developed into a new weapon—the double-edged sword. Indeed, all weapons, implements, and ornaments underwent more or less evolutionary improvements, the various stages of which can be readily traced by a comparison of extant specimens. Thus, the primitive stone axe at first retained the same form in bronze, and, as such, had a wide distribution throughout Europe; but it gradually succumbed to the flanged type, with or without a loop, till finally all forms gave way to the socketed implement, which appears to have been regarded as the best form of axe prevalent in the Bronze Age. It was only when iron superseded bronze in the manufacture of cutting implements that the modern type of axe, *i.e.* with a transverse socket, came into general use.

In the category of ornaments and articles of the toilet there falls to be considered a large assortment of new and fanciful forms, such as bracelets, pendants, necklaces, fibulæ, pins, combs, belt-clasps, finger-rings, buttons, studs, ear-rings, chains, and a few trinkets of gold, amber, and glass.

That the horse was in a state of domestication among the lake-dwellers during the Bronze Age we have very circumstantial evidence, in the discovery of bridle-bits and various ornaments for harness, as well as a wheel and other mountings of a carriage.

These progressive innovations in domestic and public life could hardly fail to influence the art of the potter. Accordingly, we meet with a better quality of paste, greater variety and elegance in the style and form of vessels, and some approach to systematic decoration. Ultimately colouring materials were utilized, which considerably enhanced the effect of the geometric style of ornamentation. Besides patterns of recurring figures, formed by impressions in the soft clay, we occasionally find similar patterns traced on the surface of vessels in thin strips of tin-foil made to adhere to the dish by means of a kind of gum or asphalt. Such vessels were made of fine black paste, with a smooth surface, and were extremely elegant in shape.

Lacustrine archæology does not supply the materials requisite for a review of the culture and civilization prevalent in the early Iron Age, as no lake-dwellings have been discovered showing a transition in the manufacture of bronze and iron objects. Iron appears in a few instances, towards the close of the Bronze Age, as in ornamental bands encrusted on a few swords and bracelets, but there are no tools or weapons of the transition stage, such as was the case at Hallstatt, where iron is seen, as it were, competing with bronze in the manufacture of all kinds of objects. On the contrary, the few objects of iron found on the sites of one or two of the Swiss lake-dwellings are mostly La Tène types, which, of course, are very different, not only in material, but in form and technique, from those of the previous age. On these stations not only were iron objects of La Tène forms found, but also Roman tiles, pottery, and coins. The introduction of iron into general use in Europe seems, therefore, to have been the work of an alien people who subjugated the lake-dwellers and destroyed their villages. On the other hand, the sporadic lake-dwellings found outside the area of these earlier habitations belong almost exclusively to the Iron Age, and their respective inhabitants had no common bonds of affinity. The vast majority of the Scottish and Irish *crannogs* flourished from the Romano-British period down to the 17th cent.—a statement which, according to R. von Virchow ('Die Pfahlbauten des nördlichen Deutschlands,' *ZE* i. [Berlin, 1869]), is applicable to their analogues in N. Germany.

The well-known station of La Tène, regarded by the earlier *lacustreurs* as a true lake-dwelling of the Iron Age, is now shown to have been an *oppidum*, or fort, of the Helvetians, erected at the outlet of the lake when its waters stood at a lower level than they did immediately before the 'Correction des Eaux du Jura.' The remarkable assortment of weapons, implements, and ornaments collected from this site gives a striking picture of the metallurgical skill to which their owners had attained prior to the influence of Roman civilization in Gaul. The style of art disclosed by them seems to be closely allied to that known in Britain as 'Late Celtic,' as represented, *e.g.*, by the relics found on the Glastonbury lake-villages; and so important is this group considered by archæologists that the name 'La Tène' has become a generic expression for those well-defined Marnian remains which are Celtic in origin, and are not to be confounded with those classified as Greek, Roman, Etruscan, or Phœnician.

4. **Terremare.**—Shortly after the middle of the 18th cent. certain artificial mounds of an earthy substance found scattered here and there over some of the eastern provinces of the Po valley became known to agriculturists as possessing great fertilizing power—a property which was henceforth turned to account by using their contents as a field manure. To such an extent has this practice been carried on that, out of about 100 sites then known, few now remain. On the removal of a few feet of surface soil the fertilizing materials come to view in the form of stratified deposits of clay, sand, ashes, etc., of various colours—yellow, brown, green, and black—shown conspicuously on section as parallel bands running across the mound. The finer materials, procured by riddling, are sold to the farmers under the name *marna* or *marne*;

and hence these mounds are now known in scientific literature as *terremare*. In course of these annual excavations a number of antiquarian objects were encountered by the workmen, such as fragments of pottery, Roman coins and tiles, implements of bronze, bone, and horn, the bones of domestic and wild animals, and occasionally those of men. These discoveries for a long time failed to lead to any scientific investigation, and, when the mysterious mounds happened to be noticed by the early writers of last century, each had a theory of his own to account for them. The celebrated naturalist G. Venturi (1822) assigned them partly to the Boii, a Celtic race who here cremated their dead warriors and ceremonially threw their weapons and animals taken in war into the burning pile, and partly to the Romans who subsequently inhabited the country and selected these mounds as burial-places. Others supposed them to have been the sacred and traditional cemeteries of successive races, and hence their contents were called cemetery-earth (*terra cimeteriale*); and it is a curious fact that many of these truncated mounds are to this day crowned by a modern church or convent, around which the Christians have been in the habit of burying their dead. B. Gastaldi thought the stratification of the deposits could be accounted for only by the intervention of floods and inundations, such as the annual overflowings of the Po and the bursting of the numerous torrents which descend from the Apennines.

These and similar theories, based on the supposition that the *terramara* mounds were the abodes of the dead, were not, however, in harmony with the domestic character of the pottery and industrial implements which were turned up. The starting-point of a long series of researches which ultimately solved the problem was the announcement, in 1861, of P. Strobel that the remains of a *palafitte*, analogous to those found in lakes and peat-bogs, were to be seen below the true *terramara* beds at the station of Castione dei Marchesi, near Borgo San Donnino, in the province of Parma. This discovery aroused much speculative interest, especially when correlated with the researches initiated by B. Gastaldi regarding pile-dwellings in lakes and marshes, the existence of which, in Italy, had just then been proved by the discovery of their remains in the peat-bog of Mercurago and in Lake Garda.

Reflecting on these novel revelations, Strobel and Luigi Pigorini, both then residing at Parma, began a series of investigations regarding the *terremare* in their own vicinity, the outcome of which was a joint report, first published in 1862 as part of Gastaldi's well-known work, *Nuovi cenni sugli oggetti di alta antichità trovati nelle torbiere e nelle marniere dell' Italia*.[1]

Interest in the whole subject now rapidly increased, and extended to agriculturists and local observers. Yearly excavations were carefully scanned for antiquities, and special excavations in the interests of science were even undertaken by the State. The outcome of these elaborate researches has been to show that a typical *terramara* settlement was virtually a land *palafitte*, trapezoidal in shape (with two sides always parallel), and orientated—the degree of orientation being dependent on the direction of the sunrise when the settlement was founded. In their construction one uniform plan was adopted.

Having selected a site suitable in size to the requirements of the community, the constructors proceeded to surround it with a moat, the excavated materials being thrown up in the form of a dike or rampart on the inner bank. The inside edge of this dike was then lined with a series of small rectangular enclosures made of horizontal beams laid one above the other, as in a Swiss châlet. The beams, which were roughly hewn and partially mortised at the points of crossing, projected irregularly beyond the enclosed spaces, some extending as far as the adjacent compartments. The interior of these log-houses was then filled with rubbish—clay, gravel, pottery, bits of wood, etc. From special investigations conducted at Castione, Pigorini came to the conclusion that the purpose of this curious structure was to support the inner side of the earthen dike (*contrafforte dell' argine*), and so give it a perpendicular facing. The area thus enclosed was then thickly planted with stakes, the tops being brought to a common level, and over them a wooden platform was laid. On this platform, huts, made of light timbers and plastered over with clay, were erected. Thus, in a very simple manner, was constructed a fortified village, access to which was secured by a wooden bridge spanning the surrounding moat. The vacant space beneath the common platform became a convenient receptacle for all sorts of refuse, including lost and worn-out objects of industry. When, in the course of time, the space became filled up, the *terramaricoli*, in order to avoid the labour of removing the débris which would have accumulated around them, adopted the ingenious plan of constructing a brand-new platform above the former. It seems that, in some instances, a preliminary step to the carrying out of this project was to set fire to the entire village, thus at one coup getting rid of all sanitary difficulties as well as of a number of uninvited guests. Having started *de novo* with a clean bill of health, they elevated the surrounding dike to the requisite height, and planted stakes, as formerly, over the habitable area for the support of the new platform. This mode of procedure appears to have been repeated over and over again, until in the course of time the successive deposits accumulated to a height of 15 or 20 feet.

Of subsequent discoveries the most remarkable were the result of systematic excavations on the *terramara* of Castellazzo di Fontanellato, in the province of Parma, conducted by Pigorini at suitable intervals during the summers of 1888 to 1896.

In this station the surrounding moat was 30 metres wide and 3½ deep below the original level of the plain. It was kept supplied with water from a neighbouring stream by an artificial canal, and in another part there was an overflow canal only half a metre in depth, so that water always remained in the moat to a depth of 3 metres. Along the inside of the moat there was a rampart, 15 metres broad at the base, having its outer side sloping and its inner side vertical—being kept in this position by a *contrafforte*. Although the woodwork of this structure had almost entirely decayed, there was no difficulty in recognizing that it was similar to that of Castione, already described. The only access to the interior was by a wooden bridge, from which the main street, 15 metres wide, extended midway between the two parallel sides of the fort. Along the middle of the east rampart and a little to its inside, there was a raised mound of earth, 100 metres long and 50 broad, surrounded by a moat and a *contrafforte*, and crossed by three bridges. This was the citadel of the village, and within it was an open trench, at the bottom of which were five rectangular pits in a row, each of which had been covered with a wooden lid. These receptacles are supposed to have been for ritual purposes, and are regarded by Pigorini as the prototypes of analogous pits found in Roman camps, such as those described by M. Jacobi of Homburg as occurring in the *Limes Germanicus*. Facing the middle bridge of the citadel, another street, but only half the breadth of the former, ran across the settlement, at right angles to the main street. Pigorini has also pointed out that these two intersecting streets are virtually the same as in a Roman camp, with its *cardo maximus* and *decumanus maximus*. Other streets ran parallel to the two main roadways, and thus divided the whole habitable area into rectangular divisions of equal size. All the spaces formed by the intersection of the streets contained traces of the piles which had supported the wooden platforms on which the huts had been erected.

Among the more important results of the investigations at Castellazzo was the discovery of two cremation cemeteries containing vases with calcined bones. One, situated near the south-east corner of the village, was of a square shape, each side measuring 165 metres. On being examined, this necropolis turned out to be a veritable pile-structure, having rows of cinerary urns placed close together, not, however, on the ground, but on a wooden platform. It was surrounded by a moat, 10 metres broad and 1·60 metres in depth, from which it would appear that the houses of the dead were constructed on the same plan as those of the living.

The station of Castellazzo was by no means a newly discovered site when Pigorini began his investigations, as its fertilizing earths were excavated by the peasants from time immemorial. The relics

[1] This work was translated into English by C. H. Chambers under the title of *Lake Habitations and Pre-historic Remains in the Turbaries and Marl-beds of Northern and Central Italy*, and published in 1865 by the Anthropological Society of London.

found on it from time to time had not been carefully collected, but nevertheless a goodly number had been sent to the museums of Parma and Rome. They are similar to the ordinary relics characteristic of the *terremare*, such as pottery (including the famous *ansa lunata*), loom weights, terra-cotta figurines of animals, and various objects of deer-horn, together with an assortment of Bronze Age implements, weapons, and ornaments.

The opinion of Pigorini and other Italian authorities is that the original lake-dwellers came into Italy from the great highway of the Danube by way of Croatia, Carinthia, and Venetia. On reaching the Po valley, they founded settlements in the lakes of Garda, Fimon, Arquà, and others during the transition period between the Stone and Bronze Ages. In the lake of Garda the settlements were numerous, and some of them continued to flourish down to the early Iron Age. In moving westwards these immigrants followed the left bank of the Po, founding settlements in the intermediate lakes, until they reached the lakes of Varese and Maggiore, which henceforth became their head-quarters in the western part of the valley. Meanwhile the early settlers who remained in the eastern district began to found lake-dwellings (*palafitte*) on swampy ground, the lakes here being too few to afford suitable accommodation for their increasing agricultural and pastoral pursuits. Subsequently they crossed to the south side of the Po, where, the land being low-lying and subject to inundations, they continued their inherited system of habitations with the addition of having them fortified by a moat and a rampart. The crossing of the Po, which doubtless was a great military achievement, is supposed to have taken place at Viadana, and it is worthy of note that the great camp of Castellazzo was in the vicinity, on the frontier of the territories of the Ibero-Liguri, the original inhabitants of the country—a fact which seems to the present writer to have been the *raison d'être* for the exceptional defences of the *terramara* villages of Western Emilia. On the east side, towards Bologna, the hut-constructors of the Stone Age were conquered and subjugated by the *terramaricoli*, who then installed themselves in their hut villages—thus accounting for the remains of the two civilizations being met with in the stations and habitable caves all along the coast of the Adriatic. Gradually these *terramara* folk moved southwards, and, according to Pigorini, became the actual founders of Rome. At any rate, a typical *terramara* station has been discovered as far south as Taranto.

5. Terpen.—We now proceed to inquire if structures analogous to the *terremare* are found elsewhere in Europe. It is a remarkable fact that, notwithstanding the striking appearance which the Swiss lake-villages must have presented to strangers, classical writers are absolutely silent about them. Such reticence does not, however, apply to the class of remains now about to be described. Before the construction of the great sea-dikes of Holland, the whole of West Friesland would have been in that hybrid condition described by Pliny (*HN* xvi. 1), in which it was difficult to say whether it belonged to sea or land:

'Here a wretched race is found, inhabiting either the more elevated spots of land, or else eminences artificially constructed, and of a height to which they know by experience that the highest tides will never reach. Here they pitch their cabins; and, when the waves cover the surrounding country far and wide, like so many mariners on board ship are they,' etc.

At the present time this region is studded with certain low mounds called *terpen*. From a map of their geographical distribution recently issued by the Friesch Genootschap, it appears that their number in Friesland alone amounts to 500, of which 200 have already been excavated. Of the remaining 300 many are not available for either agricultural or archæological purposes, being occupied by villages, churches, cemeteries, etc. Like the *terremare*, these *terp*-mounds have for a long time been excavated on account of their rich ammoniacal deposits, which are used by agriculturists as guano; but, until they accidentally attracted the attention of archæologists, nobody seemed to have given a thought to their origin. As their excavation is prosecuted solely in the interests of agriculture, little attention is paid to the position of the archæological treasures which they contain. Either a canal or a railway siding is conducted to the perpendicular facing of the excavation, and from it the transporting boats or waggons are filled. Most of the larger antiquarian objects are thus secured, but many of the smaller articles, such as beads and ornaments, escape observation. From the relics thus collected the curator of the Leeuwarden Museum has the privilege of selecting any that he thinks necessary for the national collection, but the rest may be sold or disposed of privately.

As to the origin of the *terpen*, they are now proved to have been originally constructed as pile-dwellings, at least as regards some parts of their interior; and some of them are probably the actual mounds described by Pliny. The *modus operandi* was, in the first place, to raise a circular ring-mound of mud during ebb-tide. When this mound was sufficiently elevated to keep the waves outside, wooden platforms supported on short stakes were erected in the interior, and on these huts were placed. As the rubbish accumulated the process was repeated until the interior became a solid mound, precisely like what took place in the *terremare*. The towns of Leeuwarden and Leyden are said to be built over one or two *terp*-mounds. The industrial remains collected in the course of the excavations of the *terpen*, and carefully preserved in the museum of the Friesch Genootschap at Leeuwarden, give a vivid picture of the culture and civilization of their inhabitants from pre-Roman times down to the 12th century.

Among the relics the following may be noted: egg-shells (hen and goose), some of which were unbroken; a flute made of the shank bone of an animal; Anglo-Saxon, Byzantine, and Roman coins; wooden spades; large casks for storing water; canoes; bone skates; clay loom weights; toilet and weaving combs; beads of amber and glass; quantities of the débris of flax; mittens with one stall for the thumb; cock-spurs, etc. Latterly fibulæ of La Tène types, Roman tiles and pottery (*terra sigillata*)—some specimens of the latter having makers' marks on them — bridle-bits of iron, bronze pots, and Merovingian brooches have come to light; but no objects characteristic of the Bronze Age.

During the year 1905 a number of urns and human skeletons were found in a localized spot within a *terp* near Leeuwarden. Some of the skeletons were enclosed in coffins made of the hollowed trunks of trees and some in wooden boxes. The cinerary urns were hand-made, and are regarded as of Saxon origin, dating from the 5th or 6th cent. A.D. There were, however, a few wheel-made urns, which are considered to be the work of the Franks, as the wheel was not used in Friesland, either by the Saxons or Frisians, till the 10th or 11th century.

Osseous remains representing the following animals are abundantly met with: horse, ox (several varieties), cat, dog, sheep, wild boar, deer, roe, and fallow-deer. Among the skulls of these animals are one or two of the four-horned sheep. It may be of interest to note that the bones of this animal were among those identified by W. R. Wilde as coming from the *crannog* of Lagore in Ireland.

Analogous structures, under the names 'Warfen' and 'Wurfen,' have been described in the low-lying regions of East Friesland, the fen district of Holland, the embouchure of the Elbe, and, indeed, in nearly all the marshes along this part of the North Sea coast (see *Munro Lectures* for 1912, p. 445 f.).

**6. Pile-structures in rivers.**—Habitations erected over the margins of rivers, though possessing features common to both lake-dwellings and *terremare* proper, yet differ in other respects so much that they must be treated as a separate group.

(*a*) *Butmir* (Bosnia).—The fertile plain of Ilidze, occupying the centre of a wide basin, about 11 kilometres long by 7 broad, has been formed by sedimentary materials imported by numerous streams from the surrounding hills, which, by their junction here, give rise to the river Bosna. In earlier times this basin was more or less a lake, and, indeed, in winter parts of it are still submerged. Almost in its centre there is a portion of land covering several acres, which, on careful inspection, is seen to be a little more elevated than the part of the plain in its immediate proximity. This elevation was selected by the Government as the site of offices for a model farm; and, when, in 1893, excavations for the foundations of these buildings were begun, it was discovered that all this raised area was composed of the refuse of early human occupancy. This pre-historic settlement, or workshop, as some suppose it to have been, is now known under the name of 'the neolithic station of Butmir.' Part of the area is now occupied by a large dairy and other buildings, and the rest of it has been excavated for scientific purposes. A perpendicular section, specially prepared to show the position and nature of the materials of which the elevation was composed, disclosed the following deposits in successive strata from above downwards.

On the surface were 12 to 16 inches of clayey soil; then a blackish streaky mixture of clay mould, charcoal, etc., arranged in wavy and more or less parallel strata. The depth of this heterogeneous mass was from 3 to 5 feet, and it was in it, dispersed apparently throughout its entire contents regardless of depth, that all the relics were found. Beneath this again was a natural deposit of fine yellowish clay, very adhesive and well adapted for the manufacture of pottery. The discovery of hollows, extremely variable both in size and in form, in this underlying virgin clay, suggested to W. Radimsky, the superintendent of the excavations, the idea that they were the foundations of the original huts of the inhabitants. The subsequent discovery of a number of round holes in these hollows, which were readily recognized as having been formed by wooden posts, because, although the wood had entirely decayed, the spaces had become filled up with débris, gave rise to the theory that the settlement was really a pile-structure—an opinion which the present writer has supported on the following grounds: (1) the extreme irregularity in form and size of the so-called hut-foundations; (2) the occasional presence of pieces of charcoal, pottery, and other débris on the surface layer of the virgin clay, thus showing that the deposition of the latter had not entirely ceased when the settlement was founded; (3) the presence of some of the idols and other relics among the stuff which lay in these hollows, together with the entire absence of hearths or evidence of fire in any of them; (4) the general horizontality of the strata which, in section, were seen to run across the margin of the hollows without any break in continuity; (5) at various levels throughout the débris were to be seen portions of burnt and beaten clay platforms, as well as clay casts of the timbers which formed the walls of the huts.

A peculiarity of the Butmir station was the scarcity of organic materials; not even a bone or wooden handle remained, although, from the abundance of perforated stone implements, such objects must have been largely used—all having apparently disappeared by natural decomposition. Quantities of charred corn were found in different places throughout the débris. That grain and seeds were largely used as food is inferred from the fact that no fewer than 900 stone grinders, including fragments, were found throughout the station. The industrial remains consist of about 70 fragments of idols, mostly in human form, quantities of broken pottery, including some with beautiful spiral ornamentation, and a large assortment of polished stone implements—knives, saws, scrapers, borers, chisels, hammers, axes, and adzes—but no metal object is among the collection.

(*b*) *Ripać.*—The village of Ripać lies on the east bank of the river Una, a tributary of the Save. Here the stream widens into a kind of lake in which are two small islands accessible by wooden bridges supported on piles. Like other Bosnian rivers, the water of the Una holds in solution a large amount of calcareous matters which, on exposure to the atmosphere, are deposited, causing in some localities barriers across the stream. The miniature falls and currents by which the waters escape over these barriers are often utilized as the motive-power of corn-mills. At Ripać there is such an obstruction stretching from the larger island to both shores, and along it may be seen a row of these little mills, in the form of wooden cabins planted on tall piles. In course of removing some obstructive materials to the free escape of the water from the small water-wheels, the workmen encountered the stumps of thickly-set piles in a blackish relic-bed containing fragments of pottery, clay weights, broken bones, etc. This discovery was recognized to be of so much importance that the Government gave orders to have the locality investigated under W. Radimsky, the chief inspector of mines. Exploratory operations were carried on during the summers of 1893 and 1894, and it was then ascertained that a pre-historic pile-structure not only occupied the whole space between the islands, but also embraced a considerable portion of the larger island and the bank of the river. The upper deposits contained only Roman and later remains, but in the true culture-bed underneath were found burnt beams, organic materials, portions of platforms and huts, and a large assortment of relics of the pre-historic period. The piles were mostly made of oak stems, sometimes split and perforated, but of these only the stumps remained; and there were two sets of them, a lower and an upper, which suggest an earlier and a later structure. There was also evidence that the settlement, or at least a portion of it, had been destroyed by a conflagration; but this catastrophe did not bring it to an end.

The objects collected were made of iron, copper, bronze, silver, lead, stone, clay, glass, bone, wood, and vegetable fibre. Among the relics were numerous articles characteristic, not only of the Stone and Bronze Ages, but of the well-defined periods of Hallstatt and La Tène, thus proving that the habitation was occupied continuously from the end of the Neolithic Age till taken possession of by the Romans. During the Middle Ages the larger island became a fortified castle.

Radimsky states that indications of similar pile-structures are to be seen at several other localities on the river Una, viz. at Golubic, Ribić, Kralje, and Brekovica.

(*c*) *Donja Dolina* (Bosnia).—The site of this pile-structure is on the south bank of the river Save, a tributary of the Danube. Here an oval-shaped terrace, some 500 paces in length and half this in breadth, presents a steep front to the river, but elsewhere falls away, except at the west end, where the escarpment turns abruptly inland, forming the bank of what was formerly a bay in the river. The surface of this terrace is 3 or 4 metres higher than that of the surrounding land, and is almost the only spot in the neighbourhood that is not submerged during the periodical floodings of the Save. It is called 'Gradina,' *i.e.* 'fort,' by the peasants; and here, during heavy floods, they find shelter for themselves and their cattle; and for the same reason it contains two village cemeteries—one for the Catholics and one for the Orthodox Protestants.

For several years, articles of antiquarian value from the vicinity of Donja Dolina were now and again presented to the Landesmuseum at Sarajevo—a fact which at last induced Ciro Truhelka, head of the archæological department, to visit the

locality. On walking along the river, at the foot of the 'Gradina,' he observed the tops of oak piles protruding through the river mud, while scattered around them were fragments of pottery, spindle-whorls, prism-like objects of burnt clay, worked portions of deer-horn, etc., from which he concluded that before him lay the débris of a prehistoric pile-structure. Excavations were begun in the following year (1900), and continued for several successive seasons when the water-level of the Save was favourable. The results are of great archæological importance from the wealth and variety of the relics discovered, and the ability with which they are recorded in two magnificently illustrated reports by Truhelka (*Wissensch. Mitt. aus Bosnien und der Herzegowina*, ix. [Vienna, 1904] and xi. [do. 1909]).

From the very beginning of the excavations it became evident that the structural details of this settlement deviated, in many respects, from the ordinary *Pfahlbauten* as hitherto known in Europe. The first interesting discovery was a row of piles running parallel to the river, which proved to have been the under portion of a palisade against the current, as the piles were bound together by intertwining willow thongs. In continuing the excavations inwards, the excavators brought to light the remains of several houses supported on wooden posts. These posts were thickly set, no fewer than 978 having been counted over an area of 1160 square metres—nearly one for every square metre. Many of them, however, belonged to a later period, and were inserted to strengthen old timbers for the support of new houses. They were for the most part made of oak tree-stems, seldom split or squared, and well pointed with sharp metal tools. A little back from the river palisade there was a raised promenade from which a sloping gangway gave access to the underground vaults containing the supporting piles, as well as to the platforms on which the houses had been erected. Little of the structural details of the dwelling-houses remained, except the foundations of the partition walls and some loose spars and boards, which crumbled into dust as soon as they were exposed to daylight. During the excavations the sites of eleven houses were exposed, all of different dimensions, one measuring 4·5 metres by 6 metres, and another 6 by 9 metres. By comparing the more perfect remains from different sites, a fairly correct idea of their plan and internal arrangement was obtained. Each consisted of a large room and one or two smaller compartments. The former was regarded as the kitchen, with a fire-place, a hearth, and an oven made of well-burnt clay.

It is difficult to determine the former extent of this singular settlement. Strong stumps of piles were met with over a large area of the adjacent river-bed. It has also been ascertained that during the digging of graves in the Catholic cemetery the same class of relics were often thrown up. From these and other suggestive facts, it has been conjectured that the whole of the 'Gradina Hügel' consists of the débris of pile-dwellings—an area approximately amounting to 25,000 square metres.

That the underground vaults were sometimes utilized as cattle-pens was made evident by the large amount of animal dung that had accumulated in some of them. But this was not the only use to which they were put, as in several instances cinerary urns and wooden coffins (the latter containing human remains) were found. One coffin, that of a child, had the skeleton below the pelvis pierced by a supporting pile, showing that this burial was older than the reconstruction of the superincumbent dwelling-house. The urns contained the incinerated remains of bodies, charcoal, ashes, and an extraordinary wealth of grave-goods; but, unfortunately, the latter had been greatly damaged by the fire. It would appear, from the valuable nature of some of these offerings, that the cremated persons were of greater social distinction than those buried by inhumation. The objects consisted of fibulæ and spiral bracelets of bronze, beads of glass, amber, and enamel, and other ornamental relics characteristic of the Hallstatt period. Of special interest was one urn, which contained a necklet composed of several hundred beads of amber, enamel, and coloured glass, seven cowrie shells, two perforated teeth, and a large clay bead without any ornamentation. Among the relics which supply a clue to the latest date of the settlement were five coins, one of bronze and the others of potin—all 'barbarous imitations of the tetradrachms of Philip of Macedon' (356-336 B.C.).

A discovery which materially helped to define the chronological horizon of the pile-dwellings was the identification of the cemetery in which their inhabitants were buried. It was located on some ridges, not subject to submergence, at a distance of some 600 paces to the south-west of the *Pfahlbau*, and 200 from the present bed of the river. This necropolis contained both burnt and unburnt interments, and yielded an immense assortment of relics which, from the standpoint of archæology, were recognized to be precisely similar to those disinterred from the excavations in the 'Gradina.'

(*d*) *Pile-structures in Hungary.*—On the right bank of the Theiss, a few miles from the railway station of Szolnok, near the village of Tószeg, there is an artificial mound to which, since the meeting of the International Congress of Pre-historic Archæology at Budapest, in 1876, much importance has been attached, on account of the opinion expressed by L. Pigorini that it is identical in structure with the *terramara*-deposits of Northern Italy. The mound, though considerably undermined by the river Theiss during the great floods of 1876, is still of considerable extent, measuring 380 metres in length and 100 in breadth, and rising to a maximum height of 8 metres above the surrounding plain. It is only in times of flood that the waters reach the mound, its usual bed being a mile and a half distant. When the artificial nature of the mound became known in consequence of the section exposed by the floods, some extensive excavations were made to ascertain the archæological character of its contents. An assortment of the objects collected during these researches was exhibited at the Congress, among which were the following:

Perforated hammers of stag-horn, various pointed implements of bone and horn, perforated teeth and the leg-bone of a horse pierced in two places, probably a skate, polished stone celts (some perforated), four flint flakes (one of obsidian), corn grinders, and various worked stones; a fragment of a bronze pin, a bronze knife, and a small ingot of this metal; pottery, in the form of a variety of dishes, some with handles; various objects of burnt clay—a whistle, buttons, spoons, and eighteen pyramidal and perforated clay weights; a considerable amount of food-refuse, such as bones of animals, scales of fish, land shells, charred grain, etc.

During the meeting of the Congress, L. Pigorini, R. von Virchow, and Miss J. Mestorf visited the Tószeg excavations and made some further researches which enabled them to agree on the correctness of the following propositions, which were published in separate reports after their return home:

(1) The existence of piles and wooden beams was satisfactorily proved at three different levels; (2) the materials which contained the débris of human occupancy were distinctly stratified, and formed undulating layers amounting to a total thickness of 4 metres; (3) the antiquities collected belonged to the three pre-historic ages of Stone, Bronze, and Iron.

F. Romer gave an account of his excavations at Tószeg and other localities to the members of the Congress in an article entitled 'Les Terramares en Hongrie.' It is worthy of note that in one of the

stations, viz. Ascott-halom, he mentions that rotten piles were observed in its lowest stratum before Pigorini called attention to their significance. The author concludes his article by stating that *terramara* deposits are by no means confined to the valley of the Theiss, as they have already been observed in various other low-lying localities in the Danubian valley, both above and below Budapest. But the task of excavating such huge masses goes beyond the means at the disposal of ordinary archæological societies.[1]

7. **General remarks.**—Notwithstanding the discovery of various portions of human skeletons at several stations, and their subjection to the examination of anatomical experts, anthropologists are not agreed that the data thus ascertained prove that the constructors of the pre-historic pile-structures belonged to one race with definite physical characteristics. T. Studer (*ZE* xvii. [1885] 548) advocates the theory of Troyon, viz. that with the introduction of bronze there came a new race of people; and this opinion he bases on the fact that at Sutz and Vinelz two kinds of human skulls were found, viz. brachycephalic and dolichocephalic, whereas in the pure Stone Age stations only the former were, according to him, met with. Virchow's conclusions on lacustrine craniology are as follows (*ib.*, p. 300):

(1) In the stations of the pure Stone Age brachycephalic skulls only are known to a certainty to have existed. (2) In the transition period both brachycephalic and dolichocephalic skulls are known. (3) In the full Bronze Age there is a slight preponderance of dolichocephalic skulls.

On these grounds Virchow thought that during the Bronze Age a new people joined the original lake-dwellers by degrees, but not as conquerors subverting the previous order of things—an opinion which seems to be strengthened by the undoubted continuity of the same social organizations in both these periods. Bronze was gradually introduced, and it took some time to supersede the cutting implements previously in use. Nor was there any violent disturbance of the previous conditions of social life. The original system of constructing lake-villages was continued, and the only changes detected in their structure were such as can be accounted for by the use of better implements.

Although trepanning was practised in Central Europe as far back as the Stone Age, it does not appear that this custom was prevalent to a great extent among the lake-dwellers. Segments of the upper portions of human crania, supposed to have been used as drinking-cups, were found at Gerlafingen, Sutz, Schaffis, and Locras; and from the last-named there was also a skull having a circular portion cut out, as if *post mortem* trepanning had been performed. Roundlets cut out of skulls are supposed to have been used as charms, and such relics are frequently found in the graves of the period. From lake-dwellings only two of these objects have been recorded; one from Concise has two small perforations, and another, figured by Gross, has one hole. On the Trajan column a Dacian village is represented as having human skulls set on poles before the walls. The finding of skulls of different races in the lake-villages might, therefore, be accounted for on the supposition that they were trophies of their enemies, and not the skulls of their actual inhabitants.

In eastern Switzerland and the Danubian valley the number of settlements greatly decreased during the Bronze Age, while in the Lake of Geneva they increased, and in Lake Bourget its eight stations flourished almost exclusively in the Bronze period.

In instituting a comparison between the ordinary lake-dwellings and the *terremare* of Italy, it may be observed that the latter term was originally applied only to the fertilizing materials, and not, as at present, to the *tout ensemble* of a settlement. From this point of view any organic refuse from an inhabited site containing a sufficiently large amount of ammoniacal products to be used as fertilizers (as was the case with the contents of the Barma Grande cave at Mentone) might be not inappropriately so designated. If, on the other hand, the special features of Castellazzo—moat, dike, *contrafforte*, canals, roadways, citadel, ritual pits, trapezoidal shape—must be regarded as essential characteristics of *terramara* stations in general, then it must be admitted that there are few such structures outside Western Emilia. If, however, the few known examples of the Castellazzo type be excluded on the ground that they were military forts, we can find in the Po valley parallels to all the settlements which we have described elsewhere in Europe. In pile-structures on the sea-shore, and on marshy ground liable to flooding, dikes were indispensable. The Butmir station belonged to the Stone Age, and it did not appear that a dike was necessary either for defence against enemies or to prevent flooding, as it was constructed over water.

Much significance has been assigned to the pottery known as *ansa lunata* or *cornuta*. Formerly the manufacture of this handle was supposed to be a monopoly of the *terramara* folk of Emilia, but now it has been shown to have a wider distribution, extending southwards along the coast of the Adriatic as far as Taranto and other localities in S. Italy. It is found in the lake-dwellings of the eastern district of the Po valley, but—what is very remarkable—it is entirely absent from those of Piedmont and Western Lombardy. Outside Italy it is common in the early Iron stations of Bosnia, as at Ripač and Donja Dolina, as well as in Bohemia, Lower Austria, Hungary, Styria (*Bullettino di Palet. Ital.* xv. [1889] 65). Before the brachycephalic lake-dwellers swarmed into Europe, its neolithic inhabitants were dolichocephalic, and disposed of their dead by inhumation. It appears that they freely associated with the newcomers, as was the case with the Ibero-Liguri in N. Italy, where remains of the two civilizations were found on the same stations, that of the Stone Age being in the lower strata. There is evidence to show that burial by cremation was practised by the *terramara* folk, and by both the eastern and western lake-dwellers towards the end of the Bronze Age and beginning of the Iron Age; but whether the latter were cremationists on their first appearance in Italy is a problem that has not yet been solved. Singularly enough, the same uncertainty has been experienced with regard to the burial customs of the lake-dwellers of Central Europe. Some archæologists are inclined to exaggerate the importance of this question, on the plea that the manner of disposing of the dead is hereditarily so rooted in the human constitution that it would not be readily changed. But, as a matter of fact, the contrary is the case. Cremation, being the outcome of religious ideas, powerfully influenced humanity in those early days, and spread like wild-fire throughout the whole of Europe, so that the change from inhumation to incineration might have been accomplished in a short space of time.

The cause of the almost sudden discontinuance of the *palafitte* system of habitation all over Europe at the end of the Bronze Age is not known. We may, however, surmise that it was deeply-seated, and partly due to the law of the survival of the fittest, or rather the destruction of the unfittest. In the smaller lakes the growth of peat would make lacustrine habitations useless as a means

[1] For an elaborate and highly illustrated account of the *terremare* and analogous remains in Europe, readers may consult the present writer's recent book, *Palæolithic Man and Terramara Settlements in Europe*.

of defence. Of the settlements in the Po valley the lake-dwellings of Lake Garda were the last to be abandoned, but the *terremare* ceased to be occupied at an earlier period, apparently having been found inadequate to supply the social comforts prevalent among the races who subsequently dominated the Italian peninsula.

In conclusion, we are justified, from a consideration of the archæological phenomena hitherto disclosed by lacustrine research, in formulating the hypothesis that the primary founders of the lake-dwellings of Europe were brachycephalic immigrants, in the neolithic stage of culture, who, in successive hordes, moved westwards by way of the Danubian valley, but occasionally diverged from the main route into the numerous affluents of the Danube. The goal of all these shepherd farmers was the rich and well-watered pasture-lands along the lakes, brooks, and springs of the Alpine regions, which constitute the primary sources of the great rivers of Central Europe and their tributaries. The Scottish and Irish *crannogs*, the Glastonbury lake-village, and other lacustrine habitations of the Iron Age were but sporadic remnants of the more ancient system, which, like every dying art, passed through a stage of degeneration before final extinction.

LITERATURE.—For an exhaustive list of the literature on lake-dwellings up to 1890, see 'Bibliography of Lake-dwelling Researches in Europe' appended to R. Munro's *The Lake-Dwellings of Europe*, in which over 500 books, monographs, and special articles on the subject are chronologically arranged. We shall therefore here note only a few of the more general works on lake-dwellings, classifying them in chronological sequence: F. Keller, 'Die keltischen Pfahlbauten in den Schweizerseen,' *Mitt. der antiquar. Gesellsch. in Zürich*, ix. (1854), being the first report on the Swiss lake-dwellings (since then other 8 reports have appeared in the *Proceedings* of the same Society, the 9th by J. Heierli in 1888); W. R. Wilde, 'On Crannogs,' in *Descriptive Catalogue of the Antiquities in the Museum of the Royal Irish Academy*, Dublin, 1857; W. M. Wyllie, 'On Lake-Dwellings of the early Periods,' *Archæologia*, xxxviii. (1859); F. Troyon, *Habitations lacustres des temps anciens et modernes*, Lausanne, 1860; L. Rütimeyer, *Die Fauna der Pfahlbauten in der Schweiz*, Basel, 1861; J. Lubbock, 'On the Ancient Lake-Habitations in Switzerland,' *Nat. Hist. Review*, 1862, and *Prehistoric Times*, London, 1865, $^{7}$1913; F. Keller, *The Lake-Dwellings of Switzerland and other Parts of Europe*, Eng. tr., J. E. Lee, London, 1866, $^{2}$1878; E. Desor and L. Favre, *Le Bel Âge du bronze lacustre en Suisse*, Neuchâtel, 1874; R. Munro, *Ancient Scottish Lake-Dwellings or Crannogs*, Edinburgh, 1882; V. Gross, *Les Protohelvètes*, Paris, 1883; E. Vouga, *Les Helvètes à la Tène*, Neuchâtel, 1885; W. G. Wood-Martin, *The Lake-Dwellings of Ireland*, Dublin, 1886; R. Munro, *The Lake-Dwellings of Europe*, London, 1890; T. E. Peet, *The Stone and Bronze Ages in Italy and Sicily*, Oxford, 1909; R. Munro, *Palæolithic Man and Terramara Settlements in Europe*, Edinburgh, 1912. A monograph on the Glastonbury lake-village in two volumes is now being published by the Antiquarian Society of Glastonbury (1911–14).

ROBERT MUNRO.

**LALANGS.**—See BODOS.

**LĀMAISM.**—The term 'Lāmaism' is now employed by many Europeans to designate the Buddhism of Tibet, and is intended to identify with that religion the Tibetan Buddhist monks, who are generally known as Lāmas, 'the superior ones.' It first appears to have been used by Köppen (and presumably coined by him) in his *Lamaische Hierarchie und Kirche*, 1859, which, as a pioneer work, gave some currency to the term, although it was employed by him only a few times and merely incidentally. It was not, however, adopted, though mentioned, by Emil Schlagintweit in 1863, who was the first authoritative systematic writer on the subject, setting aside the ponderous compilation by A. Giorgi of the 18th cent. (*Alphabetum Tibetanum*, Rome, 1762), which was little more than a literary curiosity. Altogether unknown to the Tibetans themselves, who designate their creed 'Buddha's religion' (*Sangs-rgyas-kyi ch'ös*) or 'the orthodox religion' (*nang-ch'ös*), this term is in many ways misleading, inappropriate, and undesirable. It conveys the implication that Tibetan Buddhism differs essentially from all other forms of that faith—which is not a fact, for its differences from mediæval Indian Buddhism are relatively trifling and mainly external.

The political ascendancy by which one sect of the Lāmas has achieved temporal power in modern times is in nowise an inherent part of the Buddhism professed by the Lāmas, nor is it shared by the older sects. It is not usual to designate religions by the generic name of their clergy; the epithet 'Brāhmanism' presents no real analogy, as that title is eponymic for the Supreme Creator in that faith, as well as descriptive of his ministers. Phonetically, also, the word is anomalous; for on the analogy of 'Buddhism' from Buddha, it should be 'Lāmism.' Altogether, therefore, 'Lāmaism' is an undesirable designation for the Buddhism of Tibet, and is rightly dropping out of use.

As the Buddhism of Tibet is intrinsically identical with, and derived from, Indian Buddhism of the Mahāyāna, the following account will indicate chiefly those features in which the Tibetan differs from the Indian Mahāyāna (*q.v.* for the general Buddhist doctrine and practices).

**1. Introduction of Buddhism into Tibet.**—The indigenous religion of Tibet was the Bon, a primitive animistic cult (see TIBET). According to all the vernacular histories, especially the most authoritative, the 'Chronicle of the Kings' (*Rgyal rabs*, and the somewhat apocryphal *Maṇi-bkah-hbum*), Buddhism was first introduced into Tibet in the reign of King Srong-btsan Gam-po, who died A.D. 650. But in the Lhāsa lithic edicts of 783, published by the present writer (*JRAS*, 1909, p. 931), the introduction of 'the orthodox religion,' *i.e.* Buddhism, is stated in general terms to have taken place several generations before Srong-btsan's epoch. This, however, may merely refer to the current legend that five generations before the advent of the latter, in the reign of a king named Lha Tho-tho-ri, certain Buddhist tracts and some relics fell from heaven upon the top of the king's palace, but that up till Srong-btsan's reign no one was able to decipher the writing. There seems to be no doubt that the indigenous histories are strictly correct in stating that before Srong-btsan's time Buddhism had not yet penetrated Tibet, and that that country was without a knowledge of the written character which is now called 'Tibetan,' which is merely a slightly modified form of the Indian alphabet as current in N. India (and in Khotan) in the middle of the 7th cent. A.D. It was certainly Srong-btsan who introduced this character, and along with it Buddhism in the form then most popular in India, the Mahāyāna.

The credit for the latter achievement is given in the *Maṇi-bkah-hbum* (the authorship of which is ascribed to Srong-btsan) to the two chief wives of the king, one the daughter of the king of Nepāl and the other an imperial Chinese princess. Though it is probable that these ladies may have contributed to the introduction of the new religion, as both of them certainly were Buddhists, it appears possible that Srong-btsan himself took the initiative, as he procured his Indian letters and early Buddhist texts from remote Kashmir, and not from the more accessible Buddhist country of Nepāl, from which he would presumably have obtained them, had he been then married to his Nepālese wife; and his Chinese marriage was still later (in A.D. 641). The first booklet translated into Tibetan in the new letters was a hymn to Avalokita on the *Oṁ maṇi* formula—which formula, it is recorded, he engraved on stone. As the first patron of Buddhism in Tibet, Srong-btsan was canonized, as were also his wives, by the grateful monks in later days.

But Srong-btsan was not the saintly person he is pictured in the religious histories, for he is seen in the contemporary Chinese chronicles to have been engaged all his life in bloody wars (see his invasion of Central India in A.D. 647 as described by the present writer in *Asiatic Quart. Rev.*, vol. xxxii.

[1911]). He certainly did little, if anything, in the way of Buddhist propaganda. He built a few temples to enshrine the images brought to him in dower by his Buddhist wives. One of these was the nucleus of the present great cathedral-temple at Lhāsa, 'the house of the lord' (Jo-k'ang; cf. Waddell, *Buddhism of Tibet*, pp. 23, 28, 300, and *Lhasa and Its Mysteries*, pp. 341, 361 f.). He built no monasteries, and, according to the vernacular histories, no order of monks was established till over a century later.

**2. Establishment of the monastic Order.**—After Srong-btsan's death (A.D. 650), Buddhism made little headway against the indigenous Bon cult, and was resisted by the people until the accession of Khri-Srong De-btsan, the fifth in succession after Srong-btsan. The son of an imperial Chinese princess, he was an ardent Buddhist and proselytizer. Desirous of establishing an Order of Buddhist monks among his people, on the advice of his family Buddhist priest, Śāntirakṣita, an Indian, he sent to India for the kinsman of the latter. This was Padmākara or Padmasambhava, of the then popular ritualistic and mystical Yoga school at Nālandā college, and skilled in Buddhist spells (*dhāraṇī*). He was a native of Udayāna (latterly known as Swāt and Kāfiristān) on the Peshāwar frontier of N. India, and he arrived in Tibet in A.D. 747, with several other Indian monks, who were induced to settle in the country. Padmākara established the first monastery at Sam-yās in A.D. 749 on the left bank of the Brahmaputra river about thirty miles to the south-east of Lhāsa, and installed Śāntirakṣita as its abbot, with seven Tibetan novices as the nucleus of the Order. Of these novices three were elderly; and the first of them, Dpal-baṅgs, who succeeded thirteen years later to the abbotship, may be said to be the first 'Lāma.' He appears to have studied in India also, and to be the same as Ska-ba-bha-po Dpal-brtsegs, who was one of the chief early translators of the Sanskrit Buddhist canon into the Tibetan language.

'Lāma' is a Tibetan word meaning 'supreme one,' and is strictly applicable only to Tibetan abbots (*q.v.*) and the most learned among the ordained monks. By courtesy, however, it is generally extended in popular conversation to ordained monks in general.

**3. Founder of the monastic Order.**—Padmākara, the founder of the Order of Buddhist monks in Tibet, is commonly known as Padmasambhava, 'the lotus-born' (in Tibetan Pad-ma Byung-gnas), or as 'the teacher treasure' (Guru Rin-po-ch'e), and also as 'Lö-pön' (*slob-dpon*), the Tibetan equivalent of the Indian *guru*, 'teacher.' It is not easy now to discover with certainty the details of his teaching, but from the remarkably high literary standard of the monks associated with him, as shown by their scholarly translations from the Sanskrit canon, it is difficult to believe that he was the quasi-shamanistic priest that he is represented to have been by the old unreformed sects. There is no doubt that he was a believer in Tantrik mysticism with its prayers to various Buddhist gods and goddesses; but so were the great Indian Buddhist patriarchs, the metaphysicists Vasubandhu and Asaṅga, before his day. No canonical translations are found ascribed to him; but he is the reputed author of several manuals of worship (*sādhanas*)[1] for compelling the good services of certain deities by means of the repetition of spells (*dhāraṇī*) after the style of the Brāhmanical *mantras*—a class of literature which was prevalent in Indian Buddhism at that period.

**4. Translation of the Indian Buddhist canon.**—Under the zealous patronage of King Khri-Srong De-btsan, Padmākara initiated an era of great literary activity and scholarship for the translation of the Buddhist canon from the Indian Sanskrit. Several of the most intellectual youths were sent to India to learn Sanskrit and Buddhist philosophy in its home in mid-India, and some of the most learned monks of India were induced to proceed to Tibet and settle there for this evangelizing work. In a letter embedded in the great commentary, the *Tan-gyur* (xciv. 387 ff.), addressed to this king by the Indian monk Buddhaguhya, we read:

> 'Thou didst dispatch to India Vairotchana, Ska-ba-dpal brtsegs, Kluyi rgyal mts'an, Ye-shes sde, Armandju, and others, to whom thou didst intrust much wealth of gold and silver, to get the Dharma, increase the little religion that was in thy realm, and open the window which would let in the light on the darkness of Bod [Tibet], and bring in its midst the life-giving waters.'[1]

This indicates clearly that in the middle of the 8th cent. A.D. Tibet was scarcely recognized as a Buddhist country at all. The young Tibetans named therein are some of the best known translators of the Tibetan scriptures.

**5. Authenticity and historical value of Tibetan canon.**—These Tibetan translations of the Sanskrit Buddhist canon are now of great historical importance, as they preserve with remarkable accuracy the Indian texts, of which most of the originals have been lost in India. The Tibetan translations of these texts, as tested by the few surviving Sanskrit fragments and by isolated texts preserved in Nepāl, display such scrupulous literary accuracy, even down to the smallest etymological detail, as to excite the admiration of all modern scholars who have examined them. Thus their authoritativeness is placed beyond dispute.

These canonical texts thus afford, along with the less precise Chinese and Japanese translations of the same originals, invaluable means for controlling, supplementing, and correcting the less detailed Pāli versions of the early scriptures, and explaining ambiguous terms in the latter, thereby enabling us to gain a more correct knowledge of Buddha and his doctrine than has been forthcoming from purely Ceylonese sources. On this account the study of Tibetan has become indispensable to students of Buddhist Sanskrit and of Buddhism in general. The excellent Tibeto-Sanskrit dictionaries date from this literary epoch, and the formation of the classical Tibetan style. The divisions of the Tibetan Buddhist canon will be indicated below.

**6. Growth of the Order and popular adoption of Buddhism.**—The institution of the indigenous Order on these Indian lines was opposed by Chinese Buddhists, under a Mahāyāna monk named Hwa-shang (the Chinese term for a Buddhist monk corresponding to the Sanskrit *upādhyāya*, or 'master'). These Chinese, who appear to have been itinerant priests, were defeated in argument by the Indian Kamalaśīla, and expelled from the country, leaving the Indian system to be developed unmolested. Many monasteries and Buddhist temples were established all over the country, and Buddhism became the State religion of the land.

A second development of literary activity and Buddhist propaganda occurred in the reign of Ral-pa-Chan, the grandson of Khri-Srong De-btsan, in the latter half of the 9th cent. A.D., when the work of translation of the Great Commentaries by Nāgārjuna, Āryadeva, Vasubandhu, etc., was actively prosecuted, and most of the remaining canonical books completed. Among the Indian translators employed by Ral-pa-Chan were the monks Jinamitra, Śīlendrabodhi, Surendrabodhi, Prajñāvarman, Dānaśīla, and Bodhimitra, assisted by the Tibetan translators (or *lo-tsa-va*) Pal-brtsegs

[1] See list of *sādhanas* by F. W. Thomas in *Muséon*, xxii. [1903] 41.

[1] W. W. Rockhill, *Life of the Buddha*, p. 221.

Light,' whose blissful paradise in the west is the popular heaven which was the goal of the majority of Indian Buddhists from the beginning of the Christian era, as it is to-day in Tibet, as well as in China and Japan. This pontiff is generally known to Europeans, after his residence, as the 'Tashi Lāma,' in contradistinction to the 'Dalai Lāma' of Lhāsa. To Tibetans, however, the former of these is usually known as 'the great treasure of learning,' Pan-ch'en Rin-po-ch'e, and the latter as 'the protector-treasure,' Kyab-gon Rin-po-ch'e, or 'the victor Jina,' a title of Buddha himself.

Latterly, a third and a fourth Grand Lāma of the dominant Yellow Hats were instituted for the two kingdoms outside Tibet, to which Tibetan Buddhism extended, namely Mongolia and China. The former of these at Urgya is known as Je-btsun Dam-pa, and possesses temporal sovereignty over Outer Mongolia, like the Dalai Lāma in Tibet; but, although posing as the head of the celibate monkhood, he is not himself celibate. The fourth was appointed by the Emperor Kang-Hsi about 1700, especially for Inner Mongolia, and has his special residence at Peking and Jehol. He is known to Tibetans as Chang-skya-Hu-thuk-thu, and is considered to be an incarnation of Rol-pai Dorje; and his succession, as well as that of the Urgya Grand Lāma, is arranged by the Dalai Lāma.

The spiritual jurisdiction of the Dalai Lāma is not acknowledged outside Tibet and Mongolia, including the land of the Buriats (*q.v.*) bordering Lake Baikal in Siberia, the tracts in Western China which formerly belonged to Tibet, the isolated Tibetan monasteries in N. China, and the Himālayan States of Bhutān, Sikkim, and Ladākh. Neither the Dalai nor the Tashi Lāma exercises any ecclesiastical authority in Tibet over the other and older sects, the Red Hats, whose relative laxity in Buddhist discipline, especially in the matter of uncelibacy, they despise.

**11. Sects in Tibetan Buddhism.**—No sects appear to have existed prior to Lang-darma's persecution in the 9th cent., nor till more than a century and a half later. The sectarial movement seems to date from the visit to Tibet of the great Indian Buddhist monk Atiṣa in 1038. Atiṣa, while clinging to Yoga and theistic Tantrism, at once started a reformation on the lines of the higher Indian Mahāyāna system, enforcing celibacy and high morality, and deprecating the Bon rites which had crept into some of the priestly practices of the Buddhist monks. The time was ripe for such a reform, as the monks in Tibet had become a very large and influential body, and possessed a fairly full and scholarly translation of the bulky Mahāyāna canon and commentaries.

The first of the reformed sects, and the one with which Atiṣa most intimately identified himself was the Kā-dam, or 'those bound by the Orders'; and it was this sect that ultimately, three and a half centuries later, in Tsong-Kha-pa's hands became less ascetic and more highly ritualistic under the title of Ge-lug, or 'Virtuous Order,' the 'Yellow Hats,' now the dominant established sect in Tibet.

Atiṣa, or 'the Lord' (Jo-bo-rje), was the sole profound reformer of Tibetan Buddhism; for we find that the other parallel early reformations were initiated by his pupils. These were the Kar-gyu and Sas-kya sects, which were directly based in great measure upon Atiṣa's teaching. These two sects may be regarded as semi-reformations adapted for those individuals who found Atiṣa's high standard of morality and discipline too irksome.

The residue, who remained wholly unreformed and weakened by the loss of their best and most intellectual members, were now called the 'Old,' or Nying-ma, as they adhered to the old corrupt practices. To legitimize some of their unorthodox practices borrowed from the indigenous Bon faith, the Nying-ma Lāmas began to discover hidden 'revelations' (*ter-ma*), or fictitious gospels, ascribed to Guru Padmākara, authorizing these practices, just as, it is related, the Indian monk Nāgārjuna, to secure an orthodox reception for his new doctrine, alleged that Śākyamuni had entrusted the developed gospels to Nāga demigods until men were sufficiently enlightened to comprehend the doctrine. Each of these 'finders' of the new revelations claimed to have been in a former birth one or other of the twenty-five traditional disciples of the *guru*. The 'revelations' treat mainly of Bon rites which are permissible in Buddhist practice; and they prescribe forms of worship mostly on the Buddhist model. These apocryphal gospels formed the starting-point for further subdivision of the semi-reformed and the old unreformed sects, which differ from each other chiefly by the particular *ter-ma*-book that they have adopted as sanctioning the worship of a particular Bon deity.

**12. Sectarian distinctions.**—The distinctions between the various sects are partly theistic and creedal, and partly ritualistic, and are also usually expressed by some external difference in dress and symbolism. None of them relate to the personality or doctrine of the historical Buddha as expressed in the canon, as this is accepted intact by all. These differences may be classed as: (1) personality and title of the primordial deity or Ādibuddha (cf. ĀDIBUDDHA); (2) special source of divine inspiration; (3) transmitters of this special inspiration; (4) meditative system of mystical insight (*darśana*, Tib. *lta-wa*); (5) special *tantra*-revelation; (6) personal tutelary (*yi-dam*) or Śaivite Indian protective demon; and (7) guardian demon (*dharmapāla*, Tib. *ch'os-skyong*), sometimes of Tibetan type.

The Ge-lug, or dominant Yellow Hats, have as their primordial deity Vajradhāra ('holder of the thunderbolt'), and they derive their divine inspiration mainly, not from the dead Śākyamuni, but from the living Buddhist 'Messiah' Maitreya, the next coming Buddha, as revealed through the succession of Indian saints from Asaṅga down to Atiṣa, and through the Tibetan saints from Atiṣa's disciple Bromton downwards to Tsong-Kha-pa. The Ge-lug mystical insight is in the *Lam-rim*, or 'graded path,' on which a commentary was written by Tsong-Kha-pa, and their special *Tantra*, or theistic manual, is *Rgya-ch'en-spyod*. Their tutelary Indian demon (*yi-dam*) is 'the fearful thunderbolt' Vajrabhairava (Tib. Dorje-jig-je), supported by Samvara (Śambara, Tib. Dem-chog) and Guhyakāla (Tib. Sang-'dus); and their 'guardian' demon (*dharmapāla*) is 'the six-armed lord' (Gon-po) or 'the horse-necked' (Hayagrīva, Tib. Tam-ch'en), both of them Indian, not Tibetan.

In organizing the Ge-lug sect Tsong-Kha-pa collected the scattered members of the Kā-dam from their ascetic retreats and housed them in monasteries, together with his new followers, under rigid discipline, setting them to keep the 253 Vinaya rules of primitive Buddhism, including strict celibacy, and hence obtaining for them the title of 'Vinaya-keepers' (Dulba-Lāma). He also made them carry a begging-bowl and wear patched robes of a yellow colour after the fashion of the Indian Buddhist mendicant. The bowl, however, soon dropped out of use, as daily begging was not adapted to the sparse population of Tibet. He attracted followers also by instituting a highly ritualistic service, in part borrowed, perhaps, from the Nestorian Christian missionaries who were undoubtedly settled at that time in Tsong-Kha, the locality of his early boyhood in W. China. He

spread monasticism, for polyandry is far from common.

| | No. of Lâmas. | No. of Laity (at 5 per family). |
|---|---|---|
| Central Province (Dbus) . | 302,500 | 602,190 |
| Western „ (Tsang) . | 13,700 | 33,760 |
| | 316,200 | 635,950 |

This gives one monk for every three of the entire lay community, including the women and children.

The shrinking of the population is evident everywhere in Central and Western Tibet, where one sees numerous abandoned tracts of former cultivation and the ruins of former villages and homesteads. The population is, presumably as a consequence of over-monasticism, steadily drifting towards extinction.

16. **Excessive monasticism an inevitable result of Buddhism.**—Yet this wide-spread devastation worked by unfettered monasticism must inevitably be the outcome everywhere of Buddhism when that religion is free to develop without restraint. Buddhism, with its inveterate note of pessimism, repressing the wholesome instinct for living and for the development and enjoyment of nature's resources, is itself in direct antagonism to all worldly progress, whilst it restricts its goal of Nirvāṇa expressly to those who have entered its celibate monastic Order. This is clearly the teaching everywhere of Buddha himself, and of all orthodox professing Buddhists of all sections of Buddhism, both North and South, *pace* the modernizing theories of popular Western writers. No prospect whatever of attaining salvation or Nirvāṇa in this life is held out by Buddhism to any one except those who actually enter its celibate Order of monks.

This is manifestly the reason, in the opinion of the present writer, why heaven and not Nirvāṇa is the popular goal of lay Buddhists—Indra's heaven in the company of 'the coming Buddha' Maitreya, according to the 'Southern' Buddhists of Ceylon, Burma, and Siam; or Amitābha's paradise in the West in the company of Avalokita, according to the Mahāyānist Buddhists. It is obviously because, in the first place, these respective heavens are the old traditional paradises of the layman's ancestors, and, in the second place, and chiefly, because there is no other goal of bliss open to him on his death; for, being a layman and forced to work for his living, or bound by family ties, he cannot afford to enter the monastic Order, which is the sole avenue to Nirvāṇa.

17. **Tibetan Buddhist scriptures.**—The scriptures of the Tibetan Buddhists are translations from the Sanskrit texts of Indian Buddhism by the most scholarly monks of mediæval India, assisted by learned Lāmas. A few books in the last volume of the *sūtras* were translated from the Pāli, and a very few from the Chinese. The whole forms a series of over three hundred volumes, each of which with its wooden covers makes a package about 26 ins. long, 8 ins. broad, 8 ins. deep, and weighing about 10 pounds. The volumes generally are in the form of xylographs, or prints from carved wooden blocks, as with the ancient Chinese books, no movable type having been employed; occasionally MS sets of the entire canon are to be found—as, *e.g.*, the set obtained by the present writer and now in the British Museum, MSS no. Oriental 672 ff.

The sacred texts consist of two great collections: (*a*) the canon, and (*b*) the commentaries.

The canon, or *Ka-gyur* (vulgarly *Kanjur*), 'translated word,' forms a series of one hundred, or, in some editions, one hundred and eight, volumes, and comprises 1083 distinct books. It is divided into seven great sections, as compared with the three divisions of the Pāli canonical scriptures, or *Tripiṭaka*. This difference in number is due to a subdivision of the *sūtras* (asterisked in the subjoined list), and the addition of the mystical Śaivite *sūtras* or *tantras*. The divisions are as follows (the constituent volumes being indicated by the letters of the alphabet, in the order of the Sanskrit alphabet):

1. Discipline, *Dul-ba* (Skr. *Vinaya*), in 12 volumes (K–P).
2. Metaphysics and transcendental wisdom, *Ser-p'yin* (Skr. *Prajñāpāramitā*), corresponding generally to the *Abhidhamma* of the Pāli, in the following recensions: (*a*) in 100,000 verses, *'Bum* (Skr. *Śatasāhasrikā*), 10 volumes (K–N); (*b*) in 25,000 verses, *Nyi-k'ri* (Skr. *Pañchaviṁśatasāhasrikā*), 3 volumes (K–G); (*c*) in 18,000 verses, *K'ri-brgyad* (Skr. *Aṣṭādaśasāhasrikā*), 3 volumes (K–G); (*d*) in 10,000 verses, *K'ri* (Skr. *Daśasāhasrikā*), 1 volume (K); (*e*) in 8000 verses, *br Gyad-stong* (Skr. *Aṣṭasāhasrikā*), 1 volume (K); (*f*) various abridged abstracts, *Na-ts'ogs* (Skr. *Viśva*), 18 tracts in 1 volume.
3. Buddhist Congregation, *P'al-ch'en* (Skr. *Buddhāvataṁsaṅgha*), 6 volumes (K–Ch).
4. Perfection of the Buddha—ethical and metaphysical doctrine entitled 'The Jewel-heap,' *dKon-brtsegs* (Skr. *Ratnakūṭa*), 5 volumes (K–Ch).

*5. Sermons [of Buddha], *mDo-sde* (Skr. *Sūtrānta*), 30 volumes (K–A).

6. *Parinirvāṇa*, or 'Deliverance from Misery,' *Myang-'das*, 2 volumes (K–Kh).
7. Mystical theosophy, *rGyud* (Skr. *Tantra*), 21 volumes (K–Zh).

To these are added:

8. Prayers, *sMon-lam* (Skr. *Praṇidhāna*), 3 leaves.
9. Index, *dKar-chag* (Skr. *Sūchilipi*), 1 volume.

The commentary *Tan-gyur* (vulgarly *Tanjur*) is a great encyclopædic library of ancient Indian lore on metaphysics, logic, composition, arts, alchemy, etc., including the commentaries of ancient Indian Buddhist writers, Nāgārjuna and others, also some texts by Tsong-Kha-pa and other Tibetan saints. Its contents have not yet been fully examined.

## LANDMARKS AND BOUNDARIES.—

1. **Introduction.**—A frequent subject of dispute is the boundary-line—between nations, that of their respective territories, between tribes, that of their hunting or fishing grounds, between individuals, that of their holdings. An excellent example of this is found in Gn 13[6f.]. It is true that in some instances land disputes are rare because there is a large area available for the needs of all,[1] but in general this is not the case; hence the need of the boundaries being carefully defined by landmarks. We must here distinguish between natural and artificial landmarks. The former mainly mark the bounds of public territories; the latter mainly those of private lands. On the other hand, sometimes carved pillars are set up on the boundaries of States, while natural landmarks—trees, boulders, and the like—may mark the limits of individual holdings. In early times nations and tribes often sought that the boundary of their territories should effectually prevent the encroachment of neighbouring peoples. Such an end was attainable where the sea, a region of ice, a range of mountains, an impenetrable forest, a river, or a waste and desert region existed on a frontier. Hence these natural boundaries are

[1] Cf. C. A. Soppitt, *Short Account of the Kuki-Lushai Tribes*, Shillong, 1887, p. 23; E. Nordenskiöld, *Indianerleben; El Gran Chaco*, Leipzig, 1912, p. 86.

years after even when the field has become fallow.[1] In general, trespass is resented and is a crime or the cause of frequent quarrels and bloodshed, but among the Kafirs it was permitted because, all having gardens and cattle, all were liable to it.[2]

Among the N. American Indians disputes regarding boundaries were also a constant source of quarrel. W. H. Dall says of the Indians and the Innuit that they were jealous of their boundary-lines—usually the summit of a watershed. Any one found on the wrong side was liable to be shot.[3] Tribal boundaries were rivers, lakes, mountain ranges, trees, stones, and other natural features. A boulder marked the limit of the Shevwits' land; a deep spring was the most prominent natural object on the line between the Onondagas and Oneidas.[4] The Iroquois ran straight lines as boundaries, marked here and there by well-known objects. Occasionally, as among the Californian Indians, Pueblos, Haidas, and other north-west tribes, artificial boundaries—posts and stones—were set up to mark the hunting and fishing grounds. Among the Serrano Indians the patches of land belonging to an individual or, more likely, the *gens* were indicated by trees with marks corresponding to those painted on the owner's face, so that they could be instantly recognized. Among the Wyandots the women of the tribe distinctly marked the household tracts after they were partitioned among the householders, out of the common land of the *gens*.[5] In modern treaties with Indians the bounds of their lands are carefully noted and described.[6] In S. America it is said of the Indians of Guiana that, while they have no clear tribal boundaries, yet each tribe lives in a separate district and allows therein no interloper from another tribe.[7] In Brazil the boundaries of each tribe were marked by trees, streams, and rocks, and also by artificial landmarks. The *pajés* took an active part in defining these, with much magical ritual, etc. Bark strips, rags, and baskets were sometimes attached to these landmarks. The trespasser was killed on the spot when caught.[8]

Among the aboriginal tribes of India the Todas mark the boundaries of their villages by stones.[9] Among the village peoples of N.W. India the arbitrator who walks the boundary does so with a raw cowskin on his head—the cow being sacred—and is under a solemn oath to decide correctly. He holds five sticks in his hand to show that he is the representative of the Pañchāyat. Boundaries and cattle paths are religiously preserved, and the curse is uttered: 'May the man who destroys a boundary, a cowpath, or a ditch have his lands sown by others, or may they lie waste.' A method of ordeal for fixing boundaries consisted in the arbitrator walking the bounds with a red-hot ball on his palm, protected by pipal leaves. If he was not burned, his decision was accepted.[10] In Mysore disputes as to boundaries were settled by the *holeya kuluvādi*, who held a ball of earth in his hand as he walked. If he diverged even accidentally from the true line, the ball went to pieces, and it was believed that he would die in fifteen days.

In Jeypore the arbitrator had to eat earth. If he died within six months, this proved that his decision was wrong, and that the earth-goddess had punished him.[1] In some parts of India a goat is led along a disputed boundary, and the place where it shivers is the true limit.[2] Among the Abors the boundaries of clearings are marked by upright stones, and property thus defined is respected. The Bhils surround their fields with fences of boughs and bamboo.[3] Among the Kandhs boundary-lines, when determined by the public tribunals, are marked by stones set up in presence of the *abbayas*, or patriarchs. They are sacred to Sundi Pennu, god of boundaries.

A prayer to him asks that disease be kept from the boundaries, that hostile gods and tigers may not cross them, that waters from the higher lands may be attracted to them, that cattle may not stray beyond them, etc. A fowl or goat is sacrificed by the priest at a point on the boundary fixed by ancient usage. The god is common to two parties whose lands join, and is supposed to help the one whose cause is just when a fight takes place between them.

The flesh of human sacrifices to the boundary-god as well as to the sun- and war-gods is strewn along the boundary-line. A boundary-god also exists among the Gonds.[4]

The Veddas had well-defined boundaries to the hunting grounds of each group in the jungle, and these were seldom trespassed on. Where it was not possible for natural features—stream or hill—to mark the boundary, definite marks were made on the trees along the line.[5]

**3. Landmarks in the higher culture.**—(*a*) Among the *Semites* the landmark was of supreme importance both for the State and for the individual owner. The Babylonians called boundary-stones *kudurru*, though the name was also applied to the land within the boundary. They were sacred to certain divinities, but not themselves representatives of divinity like the Greek Hermæ, though the divinity exercised power, the power of the curse, through them. Among gods to whom boundaries and landmarks were peculiarly sacred were Nabu ('Nabu preserves the limits of the fields'), Papu ('lord of the boundary,' period of Ḫammurabi), Ninib and Nusku ('the name of this stone is Ninib and Nusku establish the bounds'), and Šamaš ('Šamaš hates those who falsify boundaries and weights'). The importance of the just boundary is also seen in the incantation texts used by the exorcizer as he tries to discover what evil has been done by the sufferer. 'Has he fixed a false boundary, Not fixed a just boundary, Has he removed a boundary, a limit, a territory?'

The *kudurru*, which probably had some phallic significance, varies in height from one to several feet. The inscription begins with the name of the stone—*e.g.*, 'Ninib and Nusku establish the bounds.' Then follow the measurements of the field and a description of the occasion of the gift of it by a king to its owner. To this succeeds the appeal to the gods—*e.g.*, 'Whoever overthrows the grant of this field or causes it to be seized, may Anu overthrow him.' Other gods—Enlil, Ea, Sin, Šamaš, Ramman—are asked to do him various evils: 'Ninib, lord of boundaries and boundary-stones, tear out his boundary-stone. 'Whoever removes this stone, in the dust hides it, burns it with fire, casts it into water, shuts it up in an enclosure, causes a fool, a deaf man, an idiot, to take it, places it in an invisible place; may the great gods who upon this stone are mentioned by their names curse him with an evil curse, tear out his foundation, and destroy his seed.' Then follow the names of the witnesses present at the sealing of the tablet.[6] On the *kudurru* are usually representations of serpents, scorpions, and monsters. These may represent the demons to whom the soil

fire in the trench, and on the ashes the stone was placed.[1] On the Terminalia the possessors of adjacent lands sacrificed a lamb at an altar set up by the boundary-stone, and sprinkled the stone with its blood. The stone or image was garlanded by each on his own side.[2] Public sacrifices were also made at a boundary-stone by the sixth milestone on the Via Laurentina.[3] Curses were sometimes inscribed on landmarks against those who removed them.[4]

Besides marking private lands, boundary-stones also marked the limits of territories, public lands, etc.[5] In later times the removing of landmarks was punished by a fine of 5000 sesterces, and any one could lay the accusation. Hadrian enacted banishment for persons of higher degree, and for those of lower degree forced labour for two or three years.[6] Fearful curses had already been pronounced by the Etruscans against the remover of landmarks. The gods punished him by wasting disease, ruined crops, extinction of his family, etc.[7]

(*f*) Among the *Teutons* in the earliest times, according to Cæsar, a tract of waste or forest land was preferred as a territorial boundary.[8] Other natural features served as boundaries, and artificial landmarks were also used:

'Terminales lapides Alamannorum et Burgundiorum confinia distinguebant.'[9]

As to private property, Tacitus[10] and Cæsar[11] say that holdings were re-partitioned out to all once a year. This communal arable land divided into separate fields belonging to different owners was called the 'mark,' and in later times was surrounded by a fence or ditch, its limits being also shown by stones, posts, or trees, planted with great ceremony. In the case of the lands of the free-lord, he with his neighbours made a circuit of his domain, and marked the limits by cutting marks on trees, by stones, or by mounds of earth. The boundary-marks on trees and stones (often a cross) are frequently referred to in old documents. Both stones and trees forming landmarks were sacred. Even to break a twig off the latter was not permissible, and right down through the Middle Ages very severe and cruel punishments were meted out to those who removed a landmark. In folk-belief, ghosts wandering through the fields or the Jack o' Lantern were thought to be the spirits of those who had committed this crime or who had made false measurements of land. Certain divinities were guardians of boundaries—Thorr, Frea, and Holda—and in folk-sagas there are tales of boundary-ditches having been marked out by the spindle of a goddess. Holy fire was carried round boundaries, and the *Indiculus Superstitionum* (23) speaks of the custom of ploughing a furrow round the bounds of villages.[12]

(*g*) Among the ancient *Celts* in Gaul some of the many *simulacra* which Cæsar[13] describes as representing a Celtic Mercury, and which were probably menhirs or heaps of stones, may have been used as boundary-marks, as they were in later times (§ 7).

[13] *de Bell. Gall.* vi. 17.

The Irish Celts are said in the *Leabhar na hUidhre* to have had no divisions of land, and therefore no boundaries, until the time of Aed Slane (A.D. 651–694), when they were introduced because of the increasing population. The Brehon Laws define a large variety of boundary-marks—*e.g.*, stones of worship, memorial stones, trees, stakes, mounds, ditches, rivers, lakes, wells, and roads—and give details of the fines for unlawful possession of lands.[1] In Wales the laws speak of the three 'stays of boundaries'—privilege, proprietary title, and prior occupancy—but elsewhere principal waters, a lawful *randir*, and a dwelling.[2] Three things preserve a memorial of lands and stand as witness—a fireback stone, stones of a kiln, and a mounting stone, because the mark of the kindred remains on them. An action for theft arises against the man who removes these, a forfeit of life attaching to all who destroy a strong testimony.[3] Trees, stones, ditches, and rivers are also mentioned as marks.[4] A fine is levied against any one who ploughs up a ditch or removes a stone cross, or timber, or anything else preserving a boundary, and he must restore it to its former state.[5] In disputes the church fixes the boundary to the court, the court to the country, and, in cases of lands belonging to those co-equal in privilege, the oldest men are to assign the boundary after inquiry of witnesses. The judge and the king in such cases receive fees.[6]

(*h*) In ancient *Mexico* each domain was carefully measured out, marked, and its limits shown on a register kept by an officer in each district. Separate fields were enclosed with hedges or walls. Those who changed the limits of private lands or removed landmarks were put to death.[7] Similarly in *Peru* the lands were carefully divided and marked out, and the remover of a landmark was punished severely.[8]

4. **Landmarks and the curse.**—As many examples cited above have shown, a curse is invoked on the remover of the landmark, and, as in the Babylonian instances, the gods are desired to bring it about. The gods are, in fact, frequently associated with boundary-marks, and protect the owners of land against those who would take some of it.

In the Finnish *Kalevala*, Väinämöinen himself divides the land into arable patches. The boundary-stones between Sweden and Russia were believed to have been hewn by a wood-spirit.[9]

It is probable, however, that in earlier times the curse was not brought about by a god, but was inherent in the landmark itself and worked through it upon the trespasser. Thus among many savage tribes not only articles of property, but fruit-trees, growing crops, etc., are protected by charms, fetishes, and the like, placed on or among them. These are recognized as tabu signs; but, if any one disregarded them, some terrible result would follow. In effect, a curse is inherent in them and works automatically. In many instances the charm is hung from a pole, post, or fence, or the fence itself is tabu. These are then a species of primitive landmarks, to disregard which produces an automatic curse, as in New Britain, where a spell said over a fence produces serious trouble to a thief.

Among the natives of the Congo, rows of stakes are set round fields, and on them the medicine-man ties bundles of herbs, which cause death to the trespasser or thief.[10] The Ewe fasten amulets to long sticks, placed in a conspicuous position among

[10] J. Merolla da Sorrento, in J. Pinkerton, *Voyages*, London, 1808–14, xvi. 238.

of all kinds are made at them.[1] In the Himâlaya region they are venerated by Hindus, Buddhists, and Muhammadans, and offerings are made at them.[2] Heaps of stones were known among the Hebrews (Pr 26[8] RV), and were also used to mark burial-places (Jos 7[26] 8[29], 2 S 18[17])—a custom common elsewhere.[3] They are well known all over the Semitic region. In N. Africa they are found on passes, often where the tomb of a saint is first seen, or they are regarded as the tomb. Others are commemorative, or mark routes. To the former, and to those which mark where a man has been killed, the passer-by adds a stone.[4] In the W. Highlands a cairn is erected where a suicide or sudden death has taken place out-of-doors, but in earlier times the cairn was erected as a burial-mound, and each passer-by added a stone. Hence the saying: 'I will add a stone to your cairn.'[5]

Although the added stone is an offering or for good luck and the like, it is not improbable that its primary intention, whatever the origin of the cairn may have been, was that of a rite of riddance of danger or the contagion of evil.[6]

(*b*) In many parts of the world stone circles serve a variety of purposes, and must form conspicuous landmarks. The circles dating from pre-historic times and found in large numbers in Great Britain and elsewhere—*e.g.*, N. Africa, Syria, India, etc.—are generally burial-sites.[7] In the Cross River district circles of stones carved in human form occur, and are said to be deities.[8] Among the S. Massim stone circles mark the places where the men of the village meet for talk, and circles called *gahana* were used for cannibal feasts.[9] Circles also occur in Gambia[10] and in Melanesia.[11]

(*c*) In many cases stones represent divinities, or a regular cult is paid to sacred stones.[12] These stones are landmarks in the sense of being rallying-places for worship.

(*d*) The great megalithic monuments (apart from circles) which are found in Europe, Asia, and Africa—menhirs, alignments, dolmens, etc., set up as memorials of events, as marking burial-places, or the scene of a slaying (*e.g.*, among the Garos and the Todas)[13]—whether the work of one or of many races,[14] must have been noticeable landmarks through the ages, and many curious superstitions show the reverence in which they were held.

(*e*) Burial mounds (*e.g.*, the tumuli of prehistoric times, Babylonian burial-mounds, the Hindu *dāgoba* or *stūpa*), tombs (*e.g.*, the pyramids), monuments of all kinds, temples, churches, and the like, standing out conspicuously from the surrounding landscape, often form landmarks or guides to travellers.

(*f*) Among lower races rocks, trees, and the like often mark the scene of traditional or mythic events—*e.g.*, among the Arunta, where they mark events of the Alcheringa (*q.v.*) period,[15] or in Guiana, where engravings on conspicuous rock faces may commemorate striking events.[16] Such engraved rocks are also common over the Semitic area, and act as landmarks.

**LAOS.**—**1. Introductory.**—French Laos, which embraces only about a third of Laos proper (Muong Lao), was constituted by the treaty concluded between France and Siam in 1893. It is bounded on the N. by China, on the E. by Tongking, on the S. by Cambodia, and on the W. by the Mekong, which separates it from the Shan and Burman States occupied by Britain, and from Siamese Laos. French Laos is inhabited by the Thai race, the most important group of whom are called Laotians; and by the half-civilized tribes called Mois by the Annamese, Phnôngs by the Cambodians, and Khās by the Laotians (for these tribes see art. INDO-CHINA).

The Laotians are akin to the Thais of S. Tongking and the Siamese. Their origin and history are very obscure. Their royal chronicles, the data of which are often not above suspicion, mention a first king of Laos who came from India, another who came from Cambodia, then four Khā kings, and, finally, the intrusion and decisive seizure by the Laotians, who claimed to have come from the valley of Nam-hou. These immigrants, or conquerors, acquired several independent principalities, the two greatest of which seem to have been the kingdoms of Vien-chang and Luang-Prabang. Constantly at war, and attacked at the same time by Siam and Cambodia, they led a troubled and precarious life. In the 19th cent. the Siamese destroyed the kingdom of Vien-chang in order to annex it, and left only a nominal independence to the kingdom of Luang-Prabang, which, continuing in the same status under the French, is to-day the centre of the Laotian race.

**2. Habitat.**—The Laotians settled by preference along the river-banks and in the neighbourhood of rice-plains. They built huts on piles 5 to 6 ft. high, the huts measuring 20 to 40 ft. by 12 to 20 ft. The door, which nearly always faces the east, and to which they mount by a ladder, has a sort of balcony-verandah in front of it. The roof is made of palm-leaves, straw, or bamboo tiles. The furniture consists of kitchen utensils, tables, mattresses, mats, and chests for keeping clothes. Under the house are the weaving-loom, the domestic animals, and the poultry-yard; a little shelter at the side serves as a kitchen; the rice-granary is quite close, and always built on piles for fear of rodents.

**3. Appearance and character.**—The Laotians are well endowed as regards physical type; they have well-proportioned figures, and frank, open faces; and the young women especially have a graceful, supple carriage. They are of a lively and often refined intellect, with a certain aptitude for poetry; they are extremely pleasant and sociable, gay and happy-go-lucky, but extraordinarily indolent and sensual. The Laotian's indolence is a matter both of principle and of temperament: once he has got the means of living and amusing himself, he considers every kind of exertion not only useless but blameworthy. It is no use to look to him for the economic and intellectual transformation of Indo-China. He is a good builder, but a mediocre agriculturalist, often depending on hired labourers or slaves to work his rice-plantations; it is from trade and hawking principally that he makes his living. He is the usual intermediary between the 'savages' and the more civilized races. For six months out of twelve the Laotian does nothing—he does not even hunt or fish. The women work much harder: it is they who sow, prick, reprick, and harvest the rice, weave clothing, fetch water and wood, pound the rice, and, in addition to the multitudinous cares of housekeeping, manage the farm-yard.

**4. Religious beliefs.**—The Laotians, like the Cambodians, profess Sinhalese Buddhism. Although their pagodas are well supported and their bonzes well paid, their worship seems less fervent, and the morals of their clergy much less pure, than is the case in Cambodia. The bonzes mix freely with the laity in the festivals, eat and joke with them, smoke in public, breathe with impunity the flowers that abound in all Laotian solemnities, sometimes drink fermented liquors, accept objects directly from the hands of women, and even go to cut wood with them. They are shown less respect and are also granted more indulgence in their failings: for fornication, they are expelled from the pagoda, sentenced to pay a fine, and can then marry their accomplice. In Cambodia, the same offence would entail death or penal servitude for life.

and ages of the couple, those of their parents, and the money and presents given on the occasion of the wedding are put in writing, and this constitutes a sort of marriage contract. The marriage-ceremony includes a rich banquet, with oblations to ancestors, the passing of cotton threads over the left wrist of the bridegroom and the right wrist of the bride, and the drinking of a mouthful of alcohol by both of them from the same cup. Next day it is repeated identically at the house of the bridegroom's parents. At Luang-Prabang the question of dowry and presents is discussed directly by the girl and the young man. The new couple usually live near the girl's parents, sometimes with them; in the latter case, the dowry to be given by the youth is reduced because of the work that the young couple will do.

Polygamy exists in Laos, but is practised only by the wealthy. Divorce is common and easy; it takes place almost always by mutual consent, the wife claiming her own personal belongings and the share of the acquisitions after marriage which comes to her by right, and the husband not interfering unless she unlawfully carries off everything. The woman has full right to divorce if her husband leaves her for three years without news of him.

Adultery, which is rare, is punished by death in theory, in practice by a fine paid by the wife and her lover to the husband.

**8. Disposal of the dead.**—The Laotians generally burn their dead; only the poor bury them. Before the French occupation women dying in child-birth and persons dying a violent death or from an internal complaint used to be abandoned on a current of water; but to-day only a pretence of this performance is gone through, and they are buried. Cremation takes place some days, or some months, or even a whole year after the death, according to the means of the heirs. In cases of a long interval, the corpse is often buried until the appointed ceremony; among the rich, it is put in a coffin hermetically sealed except for a small opening through which a long bamboo tube carries the putrid vapours beyond the roof; this coffin is placed under a special canopy on a rich catafalque, and the bonzes stand round it to pray in turn. During the whole time that the coffin is exposed there are friends and relatives in abundance at the house of the deceased, in holiday garb and provided with musical instruments. Lengthy banquets take place, with dances, songs, games, dramatic performances, etc. The guests must, in fact, cheer the spirit of the dead man as much as possible and prevent his heirs from abandoning themselves to a grief both useless and dangerous. This accounts for the very joyous character of Laotian funerals. The placing on the pyre and the cremation are performed as in Cambodia (see CAMBODIA, 9 (5)). When it is the cremation of an important personage, the fire for lighting the pile, which used to be provided by the court of Bangkok in the form of a tinder-box, comes to-day from Hanoï from the French Governor-General of Indo-China, under the form of an electric spark.

**9. Political and administrative organization.**—Laos was once divided into independent principalities, the most important of which were the kingdom of Vien-chang (now demolished) and the kingdom of Luang-Prabang. France has preserved these divisions as provinces, each under the control of one of her envoys. Each principality, or *muong*, was administered by a *chao*, or king, under whom came an *upahat*, then a *latsabong* and a *latsabut*. The title of king has been preserved by the French Government only in the single case of the king of Luang-Prabang, but the *upahats*, *latsabong*, and *latsabuts* have been retained. These dignified offices are the privilege of a hereditary nobility, who make recruits by election under the control of the protecting Power. These functions generally pass from father to son. All the other offices may be filled by the common people. As in Cambodia, the Laotian functionaries 'drink the oath water' before entering on the exercise of their duties. When a mandarin sends a delegate to another province, he generally gives him a cane with an ivory or copper handle, which serves him as a passport. Judgment in serious affairs is administered in the capital of the *muong*, or provinces; the decisions may be revised by the *chao*. Laos is regulated by the codes and customs of Vien-chang as much as by those of Luang-Prabang. This code of laws is clear and well-arranged, and evidently related to the laws of Cambodia. It is among the most lenient of Asiatic codes. The death penalty is rare, extenuating circumstances being admitted; *e.g.*, theft of food or fruit in case of dire necessity is sometimes, according to the necessity, even pardoned. The French Power has made only slight modifications in the code in order to further the progress of Laos and foster peace in its borders.

ANTOINE CABATON.

**LAPPS.**—The religious conceptions of the Lapps come down to us from various periods. As in the religions of other Arctic hunting peoples, the primitive belief was a worship of the dead and the allied bear-worship.

**1. Worship of the dead.**—The Lapps worshipped their deceased relatives as guardian spirits. They believed that those spirits stood in the closest relation to their surviving kindred and protected them and their children from calamities, assisted them on their hunting and fishing expeditions, and watched over their reindeer in the forests. Moreover, if for any reason the dead were dissatisfied, they could injure their kinsmen—*e.g.*, by afflicting them with sickness. Alongside of the primitive worship of the dead there might also be found a more developed ancestor-worship, evident traces of which appear in sacrifices made by a certain family or clan in their special holy place. As a result of the different conditions under which the Lapps lived, the sacrificial places of the family or clan were situated on high mountains or on the shores or islands of lakes rich in fish. Such holy places (*passe*) were recognized by figures in stone or wood (*seide*). We know little about the shape of the wooden figures; but the stone figures, many examples of which have been preserved until the present day, are either natural rocks or strangely shaped blocks, often in the form of a bird. The sagas tell us that the figures had life, and originally were men turned into stone. In the Lapp districts of Pite and Lule, these figures are called by a special Swedish name, *storjunkare* ('grand younkers').

In the religion of the Lapps, even in its most primitive forms, an element of foreign influence can be traced. The belief of the Scandinavian Lapps, that the dead took up their quarters in the mountains, where they had the same occupations and lived under the same kind of conditions as in their previous life, recalls the conception of the Norsemen, that the dead continued their post-mortem life within the mountains; and the belief that the dead roamed about at Yule (*joulo-gadze* = 'Yule train') under the guidance of *Struotta-galles* ('the man of Yule') or *Joulo-herra* ('the

The symbol of the sun for sacrificial purposes was a ring. Scandinavian influence can also be traced in the mid-summer offering of the Lapps, viz. porridge set out in honour of the sun. A personification of the sun was *Beive-neida* ('the sun maiden'), and the moon (*Manno*), which in winter is an important light-giver in Lapland, seems also to have been worshipped. The Yule moon, *bisse-manno* ('the holy moon'), was specially dangerous, possibly because the dead were then free to roam. When the new moon appeared, people had to avoid all noise; the women were not even allowed to spin in the *kåta*. A brass ring was placed in the chimney for the moon. Attention was also paid to *kuova-manno* (the joy month, February), a borrowing from a Scandinavian source. The Northern lights—*aurora borealis*—were regarded as living beings; and these lights were not to be irritated by noises. Among the Russian Lapps there is a tradition that the Northern lights are the evil spirits of dead men. The thunder was thought to be a living being, *Diermes* or *Tiermes*; but it is uncertain whether the Lapps made offerings to him before they came in contact with tillers of the soil. At a later period the thunder-god was represented exactly like Thor and was called by his name, *Toragalles* ('old man Thor') or *Torat-uros* ('champion Thor'). He was supposed to be an old man (*Aija*) who killed goblins with a hammer; and his sacrificial symbol was a hammer held in his hand. From foreign sources also was derived the thunder-god's wife, *Akko* ('the old woman'), or, as she is sometimes called, *Ravdna* (*Rauni* of the Finns), to whom the rowan-tree was sacred; indeed, in her name may be recognized the Icelandic *reynir*, 'rowan.'

By the side of the thunder-god on the Lapp drum may also be seen depicted another Scandinavian deity, viz. the god of fertility, whom the Lapps called *Väralden-olmai* ('the world man'). He is pictured with a mattock in his hand, which proves, better than anything else, his southern origin. When the Lapps made offerings to him, they fastened to his sacrificial symbol a reindeer stag's genitals, to induce him to increase the reindeer herd. In addition to animal sacrifices, they offered in his honour agricultural implements, mattocks, and spades. All these features of the cult point to the Scandinavian Freyr, who was also called *Veraldar-goð* ('the god of the world'). At the sacrificial altars of Väralden-olmai, a 'world's pillar,' blood-besprinkled, was set up, a pillar with which he was to support the world. This was another borrowing from the Scandinavians, and it is seen in their sacred high-seat pillars, and in the sacred pillar (*irminsul*) of the early Saxons.

There was a third important Scandinavian nature-god whom the Lapps worshipped, viz. *Biegga-galles* ('the old man of the wind'), or *Bjegg-olmai* ('the wind man'), who drove out the wind with a club, and scooped it in again with a shovel when it had stormed enough. To this deity, who was also known in Finnish Lappmark, they offered, among other things, small boats. In the north he had a name, *Ilmaris*, borrowed from the Finnish *Ilmarinen*, one of the heroes of the *Kalevala*. Like the Ilmarinen of the Finns, Bjegg-olmai showed features which were most certainly derived from the Scandinavian *Njorðr*. In like manner the Lapp method of conjuring forth wind and storm, by undoing three magic knots, is of Scandinavian origin. From their agricultural neighbours the southern Lapps may have acquired *Jisen-olmai* ('the hoar-frost man') and *Rana-neida* (significance of *Rana* unknown), the former being a frost spirit and the latter a goddess of verdure or growth, who ruled over the mountains that become green earliest in the spring. It is probable that *Raz-ajk* ('the grass mother') of the Russian Lapps is of later origin, for grass is comparatively unimportant in the keeping of reindeer.

5. **Other deities and mediators.**—The goddess of birth was *Mader-akka* ('the old woman of the earth'); and her three daughters were *Sar-akka* or *Sar-edne* (from *sarrat*, which, according to K. B. Viklund, means 'to cleave sinews asunder for threads'; cf. the spinning of the Norns), *Juks-akka* ('the old woman of the bow'), who was identical with *Stäuk-edne* ('the gun mother'); and *Uks-akka* ('the door woman'). Sar-akka was most favoured, for she gave needed aid at child-birth and calving. The task of Juks-akka was to protect the child from falling and hurting itself; and with her Uks-akka, who lived under the door and changed girl children into boys in the mother's womb, was often confounded. All three lived under the *kåta*. The goddesses of birth, who were unknown to the eastern Lapps and to whom they offered spinning-wheels and alien sacrificial animals, corresponded to the Scandinavian Norns, just as the Lapps' porridge feast, which had to be eaten by women in child-bed in honour of the goddess, corresponded to the Faroe *nornagreytur*. During the Roman Catholic period Sar-akka was confounded with the Virgin Mary, who was frequently called *Sergve-edne* (significance unknown). Two strange ceremonies dated from the same period, viz. Sar-akka baptism and Sar-akka eucharist, which were simply imitations of the Christian sacraments. Roman Catholic tenets can also be recognized in the trinity of the Lapps—*Radien-attshe* ('the ruler's father'), *Radien-akka* ('the ruler's wife'), and *Radien-bardne* ('the ruler's child'), who are all depicted on the Lapp drum of the later periods. It was the duty of *Aílekes-olmai* ('the holiday man') to see that the week-end days, Friday, Saturday, and Sunday, were properly observed; and *Fasto-olmai* ('the fast-man') had to see that the fasts were observed. *Aílekes-olmai* also furthered prayers presented to the god whom the Lapps called *Jubmel* or *Ibmel*—a name borrowed from the Finnish *Jumala*.

The mediators between mankind and the spiritual world were *noide*, *noite*, *noaide* (Finnish *noita*), shamans of the same kind as those of the Samoyeds and the northern Asiatic folk. Usually they were extremely nervous individuals whose characteristic troubles passed down from generation to generation. Yet the natural skill and dexterity had to be cultivated by means of an old shaman. The *noaide* could enter into touch with the spirit world when in an ecstatic state, a trance, during which his soul went to the kingdom of death in order to ask the advice of the dead about such things as the cause of the sickness of men or animals, the prospects of hunting, and so on. For the purpose of assisting him, the *noaide* had one or more tutelary spirits (*suoje*, originally 'shadow,' 'phantom'), which he could inherit, or buy, or obtain as a marriage portion. Often the spirit placed itself at the disposal of the *noaide*. This spirit company was called *noaide-gaddse* ('shaman retinue')—a name which is often given to certain animals who helped the shaman during his spirit journey. From the close connexion in which such animals stood to their masters, it is probable that it was the shaman's own soul that, severed from the body, could put on different shapes: as a reindeer (*saivo-sarva*) it hastened over the hills; as a bird (*saivo-lodde*) it flew through space; as a fish (*saivo-guölle*) it plunged through the subterranean waters; and as a snake (*saivo-guarms*) it undulated on the earth.

6. **The Lapp drum.**—As a means of producing an ecstatic trance *noaide* employed yelling, wild

resolute in holding to their ideals, and for those ideals they desired not toleration but mastery. They wished to see Episcopacy supplanted by the Presbyterian system, and for that end they steadily worked within the Church itself. Their objections to ceremonies, surplices, and liturgy were only steps towards the hoped for institution of the Genevan form of discipline as the Anglican standard. For the time being, it is true, this particular hope was in abeyance, and it was mainly as a doctrinal system that Calvinism now showed its strength. The leaders of the movement were in the ranks of the clergy, and the Universities were its strongholds.

To this system Laud soon showed himself a strong and dangerous opponent. He belonged to the school of Richard Hooker and Bishop Lancelot Andrewes, and the pious aspirations of men like George Herbert and Nicholas Ferrar were very precious in his sight. His ideal for the Church of England was that which in modern times is called Anglican. He saw in the English Church a great mediating communion, neither Roman on the one side nor Genevan on the other, primitive, Scriptural, and Catholic, purged from superstition yet reverencing antiquity, loyal to the truth once delivered and yet large-hearted in its welcome to new knowledge and fresh thought. Whatever grievous mistakes he made in furtherance of this ideal, it was to it that he devoted his life; and, after everything is said against Laud that can be said, the truth remains that his conception has been justified in the subsequent history of the English Church. To him in a large degree is due the settling of the character of that Church's system.

In setting himself against the Calvinism of Oxford, however, Laud entered upon a long and one-sided conflict with authority. In an academical exercise delivered soon after his ordination he gave great offence to Abbot, Master of University College and Vice-Chancellor and afterwards Archbishop, by tracing the authority of the Church, through the Roman Catholic hierarchy, up to the Apostles and the Primitive Church, and an outcry was raised later in 1604 when, in his exercises for the B.D. degree, he maintained the necessity of Episcopacy and the doctrine of baptismal regeneration. Two years later Laud was attacked by the Vice-Chancellor, Henry Airy, for publishing 'popish opinions' in a sermon delivered in the pulpit of St. Mary's. A trial followed in the Vice-Chancellor's Court, from which Laud emerged scot-free. Amidst these and similar attacks Laud's coolness, courage, and ability served him in good stead. For a time he seemed to stand almost alone. In his own words, 'it was almost made a heresy for any one to be seen in his company, and a misprision of heresy to give him a civil salutation as he walked the streets' (Heylyn, *Cyprianus Anglicus*, p. 54). On one occasion he sat in St. Mary's and heard himself abused for almost an hour together, being pointed at as he sat (*ib.* p. 66). The preacher on this occasion was Abbot, brother of the Archbishop, and Divinity Professor, who certainly castigated in trenchant style the supposed papistical leanings of this unruly member of the University.

Yet Laud was not without friends who sympathized with him in his baptism of fire. Bishop Young of Rochester, who ordained him as deacon in 1600 and priest in 1601, praised his study of the Fathers, Councils, and the ecclesiastical historians, and declared that, if he lived, he would be 'an instrument of restoring the Church from the narrow and private principles of modern times' (Mozley, *Hist. and Theol. Essays*[2], i. 116). Rapid preferment fell to his lot. He became chaplain to the Earl of Devonshire in 1603, and in 1607 he was made Vicar of Stanford in Northamptonshire. The following year the advowson of N. Kilworth in Leicestershire was given to him, and he took his degree of D.D., and became chaplain to Bishop Neile of Rochester. His first sermon before King James was preached in 1609, and shortly afterwards he was appointed to the charge of West Tilbury in Essex. Cuxton in Kent next fell to his care in 1610, but a few months later he left it to take charge of Norton. The same year the Presidentship of St. John's College became vacant, and Laud became a candidate. Naturally the whole strength of the Puritan party was put forth to prevent his appointment, Abbot, the Archbishop-Elect, and Lord Chancellor Ellesmere being indefatigable in their efforts. Yet, although Laud was disabled by sickness, and unable personally to take part in the contest, he was elected. An appeal was made to the Crown, which James in person disposed of by declaring Laud President of St. John's.

As head of a College, Laud was in his proper element, and his rule seems to have been a happy and beneficent one. In dealing with those Fellows of the College who had worked against him he showed a proper spirit of conciliation. As a patron of literature and sound learning he was wholly admirable, and his love of order and discipline found congenial scope in dealing with academic life and affairs. When he became Chancellor of the University in 1630, his opportunities for usefulness in this direction were much widened, and he used them to the full. The reforms which he instituted resulted in a large increase of students and in greater efficiency of teaching, and their effect remained long after Laud was dead.

It may be convenient here to summarize in anticipation the valuable results of Laud's connexion with Oxford. The codification of the University Statutes was perhaps his most important work, and his code still remains as the basis of the Statute-book of the University. Among its provisions were the institution of public examinations for University degrees, the revival of the College system with its moral and religious discipline and the academical dress, and an improved method of electing proctors. Laud's benefactions to the University were many and important. He founded the Laudian Professorship of Arabic, increased the endowment of the Hebrew Chair, and similarly augmented the emoluments of the Public Orator. He befriended foreign scholars like Gerhard Vossius, and helped to promote native men of learning like Jeremy Taylor, Selden, Lindsell, and Bedell. In 1633 Laud procured a royal patent for the foundation of the University Press—an institution in which he took the greatest interest. His munificence towards the then recently founded Bodleian Library was also great. He presented to this institution over 1300 MSS in various languages, besides a collection of coins, and built an extra wing to accommodate his gifts. His claim that no Chancellor had ever loved the University as he is well borne out by the record of his services and his gifts, and, when it is remembered that his educational work was carried out in the intervals of his ecclesiastical and political labours as Archbishop and Prime Minister, it seems all the more remarkable. Mention should also be made of the fact that, as Chancellor of Dublin University, Laud provided a Charter and Code for Trinity College, one of the features of the latter being the provision that the fellowships, originally of seven years' duration, should be tenable for life. The Colleges of Eton and Winchester also came within the Archbishop's care as visitor, and we find him

can justly be laid to his charge. He was not revengeful, and often treated his fallen enemies with private kindness. He was kind to the poor, and strove in various ways for social betterment.

Laud's connexion with Scotland was a fateful one. He had accompanied King James in his visit to that country as Dean of Gloucester, and again in 1633, as Bishop of London, he was one of the companions of Charles I. in a visit that produced an unfavourable impression among the Scots. The climax came in 1637, when the attempt to introduce the Prayer Book known as 'Laud's Liturgy' led to ecclesiastical and political revolution in both countries. In spite of its name, however, the Prayer Book was in the main the work of two Scottish Bishops, Maxwell of Ross and Wedderburn of Dunblane, Laud's share being confined to preliminary suggestion and subsequent revision. Both Charles and Laud, indeed, had wished the English book then in use to be adopted in Scotland, but gave way in the face of the patriotic representations of the Scottish Bishops. The real offence of the book lay in the arbitrary method of its introduction, regarded as the culmination of a series of despotic acts.

Laud met his fall with pathetic dignity, and bore his long imprisonment with all its trials very patiently. On 18th December 1640 he was impeached by Parliament, and the following March he was imprisoned in the Tower. His friend and colleague Strafford was executed on 12th May, and the Archbishop fainted at the window of his cell when attempting to give him his blessing on the way to the scaffold. In May 1643 Prynne was commissioned to rifle his papers, and to seize his diary, a mutilated edition of which was shortly afterwards published. His trial for high treason began on 12th March 1644. Laud showed the same coolness and ability in defending himself that he had exhibited many years ago in the Court of the Vice-Chancellor of Oxford, and the prosecution failed. But his enemies were not to be baulked of their prey, and a special bill of attainder was passed by Parliament. On 10th January 1645 the Archbishop paid for his policy and his mistakes with his life. He was executed on Tower Hill in the presence of a large multitude, declaring that he had always belonged, in heart and soul, to the Church of England, and that he had never endeavoured the subversion either of law or of religion. His body was deposited in the chancel of the neighbouring Church of All Hallows, Barking, whence it was removed in 1663 to St. John's College, Oxford.

A. MITCHELL.

**LAUGHTER.**—When we seek to assign to laughter a place and a function in social life, it is clear that we have in view the laughter of embodied persons. Even when 'the joyful roar to the benefit of the lungs' has undergone repression and refinement under the touch of civilization, there remains a more chastened expression which may be seen if not heard, and without which a fellowship in feeling is incommunicable. There is, indeed, when refinement and repression have reached their limit, a hidden and silent laughter of the mind which might be enjoyed by a disembodied spirit—though even here for embodied mortals there are, no doubt, more subtle physiological effects which, by purely inward reverberation, give heightened tone to the enjoyment. But such silent and unexpressed laughter has, on one side at least, lost touch with social life. Apart from some form of telepathic influence, it can call forth no echo in others. It may bring to the individual an access of glee—a touch of 'sudden glory'; it remains, however, unshared; there can be none of that beneficent contagiousness which, through the interaction of suggestion, imitation, and sympathy, gives one form of social value to laughter—a real value, though in its more primitive stages it may as yet afford little evidence of that progress in the art of good manners which, according to Bergson, it is its function to promote.

On its physical and expressive side, then, laughter is, among other things, a means of intercommunication, though it may not be consciously employed to that end. Like other such means, it implies as a basis a common mode of expression, inherited or acquired; and, in large measure in co-operation with language, it affords to others an index of the presence of a specific and probably indefinable mode of affective tone which accompanies man's outlook on his fellows. For amid much divergence of opinion as to the essential characteristics of that which is provocative of laughter, there seems to be fairly general agreement that it is the situations of, or in close relation to, human life that afford the natural objective of laughter when it comes to maturity. On the one hand, therefore, there is the physical laugh which invites others to join in the social chorus; on the other hand, the laughable, which is a property of some sort that characterizes a social situation; and between them stands laughter, in the sense in which the word will here be used, as that which subtly yet distinctively qualifies some one's consciousness.

Of the laugh and the smile as bodily expressions little need be said. It is probable that for both there are hereditary foundations, and that the behaviour involved is, in the narrower and biological sense, instinctive. But whether the smile is, in the infant, an expression of satiety, and whether the laugh is at the outset the reflex outcome of physical tickling; how far they are quite independent modes of response, or how far they have common factors; whether they have in themselves some element of survival value, or whether the muscles concerned are, from the habits of our race, the readiest and therefore the first to receive an overflow of 'nervous energy'; how the facial, vocal, and respiratory co-ordinations are brought about, and why they should come to be an expression of specific and somewhat varying mental states—these are matters beyond our present concern. They are questions of genetic origin which we can afford to pass by. It is to laughter and the laughable that we must restrict our attention, merely noting that the nervous laugh, the irritable laugh, the laugh of bitter scorn, though the same organic mechanism of response is employed, do not seem to express the sunny laughter of the mind. The laughter of the Bible is nearly always an expression of scorn and not of mirth (see, however, Ps $126^2$ and Job $8^{21}$). Genial laughter and the laughable are in correlative relationship; at all events the laughable inevitably implies some one who does or might laugh thereat. If we add that laughter also implies something which is laughed at (which will exclude the laugh as an expression of pure joy and lightness of heart), the symmetry of the correlation will be preserved. But a good deal depends upon whether the laugher is regarded as a relatively detached and disinterested spectator or is looked upon as eminently self-centred in his outlook. Schopenhauer's doctrine of the incongruous involves the assumption of the former attitude;

antithesis to the laughing mood) is characteristic of the best comedy. If, as is generally held, humour is a blend of the playful and the serious, owing its timbre to overtones of something akin to pity, then, so far as humour is an ingredient of comedy, emotion is present. We have 'the richer laugh of heart and mind in one.' Meredith says that the humorist of high order has an embrace of contrasts beyond the reach of the comic poet. But this very contrast serves to enhance the richness of laughter, and characterizes the higher comedy as distinguished from farce; for 'the test of true comedy is that it shall awaken thoughtful laughter' (G. Meredith, *Essay on Comedy*, pp. 83, 85).

It is not the primary business of comedy to correct men's manners. That is one of the functions of laughter in social life; but it is introduced into comedy only as an ideal representation of that life. This disciplinary function of laughter is regarded by Bergson as the mark of its social utility (*op. cit.* pp. 17, 170, 197 f.). Laughter is above all a corrective. By laughter, which would fail in its object if it bore the stamp of sympathy or kindness, society avenges itself for the liberties taken with it. Its function is to intimidate by humiliating. Ridicule, we may say, is the whip with which society corrects the smaller faults of its children, and satire is the lash which is applied to corporate abuses when they have been stripped bare of their fine garments. In both there is something of self-centred superiority, even when it is felt to be the superiority of society embodied in the smiter. But, though the derisive smile or the scornful laugh may be there, it is not an expression of the true spirit of laughter, which is happy and genial. It is rather the lineal descendant of the exultant laugh of the savage over his vanquished foe. And it not infrequently fails in attaining its end, while the kindly good-humoured laugh has far greater efficacy in correcting the manners of boys and men.

It is questionable, however, whether this form of social utility is that which has given to laughter its chief evolutionary value in social life. This is rather a secondary utility like that of the insect's sting, which is derived from an organ of different ancestral value. There is a more genial form of utility. According to W. McDougall, laughter has been evolved in man as an antidote to sympathy with suffering (*Brit. Assoc.*, 1913, reported in *Nature*, xcii. [1914]). He contends that laughter arises only in situations which are mildly unpleasant except in so far as they are redeemed by laughter itself; or in presence of those things which would excite a feeble degree of sympathetic pain if we did not actually laugh at them. But are these conditions universal? Is the comic situation, or the joke, at which we laugh, always in some degree painful? Should we not substitute 'sometimes' for 'always'? There is, however, probably an element of truth (if not the whole truth) in the view that laughter is a protective reaction which shields us from the depressing influence of the shortcomings of our fellow-men—even when they jest. As pity softens the primitive callousness of laughter, so does laughter in turn relieve us from the depression which stupidity, for example, engenders. And it may have a wider influence.

'How many men in our highly civilised communities to-day may have learned to keep their heads above water by the practice of gentle laughter, no one knows' (Sully, *Essay on Laughter*, p. 408).

In any case, 'he who produces a laugh of pure gladness brightens the world for those who hear him' (Sully, *op. cit.* p. 417). Laughter is a tonic which braces both body and mind, and thus benefits both the individual and society.

Kemp, London, 1883–86; H. Spencer, 'The Physiology of Laughter,' *Macmillan's Magazine*, March, 1860, reprinted in *Essays*, i. (London, 1883); George Meredith, 'An Essay on Comedy,' *New Quarterly Magazine*, April, 1877, reprinted in book form; H. Bergson, *Le Rire*, Paris, 1900, tr. C. Brereton and F. Rothwell, London, 1911; James Sully, *An Essay on Laughter*, do. 1902, and references to literature there.

C. LLOYD MORGAN.

# LAW.

**LAW (Natural).**—The idea of 'law' has a long and varied history. It has passed through important changes, and has occasioned manifold disputes. It took its rise as something relating to human society, and was then extended to external nature and the universe, whence, after undergoing a peculiar metamorphosis, it was brought back to the sphere of its origin, in order to shed light upon human life and action.

**1. The development of the idea of natural law.**—The development of the concept began in the ancient world, but it was not until the modern epoch that 'law' came to occupy a central position in all scientific procedure. The expression 'law of nature,'[1] which formed a theme of great interest in the classical age of Greece, was originally used with reference, not to the external world, but to human nature itself. It denoted the unwritten as contrasted with the written law. This unwritten law, however, was at first simply equivalent to traditional usage and custom, and it was only later that it came to be taken in the sense of a law written by the deity in the human heart. The term 'law of nature,' in its modern acceptation, is seldom

[1] The historical origin of the phrase 'law of nature' is discussed by E. Zeller, 'Über Begriff und Begründung der sittlichen Gesetze,' reprint from *ABAW*, 1883, and with signal caution and thoroughness by R. Hirzel, "Ἄγραφος Νόμος,' in *ASG*, philol.-histor. Klasse, xx. [1900]. According to Hirzel, ἄγραφος νόμος primarily meant traditional usage and custom, and retained this sense throughout the ancient period; from the time of Thucydides, however, it came to bear another meaning as well, viz. that of the divine law written in the heart. Cf. also Hirzel's still more exhaustive work, *Themis, Dike und Verwandtes*, Leipzig, 1907, pp. 386–411.

facts. It is no doubt true that here certain uniformities have been rather prematurely resolved into laws, and that intricate congeries of facts have not always been sufficiently broken up into their simple elements; but, when all is said, the movement has opened fresh avenues of knowledge, and given effective incentives to inquiry.

(*c*) *Economics*.—The movement assumed a more intense and incisive phase upon the narrower field of economics proper. Here we find two modes of interpretation and investigation in conflict with each other. The advocates of the one mode sought to resolve the economic process into a mere tissue of self-regulating elementary movements, and so to explain them in accordance with natural laws, and they repudiated all interference in the political and social order as a derangement of natural processes.[1] The most prominent representative of this view is Adam Smith. It was maintained on the other side that, if the economic life of mankind was not to degenerate into a ruthless struggle of each against all, it must be ethically regulated. As representing this position the name of Thomas Carlyle will suffice. It is indisputable that in recent times this ethical view of economics has asserted itself more and more effectively in opposition to the purely scientific interpretation, and that, accordingly, the State has interfered more and more actively with economic conditions. Modern industry, with its huge manufactories, has been the main factor in this development.

(*d*) *History*.—There has been in recent times a considerable amount of discussion regarding the problem of historical laws. The abandonment of a religious reading of history has given rise to an endeavour to interpret the historical process by its own movement, and this again has led thinkers to construct a philosophy of history,[2] and to search for the laws that control the process. In the 19th cent. attempts to understand the movement of history as an ordered and articulate process were made—from opposite points of view, indeed, though not without a certain correspondence in results—by Hegel and Comte. Hegel regarded history as a self-evolution of the Spirit, which advances by means of antithesis, while Comte, by way of the 'three stages' in ceaseless progress, arrived finally at an intellectual interpretation of phenomena which provides a rational comprehension of human life as a whole.

In Germany, within recent years, a subject of much discussion and controversy has been the relation between history and natural science. Certain writers insist strongly upon the profound difference between the two, emphasizing the individual or particular character of historical processes, and seeing in these the pre-eminently valuable element of history. Windelband[3] and Rickert[4] are prominent champions of this view, and they are supported by the majority of German historians. A leading representative of the other school is Lamprecht, who puts forward the hypothesis of socio-psychical stages of development proceeding in a determinate order.[1]

3. **Conclusion**.—Thus the idea of 'law' provides an interesting example of the manner in which a general tendency works its way into all the various fields of human experience, and is used to mould them into conformity with the process of nature. But we also see here how the distinctive character of the several fields forms an obstacle to the tendency, and how this distinctive character is clearly revealed in the attempt to bring the various fields into correspondence with the laws of nature. It may be said, in general, that, if we are to speak of laws in the spiritual sphere at all, the conception of law must have quite a different meaning from that which it bears in the realm of nature. It is in particular the ideas of freedom and individuality that prohibit a simple extension of the laws of nature to other provinces.

LITERATURE.—In addition to the works cited in the text of the art. cf. R. Eucken, *Geistige Strömungen der Gegenwart*[4], Leipzig, 1909, Eng. tr. *Main Currents of Modern Thought*, London, 1912, p. 195 ff.; E. Boutroux, *De l'Idée de la loi naturelle dans la science et la philosophie*, Paris, 1895; W. Köhler, *Geist und Freiheit: allgemeine Kritik des Gesetzesbegriffes*, Tübingen, 1913.

R. EUCKEN.

**LAW (Primitive)**.—The definition of law, like that of religion, is by no means so easy as it looks. That framed by the great jurist, John Austin, so long dominant in English political philosophy, was derived from Hobbes, who in the 17th cent. elaborated the theory of paternal government. So high did he place the authority of the ruler that he made the king the arbiter, not merely of political and social conduct, but even of religion and morals. Austin, of course, did not go so far as this. When he formulated his theory, the controversy concerning the Divine Right of Kings was dead, theological and political passion on the question had cooled down, and the British Constitution, as settled at the Revolution, had been accepted by all parties. It was, therefore, necessary only to posit a supreme political authority, without theorizing as to its origin or dogmatizing on its proper form. According to Austin, positive law (as distinguished from the divine law, the moral law, the laws of nature, and other laws so called by way of analogy, and in his sense not really laws at all) is a rule of conduct prescribed by a sovereign, whether an individual or a definite body of men, to a member or members of the independent political society wherein its author is supreme (*Lectures on Jurisprudence*[3], London, 1861, i. 316). Laws are a species of command addressed by a political superior to those on whom he has the power and the will to inflict evil if his desire expressed in the command be disregarded. A sanction, or penalty for disobedience, is, therefore, annexed to, or implied in, every command of the sovereign—that is to say, in this connexion, every law.

'Command, duty, and sanction are inseparably connected terms. . . . Each embraces the same ideas as the others, though each denotes those ideas in a peculiar order or series' (*ib.* pp. 5 f., 9).

This definition has the merit of avoiding all antiquarian questions and all theological dogma and philosophical speculation as to the origin of the supreme authority. It takes the facts as they are in modern civilized States, and as they were in imperial Rome, and frames a formula to express them. Nothing else was possible to that generation. Archæological inquiry into origins had hardly begun in 1832, when Austin's work was

---

[1] On the history of the question see I. Neumann, *Jahrbücher für Nationalökonomie und Statistik*, 3rd ser., Jena, 1899, who (p. 152 ff.) writes: 'Even in antiquity men sought for economic and social laws, and next, more especially from the latter half of the 17th century, from the days of Locke and Hobbes, they applied the term "law" to the facts of the former [*i.e.* economics], while the physiocrats themselves, in following these precedents, cannot be altogether exonerated from the charge of having been so influenced by the then all-powerful ideas of Natural Right that they were unable to keep such laws of events sufficiently distinct from those of the "ought," or ethical laws.' Cf. also his 'Naturgesetz und Wirtschaftsgesetz,' in *Zeitschrift für die gesamte Staatswissenschaft*, iii. [1892], and F. Eulenburg, 'Naturgesetze und soziale Gesetze,' in *Archiv für Sozialwissenschaft und Sozialpolitik*, xxxi.–xxxii. [1910–11].

[2] The expression 'philosophie de l'histoire' was first used by Voltaire, though not in a technical sense.

[4] H. Rickert, *Die Grenzen der naturwissenschaftlichen Begriffsbildung*[2], Tübingen, 1913.

[1] The controversy as to the existence of laws in history is analyzed and explained by E. Bernheim, *Lehrbuch der historischen Methode und der Geschichtsphilosophie*[6], Leipzig, 1908; cf. also F. Eulenburg, 'Über Gesetzmässigkeiten in der Geschichte ("historische Gesetze")', in *Archiv für Sozialwissenschaft und Sozialpolitik*, xxxv. [1912], and art. HISTORIOGRAPHY.

portance of the matter. Bulls are regularly issued from the papal Chancellery; before Leo XIII. they were written in Gothic characters and had attached a leaden seal tied to the parchment by silk threads. Leo XIII., in 1878, ordered that in future bulls should be written in Roman letters and sealed with a red seal representing St. Peter and St. Paul and bearing the name of the pope. Only in bulls of special importance is the old leaden seal to be retained. Bulls always begin with the name of the pope and the title 'Seruus Seruorum Dei' only; briefs begin with a fuller title and are sealed in red with the seal of the Fisherman. They are prepared at the Secretariate of Briefs. The use of bulls or briefs is not easy to account for. Frequently matters of great importance are determined not by bulls but by briefs (see, further, art. BULLS AND BRIEFS). According to the matter and the force of obligation, papal constitutions are variously distinguished. General laws for the whole Church are called by the generic name *constitutiones*, and *decreta* are those which are issued 'motu proprio'; *literæ decretales* generally come from a consultation and are answers to questions. Encyclicals are addressed to the bishops of the whole Church or to those of some province. With regard to the extension of their binding force, we distinguish between *constitutiones generales* for all and *rescripta* for special cases, to which alone normally they apply. All Roman Catholics are bound by general constitutions, and also by *epistolæ decretales* if they are expressly extended to all. Otherwise, they do not constitute a general law, from defect of promulgation. Immediately they bind only those to whom they are addressed. But to others they have the force of authentic interpretations of law, and are often published with the purpose of constituting a precedent. Rescripts have no legal force except for those to whom they are addressed. Rescripts may be *iustitiæ*, containing an obligation, or *gratiæ*, conferring a favour, or *mixtæ*.

So far we have considered the *fontes iuris generalis*. *Ius particulare* is made by the decrees of provincial councils, diocesan laws, or statutes of corporations, such as chapters for their own body. It is obvious that a particular authority can bind only those who are subject to it. Many civil laws are included as particular canon law; not that the Church recognizes the right of a civic authority to legislate in ecclesiastical matters, but either because they are the civil sanction of already existing Church laws or because Church authority has given them the force of canon law. Connected with civil law are concordats. These began in the Middle Ages, *e.g.*, the 'Concordatum Calixtinum' of 1122, between Pope Calixtus II. and the Emperor Henry V., which put an end to the dispute about investitures (see art. INVESTITURE CONTROVERSY). A concordat is defined as 'a treaty between Ecclesiastical and Civil authorities, by which the connexion between both societies concerning mixed affairs is regulated.'[1] According to modern principles, only the pope makes the concordat on the side of the Church. For the State its governing authority acts. The matters treated in concordats are all the 'mixed' questions in which both Church and State have an interest, such as questions of property, marriage, presentations to benefices, and so on. Concordats are now generally said by Roman Catholic canonists to be true bilateral contracts, which oblige both sides in justice, being binding on the subjects of both powers as particular Church law and civil law (see, further, art. CONCORDAT).

(*b*) The *fontes iuris canonici non scripti* are: (1) Natural law as the origin of all positive law.

[1] S. Aichner, *Compendium juris eccl.*[9], Brixen, 1900, p. 26.

The basis of positive law is the principles of natural law; nor can positive authority make any law which contradicts that of nature. (2) Tradition, which affects principles of discipline as well as those of faith. So we distinguish divine, apostolic, and ecclesiastical traditions in matters which bind conduct. (3) Custom (*consuetudo*). This plays a great part in Catholic canon law. It is defined as: 'A law introduced by the repetition of similar actions on the part of the community, with the consent of the legislator.'[1] The difference between *consuetudo* and *traditio* is that in the case of a law coming through tradition it is presumed that it was originally formally promulgated by authority, although knowledge of that promulgation is to be had only through tradition. In the case of custom there is no promulgation at the beginning; the law gradually acquires its force through repeated acts. Custom is, in fact, the same principle as prescription, except that prescription usually connotes a right, and *consuetudo* a duty. It may be universal for the whole Church, special in the case of a particular though perfect society in its own order (as a chapter or religious order), or *specialissima*, if it affects an imperfect society, such as a family or parish.

Custom may be according to law, in which case it only makes the force of the law more clear, and perhaps interprets it (hence the proverb, 'Consuetudo est optima legum interpres'); or it may be beside the law ('præter legem'), adding to, but not contradicting, the *lex scripta*; or it may be against the law ('contra legem'), which abrogates or abolishes a law. This is the most important case. It is called *desuetudo* when custom simply abolishes a law by continual non-observance, *consuetudo contraria* when by repeated acts a new law is introduced which abrogates a former one.

There are many precautions in canon law against the too easy admittance of custom. First, it must be introduced by a perfect community, *i.e.*, by one which has the power of making or receiving a true law, as distinct from a particular precept. Hence one man can never obtain a right for himself by repeated acts. The custom must be introduced by repeated, free, and public acts on the part of the greater part of the community. Most canonists require that these acts should not be made through an erroneous opinion (*e.g.*, ignorance that the law exists); they must certainly be free, in the sense of not being made through force or fear. Nor is a new law introduced by custom when the people who practise the custom do so with the deliberate consciousness that they are merely performing a free work of piety. There must be, at least eventually, some signs of an intention (not necessarily explicit) to prescribe a custom 'præter legem.' The object of a *consuetudo* may be anything which is not opposed to natural law, or opposed to right reason, or an immediate occasion of sin, or injurious in itself to the whole system of Church discipline. The only general and certain principle that can be laid down with regard to the time required for a custom to obtain the force of law is that there must be a sufficiently repeated number of acts, extending over a sufficient time, for a reasonable person to be able to say that the custom is already in firm possession. Generally canonists apply to *consuetudo* the same principles as are required by civil law for the prescription of a right. For customs 'præter legem' some demand ten years, for customs 'contra legem' forty years. Others think ten years sufficient in this case too, at least when it is a case of law which has never been observed by the community, against which custom began as soon as the law was pro-

[1] Aichner, *op. cit.* p. 31.

tradition (παράδοσις), custom (ἔθος), and positive ecclesiastical legislation (ἡ ἐκκλησιαστικὴ νομοθεσία) as the sources of canon law. But she takes a different attitude towards civil law. As the result of the long Byzantine period, during which emperors made laws for the Church which were accepted by Eastern bishops, the Orthodox Church gives more importance to the State in Church matters than does the Church of the West. Orthodox canonists explain this. They urge that, as the Christian State accepted canon law in its province, and confirmed Church law by civil proclamation and civil sanctions, so the Church accepts all State law, even that of heathen emperors, as hers, so long as this does not contradict the canons. By this acceptance the Church 'canonizes' State law and gives it promulgation from herself. John Scholasticus (6th cent.), in his collection of canons, includes as an appendix a number of the *Novellæ* of Justinian I. which affect Church matters. The *Nomocanon* contains the rule: 'In cases where the canons contain no decision, we must follow the laws of the State.'[1] Theodore Balsamon (13th cent.), however, ascribes greater authority to the canons than to civil laws. In a case of conflict the canons, not the laws, must be obeyed. The Orthodox Church also ascribes canonical authority to the *responsa prudentum* (ἀποκρίσεις τῶν σοφῶν), *i.e.* the opinions of learned canonists given in the form of answers to questions or as statements. In this, like the Latin Church, she follows a principle of Roman civil law.

With regard to positive Church law (κανών in the strict sense) the Orthodox admit, as binding the whole Church, the 85 *Canons of the Apostles* (to which they still give apostolic and ecumenical authority, as containing principles derived from the Apostles, and as being confirmed by the Trullan Synod of 692) and the decrees of ecumenical synods. Of these they acknowledge seven, including the second of Nicæa (787) as the last. Although they hold their Church to be the whole Church of Christ on earth (so that she should have the same power of convoking an ecumenical synod as had the Church before the great schism), as a matter of fact they have held no synod claiming to be ecumenical since that schism. These are in theory the only authorities that can legislate for the whole Church, though the decrees of many particular synods and even canons of individual Fathers are considered to have acquired ecumenical authority by the later acceptance of the whole (Orthodox) Church. A Patriarch can legislate for his Patriarchate only; since the formation of permanent synods to govern national Churches, they give to these the same authority as a Patriarch has. In neither case can the particular authority legislate against the universal canons. In theory each bishop has the right to legislate for his own Eparchy, within the bounds of general law. He can summon diocesan synods, and promulgate laws for his people in the form of pastoral letters. In practice, however, this right is now much circumscribed. Each national Orthodox Church is considerably centralized under its Patriarch or Holy Synod. The independence of each national Church is balanced by a very complete dependence of each bishop within it. In the Orthodox States the government has much to say in the matter of the legislation of ecclesiastical authority.

The source of universal canon law for all Orthodox Churches is the *Nomocanon* compiled in the year 883. This is divided into fourteen titles. It contains the *Canons of the Apostles*, those of the seven ecumenical synods, those of ten particular synods, namely Ancyra (314), Neo-Cæsarea (between 314

[1] *Syntagma* (Athenian ed.), iii. 68 (*Nomocanon*, tit. i. cap. 28).

and 325), Gangra (*c.* 340), Antioch (341), Laodicea (
343), Sardica (343), Constantinople (394), Cartha
(419), Constantinople (861), and Constantinop
(879). The *Nomocanon* adds so-called canons
thirteen Fathers, namely Dionysius of Alexandri
Gregory of Neo-Cæsarea, Peter of Antioch, Atha
asius, Basil, Timothy of Alexandria, Gregory
Nazianzus, Amphilochius of Iconium, Gregory
Nyssa, Theophilus of Alexandria, Cyril of Ale
andria, Gennadius of Constantinople, and Tarasi
of Constantinople. These constitute the fund
mental law of the Church. In the *Athenia*
*Syntagma* (G. A. Rhalles and M. Potles, Athen
1852–59), after these sources are added rul
taken from St. Basil, St. John Chrysostom, S
Anastasius of Sinai, the synodical letter of Nich
las of Constantinople (895–925), and the *Cano*
of Nicephorus Confessor and of John the Faster
Constantinople (582–595). After these (which a
comprised under the heading διαφορά) comes t
rubric τέλος τῶν ἱερῶν κανόνων. As these have be
received by the various national Churches, th
are considered now to have ecumenical authority

The chief collections of canons are the *Nomocan*
of Photius (*c.* 883), who, however, only revised
former one, and that of John Zonaras (*c.* 112
who used a different source from that of Photiu
Theodore Balsamon, Orthodox Patriarch of Antio
residing at Constantinople, made a collection
canons after the order of Zonaras and depende
on his, and a commentary on Photius's *Nomocano*
Already in the 5th cent. there was an *Epitome*
*Canons* (κανονικὴ σύνοψις) made by a certain Stephan
of Ephesus. To this, in course of time, oth
canons were added. About the year 1160, Alexi
Aristenus, Nomophylax of Constantinople, wro
a commentary on this *Epitome*, and Simeon t
Logothete edited the same *Epitome* in anoth
arrangement, similar to that of Zonaras and Ba
samon. The Emperors Leo III. (717–741) a
Constantine V. (741–775) published an *Extract*
*Laws* (ἐκλογὴ τῶν νόμων) from Justinian. T
and the following collections of civil law conta
much canonical matter. In 1255 Arsenius, mo
of Athos, composed a new *Synopsis of Canon La*
In 1562 Manuel Malaxes published a *Nomocano*
In 1335 Matthew Blastares made an alphabetic
arrangement of laws (σύνταγμα). The most impo
ant modern printed collection of Canons is t
*Pedalion* (πηδάλιον).[1] This was compiled in t
first case by two monks of Athos, Agapios a
Nikodemos, and was published by authority of t
ecumenical Patriarch Neophytos VIII. at Leipz
in 1800. Theodoretos (ἱερομόναχος), who controll
the printing, added a number of passages which we
opposed to the law of the Orthodox Church; b
in 1802 the Patriarch sent out an Encyclical orde
ing all possessors of the book to erase these a
ditions. A second edition, without them, appear
at Athens in 1841, and a third, revised by Sergi
Rhaphthanes, at Zakynthos in 1864. This thi
edition contains the *Canons of the Apostles*, t
Canons of ecumenical and particular synods, a
those of the Fathers. To the text, commentari
(ἑρμηνεῖαι) and solutions of difficulties (συμφωνία
in modern Greek, are added. In 1852, two Gre
lawyers, George A. Rhalles and Michael Potl
invited by the Athenian Holy Synod, began a ne
collection of sources of canon law. The work w
completed in six volumes by 1859 and published
Athens. This is the *Athenian Syntagma* (Σύνταγ
τῶν θείων καὶ ἱερῶν κανόνων κ.τ.λ.).

Vol. i. contains Photius's *Nomocanon*, with Balsamon's co
mentary and other dissertations by older canonists; vol.

[1] In 1672 William Beveridge (afterwards bishop of
Asaph's) published an important collection of Greek law
*Synodicon sive Pandectæ canonum ss. Apostolorum et C*
*ciliorum ab Eccl. Græca receptorum*, 2 vols., London. Nea
all later Orthodox collections are based on this.

judges, the interpreters of the law, are—whether bishops or laymen—but on the question by whom their court has been appointed, and whether an ecclesiastical or quasi-ecclesiastical court is bound by the decisions of a superior court (the Judicial Committee) which does not profess to be anything but a State court.

It may be useful to consider how the Church law is interpreted in the non-established branches of the Anglican Federation. In these each Church has set up its own courts, and there is no dispute as to their validity. They may give an erroneous or foolish decision, but their power of deciding has not been questioned; it is explicitly acknowledged by those who make the subscriptions required of them before receiving an office. In the Church of Ireland the supreme court consists of three bishops and four lay judges, and, though the latter are in a majority, the spiritual character of the court has never been questioned. In the Episcopal Church in Scotland the supreme court (which is the court of appeal from the bishop in synod, and the court of first instance in the trial of a bishop) consists of all the diocesan bishops only, though they may (and, as a matter of fact, always do) have a lay assessor learned in the law to advise them, without being bound to follow his advice. The American and Colonial branches have each set up their own court, variously constituted, but on more or less similar lines.

But the question arises, What is the relation of such voluntary ecclesiastical courts to the State courts? The former can command obedience to their interpretation of the law only by virtue of the contract entered into by those who come before them. Every clergyman, before being ordained or receiving any office, makes a subscription, not only of doctrinal agreement with the Church, but promising obedience to its canons and tribunals. It is, therefore, instructive to see what view the State would take of the decisions of such Church courts. We may take the position of the Episcopal Church in Scotland as a good example of this attitude, since two or three cases in which that Church has been concerned (one of primary importance) have arisen to illustrate it.

In the case of Forbes *v.* Eden and others (*Leading Ecclesiastical Cases decided in the Court of Session, 1849-1874*, Edinburgh, 1878, p. 388 ff.), the Rev. G. Forbes, an incumbent at Burntisland (well known for his liturgiological eminence), disapproving of certain canons made in the General or Provincial Synod of 1862-63, and maintaining that he was not bound by them, as he had promised obedience at his ordination to the code previously in force, sued all the members of this synod to have, *inter alia*, the new canons declared null and void. The case was given against him by the unanimous decisions of the Court of Session in 1865 and of the House of Lords in 1867, on the ground that the code of canons which he had subscribed provided for alterations being made, and that the said synod had fulfilled all necessary requirements for making alterations. The new canons then enacted were, therefore, binding on all. In the Inner House—the Court of Appeal—Lord Cowan said that it was the province of the civil courts to redress civil wrongs. It was not their province, and it had not been their practice, to interfere as a court of review with the theological dogma or the internal regulations on discipline of religious sects or denominations. In the House of Lords the Lord Chancellor said that no civil court could take cognisance of the rules of a voluntary religious society made for the regulation of its own affairs, except so far as they related to collateral questions affecting the disposal of property. This judgment, then, makes it clear that an autonomous Church can alter its laws, if its code contains provisions to that effect.

In a more recent case, which was taken to the House of Lords (*Scottish Guardian*, Edinburgh, 1898, pp. 148, 504), it was remarked in the Inner House by Lord Young that the civil courts could not entertain an action concerning merely the government of the Church unless it involved a breach of contract; and this principle was affirmed in the House of Lords, which gave an additional ground of action before the civil courts, namely, if the managers of a congregation had in trust some funds of which the pursuer was in whole or in part beneficiary, and if they refused to pay him. To this extent would the civil courts investigate and decide on the Church documents.

The civil courts might be called in if a clergyman deprived or suspended by the Church courts declined to recognize their sentence. The Church, having no power in itself to enforce its decrees, must invoke the help of the civil courts, if necessary, to ensure the carrying out of the contracts made. This might happen if the clergyman in question refused to give up his parsonage or church; or, if costs were given in the ecclesiastical courts against a certain party, and payment was refused, the civil court might be called in. In such cases the State tribunal would treat the case purely as a matter of contract, and they would investigate whether the procedure in the Church court had been regular and in accordance with the current canons. In the Forbes case (see above), where Forbes sued for damages because he was refused an assistant curate, Lord Benholme remarked that 'this exercise of ecclesiastical discipline on the part of the bishop under the superintendence and review of the ecclesiastical court of appeal' could not be made the subject of a civil claim for damages in the Court of Session (*Leading Eccles. Cases*, p. 426).

From what has been said it would appear that, if a clergyman deposed for heresy by the Church courts appealed to the civil courts, the latter would not determine whether or not the doctrine in question was in accordance with the formularies of the Church, but would ask whether the Church courts to which the clergyman had promised obedience had proceeded regularly. In the discussions it is quite possible that doctrinal questions might be touched on, as, in fact, was done in Forbes *v.* Eden, when the Eucharistic Controversy was referred to, and (as might be expected when men go outside their own line of study) some curious *obiter dicta* in theology and ecclesiastical history were uttered. But this would happen only incidentally.

An important question of Church law was touched on in Forbes *v.* Eden, which illustrates the recent case of the Free Church of Scotland. In the latter case, as the present writer understands it, it was ruled by the House of Lords that the Free Church had not in its constitution explicit powers of complete alteration, but was subject to the limitation that certain things were unalterable. Something of this sort was the case in the Episcopal Church in Scotland from 1838 to 1890, when the codes of canons limited the alterations to those which were 'in conformity with the recognized constitution of the Church' (until 1863 also with its 'acknowledged practice'). In the Forbes case in 1865 the Lord Ordinary observed that the 'civil courts do not undertake to protect Churches or individual members of Churches from the influx of new doctrines. They only interfere to prevent the uses of property being perverted through its being retained by a majority who only keep the name while they have abandoned the principles of the Church to which it was devoted' (*Leading Eccles. Cases*, p. 401 n.). In the Inner House Lord Inglis said that a majority may be restrained on the application of a minority from carrying an alteration of a fundamental article of the constitution, and as an illustration said that a proposal to abolish the Thirty-nine Articles and to substitute Knox's Confession of Faith of 1567 would require unanimity in the Episcopal Church (*ib.* p. 404). In the Provincial Synod of 1890 the limitation on the power of alteration contained in the vague phrase 'recognized constitution' was removed.

Experience, then, tends to show that a non-established Church may make, interpret, and administer its law, in the existing civil conditions of this country, without any undue interference from the State. But it must be careful to see that its autonomous powers are clearly laid down in the documents that govern it.

in the early contract papyri, an oath by the king and Ammon was customarily recorded.

All documents of this time which had been published or were accessible to him in original or photograph are enumerated by the present writer in his *Catalogue of the Demotic Papyri in the John Rylands Library*, Manchester, 1909, vol. iii., where the papyri of that collection are also fully translated. They comprise sales of land, houses, temples, priesthoods, funerary offices, and cattle; leases of farms; also contracts of marriage and divorce, of son-ship (adoption), and of servitude. A large and complete papyrus in the Rylands Collection contains an elaborate petition presented to the *wazir* by a much-injured priest seeking redress and restoration of hereditary rights.

**5. Ptolemaic period.**—After the Macedonian conquest sales of lands and houses and of mummies with their funerary services, mortgages, leases, loans, marriage-contracts, and exculpatory oaths are common, but contracts of divorce, adoption, and servitude are not to be found, nor wills in any form. The native forms are modelled on those that preceded them, and are quite distinct from the flood of Greek contracts being produced in Egypt at the same time (see the above-mentioned *Rylands Catalogue* and numerous publications of papyri by Spiegelberg). The great priestly decrees of Canopus and of Memphis (the Rosetta stone) may also be mentioned here.

**6. Roman period.**—The native legal documents are practically confined to house-sales and mortgages in the Fayyūm of the 1st cent. A.D. See also ETHICS AND MORALITY (Egyptian), § 12.

LITERATURE.—Besides the works specified above, the most recent and therefore best publications of documents include W. Spiegelberg, *Die demotischen Verträge der Papyri Hauswaldt mit einem rechtsgeschichtlichen Beitrag von Josef Partsch*, Leipzig, 1913; O. Gradenwitz, F. Preisigke, and W. Spiegelberg, *Ein Erbstreit aus dem ptolemäischen Ägypten*, Strassburg, 1912. The numerous works of E. Revillout on Egyptian law are too fanciful to be recommended.

F. LL. GRIFFITH.

**LAW** (Greek).—I. *UNITY OF GREEK LAW.*—Although the Greek world was made up of a great number of commonwealths, each possessing independent laws of its own, and although every allowance must be made for local peculiarities, the leading conceptions of Greek law as a whole may still be considered as a unity. Most of our material, of course, comes from Athens, but Athens, as 'the school of Hellas,' is in a great measure representative of Greece. The Greeks felt very strongly that their customs and laws were peculiar to themselves as a nation, and presented a marked contrast to those of other people (Eur. *Androm.* 174 ff., and Dem. *in Lacritum*, 45).

II. *PERIODS.*—The history of Greek law falls into three principal periods, which may be called the archaic, the classical, and the Hellenistic. In the first, the rules of Greek legal lore are one of the varieties of Aryan tribal customs, which must be studied by the methods of comparative jurisprudence in close connexion with Indian, Italic, Celtic, Germanic, and Slavic law. The second covers roughly the 6th, 5th, and 4th centuries B.C., and is concerned chiefly with the laws and institutions of the autonomous city-States. The third corresponds to the time when Greek conceptions were acting as a kind of leaven in the vast tracts of the East—Asia Minor, Pontus, Syria, and Egypt—through which the Greek population had been dispersed by emigration and the Macedonian conquests.

**1. The archaic period.**—The States of the earliest periods were federations of the clans. Thus in Athens the commonwealth of the Eupatrids was subdivided into four tribes (φυλή), each of which consisted of three phratries (φρατρία), while each phratry was supposed to consist of thirty kindreds (γένος). The chief contribution of this period to Greek law consists in the principles of family law and succession. The community of family interests is symbolized by the hearth (ἑστία) as the centre of the household; the estate, which forms the basis of the material subsistence of the household, is the κλῆρος, and even in Athens of classical times certain rights and duties were considered as peculiarly attached to this estate (see, *e.g.*, Dem. *in Macart.* 1069 ff., as to the duties of criminal prosecution, corresponding to rights of succession to the κλῆροι). For this reason the practice of adoption was as well developed in Athens as in Rome (see art. ADOPTION [Greek]). A special case arose when a person died leaving a daughter to succeed him. She was emphatically 'joined to the estate' (ἐπίκληρος), and destined to marry the nearest agnate in order to preserve it. Instances from Athenian practice are quite common, but the custom is also well illustrated by examples from Sparta and Crete (Herod. vi. 57; Code of Gortyn, as to the πατρωιῶκοι, i. 50 ff.; Dareste, *Rec. des inscr. jur. gr.*, i. 379 ff.; see, further, art. INHERITANCE [Greek]). The wider kindreds were constituted on the agnatic principle, as units organized under a chief (ἄρχων τοῦ γένους); but in many respects relationship through females was also recognized. The ἀγχιστεία, as the narrower circle of kindred, included all relatives down to the degree of first cousins once removed. The admission of relatives through females by the side of agnates may be explained to some extent by tradition from a period of matrilinear organization, which, according to a popular legend, existed in Athens at the time of Kekrops (Athenæus, xiii. 2 [555]); but it is also connected with alliances between clans (*e.g.*, the case of Kleisthenes the Alkmæonid). The influence of kinship on legal rules is well exemplified by the extensive rights of kinsmen in regard to criminal prosecutions. In cases of homicide, an action (δίκη φόνου) had to be brought by relatives of the deceased, and, if the offence amounted to manslaughter, it might be condoned by the relatives (αἴδεσις) (Law of Drakon; Dareste, *Inscr. jur. gr.*, ii. 1) and compensation given by the slayer to the kindred. The family authority of the father over the children and of the husband over the wife appears in Greek as well as in other Aryan laws; but it is not so drastically expressed as in the Roman system. The father is not the absolute ruler of the household, but, as it were, a party to an implied compact, providing protection and education for his children, and entitled to support from them in return (γηροβοσκία).

**2. The classical period.**—(*a*) *General characteristics.*—In this period we must be careful to distinguish between oligarchic and democratic political principles. Aristotle (*e.g.*, *Pol.* vii. [v.] 1309*a*) often calls attention to the fact that the laws assumed a different aspect according to the system of government which was in force. The ideal of oligarchy is government by a small number of equals (ὅμοιοι), though in practice many inequalities may arise (*Pol.* ii. 9. 1270*a*); the tendency of democracy, on the other hand, is to give freer scope to individual liberty of judgment and action (*Pol.* viii. 1317*b*, 3; cf. the funeral speech of Perikles [Thuc. ii. 39]). In Athens, we are dealing with a system which, more than any other, embodied these democratic principles.

(*b*) *The Athenian system.*—Athenian law of the classical period was essentially a popular, not a technical, body of rules. It represents the most striking experiment in history to administer law according to the standards of the 'average man' as to equity and justice. The commissions of heliasts, the sworn judges of the courts (δικαστήρια),

86). (2) *Customary law.*—Nevertheless, there was also a vast body of customary law, which was mainly passed on to democracy by the preceding period, since only a few of the rules as to procedure and substantive law were actually promulgated as θεσμοί (Arist. *Ath. Pol.* iii. 4). Sacral law in general remained uncodified; ancestral customs (τὰ πάτρια) were recognized as a definite and sacred source of legal rules, and as such were interpreted by the exegetæ (Dem. *in Euergum*, p. 1160, § 68 f.). The ancient jurisdiction of the archons, and that of the Areopagus, until the reforms of Perikles and Ephialtes, were also largely concerned with traditional usages. (3) *Precedent.*—Precedent was never regarded as binding on the Athenian courts, but various kinds of non-litigious custom—*e.g.*, in dowry, commercial practice, maritime law, and forms of pleading and conveyancing employed by the professional scribes (γραμματεῖς) of the courts together with various forms of executory agreements (cf. Dareste, *Inscr. jur. gr.*, i. 318)—tended to establish precedents; and, in general, existing decisions had at least a symptomatic value, as showing the prevailing views and tendencies of popular courts (cf. Dem. *in Dionys.* 48). (4) *Natural law.*—Though in the orators and philosophers there are many indications of an 'unwritten law' (νόμοι ἄγραφοι) which is founded on instincts of human nature (Arist. *Rhet.* I. x. 3), the theory of a transcendent law of nature was not erected into a positive juridical doctrine. It appears most forcibly in the poets (*e.g.*, Soph. *Antig.* 454), though it was sometimes appealed to in actual litigation (Lysias, *in Eratosthenem*, § 2). (5) *Equity.* —A conscious juristic theory of the law of nature was rendered unnecessary by the conception of ἐπιείκεια, which gives a peculiar colouring to the whole system of Greek law. It amounted in practice to a liberal interpretation and application of legal rules. Although the oath of the heliasts enjoined them to frame their decisions according to their consciousness of justice (γνώμῃ καὶ δικαιοτάτῃ) only where there was no definite law to go by, in practice popular tribunals took great liberties in the application of existing laws. To some extent this was made necessary by the archaic origin and obscure expression of many fundamental laws (Arist. *Ath. Pol.* ix.). Wills and contracts provided fruitful material for such discretionary justice.

(*e*) *Distributive justice.*—The principle of the distribution of rights and duties, so characteristic of the Greek legal system, was by no means confined to theory, but was very definitely asserted in practice. Privileges and burdens were dispensed according to what the individual did and could contribute to the common stock. Military service, taxation, and the liturgies—*i.e.* public services such as the fitting out of ships, providing choruses for dramatic performances, etc.—were all regulated upon this basis. Those who considered themselves unfairly burdened by the very heavy requirements of the liturgies might resort to the ἀντίδοσις. A citizen who had been called upon to perform a liturgy might claim that another was better able to undertake it than himself, and demand that he should either do so or exchange properties (Dem. *in Phæn.*; Isok. Περὶ τῆς Ἀντιδόσεως). Similarly, if a citizen had been exempted from public burdens or granted a subsidy, he might be called upon to defend his privileges (Lysias, *Or.* xxiv. § 6 f.). The law of property in Athens never developed on such rigid lines as in Rome. There was no theory of absolute ownership. The κλῆρος was primarily the thing which was 'allotted' to the individual, but a kind of 'eminent domain' was reserved to the commonwealth. Therefore the typical action for the recovery of property was the διαδικασία, which was not a claim for absolute title, but only for guaranteed possession. Expropriation and interference with contracts were practised with a disregard for private right which is startling to modern notions (*e.g.*, legislation in Ephesus at the time of the Mithridatic war [Dareste, *Inscr. jur. gr.*, i. 22]).

(*f*) *Wrong and crime.*—We distinguish in the Greek theory of wrong and crime three elements which call for juridical treatment. (1) The first is that of redress. 'Damages,' in Aristotle's scheme, are not merely compensation, as in modern theory, but an equation of the loss to the party wronged (ζημία) and the gain to the wrongdoer (κέρδος). All wrongs are considered chiefly from the personal point of view. There is no sharp cleavage between the private action (δίκη) and the public action (γραφή); as a transitional form, the δίκη κατά τινος, a private action for crime, is distinguished from the δίκη πρός τινα, a purely private suit. As for the assessment of damages, the contending parties presented rival valuations between which the court had to decide. (2) The element of public reprobation assumes a religious form. Bloodshed, *e.g.*, was a pollution which excited the wrath of the Erinyes and the Olympian gods, and must be cleansed by religious purification. Hence even in classical times all actions of homicide were tried in temples, and even an inanimate object which caused the death of a human being was solemnly judged and sentenced before the hearth of the government (Prytaneum). Hence also the importance which was attached to orthodoxy: impiety, which was taken to include professions of free thought, was indictable by the γραφὴ ἀσεβείας (*e.g.*, the case of Sokrates). (3) How far was it recognized that in every crime there is a revolt of the individual will against the supreme will of the community? There are many indications that the Greeks were conscious of this element in crime, *e.g.*, Isok. *c. Lochitem*, § 7). They were not concerned with problems of individual free will in the theory of punishment. In view of the predominance of the commonwealth over the individual, punishment itself often took the terroristic form of actual extermination and intimidation. Demokritos puts the criminal on the same plane as a wild beast (frags. *ap.* Stob. *Flor.* xliv. 16, 18, 19), and Plato unequivocally states the necessity of removing obnoxious members of the body politic by means of capital punishment (*Legg.* 862). The social effect of intimidation was one of the leading principles of Protagoras's theory of law, and Plato fully endorses the view of the great Sophist that the object of punishment is not revenge for what, after all, cannot be undone, but the prevention of similar offences in the future (*Protag.* 324B).

3. **The Hellenistic period.**—It is impossible to enter in detail upon the discoveries which the recent researches of papyrologists and epigraphists have made in the Greek law of this period, especially that which prevailed in Egypt. One of its most remarkable features was the personification of the State in the king (the Pharaoh; cf. art. KING [Egyptian]), and the subjection of all juridical relations to the fiscal point of view. Under the rule of the Ptolemys, *dominium* was vested in the monarch, and private property in land amounted only to a species of leasehold (γῆ ἐν ἀφέσει), while the cultivation of State domains (γῆ βασιλική), and, later on, of all taxed land, was ensured by every means, including a compulsory distribution of plots (ἐπιβολή) among peasant farmers. In the ascription of the peasantry (δημόσιοι γεωργοί) to the crown lands we find the germs of the doctrine of local origin which played such a large part in the later Roman Empire. In Asia Minor, under the Seleucidæ, there was even a class of tenants, called

show that the arable land was already held in severalty.

In the family laws, the institution of marriage is improved by prohibiting purchase of a wife, and declaring a contract of marriage, if once concluded, to be irrevocable. Nevertheless, the position of women is one of absolute inferiority to the male sex. Thus a wife is liable to be chastised by her husband; and, even when he is unfaithful to her, she must worship him like a god. A woman is declared to be never fit for independence, and has to live under the perpetual tutelage of her father, husband, and sons. Polygamy is allowed, and seems to have been very common in rich and noble families. Infant-marriage is recommended, and the re-marriage of widows prohibited or discouraged. As regards proprietary right (*strīdhana*), women are said to be incapable of holding any property (except their *strīdhana*, or peculiar property); nor can they inherit, under the early law of succession at least, which was subsequently modified so as to let the widow in as an heir, with certain restrictions, on failure of male posterity. All family property is supposed to be held in common by a sort of joint ownership (joint family), the father or manager being regarded as a head partner. The family members are kept together by the sacred oblations offered in common by its living head to its deceased members (see INHERITANCE [Hindu]). After the father's death the sons divide his property equally, or with a specific deduction for the eldest son; or the eldest succeeds to the whole estate, the others living under him as under their father. Twelve different kinds of sonship are recognized, each of the secondary sons succeeding in default of his superior in rank, whilst the real legitimate son excludes them all from inheriting. The passages in the law-books extolling the possession of a son for spiritual purposes, as saving his father from hell, generally relate to the real legitimate son. The gross usages relating to the affiliation of the subsidiary sons were discouraged by the legal writers, and no doubt the existence of these usages throws an unfavourable light on the constitution of the family in ancient India. Thus there is the *kṣetraja*, or son begotten by levirate (*niyoga*); the *gūḍhaja*, or secretly born son of an adulterous wife; the *sahoḍha*, or son of the pregnant bride; the *kānīna*, or unmarried damsel's son; the *krīta*, or purchased son; the *apaviddha*, or deserted son. The more recent writers do not acknowledge as legitimate in the present age of sin (*Kaliyuga*) any but the true son, procreated in lawful marriage (*aurasa*), and the adopted son (*dattaka*) (see ADOPTION [Hindu]). There is diversity of opinion as to whether a widow may be allowed to adopt, with the assent of her husband given shortly before his death, this being the only case in which a sort of testamentary power of the owner of property is recognized. A father may, indeed, distribute his property among his sons during his lifetime; but, in doing so, he can exercise discretion only as to his self-acquired property, the ancestral property being held by father and sons in common, according to the joint-family principle.

Passing to criminal law, we find the suppression of crime recognized as a sovereign and a sacred function. There are hardly any survivals left of the right of private war and of the *wergild* (see BLOOD-FEUD [Hindu]). The removal of thorny weeds (*kaṇṭakaśodhana*), *i.e.* the suppression of criminals, is regarded as one of the principal duties of a ruler. Legal offences are also moral sins, and kings, by punishing the wicked and protecting the virtuous, obtain their own absolution. Punishment is personified as a god (see CRIMES AND PUNISHMENTS [Hindu]). A king in whose dominions there are no thieves, adulterers, calumniators, robbers, murderers, (after death) attains the world of Indra. Abuse, assault, theft, violence, including manslaughter and robbery, and sexual crimes, such as adultery, rape, seduction, and forbidden intercourse, are regarded as the five principal crimes. Theft and robbery seem to obtain special attention. A thief appearing before the king with flying hair, holding a club in his hand, and proclaiming his deed, is purified of his guilt, whether he be slain or pardoned; but, if the king does not strike, the guilt falls on him. Cattle-lifting appears to have been specially common, and the village to which the robbers were tracked was made answerable. The principle thus laid down has remained an effective part of the law down to our day, and elaborate rules are still in force in Kāthiāwār for following up the track from village to village, the Talukdar of the last being held primarily responsible. Stolen property in general must be restored by a king to its owner, according to Manu; and a ruler is even bound to make good the loss occasioned by his negligence. The king is required to cause taverns, shops, festive assemblies, old gardens, forests, and other places of retreat to be guarded by companies of soldiers, in order to keep away thieves, and to find out thieves with the aid of clever reformed thieves, and destroy them. The notion of theft and robbery is extended very far, so as to include cheating of every sort, forgery, bribery, jugglery, dishonest dealing in judicial proceedings, false gambling, etc. To steal gold belonging to a Brāhman is regarded as particularly punishable; but it is in the law of abuse and assault, of homicide, and of adultery, that the gradation of punishments according to the caste of the offender and of the offended comes out most clearly. Thus a low-caste man must suffer death for an intrigue with a guarded Brāhman woman, as a safeguard of caste purity, whereas adultery with a woman of inferior caste is punishable only with a fine. Fines are inflicted equally on Kṣatriyas and Vaiśyas who defame one of a higher caste, while the Śūdra offender incurs corporal punishment. Fines are the most common form of punishment, but there are many other forms (see CRIMES AND PUNISHMENTS [Hindu]). Barbarous cruelty, the prevalence of the *lex talionis*, and want of system characterize the Indian as well as other primitive codes. Death is prescribed by Manu for aggravated theft, for harbouring robbers, swindling, and kidnapping, for certain cases of adultery and insult—in short, for a great many more crimes than under more balanced systems. Death by torture was the punishment of a dishonest goldsmith, and mutilation that of the destroyer of a boundary-mark—which shows how great was the alarm at their offences. When we find that a red-hot iron spike ten fingers long is to be thrust into the mouth of a low-born wretch for reviling a Brāhman, we are reminded that the composers of these law-books were Brāhmans. Although the judges, like the jurists, were generally Brāhmans, it appears doubtful whether the privileges claimed by the sacerdotal class and incorporated with legal rules were actually accorded to them. Many of their rules belong to the moral sphere, and go beyond what we recognize as the proper province of the penal law. Excessive drinking is punished as a crime in itself, not only as a breach of public order. Gambling is viewed in the same light. There are rules for securing chastity and sexual purity. Hospitality is considered a duty to be enforced by law in certain cases. The practice of magic rites and incantations meant to destroy life is punishable by a fine. Every one must be strictly kept to the employment of his own caste. Matrimonial duties and family relations are elaborately regu-

lated. The proper province of moral obligations and delinquencies, however, is the ecclesiastical law, with its long lists of offences and religious penances and austerities (see EXPIATION AND ATONEMENT [Hindu]). Punishment and penance may be combined, as when the slayer of a milch-cow or of a bull (these being sacred animals) has to pay a fine first and do penance afterwards, or when, in cases of sexual criminality, the king inflicts punishment and the sin committed is expiated by a penance. Should an offender fail to perform the penance prescribed for his offence, he is at once expelled from his caste by the ceremony of *ghaṭasphoṭa*, 'the breaking of the water-pot'—a ceremony which is performed down to the present day in such cases. Punishment by itself is also supposed to have a purifying effect, as in the above-mentioned case of a thief who appears before the king of his own accord and is struck down by him.

Judicial procedure is simple and patriarchal. It presents the open court method of investigating accusations for crime, the king, attended by learned Brāhmans, entering his court of justice every morning, and there, after having seated himself on the judgment-seat and having worshipped the gods, undertaking the trial of the causes brought before him. The king has to fast for one whole day if a criminal deserving punishment is allowed to go free, and for three days if an innocent man is punished. The more recent law-books mention a number of other members of a court of justice besides the king—the king's domestic priest, his chief judge, who may also represent him if absent, his ministers of State, the assessors of the court, who are required to state their opinion of the case unreservedly and in accordance with the dictates of justice, the accountant, the scribe, the beadle. Gold and fire are used in the administration of oaths and ordeals, and water for refreshment. In giving a decision, the king must attend to local usage, written law, and the practice of the virtuous, if not opposed to local, family, or caste usages. Villages, tribes, and castes have also tribunals of their own, corresponding to the modern Pañchāyats; but from these an appeal to the king is possible. There is no essential difference between the trial of civil and criminal suits, except perhaps that the character and other qualifications of a reliable witness are not examined so strictly in criminal cases as in civil ones, and that the defendant in a criminal case cannot be represented by a substitute. The litigants must always be heard in person, and the king or the judge watches their countenances and their conduct carefully. Witnesses are watched in the same way, the depositions of witnesses being regarded as the most important part of the evidence. Certain persons are not admissible as witnesses on account of their personal relations with the litigant parties, or on account of age, dignity, sex, devotion to religion, moral or personal defects. There are also some provisions as to the number of witnesses, as that there shall not be less than three. In the event of a conflict of testimony, that of the majority generally prevails. The witnesses are solemnly adjured to speak the truth; and, if they should happen to meet with a calamity within seven days after making their deposition, this is held to prove its falsehood. Perjured witnesses are severely punished, and have to endure fearful pangs in a future existence, and destroy their own relatives through their wickedness. Perjury, however, is tolerated where an accused person may be saved from death by it.

The later law-books give special prominence to documents, and make written prevail over oral evidence, the plaint and the answer of the defendant having, likewise, to be stated in writing. The trial is to be conducted discreetly and skilfully, for liars may have the appearance of veracious men and veracious men may resemble liars, or documents may be forged. If human proof should fail, divine test is to be resorted to, of which there are many kinds, such as the water and fire ordeals, the ordeal by poison, the ordeal by hot metal (a gold coin has to be taken out of a vessel filled with boiling oil and butter), the ordeal by drawing lots, and the ordeal by sacred libation. The deities are invoked to supervise these proceedings, and are believed to establish the innocence or guilt of the accused. In less important cases, oaths are to be administered, the accused swearing by the head or feet of a Brāhman, or of his wife or son, or of an idol, and his innocence being established if within a certain period he should not meet with an extraordinary calamity, such as an illness, or the loss of a son or of his fortune. The custom of performing ordeals has survived down to very modern times; and oaths by an idol, a Brāhman, etc., are even now in vogue, an accident happening to the person afterwards being considered to prove his guilt. The decision of the judge in a suit is to be stated in writing, and a copy of it is to be handed to the victorious party. 'When lawsuits are decided properly, the members of the court are cleared from guilt. But where justice, wounded by injustice, approaches, and the judges do not extract the dart, then they also are wounded by that dart of injustice' (Nārada, p. 17; Manu, viii. 12).

The sources of the sacred law, according to Manu (ii. 6, 12), consist of the whole Veda, the *Smṛti*, or tradition, the customs of holy men, and self-satisfaction (where there is no other guide). The four Vedas, together with auxiliary literature, all of which is believed to be eternal and inspired, are confined to the consideration of religious rites, and contain very little about secular law, though they are considered the fountainhead of the whole law. *Dharmaśāstras* or *Smṛtis* are the real sources of law from a legal point of view. The term *Smṛti* means literally 'recollection,' and is used to denote a work or the whole body of Sanskrit works in which the sages of antiquity set down their recollections of the divine precepts regarding the duty of man. In reality, the earliest law-books were composed in and for the Brāhmanical schools studying the various parts of the Veda, and have been preserved as portions of the manuals of Vedic lore used in those schools, or as independent works. Such compositions are the *Dharmaśāstras* or *Dharmasūtras* of Āpastamba, Baudhāyana, Gautama, Vasiṣṭha, Viṣṇu, and some others. They are composed in the aphoristic Sūtra style, either entirely in prose or, more usually, in mixed prose and verse. Some of these works are supposed to have been written in the 5th or 6th cent. B.C., or even earlier, but they may have undergone many changes since then. Their contents are mainly religious, but the positive law is also treated in them, and they are very useful for tracing the gradual development of legal institutions in India.

From these aphoristic treatises we pass to the versified works, composed in the *śloka* metre, such as the celebrated Code of Manu, the Magna Charta of Brāhmanism; the Code of Yājñavalkya, distinguished for its concise and systematic treatment of the whole law, in three books, on *āchāra*, *i.e.* religious rites and duties, *vyavahāra*, *i.e.* jurisprudence, and *prāyaśchitta*, *i.e.* sins and their atonement; and the Code of Nārada, unique in its being confined to jurisprudence alone, which it treats with great fullness of detail. The opening verses of the Code of Manu narrate how Manu, the descendant of Brahmā, gave the great sages an account of the creation, and afterwards transferred the task of expounding the Institutes of the Sacred Law, which he had learned from Brahmā,

to Bhṛgu, one of his ten mind-born sons. There is an ancient proverb that 'all Manu said is medicine,' and another maxim stating that 'a *smṛti* or rule of law that is opposed to the sense of Manu's Institutes is not approved.' The great number of learned Commentaries composed on the Code of Manu, from the 8th or 9th cent. downwards, also testifies to the very particular authority early assigned to this codification of the religious and secular law, which may have originated in the first centuries A.D., if not earlier. There are also many *Smṛtis* which have not been preserved in a separate and complete form, and are known to us only from the passages of law cited in the Sanskrit Commentaries and Digests; but the authenticity of these texts is somewhat doubtful. The mythological poems called *Purāṇas* are also cited a great deal, particularly on the subject of vows, gifts, and other parts of the religious law, though they are said to be inferior in authority to the *Smṛtis*. The Commentaries and systematic works on law, being posterior in time to the *Smṛtis* and *Purāṇas*, have gradually come to supersede them in authority, especially the celebrated *Mitākṣarā*, a Commentary on the *Smṛti* of Yājñavalkya composed by the ascetic Vijñāneśvara, *c.* A.D. 1100, at Kalyāṇapura, in the Deccan. The *Smṛtichandrikā* of Devanna-bhaṭṭa, the *Sarasvatīvilāsa* of king Rudradeva, the *Vīramitrodaya* of Mitramiśra, the *Mayūkhas* of Nīlakaṇṭha, and other learned compositions are used concurrently with the *Mitākṣarā* in the several provinces; in Bengal alone the *Dāyabhāga* of Jīmūtavāhana has superseded the *Mitākṣarā* as far as the law of inheritance is concerned. Customs which are, like written codes, considered a source of law have to a certain extent been embodied in the codes. Recent collections of customs were instituted by the British Government—*e.g.*, A. Steele, *The Law and Customs of Hindu Castes*, London, 1868; C. L. Tupper, *Punjab Customary Law*, Calcutta, 1881; C. Boulnois and W. H. Rattigan, *Notes on Customary Law as administered in the Courts of the Punjab*, Lahore, 1876.

J. JOLLY.

LAW (Iranian).—The term *daēna*, the later *dīn*, which is commonly and conveniently translated 'law,' is perhaps the most characteristic and best known term in the Avestic system. It also indicates the religion itself; in fact, in accord with the entire mentality of the ancient Iranians, as of so many other Eastern peoples, there was no distinction between religious and civil law. Another term which may be translated 'law' is *dāta*, and in the Pahlavi treatise, the *Dīnkarṭ*, we read the assertion, *Aīrāno dāṭo dīno Māzdayasno* (*Dīnkarṭ*, ed. Peshotan B. Sanjana, Bombay, 1874ff., ch. 28), which we may render, 'the Mazdean religion is the law of Irān.' As Geiger remarks, it is highly probable that with the ancient Iranians, as with other Indo-European peoples, the early form of judicial process was the simple one of a village council of elders. His surmise, that in the word *vīcira* (the origin of the modern Persian *vazīr*, or, as we say, 'vizier') we have a Gāthic term for 'judge,' does not seem to be tenable, although *vīcira* certainly bears the meaning of 'deciding.' In the later Avesta the term *ṭkaēsha*, sometimes with the qualificative *dātō-rāza*, 'giving or administrating law' (*Ys.* ix. 10), certainly indicates the judge. In the passage just quoted it is especially applied to Urvākhshaya, the son of Thrita, who is considered apparently as a kind of Iranian Numa. According to Geiger's view, the priestly code, which we know as the *Vendīdād*, represents only that portion of legislation 'in which the priesthood reserved for themselves jurisdiction, or else added ecclesiastical penalties to those of the secular tribunal.' There are distinct traces in the Avesta of blood *vendetta*, and, still more, of *wergild*; indeed, the prescriptions for the latter are fairly full (see *Vend.* iv. 44). Such usages were no doubt pre-Zoroastrian. The legislation contained in the *Vendīdād*, agreeably with the underlying principles of the system, does not make any real distinction between what we should call civil jurisprudence and religious or ritual law. If we accept J. H. Moulton's theory of the Magian element in later Zoroastrianism (*Early Zoroastrianism*, London, 1913, lectures vi., vii.), then the whole ritual legislation must be attributed to this, as he maintains, non-Aryan race. In the code, however, moral, ritual, and civic, even hygienic, crimes and their respective punishments are mingled together. As we should expect from the fundamental and traditional love of truth and hatred of falsehood which, even by the testimony of their Greek foes, always characterized the ancient Iranian people, the highest value is attached to the observance of contracts (*mithra*), and breach of contract is severely condemned, even when towards unbelievers. Contracts are said to be confirmed in six ways—by word of mouth, by hand-grasp, or by the pledging of a sheep, an ox, a man, or a piece of land, respectively (*Vend.* iv. 2 ff.). Crimes of personal violence are carefully graduated according to the seriousness of the injuries done and the number of times committed, the penalties being fixed on a sliding scale of (apparently) scourgings. Capital punishment, curiously enough, is prescribed, not for taking life, but for performing irregularly and without sufficient knowledge certain priestly functions. The ordinary unit, so to speak, of corporal chastisement for all kinds of crimes is *upāzana*, which is generally translated 'stroke' or 'blow' with a horsewhip or scourge. A difficulty arises from the enormous number of these units which are prescribed for certain crimes, rising to hundreds and even thousands, which it would be quite impossible for any human being to bear. As, however, there was apparently a scale of monetary equivalents for corporal chastisements, it may be that these impossible numbers are simply meant as a guide to fix the amount of such wergild. As a matter of fact, far more serious punishments are assigned to what we should consider slight ritual or ceremonial transgression than to crimes of violence. In the opinion of Spiegel and Geiger, these *upāzana* may possibly mean simply blows with an instrument for the slaying of noxious insects and other creatures of the Evil Spirit, whose destruction was supposed to atone for a certain degree of crime.

As the *Vendīdād* was exclusively a priestly code of the Magians, 'it is self-evident why transgressions of religious precepts are most severely punished. If the penalty consisted only in the delivery of slain *khrafstras*, it might of course reach very high sums. It is probable that, quite early, persons could be relieved of their obligation by the payment of money compensation to the priest. The scourge could never have assumed such dimensions without provoking opposition' (Geiger, *Ostīrān. Kultur*, p. 459).

Be this as it may, the system of an equivalent fine in money for successive degrees of corporal punishment seems to have subsisted down to Sasanian times, inasmuch as in the Pahlavi treatise, *Shāyast lā-Shāyast* (lit. 'licet non-licet'), which is the standard text of later Mazdean casuistry, in its comment on the above-quoted 4th Fargard of the *Vendīdād*, the scale of lashes for various degrees of violence, rising from five to two hundred, is given with equivalents in *dirhams*

(1334) its successor, the Ashikaga, continued to enforce the principles of the Teiei-Shikimoku; but the laws were revised from time to time until the articles numbered two hundred and ten. The *Kenbu-Shikimoku*, of seventeen articles, was issued during the time of the Ashikaga Shogunate; but the affairs of the country became disorderly, and neither the law of the court nor the will of the Shogunate was executed. Many feudal lords declared their independence; and some among them issued their own regulations or family laws, of which those of the Shingen, Ouchi, Chosokabe, Hojo, and Asakura families remain intact. For two hundred years, until the establishment of the Tokugawa Shogunate (1603), the country passed through what is known as the dark ages, and no new laws of permanent value were enacted.

5. In the eighth year of Keicho in the reign of Emperor Goyozei (1603), Tokugawa Iyeyasu pacified the whole country and established his government as Shogun in Yedo (now Tokyo). Two hundred and sixty-five years of peace followed. The Tokugawa family tried to govern the country according to already existing customs, and, as far as possible, avoided the making of written laws. But, as time passed, the number of simple statutes increased, and they were codified in what is known as the *Kwajo-Ruiten*. This code was divided into two parts, the first dealing with laws of ceremony, of administration, and of personal relations, while the second contained the criminal laws. As the criminal law comprised a hundred articles, the people of the time termed it *Tokugawa's Code of the Hundred*. Secrecy was a governing principle of the Tokugawa Shogunate; these articles, therefore, were not published, but privately distribnted among feudal officers for information and guidance. As a result, these laws, though of comparatively recent date, are not in all points clearly understood.

6. The uncertainty concerning these laws of the Shogunate is increased by the fact that at the time of the Restoration in 1867, when the authority which had been exercised by the Shogunate was restored to the Imperial House, they were entirely inapplicable, being in reality family and not national in their nature, and they were, accordingly, completely set aside. During a period of some seven hundred years the Imperial House had had no real voice in the government, and possessed no laws which could at once be enforced. As a temporary measure, certain Chinese laws were revived and articles from the Taiho Code were revised. Contact with Western nations and a study of their civilization showed the necessity of laws in harmony with the modern world; and in the fifteenth year of Meiji (1882) the criminal code was promulgated. This was followed, in the twenty-second year (1889), by the proclamation of the Constitution, and, in the thirty-third year, (1900), by the civil code. Auxiliary laws of procedure have been issued on the models of Western nations; but all these, together with the standard codes, recognize and enforce the two fundamental principles which from the first have characterized Japanese law: the sovereignty of the Imperial House and the family system.

TAMAKICHI NAKAJIMA.

**LAW (Jewish).**—The important signification which Judaism from earliest times has attached to the law is outwardly indicated by the fact that the religious vocabulary of the Jews presents no fewer than seven synonyms for this conception: *ḥôq* (also *ḥuqqāh*), the most comprehensive expression for law, the laws of nature being also indicated by it, *mishpāṭ*, *'ēdûth*, *miṣvāh*, *piqqûd*, *tôrāh*, and the term *dāth*, which is borrowed from Persian.

The legal portions of the Pentateuch are: Ex 12 f., 20–23, 25–31, 34 f.; Lv 1–8, 11–26, 27; Nu 5–10, 18 f., $27^{7-11}$, 28–30, 35 f.; Dt 4–27.

The usual division of the laws into legal, ritual, and moral is not supported by the sources; such a distinction is nowhere expressed, nor can such a division be made with regard to their contents. On the contrary, one and the same law is often both legal and moral—*e.g.*, the numerous social laws; and just as often the basis adduced for the legal and ritual laws elevates them to moral laws.

An outward distinction is impossible because all laws without distinction are regarded as divine commands. All commands are of divine origin, since God represents law and morality in idea. This conception is the constant element in Jewish religion at all stages of its evolution, which we can still partly trace in the original documents. However much law may have varied in its connotation at different times, it was always regarded as an expression of the divine will; and he who professed to belong to the Jewish community must not only acknowledge the one God, but also conform to all His laws unconditionally. Disobedience to the commands of God was equal to heresy, just like idolatry and superstition, and was described as 'profanation of the divine name.' Judaism was from the beginning more a religion of doing than of believing, and, therefore, it has laid the main emphasis on the legal rather than on the mystical element. The constitution of Judaism, accordingly, is not a number of articles of belief, but ten commandments; and the revelation at Sinai is represented not as a communication of secret doctrines, but as a proclamation of the divine will; Moses is not a metaphysician, but a lawgiver.

The Pentateuch, as we have it to-day, does not present one uniform system of legislation, but a composite body of laws from several sources of very different times; and, in spite of all their work, critics have not entirely succeeded in assigning the single laws to a particular source or even to a particular time. The oldest laws (esp. Ex 21–23) exhibit a considerable degree of harmony with the old Babylonian Code of Ḫammurabi, but a dependence of the one on the other must not be assumed. In comparing the two systems of law, apart from the great progress in single laws, we are struck by a difference in principle, viz. the intimate union of law and morality which characterizes Jewish legislation (cf. *e.g.* Ex $22^{20-26}$ $23^{9.12}$ and esp. Dt, *e.g.* $5^{15}$ $10^{17-19}$ $15^{9-11}$ $24^{18}$).

The discourses of the prophets from the middle of the 8th cent. onwards already presuppose a law, which they recognize as binding and whose non-fulfilment they censure. Frequently, however, they polemize against the law; they declare the whole system of worship worthless and even hated of God, when the nation does not practise justice and morality. But the elevated moral exhortation of the prophets was little understood and still less followed. It was too abstract to exercise a decisive influence on the life of the people. It had first to be made practicable in a social legislation, adapted to different cases and circumstances, and transformed into a rule of conduct for the individual. In this way Deuteronomy took its rise; it is a product of the prophetic teaching, and places social justice at the heart of religion, while it restricts the sphere of worship to a great extent, and, in particular, recognizes only one place of worship. After the return from the Exile and the building of the second Temple, the order of worship in all its details was appointed in the 'Priests' Code,' although its constituent parts are, it is true, of an

earlier date. The different law-books were now combined into one book along with the traditions of primeval history and the history of the nation which also originated at different periods (up to the death of Moses). Moses was regarded as the author of this book, every word of which was supposed to be inspired, and was designated by the name *tôrāh*, 'teaching.' Belief in its divine origin and recognition of its whole contents became the basis of Judaism under Ezra. This book was by no means a law-book; half of its contents were of the nature of narrative, so that it appealed to the understanding and imagination as much as to the will; and it was those narrative portions that had the greatest influence on the religious education of the people. The LXX made a great and most momentous error when, for want of an exactly corresponding Greek expression, they translated *tôrāh* by *νόμος* ('law'), giving rise to an utterly false conception of the nature of Judaism, and making possible, at a later date, the historically important attack of the Pauline letters upon the Law. The fact that the Jews regarded the book as 'teaching' is indicated by the Aramaic translation *'ôraithā*, which can mean only 'teaching' and never 'law.' This is especially shown by the wide-spread demand of learning and teaching of the Torah, and by the fact that the occupation of the intellect with it was regarded as the loftiest and most delightful of tasks. A classical proof of this is afforded in Ps 119, which, following the succession of the letters of the Hebrew alphabet, presents in 22 times 8 verses an endless variation on the same theme: the Torah is the chief good, chief happiness, pleasure, entertainment, and comfort. The law was only the framework upon which the pure monotheism, which forms the substance of the Jewish teaching, could establish itself, work itself up, and become the religion of the people.

Simultaneously with the elevation of the Torah to be the religious book of the community, the synagogue was established with the reading, translation, and explanation of the Torah as its first object. As soon as it was introduced, the Torah, like every other law-book, required explanation by experts, and the *sôphrîm*, 'scribes' (from *sêfer*, 'book'), became the religious authorities in Judaism from that time onwards. The expositions of the Torah laid down in their lectures soon became quite as binding as the written teaching; and thus there was developed an oral teaching, which did not, however, interfere with the validity of the Torah, being at first only an application of it. But it soon went beyond the written teaching, and, in particular, it was supposed to create a 'hedge round the teaching,' on the one hand to preserve the essentials of the religion from corruption and evaporation, and on the other hand to secure the observance of the religious laws by means of provisions, sometimes lightening, sometimes increasing, their burden. The oral teaching varied with the custom and common law of each period, adapted the written word to the changed outward circumstances and new views, and even directly created new provisions, which could not possibly have been foreseen in the Torah. Thus, for instance, the whole synagogue service with its order of prayer was gradually introduced by the scribes, and at a later date, in the Hellenistic period, feasts like Pûrîm and Ḥānukkā were introduced and made religiously binding. The collision of Judaism with Greek civilization raised a very difficult problem for the scribes; and, if the victorious elevation of the Hasmonæans saved Judaism from the danger of the moment, the newly founded Jewish State nevertheless had, from the necessity of the case, to come forward in opposition to the scribes, who wished to regard Judaism as merely a religious community. Thus arose the parties of the Pharisees and the Sadducees. The former, led by the scribes, were the representatives of the religious principle and emphasized the value and necessity of the oral teaching in addition to the Torah. The latter, worldly-minded throughout, wished to recognize the Torah alone. The Sadducees, accordingly, lukewarm in their attitude towards religious matters, exerted their influence towards petrifying religion, while the pious Pharisees sought its progress and development. Under the compulsion of this contest, the Pharisees extended the oral teaching more and more and had to find a basis for it, and, in particular, to prove its agreement with the Torah. About the last century before Christ an attempt was made by Hillel and Shammai to fix the oral teaching in writing; this had previously been avoided, partly to preserve intact the authority of the Torah as the only valid religious document, and partly to leave the tradition free and flowing. Here, too, it is incorrect and one-sided to speak of an oral 'law.' For from the very beginning the oral no less than the written teaching contained narrative, instructive, and edifying portions as well as the legal elements; the legal portion was designated Hălākhā, the narrative Haggādā. Jewish thought, feelings, and hopes were laid down in the proverbs, parables, and stories of the Haggādā, which for this reason is just as important a source for the customs and religious views of the Jews as the Hălākhā. The Hălākhā, *i.e.* the religious norm, was in the different schools subjected to great differences of opinion, which the scribes sought to clear up in public discussions. A definite system of logical and exegetical principles gradually formed, according to which the Hălākhā was derived from the written text. The wider the circle within which the life of the Jews moved, and the wider their circle of knowledge and opinions became, the more the sphere of the Hălākhā had to be extended. It embraces temple rites and synagogue worship, land laws, civil and criminal law, poor laws, laws regarding marriage, laws about foods, and laws of health.

The oral law, which now gradually became written law, also recognized the existence and necessity of an unwritten law, controlling matters left to the moral feeling of the individual—the finer demands of morality which did not admit of formulation and classification. The unwritten law was designated *dābhār ham-māsûr lal-lēbh*, 'something which is left to the heart.' This conception was a healthy counterpoise to the ever-increasing tendency to determine beforehand the proper course of action in all circumstances by means of a law. On the other hand, it filled up the deficiencies and gaps that are a necessary feature of every written law. It is thus entirely misleading to speak of the Jewish religion as purely legal in character. The designation *dîn*, 'law,' for the individual provisions applies exclusively to those religious duties which deal with definite actions that can be judicially formulated—what is prohibited or allowed. The *dîn* demands nothing but obedience; the *dābhār ham-māsûr lal-lēbh*, on the other hand, appeals to the moral feeling, and thus recognizes morality as a necessary supplement to the law. The Hălākhā gives numerous instances in which the individual cannot be punished according to law, but is guilty in the eyes of the law of God.

In the midst of the work of recording the oral law there took place the great catastrophe which in A.D. 70 destroyed the State and the Temple of the Jews. The result of the dispersion of the Jews was that, since its external unity had ceased, Judaism anxiously sought to preserve its inner unity in law and custom. While up to this time

the object of all additions to and burdens on the law was to preserve the teaching of Judaism intact, the law now had the further task of preserving the very existence of the Jews as a people at all. The study of the law was now regarded as the highest religious duty and an equally valuable, in fact a more valuable, substitute for the earlier sacrifice. If the traditions of the Haggādā played an important part in the consciousness of the people, the Hălākhā was the chief occupation of the high schools in Palestine. They carefully sought not only to fix all the single provisions, but in particular to preserve all those laws and customs which by force of circumstances had for a time—they hoped only for a time—fallen into disuse. 'Aḳîbā ben Joseph (*q.v.*), who died as a martyr after the fatal issue of the rising of Bar Kokhba (A.D. 134), brought the recording of the oral teaching to a temporary end. He sought to arrange the immense amount of material from two points of view: according to the matter in the form of a book of law (*Mishnā*) and according to Bible verses in the form of a running commentary to the legal books of the Torah (*Midrāsh*). After his death his pupils tried with all possible speed to close the record finally, so that the tradition might not be lost by the violent death of other scholars. 'Aḳîbā's Mishnā formed the basis on which his pupil R. Mê'ir further improved, and after his death R. Yehûdā, the patriarch († *c.* 200), closed, the record, and created the Mishnā as a generally received book of law. Soon after, the Midrāshîm, which in their main contents went back to 'Aḳîbā and his contemporaries, were completed.

Their names (with the exception of a few which are preserved only in fragments) are *Mᵉkhiltā* (on Exodus), *Sifrā* (on Leviticus), and *Sifrê* (on Numbers and Deuteronomy). These Midrāshîm have not, however, been any more officially recognized than the collection of traditions which has been preserved to us under the name of *Tôseftā*. In attitude and aim the Tôseftā is similar to the Mishnā, but it originated in other schools and had accepted many traditions which are wanting or rejected in the latter. It is, therefore, a priceless source for the scientific investigation of the Hălākhā. The Mishnā and the Tôseftā are divided into six portions: (1) synagogue worship and agriculture; (2) sabbath and feast days; (3) law of marriage; (4) civil and criminal law; (5) temple rites; and (6) laws of purity.

The completed Mishnā, which was composed in the Hebrew language, was taken by Rābh and Samuel to Babylon, and taught and explained in the institutions of learning founded by them there. The Palestinian schools also sought to explain the Mishnā, which, owing to its condensed method of expression, was often difficult to understand. These explanations in the Aramaic tongue, which are called *Gᵉmārā*, and which have been written down and collected, furnish more than a bare commentary to the Mishnā. In their outward form they are records of the discussions which took place in the schools during three centuries, and they preserve these in all their original vividness. In their contents, particularly in the Haggādic portions, they are a repertory of everything that the most distinguished representatives of Judaism during the period spoke, thought, felt, experienced, and knew. While the explanation of the Mishnā was not finished in Palestine, the Babylonian Gᵉmārā was completed about A.D. 500. The Mishnā and the Gᵉmārā together were called the *Talmud*. Of the two Talmuds, the Babylonian became in practice the only authoritative one; the Palestinian (incorrectly called the Jerusalem Talmud) was not recognized, and was always much less studied.

The Talmud as a whole is not, strictly speaking, a law-book like the Mishnā; it places the opposite opinions with their reasons beside each other and often leaves the debated question undecided. In spite of that, it brought Jewish law to a fixed system, and thus lent to Judaism the necessary inner unity. By means of it Judaism was remoulded into the homogeneous mass which it presented during the whole of the Middle Ages. The Talmud allows a sphere of action to the freedom of thought altogether out of proportion to that which is granted to the freedom of will or action. It does not demand blind obedience to the law, but would recognize as valid only what is rationally deduced from the word of Scripture, and asks time and again in regard even to Biblical commands: Why has the Torah so ordered? It then adduces a logical or moral reason. Only in the case of very few laws, for which a rational explanation could not be found (*e.g.*, the red heifer [Nu 19]), is the authoritative command of God adduced as the ground of obligation.

The Jewish law, as it found its final expression in the Talmud, has often been represented as an unbearable yoke. This designation, however, which is played upon as early as Sirach, indicates only the impression which the law made on non-Jews, and not the emotions with which the people themselves regarded it. The Jew ever found joy and satisfaction in the fulfilment of it, and coined for it the special expression *śimḥāh śel miṣvāh*, 'joy in the commandment.'

The recognised benediction on occasions of fulfilling all the more important religious provisions ran as follows: 'Praised be thou, O God, who hast sanctified us by thy commandments'; and in the daily evening prayer they said: 'We rejoice in the words of thy teaching and the words of thy commandments now and evermore, for they are our life and the length of our days.'

It was not freedom from the law, but freedom in the law, that was the religious ideal of the Jews. They felt themselves morally free simply through the fact that they subjected themselves joyfully to the law, and recognized that it must be obeyed even when it was not there. The patriarchs they regarded as especially virtuous because they had kept the law even before it was given. It was not Kant, therefore, who was the first to teach the autonomy of morality. In one place we are told that he who keeps the commandments stands as high in God's sight as if he had produced them out of himself (cf. F. Perles, 'Die Autonomie der Sittlichkeit im jüd. Schrifttum,' in *Festschrift für Hermann Cohen*, Berlin, 1912, pp. 103–108).

It is true that the frequent use of petty casuistry, and especially the forced exegesis of the Talmud, repels us, but the Talmud ought not to be judged in this light alone. Emphasis should be laid on the fact that the morality of the Jews did not degenerate under its control, but rather became more rigorous. For the casuistry had almost always the tendency to make the law more exacting, and did not, as a rule, deal with moral so much as with legal and ritual questions, while morality was often appealed to as a supplement to the law. On the other hand, it was important that certain moral requirements, such as care for the poor, the sick, and unburied dead, and even kindness to animals, were made laws in the Talmud. It is often alleged that all the laws aim at the well-being of the individual and of society, but it is quite as frequently emphasized that only the unselfish fulfilment of the law has moral value, and that the ennobling of humanity is the highest aim. Specially peculiar to the Judaism of the Talmud is the conception of the *ḳiddûsh hash-shêm*, 'hallowing of the divine name,' according to which every Jew ought to witness for God by an exemplary life, and contribute towards His recognition among men.

In spite of the fact that the divine legislation as a whole was regarded as eternal and unchangeable, in individual cases the temporary suspension and even the annulling of a law was recognized as justifiable and necessary. Sufficient ground for putting aside even Biblical commands was found

by the lawyers not only in danger to life or impossibility of carrying out the law owing to a *vis major*, but also in intolerable inconvenience to the community, danger to the existence or repute of the religion, and collision with the laws of the State. The 'dignity of man' is also repeatedly given as a reason for temporary suspension of a law.

When it was completed, the Talmud was adopted as the only authority in matters of religious law, and became, like the Mishnā 300 years previously, the subject of study and exposition. Since it was not, of course, a law-book in the strict sense of the term, definite rules had to be laid down for judging in cases where the Talmud presented undissolved differences of opinion. The need of codifying the extensive contents of the Talmud came more and more to the front. When the Ḳaraites (*q.v.*) rejected the whole Talmud, and, in fact, the oral teaching altogether, and recognized the Torah alone as binding in matters of religious law, a code had to be formed which set forth plainly what was to be regarded as law in the Talmud and what only as individual opinion. Hence arose, from the 8th to the 9th cent., the so-called *Hălākhôth Gᵉdôlôth*, compendium of the Talmud, which in outward form follows the Mishnā, but attempts to make a better arrangement of the material according to subjects. This work, which originated from the Gᵉônîm, the heads of the Babylonian schools of the time, did not obtain such an extensive circulation as the *Hălākhôth* of Isaac al-Fāsī, which was composed two centuries later. Al-Fāsī makes use of the Palestinian Talmud also to decide questions of religious law, and is much more independent than the Gᵉônîm in laying down general rules, as well as in using them to obtain concrete results from the discussions of the Talmud. The most original and important code of Rabbinic Judaism is the *Mishnēh Tôrāh* of Moses Maimonides. Absolutely abandoning the dialectics and the order of the materials of the Talmud, he gives a strictly systematic exposition of the laws and the teaching of Judaism in fourteen books. In opposition to all his predecessors, he specifies neither his sources nor opposed opinions, and gives no reasons for his own decisions. On this account his work was very sharply attacked from many sides, although his opponents could not free themselves from his influence. After him the first work to obtain far-reaching influence was the *Ṭûr* of Jacob ben Asher of the 14th cent., who, in fact, used Maimonides as his model, but produced a new and unique book of law, stating and discussing the contradictory opinions of the authorities after the Talmud. This work remained the undisputed authority for more than two centuries. It was only after the expulsion of the Jews from Spain and Portugal that the need for a new code more suited to the changed conditions made itself felt. To meet this need Joseph Qaro produced the *Shulḥān 'Ārûkh*, basing his work on the *Ṭûr*, but also consulting the rest of its predecessors. Joseph Qaro often proceeds very independently in his code, and his work on this account met with energetic opposition before it was generally accepted. The Polish Talmudists especially opposed it, one of whom, Moses Isserles, provided it with continuous glosses, which were then printed along with the work. A century later, however, the *Shulḥān 'Ārûkh* was the only authoritative code of Rabbinic Judaism, and it has remained so among the orthodox Jews to the present day. It had, in fact, contributed largely to the consolidation of Judaism, and was at the time of its production, when the Jewish communion threatened to break up, a historical necessity. Gradually, however, it became more and more a hindrance to free religious development, and, on the whole, its influence upon the culture, particularly of the Jews of eastern Europe, has been unfavourable. The efforts of the last century, therefore, towards the culture and reform of Judaism have aimed at destroying the unrivalled authority of this work.

FELIX PERLES.

**LAW (Muhammadan).**—I. *INTRODUCTION*.—**1. Muslim canon law (sharī'ah or shar') and the sacred texts: Qur'ān and tradition.**—A Muslim is bound by religious regulations not only in the performance of his daily ritual prayers, the fast, the pilgrimage to Mecca, and other religious acts, but also in the contraction and dissolution of his marriage, in commercial contracts, and, indeed, in all events of any importance in his domestic and social life. All these religious regulations form together a code of law which in Arabic is called the *sharī'ah* or *shar'*, lit. 'the way' (viz. that which faithful Muslims must follow according to Allāh's will). Muslims believe that the regulations of this code depend not on human judgment, but entirely on Allāh's inscrutable will. Originally the only sources from which the knowledge of Allāh's law could be gained were the Qur'ān and the *sunnah*.

The Qur'ān contains few regulations of a legislative character. It is true that in certain verses instructions are given as to how a Muslim must generally distinguish himself from an unbeliever, as to his chief duties, and some sins which he must especially avoid; but these regulations do not form a complete system. From the beginning Muhammad's *sunnah*[1] was an indispensable supplement to the regulations of the Qur'ān. In the Qur'ān, *e.g.*, it is enjoined that a Muslim must perform his *ṣalāt* (*i.e.* the daily ritual prayer, which consists principally of praise of Allāh, prostration, etc.), but not how he must fulfil this religious duty. In such a case Muhammad's *sunnah* gave an explanation of the Qur'ān. All Muslims have always performed the *ṣalāt* in the same way as the Prophet had done before them, for Muhammad's position as a preacher of the new religion and as the head of the Muslim community entailed that his followers should observe not only the regulations which he gave as Allāh's will in the form of the Qur'ān, but also his personal commands and example.

After the death of Muhammad the traditions concerning the deeds and sayings of the Prophet and his companions, as well as the Qur'ān, were held in great respect; and the *sunnah* of these was an example worthy of following for the later Muslims, at least in so far as the Prophet had approved either implicitly or expressly of their acts or sayings. A tradition is called in Arabic *ḥadīth*, which commonly means 'story,' 'communication'; in a special sense 'the *ḥadīth*' means the whole sacred tradition.

[1] The word *sunnah* is often wrongly taken to mean 'tradition' (viz. regarding the deeds and sayings of the Prophet), but it really means the method of behaviour which is generally followed: the *sunnah* of a person means the ordinary line of conduct of the person, and the *sunnah* of a people means the manners and customs of the people. Cf. C. Snouck Hurgronje, 'Le Droit musulman,' in *RHR* xxxvii. [1898] 6 ff.; I. Goldziher, *Muham. Studien*, Halle, 1889–90, ii. 1 ff., 11 ff.

Originally the oral traditions were handed on from one generation to another. Many undertook long journeys in order to visit celebrated teachers of tradition in different lands and places, and to hear them relate their traditions. Besides the text (*matn*) of a tradition, the names of the persons who had handed it on, from the latest narrator to the Prophet, were accurately learned by heart. The trustworthiness of these teachers was the guarantee for the correctness of their narrative, and therefore the portion of the tradition containing the names of the teachers was called the *isnād* or *sanad*, *i.e.* 'the support' (viz. for the credibility of the traditions). Still, many of the Muslim traditions concerning Muhammad's *sunnah* are deliberately invented; on this point a historical and critical examination leaves no possibility of doubt. Decisions were ascribed to the Prophet on questions of all kinds which did not become important to Muslims till long after his death. Moreover, there are in currency numerous contradictory traditions. Apparently each party attributed to the Prophet just what they held to be the true conception. In the first century of Islām there was serious controversy as to the trustworthiness of many traditions. Every one knew that there were many true and untrue traditions as to the *sunnah* of the Prophet, and the opposing teachers of tradition accused each other of lying. But, when the ritual, the doctrine, and the most important social and political institutions had become definitely fixed, agreement was reached in wide-spread circles as to the trustworthiness of most traditions. When a tradition could not be brought into harmony with the generally current conceptions, it was regarded as false. Moreover, many successful attempts were made to harmonise contradictory traditions with the prevailing conceptions, by means of ingeniously discovered explanations.

Although there is no official and exclusively authoritative collection of Muslim traditions, there are six collections commonly recognized in the orthodox world, viz. the 'six books' or the 'six *ṣaḥīḥs*,' *i.e.* the six 'sound' or 'authentic' collections. Two of these—the collection of traditions of al-Bukhārī († A.H. 256 = A.D. 870) and that of Muslim († A.H. 261 = A.D. 875)—are held in great honour by orthodox Muslims. The other four are those of Abū Dāwūd, al-Tirmidhī, al-Nasā'ī, and Ibn Mājah.

The Shī'ites do not reject the authority of Muhammad's *sunnah*, but differ in opinion from the orthodox Muslims as to the trustworthiness of many traditions relating to it. They have their own collections of traditions.[1]

**2. The fiqh and the fiqh-schools.**—By the *'ilm al-fiqh* ('science of the *fiqh*') is meant the science of the regulations contained in the sacred texts. It was not enough to know only the literal contents of the Qur'ān and the traditions; it was also necessary to know in what sense these texts were to be understood, and how the commands and prohibitions which they contained were to be applied in different circumstances. The scholars who occupied themselves with this study of the *fiqh* (the *faqīhs*) have given an extraordinary extension to the original meaning of the regulations of the Qur'ān and of the traditions. They could find answers in the sacred texts to all possible questions of the law, and in this way the study of the *fiqh* has produced a vast system of legal casuistry worked out in every detail.

Since the opinions of scholars as regards the rules to be deduced from the Qur'ān and the traditions disagreed in many respects, there grew up in a short time different *fiqh*-schools, each having its own views as to questions of detail. Such a school was called *madhhab* ('party'). There were at first a great many of these schools; each *faqīh* of any importance had his own *madhhab*.

The rise, development, and ultimate fate of the different *madhhabs* were dependent to a great extent on accidental circumstances; and the favour of the Government often had a special influence on their reputation. If the judges and magistrates in a Muslim land were chosen by preference from among the followers of a particular *madhhab*, many people joined that *fiqh*-school, until change in the Government exercised fresh influence in an opposite direction. In the course of time most of the old schools lost their significance, until they finally had no followers at all. Only the four schools of Abū Ḥanīfah († A.H. 150 = A.D. 767), Mālik ibn Anas († A.H. 179 = A.D. 795), al-Shāfi'ī († A.H. 204 = A.D. 820), and Ibn Ḥanbal († A.H. 241 = A.D. 855) have retained adherents in the orthodox Muslim world down to the present day.

One of the extinct schools is that of Dāwūd ibn 'Alī († A.H. 270 = A.D. 883), the *Ẓāhiriyah*, *i.e.* the party which prided itself on holding to the 'outward sense' (*ẓāhir*) of the text.[1] Nawawi, an Arabic writer of the 7th cent. A.H., mentions six *fiqh*-schools held in repute in his time,[2] two of which were the *Ẓāhiriyah* and the school of Sufyān al-Thawrī († A.H. 161 = A.D. 777); but the formerly famous school of al-Awzā'ī († A.H. 157 = A.D. 773) in Syria was by that time extinct. It is true that the value of the system of al-Awzā'ī was not less than that of other *madhhabs*, but, since its adherents lived in more or less remote places, far from the great caravan roads and from the route of the pilgrims going to Mecca, their opinions on the *fiqh* gradually passed out of consideration.[3] The *madhhab* of Jarīr al-Ṭabarī (the *Jarīrīyah*), more famous as a chronicler († A.H. 310 = A.D. 922), had at that time also disappeared.

As to the *fiqh*-schools which still exist the following points may be noted.

(1) The school of Abū Ḥanīfah owed its great influence in later centuries especially to the Turkish Osman Sultans, who in the 16th cent. obtained authority over so important a part of the orthodox Muslims. From the beginning this dynasty showed exceptional preference for the Ḥanifitic system, and this *madhhab* is still dominant in Turkey and in all lands in which Turkish influence is felt. It has also spread in Central Asia (Turkestan, Bukhara, Samarkand) and in Hindustan, so far as the population there has accepted Islām as the result of the former Muslim invasions.

(2) The school of al-Shāfi'ī was based specially on the authority and influence of the 'Abbāsid Khalifs. The Shāfi'ites had obtained a considerable supremacy in the centre of the Muslim lands in the Middle Ages, and their reputation still continued to increase until, in the 16th cent., the Ḥanifitic school came to the front under Turkish influence. Even after this time the Shāfi'itic school continued to possess many adherents, even in Syria, Egypt, and West Arabia, in which lands the Ḥanifitic school only was accepted as the official one in public matters; *e.g.*, the judges and ruling personages who were sent from Turkey to these lands were all Ḥanifitic, but the original population still continued to order its religious and domestic life according to the regulations of the Shāfi'itic school, and the study of the Shāfi'itic *fiqh*-books continued to flourish. The Shāfi'itic school is also dominant in the Straits Settlements, the Malay border districts of Siam, and the whole Indian Archipelago, as well as in the coast districts of Hindustan (Malabar and Coromandel), on the Persian Gulf, and in South Arabia (especially in Ḥaḍramaut). In German East Africa it is the most important; only a minority of the Muslim population there belong to the heretical Ibāḍites. Followers of the Shāfi'itic school are also to be found in Daghestan, and in some parts of Central Asia.[4]

(3) The school of Mālik ibn Anas flourished originally at Medina. Later on, it spread over the whole of the west of Islām, not only in the north-west of Africa (Tunis, Algiers, Morocco, formerly also in Spain), but over the whole of Africa, so far as it gradually accepted Islām. Even in Egypt the Mālikitic school has many adherents. It has the same position in Upper Egypt as the Shāfi'itic has in Lower Egypt.

(4) The school of Ibn Ḥanbal has always been the least important; it has never had many adherents, and will probably completely disappear in time, like so many other *fiqh*-schools. At present Ḥanbalites are found in Central Arabia, in the interior of Oman, and on the Persian Gulf. Besides this, the followers of this school are found sporadically in Baghdād, in some towns of Central Asia, and in some districts (among others, in Syria) which do not lie on the great trade-routes. It is worthy of notice that the Wahhābites, who are generally considered heretics, prefer to be taken for Ḥanbalites; they often appeal to Ibn Taimīyah in order to defend their particular conceptions, which are in conflict with the requirements of modern life generally obtaining in the orthodox Muslim world. This scholar, though in many respects quite independent, belonged to the Ḥanbalite school.[5]

The differences of opinion between the *fiqh*-schools did not turn on fundamental points. It has been alleged, indeed, that Abū Ḥanīfah tried by preference to establish the rules of the *fiqh* in agreement with his own opinions on morality and justice, while other *faqīhs* (especially Dāwūd ibn 'Alī and Ibn Ḥanbal) kept strictly to the letter of the sacred texts. An unprejudiced comparison of

the various systems of *fiqh* shows, however, that this view is exaggerated, and that in general all Muslim scholars followed very much the same methods of establishing the *fiqh*-rules. Difference of opinion existed only on questions of detail.

Even the controversy between the earlier scholars on the question whether the *qiyās* was permissible raised no serious deep-seated difference of opinion. *Qiyās* means literally 'measuring off.' What was intended was reasoning by analogy—the application to similar cases of regulations which in the Qur'ān or in the tradition were given only with reference to special circumstances.

An example of *qiyās* is the following. A Muslim is forbidden in the Qur'ān (ii. 276–279, iii. 125, iv. 159, xxx. 38), as well as in tradition, to make himself indebted for *ribā*, *i.e.* not only usury, but every demand of interest. In the traditions in which the prohibition of the Qur'ān is explained in more detail, *ribā* is forbidden only if a Muslim carries on a business with gold, silver, and some kinds of merchandise which were formerly the usual objects of trade in Arabia. Some *faqīhs* thought that it was right to hold strictly to the letter of these traditions: '*ribā*,' they said, 'is forbidden only to any one engaged in the trades expressly mentioned in these sacred texts; for, if the demanding of interest was not permitted in other cases as well, this would have been clearly expressed.' Others thought that here the *qiyās* (analogy) must be applied, and that *ribā* must be regarded as equally forbidden in other cases of the same nature.[1]

Those who rejected the *qiyās* accused their opponents of misrepresenting and derogating from the laws of Allāh by following their own fallible human 'insight' (*ra'y*). The enemies of Abū Ḥanīfah, *e.g.*, charged him and his followers with establishing the *fiqh*-rules solely on the basis of *ra'y* and *qiyās*, and with neglecting the study of the tradition. 'Iblīs' (Satan), they said, 'was the first who had been guilty of such arbitrary arguments.' An appeal was made even to the Prophet, and it was maintained that he himself had already expressly forbidden the *qiyās* and all such kinds of reasoning. Still, the *qiyās* was in the end generally recognized by all orthodox *faqīhs* as permissible. As a matter of fact, it had never been possible to exclude analogy, and even those who had most prided themselves on keeping exclusively to the literal sense of the texts, such as the Ẓāhirites, had been themselves compelled in many cases to draw conclusions from the holy texts by means of argument (they then used to maintain that their conclusion was already 'included' [*mafhūm*] in the text, and, therefore, had not to be deduced from it by means of argument).[2]

There are some special methods of argument which have not found general favour among orthodox *faqīhs*, viz. the *istiḥsān* (*i.e.* to reckon something *ḥasan*, 'good'), which was used by Abū Ḥanīfah and his school, and a similar method of reasoning of Mālik ibn Anas, the *istiṣlāḥ* (*i.e.* judgment that something is for general good). Both methods had apparently as their object the establishment of *fiqh*-rules by the abandonment of analogy, thus departing from the regulations of the holy texts. Both Abū Ḥanīfah and Mālik thought this sometimes necessary, if holding fast to the letter of the law gave rise in exceptional cases to injustice, or was even quite impossible. But most *faqīhs* rejected these *istiḥsān* and *istiṣlāḥ*, and thought none qualified to depart in so arbitrary a manner from the usual rules, even though it might appear to be for the general good. Another method which was not generally favoured was the *istiṣḥāb* (lit. 'seek connexion with'), which was especially practised by al-Shāfi'ī, and with certain restrictions also by Abū Ḥanīfah. This *istiṣḥāb* meant that a doubtful situation was connected with a previous position of circumstances, and that the regulations which held good in the latter case were regarded as applicable in the former also. Such a position of doubt may arise if any one remains absent so long that his existence becomes uncertain. The Ḥanīfites apply the *istiṣḥāb* only when the question arises of the retention of rights which have been already obtained. The Shāfi'ītes do so even with regard to the acquirement of new rights. If, *e.g.*, any one dies after the existence of his blood-relation has become uncertain, then, according to the Ḥanīfites, the latter has no right to his estate; but the Shāfi'ītes do not recognize this limitation, and, according to them, the usual rules of inheritance obtain in such a case, just as if the existence of the absent party was certain.[3]

Fundamental departures from the doctrine of the four *fiqh*-schools are not found even among the Shī'ites and other heretical sects. Although each of these sects has its own doctrine in matters of *fiqh*, and this differs in many points from the opinions of the orthodox schools, the points of difference are generally limited to the same kind of details as those on which even the four orthodox *fiqh*-schools differ. The controversy which produced the heretical parties in Islām was not concerned with the *fiqh*, but rather with questions of the faith (*kalām* [*q.v.*]) and with the political question who should be the head of the Muslim community as the direct successor of the Prophet.

Originally each *faqīh* of any importance could consider himself qualified to deduce the *fiqh* from the Qur'ān and tradition, but after the rise of the *fiqh*-schools independent criticism of the sacred texts gradually ceased, and it became more and more usual to join the *madhhab* which was locally recognized as authoritative.

Nevertheless, for a long time some very learned *faqīhs* maintained their own judgment on matters of *fiqh*. In the 3rd cent. there arose some more or less independent *madhhabs*; and several scholars, though they associated themselves in general with the opinions of an already established school, still considered themselves qualified to depart in some points of secondary importance from the views of its founder. Abū Yūsuf and Muḥammad ibn Ḥasan al-Shaibānī, *e.g.*, who belonged to the followers of Abū Ḥanīfah, had in many cases different conceptions from those of their master. Even al-Ṭabarī and Dāwūd ibn 'Alī might be regarded as followers of the Shāfi'ītic school, though they had generally a wholly independent conception of the *fiqh*.

Later it became the general conviction in the orthodox Muslim world that scholars as well as laymen were bound to *taqlīd* (lit. 'to invest with authority,' *i.e.* to acknowledge that the rules of the *fiqh* had already been established in an authoritative manner). Such a person, for whom the rules of a *fiqh*-school had binding authority, was called *muqallid* (*i.e.* one who held others in authority). The earlier scholars, on the contrary, who had themselves deduced the *fiqh* from the holy texts, were afterwards called *mujtahids* (lit. 'people who had toiled strenuously'), and the search for the true sense of the sources to which they had applied themselves was called *ijtihād* (*i.e.* lit. 'to be zealous and take trouble,' here in the special sense of 'exerting themselves in order to determine the rules of the *fiqh*').

Muslim writers generally distinguish three kinds of *mujtahids*, because they think that not every one has been equally capable of independent judgment on matters of the *fiqh*: (1) 'Till the third century after the *hijrah*,' they say, 'there were general or unlimited *mujtahids*, who were so learned and acute that they could deduce the *fiqh* from the sources quite independently. To these belong the founders of the *fiqh*-schools, and some of their contemporaries. (2) After this time there were still *mujtahids*, but these were independent only within certain limits. Though they established new rules for *fiqh*-questions, which were not yet sufficiently settled, they apparently considered themselves bound by the principles of their school, and thus only built on the foundations laid by the master.' This second class of *mujtahids* were called '*mujtahids of madhhabs*'. (3) Later, when no more new rules were established, the necessity still remained, for some time, for a certain kind of *ijtihād*, for in each *fiqh*-school there was much diversity of opinion on questions of subordinate importance between the scholars of the *madhhab*, and contradictory traditions concerning the opinions of the founder of the school had often been brought into circulation. Scholars, such as Nawawī, who had settled which of these different opinions in the *madhhab* deserved the preference, were thus regarded by later Muslims as also in a certain sense *mujtahids*; they had 'weighed up' the contradictory decisions, and settled which of them must be regarded as the 'heaviest' (*al-rājiḥ*), *i.e.* the best. They were *mujtahids* of the third class.[1]

All later *faqīhs* are, according to the general conviction of orthodox Muslims, only *muqallids*, who are in all respects bound by the utterances of the former *mujtahids*. Those who hold a different opinion on this point, such as the Wahhābites, are regarded as heretics. The Wahhābites condemn the *taqlīd*; their scholars

[3] For *istiḥsān*, *istiṣlāḥ*, and *istiṣḥāb* cf. I. Goldziher, 'Das Prinzip des istiṣḥāb in der muham. Gesetzwissenschaft,' in *WZKM* i. [1887] 228–236.

[1] Cf. C. Snouck Hurgronje's review of Sachau's *Muham. Recht*, in *ZDMG* liii. [1899] 140 ff.

consider themselves still constantly bound by the duty of independent study of the sacred texts. Among the Shī'ites also *mujtahids* are still found who are qualified to judge in matters of religion on their own authority.

Every orthodox Muslim is, therefore, bound by the regulations of his *fiqh*-school, and the *fiqh*-books have become the law-books for later generations. The Qur'ān and the collections of tradition are, it is true, always held in high honour as holy texts, but it is not possible to know what doctrine may be deduced from these sacred sources except by means of the *fiqh*-books. The *fiqh*-books are still studied in all Muslim lands. In later times Mecca has, in a special degree, become the centre of the study of the *fiqh*, and in the great mosque of Mecca instruction in the *fiqh*, according to the method of the Middle Ages, is given almost uninterruptedly by various scholars.[1]

The great majority of Muslims cannot consult the *fiqh*-books for themselves, and must, therefore, use the explanation of a *faqīh*, who is qualified to give a *fatwā*, when they wish to know what the law prescribes in cases which are not of daily occurrence. A *fatwā* is a professional opinion on *fiqh*-matters, generally couched in the form of question and answer. A scholar who gives such *fatwās* is in consequence called *muftī*, and any one who is recognized as a competent *faqīh*, so that his legal advice is asked when occasion arises, may be regarded as a *muftī*. Besides this, there are in Muslim lands official *muftīs* paid by the Government to advise the public, and, when necessary, also the Government itself, as to the law. In some places, where adherents of different *fiqh*-schools are constantly found, the Government even appoints a separate *muftī* for each *madhhab*. The contents of the *fatwās* are obtained from the *fiqh*-books, since the *muftīs*, like all other scholars, are only *muqallids*. Sometimes, among the questions submitted to a *muftī*, are found situations which are new in Muslim society, and subjects which have become important for the Muslims only under the later influence of Western civilization; in such cases the *muftīs* must decide how the old rules are to be applied in the changed circumstances. In the *fiqh*-books of later date consideration is given, so far as is necessary, to the *fatwās* which relate to new situations.[2]

The general conviction of orthodox Muslims nowadays is that the doctrine of each of the four *fiqh*-schools represents a correct view of the canon law. At first the scholars disputed hotly on the *fiqh*, and their adherents often showed signs of great intolerance. For a long time bitter animosity existed between the teachers in the holy towns in Arabia and the *faqīhs* in the conquered territory (especially in 'Irāq). Those who lived at Mecca and Medīna would have liked to keep the monopoly of the sacred science in their own hands. They tried in every possible way to throw ridicule and suspicion on their rivals, who were frequently not even of pure Arabian descent (Abū Ḥanīfah, *e.g.*, was of Persian blood). Both parties deluged each other with a flood of abusive names. Although the majority of the people were not entirely acquainted with the details of the problems of scholarship, nevertheless, in places where the followers of different schools came into contact with each other, collisions often took place which gave rise to street fights and mutual persecution.

In spite of this, the controversial questions concerning the *fiqh* did not cause permanent divisions in Islām. On the contrary, the conviction gradually arose in orthodox circles that the difference of opinion between the *fiqh*-schools must be regarded not as a misfortune, but rather as a situation willed by God Himself. It is, they thought, apparently possible and permissible to hold different opinions as to various *fiqh*-rules of secondary importance. Thus, if one school cherished a less rigorous opinion concerning a command or prohibition than the other schools, it was proper for the faithful to regard this as in some degree a blessing, since the less rigorous opinion could apparently also be defended with good reason. A tradition says that the Prophet himself declared: 'The difference of opinion in my community is a proof of God's mercy.'

Each Muslim has to give the preference to the observance of the regulations of his own *fiqh*-school, and only under exceptional circumstances is an appeal made to the divergent doctrine of another *madhhab*. This appeal is also called *taqlīd* (in this case the recognition that the rules of another school are authoritative on a special point), and is held permissible under certain conditions for laymen.

The following is an example. According to the Shāfi'ites, children under age can be given in marriage only by their father or grandfather. In Acheh, where the Shāfi'itic *madhhab* is usually followed, it was the ancient national custom not to allow children to remain unmarried until their majority. Now, if it happens that the father and the grandfather of children under age are dead, the difficulty is solved by means of *taqlīd*, appealing to the Ḥanifites, who declare that even distant blood-relations are also competent to give children in marriage during their minority.[1]

Passing from one *madhhab* to another is not always approved of. There are Turkish scholars who permit those who follow the Shāfi'itic or another *madhhab* to become Ḥanifites, but forbid Ḥanifites to go over to another *fiqh*-school. Such transference to another *madhhab* is scarcely ever found except when there is some exceptional reason for it—*e.g.*, when any one leaves his native country and goes to live in a land where the majority of the inhabitants belong to another *fiqh*-school. In places such as Mecca, where the adherents of the different *fiqh*-schools constantly come in contact with each other, transference to another *madhhab* is found, if, *e.g.*, a man and woman who belong to different *fiqh*-schools wish to marry.

**3. The 'uṣūl al-fiqh' (i.e., the sources or foundations of the fiqh).**—The *fiqh* is based on four infallible foundations: (1) Allāh's word—the Qur'ān; (2) the words and deeds of the Prophet—*sunnat al-nabī*; (3) the general agreement of feeling among orthodox scholars—*ijmā'*; and (4) the analogy—*qiyās*. Each of these foundations supplies a guarantee that the doctrine of the *fiqh*-schools is really in agreement with the will of Allāh. They are called the *uṣūl al-fiqh* (lit. 'roots of the *fiqh*'). The name *furū'* ('branches') is used to designate the rules of the *fiqh* based on these *uṣūl*.

(1) *The Qur'ān.*—As has been stated above, the *qiyās* originally was not generally recognized as a permissible method of establishing the *fiqh*, nor has the infallibility of *sunnah* and *ijmā'* been recognized from the beginning. But none could contest the authority of the Qur'ān, which, accord-

[1] For further particulars cf. C. Snouck Hurgronje, *The Achehnese*, i. 344 ff., and see also § 5 (*a*), below.

ing to Muslim opinion, contained Allāh's own words, nor was there later any doubt that Muhammad had accurately delivered God's word.

According to tradition, the Prophet had, with the help of the angel Gabriel, repeatedly collated the sacred text with the original preserved in heaven, and the Qur'ān must thus be regarded as a completely trustworthy source of Allāh's will. It is true that some of the verses contradict each other, but it generally appeared possible to give an interpretation of the contradictory texts which brought them into harmony; and, if this was not possible, it was assumed that the one verse of the Qur'ān was cancelled by the other.

(2) *The sunnah.*—From the very beginning the *sunnah* of the Prophet passed in general as a guide for all Muslims. But Muhammad was not regarded by his contemporaries as infallible. He was often subjected to severe opposition, even from his most loyal adherents, and, indeed, did not himself make any claim to infallibility. On the contrary, he often took pains to declare expressly that he was only a fallible man like every one else; he could achieve only one miracle which none else could accomplish—the communication of Allāh's revelation.

After the death of the Prophet, also, it occasionally happened that customs which he had expressly permitted to his followers, or of which he had himself given the example, were rejected and regarded as contrary to the true spirit of Islām.

The *mut'ah*-marriage is an example. According to several traditions, the Prophet had permitted some Muslims to contract temporary marriages—*e.g.*, on the occasion of expeditions. For this purpose a sum of money or other goods was given to a woman, and a marriage was contracted with her for a definite period, after the expiration of which the marriage was again dissolved. This kind of marriage is known as *mut'ah* ('to make use of'). The second Khalif, 'Umar, forbade these temporary marriages; he apparently regarded them as practically fornication: 'Let no one be brought to me who has married a wife for a limited period,' he said, 'for, if so, I will have him stoned.' According to a later tradition, the Prophet himself withdrew his permission. Orthodox Muslims regard *mut'ah*-marriages as forbidden; the Shī'ites still continue to regard them as permissible.[1]

But later Muslims began to idealize the Prophet. They could not admit that he had been subject to mistakes and weaknesses just like other men, and they could not allow that any doubt existed on this point. It was necessary to have full security that men were not following an erroneous line when they accepted the *sunnah* of the Prophet. An attempt was made to find proofs for the infallibility (*'iṣmah*) of the Prophet, and it was thought that this could be discovered in many verses of the Qur'ān—*e.g.*, in those in which God enjoins obedience not only to Himself, but also to Muhammad, His representative. There was also a tradition which made the Prophet declare expressly: 'My community shall not err when they hold fast in everything to Allāh's book and to my *sunnah*.'

According to Muslim theory, the *sunnah* of the Prophet consists of three elements: (1) his *qawl* (decisions); (2) his *fi'l* (manner of conduct); and (3) his *sukūt* or *taqrīr* (tacit approbation of the deeds and words of others).

Generally behaviour according to the *sunnah* of the Prophet is as indispensable a duty for a Muslim as obedience to the regulations of the Qur'ān. The only exception to the general rule is formed by those cases in which God had permitted exceptional freedom to His messenger; *e.g.*, Muhammad had more than the number of wives permitted by the law, and in such special cases it is naturally regarded as forbidden to follow the example of the Prophet. Some European writers have erroneously imagined that what the *sunnah* prescribes has not a binding power in the same degree as a command in the Qur'ān. On the contrary, Muslim scholars even assume that some regulations of the Qur'ān are altered or cancelled by later decisions or acts of the Prophet which contradict them. In Qur'ān, ii. 176, *e.g.*, it is ordained that legacies may always be left to parents and near blood-relations; but this rule is regarded as cancelled, because, later on, according to tradition, after the regulation of inheritance *ab intestato*, Muhammad said: 'No will may be made for the benefit of heirs whose share in the estate is fixed.' Although the Qur'ān, xxiv. 2, prescribes only scourging as the punishment for fornication, adulterers must, according to the canon law, be in some cases stoned to death. This last punishment is based exclusively on the *sunnah* of the Prophet, which in this case has altered the regulation of the Qur'ān.

[1] On the so-called *mut'ah* see G. A. Wilken, *Das Matriarchat (das Mutterrecht) bei den alten Arabern*, Leipzig, 1884, pp. 9–16; and J. Wellhausen, 'Die Ehe bei den Arabern,' in *GGN*, 1893, p. 464 ff.

(3) *The ijmā'.*—By the time that a firm conviction had been formed in the schools as to the main rules of the *fiqh*, this general feeling began to be regarded as a new argument for the validity of the doctrine. It was declared to be impossible that rules as to which all *faqīhs* had the same opinion could be based on error, and thus the *ijmā'* ('general agreement of opinion') of the scholars must be an incontrovertible proof of the correctness of their views. There could, so men thought, no longer be any doubt, even as to subjects on which there was originally a difference of opinion, so soon as all scholars were agreed on them. Their unanimous opinion must for the future be reverenced by every one as the truth.

The doctrine of the infallibility of the *ijmā'* at first met with much opposition. Many refused to concede binding authority in religious matters to the opinions of fallible men, even when they were agreed in their judgment. Nevertheless a tradition arose later, according to which the Prophet himself had declared: 'My people shall never be unanimous in error.' It was also thought possible to find arguments for this opinion in some verses of the Qur'ān. In iv. 115, *e.g.*, punishment is threatened on those 'who separate themselves from the Prophet' and 'do not follow the way of the faithful,' and this 'way of the faithful,' it was said, was obviously nothing else than that for which unanimity had been already obtained in Islām.

The earlier Muslims had already attached great importance to the *ijmā'* of 'the companions of the Prophet' (*ṣaḥābah*). It was thought that those who belonged to the generation which had been so extraordinarily favoured by the blessing of personal acquaintance with Muhammad must have been completely permeated by the true spirit of Islām, and it was thus impossible that they could have been unanimous in error. Later on, Mālik ibn Anas laid special emphasis on the general agreement of opinion of the scholars of Medina. In that holy city, he thought, the *sunnah* of Islām must have undoubtedly been preserved in its purest form. Thus, when all the scholars in the city of the Prophet were agreed in their opinion, this could not be erroneous. Others applied the same reasoning to the *ijmā'* of the scholars in both the holy towns—Medina and Mecca. In the end, however, consideration had to be given also to the *faqīhs* in other places. There was no sufficient reason for limiting the authority of the *ijmā'* exclusively to the opinion of the *ṣaḥābah* and the scholars in the holy cities. Thus the *ijmā'* came to mean in Islām the agreement of all scholars who could be regarded as competent to judge in matters of religion.

The *ijmā'* must be regarded as the most important of the *uṣūl*. It became in the end the infallible basis for the whole doctrine of Islam.[1] It gave Muslims security also that the *fiqh* was correctly deduced from the sacred texts. It is true that, with regard to many details of the canon law, there remained a difference of opinion between the four *fiqh*-schools; but, as has already been noticed, all orthodox Muslims came later to recognize that as to these questions different opinions were possible. It was agreed that the doctrine of each of the four *madhhabs* gave a correct view of the canon law, and, in consequence, it was possible to say that the *ijmā'* itself had sanctioned even those regulations as to which the four *fiqh*-schools cherished different opinions. Moreover, everything which afterwards, under changed circumstances, became a rule was held to be justified when all were agreed about it. Customs and doctrines cannot be heresies for the true Muslim, provided that all orthodox *faqīhs* sanction them, even if they are not based on the Qur'ān or the *sunnah*. Those who do not honour customs sanctioned by the *ijmā'*, such as the Wahhābites, are regarded by the orthodox Muslim as heretics.

(4) *The qiyās.*—Of the different methods of argument according to which some rules of the *fiqh* were established only the *qiyās* was recognized as a fourth infallible foundation for the *fiqh*. The other methods, such as *istiḥsān*, *istiṣlāḥ*, and *istiṣḥāb*, were not approved by the majority of Muslim scholars.

[1] See especially C. Snouck Hurgronje, 'Le Droit musulman,' in *RHR* xxxvii. [1898] 15 ff.; I. Goldziher, 'Die Religion des Islams,' in *Die Kultur der Gegenwart*, Leipzig, 1906, i. iii., 1st half-vol., pp. 105–107.

To prove that the *fiqh* might really be based on analogy, an appeal was made to various texts of the Qur'ān and tradition. According to some traditions, the Prophet had instructed Mu'ādh, his governor of Yaman, to keep in general to the Qur'ān and the *sunnah*, but, in cases in which this was not possible, to behave according to the analogy of these sacred texts. Since, later on, all orthodox scholars were agreed that the *qiyās* was permissible, no further doubt on the point was possible. Thus, for later generations in the orthodox Muslim world, the doctrine that the *qiyās* is a fourth infallible foundation of the *fiqh* is based on *ijmā'*.

Some orthodox scholars were of opinion that the general custom (*'urf*) should also be regarded as a basis for the *fiqh*. As a matter of fact, many *faqīhs*, from ancient times, had been careful, in establishing the regulations of the *fiqh*, to take into consideration the general customs of Muslims; but it has never become a rule to regard the *'urf* as a fifth infallible foundation of the *fiqh*.[1]

Muslim writers have written extensive works about the *uṣūl al-fiqh*, which treat of the different methods by means of which the rules of the *fiqh* may be established. Most *faqīhs* make no special study of this science, but content themselves with the condensed statements as to the *uṣūl* which may be found in the *fiqh*-books.

**4. Summary of the contents of Muslim canon law.**—The chief regulations of Muslim canon law may be divided into two classes: (1) those regarding religious worship and ritual duties; and (2) those regarding civil, penal, and public law.

The regulations belonging to the first class deal in the first place with the five *'ibādāt*, *i.e.* the ritual actions by which Allāh is to be worshipped. They are (i.) the *ṣalāt* (the ritual prayer, mainly consisting of prostration, praises of the Creator, etc.); (ii.) the *ṭahārah* (the ritual purification, which must be specially gone through before the *ṣalāt* is performed, but which is also required in other cases in which a believer must be in a ritually pure condition); (iii.) the *zakāt* (originally almsgiving, which was afterwards fixed by definite rules and became a kind of religious tax); (iv.) the *ṣawm* (fasting, especially in the month of Ramaḍān); and (v.) the *ḥajj* (the annnal pilgrimage to Mecca).

These five *'ibādāt* are always treated in the first five chapters of the *fiqh*-books, according to the usual division of these works which has obtained since ancient times. They belong at the same time to the 'pillars' of Islām, *i.e.* to the principal duties of a Muslim. Originally also the *jihād* (the 'sacred war' against unbelievers) was regarded by many Muslims as a 'pillar' of Islām. This opinion is still held by the Khārijites, who are, however, regarded as heretics. According to orthodox Muslims there are only five 'pillars' of Islām. One of these is the *ṣalāt*, including the *ṭahārah* connected with it. The *zakāt*, the *ḥajj*, and fasting belong also to them, and the fifth 'pillar' is the confession (*shahādah*), consisting of the well-known 'two words': 'I confess that there is no God but Allāh, and that Muhammad is the messenger of Allāh.' For it is reported in tradition that the Prophet said: 'Islām is built on five [*sc.* foundations]: on the *shahādah*, the *ṣalāt*, the *zakāt*, the *ḥajj*, and fasting in the month of Ramaḍān.'

The subjects connected with the belief in Allāh were so numerous, and the controverting of manifold heresies on this point came in time to extend so far, that the doctrine regarding the first 'pillar' (the *shahādah*) developed into a separate branch of science, the *'ilm al-tawḥīd* or *'ilm al-kalām* ('knowledge of the unity of God' or 'doctrine of faith'). In the *fiqh*-books only the four other pillars are discussed. In connexion with the daily *ṣalāt*, the *fiqh*-books also deal with the whole worship in the mosque, the service on Friday and on the two *'īds* (*i.e.* feasts: the 'great' feast on the tenth of the last month, *Dhū'l-ḥijja*, and the 'small' feast on the first of the 10th month, *Shawwāl*); further, they deal with various special *ṣalāts*—*e.g.*, the *ṣalāt al-istisqā'* (the *ṣalāt* by which Allāh is asked for rain in times of great drought), and the *ṣalāt* at the eclipses of the sun and moon.

Besides these chief duties, a Muslim must observe numerous other religious prescriptions, and abstain from many actions which are regarded by canon law as blameworthy, or even strictly forbidden. These prescriptions may be found in nearly all the chapters of the *fiqh*-books. They treat chiefly of: (i.) the religious ceremonies on various occasions in Muslim domestic life—*e.g.*, child-birth, circumcision, marriage, and death; (ii.) the ritual purity of persons and objects, the ritual slaughter, the lawful food and drink, etc. These regulations are followed by various others—*e.g.*, concerning the prohibition of images of living beings, of superfluous luxury (the use of gold and silver dishes, the wearing of silk clothes by men, etc.), of various games and pleasures, and concerning permissible and forbidden music. The *fiqh*-books specially deal with some of those regulations in the chapter on the *walīmah* (the religious meal at the marriage-feast and on other occasions); for, if any of the rules mentioned in the *fiqh*-books are infringed, the religious character of this meal is lost.

The regulations of the second division chiefly concern marriage, divorce, relationship and the rights and duties connected with it, guardianship, inheritance, and slaves and freedmen; also contracts (sale, hire, partnership, commission, etc.), warrants, the obtaining of property and other rights, the prohibition of taking interest (Muslim law regards this as 'usury'); oaths and vows and all connected with them; testamentary dispositions and the *waqfs* (dispositions by which certain goods are withdrawn from trade in order to be reserved for definite religious aims or for a special number of persons); furthermore, the right of retaliation and the redemption of it by payment of a ransom; legal procedure, and the law of evidence; finally, the duty of believers to take part in the *jihād*, the rights and duties of unbelievers living in Muslim lands, and the appointment of an *imām* (chief of the Muslim community), his rights and his duties.

It is not the aim of all the regulations of the law to give absolute commands or prohibitions; in many cases it is only suggested that it is advisable from a religious point of view to perform or to omit some action. Five classes of regulations may be distinguished; they are called *al-aḥkām al-khamsah*, *i.e.* 'the five legal categories.' (i.) A deed may be obligatory (*wājib*, 'necessary,' or *farḍ*, 'prescribed'). Only the Ḥanifites recognize a difference between *wājib* and *farḍ*. They apply the term *farḍ* to all that is prescribed by the Qu'rān or by the tradition, if the meaning is beyond doubt; and *wājib* to that which, in case of doubt, is obligatory only according to the most probable view. Duties to be observed by every Muslim individually are called *farḍ al-'ain* (or *farḍ 'ala 'l-'ain*); duties to be observed only by a certain number of Muslims collectively are called *farḍ al-kifāyah* (or *farḍ 'ala' l-kifāyah*)—*e.g.*, the daily *ṣalāt* in the mosque and the sacred war against 'unbelievers.' (ii.) A deed may be commendable or meritorious (*sunnah*). A Muslim will be rewarded if he observes these regulations, but he will not be punished if he neglects them.

It has been supposed by some scholars that the actions belonging to this class were called *sunnah* as being derived from the *sunnah* of the Prophet. But this is incorrect. It is indifferent for what reason an action is recommended in canon law. Muslim jurists of one *fiqh*-school sometimes call a deed *sunnah*, in order not to disagree wholly with the doctrine of another *madhhab*, which calls the same deed obligatory. A deed may also be *sunnah* because it was recommended in a verse of the Qur'ān; on the other hand, the imitation of a deed of the Prophet is often 'obligatory.' Other words that are used in the same sense as *sunnah* are *mustaḥabb* ('desirable'), and *mandūb* ('recommended').

(iii.) A deed may be permissible (*mubāḥ* or *jā'iz*) or (iv.) objectionable (*makrūh*); the latter actions are better avoided, but a Muslim is not punished if he commits them. (v.) A deed may be forbidden (*ḥarām*); the committing of this action is punished. The action which is forbidden may at the same time be 'valid' (*ṣaḥīḥ*)—*e.g.*, if one steals water and with it fulfils the ritual purification; this action is 'valid,' although stealing is forbidden. An 'invalid' action is called *bāṭil*.

Notwithstanding the great lack of knowledge and the negligence of most Muslims, in all Muhammadan lands that part of the canon law which deals with religious duties and ritual is more or less faithfully observed. According to the popular conscience, some actions are even regarded as

[1] Cf. I. Goldziher, *Die Ẓâhiriten*, p. 204.

wholly indifferent for this purpose whether the bridegroom is equal in wealth to the father of the bride or not. In matters of *kafā'ah* the Mālikites do not judge according to the origin or profession of the bridegroom, but exclusively by his conduct and faith. As a rule, the various regulations of canon law concerning the *kafā'ah* are of no practical importance for the present-day Muslims. Marriages which would be considered *mésalliances* according to the theory of the law very often are considered by the wife and her *walī* as honourable. An exception to this rule is made by the *sayyids* or *sharīfs*, the descendants of the Prophet. In some countries (*e.g.*, the Dutch Indies) they refuse to marry their daughters to men who are not related to them, because of their distinguished origin.

The various *fiqh*-schools differ as to the cases in which the *walī* has still in Islām the right of making a marriage contract without the permission of the bride.

The Shāfi'ites hold that the *walī* as a rule has no right to give the bride in marriage without her permission. A minor girl, therefore, cannot be given in marriage by her *walī*, for she is not able to give a valid permission. According to the Shāfi'ites, only the father or, failing him, the paternal grandfather is entitled to compel his daughter (or granddaughter) to a marriage, if she is still a virgin, whether she be a minor or of age. For this reason they call the father and the grandfather *walī mujbir* (*i.e.* 'compelling' *walī*). Nevertheless the doctrine even of the Shāfi'ites always regarded it as commendable (*sunnah*) that the *walī mujbir* should ask the permission of the bride before giving her in marriage. Further, he is not entitled to compel her to marry if she declares that she is not a virgin—this declaration is accepted as true without further proof—or if there is enmity either between himself and the girl or between the girl and the man with whom he wishes her to join in marriage. The *walī mujbir* is not entitled to give the bride in marriage to anybody who is not her 'equal' (*kuf'*), or who is not able to pay a 'sufficient' dowry (*mahr al-mithl*).

According to the Ḥanifites and Mālikites, women under age may be given in marriage without their permission; this may be done by their father or, failing him, by a more distant kinsman on the paternal side. In the latter case the Ḥanifites permit them to demand dissolution (*faskh*) of their marriage when they come of age.

According to the Ḥanifites, women of full age cannot be compelled to a marriage by any one; and, according to the Mālikites, they may be compelled only by their father (not by the grandfather) so long as they are still virgin. Only the father is thus, according to the Mālikite system, *walī mujbir*.

The *walī* must be not only the 'nearest' kinsman,[1] but also an adult and a free Muslim in full possession of his intellectual powers and (at least according to the Shāfi'itic school) not a *fāsiq*. If he does not satisfy these conditions, his right passes to the next kinsman. If none of the persons just mentioned is qualified to become *walī*, or if there is no kinsman, or the kinsman unlawfully refuses to be *walī*, the magistrate (*ḥākim*) is regarded as the *walī* of the bride. According to tradition, the Prophet said: 'The magistrate is *walī* of her who has no *walī*.' The *fiqh*-books do not indicate which of the magistrates is then the competent *walī*; in many Muslim countries in this case the marriage contract is made by the *qāḍī*. If there is no magistrate living in the place where the marriage is to be contracted, the bride and bridegroom are allowed to hand over this function to some proper person. Such a man is called *ḥakam* (which is also the title of an arbiter in a lawsuit). Parties are entitled to choose another person as *ḥakam* even if a competent magistrate is living in the place, but in this case the *ḥakam* who is chosen is allowed to act as a substitute for the real magistrate only if he satisfies the conditions of a *qāḍī* in every respect.

The bridegroom is not generally represented by a *walī* in the making of a marriage contract—he does it himself. The contract is made by his *walī* only if he lives under guardianship as a minor. According to the Shāfi'ites, boys under age can be married only by their *walī mujbir* (their father or paternal grandfather), for they are supposed to be unfit to give their permission for the marriage. The Ḥanifites and Mālikites, however, allow other relatives also to do this.

If the bridegroom lives under guardianship for other reasons (*e.g.*, bankruptcy), he can be married only by the mediation of his guardian.

By the marriage contract the *walī* or other representative of the bride declares her to be given in marriage to the bridegroom (this declaration is called *ijāb*, 'the offer'); and the bridegroom declares that he takes her as his wife (this declaration is called *qabūl*, 'acceptance'), and that he will pay her a certain sum as dowry. *Ijāb* and *qabūl* must follow each other immediately, as in all other contracts.

According to the Shāfi'ites, in the making of the contract parties are not allowed to modify the legal rights and duties of married couples. Either husband or wife, indeed, is allowed to renounce later on the rights to which they are entitled by the law, but it is not permitted to bind oneself to this beforehand; *e.g.*, if the man bound himself beforehand not to marry a second wife, or if the wife renounced her right of being supported by her husband, then these conditions would be null and void. In this case the marriage contract remains valid, unless conditions were made which would be contrary to the aim of a marriage (*i.e.* not to have children); in that case both the condition and the marriage are considered void. In other *fiqh*-schools these questions are partly decided in another way.

For the *walī* of the bride it is *sunnah* to make a speech (*khuṭbah*) when the marriage contract takes place. If possible, this speech is made in Arabic, and must glorify God, bless His Prophet, give pious admonition, and recommend marriage. According to the Shāfi'ites and the Ḥanifites, the contract must be made in the presence of trustworthy witnesses, who must satisfy certain demands of the law. The Mālikites, however, only demand that the marriage shall not be kept secret.

Assistance of a clergyman is not required in Islām for the making of a marriage contract, but usually the aid of a person who has a special knowledge of the regulations concerning marriage is invoked. Only in this way do Muslims feel that the marriage is guaranteed not to be null and void. Thus we find in nearly all Muslim countries persons who make a profession of assisting at the marriage contracts. In different countries these men are called by various names (*e.g.*, *mumlik* in Mecca).[1] Sometimes such a person dictates to the parties the words that are to be pronounced by them, but in most cases he appears exclusively as a representative (*wakīl*) of the *walī* of the bride. Then he need only dictate to the bridegroom the required formulæ. If the bridegroom and the *walī* of the bride possess a sufficient knowledge of the regulations of the canon law, they may make the marriage contract themselves without the assistance of a professional officiator.

In the art. WORSHIP (Muslim) the religious ceremonies connected with marriage will be dealt with, such as the *walīmat al-'urs* (*i.e.* the marriage feast, which originally was probably a sacrificial meal).

It remains to mention only that bride and bridegroom are not allowed to contract a marriage if they are in the state of *iḥrām*, *i.e.* the state of religious consecration and abstinence which the law makes obligatory for those joining in the yearly pilgrimage (*ḥajj*).

(*b*) *The dowry.*—The dowry given by the bridegroom to the bride has still its old Arabic name *mahr* (cf. Heb. *mōhar*). By this word was originally meant the price which was paid to the *walī* of the bride. Another name for the dowry is *ṣadāq*. Because of the general meaning of the Arab. verb *ṣadaqa* and its derivatives, we may assume that the *ṣadāq* was originally the amount deposited by the bridegroom as a guarantee of his trustworthiness, and held by the *walī* of the bride if the bridegroom broke his promise. Later on no distinction was made between *mahr* and *ṣadāq*, and Muslim scholars generally regard these words as synonymous in every respect.

The amount to be paid by the bridegroom as dowry depends on the conditions upon which parties agree when the marriage contract is made. There are three possible cases. (1) There is no condition between parties as to the amount of the *mahr*. (2) It is expressly stated that the fixing of the amount of the present to the bride is left to the

for his small sins. But, if he confesses heretic opinions, he ceases to be *'adl*.

[1] The opinions of the different *fiqh*-schools disagree as to the order in which the kinsmen of the bride are entitled to be regarded as her nearest kinsman (cf. § 7 (*b*)).

[1] Cf. C. Snouck Hurgronje, *Mekka*, ii. 161. *Mumlik* is literally the person who 'makes' the bridegroom 'owner' of the bride.

within a certain period after the dissolution of a former one. This period is called *'iddah*, *i.e.* properly 'the number' (viz. the number of days). If the marriage was dissolved by the decease of the husband, according to Qur'ān, ii. 234, the wife must wait four months and ten days. A similar period of mourning after the death of the husband existed among the Arabians in the heathen period; but it was then customary, at least in some Arabian tribes, for the widow to seclude herself in a small tent for a full year after the death of her husband; during this time she might not purify herself.[1] The *'iddah* after divorce was, on the other hand, probably first introduced by Muhammad. According to Qur'ān, lxv. 4, the wife may not marry again within the limit of three *qurū'*, if her marriage was dissolved by divorce. According to Abū Ḥanīfah, *qurū'* must be taken to mean menstruation; according to the Shāfi'ites, Mālikites, and others, it is the period of a woman's cleanness between the periods of menstruation. If the woman has no menstruation, the *'iddah* is reckoned at three months. When a woman is pregnant at the dissolution of her marriage, she may in no case marry again before her confinement.

Difference in position is, as a rule, no obstacle to the contraction of a marriage, since it is in no case regarded as scandalous for the bridegroom to marry a woman of lower rank; and even a woman may contract a valid marriage with a man who is not her *kuf'*, if neither her *walī* nor she herself has any objection.

Youth is usually no hindrance according to Muslim law. Child-marriages were not forbidden in Muhammad's day, and even the Prophet married 'Ā'ishah, the daughter of Abū Bakr, when she was only six years old. But, according to the Shāfi'ites, only the *walī mujbir* (the father, or, failing him, the paternal grandfather) is qualified to give his children (or grandchildren) in marriage before their majority. According to the other *fiqh*-schools, more distant relations have the same right if the ancestors of the children under age are deceased. Children under age, therefore, cannot marry, according to the Shāfi'ites, if they have no father or grandfather. See, however, § 2 (at the end) as to the *taqlīd* which is applied in such a case.

(*d*) *Mutual rights and duties of married people during marriage; īlā' and ẓihār.*—No community of goods between the married couple is brought into existence by marriage. Each keeps the ownership of that which was possessed at marriage, and of that obtained during marriage by labour, endowment, inheritance, or in any other way. The wife keeps the right, during her married life, of disposing of her possessions and of making contracts. She does not in that respect come under the guardianship of her husband. The husband is obliged to support his wife according to her position, and to give her food as well as clothing, residence, and service consistently with the appropriate customs. This legal and obligatory support is called *nafaqah*. If the husband is not able to give the legal support to his wife, she is entitled to demand divorce (*faskh*), but in that case she has to prove that her husband is really not able to give her *nafaqah*. If the husband is able to support her, but refuses to do so, the judge must try to induce the husband to fulfil his duty, if the wife requires him to do so.

A husband who is married to more than one wife must not spend more time in the rooms of one wife than in those of another. The husband is also particularly forbidden in the law-books to swear an oath to abstain from sexual intercourse. The taking of such a vow of abstinence was called *īlā'* ('to swear'). In the pre-Islāmic period the Arabs

[1] Cf. J. Wellhausen, 'Die Ehe bei den Arabern,' in *GGN*, 1893, pp. 454–456.

regarded this *īlā'* as a kind of divorce, by which, however, the marriage was not fully dissolved. Although the woman was thus neglected, she could not contract a new marriage before her husband had definitely repudiated her, and this he generally refused to do before he had been paid a certain sum as ransom.

This *īlā'* was forbidden in Qur'ān, ii. 226 f. Any one who had taken such a vow of abstinence was for the future obliged to repudiate his wife after the expiration of four months, if he was then still unreconciled to her. According to the Ḥanifites, after the expiration of four months the marriage is *ipso facto* legally dissolved if no reconciliation has taken place; but, according to the Shāfi'ites and Mālikites, it must in this case be dissolved by the *ḥākim* if the man refuses to repudiate his wife of his own accord. If the husband desires to be reconciled again with his wife, he is, according to the unanimous opinion of Muslim scholars, obliged to make a 'guilt-offering' (*kaffārah*, lit. 'that which covers the sin') because he has broken his vow. The legal regulations concerning the *īlā'* are applicable only if the husband has vowed to abstain from conjugal relations with his wife for longer than four months.

Another vow of abstinence was the *ẓihār* (from *ẓahr*, 'back'). In this case the husband declared that 'his wife should be to him even (untouched) as the back of his mother.' This was apparently a customary vow of abstinence by the heathen Arabs, which, according to tradition, was also taken by some Muslims in the month of fasting, when they proposed to abstain from conjugal relations with their wives. This vow was expressly condemned in Qur'ān, lviii. 1–5.

Apparently the original meaning of this revelation was that every Muslim who 'turned again' to this heathen custom should have to pay a heavy penalty (*kaffārah*), consisting of the emancipation of a Muslim slave, fasting for two successive months, or the feeding of sixty poor persons, before he was again permitted to have intercourse with his wife. The Muslim *faqīhs*, however, have explained these verses of the Qur'ān in another sense.[1] According to the Shāfi'ites, the husband is legally bound to this *kaffārah* unless he repudiates his wife immediately after pronouncing the *ẓihār*. 'If he does not do this at once,' they say, 'then he "turns back,"' *i.e.* breaks his vow of abstinence, and must thus give the *kaffārah*. According to the other *fiqh*-schools, he breaks his promise only if he actually behaves contrary to his vow, and is only then obliged to give the *kaffārah*. Thus these also explain 'turn back' in the sense of changing opinion and breaking the vow of abstinence.

Both the *īlā'* and the *ẓihār* soon became obsolete in Islām.

If the husband fulfils his duties, he has the right to demand obedience from his wife, and is even entitled to chastise her if she is unwilling (*nāshiz*); in this case she loses her right to *nafaqah*.

Husband and wife, according to the Shāfi'ites, can make no change in their mutual rights and duties as established in canon law. Any agreement of that nature which they may make in the marriage contract has no binding power. Nevertheless, it is usual, in some Muslim lands, even among the Shāfi'ites, for the husband to undertake certain exceptional obligations with regard to his wife, to which he is not bound by the law. He promises, *e.g.*, not to take a second wife, though he has the right to do so. In order to give a binding force to such promises the bridegroom, immediately after the conclusion of the marriage contract, pronounces a repudiation of his wife conditional on the non-fulfilment of his vows. He declares, after making the marriage contract: 'If I take a second wife [or 'if I neglect my wife and give her no *nafaqah*,' etc.], then is she repudiated by me.' This custom is called *ta'līq* (lit. 'to hang up' the divorce to a condition).

By this *ta'līq* various rights may be guaranteed to the wife which the law does not give her, and she may gain in this way a much better position. If she is ill-treated or neglected by her husband, or if he acts in other respects contrary to his promises, the marriage is *ipso facto* dissolved, and the wife may, if she wishes, marry another husband. This *ta'līq* is customary especially in the Dutch Indies. Only when the bridegroom is of high distinction or a pious man, so that it is im-

[1] Cf. I. Goldziher, *Die Ẓâhiriten*, pp. 52–54.

marriage on the attainment of her majority (see § 5 (*a*)). Other reasons for the *faskh* may be found in certain diseases or bodily infirmities mentioned in the *fiqh*-books. This method of divorce is possible also when, after the completion of the marriage, it appears that the bride or bridegroom does not fulfil certain qualifications (*e.g.*, with regard to birth, position, virginity, etc.) which had been expressly insisted on as conditions at the making of the marriage contract. According to the Shāfi'ites, a wife may also demand *faskh* if she proves that her husband is not able to give her lawful maintenance (*nafaqah*). In these cases the sentence of dissolution of marriage is pronounced by the magistrate at the request of the parties.

(3) The dissolution of marriage by means of *li'ān* ('imprecation') is based on Qur'ān, xxiv. 6–9. As a rule, any one who accuses a free Muslim woman of fornication, without being able to prove his accusation, is punished by scourging. If, however, a husband suspects his own wife of infidelity, the law allows him to accuse her of adultery without any further proof, and to contest the legitimacy of her child, but he must do so by means of the *li'ān*, invoking Allāh in the manner prescribed in Qur'ān, xxiv. 6–9:

> 'Those who accuse their wives of infidelity and have no other witnesses than themselves must invoke Allāh four times as a witness that they have spoken the truth, and a fifth time, calling down His curse on themselves if they have lied. The wife may avert the punishment (for adultery) if she swears by Allāh four times that her husband has lied, and a fifth time, declaring that God's wrath may fall upon her if her husband has spoken the truth.'

If a husband, after accusing his wife of adultery, refuses to pronounce the *li'ān*, he must be scourged for slander if he cannot produce witnesses; but the Ḥanifites consider that the husband ought to be imprisoned until he pronounces the *li'ān* or admits that he has lied. According to the Shāfi'ites and the Mālikites, not only is the marriage legally dissolved by the *li'ān*, but the married couple may never marry each other again. According to the Ḥanifites, even after the *li'ān* the marriage must still be dissolved by a decision of the magistrate, and the reunion of the parties is permitted if the husband has afterwards revoked his accusation and been scourged for his slanderous imputation.

**7. Relationship, and the rights and duties based on it.**—(*a*) *The relation between a child and his parents.*—In ancient Arabia, on account of the nature of the marriage by sale, the husband (*ba'al*, lit. 'master,' of the woman) was regarded as the father of all children borne by his wife during the marriage, even if he did not beget them. Thus he was also regarded as the father of the children borne by his wife if he had married a pregnant woman, or if he had given up his wife for a certain time to another man in order to raise up noble children from her.[1]

In Islām this rule was altered. According to Muslim canon law, only the man who has begotten the children in a legal marriage is regarded as their father; a woman must wait for the expiration of the '*iddah*-period, if she wishes to marry another husband after the dissolution of her marriage, in order that it may be seen whether she is pregnant. If she is, she may marry again only after her confinement, and the first husband is regarded as the father of the children born during the '*iddah*. Thus in Islām the first and second husbands cannot quarrel about the children born after the dissolution of the marriage; such quarrels were very common in the pre-Islāmic period.[2]

Muslim canon law generally recognizes a child born in wedlock as begotten by the husband and thus as legitimate when the birth takes place not earlier than six months after the consummation of marriage. A child born within a certain period after the dissolution of marriage (whether by divorce or through the death of the husband) is also regarded as legitimate. According to the Ḥanifites, it must be assumed that pregnancy may last two years if it appears that the mother had no menstruation during that time. According to the Shāfi'ites and the Mālikites, pregnancy may even last much longer (four or seven years), and thus a child born so long after the dissolution of the marriage may still pass as legitimate. Further, the children which the master begets from his slaves are regarded as legitimate offspring, and are placed on a complete equality with those begotten in lawful marriage (see § 9 (*a*)). When it appears that a marriage is invalid, or that any one has been wrong in thinking that he was the owner of a slave, the children are, nevertheless, regarded as legitimate, provided the parents acted mistakenly in good faith, so that there can be no question of *zinā'* ('fornication').

All other children are illegitimate (*walad zinā'*, 'begotten in fornication'). There is no relationship between such illegitimate children and their father, even though the father expressly recognizes that they were begotten by him. From such an acknowledgment no claim to relationship can follow either for the child or for the father (neither right of inheritance, nor guardianship, nor duty of maintenance). The Shāfi'ites even allow a father to marry the daughter whom he begets in fornication, though they regard it as blameworthy (*makrūh*). The Ḥanifites forbid this. On the other hand, the relationship between the mother and her illegitimate children is legally precisely the same as that between her and her legitimate children. She is not allowed to marry her illegitimate son, and she inherits from him, etc. A child is also illegitimate if the husband by means of *li'ān* accuses his wife of adultery (see § 6 (*b*) (3)), and declares that the child borne by her is not his. If, on the other hand, it is uncertain whether a child was really begotten by the husband during wedlock (or by the master, during the time that he was the owner of the slave), it is then regarded as legitimate without further proof, if the father recognizes it as his. Such an acknowledgment is called *iqrār*.

Adoption is forbidden, and has no legal force (see ADOPTION [Muhammadan]).

Blood-relations in the direct line are obliged to support each other (by means of *nafaqah*) in case of necessity; according to the Ḥanifites, this duty rests on all blood-relations that are not allowed to marry each other (thus on all *maḥrams*; see § 5 (*c*) (2)).

(*b*) *Other kinds of relationship.*—Another result of marriage by sale among the ancient Arabians was that after marriage the wife ceased to belong to her family, so that there was family-relationship only between the child and the family of its father, and not between it and the family of the mother. It is true that for philological reasons it may be assumed that even in Arabia the patriarchal family-system was preceded by the matriarchal, but in historical times no clear traces of the latter system can be found.[1]

[1] For further particulars about this so-called *nikāḥ al-istibḍā'* cf. W. R. Smith, *Kinship and Marriage in Early Arabia*, London, 1885, p. 110 [[2] do. 1903, p. 132].

[2] *Ib.*

[1] On this subject see the works of the following writers, whose views differ as to many details: I. Goldziher, 'Endogamy and Polygamy among the Arabs,' in *The Academy*, xviii. [1880] 26; G. A. Wilken, *Das Matriarchat (das Mutterrecht) bei den alten Arabern*, Leipzig, 1884; J. W. Redhouse, 'Notes on Prof. E. B. Tylor's Arabian Matriarchate,' in *JRAS* xvii. [1885] 275–292; W. R. Smith, *Kinship and Marriage in Early Arabia* (new ed. with additional notes by the author and by I. Goldziher, London, 1903); cf. Th. Nöldeke, in *ZDMG* xl. [1886] 148 ff.; J. Wellhausen, 'Die Ehe bei den Arabern,' in *GGN*, 1893, p. 460 ff.; and Th. W. Juynboll, *Over het verband tusschen de Moham. bruidsgave en het rechtskarakter van het oud-Arabische huwelijk*, Leyden, 1894.

As already pointed out, even before Muhammad marriage ceased to be generally regarded as a purchase. So also it was customary in Arabia before Islām not to limit relationship entirely to the family or tribe of the father, but in many cases to take into consideration the relatives on the mother's side, although the maternal relatives are never placed on an equality with the paternal by the Muslim scholars. It is also true that maternal relationship is an obstacle to marriage according to Qur'ān, iv. 26 f. (the maternal aunt is a *maḥram*, just as is the paternal aunt, and the *ḥaḍānah* [*i.e.* the care of children] is in certain cases equally a right of maternal relatives), but, in general, attention is paid only to the rights and duties of the '*aṣabāt*, *i.e.* the male relatives on the paternal side.

Rights which are based on relationship (*nasab*) and which are usually conceded to the '*aṣabāt* are: (1) the right of giving female relatives in marriage or of opposing the marriage of female relatives who wish to marry below their rank; (2) the right of inheritance; (3) the right of managing the property of blood-relations who are under age or insane; (4) the right of retaliation or of demanding the price of blood if a blood-relation has been killed; and (5) the right to succeed a blood-relation who has set free a slave in his rights and duties with regard to the freedman. According to the majority of Muslim *faqīhs*, if a blood-relation has unintentionally killed any one, the duty of paying the satisfaction money also falls entirely on the '*aṣabāt*.

In order to indicate the nearest relative among any one's '*aṣabāt*, Muslim scholars divide the male relatives on the paternal side into classes. The first class consists of the descendants, the second of the ancestors; the third class is formed by the descendants of the father, and the fourth class by the descendants of the paternal grandfather. Among the descendants the son is the next of kin, then the son's son, etc.; among the ancestors the father is the next of kin, next to him his father, etc.; the next of kin in the third class is the brother, then follows his son, etc.; the next of kin in the fourth class is the paternal uncle, then follows his son, afterwards his son's son, etc. He who is related to any one both on the paternal and on the maternal side precedes a blood-relation of the same rank who is related to him only on the paternal side; so, *e.g.*, in the third class the full brother takes precedence of the half-brother on the paternal side, the son of the full brother precedes the son of the paternal half-brother, etc.

Thus, as a rule, not only the son but also the grandson, etc., has precedence over the father, and the grandfather on the paternal side ranks above the brother. There are, however, exceptions to this rule. (1) The nearest '*aṣabāt* of a woman who have the right to give her in marriage are, according to the Shāfi'ites, not her descendants but her ancestors, and after them her relatives in the lateral line; but, according to the Ḥanifites and Mālikites, the ordinary rules obtain in this case also, and the descendants have the right in the first place to be *walī al-nikāḥ*. (2) The brothers of a deceased man inherit equally with his paternal grandfather, and are thus not excluded by him; but the grandfather has always the right to at least a third of their common share, so that, if he inherits together with one or two brothers, each obtains an equal part; but, if he inherits with three or more brothers, the latter divide two-thirds of the whole among themselves in equal parts, while the grandfather has one-third. (3) The rights which can be exercised over a freed slave pass by the death of his emancipator to the nearest of the '*aṣabāt* of the emancipator, but in this case the brothers take precedence of the grandfather. (4) According to the Shāfi'ites, the obligation of the nearest '*aṣabāt* to pay the '*aql* (the atonement money), when one of their blood-relations has committed unintentional manslaughter, falls only on the lateral relations and not on the '*aṣabāt* in the direct (ascending and descending) line (cf. art. CRIMES AND PUNISHMENTS [Muhammadan], vol. iv. p. 292).

The blood-relations on the maternal side and those on the father's side, so far as they do not belong to the '*aṣabāt*, are called *dhawu'l-arḥām*. They have in general no rights and duties based on relationship. According to the Ḥanifites, however, they take the place of the '*aṣabāt*, if these do not exist. In such a case the right to be *walī* and to give the bride in marriage passes to the mother and to her next of kin; and the inheritance also passes to the next relatives among the *dhawu'l-arḥām*. According to the Shāfi'ites and Mālikites, on the other hand, the '*aṣabāt* in such a case are not succeeded by the *dhawu'l-arḥām* but by the Muslim community; thus, if there are no '*aṣabāt*, the treasury (*bait al-māl*) inherits; and the *ḥākim*, *i.e.* the magistrate, must take the place of the *walī* of the bride.

(*c*) *Guardianship.*—Minors are legally under the guardianship of their parents or nearest blood-relations. They are not qualified to make independent contracts, or to undertake other legal transactions. Minority ceases generally, according to Muslim law, when the children are really adult and the signs of puberty can be observed. According to the Shāfi'ites, minority ends in any case after the completion of the fifteenth year; according to the Ḥanifites, only after the eighteenth year. Besides the so-called *wilāyat al-nikāḥ* (*i.e.* the guardianship which gives the guardian the right to give a female relative in marriage, or to prevent her marrying below her rank), which has already been discussed in § 5 (*a*), Muslim lawyers distinguish two other kinds of guardianship, namely, the *ḥaḍānah* and the *wilāyat al-māl*.

(1) The purpose of the *ḥaḍānah* is to care for the physical well-being of the minors and also for their education and training for a profession. During the married life of the parents the children are subjected to the parental authority; in case of separation of the parents, the mother has the right to retain the children so long as they have need of her help, *i.e.*, according to the Shāfi'ites, until they are about seven years old; after this, the child may entrust itself to the care of the father, if it prefers to do so; according to the Ḥanifites, a boy always comes at that age under the guardianship of the father, but a girl remains under the guardianship of her mother, while, according to the Mālikites, both boys and girls remain under the guardianship of the mother until they are of full age (girls even until they marry).

If the mother contracts a fresh marriage, she loses the *ḥaḍānah*, unless her new husband is at the same time one of the blood-relations of the children. In this case she keeps the guardianship, according to the Shāfi'ites, if the husband belongs to the '*aṣabāt* of the children; according to the Ḥanifites, if he is a *maḥram* of them; and, according to the Mālikites, if he is either a *maḥram* of them or a relative who would himself have the right to be guardian over the children if he were not excluded by nearer relatives.

If, after the divorce, one of the parents removes to another place, the child remains as a rule with the parent who does not leave the former dwelling-place, in order to avoid the dangers of travel. If, however, the father establishes himself permanently in another place, he has the right to take his children there with him; but the rules of the

different *fiqh*-schools with regard to this subject vary in details.

If the mother is dead, Muslim lawyers generally consider the female relatives the most suitable for the *ḥaḍānah*. According to the Ḥanifites, the father and the other *'aṣabāt* of minors have a right to the *ḥaḍānah* only when there are no female relatives.

The rules which the *fiqh*-schools follow with regard to the order in which the male and female relatives enjoy a right to the *ḥaḍānah* differ from each other in many details; *e.g.*, according to the Mālikites, the maternal aunt has a preference above all other female relations. They base this opinion on the tradition that, when Ḥamzah and his wife were dead, three of his *'aṣabāt* quarrelled over the question which of them had the best right to look after Ḥamzah's young daughter. One of them said to the Prophet: 'She is not only the daughter of my uncle, but my wife is, moreover, her maternal aunt.' On this Muhammad decided that the child must be entrusted to this man and his wife, saying, 'The maternal aunt is as good as the mother.'

According to the Shāfi'ites, if the mother dies or is not qualified for the *ḥaḍānah*, she is succeeded by her mother, or, if necessary, by the mother of her mother. Only after them the father, and, after him, his mother, or, if necessary, his maternal grandmother, has a claim to the *ḥaḍānah*. If the father and his female ancestors (and, after them, the grandfather and his female ancestors) are dead or disqualified, the nearest of the male or female relatives in the collateral line has the right to the *ḥaḍānah*. In this case by the female relatives are meant all, both on the maternal and on the paternal side, but by the male relatives only the *'aṣabāt*. If several male and female relatives are equally related to the child, the female ones have the preference. If the child has reached the age of about seven years, it may choose for itself whether it will be entrusted to the next of kin of its male or of its female relatives.

(2) The *wilāyat al-māl* is the guardianship which has for its purpose the management of the property of minors. According to the Shāfi'ites, only the father (and, failing him, the paternal grandfather) can be legally *walī al-māl*. The father (or, if necessary, the grandfather) has, however, the right to appoint by testamentary disposition a guardian over his children (or grandchildren) who are under age. A guardian thus apppointed is called *waṣī*. Even women can in this way be entrusted with the care of the property of a child under age, and the mother is in the first place taken into consideration for this purpose, although she has no legal claim to the position. Failing both the father and grandfather, or a guardian appointed by them, the magistrate (*ḥākim*), or a person appointed by the magistrate, must take the place of guardian. The Mālikites recognize the qualification of the father only (not that of the paternal grandfather) to set up a legal claim to be guardian and to appoint a *waṣī*.

The guardian manages the property of the minor, and makes any necessary agreements for him, etc. When it is near the child's coming of age, the guardian has to inquire whether his ward is *rashīd*, *i.e.* able to manage his property for himself. This regulation is based on Qur'ān, iv. 5:

'Examine the minors, and put them in possession of their property, when you find that they are *rashīd*.'

If it appears that the ward, though of age, is not yet capable of managing his own property, the guardianship continues. The opinion of Abū Ḥanīfah, that the guardianship in any case ceased as soon as the ward was twenty-five years old,[1] has found no favour with other Muslim scholars.

The *ḥaḍānah* of the insane, and the care of their property, must be entrusted as a rule to the same blood-relations as guardianship over minors. The wife of an insane person has, however, the first claim to the *ḥaḍānah*, and his daughter has in this respect the preference above all other female relatives with the exception of the mother.

8. **Law of inheritance.**—(*a*) *Introduction.*—Muslim canon law distinguishes various groups of heirs. The first group consists of persons to whom the Qur'ān allots a definite share ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{2}{3}$, $\frac{1}{3}$, or $\frac{1}{6}$) in the estate. Such a share is called

[1] See, among others, A. von Kremer, *Culturgeschichte des Orients unter den Chalifen*, Vienna, 1875–76, i. 517, 532.

*farīḍah*, and the heirs belonging to this group are therefore called the *dhawu'l-farā'iḍ*, *i.e.* those who have a right to such definite shares.

When the heirs of this first group have received their share, the residue of the estate falls to the share of the male relatives of the deceased in the male line (the so-called *'aṣabāt*). These *'aṣabāt*, who in Islām thus form a second group of heirs, were in Arabia in pre-Islāmic times the only relatives who had a right to the estate. When, however, in the battles at Badr and Uḥud and on other occasions, many Muslims had perished, quarrels arose among the members of their families as to the division of the estates which they left. Some examples of this are reported in Muslim tradition. The widow of 'Aws ibn Thābit seems to have complained to the Prophet that the male relatives of her dead husband had taken possession of his estate, while she and her children had obtained nothing of it. Other women came with similar complaints to Muhammad. This gave him occasion to decide that for the future the widow and some of the nearest female relatives of the deceased should have a right to a certain share in his estate. These regulations are to be found in Qur'ān, iv. 8, 12–15, and 175. It is not quite clear on what principles Muhammad based his regulations. It is, however, certain that he did not mean to abolish the right of inheritance of the *'aṣabāt*. This continued to form the foundation also of the Muslim law of inheritance; and the new regulations, according to which some of the nearest relatives of the deceased obtained a right to a fixed share (*farīḍah*) of his estate, were, therefore, only supplementary to the old Arabian law of inheritance.

If there are no *'aṣabāt*, and there still remains something over from the estate after the *dhawu'l-farā'iḍ* have received their shares, then, according to the Ḥanifites, the residue must also be shared among the *dhawu'l-farā'iḍ* proportionately to their shares. According to the Shāfi'ites and Mālikites, this residue falls to the lot of the treasury (*bait al-māl*), and it is handed over to the *dhawu'l-farā'iḍ* only if the treasury is not managed according to the rules of the law.

The blood-relations of the deceased who do not belong to the *'aṣabāt* and to whom no *farīḍah* is assigned in the Qur'ān—the so-called *dhawu'l-arḥām*—form, as has already been noted in § 7 (*b*), according to the Ḥanifites, a third group of heirs who have a claim to the estate in the case of the failure of the *'aṣabāt* and the *dhawu'l-farā'iḍ*. According to the Shāfi'ites and the Mālikites, the *dhawu'l-arḥām* are not heirs unless the *'aṣabāt* and *dhawu'l-farā'iḍ* fail and the treasury is not managed according to the rules of the law. In the opposite case the whole estate falls, according to them, on the failure of heirs of the first and second group, to the share of the treasury.[1]

(*b*) *The law of inheritance of the 'aṣabāt.*—As has been stated above (in § 7 (*b*)), the *'aṣabāt* are divided into classes, and the descendants of the deceased take precedence over his ancestors, the latter over the descendants of his father, these again over the descendants of his grandfather, and in each class only the next of kin inherits. But, as has already been noted, the grandfather does not exclude the brothers of the deceased; he inherits together with them, and has a right to at least $\frac{1}{3}$ of their common share. If there are at the same time *dhawu'l-farā'iḍ* among the heirs, the grandfather has, moreover, a claim to at least $\frac{1}{6}$ of the estate. He may then choose which is most advantageous for him: $\frac{1}{6}$ of the estate, $\frac{1}{3}$ of the residue of the estate after the *dhawu'l-farā'iḍ*

[1] Cf. E. Quatremère, *Histoire des sultans mamlouks de l'Égypte*, Paris, 1837–41, II. i. 132.

*farā'iḍ* inherit together, the sum of the fixed shares to which they have a claim is more than the whole estate. In such a case the share of each must be proportionately diminished.

For example, if there are no sons, two daughters have a claim to $\frac{2}{3}$ of the estate, the father and mother to $\frac{1}{6}$ each. If the deceased has also left a widow, she has in this case a claim to $\frac{1}{8}$ and the sum of the *farā'iḍ* is $\frac{2}{3}+\frac{1}{6}+\frac{1}{6}+\frac{1}{8}=\frac{16}{24}+\frac{4}{24}+\frac{4}{24}+\frac{3}{24}=\frac{27}{24}$. In this case the estate must be divided into twenty-seven equal shares instead of twenty-four; of these the daughters receive sixteen, the parents four each, and the widow three. This diminution of the amount of the shares of the inheritance is called *'awl*. The case here indicated is known as the *minbariyah*, because this problem was proposed for decision to the Khalif 'Ali while he stood in the pulpit (*minbar*).

(*d*) *Special cases.*—There are still some special cases—the so-called *masā'il mulaqqabah* (*i.e.* cases which are known under special names)—in which, owing to the simultaneous inheritance of various blood-relations, a departure from the general rules is regarded as necessary in order to prevent relatives who usually receive more than others from receiving in a special instance less than them. It is impossible here to enumerate all these cases; the following are examples of them.

If a woman is deceased and her estate has to be shared between her two parents and her husband, the latter has a claim to $\frac{1}{2}$ and the mother to $\frac{1}{3}$ of the estate, so that there would remain over for the father only $\frac{1}{6}$—exactly $\frac{1}{2}$ of the mother's share. To prevent this, after the widower has received the half, the residue is so divided between the two parents that the father receives $\frac{2}{3}$ of it and the mother $\frac{1}{3}$. The same rule obtains when a husband is deceased and his estate has to be divided between his two parents and his widow. The widow receives $\frac{1}{4}$, and of the remaining $\frac{3}{4}$ the father receives $\frac{2}{3}$ and the mother $\frac{1}{3}$. These two cases are called the two 'brilliant,' or the 'decided by Umar,' cases.

Another case is the *akdariyah*. The origin of this name is not certain. According to some Muslim writers, Akdar was the name of a *faqīh* whom Khalif 'Abd-al-Malik consulted about the following problem. When a woman is deceased and her heirs consist of (1) her husband, (2) her mother, (3) her paternal grandfather, (4) her sister (whether her full sister or her paternal half-sister), then these have together a claim to $\frac{9}{6}$ of the estate (the widower to $\frac{3}{6}$, the mother to $\frac{2}{6}$, the sister to $\frac{3}{6}$, and the grandfather to $\frac{1}{6}$). According to the rule mentioned above (the so-called *'awl*), the estate must, therefore, be divided into nine shares, so that the widower would receive three shares, the mother two, the grandfather one, and the sister three. To prevent the sister from inheriting three times as much as the grandfather, the $\frac{4}{9}$ share of the inheritance must in this case be so divided that the grandfather receives $\frac{2}{3}$ of it and the sister $\frac{1}{3}$. Thus the grandfather inherits $\frac{8}{27}$ and the sister $\frac{4}{27}$. According to the Ḥanifites, however, the widower inherits $\frac{1}{2}$, the mother $\frac{1}{3}$, and the grandfather $\frac{1}{6}$, while the sister is excluded by the grandfather.

As to the division of the estate among the *dhawu'l-arḥām*, if they inherit, there are two theories.

According to some lawyers, the right of these persons to inherit depends on the principle that only he who is next of kin to the deceased inherits, and that he excludes the more distant relatives. Others think that the *dhawu'l-arḥām* take the place of those blood-relations of the first and second group through whose intermediacy they are related to the deceased. Thus, if the estate must be divided between two persons A and B, of whom A is the daughter of the daughter of the deceased, and B the daughter of the daughter of his son, then, according to the first theory, B would be excluded by A, who is more closely related to the deceased; but, according to the second theory, A would take the place of the daughter of the deceased and thus inherit $\frac{1}{2}$, and B would take the place of the daughter of the son and thus inherit $\frac{1}{6}$ (see § 8 (*c*)). Moreover, according to the second theory, the residue of the estate also must be divided in the same proportion between the *dhawu'l-arḥām*, so that in this case A inherits $\frac{3}{4}$, and B only $\frac{1}{4}$. The latter theory is preferred by the Shāfi'ites, the former by the Ḥanifites.

He who deliberately and illegally has compassed the death of the deceased is unworthy to inherit, like the *murtadd* (*i.e.* he who is an apostate from Islām). The estate of the *murtadd* passes, according to the Shāfi'ites and Mālikites, to the treasury; according to the Ḥanifite scholars Abū Yūsuf and Muhammad ibn Ḥasan, on the other hand, the heirs of the *murtadd* have a right to his estate. Otherwise, according to the unanimous opinion of the *fiqh*-schools, there is no difference in general between believers and unbelievers in the law of inheritance.

No one can be regarded as an heir if it is not certain that he was still alive at the moment when the deceased died. If, therefore, various persons lose their lives by flood, conflagration, or other disasters without its appearing which perished first, there can be no inheritance between those persons. With regard to the case in which an heir is so long absent that his existence is doubtful, see § 2, p. 860ᵃ. An exception to the general rule is found in the case of a child who was not born at the moment of the death of his father; as soon as such a child comes into the world alive, it is regarded as an heir of its deceased father.[1]

9. **Slaves and freedmen.**—(*a*) *The rights and duties of slaves.*—In Muhammad's time there were many slaves in Arabia. It would have been impossible for him to abolish slavery. Islām, however, so far changed the position of affairs that for the future no Muslim might make a slave of a fellow-believer. According to Muslim canon law, slavery can arise only (1) through captivity, if a non-Muslim prisoner be taken by a Muslim; or (2) by birth, if the mother is a married slave.

Slaves are the property of their master (*saiyid*). He can dispose of them as of the rest of his possessions. He can, for instance, part with them by sale, gift, or testamentary disposition, hire them out, lend them, mortgage them, etc. A child, however, may not be separated from the mother so long as it is still in need of a mother's care (*i.e.* till about seven years old). The master may not make his slave work beyond his power, and must give him the necessary rest after his work. Slaves have also a right to *nafaqah* (maintenance, *i.e.* food, clothing, housing). The legal punishments for the misdemeanours of slaves are, generally speaking, less severe than for those of free persons.

Slaves have no right of property, nor can they, as a rule, make contracts or bind themselves by them. All that they acquire becomes the property of their master. When, however, he wishes to use the service of his slave for commercial purposes, the master may give him authority to carry out the necessary legal transactions (sale and purchase, etc.). The contracts which the slave then makes are binding and valid, so far as he remains within the limits of the power given him, and the goods which the master has entrusted to him to carry on the business serve as guarantee for the engagements made by the slave. If, on the other hand, the slave goes beyond his powers, he is himself alone responsible; and the creditors can obtain satisfaction from him after he has been set free. If slaves injure any one by a punishable act, the *saiyid* is liable to make good the damage, but he can free himself from this liability by giving up the guilty slave to the injured person.

The master has the right to live in concubinage with all his unmarried female slaves, if they confess Islām or belong to the so-called 'people of the book'—in the last case, however, according to the Shāfi'ites, only if the slaves belong to the true *ahl al-kitāb* (see § 5 (*c*) (3)). If any one has become an owner of the female slave of another person by means of sale, donation, or otherwise, he is not permitted immediately to live with her in concubinage, but must wait a definite period to see if she is not already pregnant.

Children born from the concubinage of the owner with his female slave are free (see § 7 (*a*)), and are

Erbrecht nach der Lehre der Ibaditischen Araber von Zanzibar und Ostafrika,' in *SBAW*, 1894, pp. 159–210.

The *walā'* exists not only between the liberator and his freed slave personally, but also between the liberator and the descendants (and even the freed slaves) of the freed slave. After the death of the liberator the patronage passes to the next of kin of his *'aṣabāt* (cf. § 7 (*b*)). The same rules are also applied to a woman who has liberated a slave (*mawlāt*, *i.e.* liberatrix).[1]

III. *CONTRACTS, WILLS, 'WAQFS.'*—**10. General rules.** — The *fiqh*-books contain many special regulations for various contracts, but scarcely any general principles as to the responsibility of the parties, the establishment and annulment of rights and obligations, etc. They expressly forbid only agreements which are not precise or which depend upon accidental chances (*e.g.*, all assurance contracts), and these they declare invalid because of the possibility that one of the parties thereby binds himself to something which he cannot see in advance. The Muslim jurists call such an undesirable chance *gharar*.

No definite form for the making of a contract (*'aqd*) is prescribed. In consequence of Qur'ān, ii. 282, many of the earlier *faqīhs* thought that, when an agreement has not to be immediately fulfilled on either side, since the parties have agreed on certain terms of delay, the contract must be in writing, and concluded in the presence of witnesses. This was considered necessary, *e.g.*, for the so-called *salam* or *salaf*; this contract meant that a future harvest was bought and the price paid in advance. But this did not become the general opinion. The law-books insist only that the parties who make an agreement must make their intentions plain to each other. The legal form of an agreement is called its *ṣighah*. The mutual declarations of the parties are called *ījāb* (offer) and *qabūl* (acceptance). Only exceptionally is it permitted to make contracts without such an *ījāb* and *qabūl* in matters of very little importance.

When two parties transfer to each other rights or claims, these must refer to matters which, according to the *sharī'ah*, have a real value for Muslims. Thus, regarded from a legal standpoint, all contracts are invalid which refer to forbidden musical instruments, to books which treat of philosophy, astrology, and other forbidden sciences, to grapes, which must serve for the preparation of wine, to dogs, pigs, and other ritually unclean things, etc. If such affairs are treated, it is not strictly a change of real ownership (*tamlīk*), according to the Muslim law-books, but rather a method of obtaining a *de facto* possession (*istīlā'*).

The *fiqh*-books contain numerous precise regulations concerning the most common contracts and transactions, such as purchase, sale, hire, mortgage, gift, deposit, partnership, security and loan, etc. These transactions have the general name of *mu'āmalāt*. But this part of the law has only a theoretical and no practical value for the Muslim (see above, § 4). Principles different from those of the *sharī'ah* generally obtain in commercial life; and it is usually impossible even for the most pious Muslims to regulate their lives in this matter precisely according to the law-books. Therefore no further discussion in detail need be given here.

The remarkable regulation of the Muslim law which forbids the charging of interest in trade must, however, not remain unnoticed. Not only usury in the strict sense, but the charging of interest at all is regarded as a great sin (*kabīrah*); and, although this prohibition has always been transgressed by numbers of Muslims, the pious try as far as possible to avoid direct offence against it.[1]

**11. The prohibition against charging interest (ribā).** — (*a*) *Introduction.* — In Muhammad's surroundings the practice of usury seems to have taken the form especially of a contract of exchange. The money-lender gave money or articles of commerce (*e.g.*, dates or barley) on condition that after a certain period a larger sum of money or a greater quantity of the articles received should be returned. If the debtor could not fulfil his obligation on the day when it fell due, the creditor gave him a postponement of payment, but doubled the amount of his debt. Such contracts of exchange were regarded as a sort of sale and purchase (*bai'*), and the postponement of payment was called *nasī'ah*. This usurious trade is strictly forbidden in various verses of the Qur'ān; see, *e.g.*, ii. 276:

> 'They say that there is no difference between *bai'* and *ribā*, but Allāh permits *bai'* and forbids *ribā*! . . . They who in future are guilty of *ribā* are destined for hell; they shall remain there for ever.' Cf. also ii. 276–279, iv. 159, and xxx. 38.

Thus no Muslim could doubt that usury was strictly forbidden in Islām, but in the earliest times there were many, and among them well-known companions of the Prophet, such as Ibn 'Abbās, who maintained that Islām prohibited only the abuse of the poverty of the debtor by constantly doubling his debt and ruining him. They regarded usury as forbidden only in a restricted sense; the *nasī'ah* was particularly deprecated. Others thought that by *ribā* (lit. 'multiplication') the Prophet had meant not only usury, but all charging of interest. Later on this opinion became general. Thus, if a Muslim wishes to lend money or articles of commerce to any one, he can do so only on condition that the debtor, after the expiration of a certain period, shall pay him back the same sum of money or the same quantity of articles lent him. No profit may be made out of him; the value which the creditor receives must be the same as that which he has given. If the purpose is not to give a temporary convenience to the other party, but only to exchange goods, this is permitted only if both parties receive goods of the same value and at the same time. One who does not observe these rules is guilty of *ribā*. It is, therefore, necessary to distinguish two kinds of *ribā*: (1) *ribā* by contract of exchange, (2) *ribā* by loan (*mutuum*).

(*b*) *Ribā by contract of exchange.*—The regulations of the law-books concerning the first kind of *ribā* are based on traditions, according to which the Prophet had expressly declared that it was prohibited to a Muslim to exchange gold for gold, silver for silver, dates for dates, etc., unless both parties simultaneously made the same payment to each other. These words of the Prophet are handed down in various recensions, in which gold, silver, barley, wheat, and dates (sometimes also raisins

*kaffārah* if he breaks his oath, even though he had pledged himself to do something which is forbidden, or to omit something which is obligatory.

Moreover, Muslim jurists deal at length with various special oaths and vows and the questions connected with them; even in very short *fiqh*-books there are usually full details as to this subject. The following cases, *e.g.*, are mentioned in particular. When a man has declared, 'If such and such is done, I will apostatize from Islām,' if the conditions are fulfilled, he may not, it is true, give up his faith, but must nevertheless, according to the Ḥanifites, offer a *kaffārah*. On the other hand, if a man has declared, 'If I do such and such, or if such and such happens, my wife is repudiated, or my slave is set free,' he is actually bound by his words, and, on the fulfilling of the conditions, his wife must be regarded as repudiated and his slave as free.

An oath is valid only when it has been taken either in the name of Allāh (or in that of one of His attributes) or by the Qur'ān. Other oaths, *e.g.*, by calling on the Prophet, are not binding.

13. **Wills.**—Muslim law only partially recognizes the right to make a will. When the debts of the deceased have been paid, his legal heirs (see § 8) have a claim to ⅔ of the residue of the estate. The testator may dispose by will (*waṣīyah*) of only the remaining ⅓ of the estate. If he has disposed of more than ⅓, his arrangements and legacies are valid only if, and so far as, they are sanctioned by his heirs.

As to this rule, there is no difference of opinion among the *fiqh*-schools. It is based on the following tradition.

Sa'd ibn Abī Waqqāṣ, one of the contemporaries of the Prophet, had decided to devote the whole of his property after his death to pious purposes. Once, when he lay dangerously ill, he explained his plan to the Prophet, who, he thought, would value his pious deed. This was, however, not the case; on the contrary, Muhammad forbade him to disinherit his heirs. 'It is better to leave them rich,' said he, 'than to force them to beg after your death.' Finally, the Prophet consented to Sa'd's petition to dispose of ⅓ of his estate.

From this tradition the Muslim jurists have deduced another principle. Every Muslim may dispose of his property as he wishes during his life, and thus may even give everything away if he wishes; but this right ceases if he is seriously ill. In that case only ⅓ of the property may be disposed of by gift, the manumitting of slaves, etc. The property of a seriously sick person is thus treated as in some degree similar to an estate to which the heirs have a claim.

This rule is also applicable to persons who in other ways are in danger of their lives—*e.g.*, to any one who is taking part in a battle, to a woman during childbirth, to the inhabitants of a district which is suffering severely from plague, etc. If, during a serious illness, or while he was in other respects in danger of his life, a person has given away more than ⅓ of his property, his arrangements are valid only if his heirs offer no opposition to them, or if he has recovered from his illness or escaped the danger in which he was.

Further, the legality of a *waṣīyah* depends principally on (1) the right of the person who makes the will (*al-mūṣī*), (2) the right of the one who benefits by the will (*al-mūṣā-lahu*), (3) the property which is disposed of (*al-mūṣā-bihi*), and (4) the form of the will. The law-books contain the following regulations as to these four subjects. (1) Only those who have the power of independent disposition over their property have the right to make a will; minors are not qualified. Moreover, the *waṣīyah* is valid only if the testator had the right to dispose of what he left, and if he acted without compulsion. The testator remains qualified to revoke his will up to the time of his death. (2) The beneficiary under a will must at the moment at which the will is made be qualified and in a position to become the owner of what is left him. A will made in favour of an unborn child is valid, however, if the child be born within the next six months. Those who already inherit by the enactment of the law have no right to receive further legacies by will. According to tradition, the Prophet forbade the alteration, by means of testamentary disposition, of the shares fixed for them by law (see above, p. 862a); if the will is not made in favour of a definite person, but for a hospital, a mosque, or similar institution, then the purpose must be one which is permitted by law; *e.g.*, a will in favour of a Christian church or a Jewish synagogue is invalid. (3) The objects which are left to any one in the will must be accurately described, and of such a nature that it is possible to take possession of them. The testator may not, for instance, leave any forbidden musical instruments or dogs to any one; or a copy of the Qur'ān, or a Muslim slave, to a Christian or other unbeliever. (4) No special form of will is prescribed; the law directs only that the testator should make his will clearly known in the presence of persons who can bear witness that he has really made such a testament. It need not be reduced to writing. Besides the allotment of property, the will may contain certain other dispositions—*e.g.*, the appointment of an executor who is charged with the care of the payment of debts, and of the division of the estate; further, the nomination of a guardian for the children of the testator who are under age, etc.

The beneficiary of the will first receives possession of the property left him when he has accepted the arrangements of the testator (by means of *qabūl*; see § 10). If he should predecease the testator, his heirs are qualified to accept the will in his favour.[1]

14. **Regulations concerning the waqfs.**—By a *waqf* Muslim law means something which is withdrawn from commerce, in order to reserve it for religious purposes or for the benefit of definite persons. To the question whether such a disposition is lawful in Islām Muslim scholars originally gave various answers. Some considered that the rights of the heir were injured by such dispositions. Others declared that the heirs had no claims on any man's property so long as he still lived, and, therefore, a man might withdraw his goods from commerce, just as he had the right to contract debts, to set free slaves, and to give away property, to the injury of his heirs. According to Abū Ḥanīfah, a *waqf* was not irrevocably binding; 'he who has made a *waqf* of anything,' said he, 'remains the owner of it, and can always revoke his disposition if he will.' The majority of Muslim lawyers, however—and among them Abū Yūsuf and Muhammad, the two pupils of Abū Ḥanīfah—considered that the disposition by which anything was made a *waqf* was irrevocably binding. By making such a disposition, they said, the owner loses his right of ownership; only Allāh remains the owner of that which is *waqf*. Others held that the ownership of a *waqf* passed to those who benefited by it.

Those who regarded the *waqfs* as allowable appealed for support to the traditions according to which various comrades of the Prophet had made such dispositions with his approbation. The best-known tradition is the following. 'Umar, the second Khalīf (or, according to others, his son 'Abd-Allāh), had a piece of land at Khaibar which he valued greatly. He decided to devote it to religious purposes. With the approbation of the Prophet, he made a *waqf* of it, and enacted that it might for the future be neither sold nor given away, and that the income should be devoted exclusively to the poor and to religious purposes.

*Waqf* properly means the transaction itself, *i.e.* the devotion of property to religious purposes; other words used in the same sense are *tasbīl*, *i.e.* devote to the 'way of God' (*sabīl Allāh*); *taḥrīm*, *i.e.* the declaration that something is *ḥarām* ('forbidden,' 'inalienable'); and *ḥabs*, *i.e.* to make fast (in other words, to make inalienable). Both *waqf* and *ḥabs* are also used to indicate that which is

[1] See, further, F. Peltier, *Le Livre des testaments du Çaḥîḥ d'El-Bokhârî*, Algiers, 1909.

situations on his own authority, just as the immediate successors of Muhammad were held to have been perfect scholars. Since, however, such *ijtihād* was regarded as beyond the reach of later generations, such learning can no longer be demanded even of an *imām*. (4) An *imām* may have no physical infirmity, or defect of intellect; serious defects, such as blindness, deafness, or insanity, disqualify a candidate for the *imāmat*. Consequently, a *khalīf* was often made blind after his deposition, in order to prevent him from attempting to recover his position.

At the election of an *imām* it is necessary to follow the principles which obtained in the 'Golden Age.' Inheritance, according to the law, gives no claim to the *imāmat*. Each *khalīf* must be elected, and his election is valid only if (1) he, like the first *khalīf* Abū Bakr, receives the homage of a certain number of Muslims of high rank ('those who are qualified to bind and loose'); or if, (2) like the second *khalīf* 'Umar, he is appointed by the former *imām* as his successor. 'Those who are qualified to bind and loose' and have the right of electing an *imām* consist of Muslims of full age, of the male sex, free men who are recognized as *'adl*, and can judge what persons have the necessary qualifications to be elected as *imām*, and which among those who come under consideration is the most suitable for the position under existing circumstances.

The election of an *imām* is a *farḍ al-kifāyah*; *i.e.*, as soon as this task is fulfilled by some qualified person, all others are relieved from the duty (see p. 863[b]). 'The election of an *imām*,' say the Muslim scholars, 'it is true, is usually carried out by the leading circles in the capital, and is acquiesced in in the other parts of the land (as at the election of Abū Bakr), but the electors in the capital have no right of preference above those in other places.' If different persons are elected as *imām* in different places, a new election must be held between these candidates. The *faqīhs* are not agreed as to the number of electors which must be demanded for a valid election. Some of them require at least five electors, and in support of this opinion appeal to the election of the third *khalīf* 'Uthmān, but others regard the election by even one elector as valid if he is a universally respected and influential man.

If the *imām* himself nominates his successor, the choice is binding on all Muslims, if the chosen person has the qualities necessary for an *imām* and expressly accepts his nomination. In appointing his successor the *imām* need not consult the electors; he may also indicate several persons to succeed him in a definite order one after the other. But Muslim lawyers consider that a father has no right to appoint his son as his successor, since they regard no one as capable of forming an unprejudiced judgment as to whether his son is fitted for this high dignity.

(*b*) *The rights and duties of the imām.*—The *imām* is not only the spiritual head of the Muslims, as has been often incorrectly assumed in Europe; he is at the same time the highest secular authority in Islām. There is no idea among Muslims of a separation between spiritual and temporal power. In this respect the position of the first thirty years after Muhammad is copied. The *imām* must, like the four 'rightly led' *khalīfs*, wage war against unbelievers, see to the contribution of the *zakāh*, resolve differences of opinion in the community, take care that the regulations of the *sharī'ah* are respected and that transgressions against it are punished, take action against heresies, try to bring the erring back to the right way, etc. If it appears that the *imām* is incompetent to fulfil his office, or that he abuses his power, then 'those who can bind and loose' must depose him and choose a new *imām*.

Every Muslim is bound in loyalty and obedience not only to the legitimate *imām*, but also to any one who has made himself *de facto* master of the highest authority, even though he has not the requisite qualities (*e.g.*, a woman, a person who is under age, ignorant, not an Arabian, or a sinner), and even if he has not been appointed as *imām* in a legal manner. Such a potentate, who in the *fiqh*-books is usually called 'the holder of power' (*dhū'l-shawkah*), is not a legitimate *imām*, but orthodox Muslims nevertheless regard it as necessary for believers to recognize his authority, at least when he does not force them to sin against the law.

This opinion apparently arose as early as the first century after Muhammad. During the incessant strife of the Umayyads against the religious rebels, who would not recognize their authority, the opinion became established, among the majority of the people and among the leading scholars, that it was better, for the prevention of greater disasters, not to resist the tyrant even though he did not fulfil the theoretical ideals. Traditions arose that the Prophet himself had foretold this state of affairs, and had enunciated the doctrine that it was a duty for all Muslims to submit to the ruling princes. 'Thirty years long,' the Prophet is reported to have said, 'shall you be happy under the government of my successors, but after this the dominion shall pass to tyrannous princes.' The companions of Muhammad asked, 'Must we not contend against such godless potentates?' 'No,' he answered, 'so long as they do not interfere with the *salāt*.' According to another saying of the Prophet, 'a Muslim must be obedient both in matters which he approves and in those of which he disapproves, so long as no acts are enjoined on him by which he would transgress the laws of God. In the latter case he need neither listen nor obey.'

On the ground of this theory the later Muslim princes and *khalīfs* had a claim on the obedience of their subjects, even though they were not appointed according to the regulations of the *sharī'ah* and did not possess the legally required qualities. Opposition to princes who are not of Quraishite (or even of Arabian) origin, such as the Turkish Sulṭāns, and who have, therefore, theoretically no right to the Khalifate, is from a religious standpoint not permitted for Muslims, unless the prince has to be deposed because of his bad government.

**16. Legal procedure.**—(*a*) *Regulations concerning the qāḍī and trials.*—A very important duty of the *imām* is to appoint a sufficient number of judges. Acting as judge is regarded by Muslim scholars as a *farḍ al-kifāyah* (see p. 863[b]). Thus no one is obliged to accept the office of judge when the duty can be fulfilled satisfactorily by others; when this, however, is not the case, to act as judge becomes a personal duty (*farḍ al-'ain*); under such circumstances every one who is able to give a decision according to the regulations of the law is obliged to be a judge.

A *qāḍī* (judge) generally must be a free male Muslim of full age, who is recognized as *'adl* (see p. 864[b]), and is fully acquainted with the regulations of the canon law. In theory the judge must even be a *mujtahid* (see p. 860[b]), and be able, in passing a sentence, to deduce independently from the sacred sources the rules to be applied. But, as has already been stated, among the later Muslims no one was any longer regarded as qualified to give an independent judgment in *fiqh*-matters; therefore even a judge can at present be only a *muqallid*, and must keep in every respect to what is prescribed in the authoritative *fiqh*-books of his *madhhab*.

In order to secure the independence of the judge, the law forbids the *qāḍī* to accept presents, except from his relatives in the direct line (because, according to the law, he can never give a decision in their favour). For the same reason, according to all except the Ḥanifites, judges are forbidden to engage in commerce, because it would be possible to give them exceptional advantages in trade, in order to obtain their favour.

The judge controls the trial, and is not generally bound by legal regulations for this purpose. He is obliged only to give sufficient opportunity both

Another important religious duty of the *imām* and the Muslim community is the holy war against unbelievers—the *jihād* (*i.e.* 'to take trouble,' 'exert oneself,' striving 'on the way of Allāh' [*fī sabīl Allāh*])—in order violently to convert the heathen to the true faith, or at least to subject them to the yoke of Islām.

In the earliest period of Islām, Muslims were forbidden to take measures against the unbelieving inhabitants of Mecca who persecuted and ill-treated them, but after the *Hijrah* the position was altered. In Qur'ān, xxii. 39–42, Allāh declared that in future Muslims should be permitted to defend themselves if they were attacked, and that in so doing they could count on God's support.

'When they strive against their persecutors,' it is stated in these verses of the Qur'ān, 'it is permissible: Allāh is powerful enough to help those who are driven out of their homes unrighteously, merely because they said, "Allāh is our Lord." If God did not help men against each other, hermitages, churches, synagogues, and all places of prayer where God's name is often glorified would be rendered desolate,' etc.

This permission to offer defence against attacks was soon afterwards changed into a command actually to attack the unbelievers, and, since the various expeditions for robbery and pillage on both sides brought about a state of perpetual war between the inhabitants of Mecca and the Muslims at Medīna, the *jihād* gradually became one of the most important religious duties of Muhammad's adherents.

Cf. Qur'ān, ii. 212-213: 'The strife is prescribed for you; you have, it is true, an antipathy to it, but it is possible that you have an antipathy to that which nevertheless is good for you.'

Those who could not personally take part in the campaign must at least assist in the *jihād* by payments of money according to their means.

Even after Mecca was taken, and the inhabitants had been converted to Islām, the *jihād* against unbelievers remained a religious duty. Though the Prophet at that time did not persecute the heathen for their unbelief alone, the *jihād* against many tribes of the heathen Arabs was necessary because they frequently broke their treaty and otherwise showed signs of their untrustworthy and dangerous disposition. The doctrine that all heathen must be subjected to Islām 'because of their unbelief' first arose in the time of the Great Conquests, after the death of the Prophet, when the Muslim armies succeeded in conquering an extensive territory outside Arabia, and in making tributaries of many unbelievers. At that time the Prophet is said to have declared: 'I am commanded to fight against men until they bear witness that there is no God but Allāh, and that Muhammad is God's messenger; only by pronouncing these words can they make their property and blood secure from me.'

The *jihād* is a duty for every male Muslim who is free, of full age, and not only in the full possession of his intellectual powers, but also physically fit for service and able to obtain the necessary weapons. A son, however, may not go to war without the permission of his parents (if they are Muslims), or a debtor without the permission of his creditors. According to the Shāfi'ites and Ḥanifites, no one is bound to the *jihād* unless he has a mount to cover the distance between his dwelling and the scene of war, and also the necessary sustenance for himself and for those for whose sustenance he is responsible; according to the Mālikites, the duty of taking part in the war is independent of these conditions.

The *jihād* is generally a *farḍ al-kifāyah*, and, when a sufficient number of Muslims take part in the war, the others are permitted to give themselves up to the study of the law and to the practice of the various callings by which the sustenance of believers must be maintained. Only in case of an attack by unbelievers and the invasion of a Muslim land is participation in the *jihād* an individual duty (*farḍ al-'ain*) both for the inhabitants of the threatened districts and for all believers living in the neighbourhood. If the land is conquered by unbelievers, according to the *fatwās* of the later scholars, every Muslim who is in a position to leave the land is then obliged to do so as quickly as possible, at least if he is hindered in the practice of his religious duties.

All lands not belonging to 'the territory of Islām' (*dār al-islām*) must gradually be conquered by the Muslims, and are therefore called 'territory of the war' (*dār al-ḥarb*). The *imām* has to settle when the attack shall be begun. According to theory, one campaign at least must be undertaken against the unbelievers every year; but this became impossible in the later periods, and, according to several Muslim scholars, at present it may be regarded as sufficient if the *imām* keeps the army in good condition and trains it for carrying on the *jihād*.

The many regulations concerning the ways in which Muslims must wage the *jihād* cannot be treated in detail here; they have no practical importance for the later generations. Generally speaking, the war must be carried on as humanely as possible, the helpless must not be killed, and the property of the enemy must not be needlessly destroyed. Before the *imām* invades territory inhabited by unbelievers, he must urge the inhabitants to be converted to Islām. If he neglects this, according to the Shāfi'ites (but not the other *fiqh*-schools), the *diyah* must be paid for every believer who is killed.

(*b*) *Regulations concerning booty.*—The sharing of booty (*ghanīmah*) among those who have a claim to it is carefully regulated in the *fiqh*-books. The regulations on this subject depend on Qur'ān, viii. 42. This verse was revealed when the Muslims had obtained great booty in the battle of Badr, and it was necessary to establish rules for its division. Among the ancient Arabians the head of the tribe usually received a fixed proportion (*e.g.*, a quarter) of the booty, while the rest was divided among the fighting men of the tribe. The head of the tribe received the largest share, but was bound to heavy expenditure in the interests of the tribe. He had, above all, to uphold the honour of the tribe, by hospitality and kindness not only to his relations but to all who had need of help, such as the old, widows, orphans, the poor, and the guests of the tribe. In agreement with this old Arabian custom, Qur'ān, viii. 42, regulated the division of the *ghanīmah* in the following words: 'Know that of that which you make booty a fifth part belongs to Allāh—to His messenger, his family, the orphans, the poor, and travellers—if you believe in Allāh,' etc. Thus the head of the Muslim community, *i.e.* Allāh or His messenger, for the future took the place of the former head of the tribe, and had to use the fifth part of the booty for the same purposes as the Arabian heads of the tribes had formerly been accustomed to use it.

According to Muslim law, $\frac{4}{5}$ of the booty of war must be divided among the troops which have taken part in the battle. If a Muslim kills an unbeliever in battle, according to the Shāfi'ites, he has a right to his weapons (*salab*); but, according to the Ḥanifites and Mālikites, only if he had expressly made this condition with the *imām* beforehand. The remaining fifth part (*khums*), according to the Shāfi'itic system, based on the words of Qur'ān, viii. 42, must be divided into five equal parts. One of these parts (namely, that which was formerly designed for the Prophet) must after his

death be used for the common good of the general Muslim community, and the four remaining parts are to be given respectively to (1) the relatives of the Prophet, (2) the orphans, (3) the poor, and (4) travellers, at least so far as they have need of help. According to the Ḥanifites, the share of the Prophet has lapsed since his death, and so also has that of his family, so that the *khums* must be divided into three equal parts and paid out to the three remaining parties. According to the Mālikites, the *imām* has the right to decide according to his own judgment how the *khums* shall be used in the general interest of Muslims.

To the booty belong not only the weapons and mounts which have been captured in battle, but all moveable property of the enemy; on the other hand, the land and all immoveable property in conquered territory is not divided as booty (see below, § 18 (*a*)). Prisoners are also part of the booty. If unbelievers are converted to Islām before they fall into the hands of the conquerors, they and their children must be regarded by the Muslims as fellow-believers, and they also keep their property. In the opposite case they become slaves (the men as well as the women and children) and are divided among the persons who have a right to a share in the booty. The *imām* is entitled to put prisoners of war to death; according to the Shāfi'ites and Mālikites, he may spare them and set them free, either in exchange for ransom or for Muslim prisoners of war, or even without compensation.

**18. Rights and duties of unbelievers in Muslim lands.**—(*a*) *Tribute.*—The population of the lands conquered by Muslims after Muhammad's death originally retained their old faith. They were allowed to remain in their old dwellings, both in the towns and in the country; but they had to pay tribute to their conquerors. The tribute consisted chiefly of payment of part of the harvest. Villages and sometimes whole districts were commanded by the magistrates to deliver definite quantities of crops, which were afterwards converted into money by the Muslim officials. The forms of government existing in the ancient times in the different districts were preserved in many respects.[1]

The tribute is called both *jizyah* and *kharāj*; both names have originally the same meaning. The word *jizyah* is taken from Qur'ān, ix. 29: 'Strive against the "people of the Book" who do not believe in Allāh and the Last Day, and do not regard as forbidden what Allāh and His messenger forbid, until they pay you *jizyah* in abasement.' Muslim writers are accustomed to explain *jizyah* as that which is paid 'as compensation' by the 'people of the Book' because the Muslims allow them to keep both their faith and their life and give them protection. *Kharāj*, on the other hand, is borrowed from the language of the conquered, especially in Irāq, where the word is used in the general sense of taxation.[2] Later on, however, a difference was made between the two words, *kharāj* being taken to mean—probably because it was originally understood in the sense of produce of the field—taxation connected with the occupation of land, in distinction from *jizyah*, which came to be used exclusively in the sense of poll-tax.

The land in the conquered territories was declared by Muhammad's successors to be a national domain, in agreement with the opinions of the

1 See C. H. Becker, *Papyri Schott-Reinhardt*, i. (Heidelberg, 1906) 37 ff.

2 Cf. T. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 241; M. von Berchem, *La Propriété territoriale et l'impôt foncier*, Geneva, 1886, p. 20; C. H. Becker, p. 39. Another name, originally a Byzantine term, was *ṭasq* (Gr. τάξις); cf. Nöldeke, *ZA* xxiii. [1909–10] 145–148.

companions of the Prophet. They would not divide the land among the troops, but kept it as a permanent source of income for all future generations of Muslims. The conquered population were allowed to cultivate the land as they had formerly done, but they had to pay part of the produce as tribute (*kharāj*).

The Prophet himself had acted in some respects in the same way at the conquest of certain districts inhabited by Jews to the north of Medina. When these places fell into the hands of Muslims without much fighting, the Prophet commanded that the captured land should not be divided among the Muslim troops, but, like the *khums* of the *ghanīmah*, should be left to his personal disposition. See Qur'ān, lix. 7: 'What God allows to fall to His messenger as *fai'*[1] belongs to God—to His messenger, his family, the orphans, the poor, and travellers; accept what God's messenger gives you, but refrain from that which he forbids you; fear God, for His punishments are fearful.' Apparently the intention was that property which could not be regarded as booty should be managed by the Prophet, in order that the income might be used in the same way as the fifth part of the booty.

The land which was declared to belong to the State dominion in conquered countries was also called *fai'*, and to secure the use of the income of the *fai'*-land to the Muslim community it was arranged that *kharāj* should be for ever attached to the possession of that land. Even if the population which cultivated the land went over to Islām, they must continue to pay the *kharāj*. This rule has proved unworkable in practice, since the payment of the *kharāj* was regarded as an act of subjection to which only unbelievers could submit.[2] The new converts rejected this obligation, in spite of all measures taken by the magistrate. After their conversion they refused to pay more than the tithe which the Arabian Muslims were also obliged to pay from the product of their harvests.

In the second century after the *Hijrah* several separate works were written by Muslim scholars about the *kharāj*. Among these is the well-known book written by Abū Yūsuf at the instance of the 'Abbāsid Khalīf Al-Manṣūr.[3] In these works it is accurately established which lands belonged to the *fai'*-territory and were thus the State's dominion, and how much their inhabitants must pay as tribute. But, after the whole population had gradually accepted the faith of the Arabian conquerors, and the sharp distinction between them and the latter was becoming less and less marked, the payment of the *kharāj* passed completely out of use. Both the Arabs who had settled on the State domain and the new converts refused to submit to such a tribute, and in the end the land was no longer regarded as *fai'*-land.

(*b*) *Poll-tax, and other obligations of the dhimmīs.*—In the later law-books there is usually no longer an exhaustive discussion of the *kharāj*, but only of the *jizyah*. By this was understood in later times, as has already been noted, a fixed sum of money which was to be paid per head by unbelievers as tribute (on the ground of Qur'ān, ix. 29). According to the Shāfi'ites, only the *ahl al-kitāb*, *i.e.* possessors of a revelation (esp. Christians and Jews who already confessed their faith before Muhammad had preached Islām [see above, p. 866[b]]), are allowed to submit to the Muslims on condition that they shall pay the *jizyah*. Other believers must, ac-

1 Lit. 'what God *makes return* (Arab. *afā'a*) to His messenger.' All the possessions of the unbelievers must 'return' to the Muslims. From this peculiar expression of Qur'an, lix. 7, the name *fai'* originated. By this name Muslim law understands all goods returning to the Muslims, without being booty in the proper sense of the word. The tribute paid by unbelievers also belongs to the *fai'*.

2 Hence the earlier Muslim *faqīhs* used to forbid Arab conquerors to own land, at least in countries in which the land belonged to the State domain (*fai'*). There was no objection, however, to Arabs possessing land in countries in which the land did not belong to the *fai'*, and where, therefore, no *kharāj* was to be paid.

3 On the Arabic books about the *kharāj* see I. Goldziher, *Deutsche Lit.-Zeitung*, xvii. [1896] 1514 f.

cording to them, be fought against until they have accepted Islām. According to the other *fiqh*-schools, the regulations concerning the *jizyah* are applicable also to all other unbelievers, and the latter may be permitted to submit to the Muslims and at the same time to retain their faith. According to the Ḥanifites, the heathen Arabians were the only exception to this rule; and, according to the Mālikites, the heathen Quraishites, so that only these had to choose between death and conversion to Islām.

The submission of unbelievers must take the form of a statement by which the rights and duties of both parties are accurately described. The unbelievers must bind themselves to pay the *jizyah*, and to fulfil the other duties that Islām enjoins on them. The Muslims in exchange for this must bind themselves for the future not only to leave them in peace, but also to protect them. The subjugated unbelievers who are thus under the protection (*dhimmah*, *i.e.* responsibility) of the Muslims are therefore called *dhimmīs* in the law-books.

Only those *dhimmīs* who are of full age, free, male, and in full possession of their intellectual faculties are obliged to pay *jizyah*. According to the Shāfi'ites, the amount of this payment depends on the agreement made at the drawing-up of the act of submission; the *imām* or his deputy must demand at least one *dīnār* per head, but, if it is possible, preferably more; according to the Mālikites, the *imām* has the right to act in the interests of the Muslims according to his own judgment; according to the Ḥanifites, he has no choice, but must demand from every poor *dhimmī* one *dīnār*, from each who is well-to-do two *dīnārs*, and from each who is rich four *dīnārs*. According to the conviction of Muslims, however, at the 'end of the days' Jesus will once more come back to the earth and show to Christians as well as to Jews that Islām is the only true religion. In the ideal period, which will begin at His coming, all unbelievers must be converted, and the *jizyah* can no longer be accepted from any one.

Like other taxes which unbelievers have to pay (*e.g.*, the customs which they must pay for their goods if they trade in Muslim lands), the *jizyah* belongs to the *fai'*. As to the question how the *imām* must use the money belonging to the *fai'* there is a difference of opinion among the *fiqh*-schools.

According to the Shāfi'ites, the rules concerning the division of the *khums* of the booty (see above, p. 881 f.) are also applicable to the *fai'*; thus $\frac{1}{5}$ of the *fai'* must be divided between the same five categories of persons who have also a right to the *khums* of the booty, while the remaining $\frac{4}{5}$ are destined for the general interests of Muslims. According to the Ḥanifites and Mālikites, the rules concerning the distribution of the booty are not applicable to the *fai'*, but the whole *fai'* must be used in the interests of all Muslims (*e.g.*, for the payment of judges, troops, and officials, for the building of forts, roads, bridges, mosques, etc.).

Unbelievers in Muslim lands not only have to pay tribute, but are also subjected to other regulations which involve indignities; *e.g.*, they have to fasten a coloured piece of cloth (*ghiyār*) on their clothes, and wear a special kind of girdle (*zunnār*), in order that they may readily be distinguishable from Muslims. Christians must preferably wear a blue, Jews a yellow *ghiyār*. They may not ride on horseback, their houses may not be as high as, or higher than, those of their Muhammadan neighbours, and they may carry no weapons. They must not give offence to Muslims—*e.g.*, by ringing their church-bells, or by openly slighting Islām, the Prophet, or the Qur'ān, by drinking wine, or eating pork, etc. On the other hand, they may practise their own religious observances. In the towns in which at the conquest of the land there were no churches or synagogues, they may not be built later; Christians and Jews may restore these buildings only if they are in danger of ruin; according to Abū Ḥanīfah, even this was permitted only in those lands which had not been conquered but had voluntarily submitted at the approach of the Muslim army. As a matter of fact, however, in the first centuries of Islām the Muslims conceded to Christians much greater freedom as to the building of churches (cf. I. Goldziher, in *ZDMG* xxxviii. [1884] 674). Otherwise the *dhimmīs* are in many respects on an equality with their Muslim fellow-citizens: they may acquire property in the lands of Islām and carry on trade; this last is under certain conditions permitted even to unbelievers who have not submitted.

LITERATURE.—Besides the works on special subjects of Muslim law cited above and various artt. in *EI* and *DI*, the following general works must be mentioned here: Ash-Sha'rānī, *Balance de la loi musulmane*, Fr. tr. by M. **LAW (Roman).**—**I. Fas and ius.**—Law, according to Roman ideas, had a double foundation, being based partly upon divine revelation and partly upon human ordinance. Here we have the root of the distinction between *fas* and *ius*, and this again corresponds to the division of law into *ius divinum* and *ius humanum*:

'Fas et iura sinunt id est divina humanaque iura permittunt; nam ad religionem fas, ad homines iura pertinent' (Serv. *Georg.* i. 269; the explanatory clause, however, fails to hit the mark, as the distinctive character of the *fas* lay, not in its relation to religious things—there were also secular laws 'de religione'—but in its divine origin [cf. Isid. *Orig.* v. ii. 2, 'fas lex divina est, ius lex humana']); Cic. *de Harusp. Resp.* 34, 'oratores contra ius fasque interfectos . . . ius legatorum cum hominum praesidio munitum sit, tum etiam divino iure esse vallatum'; Livy, XXVII. xvii. 13, 'ubi ius ac fas crederent coli . . . '; *ib.* 16, 'ubi nec divini quicquam nec humani sanctum esset.'

On the other hand, the later threefold division of the law into *ius sacrum*, *ius publicum*, and *ius privatum*[1]—a division unknown in professional jurisprudence[2]—does not rest upon diversity of origin, but is based upon the division of affairs into *res sacræ*, *res publicæ*, and *res privatæ*, of which groups the *res sacræ* (and *res religiosæ*) come under *ius divinum*, and the other two under *ius humanum*.[3] The fact that the term *fas* is neuter and indeclinable shows that the corresponding concept was a pure abstraction; the attempts to personify it were of relatively late date, and never quite

[2] Mommsen, *Staatsrecht*[3], ii. 52.

[3] Gaius, *Inst.* ii. 2, 'Summa itaque rerum divisio in duos articulos diducitur; nam aliae sunt divini iuris, aliae humani. Divini iuris sunt veluti res sacrae et religiosae . . . '; 10, 'hae autem quae humani iuris sunt, aut publicae sunt aut privatae' (cf. Mommsen, *loc. cit.*).

nouncing the formula 'sacer esto,' devotes the offender to the deity for such punishment as the latter may decree. The *leges sacratæ* with which the inviolability of the plebeian magistracy was guaranteed at its institution were simply laws which pronounced the sentence (*sanctio*) 'sacer esto,'[1] just as, in fact, the penalty imposed upon one who violated the privileges of the *plebs* was, according to the literary tradition, 'ut . . . eius caput Iovi sacrum esset, familia ad sedem Cereris, Liberi, Liberaeque venum iret.'[2] What we have here, accordingly, is not a secular ordinance in the forms of public law, but a contract under the protection of the *fas*. The person declared to be *sacer* was a proscribed outlaw, and any one had the right to execute the divine sentence under which he lay, and might kill him with impunity.[3] The same consequences were incurred by one who committed an act of violence upon a tribune of the people,[4] though at a later period the State itself saw to the due infliction of the penalty by secular law, viz. by bringing the crime before the magistrates in the form of a process of perduellion.[5] A similar reinforcement of the sentence 'sacer esto' by a secular penalty is authorized also by the Law of the XII Tables as given by Pliny, *HN* xviii. 12:

> 'Frugem . . . aratro quaesitam noctu pavisse ac secuisse puberi XII tabulis capital erat suspensumque Cereri necari iubebant, . . . impubem praetoris arbitratu verberari noxiamve duplionemve decerni,'

where the reference to Ceres indicates that the original formula of the *sanctio* was 'Cereri sacer esto,' and that the penalty of crucifixion (or, in the case of those under age, scourging) was a later addition. It is possible that in other cases as well the sanction of secular law was added to or substituted for that of sacred law, and, as the former was naturally more certain in its operation than the latter, *fas* gradually lost its practical significance, and came to be regarded more as an ideal ratification and reinforcement of a secular law that was in itself perfectly competent to administer the penalty. Only so can we explain the circumstance that the often[6] purely conventional phrase, 'ius et fas' or 'ius fasque,'[7] is found, almost without exception, with its terms in that order,[8] even in passages where the reverse order might seem the more natural, as, *e.g.*, Livy, XXXIII. xxxiii. 7, 'ius fas lex,' and Cic. *de Harusp. Resp.* 43, 'deos hominesque, pudorem, pudicitiam, senatus auctoritatem, ius, fas, leges, iudicia violavit' (where 'deos hominesque' would lead us to expect 'fas iusque'). The same sequence occurs also in the technical language of religion, as in the Lex aræ Narbonensis, *CIL* xii. 4333, ii. 14, 'Si quis tergere ornare reficere volet, quod beneficii causa fiat, ius fasque esto,' in accordance with which the corresponding passage in the law of the temple at Furfo (*CIL* ix. 3513. 7) should probably be restored thus: 'utei tangere sarcire tegere . . . [ius] fasque esto.' This also explains why the *fas* should be specially appealed to in matters which the arm of the civil law did not reach, as, *e.g.*, affairs of international law, which regulated the relations of war and peace among the nations; thus Tacitus speaks of the 'fas gentium'[1] and the 'fas armorum et ius hostium.'[2]

2. **Codification.**—It is only natural to expect that there could be no complete or public codification of the ordinances of the *ius divinum*, as, although the latter was traced back to a definite compact with the gods, it was in reality the result of a gradual development. The duty of preserving this sacred law was committed to the State priests, who had, as required, to give their professional opinions for the enlightenment and instruction both of the authorities and of private individuals. There was, however—apart from the penal authority of the Pontifex Maximus in relation to his subordinate priests—no official administration of sacred law, and no official infliction of its penalties. In general, offences against the *fas* were regarded as falling under the maxim 'deorum iniuriae dis curae' (Tac. *Ann.* i. 73), and the *piacula* assigned to particular ritual misdeeds were not penalties, but were designed simply to show the delinquent how he might propitiate the offended deity. A person who did not avail himself of this opportunity, and who refused to offer the required *piaculum*, or one who violated the *fas* in so gross a fashion that expiation was deemed impossible, was *impius*, was excluded from the *pax deorum*, even if neither the sacred nor the secular authorities took proceedings against him;[3] the only thing that could affect such an offender, indeed, was the reprimand of the Censor. Those who violated the ordinance regarding holy days, or did not fulfil a vow that they had made, or broke an oath made by appealing to the gods, did not thereby become liable to human retribution at all, whether of priests or of magistrates; and even with regard to those provisions of the sacred law which, by means of the formula 'sacer esto,' committed the defender to the divine retribution, the intervention of the State in the infliction of punishment was, as noted above, a later development. Likewise, in cases which did not relate to penal offences at all, but involved civil matters falling within the scope of the *fas*, as, *e.g.*, the mode and extent of the required fulfilment of a vow, the inheritance of the *sacra familiaria*, etc., the priests did not deliver a judgment that could be enforced by law, but merely gave an opinion regarding the legal position, though it is true that this opinion was almost always accepted by the parties concerned.

Corresponding to the respective spheres of the several colleges of priests, the codification of the *ius divinum* is found in three distinct forms, viz. the *ius pontificium*, the *ius augurale*, and the *ius fetiale*. The *ius fetiale* contained the articles relating to matters of international law which could not be consummated without religious ceremonies, and also the form of such ritual; the vital element in the *ius augurale* was the widely ramified and imposing doctrine of the *auspicia*; the *ius pontificium* embraced not only the ritual ordinances designed for the guidance of the priests, *i.e.* the ceremonial law in the proper sense, but also all the essential principles of the legal and other relations between the Roman citizen or the Roman nation and the State gods; and in a State whose citizens, alike as individuals and as a people, attached the utmost significance to the maintenance of the *pax deum*, and as 'religiosissimi mortales' (Sallust, *Cat.* xii. 3) applied themselves to their religious

[1] Hence the term 'sacrosanctus,' the implications of which A. Rosenberg (*Hermes*, xlviii. [1913] 359 ff.), whose arguments so frequently carry conviction, has failed to grasp with sufficient clearness.

[8] The sequence in Verg. *Georg.* i. 269 ('fas et iura sinunt') and Amm. Marc. XIV. i. 5 ('velut fas iusque perpensum') is due no doubt to the writers' conscious purpose; in Livy, VII. xxxi. 3 ('sicut fas iusque est') E. Wölfflin, in view of his author's regular usage, has substituted 'ius fasque' for the traditional reading.

concerns with the most painful conscientiousness, this pontifical law bore upon every phase of private and public life, so that the Pontifex Maximus was actually designated as 'iudex atque arbiter rerum divinarum humanarumque' (Festus, p. 185). This certainly does not in the slightest alter the fact that the jurisdiction of the Pontifices, as of all other priests, was wholly confined to the province of the *ius divinum*;[1] nevertheless those invested with the priestly office, just because they expounded and administered the *fas*, had, on the one hand, the opportunity of acquiring great experience in the application and interpretation of law, and thus also great acuteness in juridical thinking and reasoning; while, on the other hand, in view of the numerous points at which the *fas* came into touch with questions of secular life and secular law, they required to have a thorough knowledge of the *ius civile* also,[2] so that the Pontifices were the earliest jurists of Rome, and in virtue of their *responsa* exercised no small influence upon the development of the civil law as well. It should be noted, however, that these *responsa*, so far as they transcended the proper sphere of the *ius divinum*, were not official deliverances, and thus were never given by the *collegium* as a whole, but were pronounced by individual Pontifices, who in such things had no higher authority than a private person learned in the law. From the circumstance that the body of consulting lawyers was largely recruited from among the Pontifices the ancient reading of the history, to which modern scholars have attached too much importance, wrongly assumed that the Pontifical College as such was officially concerned in the preservation and application of the civil law, and asserted that the form of words necessary to the institution of a suit (the *legis actiones*) was officially communicated to the parties by a member of the Pontifical College annually appointed for the purpose,[3] and even that the knowledge of the civil law as a whole was confined to the Pontifices.[4] As a matter of fact, the official function of the Pontifical College was restricted to the administration of the sacred law, and a similar limitation must be assigned to the juristic writings *de iure pontificio*, which drew their materials from the pontifical archives, the *libri* (or *commentarii*) *pontificum*, and of which, with an older work by Q. Fabius Pictor, the comprehensive treatises of M. Antistius Labeo and C. Ateius Capito may be singled out for special mention.

An important step in the publication of the sacred law was taken when the register of court-days and holy days, the *Fasti*, was made accessible to the public—an event brought about, as Mommsen[5] rightly infers from Cic. *ad Att.* VI. i. 8, by the promulgation of the Code of the XII Tables; while the well-known disclosure of Cn. Flavius, the protégé of the revolutionary Appius Claudius, Censor in 312 B.C., marks the earliest issue of the calendar in a codified form. Another extensive collection of articles from the sacred law, the publication of which cannot be precisely dated, was current among the jurists of the later period under the

title of *Ius Papirianum*,[1] and was annotated by Granius Flaccus, a contemporary of Cæsar.[2] The meaning of the name 'Papirianum' had been forgotten by the ancients themselves, but was believed to go back to an editor called Papirius (the *prænomen* is variously given), said to have been the first Pontifex Maximus after the expulsion of the kings,[3] while a rather unconvincing modern theory[4] would assign the compilation to Sextus Papirius, a jurist of Cicero's time, who is mentioned as a pupil of Q. Mucius Scævola.[5] While the collection as a whole may be of fairly late date,[6] there can be no doubt that its individual statutes go back to a very remote period and were drawn from the writings of the Pontifices. They are called *Leges Regiæ*,[7] and were arranged in the order of the kings to whom—somewhat arbitrarily, it is clear—they were ascribed.[8] As regards their matter, they lie wholly within the range of the *ius divinum*, and, in cases where they prohibit something, the penalties imposed are exclusively of a religious kind—the offering of a *piaculum* for less serious offences,[9] and, for more serious, condemnation by the formula 'sacer esto.'[10] Moreover, many of the provisions bear directly upon the ceremonial of sacrifice,[11] and of other proceedings regulated by religious law, as, *e.g.*, the interment of the dead,[12] so that we can quite easily understand the reference of Servius (*Æn.* xii. 836) to the 'lex Papiria *de ritu sacrorum*' (cf. also Macr. *Sat.* III. xi. 5). In all cases where the code seems to encroach upon the sphere of secular law, it deals with matters which originally were regulated by the *fas* alone, but were subsequently brought within the scope of the ordinary criminal law, as appears to have been the case even with *paricidium*.[13] The ordinances of the *fas* formulated in the *Leges Regiæ* bore with special frequency upon matters in which private law was palpably defective,[14] as, *e.g.*, the unintentional slaying of a human being,[15] and many questions of family law: thus we find ordinances concerning the punishment of children who ill-treat their parents,[16] the exposure of children,[17] the repudiation and selling of wives,[18] the period of a widow's mourning and her re-marriage,[19] etc.; the protection of clients[20] and landmarks[21] also fell within the scope of the sacred law. When the extreme penalty of 'sacer esto' is imposed, the deities to whom the criminal is delivered are always those of the earliest Roman cultus, and above all Juppiter,[22] Vediovis,[23] and the *divi parentum* or

ancestral spirits.[1] The Δημήτηρ to whom one half of the husband's property was assigned when he unjustly repudiated his wife[2] must undoubtedly have been the ancient Roman goddess Tellus, of whom we read as the goddess of marriage;[3] and to her also belonged the oblation of a cow in calf ('forda bos'), which, according to Plut. *Numa*, 12, was demanded from a widow who married again during her period of mourning. The Ceres to whom the spoiler of crops was delivered was without doubt the ancient Roman goddess of vegetation,[4] and not the Greek Demeter; it was the latter, however, to whom, as Ceres Liber and Ceres Libera, the statutes of the *Leges Sacratæ* (a reproduction of the *Leges Regiæ*) assigned the property of one who infringed the privileges of the *plebs*.[5]

As the sentence of 'sacer esto' was attached only to the statutes derived from the sphere of the ancient *fas*, we must not, with Mommsen (*Strafrecht*, p. 900 ff.), regard the formula as equivalent to the capital penalty of the secular law; in reality it simply handed the offender over to divine retribution, nor did it ever signify more than this except in so far as the State supplemented the religious penalty by a civil one. The youth who beat his father, and thereby became 'divis parentum sacer' was not called to account by the civil magistrates, though in legislating for certain other offences the State fixed definite penalties and so undertook to enforce them. As we saw above (p. 885a), the peculiar form of the penalty imposed by the XII Tables upon the injurer of crops ('suspensum Cereri necari' [Pliny, *HN* xviii. 12]) clearly implies that the secular penalty of crucifixion was an addition to the older religious penalty of 'Cereri sacer esto.' The like holds good with regard to another offence: if a patron wilfully injured his client, he was, by a *lex regia* ascribed to Romulus, delivered, as *sacer*, to Vediovis (Dion. Hal. II. x. 3), and the XII Tables formulated this ordinance as 'patronus si clienti fraudem fecerit, sacer esto' (Serv. *Æn.* vi. 609); the fact that the deity's name is omitted in the latter formulation shows that the phrase 'sacer esto' had lost its original meaning, for it was necessary that the sentence of *sacratio* should always specify a particular deity.[6] That the whole procedure of *consecratio capitis et bonorum*[7] lay outside the sphere of secular justice, and belonged exclusively to that of religious law,[8] to which all formal judicial procedure was alien, appears from the fact that the *consecratio bonorum*, which was still inflicted in historical times, and manifestly on the grounds of the *Leges Sacratæ*, by the tribunes of the people upon those who resisted them,[9] was carried out in purely religious forms, and neither required a forensic process nor permitted of an appeal.

As the *ius divinum* was believed to have come into being at the foundation of the city, it could of course be developed indirectly by the expositions of the priests, but could not be added to by the creation of fresh laws. From the institution of the Republic, accordingly, there was no specific sacred legislation, and the *ius sacrum* was a division of the *ius publicum*,[10] as finds clear expression in the formula with which the magistrate rejected

private claims to property, 'aut sacrum aut publicum esse,'[1] *i.e.* 'the property of the gods and that of the State are one in relation to private property.' In the so-called *Lex de imperio Vespasiani*[2] the two great divisions of *divinæ humanæ res* and *publicæ privatæque res* (the *publicæ res* embracing also the *sacræ res*) are not conjoined in such a way as to imply that the latter pair is a subdivision of the *humanæ res*; and Ulpian's definition of (secular) jurisprudence as 'divinarum atque humanarum rerum notitia, iusti atque iniusti scientia' (*Dig.* I. i. 10. 2) no longer recognizes any distinction between sacred and secular law.

G. WISSOWA.

**LAW (Teutonic and Slavic).**—I. **Terms denoting 'law.'**—As the conceptions of justice and law are everywhere of higher antiquity than the knowledge and use of writing, we may assume that among the Teutons and the Slavs there were at one time only ἄγραφοι νόμοι, 'unwritten laws.' The nature of such unwritten laws can be discovered only by an analysis of the general terms used to designate them. Among the Slavs one of the most typical terms for the idea of law is *zakonŭ*, a word found in all the Slavic tongues, and the word *pokonŭ* was employed in the same sense. As both of these words are etymologically akin to the O. Slav. *za-čina*, Czech *po-čnu*, 'I begin,' they must originally have meant something like 'beginning,' *i.e.* that which existed or was in force from the first. This is the fundamental sense also of the O. Russ. *pošlina*, 'law,' lit. 'the past,' and *starina*, 'law,' lit. 'antiquity'; cf. such phrases as *po staroj pošlině Novgorodĭkoj*, 'by ancient Novgorod law,' *dĭrzati vĭ starine*, 'to observe the laws,' *na vsej starine*, 'in retention of all previous law.' An essentially similar idea lies at the root of the term for 'law' common to the West Teutonic dialects, O.H.G. *ēwa*, O.S. *ēo*, A.S. *æ*, *æw*. It is true that some philologists regard this Teutonic word as cognate with the Lat. *æquum*, so that it would mean originally 'fairness,' 'equity,' and this is certainly possible by phonetic laws (O.H.G. *ēwa* from * *aihva* = Lat. *æquum* from * *aiquo*); but the Slavic data just noted seem to make it much more probable that O.H.G. *ēwa* is related to Lat. *ævum*, 'eternity,' Gr. αἰών, 'long space of time,' αἰεί, 'ever,' and thus, like the Slavic *zakonŭ*, *pošlina*, *starina*, will mean 'the law which has been in force from eternity, from the beginning, from of old.'

A second concept connoting 'law' and 'equity,' and common to both Teutons and Slavs—though found also in other branches of the Indogermanic stock—is that of 'straightness' as contrasted with 'crookedness.' Thus Goth. *raihts*, O. Norse *réttr*, A.S. *riht*, O. Sax. *reht* (cf. also O. Irish *recht*, 'law,' 'justice'), are philologically equivalent to Lat. *rectus*, 'straight,' 'right,' Avest. *rāšta*, 'straight,' 'right,' 'correct'; and similarly the Slav. *pravida*, *pravo*, 'law,' 'justice,' is derived from *pravŭ*, 'straight.' We cannot doubt that this 'straight' signifies 'running in the same line with something else,' *i.e.* 'in accordance with it.' This, however, raises the question as to what that 'something else' was. According to R. Löning (*Über Wurzel und*

[1] *CIL* ix. 439, 440; cf. Plaut. *Trin.* 1044; Livy, xxv. i. 12, xl. li. 8.
[2] *CIL* vi. 930, line 17, 'quaecunque ex usu reipublicae maiestateque divinarum humanarum, publicarum privatarumque rerum esse censebit.'

*Wesen des Rechts*, Jena, 1907, *passim*), the norm was a sense of justice inherent in man. In view of the above interpretations of Slav. *zakonŭ*, *pošlina*, *starina*, and O.H.G. *êwa* (Lat. *ævum*), however, the present writer thinks it more natural and more in keeping with primitive thought to explain Germ. *Recht*, Slav. *pravo*, as signifying that which agrees with the usages of the earliest times.

Other two Teutonic groups of terms denoting 'law' are derivatives of roots originally signifying 'statute,' 'something fixed.' One of these is Eastern Teutonic, the O. Norse *lög* (from which A.S. *lagu* and hence 'law' itself are derived), Goth. (as in Jordanes, 11) *bel(l)agines*, 'laws' = * *bi-lagineis*, connected with *lagjan*, 'to lay,' and, if cognate with Lat. *lex*, going back to the primitive Indogermanic language. The other group, which is represented in all the Teutonic dialects, and tends rather to assume the sense of 'judgment on grounds of law,' includes the Goth. *dôms*, in *dômjan*, O. Norse *dómr*, A.S. *dóm* (the regular term for 'law,' as in *dómbók*, 'law-book'), O. Fris. *dôm*, O. Sax. *dôm*, O.H.G. *tuom*—all cognate with Gr. *τίθημι*, 'set,' 'place,' 'lay, 'and Skr. *dhâman*, 'seat,' 'law,' 'order.' As we can hardly suppose that the reference here is to statutes of the primitive gods, whose sphere of authority lay as yet 'beyond good and evil' (cf. art. ARYAN RELIGION, vol. ii. p. 50ᵇ), any more than to the statutes of kings, who in primitive times had no independent authority to make laws (cf. art. KING [Teut. and Litu-Slav.], above, p. 728), we must regard O. Norse *lög* and Goth. *dôms* as denoting the statutes of those tribal assemblies, presided over by kings, which can be traced back to the Indogermanic epoch, such statutes being then carried in the memory of the people and so handed down from one generation to another (cf. O. Schrader, *Reallexikon der indogermanischen Altertumskunde*, Strassburg, 1901, *s.v.* 'Volksversammlung').

Reference must be made, finally, to a very peculiar term for 'law' found in all the Teutonic languages, viz. Goth. *witôp* ('*νόμος*'), O. Norse *vitað*, O.H.G. *wizzôd*, etc. It is formed from the Goth. *witan*, 'to know,' and is manifestly to be understood in the sense of the late M.H.G. *wîstuom* (Eng. 'wisdom'), 'legal precedent,' 'instruction in law,' but lit. 'learning,' *i.e.* the learning that consists in the knowledge and application of legal views and usages.

**2. Law as oral tradition.**—If we want a concise characterization of the legal side of primitive life among the Teutons and Slavs, we cannot do better than take the words of Nestor's *Chronicle*, ch. x.: 'they had the customs and the law of their fathers and traditions; each [tribe] its own usage.' As writing was not yet in use, this ancient law of custom (Slav. *zakonŭ*, O.H.G. *êwa*) could, of course, be preserved from age to age only by oral tradition. How this was done in remote antiquity we have no direct or definite means of knowing, but we may gain some idea of the method by observing the corresponding state of matters found among peoples who still remained without legal documents till far on in historical times. Among Teutonic peoples this was the case with the Scandinavians.

'The highest civic position was that of "the man of law" (*lögmaðr*, *lögsögumaðr*). He was the living code and the custodian of the law for the province and the diet; he was the director of the Thing, he announced its decisions to the public, and in cases of doubt expounded the law. It was his duty to keep a knowledge of law alive among the people, and, as is prescribed by the Icelandic *graugans* and recommended by the Scandinavian statutes, he had every three years to stand upon the "cliff of the law" and recite intelligibly to all the whole civil law, and once a year the procedure of the law-courts (*þingsköp*)' (K. Weinhold, *Altnordisches Leben*, Berlin, 1856, p. 400).

Such 'men of law,' as official guardians and preservers of primitive legal tradition, who in Scandinavia were preferably resorted to even when at length movements were made towards reducing the laws to writing, must have played a part also among the other Teutonic peoples from remote times. In references to the documentary formulation of ancient popular laws, we often hear of *sapientes*, *i.e.* 'the learned' (cf. Goth. *witôp*, 'law,' 'legal decision'), as those to whom the work was committed. Thus Charlemagne (*Capit.* ann. 789, cap. 62) says: 'lex a sapientibus populo composita.' From a prologue to a collection of ancient popular laws we learn that Theodoric, king of the Franks, when at Chalons, selected a number of men learned in the laws ('viros sapientes qui in regno suo legibus antiquis eruditi erant') with a view to recording the usages of the Franks, Alamans, and Bavarians. The law of the Frisians contains supplements by the *sapientes* Wlemarus and Saxomundus, and that of the Thuringians by the former. With reference to the ordinance of the *Lex Salica*, a prologue dating from the 6th cent. states that in the days when the people were still heathens four men selected by the 'rectores' of the people had expounded the Salic law in three assemblies (cf. O. Stobbe, *Gesch. der deutschen Rechtsquellen*, Brunswick, 1860–64, i. 16 f.; H. Brunner, *Deutsche Rechtsgesch.* i.², Leipzig, 1906, p. 298). These *sapientes*, whose legal formulæ are referred to in the sources as *iudicia* ('decisions,' 'opinions'), may be compared to the Scandinavian 'men of law,' and we may safely assume that among the Teutons there had existed from time immemorial a class of 'erudite men' who carried in their minds the ancient law of custom in fixed formulæ, and publicly recited it on given occasions. From traces still found in Scandinavia (cf. K. von Amira, *Grundriss des german. Rechts*³, Strassburg, 1901, p. 50 ff.), it may be inferred that these fixed forms were at first metrical; and with this we may compare what Aristotle says of the Agathyrsians, a Transylvanian people, viz. that before they had a knowledge of writing they expressed their laws in song, so that they might not forget them.[1]

**3. The beginnings of codification.**—Whether, like the Teutons, the Slavs had among them in pre-historic times a special class of learned men who carried in their memories the ancient law of use and wont, and on given occasions communicated it to the people, we have no definite means of knowing. The two races, however, are certainly so far alike that their first attempts to reduce their laws to writing (and it is only with such beginnings that the present article can deal) were due to their contact with the civilized peoples of the South, and to the need of having their relations with these regulated by law, the movement, in the case of the Teutons, being a result of their coming into touch with the Romans, while the Slavs (Russians) were similarly influenced by their intercourse with Byzantium. In the Romanic area arose the *Lex Salica* and the *Lex Ribuaria*; the two West Gothic law-books and the Edict of Theodoric, king of the Eastern Goths; the two Burgundian codes and the Edicts of the Longobards. These, as well as the *Lex Alamannorum*, the *Lex Baiwariorum*, and the three sets of popular laws (Thuringian, Frisian, Saxon) reduced to writing at the instance of Charlemagne, were all in Latin, while the Anglo-Saxon code, which is closely connected with the *Lex Saxonum*, was the only one of the West Teutonic law-books which used the native language.[2]

[1] ἢ ὅτι πρὶν ἐπίστασθαι γράμματα, ᾖδον τοὺς νόμους, ὅπως μὴ ἐπιλάθωνται, ὥσπερ ἐν Ἀγαθύρσοις ἔτι εἰώθασι (*Problem.* xix. 28).

[2] Further details are given fully in O. Stobbe, *op. cit.*; H. Brunner, *op. cit.*; R. Schröder, *Lehrbuch der deutschen Rechtsgesch.*⁵, i., Leipzig, 1907; R. Schmid, *Die Gesetze der Angelsachsen*², Leipzig, 1858; F. Liebermann, *Die Gesetze der Angelsachsen*, Halle, 1903.

On Slavic soil, again, it was the relations between the Russians and the Greeks that gave occasion to the earliest written formulations of legal enactments. These were the treaties of peace (*dogovory*) between Prince Oleg and the Greeks (A.D. 912), and between Prince Igor and the same people (A.D. 945).[1] The investigations of Ewers[2] seem to show that Oleg's document is the main treaty, and that Igor's contains later supplements. The purpose of each was to bring the relations between Russians and Greeks under legal regulations; cf., *e.g.*, § 3 of Oleg's treaty, referring to homicide:

'If a Russian kills a Christian, or a Christian a Russian, he shall die at the place where he committed the homicide. If, however, he who committed the homicide flees, then, if he possesses property, the nearest kinsman of the slain man shall take his portion *according to the law* (*po zakonŭ*), but the wife of the slayer shall take as much as falls to her *according to the law*,' etc.

As may be inferred from this extract, the treaty makes frequent reference to the Russian law (*zakonŭ*), which, in view of what has already been said, would be no more than an unwritten law of custom, and of which we have the earliest written deposit in the treaties of Oleg and Igor designed to regulate the intercourse of Greeks and Russians. As was shown above, similar considerations, *mutatis mutandis*, underlie the various *leges Barbarorum*. The earliest codification of the Russian law of custom, or of part of it, for the Russians themselves, will then be found in the first form of the *Russkaja Pravda*,[3] which, according to tradition, Jaroslav (A.D. 1019–54) presented as a gift to his allies, the Novgorodians, '. . . and gave them a law (*pravdu*), and caused a statute to be written, saying, "Walk according to this document."' As Ewers remarks, 'So arose the earliest legal document of the Russians, intended primarily for Novgorod, but it must soon have become operative throughout Russia, as there was no other written law in its way.'

It ought to be noted, however, that L. K. Goetz[4] takes quite a different view from the foregoing. He is of opinion (p. 238) that the references to 'Russian law' found in the treaties of Oleg and Igor really presuppose the existence of a *document*—the *Pravda* in its original form (as in Goetz, pp. 6–11; Jireček, iii. 1–17; Ewers, pp. 264–270)—since, as he believes, that earliest formulation of the Russian law of custom was free from all extraneous (Greek or Teutonic) influence, and dates from a time anterior to Vladimir—from the first half of the 9th, if not indeed from the 8th century. He certainly admits that it was in no sense an official document, and supposes that it was written for purely private purposes by, say, a judge of the local law-court (see KING [Teut. and Litu-Slav.]), who 'made these notes to serve as a guide in cases where he might have to pronounce a legal decision regarding the amount of compensation' (p. 230). It is hardly possible to arrive at certain conclusions regarding these matters, although the theory that the *Russkaja Pravda* had a private origin such as Goetz conjectures does not appear to the present writer to be very probable.

LITERATURE.—This has been sufficiently indicated in the course of the article.

O. SCHRADER.

**LEAVEN.**—Leaven is that which produces fermentation in a mass of dough. The Hebrew word *sᵉʾôr* was the designation of the piece of dough already infected by the leaven which was put into the flour to communicate the leaven to the entire mass before it was baked. Dough that had risen through the influence of this leaven was called *ḥāmēṣ*. Leaven might either be communicated by contagion, by mixing yeast with water, or spring up spontaneously, especially in a warm climate like Palestine. Bread that was entirely free from leaven was called *maṣṣāh*, 'unleavened bread.' Ordinarily in the warm climate of Syria twenty-four hours was sufficient for a mass of dough to become thoroughly leavened. Pliny (*HN* xviii. 26) states that the best yeast was made among the Romans by kneading millet or a fine brand of wheat with must at vintage time. The early Hebrews, however, appear to have depended entirely upon the *sᵉʾôr*, or leavened piece of dough, to preserve and transmit the leaven. The later Jews probably used the lees of wine as yeast.

Leaven, like all striking forms of germ growth, made a profound impression upon the thought and institutions of the Hebrews. Ignorant as they were of its real nature, they interpreted it as it appealed to their senses. The fact that it soured the dough in which it was placed led them to classify it as a type of corruption. Therefore everything infected with leaven was in time regarded as unfit for use in certain parts of the sacrificial ritnal. Plutarch has most clearly voiced this widely held belief:

'Now leaven is itself the offspring of corruption and corrupts the mass of dough with which it has been mixed' (*Quaest. Rom.* 109).

Am $4^5$ indicates, however, that leaven offerings, either in principle or in practice, were not wholly forbidden in the ritual of northern Israel. Lv $7^{13}$ and $23^{17}$ also provide that the bread eaten by the priest might contain leaven, and indicate that leavened cakes were presented in connexion with the Feast of Weeks. Here the early use of wine (Lv $23^{13}$; cf. also Ex $29^{40}$, Nu $15^5$ $28^{7-14}$), which must in many cases have been fermented, in connexion with sacrifices presents a suggestive analogy and indicates that the provision against that which contained evidence of corruption was not primitive or absolute. W. Robertson Smith (*Rel. Sem.*[2], London, 1894, p. 221) has suggested that in its earliest form the legal prohibition of leaven applied only to the Passover, and in the oldest code (J) of Ex $34^{25}$ and $23^{18}$ the prohibition is thus limited. The extension of the prohibition to the shewbread and then to all cereal offerings (Lv $2^{4.11}$ $7^{12}$ $8^2$, Nu $6^{15}$) evidently represents a later stage of development, under the influence of the popular idea that leaven represented corruption, and from the desire (so manifest in the Holiness Code and Ezekiel) absolutely to exclude from the ritual everything inconsistent with the idea of Jahweh's perfect holiness. The original reason for the use of unleavened bread in connexion with the Passover meal appears to have been simpler. In primitive times, and still among the Arabs on a low stage of civilization, bread was made and cooked at once. The Passover, in its latest Jewish form, evidently represented a blending of the older nomadic spring festival and the first of the three great Canaanite harvest festivals. After the Hebrews passed over to the agricultural stage, it marked the time when the sickle was first put in the standing grain and the people brought to the Deity the first sheaves gathered from their fields (cf. C. F. Kent, *Israel's Laws and Leg. Precedents*, London, 1907, p. 258 f.). During this busy first week of harvest the people had no time to wait for the slow working of the leaven, but gladly ate the bread made hastily from the unleavened dough. Thus the custom grew into an institution confirmed by the earliest Hebrew laws. In later times it presented such a marked contrast to existing usage that the Passover itself was frequently designated as the Feast of Unleavened Bread. The tendency to regard leaven as a type of putrefaction doubtless

Vatican Library by the pope, but one of the conditions was that he should become a Roman Catholic, and to this Leibniz would not consent. He was, however, interested in a scheme which was then being mooted for the reunion of the Protestant and Roman Catholic Churches, and it was in connexion with this discussion that he wrote, in 1686, *Systema theologicum*, in which he tried to find some common standing-ground between the two religions. The letters to Leibniz from Bossuet and others show that the writers hoped to convert him to Roman Catholicism; and, when it was clear that they would not succeed, the letters ceased. He later attempted to reconcile the Reformed and Lutheran Churches, also without success. In addition to his literary pursuits, Leibniz interested himself in the mining operations carried on in the Harz Mountains and in the coining of silver found there.

In 1690 Leibniz was appointed librarian at Wolfenbüttel, and some years later he formed a friendship with the Electress Sophia Charlotte of Brandenburg and her mother Princess Sophia of Hanover. It was through this friendship that his connexion with Berlin arose, and he was invited thither in 1700. In this year the Academy which he planned was founded by Frederick I. of Prussia with Leibniz as President for life. He proceeded to suggest the establishment of similar societies in St. Petersburg, Dresden, and Vienna, with various degrees of success. In recognition of this work Leibniz was made privy councillor of justice by the Elector of Brandenburg; the same honour was given him by the Elector of Hanover and by Peter the Great of Russia. He likewise had the distinction of being granted an imperial privy councillorship when on a visit to Vienna in 1712, while he was also made a baron of the Empire (Reichsfreiherr). While in Berlin he had much pleasant intercourse at Charlottenburg with his royal pupil the Electress Sophia Charlotte, and her death in 1705 was a severe blow to him. Indeed subsequently to that event his visits to Berlin became less frequent, and that which took place in 1711 was the last. After the visit to Vienna in 1712 he returned to Hanover in 1714, but the Elector George had by that time gone to England to assume the crown, and Leibniz was disappointed at not being asked to accompany him, since he had supported his father's claims to the Elector's hat. He was directed instead to remain in Hanover and finish his history of Brunswick. This was the last work of his life. He died on November 14th, 1716, and his last years were far from happy. He was ill, neglected after his royal friend's death by those who should have helped him, and embittered by many controversies; and, when the end came, hardly any notice was taken of it either in Berlin or in London, whither his sovereign had gone. His only mourner in Hanover was Eckhart, his secretary, and not till 1787 was a monument erected to his memory. To the last he showed a marvellous power of work in very many directions; indeed his attainments were those of an almost universal kind, and such as have seldom been equalled. As he was naturally ambitious, the neglect from which he suffered pained him greatly.

It is matter for regret that Leibniz's teaching has to be derived in great measure from isolated papers, sketches, and letters. In 1703–04 he worked out his criticisms on Locke's *Essay*, but the author's death prevented their publication. In 1710 appeared his most important philosophical work, the *Essais de théodicée sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal.* In 1714 he wrote *La Monadologie*, and in that year there also appeared the *Principes de la nature et de la grâce.* During his latter years he corresponded (by the desire of the Queen of England) with Samuel Clarke 'sur Dieu, l'âme, l'espace, la durée.'

2. **Philosophy.**—Leibniz's philosophical doctrines are mainly concerned with the mode in which substance is to be conceived. They represent a distinct advance on the Cartesian view, which took for granted that there were *two* substances, connected only, if indeed they were connected at all, by the power of God. Thus Cartesianism showed itself to be a dualism which successive philosophers have in different ways done their best to solve. Spinoza, of course, endeavoured to absorb them into one Divine Substance. For him 'determination is negation,' and so far did he carry this doctrine that in his case unity is preserved only at the expense of the reality of the parts; the Substance, that is to say, is self-existent and unconditional, requiring no other thing from which it is formed, or part which may determine it. This development of the Cartesian doctrine is, no doubt, a consistent one, and one which carried the principle to its logical conclusion, but it ends in something which much resembles the Oriental theory of absolute self-identity. Leibniz, on the other hand, accepts the multiplicity of substance (the ultimate reality), which he terms monads (an expression originally perhaps adopted from the Pythagoreans, but more directly from Giordano Bruno), and these monads he proceeds to determine. Assuming that substance can be conceived only as force, he states that the metaphysical view of monads is that they are simple substances without parts, and, as there are no parts, there can be 'neither extension, form, nor divisibility.' No dissolution of these elements need be feared, and there is no conceivable way in which they can be destroyed by natural means. Nor can they by these means come into being. Thus a monad can become existent or come to an end only all at once, *i.e.* by creation in the one instance or annihilation in the other.

These monads are therefore, so to speak, centres of force, as distinguished from manifestations of world-force. They are not to be confused with the atoms of Democritus or the materialists, inasmuch as they have within them the power of action; indeed it is their nature to act, and they also have what might be called a spiritual nature. In his *Monadology*, Leibniz states that the monad likewise has 'perception and appetition.' The perception is, however, not necessarily conscious perception, since conscious perception represents another stage, which he calls 'apperception.' In perception we have a unity which has a multiplicity of relations, and is thus variously modified. Likewise the appetition is not necessarily conscious desire or will; it represents change within the identity of a simple substance. Hence we must conceive the monad as possessed of spontaneity and as capable of evolving its nature and experience from itself. It is not inert and passive, but is a microcosm, 'the universe in little'; indeed Leibniz goes so far as to make use of the Aristotelian term, and say that the monads are entelechies because they have a

> 'certain perfection which makes them the sources of their internal activities, so to speak, incorporeal automata' (§ 18).

They are not, however, pure entelechies, as is shown by the differences among themselves.

> 'Each monad must be different from every other. For in nature there are never two beings which are perfectly alike' (§ 9).

He considers that the Cartesian view of perception is wrong, because it treats as non-existent those perceptions of which we are not commonly aware, and he believes that this causes a failure to distinguish between a prolonged unconsciousness and death; this error has even 'confirmed ill-

than Leibniz from misrepresentation of their systems. We have Voltaire's stinging satire of the doctrine of the 'best possible world' in his *Candide*, but that was a satire more than a misrepresentation. The doctrine of the pre-established harmony, however, lent itself to easy caricature, as did that of the living monads. Few of Leibniz's writings were published during his lifetime, and he left masses of MSS in detached papers and little treatises, difficult to sort out. His two principles of contradiction and sufficient reason were never clearly related to one another, and existed, so to speak, side by side in independence. Newton's physics did not altogether accord with Leibniz's metaphysics, and Newton's triumph meant corresponding discredit to Leibniz. His successor, Christian Wolf, though he systematized his philosophy, was not a true follower, or at least he followed him in a pedantic way. Perhaps Kant understood his position better, although he advanced far beyond it. Hegel terms it an 'artificial system,' but he appreciates its worth as showing forth the principle of individuality. Goethe adopted the Leibnizian conception of monads and souls. Later on Lotze re-constructed the philosophy of Leibniz on his revolt as a man of science against the idealism of Fichte, Schelling, and Hegel, though he was influenced by Kantian doctrines and rejected much of Leibniz's teaching.

[3. Mathematics.—Leibniz was a pioneer in the science of comparative philology, and compared and collected various remote languages; this was but one of his very numerous studies outside philosophy. It was to mathematics, however, that he specially devoted his attention. Leibniz's mathematical studies were carried beyond what was usual at the time under Weigel at Jena in 1663. The *de Arte Combinatoria*, which he wrote in 1666, is of logical rather than mathematical interest. In 1673, when in London, he told Pell that he had obtained the summation of infinite series by differences, but in this he had been anticipated. After this he studied under Huygens in Paris. Among other results at this period, he obtained the important series $\frac{\pi}{4} = 1 - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9} - \ldots$

He now began his great work on the infinitesimal calculus. He started with the conception, previously employed by Barrow, Newton's teacher, of a 'triangulum characteristicum' at any point on the curve. This consists of the chord joining two adjacent points, together with parallels to the axes of co-ordinates drawn through these points. In the limit when these points come to coincide with the given point, the chord becomes the tangent at it. With the aid of this conception he attacked problems of tangency, showing that the so-called 'inverse problems of tangents' could be reduced to quadratures, or, in modern terminology, integrations. He regarded integration as a summation of infinitesimals. His original notation for $\int y\,dx$ was '*omn.y*,' *omn.* standing for *omnia*. Later he introduced the symbols $\int$, standing for *S*, or *Summa*, and *d*, for *differentia*, which are still used in the calculus. By 1676 he had applied the new methods to the 'direct problems of tangents' and to solid geometry, and in the following year he gave correct rules for the differentiation of sums, products, powers, and other functions.

In 1684 he published his first paper on the differential calculus in the Leipzig *Acta Eruditorum*. Besides tangency, maxima and minima and refraction are treated; $dy$ and $dx$ are still apparently taken as finite, though small.

Two years later he gave a sketch of the integral calculus in the same journal. Here $dy$ and $dx$ are regarded as quantities, though infinitely small. His final position appears to have been that they are 'quantitates assignabiles' which spring from 'quantitates inassignabiles' by the law of continuity, but on the whole question he showed considerable vacillation. His view of the calculus, though more general, and perhaps more fruitful, than Newton's, was on the whole less consistent and logical. Thus he always seems to have regarded a curve as a polygon with infinitesimal sides, whilst Newton usually considered it as generated by the continuous motion of a point. In the minds of both, however, there was probably enough confusion to justify Berkeley's attack in *The Analyst*.

Some idea of the variety and magnitude of Leibniz's mathematical achievements can be gathered from the fact that, besides the notation of the calculus, we owe to him the words 'co-ordinate' and 'axis of co-ordinates' in analytical geometry, the beginnings of the theories of determinants, osculation, and envelopes, and the method of partial fractions. 'Leibniz's theorem' deals with the repeated differentiation of a product. In mechanics his work, though fruitful, contains many errors. He regarded *vis viva*, which varies as the square of the velocity, as the proper measure of the force in a moving body, whilst Descartes had used momentum, varying directly as the velocity, for this purpose. Though the attack on Descartes was unjustified, yet this view ultimately led to the fundamental modern conception of energy.—J. B. S. HALDANE.]

LITERATURE.—None of the many editions of Leibniz's works is complete. There is, first of all, the *Opera Omnia*, by L. Dutens, Geneva, 1768, which was held to be complete when published. In 1843 G. H. Pertz began an edition of his works (1st ser. 'History,' 4 vols., Hanover, 1843–47, 2nd ser. 'Philosophical,' 1 vol., incomplete, Berlin, 1846). The only complete edition of his mathematical works is the third of the same series, 'Leibnizens mathematische Schriften,' ed. C. J. Gerhardt, 7 vols. and supplementary vol., Halle and Berlin, 1850–63. The most important edition of his philosophical works is by C. J. Gerhardt, *Die philosophischen Schriften von G. W. Leibniz*, 7 vols., Berlin, 1875–90. There are also Leibniz's *Deutsche Schriften*, ed. G. E. Guhrauer, 2 vols., Berlin, 1838–40; A. Foucher de Careil, *Œuvres de Leibnitz*, 7 vols. (planned in 20 vols.), Paris, 1859–75; Onno Klopp, *Die Werke von Leibnitz*, 10 vols., Hanover, London, and Paris, 1864–77, containing the historical and political works; and A. Jacques, *Œuvres de Leibnitz*, 2 vols., Paris, 1847. There is an edition (not complete) of his philosophical works by J. E. Erdmann, Berlin, 1839–40, and one by P. Janet, 2 vols., Paris, 1866.

For the life and teaching of Leibniz we have Robert Latta, *The Monadology and other Philosophical Writings*, Oxford, 1898 (gives a translation of the *Monadology* and other philosophical works); J. T. Merz, *Leibnitz*, in Blackwood's Philosophical Classics, Edinburgh, 1884; W. R. Sorley, art. 'Leibnitz,' in *EBr*11; E. Boutroux, *La Monadologie: accompagnée d'eclaircissements*, Paris, 1881; cf. also Le Bovier de Fontenelle, *Eloge* (=vol. i. of the *Opera Omnia*, Geneva, 1768 [see above]), in the *Acta Eruditorum*, and L. Grote, *Leibniz und seine Zeit*, Hanover, 1869; E. Pfleiderer, *Leibnitz als Patriot, Staatsmann und Bildungsträger*, Leipzig, 1870; F. Kirchner, *G. W. Leibniz: sein Leben und Denken*, Köthen, 1876. There are countless monographs on Leibniz, besides good accounts of him by Kuno Fischer, 'G. W. Leibniz, Leben, Werke, und Lehre' in *Gesch. der neueren Philosophie*, Heidelberg, 1902; E. Zeller, *Gesch. der deutschen Philosophie*, Munich, 1873. Among the critical works may be mentioned Bertrand Russell, *Critical Exposition of the Philosophy of Leibnitz*, Cambridge, 1900. Further literature is cited in *DPhP* iii. [1905] 330–338.

**LEPROSY.**—See DISEASE AND MEDICINE.

**LESSING.—1. Life and times.**—It is easy for us to see in retrospect that the achievement of Lessing lay in preparing the way for the complex creative movement associated with the names of Goethe and Schiller; Lessing himself, however, looked forward to a future only dimly illumined by rays of hope, and he went out perforce 'not knowing whither he went.' The century following the close of the Hundred Years' War had seen a very slow and partial recovery of the German national life from the utter barbarism, the degeneration of morals, of manners, and of educational and political institutions which resulted from that devastating war. But at the middle of the 18th cent., when Lessing's literary career began, a new life was stirring; universities were

in other words, he is able to lead up to his critical moment and to tone down the effects of his treatment of it. Virgil could for this reason represent Laocoon as screaming with anguish; but the sculptor shows him to us as emitting deep sighs.

'That choice which allows free play to the imagination is alone a happy one. The more we gaze, the more must our imagination add; and the more our imagination adds, the more we must believe that we see. Now in the whole course of an emotion there is no moment which offers this to so little advantage as its climax. There is nothing higher beyond this, and to present the extreme to the eye is to clip the wings of fancy and to compel her, since she cannot get beyond the impression of the senses, to seek lower and weaker images wherewith to occupy herself, shunning, as her limit, the visible fulness of expression. Thus, if the Laocoon sighs, the imagination can hear him shriek. But if he shrieks, it can neither rise a step above, nor descend a step below this representation, without beholding him in a more endurable and consequently less interesting condition. It either hears him merely moaning or sees him already dead' (*Laocoon*, ch. iii.).

With some of the exaggeration of an advocate, Lessing inveighs against descriptive poetry; action in the widest sense of the word, we might say 'the dramatic,' that which changes, moves, and progresses (including feeling), is to him the primary object of poetry. So far as poetry represents things co-existing in time, it must do so by representation of things in succession. A fruitful illustration of this, as of so many of his theses, is drawn from Homer.

'Now a shield, at any rate, it will be said, is a single material object, and consequently a description of it, according to its parts in juxtaposition, would not form a suitable subject for poetic representation. And yet this very shield [that of Achilles] has been described by Homer, in over a hundred magnificent lines, with such minuteness and exactitude as regards its material, its form, and all the figures which filled its vast surface, that modern artists have experienced little difficulty in producing a drawing corresponding with it in every detail. My reply to this particular objection is that I have already replied to it. What Homer does is not to describe the shield as it is when finished and complete, but as it is being wrought. Here again, therefore, he has availed himself of that admirable device of transforming what is co-existent in his subject into what is consecutive, thus giving us a vivid picture of an action instead of a tedious painting of a material object. We do not see the shield, but the divine craftsman in the act of making it. He steps, with hammer and tongs, before his anvil, and, after the plates have been forged out of the raw material, the figures destined by him to adorn the shield rise from the bronze one by one before our eyes, beneath the finer strokes of his hammer. We do not lose sight of *him* until *the work* is completed. At length it is finished, and we marvel at it with the confident astonishment of an eye-witness who has beheld the actual operation' (*ib.* ch. xviii.).

Incidentally Lessing discusses a number of special topics of interest to the student of art from the comparative point of view. The book, as we have it, is but a fragment of Lessing's projected work, but its charm lies in the skill with which the main themes are relieved, and at the same time illustrated, by digressions which stimulate the imagination instead of wearying the critical faculties.

'We are plunged at once into the midst of his argument; then he draws back, alternately approaches and recedes from his goal, taking occasionally a side-glance at objects he meets on his way. We see him in the very act of conquering the truths he intends to expound, witness his hesitancy while they are still uncertain, share his pleasure as they burst upon him in their full significance. . . . If we except the best of Plato's dialogues, it would be difficult to name any book which gives opportunity for so much of the most valuable kind of mental gymnastic' (J. Sime, *Lessing*, i. 251 f.).

3. **Dramatic writings.**—Lessing's dramatic works interest us here only in so far as they reflect his social and religious ideals. *Miss Sara Sampson*, the scene of which is laid in England, is a tragedy of middle-class life, interesting as a hint of the new day about to dawn on the German drama. *Minna von Barnhelm* is a charming study in human character, full of local colour and contemporary feeling, and presents its characters before a background of political significance.

The Seven Years' War ended for political reasons, and harmony of national sentiment did not immediately take the place of the bitterness which accompanied the conflict. *Minna von Barnhelm* made for true peace, whether Goethe was right or wrong in saying that it was the design of the play to effect by art a result which could not be achieved by diplomacy. 'The Saxon felt most painfully the wounds inflicted upon him by the proud Prussian.' In this play 'the grace and amiability of the Saxon ladies subdue the stolid character, the dignity, the obstinacy of the Prussians' (*Dichtung und Wahrheit*, Stuttgart and Tübingen, 1837, pt. ii. bk. 7). The play was of great importance, since its originality, and the breach which it made with contemporary imitation of French and English drama, stimulated the national consciousness and genius.

*Nathan the Wise*, a dramatic poem rather than a drama, secured Lessing's European fame. It saw the light first in 1779, but had long been planned. While Lessing declined to admit that his play contained allusions to the controversies in which he had been engaged with a Hamburg pastor, J. M. Götze, he declared that he would have nothing to say against the surmise that his purpose was to show how in olden time and in many lands, as among modern peoples, there have lived individuals who, though holding aloof from the religious systems of their age, were yet respectable and good; or against the conclusion that he intended to present such persons in a less repulsive light than that in which they had hitherto been regarded in Christian communities.

We cannot here detail the plot, but the idea of the play—and there is more idea than action—centres in the story of three rings in the possession of three sons of a dead man, one of them being the true heirloom, the others fraudulent imitations. The central characters of the play are a Christian, a Jew, and a Muslim. Nathan, the Jew, teaches what Lessing admitted was his own conviction, not, as some have supposed, that of the three religions one is true and the others false, the true to be discovered by observation of the results of each in the lives of its adherents, but rather the deep truth that, so long as Christians, Muslims, and Jews quarrel about their systems, the truth of religion (present in each) can never be discovered. When the power of the true ring has shown itself acting from within its owner, there will be nothing left to quarrel about. Creeds are accidents of birth and circumstances, but true religion is seen in character and action and must be the achievement of those who profess it.

*Nathan the Wise* was played in Berlin in 1783, but by indifferent actors. Only when Goethe and Schiller produced it at Weimar in 1801 did it take the place that it holds to-day in the repertory of the best German theatres. In it Lessing still teaches his lessons of toleration and broad-minded sympathy.

4. **Literary and dramatic criticism.**—In literary and dramatic criticism Lessing occupied an original standpoint and maintained it with brilliance and learning. His various contributions to periodicals and his *Literaturbriefe* ('Letters upon Current Literature') carried him into the arena already occupied, on the one side, by J. C. Gottsched, who blindly imitated the stilted masterpieces of the French, and therefore gave supremacy to formal standards, and, on the other, by the Swiss writers J. J. Bodmer and J. J. Breitinger, who insisted on the supreme importance of creative imagination. Lessing took up an independent position, criticizing both schools, though championing the main thesis of the anti-French school. From the frankest criticism of Gottsched, a renowned Leipzig professor, the young critic proceeded to the still more daring venture of criticizing Rousseau and Voltaire. In his *Hamburgische Dramaturgie* (published while he was 'critic' at the Hamburg Theatre and collected in 1769) he urged that the Greek dramatists and Shakespeare should be regarded as models, and he succeeded in severing the tie between German literature and the classic French school. In a brief but striking essay on 'How the Ancients represented Death' (*Wie die Alten den Tod gebildet*, 1769), Lessing maintained in reply to Klotz, who had criticized a remark in *Laocoon*, that the ancients represented the god of Death, not by the symbol of a skeleton, but by that of a boy, twin-brother of Sleep. He argued that skeletons represented the departed souls of evil men.

ancient cheerful image of Death out of the realm of art. Since, however, this religion did not wish to reveal this terrible truth [that even natural death is the wages and fruit of sin] to drive us to despair, since it too assures us that the death of the righteous cannot be other than gentle and restoring, I do not see what should prevent our artists from banishing the terrible skeletons, and again taking possession of that other better image. . . . Only misunderstood religion can estrange us from beauty, and it is a token that religion is true and rightly understood, if it everywhere leads us back to the beautiful' (*Lessing's Prose Works*, Bohn's Library, 1879, p. 225 f.).

**5. Theological opinions.**—Lessing was always most powerful in the expression of his opinions when he was compelled to defend them against the traditionalist, whether of the literary or of the theological world. In addition to early Essays, 'The Origin of Revealed Religion' and 'Contributions to History and Literature' (containing essays on the theories of Leibniz), controversies in which he was engaged led to the publication of the following tracts: 'The Demonstration of the Spirit and of Power,' 'The Testament of John,' 'A Rejoinder' (*Ein Duplik*), and 'The Religion of Christ.' His chief theological controversy arose over papers that he published anonymously which were the work of H. S. Reimarus, who died at Hamburg while Lessing was there. These papers, which were transcripts from an essay left by Reimarus entitled 'An Apology for Rational Worshippers of God,' dealt with the questions of revelation, immortality in the OT, and the inconsistencies in the accounts of Christ's Resurrection. That they did not reflect adequately his personal views may be judged by his own words:

'What has the Christian to do with the hypotheses, the explanations, the proofs, of the theologian? The letter is not the spirit, and the Bible is not religion' (*Sämmtliche Schriften*, x. 14).

The foremost critic of these papers was Götze, head-pastor of Hamburg, whose utterances were the occasion of some of Lessing's most brilliant controversial writings. Lessing strenuously upheld the right of the intellect to discuss with perfect freedom all subjects, whatever their nature, which are of deep concern to mankind.

'If you could bring it about that our Lutheran pastors should become our popes; that they should have power to prescribe to us where we must cease to investigate Scripture, to put limits to our investigation and to our right of publishing the results; I should be the first to exchange the popelings for the pope' (*ib.* p. 161).

Lessing insisted on the distinction between Christianity and the religion of Christ:

'that which He Himself as a man recognized and practised, which every man may have in common with Him, which every man must wish to have in common with Him in proportion as the character ascribed to Christ simply as a man is sublime and lovely' (*ib.* xi. (2) 243).

In the dialogue entitled 'The Testament of John,' Lessing asks, 'Are not Christian love and the Christian religion the same thing?' (*ib.* x. 46). In his treatment of Biblical questions Lessing was very frank. He left it to others to write appreciations of the Bible, taking their results for granted. He himself set out to show that the Bible is not the only sustenance for man's spiritual life, and the suggestions which he threw out in the course of these controversial writings (which belong chiefly to the year 1778) led to those inquiries and researches which were only much later recognized as the legitimate studies of NT Canon and Early Christian History. Indeed, it was Lessing who first among the Moderns drew attention to the essential difference between the first three and the fourth Gospels (see the fragment, 'New Hypothesis concerning the Evangelists,' *Sämmtliche Schriften*, xi.).

Lessing's contributions to theological study were vividly summarized in a work consisting of a hundred propositions and entitled 'The Education of the Human Race' (*Die Erziehung des Menschengeschlechts*, 1780). Humanity is represented as passing through three stages of education. The first is that reflected in its school-book, the OT. We see there the gradual development from the worship of a patriarchal and local deity to that of one God, and the transition from the ethics of a virtue which is dependent on rewards and punishments in this life to the doctrine of the immortality of the soul, to learn which the Hebrew people had been 'sent abroad' to Babylon. The second is that in which Christ taught the eternal sanctions of righteousness in place of immediate retribution, and the NT is the school-book of this stage. Before the third stage is reached, revealed truths are to be transformed into truths of reason.

'It will come, the time of consummation, when man, however firmly his mind is convinced of an ever better future, will yet have no need to borrow motives for his conduct from that future. For he will do what is right because it is right, and not because arbitrary rewards are attached to it, which were merely intended to attract and strengthen his wandering attention, so that he might recognise its inward and better rewards. It will certainly come, the time of this *new eternal Gospel*, which is promised us already in the elementary books of the New Covenant' (Proposition 85 f.).

After remarking that each individual human being must first traverse the ground along which the race advances towards its perfection, he meets the objection that in one and the same lifetime a man cannot pass through all the stages, making the interesting, and at that time novel, suggestion of pre-existence (see Propositions 93–100). This little treatise is closely related to *Nathan the Wise* in its teaching of the relative worth of different religions, and in its insistence that each is fitted for a particular race and epoch and that none can claim supremacy over all the others.

**6. Political opinions.**—In *Ernst and Falk, Dialogues for Freemasons* (*Gespräche für Freymäuer*), published without his permission in 1780, Lessing expresses his views of society, devoting but little space to freemasonry, which should, he says, overcome all distinctions of caste and fortune, of nationality and religion. He admits a preference for natural life as opposed to the social state.

Speaking of ants, he says: 'What activity and yet what order! Everyone carries, drags, and pushes, and not one is a hindrance to the rest. See, they even help one another; . . . they have no member that holds them together and rules them; . . . each individual is able to govern himself' (*Sämmtliche Schriften*, x. 257).

But at the same time he recognizes that the good of individuals depends at present on a certain degree of organization. With no uncertain courage, considering the circumstances of the age, Lessing insists on the basis of social life in the needs and satisfactions of individual life.

'States unite men that through and in this union every individual man may the better and more surely enjoy his share of welfare. The total of the welfare of all its members is the welfare of the state; besides this there is none. Every other kind of welfare of the state, whereby individuals suffer and must suffer, is a cloak for tyranny. . . . As if nature could have intended the welfare of an abstract idea, State, Fatherland, and the like rather than that of each individual' (*ib.* x. 258).

LITERATURE.—i. Works.—*Sämmtliche Schriften*, ed. K. Lachmann, 13 vols., Berlin, 1825–28; re-edited W. von Maltzahn, Leipzig, 1853–57; and re-edited F. Muncker, 21 vols., Stuttgart, 1886–90; *Gesammelte Werke*, 6 vols., Leipzig, 1912.

ii. Translations.—*Selected Prose Works of G. E. Lessing* (*Laocoon, How the Ancients represented Death*, and *Dramatic Notes*), tr. E. C. Beasley and H. Zimmern, London, 1879; *Lessing's Laocoon*, tr. E. C. Beasley, do. 1887; *Laocoon and Other Prose Writings*, tr. and ed. W. B. Rönnfeldt, do. 1895; *Laocoon*, tr. with introd. R. Phillimore, do. 1905; *Lessing's Dramatic Works*, ed. E. Bell, 2 vols., do. 1879; *Plays of Lessing* (*Nathan the Wise, Minna von Barnhelm*), tr. R. D. Boylan, ed. E. Bell, do. 1888; *Nathan the Wise*, tr. with introd. R. Willis, do. 1867; *Nathan the Wise*, tr. E. Frothingham, New York, 1868; *Cambridge Free Thoughts and Letters on Bibliolatry*, tr. from German of G. E. Lessing by H. H. Bernard, London, 1862; *The Education of the Human Race*[4], tr. F. W. Robertson, do. 1896.

HAROLD E. B. SPEIGHT.

**LETTERS CELESTIAL AND INFERNAL.**—With the development of writing the belief arose that the gods themselves kept records of their proceedings, and thus among the Egyptians Thoth was the scribe of the gods (A. Wiedemann, *Religion of the anc. Egyptians*, London, 1897, pp. 227 f., 248), while the Indians believed Brahmā to be a writer god (cf. *Vāsavadattā*, tr. L. H. Gray, New York, 1913, p. 115), particularly the deity who writes the fate of each mortal on the individual's forehead (*brahmarekhā*).

As a natural corollary it was thought that the gods could communicate their will to man by written as well as by spoken words.

In the Egyptian *Book of the Dead*, the rubric of ch. xxx. b. states that 'this chapter was found in the city of Khemennu [Hermopolis Magna] under the feet of [the statue of] this god. [It was inscribed] upon a slab of iron of the south, in the writing of the god himself, in the time of . . . Men-kau-Rā [of the IVth dynasty] . . . by the royal son Ḥeru-ṭā-ṭā-f' [son of Cheops, the builder of the Great Pyramid] (*Book of the Dead*, tr. E. A. W. Budge, London, 1901, p. 151; cf. 221 f., 418).

In some forms of revelation the document is written in heaven by the deity. This is notably the case with the Decalogue (Ex $24^{12}$ $31^{18}$ $32^{15f.}$ $34^{1.28}$, Dt $5^{22}$ $9^{10}$ $10^{2.4}$), and the archetype of the Qur'ān is written 'on the preserved table' (*fī lauḥⁱⁿ maḥfūẓⁱⁿ*, lxxxv. 22; cf. also xiii. 39, xcvii. 1), the word for 'table' (*lauḥ*) being the one employed also in reference to the tables of the Ten Commandments (vii. 142, 149, 153; cf. the equivalent Heb. לוּחַ, Ex $24^{12}$ etc.). Mention is likewise made in the Bible of books sent down from heaven and eaten by Ezekiel and St. John the Divine, who then prophesied the contents of the volumes (Ezk $2^{9ff.}$ Rev $10^{9ff.}$). Similarly, in the Book of Mormon an angel gives Lehi a book foretelling the Babylonian Captivity (1 Nephi $1^{11ff.}$). According to the *Zôhar*, Adam, while yet in Eden, received from God a book containing, in 670 writings, the 72 sorts of wisdom, and giving the 1500 keys of knowledge—matters which were unknown even to the angels. Adam consulted this book daily till he was driven from the Garden, when it flew away from him. In pity for his grief, God caused it to be restored to him, and it was in the possession of his descendants until Abraham (J. E. Eisenmenger, *Entdecktes Judenthum*, Königsberg, 1711, i. 375 f., ii. 675).

The sacred book of the Elkesaites was believed to have fallen from heaven (Eus. *HE* vi. 38), or, according to another version, to have been brought from heaven to Elkesai by a gigantic angel (Hippol. *Refut.* ix. 8; see *ERE* v. 263ᵃ).

The belief may, however, be traced much farther back. Towards the end of the 3rd or during the 2nd cent. B.C. Menippus, a Syrian from Gadara, inaugurated the *genre* of the 'Menippean satire.' Among his productions were ἐπιστολαὶ κεκομψευμέναι ἀπὸ τοῦ τῶν θεῶν προσώπου (Diog. Laert. VI. viii. 101), and Dieterich (*Kleine Schriften*, p. 244) suggests that the non-Greek phrase ἀπὸ τοῦ τῶν θεῶν προσώπου may be a reminiscence of a Heb. מִלִּפְנֵי אֱלֹהִים. It may have been these compositions that gave another Semite, Lucian of Samosata, the inspiration for his 'Letters of the Gods.' Servius (*ad Æn.* vi. 532) mentions a certain Tiberianus who 'inducit epistolam vento allatam ab antipodibus, quae habet superi inferis salutem,' and Pausanias (x. xxxviii. 7) records that Æsculapius sent the poetess Anyte to Naupactus, bearing a sealed tablet given her by the god, to heal Phalysius, who was well-nigh blind, but who, obeying the divine command to read the tablet, received full vision again. Other instances of more doubtful interpretation might be cited, as, *e.g.*, Juvenal's phrase (xi. 27), 'e caelo descendit γνῶθι σεαυτόν,' although here the most obvious meaning is that Chilon was divinely inspired with the maxim, not that a missive inscribed 'γνῶθι σεαυτόν' was wafted to him from the sky.

Within Christianity one of the earliest mentions of a celestial letter occurs in the 23rd Ode of Solomon (tr. J. H. Bernard, *TS* VIII. iii. [1912] 97 f.; probably second half of the 2nd cent. A.D.), in which the decree of the Most High descends in a letter 'like an arrow which is violently shot from the bow.' It was 'a great Tablet, which was wholly written by the Finger of God.' The contents of this letter were apparently Mt $28^{19}$. In the Ethiopic Acts of Peter the apostle receives from Christ books 'written with His own hand . . . wherein were written the mysteries which the tongues of the children of men are neither able to utter nor to understand with their hearts, except those whose hearts are arrayed in the strength of the gracious gift of baptism' (tr. E. A. W. Budge, *Contendings of the Apostles*, London, 1899–1901, ii. 469–471). In the 4th cent. Georgian Life of St. Nino (tr. M. and J. O. Wardrop, *Stud. Bib. et Eccles.* v. 1 [1900]) the saint receives, in vision, a book from a divine visitor, its contents being Mt $26^{13}$, Gal $3^{28}$, Mt $28^{19}$, Lk $2^{32}$, Mk $16^{15}$, Mt $10^{40.38}$, Jn $20^{17}$, and two other sentences—all apparently being selected to promote Montanistic teachings.

To the category of celestial letters belongs the very interesting 'letter for hallowing Sunday,' whose history may be traced at least to the 6th cent., and which has spread, despite many efforts to check it, throughout both Western and Eastern Christendom. Although much study has already been devoted to this letter, its history is by no means clear. Its general character is thus summarized by Delehaye (*op. cit. infra*, p. 174):

'La lettre est écrite par le Christ lui-même, en lettres d'or ou avec son sang. Elle est portée sur la terre par l'archange Michel, ou bien elle tombe du ciel, à Rome sur le tombeau de saint Pierre, à Jérusalem, à Bethléem ou en d'autres lieux célèbres, suivant l'occurrence. Son objet principal est d'enculquer l'observation du dimanche. Subsidiairement, d'autres préceptes y sont recommandés. Vient ensuite une série de menaces terribles contre ceux qui mépriseront ces ordres, et assez souvent une vive protestation destinée à rassurer les chrétiens qui concevraient des doutes sur l'authenticité du document. Ordinairement, le texte du message divin est encadré d'un prologue racontant les circonstances de la promulgation, et d'un court épilogue.'

The principal specimens of this letter are as follows:

(*a*) Latin: J. A. Fabricius, *Codex apocr. Novi Testamenti*², Hamburg, 1719, i. 308–314; J. P. Migne, *Dict. des apocryphes*, Paris, 1856–58, ii. 367–369; Delehaye, 179–185.

(*b*) Anglo-Saxon: Four homilies are edited by A. S. Napier in *Wulfstan*, Berlin, 1883, a fifth by him in *Eng. Miscellany presented to Dr. Furnivall*, Oxford, 1901, pp. 355–362, and a sixth has been published by R. Priebsch in *Otia Merseiana*, i. (Liverpool, 1899) 129 ff.

(*c*) Middle English: John Audelay's poem is edited by R. Priebsch in *Eng. Miscellany*, 397–407.

(*d*) German: Delehaye, 191–193; Dieterich, 234–237, 248 f.; A. Wuttke, *Deut. Volksaberglaube*³, Berlin, 1900, p. 178 f.; L. Strackerjan, *Aberglaube und Sagen aus dem Herzogtum Oldenburg*, Oldenburg, 1868, i. 59 ff.; K. Bartsch, *Sagen, Märchen und Gebräuche aus Mecklenburg*, Vienna, 1879–80, ii. 341 ff.; U. Jahn, *Hexenwesen und Zauberei in Pommern*, Breslau, 1887, p. 40 ff.; F. Closener, *Strassburgische Chronik*, Stuttgart, 1842, pp. 89–95; *Chroniken der oberrhein. Städte*, Strassburg, i. (Leipzig, 1870) 111–116; M. Haupt, *Altdeut. Blätter*, ii. (do. 1840) 241–264.

(*e*) Icelandic: J. Arnason, *Íslenzkar þjóðsögur og æfintýri*, Leipzig, 1861–64, ii. 53–55.

(*f*) French: Delehaye, 194–196; an unedited O. Fr. text is mentioned by Priebsch, *Eng. Miscellany*, 397.

(*g*) Celtic: E. O'Curry, *Lectures on the MS Material of anc. Irish Hist.*, Dublin, 1861, p. 663 (referring to *Leabhar Lecain*, do. 1896, col. 217); P. W. Joyce, *Soc. Hist. of anc. Ireland*,

part of which Pope Clement VI. (1342) ordered to be translated into Latin; and he is mentioned by Reuchlin and Keppler. Further, he was the real discoverer of the *baculus*, or 'Jacob's Staff,' an instrument for measuring angles and distances on the earth and in the spheres—a discovery which has been attributed to Regiomontanus. He also invented the *camera obscura*, in order to be able to find out the relation of the radii of the sun and the moon to the radius of a circle, to measure the size of the eclipse of these two bodies, and to ascertain the relation of the diameter of the whole body to that of the part obscured. He laid down these results in his *Luḥôth ha-t'kunnāh* ('Astronomical Tables'), incorporated in the fifth part of the *Milḥāmôth*. This was 200 years before Leonardo da Vinci and Porta.

2. Philosophy.—Levi's philosophical system is contained in his *Milḥāmôth Adhônai* ('Wars of the Lord,' Riva di Trenta, 1560, Leipzig, 1866). His controversy with Maimonides centred about the creation of matter and the immortality of the soul. In order to posit God's interference in natural phenomena and to form a basis for the existence of miracles, Maimonides had denied the eternity of matter, while he had not proved the possibility of individual immortality. Levi held opposite views; but, in order to justify his standpoint, he found it necessary to explain the physical and metaphysical theories upon which his idea of the co-eternity of matter with God was based. The *Milḥāmôth*, which is in six parts, covers the whole ground of natural philosophy, metaphysics, and theology in the following order: theory of the soul; prophecy; God's omniscience; providence; astronomy, physics, and metaphysics; Creation and miracles.

According to Levi, the basis of human intellect is in reality the imaginative soul, something akin to the animal soul. This human intellect is moved to action by the universal intellect; when joined to the acquired ideas and conceptions, it becomes the acquired intellect. This acquired intellect is made up of universals; and Levi holds, with the realists, that such universals have a real existence. It is therefore possible that the acquired intellect may continue to exist after death, thus affording us a philosophical basis for the theological doctrine of the immortality of man. In a similar manner he lays the foundation for the belief in prophecy by connecting the rational faculty in man, which then comes into play, with the universal intellect. Prophecy is thus differentiated from divination, in which the imaginative power in man is, so to speak, the receiving instrument, and to whose workings no certainty can be attached. Maimonides had based his theory upon the imaginative side of the human mind and upon the will of God, without attempting to explain the psychological process. Levi, on the other hand, demands moral as well as intellectual perfection in the prophet.

There are three grades of superhuman forces—the planetary intelligences, the active intellect, and the primary cause of all, God. God's existence is proved by the phenomena of creation; and His oneness is deducible from the evident hierarchy in the forces that move the universe. The planetary intelligences are made up of the spirits of the stars, which are to be thought of as immaterial bodies swinging in recurring periods in the world harmony. There are forty-eight such sphere intelligences and eight astral ones, corresponding to the forty-eight spheres and the eight planets. No one of the sphere intelligences can be—as Averroes supposed—the primary cause, since they affect a part of the universe and not the whole. In contradistinction to Aristotle, Levi holds that the world had a beginning, since neither matter nor motion is infinite; but, like the heavenly bodies, it has no end. At creation, matter was inert and undetermined. Form and various attributes were given to it by God, but the diverse separate intelligences proceeded directly from the Divine Being. Miracles do not proceed from the Deity, but from the active intellect. Natural laws are of two kinds: those governing the heavens, upon which sublunary phenomena are dependent, and those governing the active intellect. Miracles are natural events, and are meant to act as a counterpoise to the inflexibility of the celestial bodies. According to Levi, there is a definite analogy between the knowledge of God and that of man; but there is a clear distinction to be made between them. God's knowledge extends over all the cosmic laws of the universe, and over the influence exercised upon sublunary things by the celestial bodies; but He does not know the details of what happens in the sublunary world. This explains the possibility of the freedom of the will, which does not in any way derogate from God's omniscience or imply any imperfection in Him, as He knows all that is essential.

God's providence does not extend to every individual, as Maimonides had supposed; nor does it deal only with mankind as a whole—the theory of Aristotle. Levi strikes a middle course, and holds that some human beings are under a general providence, others under a special, and that the quantity of special providence meted out to any individual is in direct relation to the scale in creation which he has reached—*i.e.*, to the degree of nearness to the active intellect attained by him. The solicitude of this special providence, appreciated only by beings of the highest perfection, manifests itself in a warning to avoid evil influences emanating from the celestial bodies, all of which are regulated by eternal laws known to the Deity.

These philosophical and metaphysical doctrines are found again in Levi's commentaries on various books of the Bible, written between the years 1326 and 1338—notably in those on the Pentateuch and the Former Prophets—and they have even been excerpted and published in separate form under the title of *Tô'ălīyôth* (Riva di Trenta, 1550–64). In addition to these he wrote comments on Job, Daniel, Proverbs, Canticles, Esther, Ecclesiastes, and Ruth. Levi's explanations are quite consciously two-faced. He is perfectly well aware of the literal meaning of the text, which he explains with lucidity and clearness, following in many cases Ibn Ezra; even miracles, *e.g.*, he explains in a natural sense. But behind this literal meaning he sees a philosophical and historic sense, which he deduces out of the text with great skill. He also finds his scientific principles rooted in the Bible—on the theory that all knowledge is one, the separate parts of which cannot contradict each other.

This philosophic bent of mind is likewise seen in his works on pure science. He believed himself to be an absolute rationalist, and held that no problem was insoluble to man. He even dared to explain geometric axioms. His work on arithmetic (*Ma'ăsēh Ḥôshēbh*) differs from that of Ibn Ezra, which may be said to be dogmatic and mechanical, in that it attempts to build up a theoretic system founded upon an algebraic basis taken from the elements of Euclid. The same spirit is shown in his tract *de Numeris harmonicis*, dealing with a question in algebra put to him by Philip of Vitry, Bishop of Meaux. Levi was also one of the first writers in Europe to study trigonometry, and he worked out a commentary on the first five books of Euclid.

*Juden*[2], Berlin, 1892, pp. 424–496). But, in the centuries preceding the age of Reform, sermons were rare in synagogues, being usual only twice a year, and then the language employed by the preacher was either some form of Hebrew or a dialect, such as Yiddish. The establishment of regular sermons in the pure vernacular and the fuller organization of religious education for the young, especially as regards girls, are among the most important changes which the modern conservative synagogue owes to the liberals. Again, the introduction of the organ and the employment of vernacular prayers and hymns were further stages in the Reform movement (1810), which, on the whole, sought to 'æstheticize,' or, as some have ineptly expressed it, to 'de-orientalize,' the synagogue services.

But there was a deeper principle at work, and, as time went on, the Reform movement, attaching itself to such views as that of Maimonides that the Pentateuchal sacrificial system was a concession to the weakness of early Israel, sought to remove the liturgical prayers for the restoration of the sacrifices and also for the physical resurrection and return to Palestine, without, however, surrendering the belief in immortality and in the Messianic Age. Liberal Judaism has always tended to a firm grasp of Messianism, in the form of a belief in the perfectibility of human nature, of a steady advance towards that end, and of the ultimate conversion of the world to monotheism, and the establishment of the universal Kingdom of God.

Much anxiety was presented by the Saturday Sabbath, and since the beginnings of Reform the problem has grown in difficulty. Economic pressure among the working and professional classes, as well as laxity and assimilation among the more wealthy and leisured circles, has led to a weakening of the seventh day sabbatical rule among conservatives as well as among liberals. No real solution has been found, for, while Sunday services have been established in some liberal Jewish congregations of Germany and America, there has been very little desire or attempt to transfer the Sabbath from Saturday to Sunday.

Reform in Judaism entered on a new and more fertile phase under the inspiration of Abraham Geiger (1810–74). He was one of the leading representatives of the new learning—of the 'science' of Judaism, to use the phrase often applied to it. His writings were of great significance; indeed, his *Urschrift* (Breslau, 1857) is a work which is becoming more and more appreciated as a contribution to Biblical and historical criticism. But, though Geiger was possessed of a 'historical temper'—to use E. G. Hirsch's phrase—he did not, as the 'Breslau' school of Jewish thought tended to do, separate his criticism from his creed. Just because he conceived of Judaism not as a given quantity but as a process (*JE* v. 586), Geiger recognized the necessity of making that process harmonious. His whole struggle for Reform was based on his sense that thought and religion must be syncretized, not put into separate compartments. Some very sincere and very great Jews of the Breslau School were able to discriminate between intellectual and practical freedom, but Geiger could not arrive at critical results in his study and go on with religious conformity as though nothing had happened to compromise the sanctions on which conformity was based. The same attitude towards sanctions and their influence on life is at the root of the liberal Judaism of our own time.

Parallel with this was the conviction among certain Reformers that it was necessary to return to the Bible in order to purge Judaism from Rabbinism. This tendency was shown in the discussions of the French Sanhedrin, summoned by Napoleon in 1806. So, too, when the first Reform synagogue was opened in England (1842), the authority of the 'Oral Law' was repudiated, while, as D. W. Marks, the minister of the new congregation, put it, in his sermon published on the occasion, 'for Israelites there is but one immutable law, the sacred volume of the scriptures, commanded by God to be written down for the unerring guidance of his people until the end of time.' Similarly, Isaac M. Wise (1819–1900), the great organizer of Jewish Reform in the United States of America, and the founder of the famous Hebrew Union College of Cincinnati, strenuously maintained the older view of Biblical inspiration; to the end of his life he upheld the Mosaic authorship of the Pentateuch, as in his *Pronaos to Holy Writ* (Cincinnati, 1891). But this easy discrimination between 'Mosaism' and 'Rabbinism' was not tenable when the newer Biblical criticism affected the synagogue. Geiger had been a 'higher critic' not only of Rabbinism but also of Mosaism. Similarly, Zunz (1794–1886) was not only a pioneer in the criticism of the Midrash; he was also a leader in the criticism of the Biblical text which the Midrash expounded. For some time, however, a half-way house was built by those who, while firmly holding by the authority of the Bible, denied the authority of tradition. But the house constructed with so much care proved an ephemeral lodging for the new Judaism. And this for two reasons. Whereas the older confident view as to Biblical authority was undermined, the newer repudiation of tradition was equally felt to be ill-founded. Mystical theories, not always consciously recognized as mystical, have invaded all forms of religion, and Judaism at present is much infected by mystical conceptions. Liberal Judaism, feeling itself bound to assert that not all the Bible is of God, became equally assured that not all the tradition is of man. It believes in a spiritual continuity of the ages, and regards the whole of the Jewish revelation as a spiritual experience, which links together all generations of Jews, including the present generation. It is not, however, necessary to insist on this way of describing what has happened. It can be expressed rationally by the assertion that criticism has tended to prove that, just as documents grew up from traditions, so traditions may have the validity of documents. Hence it is becoming usual now to speak of 'liberal Judaism,' whereas in former generations the favoured term was 'Reform Judaism.' Liberal Judaism in a real sense bases itself on the Scriptures. It may be described in general terms as a direct resumption of the prophetical Judaism. But it regards the Talmud as often a real advance in religious and ethical teaching, and therefore has the warmest affection for the Talmud as the expression of certain important aspects of the Jewish genius. Thus liberal Judaism, though necessarily denying the validity of any book whatever as a final authority in religion, is strongly placed by its very power of eclecticism. It has not yet formulated a precise theory as to its relation to the idea of Law. But it is coming to accept the theory of progressive revelation in a manner which must eventually become interpretable in objective, communal, and therefore more or less legalistic, terms.

It is unnecessary to discuss more fully the tenets of liberal Judaism, because in most fundamental principles it is at one with conservative opinion. Liberal Judaism shares the belief in the absolute unity of God, in the revelation of God to man, in human responsibility, in immortality, in the call of Israel to teach the universal Fatherhood of God, in the pragmatic sufficiency of righteousness for salvation to all men despite differences of creed,

and in the ultimate triumph of right throughout the world. Liberal Judaism, however, more consciously upholds the universalistic character of the religion, and lays more stress on the fundamental principles than on their expression in ceremony and institution. It allies itself specifically to the teaching, or rather to the spirit, of the Hebrew prophets, who made their appeal to the great truths of religion and morality, and who held that these truths can be brought to bear directly on the life of humanity. But liberal Judaism maintains, as strongly as does the older Judaism, that spirit and letter, prophet and priest, are not antithetic. Hence, although some individual liberal Jews are now expressing appreciation of parts of the NT, liberal Judaism does not acquiesce in any general condemnation of Pharisaism apart from the abuses to which every organized system is liable. On its part, while reducing considerably the number and details of ceremonial observances, and while leaving even such important ritual as the dietary laws a matter for individual choice, liberal Judaism accepts and maintains the idea of ceremony as valuable for enforcing the religious life in the synagogue and for sanctifying the home. Hence the Sabbath, and great festivals, and a number of other public and family rites are lovingly retained. The very fact that this can be done without the ritual precision marking the observance of the same rites in the older Judaism is tending to revive many beautiful customs, full of significance for the historical continuity of religious experience, and possessed of spiritual value, which modern conditions of life were weakening or destroying. It may be said, in conclusion, that liberal Judaism applies to ceremonies the test of present values. It believes in the retention of whatever of the past has vital value in the present or promises a renewal of value in the future.

LITERATURE.—D. Philipson, *The Reform Movement in Judaism*, New York, 1907 (a complete history of the movement with many quotations, and full references to the earlier literature on the subject); C. G. Montefiore, *Liberal Judaism*, London, 1903, *Outlines of Liberal Judaism*, do. 1912; *Richtlinien zu einem Programm für das liberale Judentum*, Frankfort, 1912 (an important series of declarations which are the basis of the liberal revival in Germany now in progress); volumes of the annual *Year Books* of the Central Conference of American Rabbis (the meeting in Detroit in 1914 was the 25th of the series); *Jewish Addresses*, London, 1904, and other publications of the Jewish Religious Union, London.

I. ABRAHAMS.

**LIBERTARIANISM AND NECESSITARIANISM.**—I. *THE CONTROVERSY AND ITS METHODOLOGY.* — Libertarianism[1] is misrepresented by necessitarians; necessitarianism is misunderstood by libertarians. So we find it urged by writers on either side of this discussion, and even a moderate acquaintance with the relevant literature substantiates both these charges. This is not due to wilfulness, but arises partly from the ambiguity of language which is unequal to the subtlety of nature, though mainly, as we shall see, from the intrinsic difficulty of the problem itself.

'Both parties commit themselves to a confusion which arises from language, and which is due to the fact that language is not meant to convey all the delicate shades of inner states' (Bergson, *Time and Free Will*, p. 160). 'Facts must be described in some way and therefore words must be used,' as B. Jowett reminds us (*Interpretation of Scripture and other Essays*, London Library Series, n.d., p. 526), but 'always in philosophy with a latent consciousness of their inadequacy and imperfection.'

It is therefore necessary to analyze terms like 'cause,' 'motive,' 'character,' which play such an important rôle in this discussion; for we must make sure that the question is not a logomachy, but a real one.

Thus the term 'causality' is allowed by custom, 'the arbiter of language,' to embrace many meanings. The scientist means by it uniformity of

[1] The term, according to Thomas Reid, was introduced into hpilosophy by Alexander Crombie (1760–1842).

sequence, and objects to any other meaning. Now it is clear that, if this is a full account of causation, libertarianism in any sense is meaningless. For to seek the cause of a moral action in the past is to desert the moral standpoint, and is vetoed by the moral consciousness. Moreover, causality as uniform sequence seems to be full of contradictions. There are uniform sequences which are not causally connected, as the conjunction of night and day. Again, uniform sequence lands us in an infinite regress. The intellect which meant to satisfy itself by going one step back is urged to go back for ever. When we come to man, however, we find, or seem to find, a 'cause' which is intelligible in itself. We know *why* we act in some cases; it is because we have purposes which we wish to realize, ideals by which we guide our actions. It may not be possible to explain *how* we act, because activity is an ultimate element in our experience, just as we cannot say how we think, but *cogito ergo sum*. Man, then, appears to himself the principle of his own movements; here the cause is immanent and efficient. And he guides himself by ideas; here the cause is final. At first men applied 'cause' in this full sense to the world of nature, as we still do in ordinary speech.

'Savages wherever they see motion which they cannot account for there they suppose a soul' (G. T. F. Raynal, quoted by T. Reid, *Essays on the Powers of the Human Mind*, 3 vols., London, 1822, iii. 269).

As time went on, this rich view of causality as applied to nature became eviscerated. Final causes were fruitless, efficient cause was useless, the regularity of sequences sufficed. No one can deny that this was a gain, that superstition and magic thus received a death-blow, and that nature was examined with greater impartiality and rewarded the patient student. It is, however, questionable whether this view is rightly termed causality at all, for what is it but an attempt to understand a change without beginning or end, an attempt which succeeds only because it has the instinct to stop somewhere and to take just as much of the change as it pleases? A change, however, can never explain itself, and it certainly cannot explain the subject who is conscious of it or the moral agent who thinks—rightly or wrongly—that he can direct it in accordance with his aims. In discussing freedom we must ask which view of causation is the most satisfactory. It will not do to foreclose the question off-hand by a bigoted adherence to uniformity of sequence as alone possible or exhaustive. If we remember this looseness in the use of the term 'cause,' we are saved from initial confusion and from the arrogance of gratuitous assumptions. To say that a human action is 'caused' does not in any way inform us as to the kind of causation implied. The rashest libertarian may use the term without committing himself to determinism.

'The circulation of the blood is not the cause of life in the same sense that a blow with the hammer may be the cause of death, nor is virtue the cause of happiness in precisely the same sense that the circulation of the blood is the cause of life. Everywhere as we ascend in the scale of creation from mechanics to chemistry, from chemistry to physiology and human action, the relative notion is more difficult and subtle, the cause becoming inextricably involved with the effect and the effect with the cause, every means being an end and every end a means. Hence no one who examines our ideas of cause and effect will believe that they impose any limit on the will. They are an imperfect mode in which the mind imagines the sequence of natural or moral actions; being no generalization from experience but a play of words only. The chain which we are weaving is loose, and when shaken will drop off. External circumstances are not the cause of which the will is the effect, neither is the will the cause of which circumstances are the effect. But the phenomenon intended to be described by the words "cause and effect" is itself the will whose motions are analysed in language borrowed from physical nature' (Jowett, *op. cit.* p. 526).

Occam's razor[1] is no doubt a useful instrument

[1] 'Entia non sunt multiplicanda praeter necessitatem.'

for certain purposes, but it can be abused, and it is abused when causality is shorn till nothing is left but uniform sequence.

Further, in our use of the term 'motive,' we ought to remember that motives do not act on a person as forces act on a body. While it is true that in deliberation, which is mainly intellectual, we have something metaphorically similar to the placing of weights in a balance, yet this is a metaphorical resemblance only, and in real action the decisive elements are preference and value, and these emerge from the living person himself. Motives are movements of the subject as well as movements on the subject. The subject acts on its own affections.

'We must reject also the idea that our motives are fixed and given quantities which operate within the soul like weights on a pair of scales, thus effecting a decision. Must all conduct result from given motives—cannot new motives arise from inner transformations of life? And, moreover, must not the soul continually assign fresh values to the motives?' (Eucken, *Main Currents of Modern Thought*, p. 439, footnote).

If moral activity is real, then we cannot speak as if a decision was a resultant compounded of many different forces acting on one centre; we find rather that one course of action is preferred by a person and acted on. The rejected proposals do not enter into the action as in the case of mechanical resultants. In fact they may even strengthen the preferred activity—by rousing the subject to greater effort. It is often said that the strongest motive always prevails, but, if this means that the motive which prevails is always strongest, we have an identical, and so a useless, proposition. If it means, as most ordinary people take it to mean, that our reason always obeys our passions, that, in Bentham's phrase, 'nature has placed man under the empire of pleasure and pain' (*Principles of Morals and Legislation*, London, 1789, ch. i.), then it is not true. While men act largely from passion, they need not do so; and, indeed, to most people, as Lecky points out, 'the reality of all moral freedom ultimately depends' on the distinction between our will and our desires, on what Reid in his able discussion on this point calls our animal and our rational natures (W. E. H. Lecky, *Eur. Morals*[6], London, 1888, ii. 123; Reid, *Essays*, iv. ch. 4). It is just because a mechanical view of motives is tacitly assumed as true that so much confusion arises. J. S. Mill failed to distinguish properly between desire and will for this reason (see A. C. Pigou, *The Problem of Theism*, London, 1908, p. 79); and, when T. H. Green says: 'but he being what he is, and the circumstances being what they are at any particular conjuncture, the determination of the will is already given, just as an effect is given in the sum of its conditions' (*Works*, London, 1906, ii. 318; cf. *Prolegomena*, Oxford, 1883, p. 126), we feel that in the last clause he has given up his own standpoint and descended into another genus of thought. No one has done more to explain the real nature of motives than Green, and perhaps this is an unfortunate lapsus. Libertarians have probably fastened on this and the corresponding sentence in the *Prolegomena* with too great avidity. Green not only recognized, but enforced and carried through all his moral reasonings, the difference between motives and the solicitations of desire. While we admit, then, that moral action depends on motives, we do not by this admission decide the question of freedom either one way or another. We have still to ask what the nature of this relation is.

Again, no term is more abused in this discussion than 'character' (see Eucken, *op. cit.* p. 422 ff., and art. CHARACTER, vol. iii. p. 364 f., for the various meanings of this term). While the determinist tends to look on 'character' as fixed at each stage, its growth depending on the interaction between it and circumstances also fixed, the indeterminist sometimes speaks of the will as acting independently of the character; and so in the former case we have character explained as mechanical, and actions looked on without regard to any real activity of the subject, while in the latter case we have a subject with no content. But, in reality, what we have is a subject possessing a character which has to be conserved or bettered in the midst of circumstances. We have a subject conditioned by its object but relatively independent of it. This 'character' is not fixed at any point, nor are these circumstances unalterable. Circumstances and character are not indifferent to the subject, nor does the subject act otherwise than through them. But, if the subject could not act teleologically on them and through them, there would be no moral life at all. There is a seeming paradox in all self-control or self-denial, as Plato saw, but it is a paradox explicable only on the ground that personality is a potential infinite under self-imposed moral government.

If 'character' be used in a sense which gives no future to man, which forgets that man does not grow simply as a plant grows, but that he draws on the future also for his spiritual sustenance, then Martineau and others are justified in drawing some distinction between the 'self' and the 'character.' In fact, some such distinction is used in every philosophical system which recognizes that man can obey ideals and an 'ought' which is higher than 'is.'

'With regard to moral laws, experience is (unfortunately) the mother of pretence, and it is in the highest degree reprehensible to allow laws relating to what I ought to do to be determined or limited by what is done' (Kant, *Works*, ed. G. Hartenstein, Leipzig, 1867–68, iii. 26).

In regard even to the past there is a very true sense in which a spiritual being like man can be said to create it. He selects from it, and reacts upon it. If the self is treated as fixed, *i.e.* if its future determinations are calculable, if any dubiety on this head is held to be owing to our imperfect knowledge, then we are unconsciously falling back on a biological view of the self. This may be done in the interests of our ideal freedom, as by certain Hegelians; but there is the danger that by so doing we are destroying the very possibility of this ideal freedom itself. In discussing the question of freedom, the phrase 'self-determination' or 'determination by character' may be used in a way that ignores the very possibility of freedom. We do not solve the question by the phrase 'self-determination' or 'self-realization.' We need to examine what this self is, and what is the nature of the determination.

We are thus led to the conclusion that the misunderstanding between the two parties is deeper than language, that it is inherent in the problem itself. The question of freedom is but a specific way in which different theories of life conflict. The controversy is like a combat between two representative champions, on the issue of which the fate of armies depends. That is what gives the problem its perennial interest and importance, and makes it so difficult of solution. It is true, as Eucken points out, that in recent times more than in the past the solution of the problem is attempted through an analysis of experience (*op. cit.* p. 433), but the problem cannot be solved on that arena alone; it is mainly a philosophical and theological question. The wider issues emerge sooner or later on whatever plane we attempt a solution. Freedom may be taken as the touchstone of every philosophical system. To explicate a theory from this standpoint is to come face to face with its real implications.

'If there be anything obscure and difficult in philosophy we are sure to find it in that part which treats of Elections and

machine of nature, nor mere points through which God irresistibly acts. May it not be the case that nature itself is more friendly to us than we imagine, that its stability is a training-ground for growing men to learn their powers, and carry out their purposes, and God Himself our very life whose unchangeable nature gives independence to our dependence, and whose perfect freedom and moral relations to us alone supply the transition by offering us the power by which we can be freed from our self-delusion and our moral thraldom? The great objection to this view is that we get something 'de novo.' But is that not just the whole claim of morality, that the present be not simply projected into the future, but that a new and a better world be created? For Christianity, at any rate, the possibility of new creatures and of a new world is basal. What a moral law, an 'ought' above the 'is' of character, implies is that this requirement is morally more reasonable than a mere re-arrangement of the existent. We need not be afraid of those who cry 'chance.' For there is so much unreason and absurdity, so much cruelty and evil, in the world that we welcome even 'chance' if it opens a door to their abolition. That this could be possible without the dangerous gift of free power we cannot conceive. But so imperative is the need of betterment that even this dangerous method is welcome. Nor need we be concerned that thus the peace of the absolute is destroyed. The only Absolute for which Christian men care has, if certain tales be true, sacrificed His own peace and more to make it possible for men to obey their conscience and be fellow-workers with God.

LITERATURE.—The literature on this subject is well-nigh unlimited; see the selection given in *DPhP*. Recent discussions are found in J. Ward, *Realm of Ends*, Cambridge, 1911; H. Bergson, *Time and Free Will*, Eng. tr., London, 1912; R. Eucken, *Main Currents of Modern Thought*, Eng. tr., do. 1912; F. C. S. Schiller, 'Freedom and Responsibility,' in *Oxford and Cambridge Review*, 1907, p. 41 ff.; Andrew Seth, *Two Lectures on Theism*, Edinburgh, 1897; Norman Pearson, *Some Problems of Existence*, London, 1907; Bertrand Russell, *Philosophical Essays*, do. 1910; Borden P. Bowne, *Personalism*, do. 1908; C. B. Upton, *The Bases of Religious Belief* (*HL*, 1893), do. 1894, *Dr. Martineau's Philosophy* (with Introductory Essay), do. 1905; Oliver Lodge, *Man and the Universe*, do. 1910; James Lindsay, *Recent Advances in Theistic Philosophy of Religion*, do. 1897, ch. xiii.; G. F. Barbour, *A Philosophical Study of Christian Ethics*, do. 1911, ch. x.; see also art. FREE WILL.

DONALD MACKENZIE.

**LIBERTY** (Christian).—In this article no attempt is made to deal with the philosophical problems of free will and determinism, nor with the relation of free will to predestination or causality; the reader is referred to the artt. specifically treating of free will under its metaphysical and speculative aspects (see artt. FREE WILL, LIBERTARIANISM AND NECESSITARIANISM, PREDESTINATION). Of recent writers on Christian ethics Haering, *Ethics of the Christian Life* (see pp. 76–95), may be consulted for a discussion of the free will as a presupposition of Christian morality, and in particular in its relation to conscience as viewed from the Christian standpoint.

By the Biblical writers the fact of human free will is assumed, like the existence of God. Free will in its absolute sense belongs alone to the unconditioned being of the Deity, but on the moral side man is at once free and responsible. In Ezk $18^{1-4}$ the idea of irresponsibility as a deduction from heredity is vigorously combated: 'the soul that sinneth it shall die.' Man, who is created in the Divine image, is a partaker of the Divine nature, and his freedom is the reflex of God's. When we pass into the atmosphere of the NT, we discover that personal free will is an axiom in the teaching of our Lord and His apostles. We may therefore fitly consider the following aspects of the subject.

**1. Christian liberty as a religious experience.**—The religious life in our Lord's interpretation is a filial relationship with a Heavenly Father, and therefore a life of liberty. It consists in love to God and to man. When hatred, rancour, and resentment, on the one side (Mt $5^{44f.}$), and needless anxiety in relation to material things, on the other (Mt $6^{31-34}$), have been expelled from the soul, we are then truly the sons of our Father. The submission of children to the Father above is not a surrender of liberty, but its noblest prerogative; in fact, freedom in the Christian sense is simply obedience to that which we most truly and deeply love and venerate. Freedom is attained by self-conquest, by victory over unrighteousness, of which the penalty is self-contempt and unrest. 'Come unto me . . . and ye shall find rest unto your souls' (Mt $11^{28-30}$) is a promise of freedom. Self-denial, therefore, to Jesus is a privilege, not a loss; the taking up of the cross (Mt $10^{38}$ $16^{24}$, Mk $8^{34}$, Lk $14^{27}$), which looks like the loss of liberty, issues in moral emancipation.

This general view of religion explains our Lord's attitude towards the Mosaic Law, which is a conspicuous feature of His teaching alike in the Synoptic and Johannine narratives. He does not, of course, countenance an antinomian contempt of moral restriction, nor does He proclaim exemption from the Moral Law. In so far as the Mosaic Law enshrines the eternal principles of morality, it is worthy of all reverence; it is not superseded, but only consummated, by the 'New Commandment' of our Lord's teaching. On the other hand, in the course of time the Law had been marred by accretions of interpretation which tended to lay the emphasis on vexatious minutiæ of custom and usage, and elevated practices of cleanliness and health to an unnecessary prominence, with the result that trivial and secondary regulations were deemed as sacred as the original enactments. The letter of the Law was punctiliously observed by the pious Jew in the hope of propitiating God. Obedience to the outward regulation tended to cloud the finer powers of the inner life and to produce a distorted sense of the relative value of given acts. Hence our Lord's pronouncements on the unwashen hands of the disciples (Mt $15^{20}$, Mk $7^{2}$) and on the proper view of the Sabbath as 'made for man' (Mk $2^{27}$) are to be regarded as examples of His method of interpreting the nature of Christian freedom. He substituted great principles of action for minute and arbitrary regulations supposed to be binding at all times and under all circumstances. He superseded definitions of duty—*e.g.*, our duty to our neighbour in the parable of the good Samaritan—by a commandment 'exceeding broad,' namely, the law of love.

It is obvious that this view of liberty receives its crowning illustration and its binding force from His own manhood. If we take such statements as Jn $4^{34}$ $5^{30}$ $6^{38}$ as summing up the character of His own religious experience, we discover that self-will in His judgment is no freedom; the true freedom for Him was 'to do the will' of His Father. Moreover, His sinlessness is the supreme argument for His conception of freedom and the reality of His power to liberate humanity from the power of sin. These ideas are clearly expressed in His discourse to 'those Jews which had believed Him' (see Jn $8^{31-36}$). Professing, as 'the seed of Abraham,' that they had never suffered the extreme penalty of domination by their conquerors—a proud boast and substantially true in so far as the preservation of their racial identity was concerned—they had overlooked the true principle of freedom, which was in effect freedom from the bondage of sin. Moral emancipation was the *real* freedom (free 'essentially,' *ὄντως* [$8^{36}$]) in our Lord's view. 'The

an exaggerated asceticism which in some sections of the Church resulted in the advocacy of celibacy, in aversion to mixed marriages (1 Co 7[12f.]), and even in hostility to such spiritual manifestations as 'speaking with tongues,' which recalled the excitements of pagan cults. In holding the balance between such opposing tendencies, neither of which did justice to the gospel as a whole, St. Paul had a difficult task. He sympathized with the moral vigour of the one and the moral earnestness of the other, and resolved the antinomy by the proclamation of Christian love as the supreme law of conduct and the sovereign *charisma* (1 Co 13). Christian liberty is always to be humanized, corrected in its exercise even where legitimate, and modified in the doing of what is morally indifferent by the spirit of love, which teaches the Christian not so much to stand upon his rights as to consider the interest of others. Such *ἐπιείκεια* (Ph 4[5]), or 'sweet reasonableness,' is not a weak concession to human infirmity, but a virile demonstration of tenderness and charity. It was in this sense that the Apostle himself 'became all things to all men' (1 Co 9[22]) that he might save some. He was ready to sacrifice liberty to the claims of brotherhood; and this was the new contribution which Christianity made to the ethics of the ancient world: it superseded or (perhaps it would be more correct to say) consummated the ethics of self-realization by the ethics of self-sacrifice.

Christianity therefore condemned libertinism as an offence against the common life of humanity. The 'liberty of indifference'—of doing what one likes—is rejected by the Christian ethic as an illustration of that *ἀνομία* which is sin (1 Jn 3[4]). Undoubtedly the interpretation of liberty against which St. Paul and later teachers protested (cf. Irenæus, *adv. Hær.* I. vi. 3, quoted by von Dobschütz, p. 270, for an account of the practices of Valentinians, curiously parallel to those of the Corinthian Church) was a mark of immaturity in the early Christian communities, due to an exultant sense of a new unrestricted life; but the influence of Gnosticism, with its dualistic separation of spirit and matter, must also be taken into account as explanatory of the repeated appearances of libertinism in the primitive Church. On the other hand, the antagonism between flesh and spirit is inherent in human nature; even when sublimated into the convenient distinction of Hebraism and Hellenism, the one standing for righteousness, the other for freedom, the two tendencies represent a fixed duality in the moral and intellectual evolution of the race. Now one element and now the other holds the sway in the life of the individual and of the community; and no one who reads the history of the Church can be blind to the fact that in given periods one of the two has exercised the greater influence and created the type of religious witness which is associated with particular epochs. After the dark ages the Renaissance represents the revival of Hellenism; and to mediæval laxity in religious and social life succeeds the Reformation, which is the triumph of Hebraism. The swing of the pendulum from Puritanism to the excesses of the Restoration in England illustrates the fact that there are recurring reactions in national life which inevitably affect the ethical standard alike of Church and society. It is clear also that the conception of Christian liberty, always subject to the expansions of a virile intellectual or rationalistic consciousness, is bound to suffer restriction and limitation during a reaction to Puritanism of life and morals; and, when the Puritan wave has spent itself, human nature re-asserts itself in a desire to regain its lost or curtailed liberty of action. Thus in all ages of the Church the question of accommodation to the habits, customs, and recreations of secular society has to be faced by the individual Christian, and in the solution of the difficulty two opposite tendencies, parallel with those in the Corinthian Church, have always made themselves felt: we should now call them the broad and the narrow view. In the present age, when we have reached a pitch of civilization in which the resources of the natural universe are placed at the disposal of mankind to an extraordinary extent and the facilities of intercommunication, luxury, and amusement are multiplied for all sections of society, Christianity is still represented by the double ideal—the one proclaiming the width of the Christian freedom, the other its self-restraint and self-limitation. Take, *e.g.*, the attitude of the modern Christian to the theatre. This is but a repetition, under another set of conditions, of the problem which the early teacher of Christianity had to face. With all our advance in moral insight, our larger views of life and destiny, we have not yet superseded the ethical principles which served as a guide to St. Paul. The individual conscience still has to weigh over against the undoubted fact of Christian liberty the influence of the personal support of certain customs or institutions not wholly moralized, and, under certain circumstances, actually immoral, still has to take into account the effect of the exercise of liberty, in matters morally indifferent, upon others not so clear in their moral vision nor sufficiently strong to meet the demands of a new temptation, as well as upon those belonging to the same community whose conscience is sensitive. At the same time, it is clear that a policy of self-isolation on the part of the Christian in regard to the defective and degrading tendencies of given recreations leaves the latter as they are; and to many Christians who interpret liberty in the wider sense consideration of the public good is paramount in determining their attitude in the matter of supporting the drama or otherwise. The law of love is not less binding to-day than in the earlier ages of the Church. It may even be argued that the developed sense of human solidarity and brotherhood, in itself the offspring of Christianity, is educating the Christian conscience to solve all such questions of conscience by a reference to the good of the community as a whole. Yet even the love of humanity, which is but another aspect of the love of God, is determined in practice by our ethical conception of the *summum bonum* for humanity; and here the Christian ideal, more especially in relation to art, differs *toto orbe* from the cult of realism popular in many quarters to-day, which is based on the theory of 'art for art's sake,' regardless of the effect on public morality. Art enriches the common life only when regarded as 'a revelation of a deeper truth in things.'

'If it is taken merely *as* art, merely as a beautiful dream, it sinks into play, becomes a mere refined amusement, and loses all its real power over the human spirit. There could hardly be any worse sign of an age than that it regards art as a mere amusement, as a mere escape from the graver problems of life' (J. S. Mackenzie, *Manual of Ethics*[4], London, 1900, p. 443).

'All things are yours' (1 Co 3[21]) is indeed the noblest charter of Christian freedom, but only when interpreted in the light of the succeeding words, 'ye are Christ's.' The possession of worldly treasure—literary, scientific, commercial, territorial—involves for the Christian in personal union with a Divine life a clear perception of the eternal amid the transitory, the unseen amid the temporal: his citizenship is in heaven; his real life lies in that ideal world which gives meaning, beauty, and power to the world of phenomena. Hence 'liberty' in the Christian sense is always limited by the sanctions of 'the mind of Christ'; in other words, by a reference to the ethical ideal for which Christ stands.

let 'that capability and godlike reason fust in us unused' (Shakespeare, *Hamlet*, IV. iv. 38 f.), to imperil our moral and spiritual health, and to foreclose the possibility of a larger equipment for Christian influence. If the issue on the intellectual side is rejection of the doctrines hitherto accepted on authority, there still remain the witness of life and the experience of the saints. It is no doubt true that Christian experience is bound up with a conviction of the truth of certain doctrines, such as the existence of God, immortality, the divinity of our Lord, and the persistent activity of His spirit; but its moral earnestness and beauty remain as a perpetual challenge to those who reject doctrinal Christianity and thereupon feel justified in belittling its contribution to the ethical progress of humanity. On the one hand, it is possible to combine intellectual suspense and even scepticism with a high-minded allegiance to the moral teaching of Christ, and such inquirers after truth are not to be excluded from the fellowship either of individual Christians or of the organized Christian community in its various forms. On the other hand, the Church may legitimately demand from those to whom it does not refuse the right of private judgment that such judgment shall be exercised with becoming humility.

'He who would teach a new truth or reject an old (and to do so is a vocation to which in every generation some men are called) must both expect to meet in practice with the persecutions by which true prophets are assailed, and must also face the *prima facie* likelihood that his own prophecy may turn out false' (*ib.* p. 380).

Hence in actual practice within the limits of the Christian fellowship liberty of thought is restricted by the collective witness of the saints, by consideration of human fallibility, by the avoidance of arrogance, intolerance, and impatience, and by respect for simple faith which moves on traditional lines. If one may adapt a saying of T. H. Green (*Prolegomena to Ethics*, Oxford, 1884, p. 292), the Church is 'a society of which the members owe reciprocal services to each other,' simply as Christian to Christian. There must be no attempt to frown on the mind that is open to the newer light when ethically and intellectually equipped for the re-interpretation of ancient doctrine, nor is it to be forgotten that those who have been affected in spiritual outlook by the critical spirit which has modified the value of time-honoured creeds and formularies may yet be qualified to bring out of the treasury of their wisdom and devotion 'things both new and old.' It is a function of Christian liberty to harmonize *nova et vetera*, as giving their respective witness to the realization in humanity of the ever-developing Christian ideal. But, if the modernist as a reverent seeker after truth is tolerated, he in turn must exercise the grace of patience towards the traditionalist. Christian liberty is a great gift, but Christian charity is a greater.
